This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

MOTORCYCLE ILLUSTRATED

THURSDAY, JANUARY 9, 1913

Issued Every Other Thursday by the Motorcycle Publishing Co., 51 Chambers St., New York

AT THE COMING SHOWS

Examine the 1913 Models of

The *Indian* Motocycle

NOTE the latest and greatest comfort feature—The Cradle Spring Frame. The only motorcycle with the automobile principle of spring suspension. Leaf sprung fore and aft. Absolute riding comfort.

NOTE the equipment of foot-boards in addition to pedals on the regular models and the improved luggage carrier fitted to all models.

NOTE 8 other Important Improvements and 29 additional "refinements." Have the demonstrator explain them to you personally.

NOTE that all these new features are embodied in the machines without extra charge. No change in prices.

PRICES: 4 H.P. Single, $200; 7 H.P. Twin, $250; F.O.B. Factory

Show Space at Grand Central Palace, New York, No. 712

A free demonstration from any of our 1600 dealers throughout the country

Times Find Ready

GOODYEARS

AKRON, OHIO

MOTORCYCLE Tires must meet conditions as they find them. But conditions change. So tires must change. Tires that did yesterday won't do today.

Improved roads making for greater speed, the adoption of the free engine clutch, the growing popularity of the tandem are signs of progression. And they mean overloaded, overstrained, overtaxed Tires.

To meet these conditions tires must be built with greater strength—treads must be tougher—the whole construction more durable.

And thus our Tire experts are building Goodyear Motorcycle Tires. They are building them with tougher, more durable treads than ever—building them to stand the fabric-rending strain of the free engine clutch, the wear and tear of high speed, the tax of overloading. They are building them **up to date** only as the experts of No-Rim-Cut Automobile Tire fame know how to build dependable pneumatics.

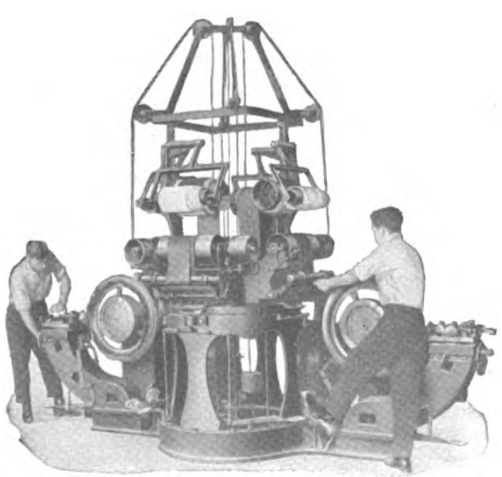
And the greater part of Motorcycledom has come to look on.

From the closest figures available we estimate that Goodyears equipped two out of every three new machines in 1912.

26 Motorcycle makers have adopted Goodyear Motorcycle tires for next year.

This with the demand from other sources will, we figure, result in the use of almost as many Goodyear Motorcycle Tires as **all other makes combined.**

And all because these tires give **service**—all because they are built to meet men's current needs.



The Machine-Made Motorcycle Tire

That is one advantage of Goodyears. They are made on machines. These machines, by means of which the uncertain hand method of stretching the plies of fabric is done away with, insure a tire of uniform tension—a tire of uniform strength and durability.

Countless tests prove these the most durable tires in existence.

Made by Makers of No-Rim-Cut Auto Tires

That's another advantage. You get the benefit of the years of testing and experimenting that have gone into Goodyear No-Rim-Cuts—the popular Automobile tires of the day—tires with sales of over **seventeen hundred THOUSAND.**

A New Booklet Now on Press

This booklet tells all about our tires. It is full of practical points every motorcyclist ought to have. Let us send it as soon as printed. Address

MAJESTIC SIDE CARS

Fit Any Motorcycle

Improved and Perfected by Experience

DE LUXE-CANOE FRONT

$90.00

The Majestic De Luxe Cars are the handsomest models ever produced. Special double braced chassis. Long velvet springs. Substantial bodies with high, luxurious backs, storm apron and foot mat. Built for those who want the best in design perfected by long experience.

The "Trinity" is for the whole family, and has a detachable child's seat.

The "Standard" and "Standard Canoe" are high class cars at popular prices.

All attachments steel forgings. Special attachments for spring frame Indian.

At the Low Price of $15.00

The Corbin-Brown Speedometer is built on the centrifugal principle.

Science has proved that the accuracy of mechanism so constructed cannot be affected by climatic changes.

It is this reason in addition to absolute simplicity—the total absence of complicated parts—that makes the

CORBIN-BROWN SPEEDOMETER

"The Speedometer of *Permanent* Accuracy" for Motorcycles

There are no delicate parts to jar loose or break and thus reduce the instrument's efficiency

The Corbin-Brown is calibrated up to 80 miles. It records low mileage just as accurately as high.

Can be attached to front or rear wheel without disturbing even slightly the motorcycle's adjustment.

Records a total of 100,000 miles, making it possible to keep an accurate record of the complete mileage the machine has accomplished.

Sold by leading motorcycle dealers everywhere. Order of your jobber.

"Good Thing We're Oilproof"

PENNSYLVANIA Oilproof VACUUM CUP TIRES

For Motorcycles

The oilproof feature has made a huge hit. No improvement was more surely needed. Riders who were weary of paying out money for "oil disease" are swinging over to Vacuum Cup tires—because they resist oil. The addition of this tremendous feature to tires already renowned for their leadership as anti-skid and longer wearing tires makes an opportunity for record sales that is boundless.

1913 will see an additional 80,000 motorcycles put on the roads of the country. See that each rider in your locality gets Vacuum Cup Oilproof tires. They'll be expecting you to carry them.

"Yes, and V. C. Non-Skid Too!"

Red Tread

PENNSYLVANIA Oilproof VACUUM CUP TIRES

For Bicycles

Oilproof, Anti-skid and Long Wearing—the perfect bicycle tire. The oilproof feature, and its distinguishing mark, the Red Tread, has still further increased the tremendous popularity of Vacuum Cup Tires. Outside of their truly remarkable service and anti-skid efficiency, the Red Tread carries a strong appeal to the eye. The wheel gains a new distinction. To show these tires is to keep on ordering them from your jobber. Dealers are having this fortunate experience throughout the entire country. Get after all the bicyclists in your territory. You can not only sell a pair to every rider, but you can induce others to bring "resting" wheels out into the light again. There's money in it.

NOTE: Pennsylvania Bicycle Tires now have a flannel strip inside, which facilitates cementing to the rim.

Get in your orders.

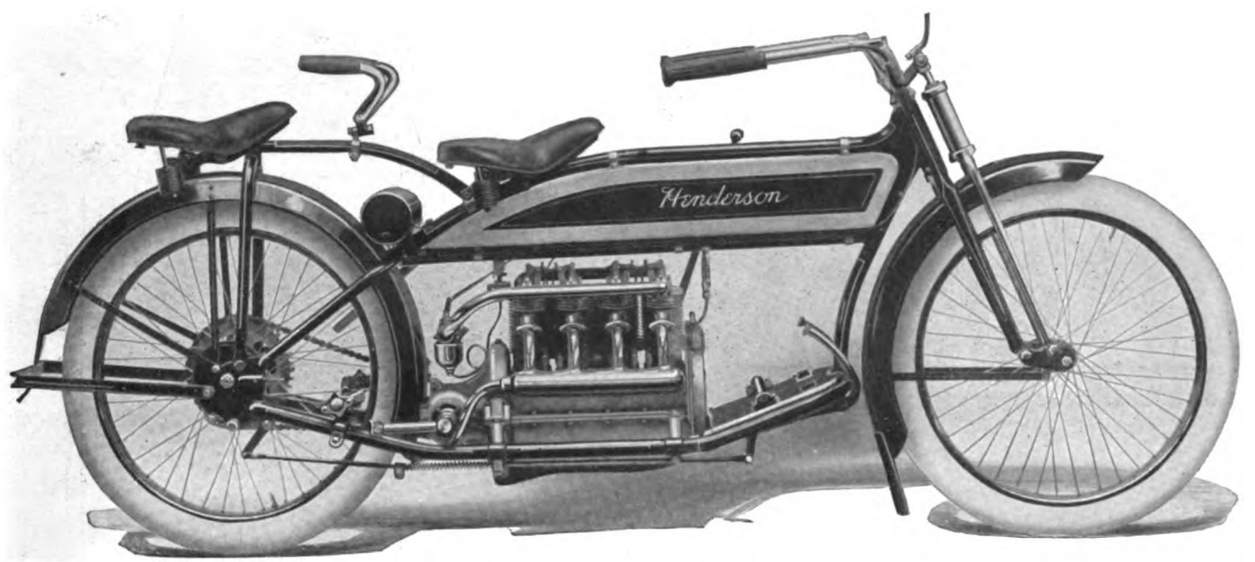
The Henderson exhibit that meets all



THE 1913 HENDERSON, 8 H. P., 4 CYLINDERS, FREE ENGINE, CHAIN DRIVE $325

Any motorcycle dealer or rider knows that the great demand of the day is for power, flexibility, silence, comfort and vibrationless riding.

And the man who studies the Henderson—at the show or at his home dealer's—will see how fully and completely the Henderson meets all these demands.

It did so last year more satisfactorily than any other motorcycle.

It does so again this year in the same fashion.

It does so because of its advanced design—because of its four-cylinder motor, its long wheelbase, its unique saddle position, etc.

Having four cylinders, the Henderson runs without vibration and with a smoothness impossible with any other type of motor.

It is also possible to throttle the motor to slower speed and still have power enough to pull than with any other type.

The saddle well forward of the rear wheel; the feet resting on comfortable foot-rests instead of pedals; a long wheelbase and low center of gravity; the large tires—these are some other exclusive Henderson features.

With the 1913 output more than half sold, dealers and buyers alike will realize the necessity for prompt action if they want to sell or ride the most popular motorcycle of the year.

HENDERSON MOTORCYCLE CO., 1158 Cass Ave., DETROIT, MICH.

Distributors: New York & Brooklyn Auto Supply Company, 1717 Broadway, New York City; Henderson Motorcycle Sales Company, 1324 Michigan Avenue, Chicago, Ills.; A. M. Kupfer, Inc., Los Angeles, California.

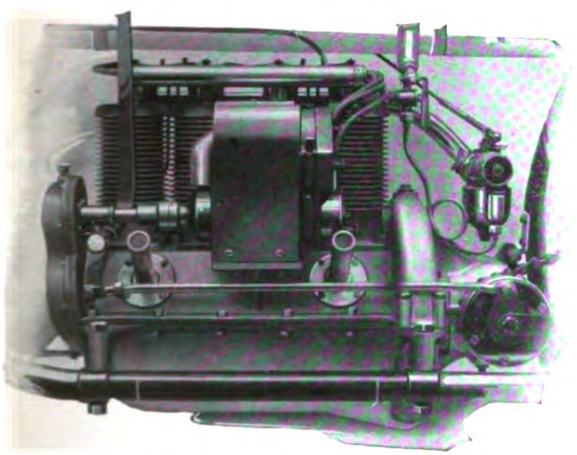
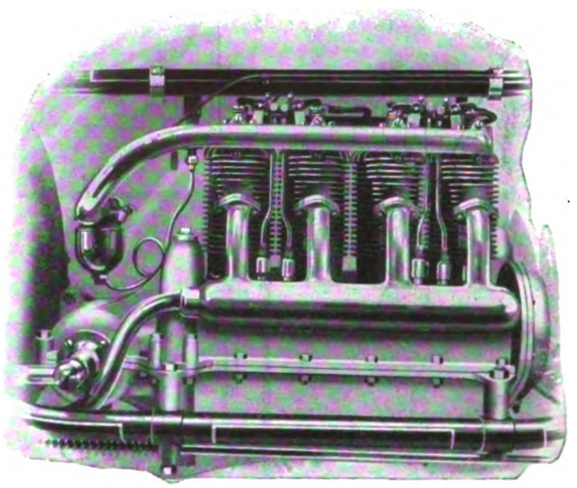
shows the one machine popular demands



LEFT SIDE OF MOTOR



RIGHT SIDE OF MOTOR

SPECIFICATIONS OF THE HENDERSON 8-65

Motor—Four cylinder 2⅝" bore, 3" stroke, 65 cubic inches displacement, L head.

Starting Crank—Folding design, Henderson patent.

Carbureter—Schebler.

Valves—Mechanically operated.

Ignition—Bosch magneto, D U 4, fat hot spark.

Muffler—Sealed joints; silent, no back pressure; nickeled and polished.

Lubrications—Splash system with sight feed.

Control—Double grip.

Handle bars—U-shaped, with brace.

Transmission—Chain drive, free engine.

Tool-bag—Round metal—with complete set of tools.

Finish—Enameled royal blue and aluminum, with striping; highly nickeled motor.

Clutch—Eclipse.

Tank—Square type, divided for 3 gallons gasoline, 2 quarts oil.

Frame—Cradle type 1¼", 13 gauge tubing.

Fork—Triple stem, with 2 large springs.

Wheels—28", standard.

Tires—28" x 3", front and rear, large and easy riding.

Brake—External band, Henderson design. Extremely powerful and simple.

Foot-board—Aluminum, roomy, with rubber foot-pads.

Stand—Henderson special, one piece.

Saddle—Special Henderson-Persons.

Tandem—$25 complete.

Price—$325 F. O. B. Detroit.

HENDERSON MOTORCYCLE CO., 1158 Cass Ave., DETROIT, MICH.

Mott Steel Rims

Durability—the power to withstand severe use and often abuse—must be built into every motorcycle.

The tires are a motorcycle's shoes—the rims are the feet.

On rocky, rutty roads, the rims are necessarily subjected to considerable punishment.

Wise manufacturers insure longer service by using

MOTT STEEL RIMS

For strength, elasticity, durability, MOTT STEEL RIMS are at the height of perfection. They cannot but be so, in that they are made in a plant whose enormous manufacturing facilities are devoted exclusively to the making of Steel Rims.

The Show's the place—let us convince you.

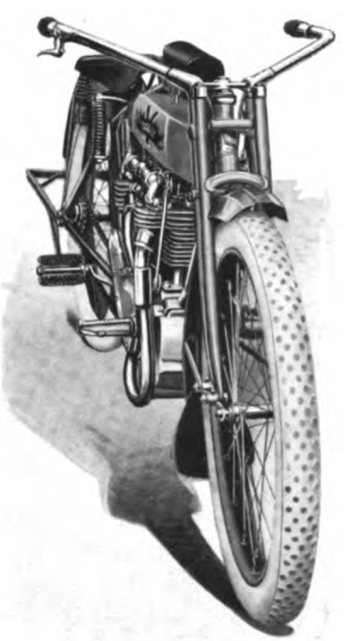
THE CONSOLIDATED MFG. Co. TOLEDO, O.

Motorcycle Construction of Quality

QUALITY, in a motorcycle, is tangible and material. It can be seen, measured and tested. It is not a vague, indefinable substance for which you have to take the manufacturer's word. It is created by the use of selected and tested materials, built by accurate and scientific methods by skilled, experienced mechanics from designs that embody the best ideas of all the engineers and technical experts who have worked on motorcycle problems.

¶ In the following pages are set forth some of the facts that make the YALE "*the Motorcycle of Highest Quality*"



Digitized by Google

YALE
THE CONSOLIDATED MFG. Co. TOLEDO, O.

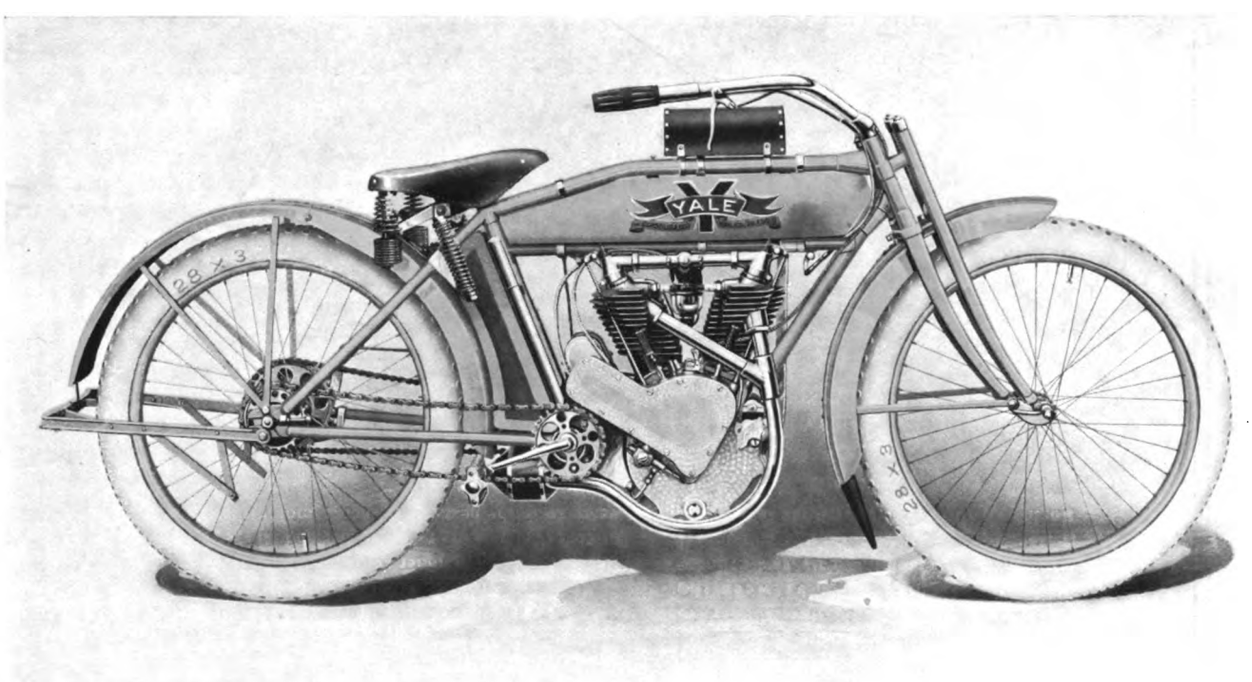
Motors of 60.92 Cnbic Inches that

THE power plant, as the most vital part of any machine, is considered the point of first importance by practically all riders. Yale motors are the most efficient gasoline engines ever put in road machines—and there's a reason for it.

¶ The Yale twin puts an abundance of power always at the rider's command—an unconquerable reserve that overcomes every difficulty. The motor is of the long-stroke, high-efficiency type, with all moving parts so perfectly balanced that it runs absolutely without vibration.

The Cooling Problem

¶ On this motor the cooling problem, which has baffled makers of other twins, is solved effectively. The cylinder flanges are horizontal, in



BIG 7-8 H. P. Twin Yale. Note the "classy," racy appearance. Drive by roller chain or big V belt (no flat belt could hold the full power of this motor) with Eclipse free-engine clutch on all machines. Yale cushion fork and Y-A shock absorber. Troxel saddle. Three-inch tires (automobile size) Goodyear, U. S., Federal or Diamond. Hinged rear mudguard. Footrests, with auxiliary foot lever for operating brake when feet are on rests. Corbin band or Eclipse multiple disc-brake. Wheelbase, 57½ inches. Large separate tanks carrying three gallons of gasoline and a gallon of cylinder oil. Throttle and spark controlled from grips, with exhaust-valve lift operated by independent lever under right grip. Unusually efficient muffler with cutout that when opened gives free, straight-line outlet for gases.

$275

Digitized by Google

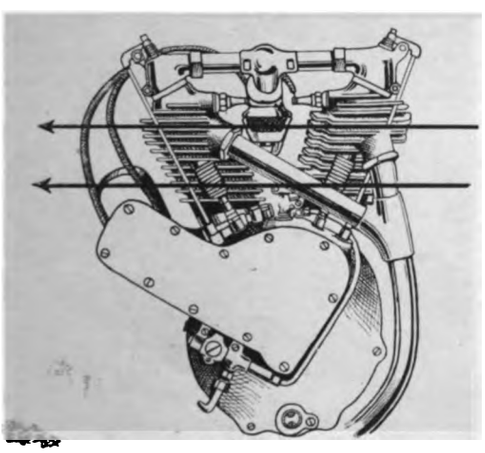
YALE
THE CONSOLIDATED MFG. Co. TOLEDO, O.

Develop Nearly 10 Actual Horsepower

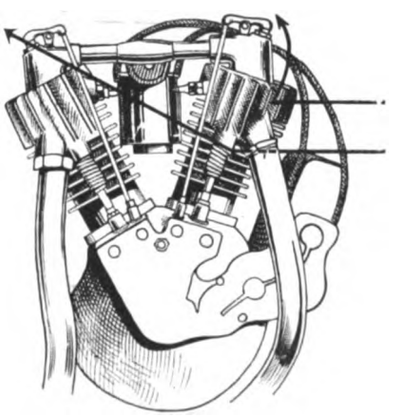
line with the direction of the air currents. Thus the air travels straight through, sweeping freely over the surfaces of both cylinders and cooling them perfectly, instead of being deflected upward by the slanting flanges of the front cylinder so that the rear is missed.

¶ The back cylinder of the average twin motor is in a dead pocket, as the air is kept away by the front cylinder, and it naturally overheats, eating up power and forming a drag on the motor.

¶ The Yale twin motor is of 60.92 cubic inches piston displacement, rated conservatively at 7-8 horsepower. But by accurate balancing, perfect proportion of all parts, and expert precision in building, such remarkable efficiency has been attained that this motor develops far above its rated power. The average pull of the Yale twin motors—on actual block test, not "calculated" or "estimated" power—is 9.2 horsepower. Many pull close to 10 H. P., but all are well above 9.



SKETCH showing how air currents pass straight through between the horizontal flanges of the Yale two-cylinder motor, sweeping freely over the surfaces of both cylinders, so that heat is carried away from the rear cylinder as well as the front, cooling both perfectly.



SHOWING action of air currents on twin motors used on other machines. The air strikes the front cylinder and is deflected up, so that it misses the rear cylinder and fails to carry away the heat. On such a motor the back cylinder is always more or less overheated and is a continual drag on the engine.

Digitized by Google

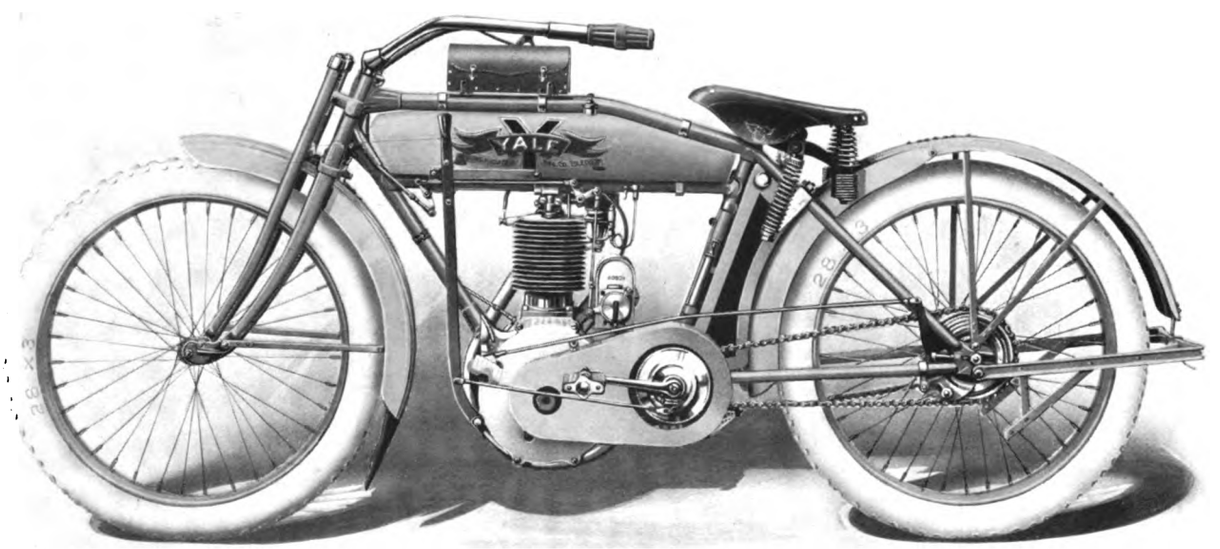
YALE
THE CONSOLIDATED MFG. Co. TOLEDO, O.

Reserve Power, More Flexibility, and

UNUSUAL all-around ability marks the 1913 single-cylinder Yale, which pulls nearly six actual horsepower. There is an abundance of power for all emergencies, such as used to be found only in twins, combined with wonderful simplicity and sturdiness of construction. The correct proportion, accurate design and exquisite balance of every moving part in this single-cylinder motor render it so efficient that its unusual power is produced without making it large and bulky. Compact, capable, "there with the goods" whenever called upon—that's the "Big Y" single.

¶ Getting down to details emphasizes the superiority of this over other single-cylinder motors—many of them are still of the old 4 h. p. type.

¶ The crankshafts, for example, are ⅞ inch diameter and 1⅝ inches long. The crankpin gives exceptionally large bearing surface for the connecting rod, as it is ⅞ inch diameter and 2 inches long.



POWERFUL 5-6 H. P. Yale single-cylinder model. Transmission by roller chain or flat belt, with Eclipse clutch. Flat belt models have independent adjustment of clutch engagement and belt tension to allow most effective operation. Y-A shock absorber and Troxel saddle. Yale cushion fork. Three-inch tires, Goodyear, U. S., Federal, or Diamond. Hinged rear mudguard. Footrests with auxiliary foot lever for operating brake when feet are on rests. Eclipse multiple-disc or Corbin band brake. Wheelbase 57½ inches. Separate tanks holding three gallons of gasoline and one gallon of lubricating oil. Grip control with exhaust-valve lifted by independent lever under right grip. Muffler behind motor with cutout to give free, straight-line outlet to gases when opened.

$225

Digitized by Google

YALE
THE CONSOLIDATED MFG. Co. TOLEDO, O.

Superior Capability in New 5-6 h. p. Yale

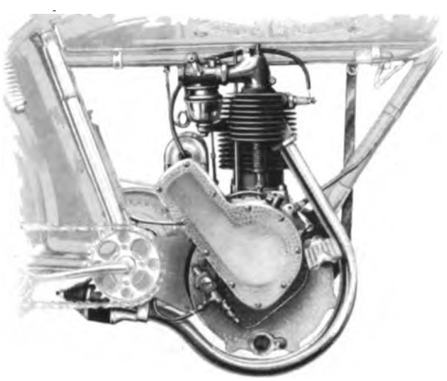
Both shaft and pin are of chrome nickel steel, hardened and accurately ground to size. Compare these with the sizes of bearings used on any other motorcycle engine.

¶ The piston pin, also of chrome nickel steel, is held in place by brass pins, which cannot loosen. The connecting rod, drop-forged and of unequalled strength, is more than twice the length of the stroke, which gives an easy angle to its motion, reduces side thrust and makes wear on all parts less. On each end are unusually large bosses for bearings, so large and strong that no strain will ever stretch or weaken them.

¶ Bushings of special alloy are used, with walls 7/32 inch thick, and special self-contained reservoirs and oil channels give positive lubrication of all bearing surfaces all the time.

¶ All gears are drop-forged, pressed on steel shafts, with teeth of helical type that, by rolling into engagement instead of jumping together, give better contact and are quieter than plain spur gears. Two teeth on each gear are always in full engagement. The cams have wide faces, hardened and ground. The plunger rods of the valve mechanism are also hardened and pass through steel bushings, with a dust sleeve to keep out grit.

¶ Lubrication is by a positive mechanical plunger pump, absolutely automatic in its action. Oil is always supplied in exactly the right amount without depending on the rider's memory or judgment.



YALE single-cylinder motor. Pulls nearly 6 horsepower on actual block test. Mechanically operated inlet valve with substantial overhead rocker arm and pushrod. Exhaust and inlet cams separate to give accurate timing. Mechanical oil pump of plunger type driven by worm gear. Auxiliary hand oil pump. Special Heitger carburetor. Waterproof Bosch magneto of enclosed type.

Digitized by Google

YALE
THE CONSOLIDATED MFG. Co. TOLEDO, O.

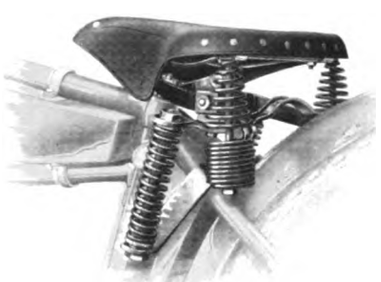
Luxury on the Road and How the

COMFORT requires more than a mere system of springs that yield when road shocks are met by the wheel, for side play from a jointed spring frame or wobbly spring seatpost that makes riding dangerous, or the constant danger of an inadequate spring fork breaking, harass the mind of the rider so that the pleasure of any ride is destroyed by the uncertainty.

¶ On the Y-A shock absorber—the most efficient device used for eliminating rear-wheel jolts—two big, flexible springs smooth out every little vibration and unevenness, as well as absorbing completely the heaviest jars and slams, such as are caused by hitting big boulders or deep chuck holes at high speed.

¶ Y-A design makes sideplay impossible. The Yale can be handled at high speed on sharp turns, or under conditions where control is difficult, with the certainty of a rigid machine. Every rider who has tried it is enthusiastic. Students of motorcycle construction who study the features of all types of motorcycles, say that it embodies the right ideas, has the best construction according to engineering theories—and the experience of thousands of practical riders has proved these theories to be sound.

¶ The Yale was the first motorcycle to use an effective cushion fork, and last season's record shows that it now has the most dependable as well as the easiest-riding fork, for not one 1912 fork was broken. A graduated system of long springs takes up every road shock and quiver, making all surfaces seem level. Extra-long recoil springs,



ALL 1913 Yale Motorcycles are fitted with the Y-A shock absorber, "the original jolt-killer." Two big springs thoroughly insulate the rider from every road jar or vibration. Sideplay is made impossible by its construction. Also gives a very low saddle position.

Digitized by Google

YALE
THE CONSOLIDATED MFG. CO. TOLEDO, O.

1913 Yale Motorcycle Provides It

of special spring steel carefully tempered, check the rebound when the direct shock is past, and make the operation smooth and perfect. The length and special temper render breakage of these springs practically impossible. The six "Big Y" riders in the four-state 1,300-mile Kansas Short Grass Tour finished without a spring broken or a frame or fork defective—service unequaled by any other machine. They came on home on the same machines. How many others did?

¶ A few fine points of design make the fork of the "Big Y" far more effective than its imitations—for there are other forks that *look* much like that of the Yale, but which fail sadly to deliver its service. For instance, by slanting the fork just right and by placing the rocker arms at a certain angle, the effect of a trailing front wheel is given and the wheel passes over bumps more easily and with less shock than a wheel actually swung behind the fork tips, as on the so-called "castor" type of fork.

¶ The wheelbase of the Yale is 57½ inches, which has been found ideal after thorough testing. This length minimizes road jars and gives ease of riding, and at the same time is not so great as to make the machine unwieldy. The "Big Y" holds the road perfectly at high speeds.

¶ The low-hung motor, held by straight-line frame tubes, gives excellent balance and steering qualities, and the frame, reinforced by a vertical steel wall in the center of the tubing, preserves perfect alignment under the most severe use, so that control is always easy.

YALE cushion fork. Graduated system of long, flexible springs to absorb both little vibrations and heavy shocks. Extra long rebound springs of special spring steel, carefully tempered and unbreakable. Fork sides extending all the way up and connected to handlebars by drop forged crosshead. Substantial forgings at points where strains are met. Fork slanted and rocker arms set at angle to cause wheel to pass easily over obstacles with least jar—giving trailing effect and easier riding than fork of "castor" type, and steering more easily.

Digitized by Google

Every Good Point, with Mistakes Left Out

BESIDES its exclusive features, the "Big Y" has every good point—every really good and tested point of advantage—possessed by any other machine. In the Yale you get every feature of value that is used in motorcycle construction, with none of the freaks or experiments.

¶ The mistakes made by others have been detected and carefully corrected before any feature was incorporated in the 1913 Yale. Faults that caused inefficiency, lack of power, weakness, or failure, are not allowed in this machine. We don't use castings or stampings for frame connections or small parts. We use drop forgings, for these are best. We use the strongest type of triple-stem front fork, with the sides and handlebars connected by a substantial drop-forged crosshead. Our flywheels are balanced exactly, absolutely eliminating vibration. There are many features that the average rider does not know of, because they are where he cannot see them, but they make a big difference in the year-round service of the machine.

¶ In the Yale, and in the Yale only, you get all these good points, at the same time avoiding all the mistakes, freaks, and experiments. You can't afford to miss one good point, or to buy one bad one. Its failure to have any one of these good points is sufficient reason for your not buying another make.

¶ We are driving these Yale advantages home to over ten million readers by our $125,000 series of impressive advertisements in publications of immense national circulation. This is what brings business to the dealer. Our ads in the motorcycle journals serve chiefly to keep us in touch with our agents and riders—speak almost exclusively to those already interested—but they don't reach new people or make new riders. This national advertising is convincing men not previously interested, making them see that they need Yale motorcycles. It is creating more business, bringing new customers to the Yale agent in steadily increasing numbers. It removes the element of doubt from the motorcycle business, and guarantees success from the start for the Yale agent.

Get in line with the Yale for a year that will break all records for success — don't delay, for we are closing contracts in remarkable numbers. Tomorrow may be too late. Ask for our proposition right now.

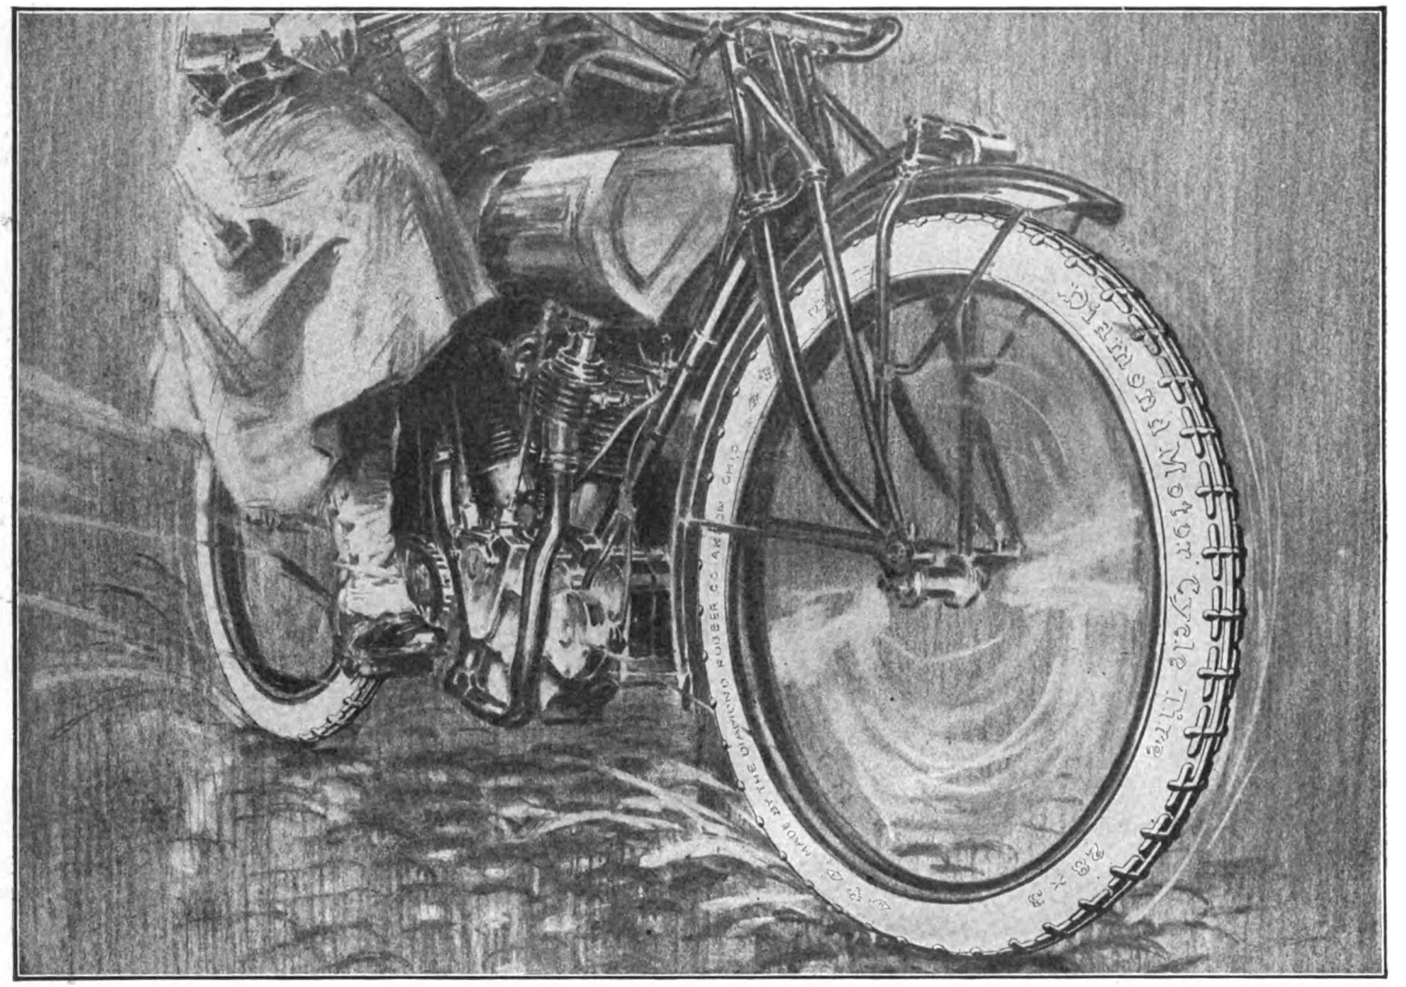
ANY CURBSTONE WILL STOP A SKID

But Only Diamond SAFETY TREAD (SQUEEGEE) TIRES WILL PREVENT ONE FROM STARTING



Diamond Safety Tread Motorcycle Tires obey your will. Your machine is always under your control—you go where you steer.

No matter how slippery and treacherous the pavement, they grip and hold. You ride in safety and you ride with pleasure on Diamond Safety Tread Tires.

But that's not all. There's real economy in Diamond Safety Tread Tires. Extra mileage is built into them and you get it. The mileage strip adds 20% to the wearing surface of the tread and assures you of a correspondingly high mileage and freedom from trouble.

Get this clearly in your mind—The Diamond Safety Tread Motorcycle Tire is not a tire that stops a skid, but prevents one from starting.

Diamond MOTORCYCLE TIRES

MADE OF

VITALIZED RUBBER

AND IN TWO FAMOUS TREADS

SAFETY and STUDDED
(SQUEEGEE)

BOTH WITH A DISTINCTIVE DIAMOND FEATURE

THE MILEAGE STRIP

Vitalized Rubber is pure young rubber combined—by a secret process known only to ourselves—with a toughening compound and the result is the toughest, most wear-resisting material every put into a motorcycle tire.

A brand new and exclusive Diamond feature is the mileage strip—extending all round the tire and adding 20% to the wearing surface of the tread. It not only means greater mileage, but it puts the side-slip bugaboo into the discard.

You have the choice of two treads—Safety (Squeegee) and Studded. The sharp, clear-cut studs on the new Diamond motorcycle tire, combined with the mileage strip, will hold your machine where you want it better than any other studded tread tire you can buy.

And, in addition to all these things, you get perfect 3-point rim contact—an assurance that the tire will sit perfectly in the rim. No unnatural distortion or bending of plies to break down the tire before it has given the mileage you pay for and should get.

MODEL A

Mueller Tandem Attachments

TO FIT ALL INDIAN MOTOCYCLES

Specially Adapted to New Spring Frame Models

MODEL A attachment is for 1913 spring frame machine and does not interfere with frame action. Attachment is made of steel tubing and drop forgings, well brazed—enameled and nickeled. Large Troxel motorcycle saddle, Kelly adjustable handle bars, standard No. 3 pedals. Enameled red to match motorcycle.

MODEL B attachment will fit all rigid frames fitted with luggage carrier bosses. Also made with curved tube to attach on forward seat post when desired. Colors: Red, blue or green.

THE ORIGINAL AND ONLY FULLY EQUIPPED MOTORCYCLE

JUST WHAT LIVE AGENTS HAVE BEEN WAITING FOR

The A-M-C is the most profitable and easiest selling motorcycle offered

READ THESE SPECIFICATIONS—EVERY ONE A SELLING POINT

MOTORS—Twin type actual 7 H. P., single actual 4 H. P.—3 43/64 inches stroke and 3¼ inches bore on all models; piston displacement 30.50 inches.

CYLINDER—Racine special close grained grey iron one piece type.

BEARINGS—Connecting rod on twin, roller and large phosphor bronze on single models, piston bearing 2⅛x⅞ nickel steel against cast iron.

CARBURETER—Latest type Schebler or Heitger.

IGNITION—Standard make high tension magneto.

MUFFLER—Improvement over all previous types; dead quiet even with retarded spark—exhaust pipes lead into muffler without any off-sets, allowing the gas to exhaust without meeting with resistance.

HANDLE BARS—Made of heavy seamless tubing, rigidly braced, with just the right length and drop to give an easy riding position.

CONTROL—A-M-C positive double grip with concealed flexible cable—no levers to work loose.

TRANSMISSION—Choice of flat and V belt or noiseless chain.

FREE ENGINE CLUTCH—All models equipped with Eclipse latest type free engine clutch.

TANKS—Oil and gasoline tanks are made separately, affording no chance of contents becoming mixed. They are ingeniously made so as to fit together, covering the two top bars. Space is provided for the gas tube and speedometer shaft. Capacity 3 gal. gasoline, 2 quarts oil.

FRAME—Made of Shelby Cold Drawn Seamless tube, double bar loop type. The loop is one piece from the head to the seat post mast, making an unusually strong bracket for holding the motor; loop also protects the crank case from damage. Every joint and connection is made of Vanadium Steel. Top bars are brazed into the Vanadium Steel head; no joints occur at the point of stress, making the same doubly strong. Our perfect design gives an extremely low saddle position.

FORK—Effective trussed cushion spring, doing away with the objectionable rebound experienced with other forks.

THE SPRING SEAT POST—Is a real spring seat post; the rider's weight is held in suspension between the two springs so arranged as to be self-compensating, doing away entirely with any jerky effect and making it impossible to hit bottom.

SADDLES—Troxel and Persons.

HEIGHT OF SADDLE—From ground extremely low, approximately 28 inches.

TIRE CLEARANCE—Between the guards, 2 inches; a point to consider in country traveling.

LOCK WASHERS—Are placed on all bolts and nuts; no parts to rattle or become lost.

WHEEL BASE—56 inches, making it the easiest riding machine made.

DISTRIBUTION OF WEIGHT—We believe the A-M-C excels all others in this respect, which is due to our perfected frame construction.

SPEEDOMETER—Corbin—best that can be secured; concealed shaft made especially to fit the A-M-C.

HEAD LIGHT—Powerful 8 inch gas lamp with polished mangin mirror lens reflector.

GAS TANK—Standard Prest-O-Lite motorcycle tank.

BRACKET—Special A-M-C holds both lamp and tank, making them a complete unit.

TAIL LAMP—Specially made, burns gas, shows red to rear and reflects white for number.

HORN—Sireno gives either a piercing or melodious alarm.

PEDALS—Standard extra wide with rubber cushions.

CARRIER—Light but strong, combination carrier or tandem seat.

WEIGHT—Twin model approximately 215 lbs. Single model 185 lbs.

FINISH—The A-M-C is without doubt the finest finished motorcycle ever offered, enameled in cream white, paneled to harmonize; handle bars are finished with indestructible rubberoid.

When writing to advertisers, please mention MOTORCYCLE ILLUSTRATED.

Digitized by Google

The A-M-C is Complete—No Extras to Buy

The agent who sells the A-M-C makes a real sale. He sells a machine complete in every single detail. All equipments are made for this machine and fit perfectly and are absolutely the best that can be secured. The same care and precision are executed in selecting the equipments for the A-M-C as there are in the material used in its construction.

The A-M-C is easier to sell not only on account of its graceful lines, fine finish and superior working qualities but the manner in which the equipments are selected, the way they are attached and the general refinement that they give the entire machine. If given an opportunity no motorcycle buyer will select a machine which is only partly equipped. Heretofore, the manufacturer has been satisfied to let the agent worry out the equipment troubles for himself.

In producing the A-M-C it has been our object not only to offer the best built motorcycle on the market but the one that would be the cleanest and easiest proposition for the agent to handle.

The agent handling the A-M-C can give his customer a machine with standard equipments of the very highest grade, specially selected and fitted with special brackets and devices which make them perfectly adapted to the A-M-C, for less money than what he can sell any standard machine for with such equipments as the rider might select of even inferior quality; the attachments for which would be so made as to come as near fitting as possible every motorcycle on the market but not fitting any certain machine in particular.

The A-M-C agent not only saves several hours' time which is usually wasted in putting on these equipments, which at the best never fit properly, but he also makes a greater profit than he possibly could were he to sell the equipments separately.

Furthermore, when an agent sells an A-M-C he has the satisfaction of selling a motorcycle complete with all its equipments.

A careful comparison of our prices and a little figuring will satisfy any wise agent that it is the machine for him to handle if he is actually in the business for profit.

The time is very near when no buyer will accept a machine that is not fully equipped. Why wait until your competitor gains this point of advantage? Be a leader and let the rest follow: We want every live agent to figure this fully equipped proposition out for himself.

You know what standard equipment costs and also what it sells for. So that you can easily verify every single claim we make the A-M-C equipment, as follows:

For your convenience, we have added the regular retail prices.

Standard Prest-O-Lite gas tank	$10.00
8 in. Gas Lamp, mangin lens mirror	5.00
Unit Type Tank & Lamp Bracket	2.50
Tail lamp	1.00
Imported Sireno Horn	2.50
Guaranteed Corbin Speedometer	15.00
Total	$36.00

Any agent who has ever placed equipments on a machine readily realizes just how much time it takes to put these equipments on. After adding the selling price of the equipment that we use to the selling price of any standard machine, you can see at a glance that you can offer your customer an A-M-C machine fully equipped for far less than what he can purchase a complete machine under any other conditions and when you get our agent's proposition, it will show you where the double profit is in it for you.

The A-M-C line consists of two models; a single cylinder 4 actual horse-power, magneto ignition, and a twin model, magneto ignition, 7 actual horse-power. Both models fully equipped even to the last detail. Each cylinder is 3¼ in. bore and 3 43-64 in. stroke. Piston displacement 61 cubic inches on the twin model and 30.50 cubic inches on the single cylinder model. All are equipped with the latest type Eclipse Free Engine and variable speed clutch pulley. Choice of either V belt or chain drive transmission is offered.

The A-M-C is a truly vanadium steel built machine. The head, hanger bracket, fork ends, seat post cluster, in fact, every connection on the A-M-C is made from vanadium steel; known the world over as being the strongest material for such purposes. Actual tests show that chrome vanadium steel has an elastic limit of 170,000 to 225,000 pounds per square inch with a tensile strength ranging from 180,000 to 225,000 pounds per square inch. Of course, this is after it has been heat treated. It is the material used by the largest and most prominent automobile manufacturers for parts that stand hard use and are subject to crystallizing.

The A-M-C motor is a marvel of simplicity. Piece for piece there are actually less parts in this motor than in any other. This not only means greater life, but also the absence of any possible chance for loss of power due to faulty adjustment. For instance, there are actually 50 per cent. fewer parts in the A-M-C gear box. A double cam forged from a single piece of steel operates both valves on the single and twin models. Thus, timing is an exceedingly simple process, and makes it impossible for the A-M-C engine to become out of time. Both inlet and exhaust valves are actuated by forged steel rocker arms which are designed so that there is a minimum of sliding friction. **The inlet valve is ingeniously designed.** More power has been lost in motorcycle engines due to faulty construction of this part than from any other source.

The valve cage admits gas around the entire circumference to the inlet valve, thus admitting a larger charge of gas quickly to the cylinder and thereby greatly increasing the power. The valve cage has a number of holes bored in the side so that the gas freely enters, no matter in what position the cage is screwed in the cylinder.

The spark plug is so situated that it is self-cleaning and eliminates the main source of trouble in ignition.

The A-M-C frictionless piston is a mighty big step in advanced motorcycle engineering skill. The A-M-C piston has three eccentric rings with 45 degree joints and five oil grooves which help to maintain compression. A floating piston pin is used, ⅞ in. in diameter, made from chrome nickel steel and specially hardened. The unusual feature is that the pin is fastened to the connecting rod instead of to the piston. This construction has many advantages.

It permits the piston to expand evenly and thus remain round instead of becoming oval, and makes it possible to operate the engine satisfactorily with less oil than in any other, as the piston is less likely to seize.

When the piston pin is fastened to the piston it has a tendency to become oval when hot as it is restrained in one direction by the pin.

Another good feature is that a larger bearing surface may be obtained in the piston than in the connecting rod. This insures long wear and smooth running and places a bearing at each end of the piston instead of in the center.

A spacer which is clamped to the connecting rod prevents the end of the piston pin coming in contact with the cylinder walls. This spacer is clamped by the same bolt which holds the connecting rod in place, and thus there is no possibility of becoming loose.

These are only a few features embodied in the A-M-C which will give you a fair idea of its perfect mechanical construction.

The motor is absolutely everything that can be desired and has a flexibility and persistent power that has to be seen before it is fully appreciated. The valves work positively and quietly which, together with the perfectly constructed muffler, makes a dead quiet machine. Smooth, quiet riding appeals to everyone who has ever experienced it. It is a much advertised feature generally, but one actually finds it only in the A-M-C. In the A-M-C motor one power impulse over-laps and picks up the previous impulses to such an extent that it produces an even and constant flow of power, not intermittent pushes. A hardly discernible purr expresses the flow of power in the A-M-C.

Ounce for ounce, we are fully convinced that the A-M-C will develop more power and speed than some having a rating of an additional horse-power. The scientific distribution of weight makes a smooth and perfect riding machine. **Distribution of weight** is a feature which is very seldom given any attention by the ordinary agent or rider as it is usually only noticeable to mechanical engineers who take the time to figure it out.

You will find most of the weight on the average motorcycle comes on the rear of the machine, giving it a tendency to skid easily, also adding to tire expense and actually taking at least an additional horse-power. We have designed our frame so that when the rider is in the saddle and even with an extra rider on the rear, the weight is evenly suspended in the proper proportions, making the machine not only easier to steer and handle but giving a certain flexibility and quick pick-up which must be experienced to be fully appreciated.

We want every live agent to have our proposition providing his territory is not already closed. If you want the best selling machine on the market, a machine which stays sold and will help you to sell others and show you the biggest profit, by all means get in communication with us at once. Territory is being closed up very quickly and a special delivery letter or telegram might enable you to secure this money-maker before your competitor. By all means, whatever you do, be sure to get our proposition, which is the most liberal offered.

Old Reliable

Second Sensation of the Season

Another new high-grade motorcycle lamp, Old Reliable, at a price unheard of before in the history of the motorcycle business.

This lamp is being manufactured in same factory as the X-Ray.

Will be furnished in All Nickel-Black, Red, Gray, Blue or Orange with Nickel Trimmings, colors matching enamel on machines.

Sale of this lamp will be confined exclusively to jobbers, best proposition in the field today.

In addition to the X-Ray and Old Reliable, we have a pleasant surprise in store for everyone interested in the motorcycle business in the way of several new designs which will be shown at the Chicago Motorcycle Show. All jobbers should not close contracts until after the above show—we count on seeing you there.

Best and most attractive line of lamps on the market, read the specifications on the Old Reliable, as a sample, and be convinced.

Front measurement	**8¼"**
Body measurement	**6½"**
Genuine Mangin Lens	**6½"**

Absolutely the largest mirror reflector in a motorcycle lamp, filling entire body of lamp, insuring a greater amount of light than any lamp on the market.

Props soldered and riveted to body. Hood riveted to body. Body of lamp stamped out of one piece of heavy metal. Heavy hinge and catch thoroughly riveted. Mirror or reflector fastened in lamp with removable lugs. Adjustable focus. Don't forget the great light-giving qualities, this can only be effected by use of large mirror. Owing to our method of inserting mirror we have increased size materially without making lamp too large.

Don't forget to meet us at the Chicago Show.

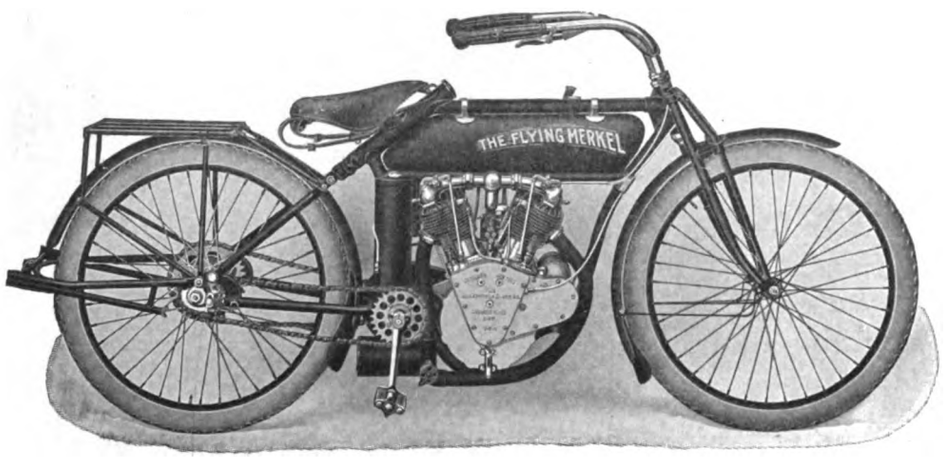
HERE IT IS

THE FLYING MERKEL

The Prize Winning "Yellow Jacket" Model



The Only Self-Starting Two-Speed Motorcycle In the World

IN the trade papers of December we offered $100.00 in gold to the person suggesting the most suitable name for Model 45 and 75. The contest closed on December 15th. As evidence of the wonderful sensation these new models created, no less than 17,092 names were submitted before December 15th. Several thousand names came in after the contest closed but these of course could not be counted. After two weeks of careful study the judges decided upon the name "Yellow Jacket." As more than one person submitted the name "Yellow Jacket" we were compelled to divide the $100.00 proportionately. Accordingly the following persons will receive a check for $3.84 this week.

Chas. Anderson, No. 1063 Perry Ave., Chicago, Ill.
James J. Shea, Sidney, Ohio.
Chas. Reith, High Point, N. C.
Wm. J. Martin, Box 128, Brocton, N. Y.
A. F. Lattig, Payette, Idaho.
Maurice Fitzgerald, No. 86 Commercial St., Bridgeport, Conn.
R. S. Hickey, No. 198 Summer St., Paterson, N. J.
Russell A. Evans, c/o Cadillac Motor Car Co., Detroit, Mich.
E. A. Emmert, Publisher, Dallas Center Times, Dallas Center, Iowa.
N. C. Hildebrand, Butler Co., Eidenau, Pa.
J. C. Youngblood, Agt. Overland Car and Excelsior Motorcycle, Atwood, Kansas.
Roy H. Arthur, c/o Elk Motor Truck Co., Charleston, W. Va.
Geo. F. Devers, No. 1420 Blondeau St., Keokuk, Iowa.
Ernest Mobberly, No. 1313 Scott Ave., Canton, Ohio.
F. C. Dolder, St. Charles, Minn.
Harry C. Wise, Crete, Ind.
C. M. Shaw, Concordia, Kansas.
Rafe M. Lindsey, No. 148 E. 6th St., Anderson, Ind.
Lee Wolary, R. R. No. 1, Wilmington, Ohio.
Russell Hicks, R. F. D. No. 8, Santa Barbara, Cal.
Chas. W. Johnston, Delaware, Ont.
Francis Miller, No. 719 E. 4th St., Canton, Ohio.
W. B. Glasser, No. 780 Downey St., Denver, Colo.
Arthur B. Cookrum, Ontario, Ore.
Evart J. Deakins, Box 164, Reff, Okla.

One card containing the Prize winning name was received without the name and address of the sender. The check will be forwarded upon proper proof being sent.

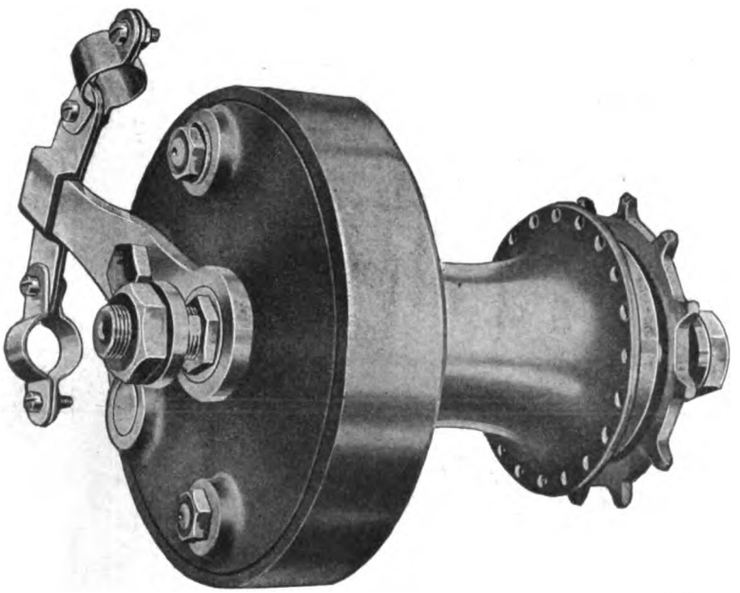
1913 New Departure Coaster

Strong Enough to



For Belt Drive Motorcycles.

¶ Every safety factor enjoyed by the automobilist is assured to the motorcyclist who uses the 1913 model of the **New Departure Motorcycle Coaster Brake.** It gives him absolute and instant control of his machine and so makes all roads safe.

¶ This brake is strong enough to hold an automobile—to easily stall the engine of the highest powered motorcycles and stop any machine within its length or less.

¶ In the development of this brake, automobile practice has been followed. In design it is the internal expanding brake shoe type that has been successfully used in automobiles of all load ratings for years.

¶ A back pedalling pressure of seventy-five pounds at the pedals will exert a retarding force in the brake drum of a ton and a half—more than sufficient to quickly stop a motorcycle of twice the horse power of any now on the market.

¶ All of the wearing parts that are called upon to withstand the severe stresses of service are made of best alloy

Expanding Brake Shoes Operated by Cam Mechanism.

New Departures are always Guaranteed

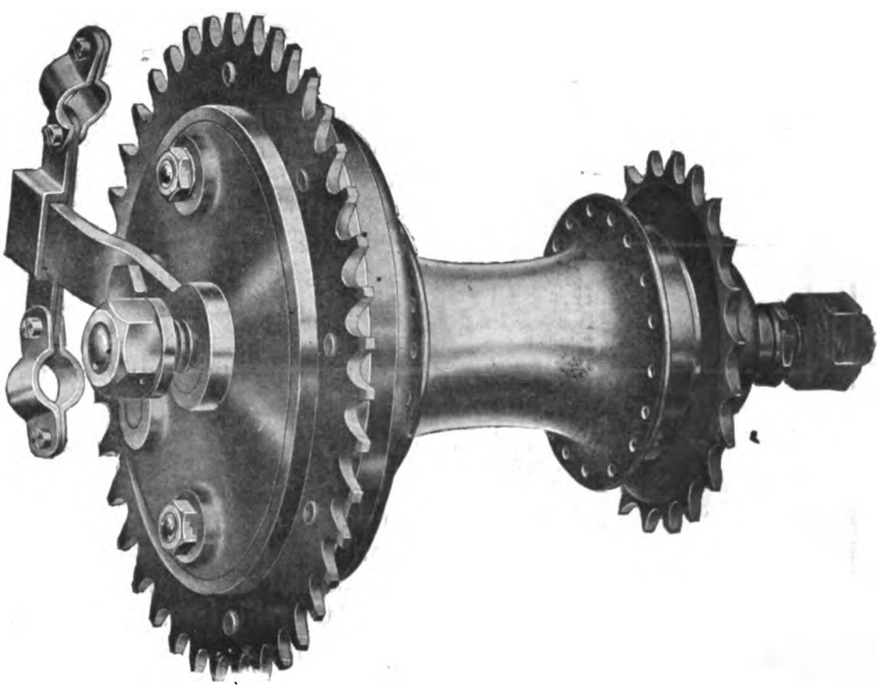
Digitized by Google

Brake for Motorcycles

Hold An Automobile!

steel, specially treated. The ball bearings are heavier than usually found in front wheels of many automobiles. The axles are unusually large, and so throughout the entire construction maximum qualities of strength, durability, toughness and resiliency have been secured.

¶ A glance at the mechanical principle of operation will convince that the brake cannot fail, cannot lock or bind. In fact, every test has demonstrated this brake to be ideal and almost perfect.



For Chain Drive Motorcycles.

¶ Motorcycle manufacturers, dealers and riders are invited to call at the New Departure booth, space No. 204, Balcony, Madison Square Garden Automobile Show, January 11th to 25th, examine this brake and see it demonstrated.

WRITE FOR LITERATURE TODAY.

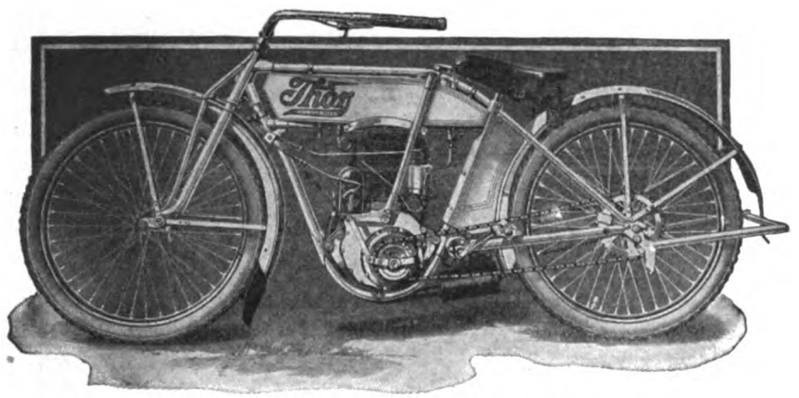
Thor

We are the originators of Chain Drive Motorcycles

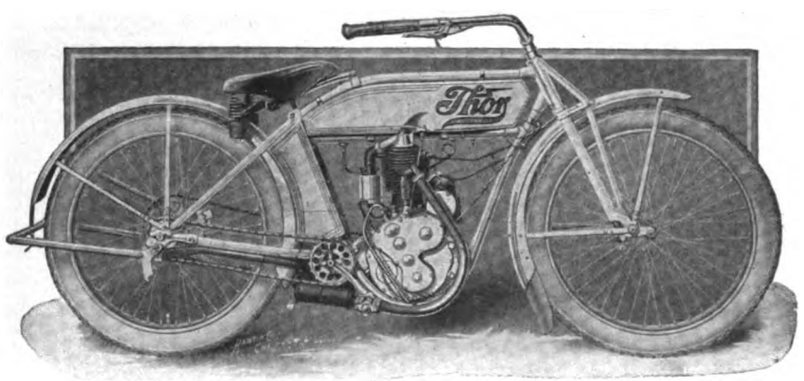
The name THOR has always been a synonym for motorcycle perfection. For clean cut beauty of appearance, for mechanical accuracy of makeup, for matchless performance, whether on the road or on the track, THOR motorcycles hold a distinct place in the estimation of "those who know."

It is our sincere opinion, corroborated by the leading engineers in America, that our 4 h. p. single is the fastest single cylinder ever made. The reason is not hard to find. Note its specifications: Bore, 3.25; Stroke, 3.60; Displacement, 30.50 cubic inches. Roller bearing connecting rods; mechanical overhead intake valves with THOR ball and socket joints; Carbureter, Thor improved twin air adjustment and butterfly valve; Bosch Armored Magneto; Thor undergeared internal gear direct chain drive; Thor improved ball bearing free engine clutch; wheel base 58 inches; control, Thor improved double grip, positively perfect at all times. Motor is mechanically oiled with the new Thor perfected force feed, oiling crank case direct. Two Speed and Two Speed Control, $40 extra.



Model "13-M" $225.00

On muddy, rutty, sandy, rocky roads and "stiff" hills, where tremendous pulling power is absolutely essential at slow speeds, that's where our model 13-W. shines. Its Big 5 Motor, with large radiating fins, larger cylinder and exhaust chamber, is just the thing for the rider who wants a sturdy, dependable motor, capable of furnishing all the speed he needs, but distinguished chiefly for its remarkable pulling power. Bore, 3.57; Stroke, 3.80; Displacement, 38½ cubic inches. Roller bearing throughout. Other specifications the same as Model 13 M. Two Speed and Two Speed Control, $40 extra.



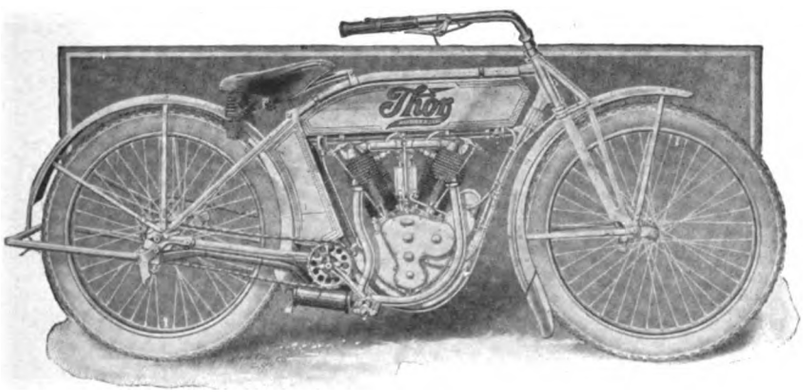
Model "13-W" $240.00

Digitized by Google

Thor

We are the originators of Chain Drive Motorcycles

Attention is called to the lithe, efficient appearance of our Model 13-U. Note the absolute absence of superfluous parts. The Thor 7 h. p. Twin is a handsome machine. It is a graceful machine. It is a machine that is easily handled. BUT—most important of all, it is positively the FASTEST STOCK TWIN IN THE WORLD, BAR NONE. The improved THOR clutch, the most reliable clutch made, forms an important feature of this "godlike" machine. In the THOR Twin the rider's cherished conception of what a motorcycle SHOULD BE is achieved in every respect. Power and speed, combined with durability and comfort make the THOR Twin a truly perfect machine.



Model "13-U" $290.00

SPECIFICATIONS: 7 h. p. Motor with Bore, 3.25; Stroke, 3.60; Displacement, 61 cubic inches. Cylinders are set upright 50 degrees apart. Motor, roller bearing throughout. Standard tire equipment, 29x2¾, otherwise the same improvements throughout as the 4 h. p. Two Speed and Two Speed Control, $40 extra.

DEALERS—It will be worth your while to investigate our proposition. Our tremendous organization, our large corps of experienced engineers, our practically limitless manufacturing facilities—these are at your disposal. Fill out the blank underneath and send it to us—preferably special delivery. Or better still, wire. There is not much time to waste.

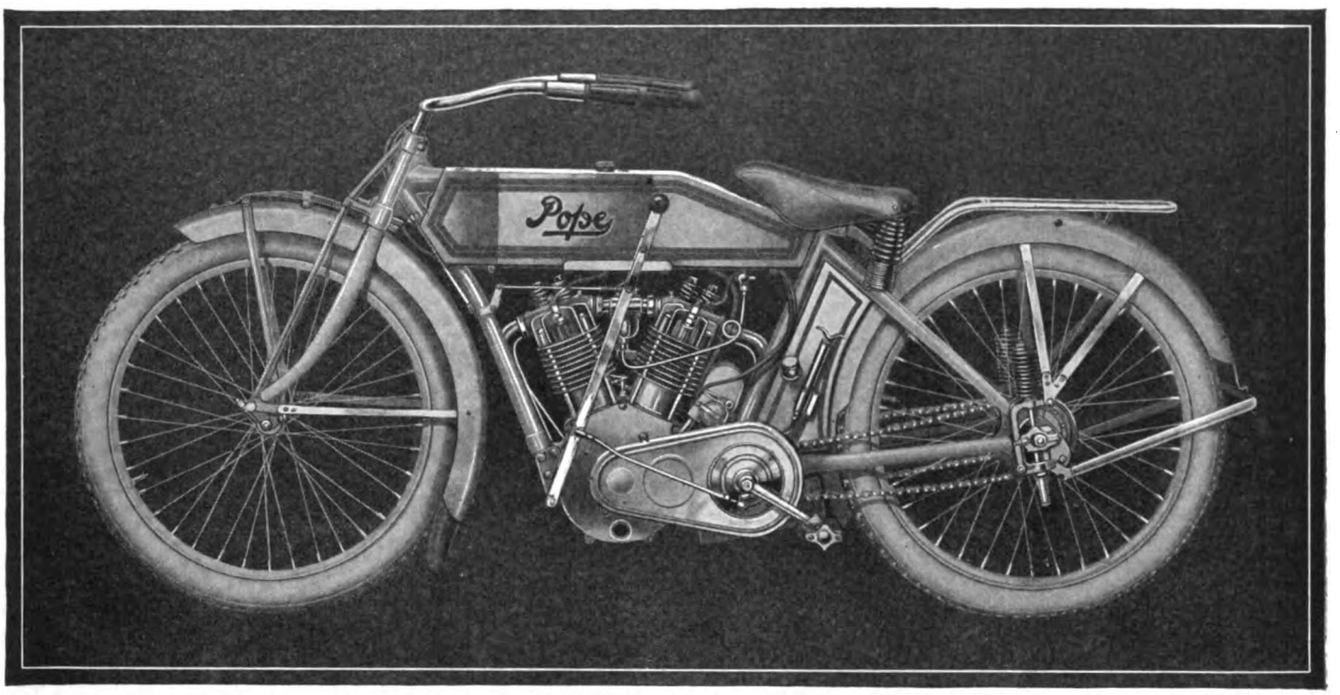
THE POPE "TWIN"

PATENT REAR SPRING SUSPENSION, POPE SPRING FORK, OVERHEAD VALVES, 7-8 H. P., SHAFT DRIVEN MAGNETO, IMPROVED MECHANICAL OILER - - $250.00



56½ inch Wheelbase—28 inch Wheels fitted with 3 inch tires.

A Wonderfully Fine Machine

Comfortable—Speedy—Powerful—Quiet—Handsome

THE PATENTED REAR SPRING SUSPENSION

alone would make this "TWIN" a marked machine. We have solved the problem of producing a really smooth riding motorcycle by means of a helical spring device which absorbs shocks, makes for greater comfort and safety and lessens the wear and tear on wheels and tires. The normal position of this spring is shown in the above cut. When the rider's weight causes the springs to expand, the load is suspended. As the wheel strikes an obstacle the rear axle, bearing-blocks, and guide-rods, rise easily, bringing the helical springs into expansive action and absorbing the shock.

FULL DETAILS OF REAR SPRING SUSPENSION AND OTHER FEATURES IN 1913 POPE CATALOG READY JANUARY 10th.

New Model M 5 H. P. "Single", Chain Drive, Rear Spring Suspension, Overhead Valves, $215

Full Pope Line for 1913—4 Models—Model L "Twin", $250; Model M, 5 H. P., Chain Drive, $215; Model K, 4 H. P., Belt Drive, $200; Model H, Lightweight, $165.

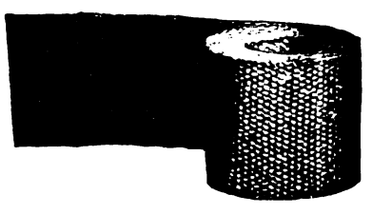
Continental-Erie Motorcycle Tubes

Continental-Erie Motorcycle Blow-Out Patches



Woven Steel Reinforced Grip
Rubber cut away to show construction.

We will exhibit a complete line of our Motorcycle and Bicycle Tires, Tubes and Sundries at the New York Automobile Show, from January 11th to the 18th, at Space No. 309, Grand Central Palace.

We will cordially welcome all Manufacturers, Jobbers and Dealers who visit our space.

Mr. Dealer: If you visit the New York Show, be sure and visit our space and look over our line of Motorcycle Tires and Sundries. If you will present your business card and register at our space, we will present you with a roll of our Non-Slip-Lag, or a pair of our new Woven Steel Reinforced Motorcycle Grips.

"Built for the Road by Men Who Know."

DeLuxe Motorcycles

Twins Only for 1913

IT is natural for every manufacturer to claim that his motorcycle is the best; but the up-to-date motorcyclist, particularly the experienced rider looking for his second or third machine, MUST BE SHOWN.

We therefore offer the following points of De Luxe superiority for critical consideration.

THE DE LUXE MOTOR

The real fundamental element of any motorcycle is the power plant, and the De Luxe motor is so far beyond any other motorcycle engine in every point in motorcycling that that alone puts the DeLuxe in a class far above the rest.

The De Luxe motor is designed right by experienced engineers and built right in one of the most completely equipped plants in the country, by selected mechanics who know and appreciate the necessity of absolute accuracy and perfection of workmanship.

The predominant features of this motor are the single horizontal cam-shaft, which operates both the exhaust and intake valves, and drives the magneto, thereby positively assuring absolute accuracy of timing, both of valves and ignition.

The De Luxe is the only motor ever built with overhead mechanically operated inlet valves, all working parts of which are inclosed and run in oil. Thus, it naturally follows that De Luxe is silent.

The main shaft runs on the finest imported annular ball bearings. The connecting rod bearings are the roller type and extra large, thereby assuring a practically frictionless motor. The fly wheels are large and perfectly balanced, thereby eliminating vibration and allowing an extraordinary high compression. The total of all this is a motor of maximum power, minimum parts, and one that is absolutely silent and frictionless.

FRAME AND FORK CONSTRUCTION

The De Luxe frame has been designed with the utmost care and the lines and re-inforcements are the result of scientific calculation. The fork is the now familiar trussed type with the familiar cradle spring. The main fork sides extend from the hub to the handle bar, with a two-point connection at the top.

The fork stem proper runs from the forged fork crown to the forged clamp that embraces the top of this stem and the fork sides. Thus the centre fork stem acts really as a pivotal member and all the load is carried by the fork sides.

There are, however, no unnecessary frills or freak schemes, which simply serve to complicate and increase the cost of a machine, without in any way improving it mechanically.

These are only a few points. The machine is built equally well throughout, and no motorcyclist can afford to buy his 1913 motor—and no dealer can afford to prepare for his 1913 business, without first carefully inspecting the De Luxe and De Luxe selling policy.

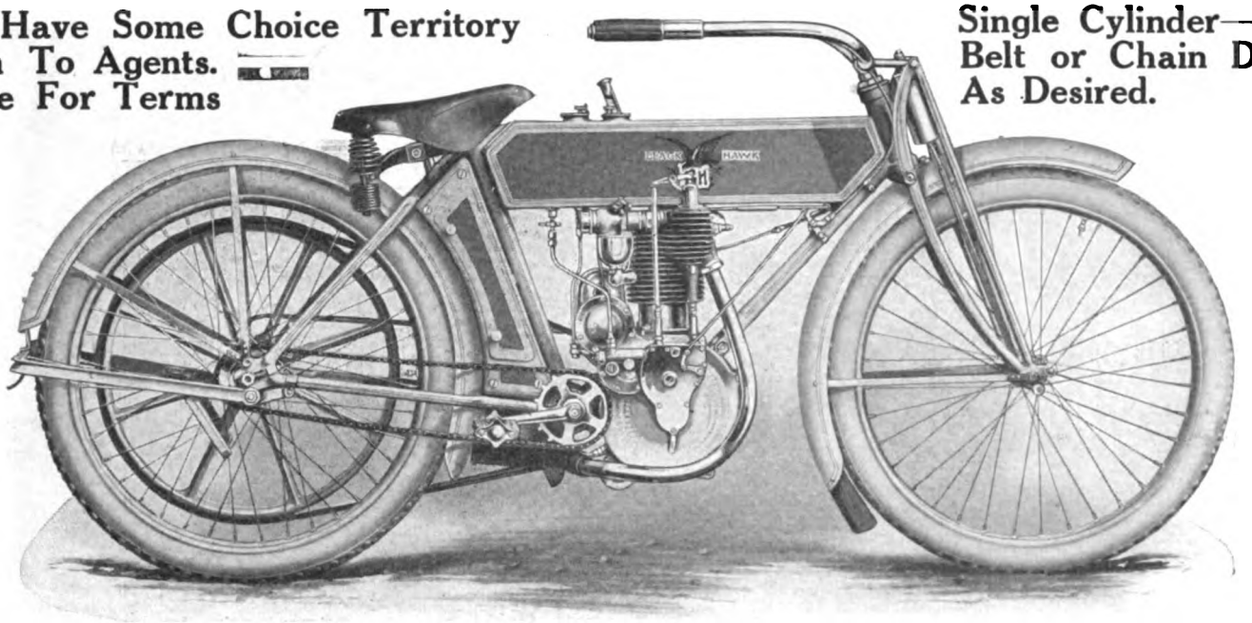
Single Cylinder—Belt or Chain Drive As Desired.



"BLACK HAWK"

For 1913—Now Ready

Here at last is the one motorcycle that doesn't expect to win approval by excelling in any one particular, but it combines so many advantages and superiorities that competition cannot rank with it. The mistakes and weaknesses of other motorcycles have been studied in the development of the "Black Hawk." All the good points have been multiplied in this motorcycle, all the impracticable, trouble-causing features have been overcome and eliminated.

Without A Fault or Undesirable Feature

This is no exaggerated statement. Our designer, who has had years of experience in building motorcycles, has seen the weaknesses in construction of various makes and has built for us a machine which is the embodiment of his genius and experience—a motorcycle without a fault or flaw anywhere.

The buyer of a Black Hawk Motorcycle will find little occasion to purchase another for a long time to come, as this motorcycle will continue to give good service, year after year, for an indefinite time.

There is a certain element of satisfaction in owning a motorcycle that will give the service that the "Black Hawk" will give—especially when it backs up its service with aristocratic appearance, ample power, simple, reliable mechanism and easy-riding qualities, which makes it the ideal motorcycle for touring, for speeding—for daily use, for week-end trips—for any and every purpose.

These and other points are all set forth in a handsomely printed booklet which we send free on request. Write for it today.

To Riders:

If you are thinking about buying a motorcycle, you will make no mistake going to a *"Black Hawk"* dealer.

First, because the dealer handling the *"Black Hawk"* has a motorcycle that he can sell with the guarantee that it will give you *perfect satisfaction always.*

Second, because you will actually receive *more real* motorcycle value out of the *"Black Hawk"* than can be obtained from any other machine.

No matter how you look at it—for *service*, for *mechanical perfection*, for *handsome lines* and *finish*—the *"Black Hawk"* has no real competition when it comes to delivering the goods, and you owe it to yourself to investigate our claims before putting your good money into any motorcycle, regardless of make and price.

If you will write us, we will send you a handsome booklet which will give you a more complete idea of *"Black Hawk"* motorcycles—their absolute *quietness in operation*, their *unsurpassed riding qualities* and *their perfect control at all times.*

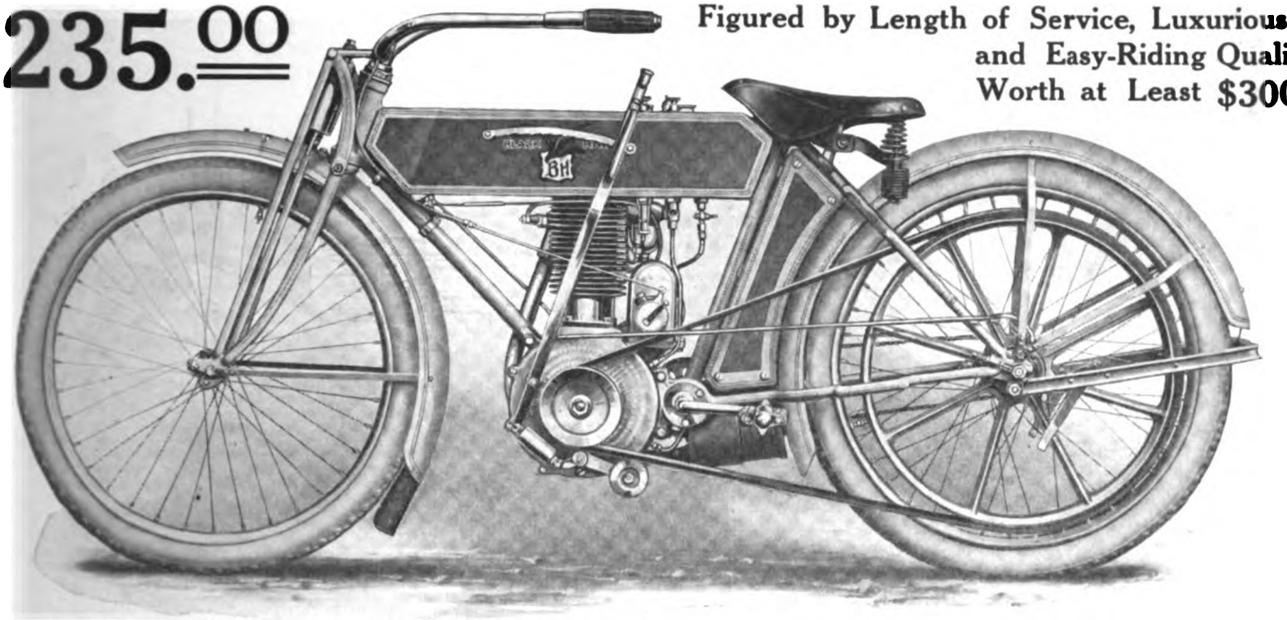
Black Hawk Motor Company

Dept. A **Rock Island, Ill.**

Digitized by Google

$235.00

Figured by Length of Service, Luxuriousness and Easy-Riding Qualities. Worth at Least $300.00



IN presenting the Black Hawk Motorcycle it gives us a great deal of satisfaction to announce that we know for a certainty that we have reached the point in constructing motorcycles where no one can produce anything better even at twice the price.

Read the points of superiority on this page. If these features count for anything—and they surely do—then the **"Black Hawk"** has a perfect right to call itself the **best motorcycle** and the best motorcycle is the one you want.

You can learn more about the **"Black Hawk"** from a handsome book we send free to all those interested.

A BRIEF OUTLINE of the "BLACK HAWK"

The points of advantage in the **"BLACK HAWK"** that are of particular interest to riders are as follows:

APPEARANCE. The Black Hawk Motorcycle is graceful in contour and trim in every detail—and built so without sacrificing stanchness or easy-riding qualities.

CLEANLINESS. It is free from all pockets and corners which collect and retain dirt. Can be quickly and easily made clean and kept so without trouble.

SIMPLICITY AND ACCESSIBILITY. The entire mechanism of the "Black Hawk" is greatly simplified, which adds to its efficiency and reliability. Any part can be removed and replaced with the greatest facility.

SADDLE POSITION. The Black Hawk saddle position is very low, so the rider can easily place both feet flat on the ground, which is most desirable if it can be obtained without cramped leg position. We have corrected the objections by placing the pedals as far forward as possible, permitting saddle to be well ahead of the rear axle and still comfortable. The forward position of feet affords ample leg room. The position of saddle is ideal from standpoint of easy riding and handling of the machine, especially on rough or sandy road.

ROAD CLEARANCE. Ample room between bottom of engine and the road gives us a great advantage over many machines, especially those of the loop frame construction, as on such machines the lower frame bar supporting the engine is very much nearer the ground and liable to suffer injury when running over rocky, hilly roads.

QUIETNESS. This feature, of course, is not apparent, but the quietness of the "Black Hawk," due to the motor construction and muffler, is most remarkable.

MOTOR DETAILS

CRANK CASE. Oil tight joints; smooth, clean, easily accessible.

POWER. Motor develops over 6 h. p. on brake test, which is considerably more than claimed for any other motor of this size and type.

RELIABILITY. Fewer working parts and design give assurance of absolute reliability under any and all conditions.

FLEXIBILITY. That we here again excel is evidenced by the fact that the motor will develop road speed of from 50 to 60 miles per hour—yet can be throttled down to 4 miles per hour.

PERFECT COOLING CYLINDERS. The cylinder is designed to afford the most perfect radiation, so it stays cool and maintains the high efficiency of motor always.

LIGHT PISTONS. The special construction of pistons and use of concentric rings is such as to permit of much lighter wall than ordinarily. As lightness is a very important feature, the value of this form of construction can be easily seen and appreciated.

FLY WHEELS. Accurately balanced with weight in rims, so that it gives the machine good hill-climbing powers.

CRANK SHAFT. Carefully hardened and ground—much larger than in average engine of same size—and run in highest grade of bronze bearing metal, which is the most satisfactory bearing in this place.

VALVES. Mechanically operated type, easy to remove when occasion requires.

CAM ACTION. Cams for both valves, cam shaft and cam gear are all made in one piece from steel drop forging, making it impossible for cams or gears to get loose and destroy the timing.

IDLER. We have made a great improvement in the neatness of design and efficiency of the Idler, all bearings being provided with balls. Also all places for adjustment have been taken care of so the Idler pulley cannot get out of line with the belt.

CLUTCH. Located on the inside of the rear hub out of the way and out of sight. Thoroughly protected, has extremely large friction area, is very flexible and durable—being of multiple steel disc type.

BRAKES. Also of multiple steel disc type. Absolutely reliable, easy of operation. Machine can be checked up easy, or wheel locked in emergency if desirable.

MUFFLER. Very efficient. On ordinary speed there is hardly any sound. Only about two per cent. loss of power through its use against 15 per cent. in ordinary type.

OILING SYSTEM. The distribution of oil has been carefully worked out in the "Black Hawk" so that the oil reaches all bearings and keeps them flooded at all times. Our mechanically operated pump is exclusive with us. Patents are now pending.

FRAME. The straight line or bridge form of construction which we use is conceded not only to be the best looking but the strongest known to the motorcycling trade. The frame is reinforced so as to positively prevent centralization of vibration and is absolutely reliable under most severe conditions. Other advantages of our frame are the method of hanging the motor into the frame, permitting its easy removal, large gasoline and oil capacity, oil and gasoline control in a protected position on top of tank.

SPRING FORK. The construction of our spring fork is such that it is impossible to bottom the spring or extend it beyond safe working limits so that breakage is absolutely eliminated.

IGNITION. The "Black Hawk" is equipped with latest model high tension Bosch magneto, mounted in the rear of motor and parallel to the cylinder on shelf cast integral with crank case.

MUD GUARDS. Wide and neat in design, being deep and with flanged sides to prevent mud and water from splashing side-wise onto the rider or belt.

TOOL BOX. Of pressed steel, neatly designed, set between seat mast and rear guard. Made in two parts and can be easily removed. Has large door on one side with near and substantial latches.

TOOL EQUIPMENT. Includes complete set of tools, gear and pulley removers, etc., with which all parts can be removed or replaced easily without trouble or annoyance.

PRICE

When consideration is given to the way in which every part of the Black Hawk Motorcycle has been designed and manufactured to obtain the highest degree of efficiency, durability, reliability, simplicity, accessibility and neatness you can readily see that we may claim the utmost in motorcycle construction for the "Black Hawk"—yet with all the extra value the price will be only

SPLITDORF

"ALWAYS THERE"

TWO NEW MAGNETOS

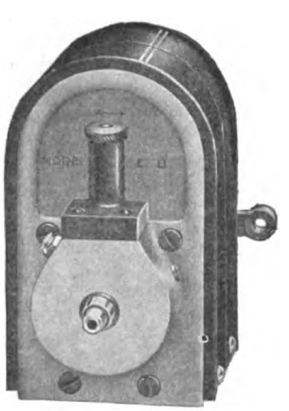
designed for motorcycles—made for motorcycles and good for the life of any motorcycle engine and then some—now make their appearance for the first time.

Every motorcyclist owes it to himself to inspect the new SPLITDORF instruments. In appearance they are just about the best, neatest and most compact ever offered and in effectiveness their equal is not to be found.

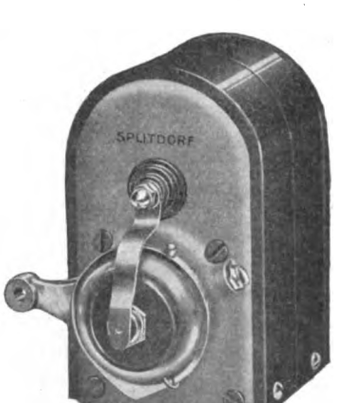
The "EU" is the enclosed single-cylinder instrument, while the "EV" is the enclosed 2-cylinder type and their appearance has been discounted to the extent of tremendous equipment orders.

Don't be misled on these new SPLITDORF instruments—examine their superior high-grade finish and details that stamp them as LEADERS.

SPLITDORF MAGNETOS are waterproof with an aluminum covering extending over front and back plates. Windings have been so designed as to make easy starting with these machines a certainty, and every feature typifies a high and advanced example of ignition engineering skill.



Back View "EU" Magneto.



Front View "EU" Magneto.

The Lunar Lamp assures Freedom from Lamp Troubles

NIGHT riding on a motorcycle is one of the keenest, most enjoyable pleasures and is rendered practically as safe and comfortable as day riding through the use of the NEW LUNAR Motorcycle Headlight—

The Strongest, Most Powerful and Economical Motorcycle Light Made.

THE LUNAR is made from heavy gauge material throughout, body constructed in one piece with no rings or pockets to allow collection of dust. The double reflector is a feature found in no other motorcycle light. The Mangin Mirror throws a clear, white and powerful light far ahead while the inside reflector diverges the rays, lighting both sides of the road. This feature is doubly valuable to the rider on extremely dark country roads or streets.

Specifications

Diameter of MANGIN MIRROR, 5 inches; Diameter of Flange, 8 inches; Extreme length, 6 inches. Brackets adjustable to fit any motorcycle. Nickel finish will be furnished regularly. Other standard finishes at no extra cost. You can get a LUNAR from your dealer; if he doesn't handle it, write us and we will ship direct from factory.

The Super-Dreadnaught of Chains

Powerful—speedy—silent—tremendously efficient in action—built to withstand the attack of the elements—constructed with infinite attention to detail—strong and invulnerable as Gibraltar itself

"The Coventry" Chain

can well be termed "The Super-Dreadnaught of Chains."

Its silent, supple action, coupled with its tremendous strength—thirty-six hundred pounds' weight sustaining capacity—makes it the ideal transmission for every motorcycle.

Especially is "The Coventry" Chain adapted to the powerful twins which will be the vogue in 1913. And its enormous pulling power makes it the transmission par-excellence for side-car work.

In short, for every purpose, racing, hill-climbing, touring or just plain "boule-vardiering"—"The Coventry" Chain is admittedly the PERFECT DRIVE.

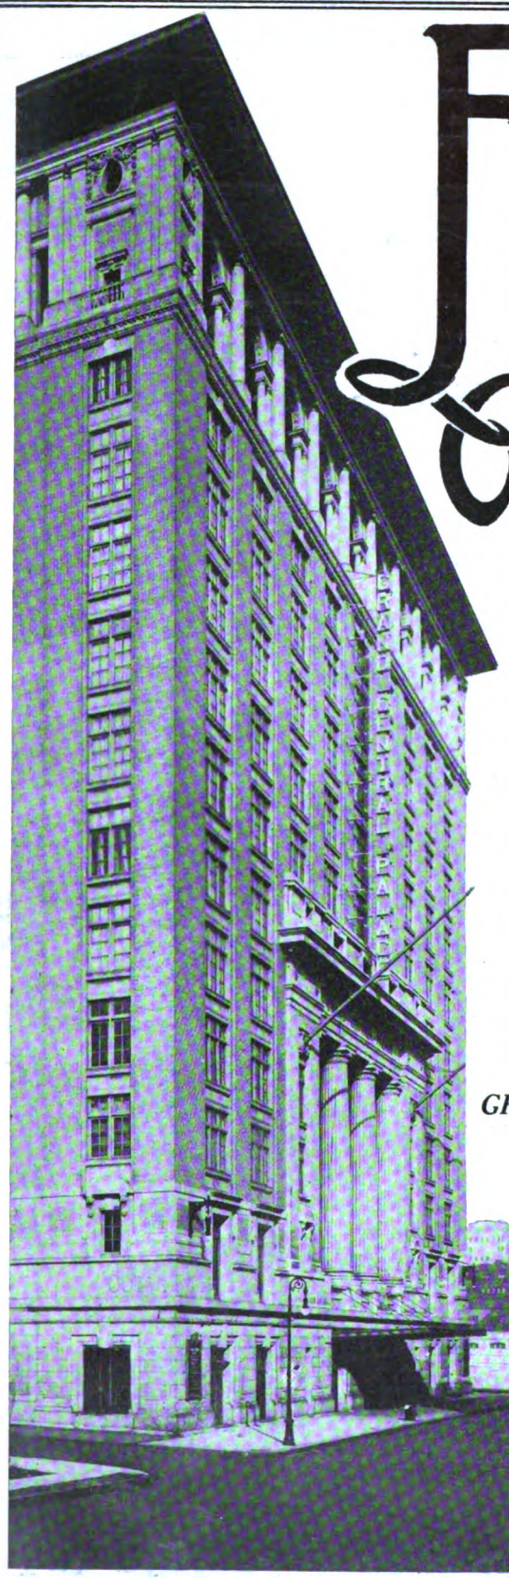
MOTOR ILLUS

FORECAST of



EVERY desire on the part of riders and users of motorcycles will be catered to, it is safe to predict, in the forthcoming Motorcycle Show in the Grand Central Palace next week. Ranging from the 3½ horse single to the monster 9 horse twin, from the requirements of the sober-paced solo rider to the cross-country record-breaker or speed enthusiast and the sociably-inclined rider who fits a sidecar, a variety of choices can be made in every case. Nor will the commercial element be neglected in this respect, as devices for carrying articles weighing up to 600 pounds loads will be shown.

Compared to the 1912 shows, the changes in general are more in the line of refinements in construction and appearance rather than as startling innovations. The season of 1913 will, however, show the increase in devotees in at least two important elements of construction: spring frames and hub variable gears. A greater trend toward standardization in control, equipment and the like is likewise very noticeable, and indicates the stability of the industry in all connections as well as the constant search for betterment in all directions and proportionate advances toward the final goal. From the veriest novice to the most experienced rider there will be plenty of features of interest throughout the exhibits and greater variety than for several years past.

A Heavyweight Season.

WHILE there will be plenty of exhibits showing 4 horse single machines, and at least one showing a 3½ horse single, there will be noticed an advance in power in numerous instances in the newer models particularly, and the 5 horse single may be said to be the "regular" type for 1913. It is not by any means that the 4 has been found wanting in any lines to which it has been applied, but there has been a steadily growing demand for singles slightly more powerful than the 4, and the 5 has been put out to satisfy this demand. The light and medium single and twin have disappeared, the latter never having been popular with American riders, but it is unsafe to predict that there may not be a demand for a medium twin before we again pass along the line of exhibits in 1914.

Big Twins Also.

IN line with the increase in the power of the singles, there is a corresponding increase in that of the twins, 8 horsepower and as high as 9-12 being fitted in several cases. To the increase in long distance touring and to the use of the sidecar and other passenger attachments is probably due this advance, rather than in the desire for greater speed, but it will undoubtedly be a long time before the regular standby of previous seasons, the 7 horse twin, will be succeeded universally by higher-powered motors. The construction and marketing of these big motors with air-cooling, to the technical mind, shows the firm grasp that designers have on the relatively difficult problems of motors of this type.

Few Variable Gears.

AS far as numbers go, there will be seen no gain in the ranks of the variable gear advocates, but whereas in the past season the chief representation was in the countershaft

FRANK MERRITT

Digitized by Google

CYCLE TRATED

the NEW YORK SHOW

type of dog-clutch, planetary and sliding gears, with but one example each of the engine-shaft and hub devices, the devotees of the latter type have slightly increased in number, including the Thiem and Merkel among others, which, with the engine-shaft Thor type, practically ties the countershaft position followers for 1913. Dog-clutches advocates are the Indian and Michaelson, while the Pierce retains the sliding type with indirect drive on both speeds. Two ratios only will be fitted to all, the three-speed device having not yet made its appearance.

Undergearing and Countershaft.

A DIRECT chain drive with main reduction by undergearing is to be seen on the Reading-Standard and Thor machines, but the majority of chain mounts will be of the countershaft type, having a primary drive to the countershaft and a final drive from the latter to the rear sprocket. On the belt models the drive is direct, any variable gear device being fitted either to the hub or engine-shaft.

Free Engine Devices.

THE free engine device is now practically universal, no matter what the transmission means, and the multiple disc clutch of Eclipse make the most used. This type of clutch other than of the make mentioned is to be found on the Indian, Thor and Pierce makes, while cone-clutch advocates will be found in the Reading-Standard and Iver Johnson. The Harley-Davidson continues the characteristic free-wheel disc clutch of former seasons in the hub. Control is by hand lever at the left side of the frame, with the exception of the Indian two-speed mounts, where a rocking pedal is employed.

Carbureter Construction.

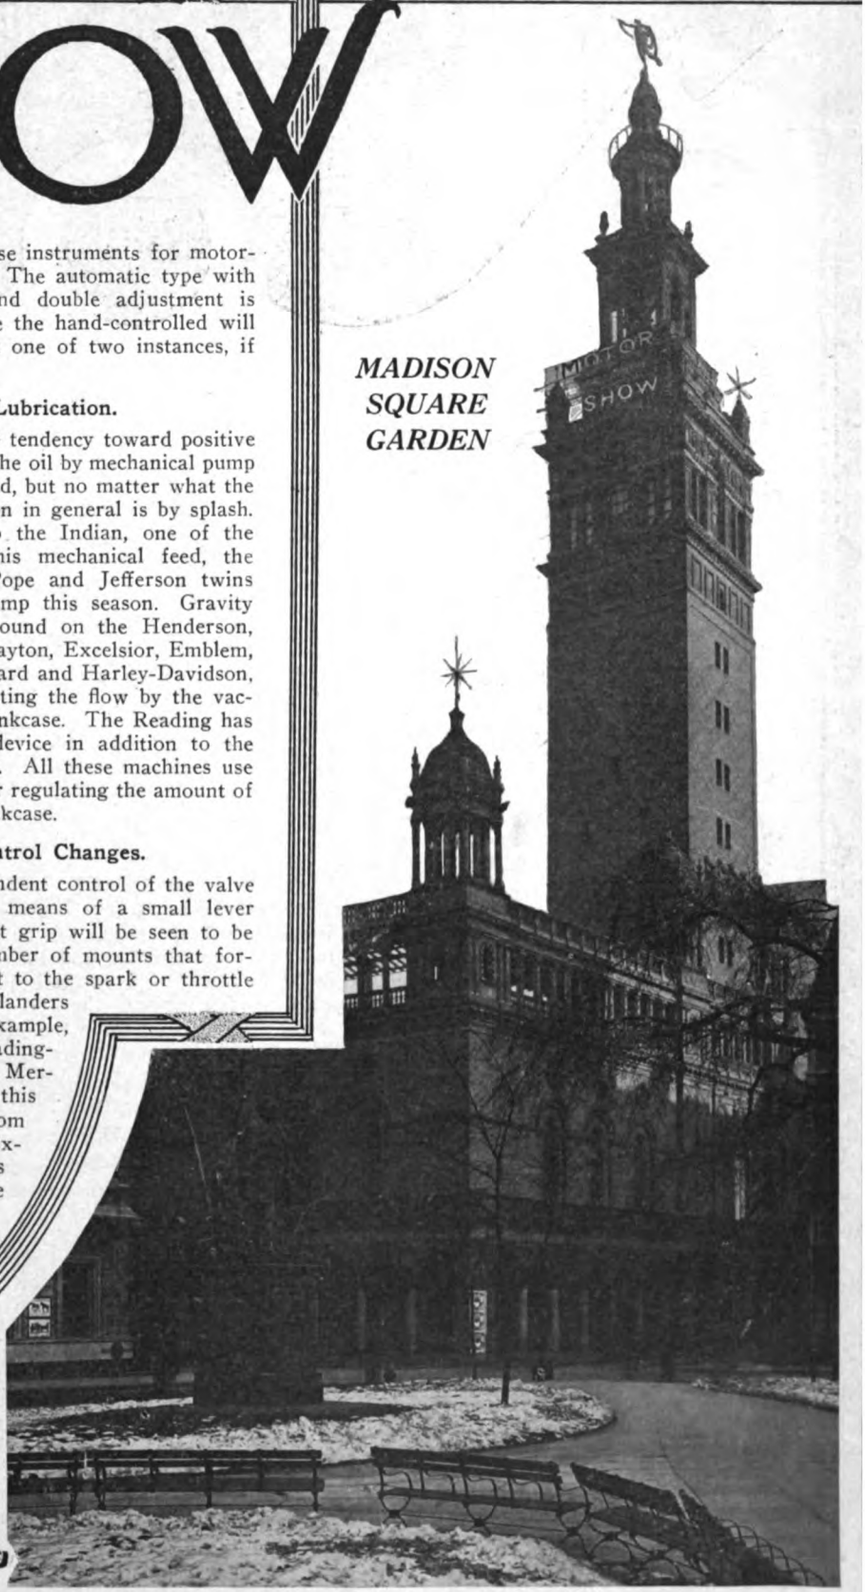
ONLY minor changes will be observed in carbureter construction, an indication of the great reliability of these instruments for motorcycle service. The automatic type with both single and double adjustment is the rule, while the hand-controlled will be seen in but one of two instances, if at all.

Lubrication.

A STRONG tendency toward positive feed of the oil by mechanical pump will be observed, but no matter what the feed, lubrication in general is by splash. In addition to the Indian, one of the pioneers of this mechanical feed, the Yale, Thor, Pope and Jefferson twins will fit the pump this season. Gravity feed will be found on the Henderson, Pope single, Dayton, Excelsior, Emblem, Reading-Standard and Harley-Davidson, the latter assisting the flow by the vacuum in the crankcase. The Reading has a measuring device in addition to the regular system. All these machines use a sight-feed for regulating the amount of oil to the crankcase.

Control Changes.

THE independent control of the valve lifter by means of a small lever under the right grip will be seen to be fitted to a number of mounts that formerly linked it to the spark or throttle grip. The Flanders twin is an example, while the Reading-Standard and Merkel continue this arrangement from 1912. The Excelsior models operate the clutch by means of the left grip.



MADISON SQUARE GARDEN

Digitized by Google

MOTORS

FOUR-STROKE motors giving one impulse per cylinder every two revolutions form the bulk of those to be exhibited in the Grand Central Palace next week, and will be seen in single, twin and four-cylinder types, the latter being in the minority. The only two-stroke advocate, Schickel, stands alone in this field, but with two models, a 5 and a 6 h. single. This motor is valveless, and has one firing stroke per revolution, taking the explosive mixture for the crankcase and under side of the piston from ports opened by the latter near the foot of its stroke. The burned charge is exhausted through ports at the lowest part of the stroke, as these are uncovered during the downward movement of the piston, and at the same time a new charge is compressed in the crankcase. Minor changes only have been made in these motors since their first appearance, two years ago, at Chicago.

Twins and Singles.

AT this period it is difficult to state which of the two types, single or twin, will be used in the majority, but in point of numbers shown the "one-lunger" will depress the balance in its own favor. Practically every maker of a twin makes a single also, but there are motors made as singles only, such as the Black Hawk, Pirate, Schickel and Thiem. There is a notable tendency toward increase in the power of both types, the 5 single probably being able to hold that it is the "regular" type for the new season, although the 4 single will be seen at the stands of a large number of exhibitors as the Monarch, Indian and M. M. among others. Similarly, the 8 and 9 h. twins have come into popularity, but by no means have they displaced the 7. It will be several seasons at least before this popular-powered motor will step down from the position it has held heretofore. It may be that the increase in power is due to the growing use of the side-car and of more general long-distance touring, rather than in the desire for more speed on the road. Among those fitting the 8 h. twin are the Dayton, Reading-Standard, De Luxe and Eagle. The Harley-Davidson will put out a 7-8 twin, as will the Merkel. Among the stanch retainers of the 7 twin are the Indian, Yale and Excelsior.

Mechanical Inlet Valves.

WITH but few exceptions, all inlet valves are mechanically operated, one former advocate at least of automatic inlets having gone to swell the ranks of the mechanically-actuated devotees. The location of the inlet shows a strong tendency toward the single-chamber location, where the inlet is operated vertically over the exhaust valve in a common chamber. This form is known as the single-chamber L-head arrangement. Among users may be mentioned the Indian, Merkel, Monarch, Black Hawk, Harley-Davidson, Dayton, Eagle, Spacke and Excelsior. The side-by-side L-head type, with valves in separate chambers has its advocates in the Reading-Standard, the pioneer in this country, the Iver Johnson, and the Minneapolis-Pirate. Valves in the head advocates number, among others, the Jefferson, Pope, Curtiss, while the automatic inlet's chief advocate is the M. M. It will be seen that the valves-in-head ranks have been augmented since 1912.

Bearing Types.

THE plain bearing will be seen on the majority of motors, but there has been an increase in the roller-bearing and ball-bearing ranks, so that the question as to the final type of motorcycle motor bearings is far from being definitely decided yet. The Indian motors have roller bearing crankpins for the new season as compared with the plain bearings used heretofore, while the M. M., Eagle and De Luxe also employs this type. Ball-bearing advocates are the Reading-Standard and Schickel two-stroke among the more prominent. There is quite a tendency toward the use of both plain and ball or roller-types noticeable.

Magneto Drive and Position.

BUT few motors with battery ignition will be shown, the preponderating majority being fitted with the high-tension magneto as the source of current. Drive is by spur gear-train for the most part, exceptions being the Spacke and the Iver Johnson, which employ cross-shafts with worm or spiral gear drive. The Schickel drives the magneto by means of a "banjo" connection, while the M. M. twin uses elliptical gears in a train. As regards position, indications point toward the location behind the cylinders as in the Reading-Standard and Harley-Davidson, although the forward position advocates still hold their own. Probably, with the newer enclosed magnetos, the question of position is not of such vital importance as was the case when open magnetos only were fitted. The M. M. twin fits the magneto between the cylinders, while the Henderson four-cylinder has it at the left side and driven by shaft, car fashion.

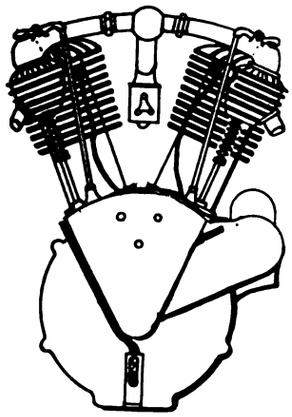
Cylinder Angles.

IN the case of twins, the 45 degree angle was, with two exceptions, that most used in 1912. The Indian had and continues the 42 degree angle, and the Thor the 50 degree angle, but a newcomer follows Continental practice in having the angle of 60 degrees. This is the Iver Johnson with side-by-side valves and 7 h. It is to be hoped that the multiplicity of angles which characterize European twin construction will never be adopted here, as with the M. M. twin of 90 degrees there are now five different arrangements for 1913.

Four Cylinders.

PRACTICALLY no new converts to the four-cylinder ranks will be seen this 1913 season. The Pierce and the Henderson are the chief in this field of construction, one employing the T-head motor, with valves on opposite sides, while the Henderson has the single-chamber arrangement. The Pierce uses

Digitized by Google



Merkel 7.

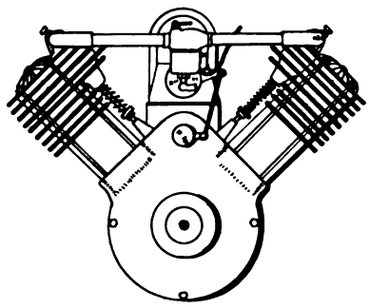
a magneto with separate distributor, while the Henderson employs an automobile type machine, the DU4 Bosch.

Merkel Twin.

ABANDONING the automatic inlet for the mechanical single-chamber arrangement are the Merkel models, the twin of which is here shown. From a "square" motor the 1912 product has been changed to a 3¼ bore and 3 43/64 stroke type with a new form of crankcase but a similar form for the cylinders, characteristic of Merkel construction. The cylinder angle is 45 degrees, and there is an oil gauge fitted at the right side of the crankcase, enabling the rider to observe his fuel level from the saddle. On the two-speed model, an innovation in motorcycle construction will be noticed. It is a spring starter, with capacity to turn over the motor eight times at least. This starter is operated by a small pedal, and covers the end of the engine shaft.

Pope Twin.

A NEWCOMER in the twin field is the overhead valve Pope with separable head and straight through inlet and exhaust passages. It is known as Model L, and has perpendicular flanges on the cylinders and longitudinal cooling ribs on the heads. The straight through construction allows the charge to pass in and out with the least resistance. This twin is typical of overhead valve practice for 1913.



Marsh-Metz 8.

Marsh-Metz Twin.

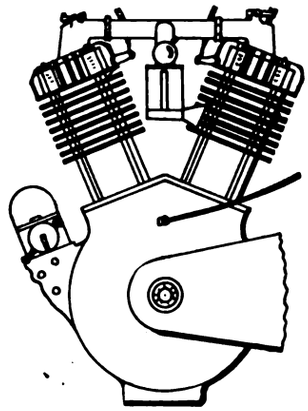
THE only 90 degree twin on the market will be seen where the M. M. machines are exhibited, being the 8 h. model. The inlet valves are automatic, as in previous models, but the pistons are of a new construction, being with their rings of vanadium-iron. There are two rings with an oil channel between and a larger oil groove around the wrist pin. The valve arrangement is, of course, the single-chamber type and the magneto, centrally located, is driven by elliptical spur gears.

Jefferson Twin.

FOLLOWING the general design of the Waverley single in valve arrangement is the Jefferson twin, shown herewith. The inlet and exhaust passages are straight through making for facile entry and exit of the charges of gas. Noticeable are the gentle curves in inlet and exhaust pipes. The magneto is mounted in front of the motor and the crankcase is smooth, making for ease in keeping the power plant clean. The power is 7 and the cylinder angle 45 degrees.

Indian Twin.

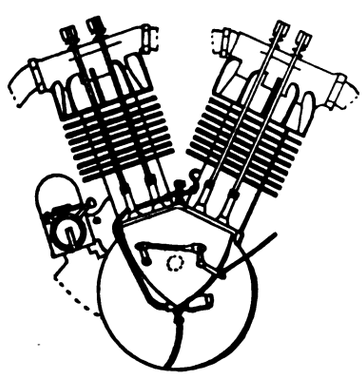
THE construction and appearance of the Indian motors is almost too familiar to need description here, and the changes made for 1913 are very minor, being in an added length to the transmission side bearing and steel flywheel discs. The kick—or pedal—starter is slightly altered to have the foot-pin swing out of line when not in use, and a rubber tread is fitted to it. The ratchet is also slightly altered in the manner of carrying it. This machine has the foot starter on the two-speed models only, and was the pioneer in fitting other than pedal-gear starting in this country. Other details need no comment.



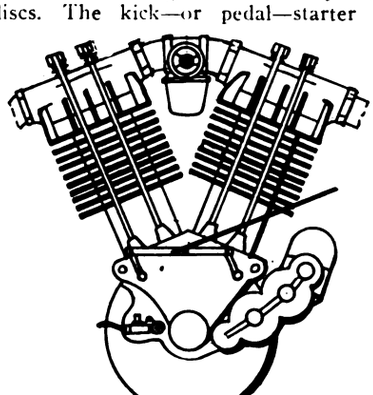
Indian 7.

Spacke Twin.

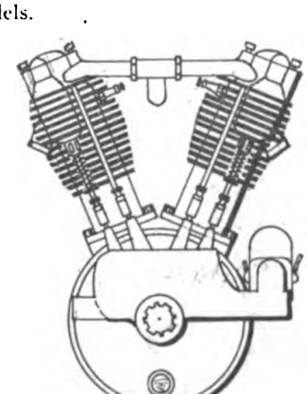
THE Spacke motor, used on the Eagle, Dayton, De Luxe and Michaelson machines is of the single chamber, inlet over exhaust type, the twin model of 8-10 h. being here illustrated. The inlet valve is in a dome, and the rocker lever and dome itself are enclosed in a hood, the inlet rocker rod passing from the tappet through holes in the cooling flanges. Roller-bearings are used on the big ends of the connecting-rods, and the magneto is driven by spiral gears and a horizontal shaft. The cam connection is peculiar, the working faces being on one side instead of on the circumference, as in ordinary practice, while the cams are formed integral on the lateral shaft which drives the magneto. The oiling distribution is to the connecting-rod bearings at both ends as well as the shaft bearings, the splash from the crankcase being distributed by suitable internal construction. These motors are made in 4 and 5 single and 7 and 9 twin models.



Pope 7-8.

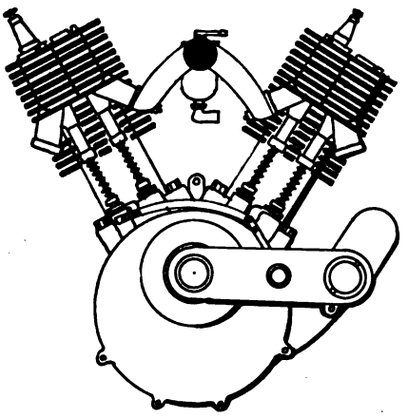


Jefferson 7.



Spacke 9.

Digitized by Google



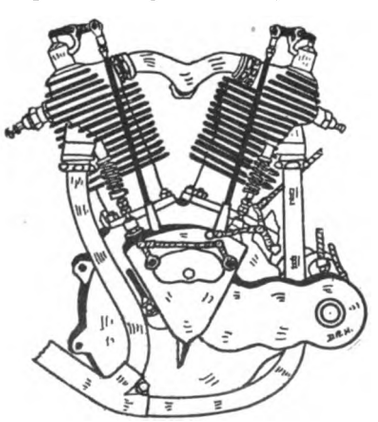
Iver-Johnson 7-8.

Iver Johnson Twin.

A SIDE-BY-SIDE valve twin is the Iver Johnson, with 7 h. and magneto at the front of the motor. The arrangement of inlet piping is unique, and gives excellent distribution of the gas to each cylinder, the inlet branches being always full of mixture. The curves of the exhaust pipes are gentle, facilitating easy flow of the burned charges, and no muffler is fitted, there being a very long tail-pipe with large perforations. The cylinder angle is 60 degrees, and in the use of this angle the makers are pioneers in this country. A smooth crankcase makes for ease in cleaning and the arrangement of covers in the distribution and magneto casings for ready inspection and adjustment.

Schickel "Bix Six."

THE latest addition to the two-stroke Schickel line is the "Big Six," shown herewith. Like previous constructions of this firm, there are no valves, but the arrangement of the connections is changed as compared with the 5 h. model. The exhaust is in front and connects with a very large muffler fitted with a tail-pipe with "sharpened" end. The carbureter is at the rear, and the compression relief is fitted within a casing so arranged that any oil discharged will be retained until let out by a plug at the bottom. The carbureter used is of the puddle type, and is fitted with a drain to prevent too high a level in the "puddle." The motor has a bore of 4 inches; very large for an air-cooled motor.



Excelsior 7.

Excelsior Twin.

THE Excelsior is a 45 degree angle twin, of 7 h., and in many respects is typical of standard twin practice. It was one of the pioneers in smooth crankcase construction, and still retains for 1913 its scientific inlet piping, ensuring proper distribution of the mixture to the cylinders. Excelsior motors in both single and twin types are of single-chamber valve arrangement.

Harley-Davidson Single.

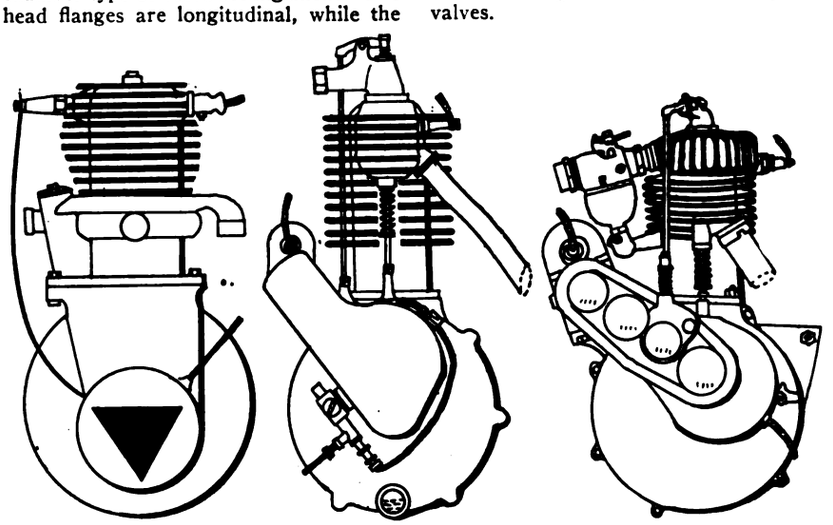
THE Harley-Davidson "5-35" will be seen as the latest model of the Milwaukee firm, and is of the single-chamber type of valve arrangement. The head flanges are longitudinal, while the cylinder body flanges are lateral. The magneto is fitted behind the cylinder, and the inlet and exhaust valves have each their own independent cam and action. An oil pocket is arranged in the exhaust chamber, catching the oil on the valve stem and vaporizing it, making for cleanliness. The semi-automatic vacuum feed used with success on former models of this make is continued, and there is a new breather device which carries the oil out below the bottom of the crankcase.

Yale Single 5.

ANOTHER single with the inlet over exhaust arrangement is the Yale 5, which succeeds the 4 h. model of last season. The inlet rod passes through holes in the horizontal cooling flanges and through the inlet connection to the dome carrying the valve. The exhaust passes out at an angle through a straight section of pipe followed by a big loop, giving relatively free passage, while the straight inlet pipe enables the freest possible induction of the fresh charge. A mechanical oil-pump feeds the oil from the tank to a two-way connection, one branch of which goes to the distribution casing and the other to the crankcase. The magneto is located behind the cylinder.

Reading-Standard 5.

THE successor to the 4 h. single Reading-Standard is the new 5 single shown herewith. Typical of this firm's construction are the inlet and exhaust cams and half-time gear in one piece, the valves being operated by rockers through tappets. The exhaust lifter acts directly on the exhaust tappet, thus obviating any bending of the valve mechanism. The magneto is carried on its seat by a strap of steel, and is behind the cylinder. Like other Reading motors, it has side-by-side valves.



A Trio of Single Cylinder Motors—Schickel Two-Stroke "Big Six," Yale 5 and Harley-Davidson 5, the two latter showing standard valve practice.

OFFICERS ELECTED

CLEVELAND, O.—Contests marked the election of officers for 1913 by the Cleveland (Ohio) M. C., and it was only after three ballots had been taken that J. D. Waltz took a lead over F. B. Preston for the office of president. R. S. McConnell is the retiring president. H. Johnson was chosen as vice-president; Raymond Ray, recording secretary and treasurer; George McIntyre, financial secretary, and Oran Entres, publicity chairman. The directors for the coming term are: R. S. McConnell retiring president; H. H. Huntsbery and A. J. Macbeth.

A SQUAD of motorcycle messengers has been established by the Shubert theater in Milwaukee, for the delivery of theater tickets.

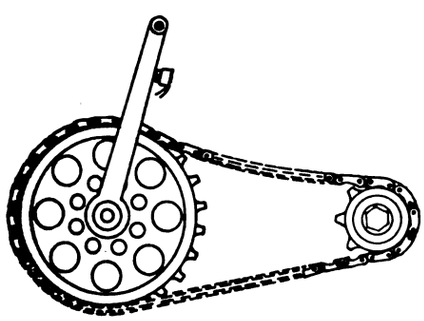
Digitized by Google

GEARS & CLUTCHES

THERE are few machines for 1913 which will not be provided with a free-engine clutch, and those to be seen in the Grand Central Palace shortly will show clutches fitted in all three of the chief locations; engine shaft, countershaft and rear hub. The majority of machines have the devices fitted in either of the two first-mentioned positions, the chief advocate of the hub position for the clutch being, as in previous seasons, the Harley-Davidson. The actuating lever is mounted just forward of the seat mast, as in the 1912 design. On the belt-drive machines of this make an idler operated by a hand-lever is fitted in addition to the clutch lever, and the location of both is such that no mistake can be made in reaching the proper lever.

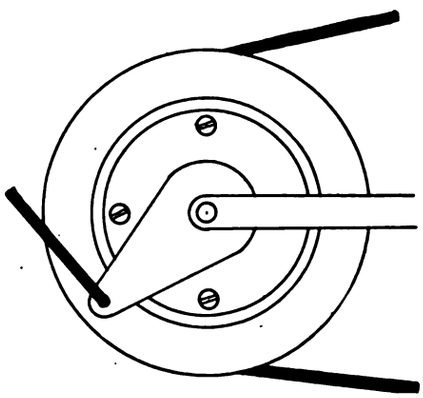
Multiple Disc Predominates.

OF the several types of clutch to be seen the multiple disc predominates. The actuation of practically all clutches is by hand-lever at the left side of the frame, as in the cases of the Dayton, Merkel, Yale, Indian single-geared, Pope and Schickel Six. These machines have the clutch located in the countershaft position, while the Pope Four, Reading-Standard Four, among others, have lever control with clutch on the engine shaft. The clutch most used is the Eclipse.



Indian Foot-Starter.

ON the Indian two-speed machines will be seen a heel-and-toe pedal alongside the left foot-board for controlling the clutch, which on all these models is of Hendee make. This design appears for the first time in this country on Indian machines, and is an excellent means of control. The pressure of the rider's toe disconnects the motor from the final drive, while a movement of the heel engages the discs with each other. On the new Excelsiors the clutch is operated by a twist grip on the left bar, as is the case on both models of the Schickel. On the belt model of the latter the grip operates the idler, and on the chain models, the Eclipse disc clutch.



Eclipse Clutch.

Cone Clutch.

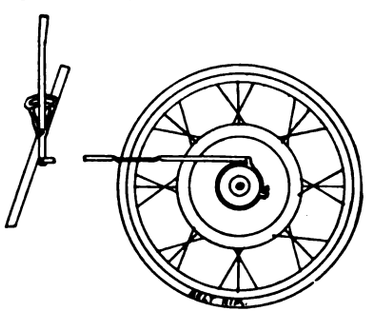
ON the Reading-Standard single 5 and twin, and on the Iver Johnson mounts, cone clutches are employed, operated by hand lever on the left side of the frame. The Reading clutch has the male cone carried by the undergearing, and the female cone carries the chain and sprocket. The latter cone is moved out of contact for the free engine position, and is controlled by a latched lever working over a toothed quadrant. The male cone of the Iver Johnson engine-shaft clutch is forced inward for the release, a fan-shaped surface on the hand-lever effecting this inward movement. There is no undergearing in this model. There are no instances of cone clutches carried in the countershaft or rear hub positions.

Eclipse Clutch.

THE Eclipse clutch is of the multiple disc type, adapted for either engine shaft or countershaft positions. The casing carries the transmission member (sprocket or pulley), and has internal lugs formed in it on which are carried the positive discs. Through the center of the casing, but independent of it, is a slotted shaft carrying an equal number of discs which interleave with those on the casing. An inner plate carries a worm on which works a nut operated by the operating lever, the nut being stationary with relation to the worm until moved by the operating lever. Six springs are fitted between the inner plate and the cover of the casing, and when the nut turns the worm the spring pushes the inner plate, causing the pack of discs to contact with each other and connect the motor with the transmission. A reverse movement of the worm draws back the inner plate and the discs separate, giving free engine position.

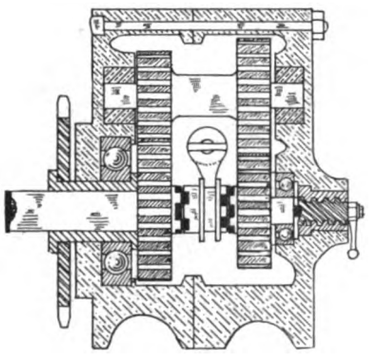
Variable Gears Scarce.

IN point of numbers of models to be seen, the variable gear situation is about the same as during the 1912 season, one advocate having dropped out and a new one having been added to the ranks. It is safe to predict, however, that the demand for these devices will bring out a quantity of new designs which will not be forthcoming at the shows, as their advantages for passenger work are becoming more and more obvious as the side-car increases in use



Harley Free Wheel.

Digitized by Google



Indian Two-Speed Gear.

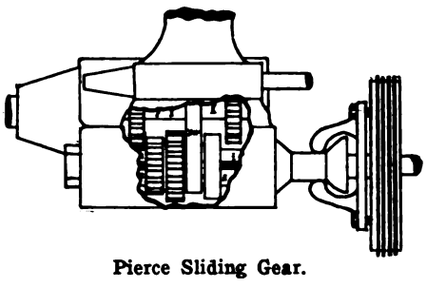
more and more. But though relatively few in numbers, the quality of those shown is excellent, such makes as the Merkel, Indian, Thor, Pierce, Michaelson and Pirate being the exponents. Classified into types, the Merkel, Thor and Pirate use the planetary; the Indian and Michaelson the dog-clutch, and the Pierce the sliding type.

Dog Clutch Gears.

IN the dog-clutch type of variable gear, the illustration of the Indian will show the operation. The clutch is mounted on the larger shaft whose inner end carries the squared shaft and slider with two dog-clutches. Loose on this are two gears fitted also with dog teeth and meshing with two other gears in one piece on the side-shaft. The left-hand gear is mounted with a sleeve which carries the final drive sprocket.

Pierce Sliding Gear.

TYPICAL of general motorcycle sliding gear practice is the Pierce two-speed gear shown in the illustration. A spool slides on a slotted shaft which is a continuation of the clutch shaft, and there are two gears mounted on the spool. For the high speed, the spool is moved toward the right, whence the larger of the two gears is meshed with another on the side shaft, which latter drives the final drive shaft. For low speed the spool is slid to the left.



Pierce Sliding Gear.

Planetary Hub Gears.

THE new Merkel two-speed model has a planetary device incorporated in the rear hub and operated by a lever and rod to the countershaft, where the same arrangement of lever as in the clutch models operates the two speeds. In addition to the variable gear there is fitted a compensating device in the rear sprocket and hub end. In the Thor arrangement, the planetary gear is fitted to the hub on the left side and actuated by a lever working in a vertical gate or selective quadrant.

TRANSMISSION

COMPARISON with the 1912 models in transmission will make noticeable the increase in the number of chain drives fitted and a decrease in the number of belt models, though this latter is not in proportion. Of the chain-driven machine models, quite a number of former all-belt advocates are offering alternatives of V or flat belt or chain, while others fit their twin machines with the chain exclusively. The shaft drive has but one representative, the Pierce, a decrease of two advocates since the 1912 shows. The predominance of the chain is probably due in part to the very general use of friction clutches or free engine devices, fittings which were too conspicuously absent for last year's machines, with a few exceptions. Nevertheless, it is still difficult to predict what the ultimate form of transmission will be, but for 1913 at least the drive for twins will be preponderatingly by chain.

Countershaft Drive.

OF the various chain arrangements, that employing a primary drive to a countershaft and a final drive to the rear wheel sprocket will be seen in the majority of cases. There are examples of different arrangements which are worthy of note, as for example the under-geared, single chain drive of the Reading-Standard and Thor. In this form, the engine shaft carries a small pinion which meshes with an internal gear in the clutch body, the ratio on the Reading-Standard drive being 3:1 in this under-gear device. On the other member of the clutch is carried the front sprocket and the chain leads directly to the rear wheel. On both transmissions mentioned the clutch is carried practically on the engine, while on the countershaft drive it is located on the rear sprocket of the primary drive. Another modification is to be seen on the Henderson four-cylinder machine, where the longitudinal motor first drives a cross-shaft by bevel gearing, and a single chain is used for the final drive. The clutch is in this case mounted on the end of the cross shaft.

Flat and V-Belts.

A SLIGHT superiority in numbers in favor of the flat belt will also be noticeable as compared with the V-belt. As a rule belts of the first type will be seen in double ply for all but the very heaviest service, an exception being the three-ply flat belt on the big Eagle twin machines. Those interested in their pet makes will see the names of Spartan, "White Strip" and Reinhold in both flat and V types. In chains, the domestic article will be represented by Diamond, Duckworth and Whitney, and the imported brands by Hans Renold, and Coventry.

Combination and Worm Drives.

ALTHOUGH a few experimental models may make their appearance at one or the other of the 1913 shows, it is doubtful if the combination or worm drive will appear at all. The former involves a countershaft drive with the primary drive by chain and the final drive by V belt. The latter transmission replaces the bevel gear in a shaft or cross-shaft drive by a worm and worm wheel with other parts of the respective transmission as before. Shaft drive with bevel gearing at each end has disappeared since 1912, and may not have a return to favor.

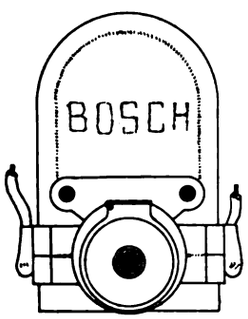
IGNITION

IN the realm of motorcycle ignition, the true high-tension magneto reigns supreme, although there are a number of makes of single-cylinder motor that still employ the battery-and-coil system of ignition. These are, however, the more moderate priced models, and at the show in the Grand Central Palace, the dry battery as a current source will be noticeable by its rarity, if not by its absence. The true high-tension magneto is so called by reason of having both



Bosch ZEV.

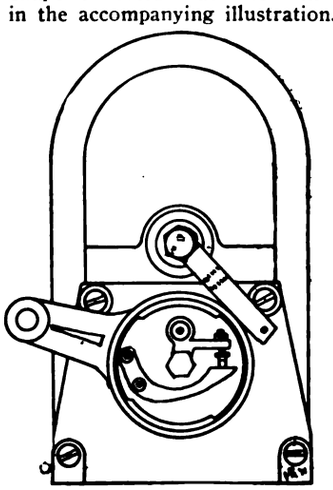
the primary and secondary windings on the armature, in contrast to the low-high-tension machines which have only the primary winding within the tunnel and the secondary windings either under the magnet arches or arranged otherwise outside of the body of the magneto. The three magneto types which predominate are the Bosch, Herz (Ruthardt) and the Splitdorf.

The Bosch Z Type.

THE makers of the Bosch magneto brought out fully-housed machines for motorcycle service in 1912 and these models will be seen on 1913 mounts. Characterized by the letter Z for identification, the magnetos are provided with aluminum end plates and washers which fit closely on the magnet arches, giving a dust-tight and rain-proof construction. That on the drive end is fitted above a casing carrying the ball bearings for the armature, and is provided with an insulated aperture for the cable to the spark plug on the single-cylinder model (ZE1). The terminal is within this plate and is specially designed for this magneto. On the twin model (ZEV) the terminals fit outside of special vulcanite pieces, as will be seen in the illustration.

The Herz Magneto.

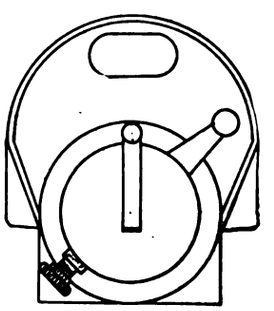
FOR 1913 the makers of the Herz high-tension magneto will fit a new model, known as the 4U1, for single-cylinder ignition. Like all former models of the Ruthardt machine, aluminum end plates are fitted and with the heavily insulated terminals supplied, the magneto is thoroughly water and dirt-proof. Instead of using horseshoe-shaped laminated magnets, the new models on view at the show will have a pair of U-shaped magnets, with separate pole pieces. The condenser sheets are clipped together and wound with two wrappings of waterproofed cord in addition and fitted at the contact end with a protective flap for insulation. A "doll's head" and button form of terminal, used heretofore in modified type on the Herz automobile ignition apparatus, is another noticeable feature of this magneto. The characteristic shape of Herz machines will be seen in the accompanying illustration.



Splitdorf.

Splitdorf Magneto.

THE Splitdorf magneto incorporates a centrifugal contact maker, which was an innovation in ignition apparatus construction when first exhibited at the 1912 shows, and still can be ranked as one of the most ingenious devices yet applied. The contact lever has a short, heavy arm carrying the roller which is four sided, giving four distinct wearing surfaces. In addition to the spring for keeping the platinum points in contact during the



Herz 4U1.

"make," the heavy arm stays out by centrifugal force and assists contact when the speed is high until the roller is again "wiped" by the contact surface. Contact is therefore instantaneous. Noticeable on the Splitdorf machine are the large insulating surfaces on the terminals. The latest of these magnetos is described elsewhere in this issue, and the model described is shown herewith.

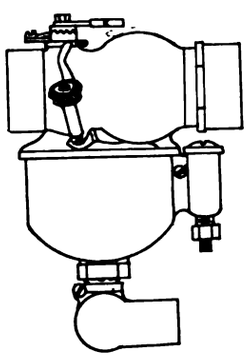
LORAIN'S STAFF.

MEMBERS of the Lorain Motorcycle Club, of Lorain, O., participated in a run to Gulf Hill, on New Year's Day. At a recent meeting of the club officers for the year were elected. Edward Clotz is president; J. Michels, vice-president; Floyd Blackford, secretary; Charles Good, treasurer, and Louis Gerhart and Albert Kane were named directors. G. W. Williams was chosen road captain and Thomas Lynch, lieutenant.

Digitized by Google

CARBURETION

ONLY automatic carbureters will be used for the season of 1913, these instruments following along the line of previous models in 1912. In the great majority of cases, changes in construction have been very minor, and it is safe to say that riders and prospective riders who are familiar at all with the present standard designs will rarely recognize the differences in next season's products. The nature of the changes, being such,



Schebler.

indicate that most satisfactory carbureters are now in use and the types, if not final, are at least a remarkable way toward finality. The primary air, in the majority of constructions, flows past the jet in a relatively fixed quantity, an auxiliary air valve supplying automatically the dilution with air necessary to maintain the mixture in its proper quality as the speed increases. An exception to the use of the jet is to be seen on the Schickel motors, where the carbureter is provided with a puddle from which the gasoline is swept off to form the mixture. This carbureter is very interesting in having an overflow device, thus keeping the level of gasoline in the puddle constant, as well as that in the float chamber.

The Breeze.

SHOWN in part section herewith, the Breeze carbureter well illustrates the usual arrangement of motorcycle carbureters. In the model there is no jet control in connection with the throttle lever; the adjustment is independent. The auxiliary air valve is at the top of the mixing chamber, while the jet is vertical, with a Venturi tube, the end of the needle valve being just below where the instrument is cut away. The throttle lever is adjustable on its spindle, while the throttle is of the butterfly type standing vertically. A latch retains the needle valve in its setting until moved by means of the milled head. The float chamber is concentric, surrounding the Venturi chamber.

Schebler Type.

A TYPE of carbureter in which the needle valve adjustment is varied as the throttle is moved is the Schebler, probably as widely known a type as any in America. In this carbureter a cam on the stem of the butterfly throttle rocks the jet needle valve, increasing the opening or decreasing it as the case may be. The auxiliary air valve is fitted to move horizontally in the end of the mixing chamber, which is of the straight-through type. The jet is set at an angle in the mixing chamber, and there is an adjustment for slow speed, consisting of a small lever working over a graduated arc attached to the throttle stem and permitting of any desired minimum opening. A Venturi tube surrounds the jet as in the model described previously. The type used in most cases is the "H."

Heitger Models.

THE Heitger carbureter is made in two models, one with adjustment for both low and high speeds and the other for single adjustment only. On this carbureter the float bowl is either of glass or metal and the jet is fitted within a Venturi tube at the throat, extending vertically through the center of the instrument. The straight-through chamber and milled knob adjustment for the auxiliary air valve, which are characteristic of American carbureter design for motorcycles, appear on all Heitger models. A new model is described elsewhere in this issue.

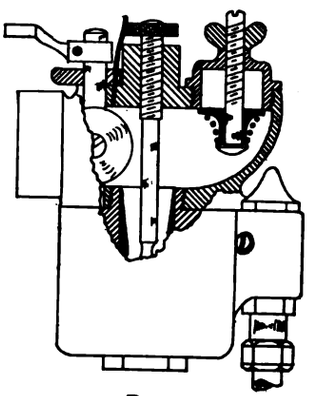
Hand Controlled and Adjustmentless.

THE hand-controlled, or Continental, carbureter is practically non-existent on 1913 models, and it is very doubtful if it ever will be again used except in isolated cases, as of individuals. There is a slight tendency toward the development of the so-called "adjustmentless" carbureter, where one or more jets are used and the only setting is that of the minimum opening of the throttle or of a by-pass for slow running. The only multi-jet carbureter in any general use for the coming season will be the Hedstrom instrument, as fitted to the Indian machines. This has a main jet under control of the barrel throttle, and a pilot jet which comes into action for idling and slow running but is out of control of the throttle.

INDIANA OFFICERS.

FOLLOWING are the F. A. M. officers for Indiana as appointed by the State Commissioner: E. P. Whitmer, secretary-treasurer; E. G. Baker, competition committee; J. E. Merz, press committee; Roy Sonneborn, legal action committee, and Elmer Smith, membership committee.

MEMBERS of the East St. Louis (Ill.) M. C. are planning to hold a card party and dance in the near future at their headquarters.



Breeze.

Digitized by Google

LUBRICATION

SPLASH lubrication will be depended upon in the majority of cases in the motorcycles to be seen in the Palace, no matter what the means of bringing the oil to the motor from the tank. In regard to the oil feed, there will be noticed a decided tendency toward the employment of mechanical pumps driven by the motor for forcing the oil to certain bearings, but as far as the cylinder walls, piston and wrist-pin are concerned, splash even when these pumps are fitted is still depended upon. Probably the chief feed for 1913 will be by gravity from the tank, with a sight-feed glass to regulate the amount of oil passing to the crankcase. This action in several cases is further assisted by the depression within the crankcase during certain strokes of the cycle. Feed by hand pump only will be noticeable by its rarity.

Mechanical Pump Feed.

WHILE the use of the mechanical pump feed is by no means new, being employed for several seasons on the Indian machines, among others, it will be seen applied on the Yale, Pope, Thor and Jefferson twins, also. One lead from the tank goes to the suction end of the pump, while the discharge is sent generally to the crankcase, or in the case of the Pope twin to a two-way connection above the gear casing. In this latter arrangement, one branch goes to the gear casing and the other to the rear wall of the front cylinder. A similar arrangement is fitted to the Indian twins, and these with the Pope, are the nearest approach toward all-force-feed lubrication, which it is reasonable to predict will be the final lubrication system. The pumps are driven at a great reduction as compared with the speed of the motor, and the stroke is adjustable to suit the conditions of running. In nearly every case a hand pump is provided as an auxiliary for speed work, filling the crankcase, etc.

Gravity Feed.

GRAVITY feed from the tank to crankcase with a sight-feed glass for regulation will be seen to have two classes of adherents: those employing hand regulation of the feed only, and those who increase the amount of feed automatically with an additional hand setting. Among the first will be seen the Harley-Davidson, Pope single, Dayton, Henderson, Reading-Standard, Emblem and Excelsior, the two latter and the Dayton having hand pumps as auxiliaries. The Reading-Standard has as an auxiliary, a cup controlled by a handle above the tank, which measures off a given quantity of oil and permits it to go to the crankcase. This cup device is used for high-speed work, etc. In the second class come the Merkel, and Flanders single, where the needle valve of the sight feed is lifted or lowered by a connection to the carbureter throttle. On the Merkel there are two regulations: A milled head on the valve stem for low speed and a handle on the side governing the inclination of a cam surface over which an arm attached to the needle valve rubs when the throttle is moved. There is a hand pump in addition and the level of oil is ascertained by a gauge at the side of the crankcase, visible when the rider is in the saddle. On the Flanders machines there is no auxiliary.

Induction Lubrication.

THE chief advocate of the two-stroke motor, Schickel, employs a unique oiling system for 1913 along the same lines as that of 1912. In this arrangement, the oil is mixed with the fuel and goes to the carbureter and crankcase where it lubricates by splash. The proper amount of oil is provided for by a measure which forms the filler cap to the tank, one measure being ample for the full gasoline tank contents. This method of oiling has been taken up abroad on practically the best two-stroke motorcycle motors for the coming year and is attracting much attention.

Hand Pump Feed.

ADVOCATES of the hand pump for feeding are few in number, the chief being the Marsh-Metz and the Iver Johnson. On the first of these the pump is fitted alongside the oil tank, which is situated in rear of the motor, while in the case of the Iver Johnson, the pump is buried in the tank at the left side, but with the grip convenient to the rider's hand. This location of the hand pump is to be seen on the Dayton and Emblem as mentioned previously.

NEW YORK SPEED LIMIT.

ON January 6 the Board of Aldermen of the City of New York passed an ordinance limiting the speed of all vehicles, motor or otherwise, and including a section prohibiting reckless and negligent driving. This law goes into effect March 1 and there are provisions of fine and imprisonment as punishment for violation of any section of the ordinance. For streets on which public schools adjoin the limit is ten miles per hour; in the borough certain highways, such as upper Broadway above 125th street, Hoffman Boulevard and Grand Concourse (Bronx), the limit is respectively raised to 18 and 20 miles, the latter on the Bronx highway mentioned. A 25-mile limit is provided for in sparsely settled portions of the county. An excellent provision is the prohibition of vehicles from approaching nearer than six feet of a street car discharging passengers, and in not passing until the car is under way. A card system is used to keep track of violaters of this ordinance.

HUMISTON CRACKS RECORDS.

LOS ANGELES, December 30.—Lee Humiston, riding an Excelsior, put a crimp in all records from 1 to 12 miles at the Playa del Rey mile motordrome. He beat the records of Ray Seymour by about a second at each lap. This record-breaking streak was stopped after the twelfth mile, when Humiston broke his manifold and his carbureter went out of adjustment. After the excitement was over Humiston declared that he would go after all other records up to 100 miles as soon as possible.

A MOTORCYCLE is used by a newspaper publisher of Pensacola, Fla., in delivering daily papers.

Digitized by Google

FRAMES-FORKS ETC

THERE are several minor features with regard to the frames of 1913 which show most careful study of road conditions in general, and the chief of these are the retention of a rather short wheelbase, a reduction of saddle height and an increase in tankage capacity. The 1913 motorcycle shows strong tendencies toward the "cob" type, with its camel-back frame, low seat position and big tanks as stated above, but with a few exceptions, there is an even stronger tendency toward a general design practically the same as in 1912 and 1911.

Spring Frames and Posts.

WHERE the Merkel only used a spring frame last season, there are now to be seen the Indian, Merkel, Jefferson, Pirate, Iver Johnson and Pope in the ranks. The first mentioned and the Jefferson are sprung both fore and aft on coach-type springs, the Merkel on spiral springs at front and back, while the Pope has a coach-spring front fork and a pair of spiral rear-wheel springs. The Iver Johnson has a peculiar arrangement of coach rear spring, as will be seen in the drawing accompanying. Regarding spring seat posts, the chief advocates will continue to be the Harley-Davidson, Reading-Standard and Excelsior, whose devices are too well known to need description here. The Schickel will fit a spiral spring post of original design and incorporating a shock absorber. The others use rigid frames with spring forks.

Spring Forks.

THE spring fork question seems to resolve itself into two fields, that of the coach type, and that of the spiral spring type. Excelsior, Pope, Indian, Eagle and M. M. are among the upholders of the leaf spring fork, while Reading-Standard, Henderson, Harley-Davidson, Thor and Schickel take the other side with the spiral spring type. The advocates of the first type have gained a number of adherents since the beginning of 1912, but the opponents rather outnumber them.

Indian Spring Frame.

THE Indian cradle spring fork with scroll end has been in successful use for several seasons, and for 1913 a twin arrangement of this fork type has been applied to the rear frame, making a spring frame machine. Back of the seat mast tube is fitted a U-shaped spring carrier to whose ends are attached the butts of cradle springs similar to those used in front. A reversed U piece has its ends fastened to the newly designed fork ends and carries yokes with the usual rubber buffers to accommodate the scroll ends of the springs. The springs have seven plates each in the rear. At the base of the seat mast tube is a rocker bearing about which pivots the rear fork construction.

Pope Springing Arrangement.

A TYPE of rear wheel springing which is unique is that used on Pope motorcycles. To the rear of each side of the rear construction is a C-shaped pedestal open at the back and supplied with bearings above and below. A plunger carrying the slider fork passes through these bearings and is fitted with a spiral spring above the pedestal. The rear wheel is thus given a limited spring movement up and down within the pedestal under the control of the spiral springs above.

Iver Johnson Frame.

NOTICEABLE from the viewpoint of rigidity as well as distinctive in appearance is the Iver Johnson frame, which is of the arched truss type. The intermediate tube is of heavy gauge, following the lines of the characteristic bicycle frame of this make. The front fork is of the quarter-elliptic coach spring type without scroll, and braces lead from the rigid fork ends to the steering head. On the twin model, there is another coach spring arranged vertically at the rear of the seat mast, while the rear construction pivots about a bearing in the lower part.

Harley Spring Seat.

THE Harley-Davidson frame design has been tried out in the most gruelling conditions of service and is continued for 1913 in practically the same lines as in 1912. The twin plunger-type spring forks with the axle at the end of the rocker and the spring support intermediate will be seen in the illustration. The "Ful Floteing" seat device is naturally also continued.

Henderson Trapezoidal Frame.

ONE of the most scientific frame constructions is that on the Henderson four-cylinder machine, which made its debut in 1912. It is of the trapezoidal cradle type, carrying the motor longitudinally, but the top tube no longer has a boss for a front saddle.

Merkel Spring Frame.

THE Flying Merkel continues the use of its original spring frame design, with slight modifications. The new frame is lower than that of 1912 and the two springs formerly used in the plunger pillars are replaced by a single large one, adjustable to the weight of the rider. The rocker joints have a similar shock-absorber to that of the previous models and there is an oil tank of large diameter, which forms the seat mast tube in the ordinary frame, but in this case is integral with the other frame members, the saddle being carried by a prolongation of the top tube.

Emblem Frame.

TYPICAL of the tendency toward lower saddle position with relatively short wheelbase for a large motor is the frame of the Emblem. The bend in the top tube is quite far forward and the saddle being located in the normal position with relation to the pedal gear is very low.

Schickel Spring Seatpost.

TO the distinctive box-section tank frame of the Schickel machine is added for 1913 a spring seat post, consisting of a plunger working within the hollow seat mast tube. Within this plunger are two springs, those for recoil and buffing the upward movement. These springs are separated by a pin which passes through the seat tube and carries the ends of links at its outer ends. The links form two sides of a triangle and carry a shock absorber.

BLACK HAWK FEATURES

ROCK ISLAND PRODUCT
For
COMING SEASON HAS
TANK IN FRAME CONSTRUCTION
MULTIPLE DISC CLUTCH IN REAR HUB
IMPROVED SPRING FORKS
CHAIN OR BELT DRIVE
SPRING SEAT POST
&
DOUBLE LUBRICATING SYSTEM

IN the production of its 1913 model the Black Hawk Motor Co., of Rock Island, Ill., has aimed at symmetry, simplicity of mechanical design, ease of operation, power and durability, and the firm's announcement of its specifications for the coming season leads to the conclusion that these qualities have been achieved to an unusual degree. Consideration of the 1913 machine in detail brings to light a number of desirable changes and refinements over 1912 production, and promises well for sales activity on the part of the Rock Island firm.

The Frame Construction.

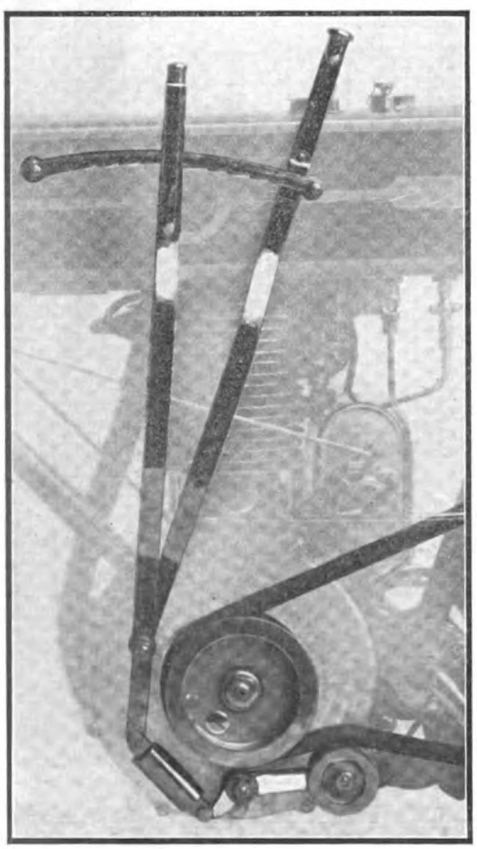
The tank on the Black Hawk machine is part of the frame, and is made of specially treated Shelby cold-drawn seamless steel tubing, one-sixteenth of an inch thick. In this way unusual strength is obtained, and the small tubing above and below the tank is eliminated; by the same token clips and fastenings for the tank are unnecessary, and the result is a marked improvement in appearance and service. In addition the company is fitting an oil tank that is leak-proof and practically indestructible. There are no seams to spread in case of a spill; all the fittings are put in by a special compression method which does away with soldering. The frame construction also permits of an unusually low saddle position, without sacrificing the frame lines. Perfect balance and ease in handling result from the low center of gravity.

In the designing of the Black Hawk, advantage has been taken of every point making for efficiency, and always with a view of overcoming the weaknesses to which the motor two-wheeler has shown itself susceptible. The company's designers have kept in mind at all times flexibility and reliability; in their opinion flexibility should be defined as meaning the ability of the motor to handle the machine at all speeds, from four to sixty miles, without the use of the clutch. Reliability, in the Black Hawk lexicon, implies a capability to travel hundreds of miles without the necessity for making adjustments or repairs, and the designers have convinced themselves that they have such a machine.

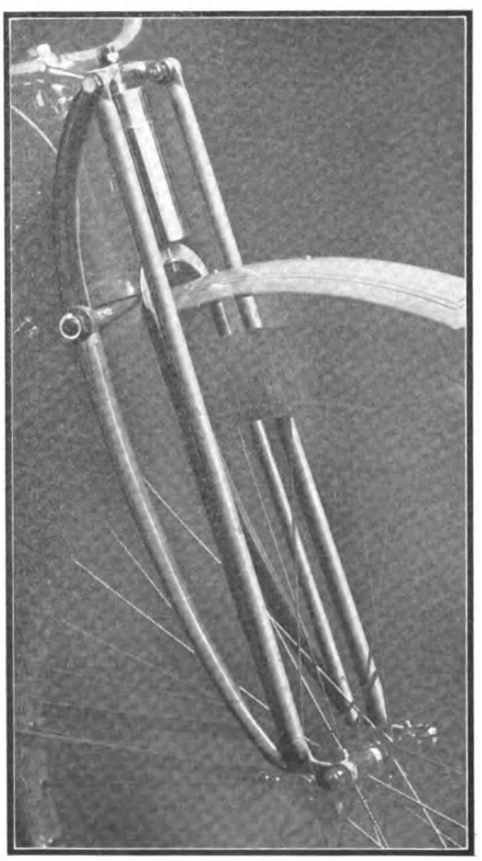
The Clutch Position.

The builders of the Black Hawk believe they have placed the clutch in the ideal position in locating it in the rear hub, combined with the coaster brake. The clutch is of the multiple steel disc type common to automobiles and has over 300 square inches of friction surface. This insures a smooth "getaway," without the necessity for racing the motor or stalling it. Tests have shown that there is no danger of the clutch slipping even at maximum speeds and in hill-climbing. Control of the clutch is by a lever placed beside the belt tightener. By placing the clutch in the rear the Black Hawk designers argue that they have improved the appearance of the power plant. The brake contained in the rear hub is sufficiently powerful to check the progress of the machine with a slight pressure of the foot, or to lock the rear wheel instantly in an emergency.

The neatness of design is further enhanced by the spring fork construction. The strong truss insures absolute safety of the rigid member, and the flexibility of the spring member of the fork practically eliminates annoyance from road shocks. The rocker arms are so hung that the spring tension is light enough to absorb small road inequalities, as well as the more disturbing jars. As the rocker arms swing upward under a shock the levers, combined with the compression of the springs, multiply the resistance so that it is impossible for the tire to strike the mudguard or for the springs to be compressed to the danger point. In the case of very heavy road shocks the rocker arm is at dead center before the tire can strike the mudguard, and further upward movement is thus checked. The load is



Black Hawk Idler System and Clutch Lever.



The Sturdy Spring Fork.

Transmission Side of 1913 Black Hawk.

then transmitted to the rigid fork members. The number of parts in the fork has been reduced to the minimum, thus making for long life.

Spring Seat-Post.

The spring seat-post is built on the same principle as the spring fork and is credited with remarkably easy riding. The movement of the saddle is directly up and down, there being no side motion or tilting to affect the rider's position while the machine is in operation.

Two lubrication systems are used in the Black Hawk, mechanical and suction feed. The mechanical oiler is unusually simple in construction, there being but one moving part, a piston which is driven by the intermediate gear. A small screw regulates the amount of oil, and can be set to give the desired result in an instant. The feed increases in direct proportion with the speed of the motor. There is a small glass in the pump so that it is possible to see the quantity of oil that is being fed at all times. In addition to this pump the suction system of oiling is provided for extreme speed work.

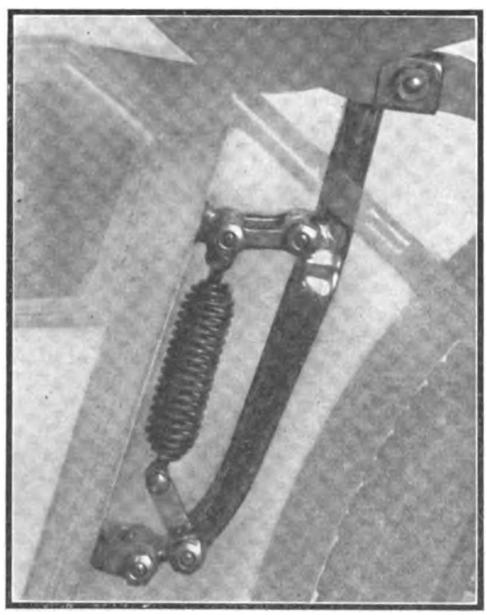
The idler is compact and the spring is contained in collapsing tubes. The distance between the center of the pulley and the pivotal point of the arm attached thereto is less than four inches, so that there is no danger of its getting out of alignment. If the machine is backed up the idler is held true and the belt is retained in its proper position. The pulley runs on ball bearings which can be adjusted in a few seconds by removing one nut and twisting the halves of the pulley in opposite directions. Tightening the nut locks the pulley positively.

Attention to Accessibility.

The grip control on the Black Hawk is by 16-gage piano wire, and the bends in the wire are long and gradual so that danger of breakage is reduced. However, in case of necessity, the wire can be withdrawn quite easily. The tool-box is made of pressed steel in halves and bolts into place. The muffler is built along the latest lines of silencer construction and is credited with being unusually efficient without exerting back-pressure. It is figured that the muffling process on the Black Hawk results in a loss of only two per cent. of power.

Special attention has been given to accessibility in the designing of the entire machine, and all the parts have been worked out with a view of avoiding mechanical complications. The lines are uniform and pleasing and the makeup of the mount in general is calculated to create a favorable impression.

The motor has a cubic displacement of 30.50 inches, the bore being 3¼ and the stroke 3 43/64 inches. The valves are mechanically operated; ignition is by Bosch armored mag-



Spring Seat-Post Feature.

neto and the Schebler carbureter is fitted. Transmission is by chain or endless flat Spartan belt, 1¾ inches wide; the brake is of the multiple disc coaster type; the wheelbase is 53 inches and 28-inch wheels are used; 2¾ studded Goodyear or United States tires may be specified, and the Troxel saddle is standard equipment. The weight is 190 lbs. and the finish is light gray, with dark panels and blue striping, with all bright parts nickel-plated. The 1913 Black Hawk lists at $235, f. o. b, Rock Island, Ill.

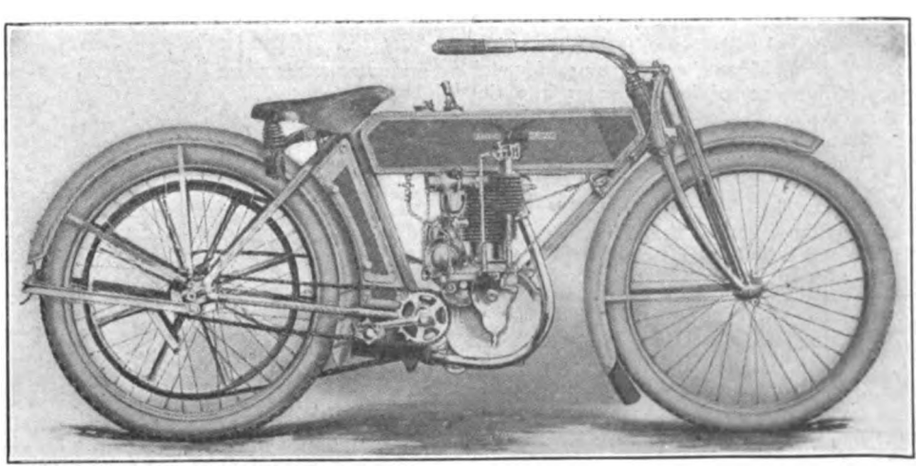
F. A. M. GAIN IN 1912.

CARD number 12,068 was the first one issued in 1912 by the F. A. M. The last card issued for the year was 19,467, showing an increase of 7,401 for the twelve months. Following is the year's membership growth by months: January, 402; February, 440; March, 625; April, 841; May, 986; June, 899; July, 939; August, 736; September, 530; October, 374; November, 330, and December, 290.

The gains in each state for December are given as follows: Maine—unaffiliated, 1; New Hampshire—unaffiliated, 1; renewal, 1; Massachusetts—affiliated, 2; unaffiliated, 1; renewals, 7; Rhode Island—unaffiliated, 1; Connecticut—affiliated, 1; unaffiliated, 1; renewals, 2; New York—affiliated, 12; unaffiliated, 7; renewals, 30; New Jersey—affiliated, 1; unaffiliated, 1; renewals, 2; Pennsylvania—affiliated, 8; unaffiliated, 1; renewals, 3; Maryland—affiliated, 5; unaffiliated, 2; renewals, 7; Virginia—unaffiliated, 1; West Virginia—unaffiliated, 1; Delaware—affiliated, 23; North Carolina—renewal, 1; Tennessee—unaffiliated, 1; Georgia—renewals, 2; Florida—affiliated, 1; renewal, 1; Arkansas—affiliated, 1; Texas—affiliated, 20; unaffiliated, 3; Kentucky—renewal, 1; Oklahoma—unaffiliated, 1; Ohio—affiliated, 13; unaffiliated, 8; renewals, 17; Indiana—affiliated, 28; unaffiliated, 2; renewals, 5; Illinois—affiliated, 75; unaffiliated, 10; renewals, 7; Missouri—affiliated, 2; renewal, 1; Wisconsin—affiliated, 1; renewals, 4; Michigan—affiliated, 1; renewals, 2; North Dakota—unaffiliated, 1; Nebraska—renewal, 1; Kansas—affiliated, 4; renewal, 1; Iowa—renewal, 1; California—affiliated, 17; unaffiliated, 19; renewals, 17; Utah—affiliated, 1; Colorado—renewals, 3; Arizona—unaffiliated, 1; Montana—affiliated, 4; Idaho—renewals, 2; Washington—affiliated, 3; Canada—renewal, 1; Panama—unaffiliated, 1.

THE OLYMPIA LIST.

OUT of 637 motorcycles exhibited at the Olympia Show in London, 235 were 2½ horsepower, 77 were six horse twins, and 33 eight horse twins. The 2½ and 2¾ machines totalled together 118, while the largest single was one of 6 horsepower used for sidecar work. The smallest twin was of 2½ horsepower, and the smallest single of 1¾. Only one 8-10 twin was shown.



1913 Black Hawk from Valve Side.

STAGING the BIG SHOW

FEW spectators who visit Madison Square Garden and the Grand Central Palace during the big double motor show will have inclination or time for full appreciation of the artistic effects that have been achieved by the decorators, and it is safe to say that none will properly estimate the thought and ingenuity that have gone into the scenic plans. For weeks past painters and modellers have been at work on designs for the two show buildings, and the finishing touches are now being administered. As usual, an effort has been made to provide an entire change of scenic arrangement from previous displays, and reports are to the effect that the designers have been eminently successful. The decorative theme at the Garden provides for a "Crystal Palace," while the Grand Central Palace is being transformed into "The Palace of Versailles."

Every nook and cranny in both the Garden and Palace has been carefully considered in the plans and an idea of uniformity will be carried out so completely that the small spaces in the galleries, basement and platforms will receive the same attention as the exhibits on the main floors. The decorations for the Palace as well as the Garden will be more magnificent and costly than for any previous affair.

At each of the last two automobile shows held in the Garden, the interior was entirely reconstructed with huge galleries, which greatly increased the floor space in the building. These galleries extended out into the amphitheater twenty feet or more and were supported by huge steel girders and pillars. The entire construction was temporary and immediately the show was finished the balconies were disassembled. The same plan will be followed this season. It has been quite a feat of engineering to build this network of steel, clothed with floor boards. Originally wood beams were used to some extent in conjunction with the steel, but this season additional steel construction has been ordered so that no wood will be used other than that for the floors. More than 200 tons of metal and a million feet of lumber enter into the construction.

For the Madison Square Garden display, white and gold will be the dominant colors although green and crimson will be strongly in evidence. The girders of the big dome will be screened by a canopy of 5,400 yards of cloth of fluffy azure blue, amid which 7,700 tungsten incandescent lamps will twinkle. Twenty huge arc lamps and a number of crystal shades and "skirts" will be pendant from the roof. Fifty thousand feet of wire will be necessary to wire the building. Along the sides of the Garden, more than 5,000 feet of mirrors will be panelled and the reflection will greatly add distance to the machines on view. Lattice work will be more prominent this year in the structural treatment than was the case at last year's exhibition. Of an unusual design will be the mammoth crystal chandeliers which will be hung in the "sky" of the Garden. The chandeliers will be topped by natural foliage, which will entwine the strings of crystal through which light will radiate.

The exhibition spaces on the main floor of both the Palace and Garden will be carpeted with a specially woven fabric of light green, to lend something toward the effect of the cars being on the turf. More than 12,000 square yards of carpeting will be used. In the Garden the car exhibits on the elevated platform will also be carpeted with this fabric. At brief intervals along the sides of the elevated platform in the Garden, extending the length of the arena will be a number of ornamental lamp posts which will have the name of the exhibitors on their sides. Lettering on the posts will also inform visitors to various departments of the show.

Entering the arena at the Garden exhibition the visitors will be confronted by a Roman seat and fountain. The fountain forms the center of the seat, which is of a low abutment of gray stone and has a trow-like basin in which gold fish will disport themselves amid natural pond lilies, from which varied colored lights will radiate. In the Garden a wide balustrade will extend along the outer edge of the elevated platform, while the walls at the back will be covered with an imported cartridge paper of golden hue. In the general view there will be three balconies in the rear and in the front of the Garden, and but one on either side.

The exhibits of cars and accessories on the elevated platform will be separated by an aisle. The basement of the Garden will be similar in treatment to the other departments of the show. The Garden could appropriately have been named "The Garden of Nymphs," because of the fact that two score or more allegorical statues, representing nymphs, will support the elevated platform.

Nolan Diatyler, of the Lorain (Ohio) M. C., an enthusiastic motorcyclist despite his 240 pounds.

Grand Central Palace, which in itself is a beautiful building, will be decked in a most suitable setting. One hundred caen stone pillars, thirty feet high, will add a stately effect to the Corinthian architectural idea which is to be carried out. Lattice construction will play a very important part in the treatment of the Palace. The lattice work will be painted green, which color will blend with the other colors used in the decorations. Along the walls of the building interior will be several thousand square feet of scenic paintings, depicting picturesque views taken in all parts of the country. By a stretch of imagination a visitor to the Palace can think he is in the center of a mammoth palace with landscapes stretching away for miles beyond. Such will be the effect. A marble exedra will be the piece de resistance at the rear of the interior. "Old Abe," an eagle on a wheel will again be in evidence.

TANDEM FIGHT CONTINUED.

IN view of the fact that the National Capitol M. C. has decided not to accept the concessions offered by the authorities at Washington regarding tandem riding, another meeting was held on January 8 to discuss the furtherance of the campaign of protest. A number of dealers have been appointed to receive contributions for the campaign. They are as follows: Harry W. Bigham, John S. Barryman, Phillip M. Corr, George W. Beall, Thomas N. Mudd, Osborn & Leisheer, Howard A. French, Haverford Cycle Company; Frank Hazelton, National Sporting Goods Company, and Harry F. Seemark.

LONG WEDDING TOUR.

HAROLD A. STEWART, of Indianapolis, Ind., who for some time has been employed by the Scarborough Map Company as a pathfinder, will leave San Francisco, on February 6, for China. Mr. Stewart and his bride, Miss Marie Bancroft, will make a tour of the world and expect to cover most of the distance on a motorcycle. They count on the trip requiring two years.

DELIVERING BOOKS.

STILL another use for the motorcycle has been found in Los Angeles. They are used there by the public library officials in delivering books to the fourteen different branches in the city. The library board has found this system of delivery to be a good one and recommends it to other cities where the transportation of books is left to the express companies.

SUCCESSFUL P. O. SERVICE.

MOTORCYCLES are being used in the special delivery department of the San Jose (Cal.) post office.

Digitized by Google

AN AMERICAN AT OLYMPIA

IMPRESSIONS OF THE RECENT ENGLISH SHOW

OBTAINED AT FIRST HAND BY ONE WHO IS FITTED TO MAKE

INTERESTING OBSERVATIONS AND COMPARISONS

AS THE RESULT OF LONG EXPERIENCE WITH THE MOTORCYCLE TRADE

SURELY the right way to start a description of the English Olympia Show is to state that it was the biggest and best ever. In the number of machines on exhibition, in the perfect attention to detail, in the amount of space used, and in courtesies extended to visitors, the show was certainly the best that I have ever seen. I had entertained real doubts as to whether it would compare with our own shows, in the number of machines, or in any other way, and I stood in amazement when I entered the main door and got my first sight of the exhibition. The entire building was one mass of lights in many colors, and the decorations were far superior to anything ever shown in the States. I believe the manner in which the show was lighted had the effect of showing off the machines and their splendid finish in a way that nothing else could have done.

Variety in Decorations.

One feature of the exhibition that appealed to me quite strongly was the full scope that was allowed exhibitors in regard to decorations, etc. I believe the great variety in this line added much to the interest shown. Every exhibitor had plenty of space, and, in addition to this, all manufacturers had a good-sized private office in the rear of the building, which permitted them to hold private conferences with customers, and do any amount of entertaining in the line of refreshments, etc., that they wished. In the gallery the parts makers had their extra space in the rear of their exhibits. This feature appealed very strongly to me and I believe it would be well worth considering in American exhibitions.

One naturally expects to find a good finish on show machines, but in this direction our English brethren had us beaten a mile. The machines were as nearly perfect as it is possible to make them, and I felt rather ashamed of the finish on the several American machines shown, as only one of them compared at all with the English makes.

Everybody seemed to have worked out all the details connected with his exhibit in good shape. There was an ample supply of catalogues and printed matter, which went more into detail in regard to construction, etc., than anything I had previously seen.

Visitors Were Well Posted.

One point with reference to the crowd made quite an impression on me, and that was the thorough manner in which visitors seemed to be posted on the mechanical features connected with the machines. It was a real pleasure to hear the conversation between a customer and a salesman, because of the decidedly clever mechanical objections the prospective buyer would raise in regard to the different features.

I believe that fully 40 per cent. of the crowd was made up of ladies, and the manner in which they discussed the various points of the machines was surely an eye-opener. They seemed to know as much as the men did concerning equipment. I presume this is caused by the fact that practically every English machine is equipped with a sidecar.

Practically all of the leading motorcycle manufacturers, in addition to their regular line, showed a line of cyclecars. Judging from the great interest shown by the public, I believe there is going to be a large sale of this type of car on the other side.

Not Impressed by Cyclecars.

I could not see anything about them, however, that would appeal to the American trade. They are decidedly clever in many respects as to construction, etc., but they are too small for practical work. They do not compare for a moment with the Ford, Overland or any other of the small American cars. The construction is extremely light and the horsepower very low, not running in any case over 10 h. I do not believe they would stand up for a week on American roads. They will be a success on English road perhaps, but I am led to believe they are more or less of an experiment.

The price of the cyclecar varies from $425 to $725. Very few manufacturers had made any quantity of cars; in nearly every case the sample cars were all they had to show the public. I understood they were promising deliveries in about three months, and they have reported plenty of orders. Knowing how conservative the English manufacturers are in all of these matters, I was certainly very much surprised to find a new article like the cyclecar making such a large showing.

The majority were four-wheel machines, but several manufacturers showed machines with two wheels in the front and one in the rear. Naturally one expected to find lots of sidecars, but not nearly as many as were shown. All of the manufacturers had from one to three machines fitted with varying types. The prospective customer certainly had a large variety to choose from, as there were no less than eight manufacturers showing sidecars exclusively.

Canoe-Shaped Sidecar Popular.

The canoe-shaped body seemed to have the run over other types. Several manufacturers showed sidecars having complete tops and side-door, the same as an automobile. All of the motorcycle manufacturers who are in the bicycle game showed a large number of bicycles gotten up in very nice shape. I was surprised to find that the public seemed to show little or no interest, however, in bicycles.

The question one naturally asks is, Will the motorcycle in the States supersede the bicycle, as it seems to be doing in England?

The attendance was equal to any automobile show that we have ever held. On Wednesday it was almost impossible to get around at all. They reported thirty thousand paid admissions, in addition to passes issue. One of the leading manufacturers claimed that the attendance was a trifle over thirty-eight thousand for a day. I believe the low admission fee of 25 cents, or one shilling, had a great deal to do with the large attendance.

The English Braking System.

The English fashion of two brakes, which is required by English law, seemed to me just a little absurd, although I believe, frankly, that this is caused by the fact that the brakes used are insufficient, the ordinary type of machine using a fibre block against the rear belt rim. I believe that, with the adoption of higher powered machines, they will use the American style of a coaster brake.

Conversations with prospective buyers convinced me that the English purchaser of a motorcycle buys a machine more as a permanent investment than does his American cousin. There does not seem to be the thought of changing models from year to year.

Summing the whole thing up, I believe that we have quite a little to learn from our English friends in the manner of working out the final details, but I believe, on the other hand, that we are quicker to make the necessary changes.

[The above article was prepared by the sales manager of a manufacturing firm recognized as one of the most active in the American motorcycle field. It was written shortly after the official's return from London, and is therefore especially interesting as outlining up-to-date British tendencies from the American viewpoint.—Ed.]

SHELBYVILLE ELECTION.

THE following officers were elected at the recent organization meeting of the Shelbyville (Ind.) Motorcycle Club: Rollyn Barnes, president; Hallard Payne, vice-president, and Edgar Kirsh, secretary-treasurer.

A MOTORCYCLE club was recently formed in Piqua, Ohio, under the name of the Harley-Davidson M. C.

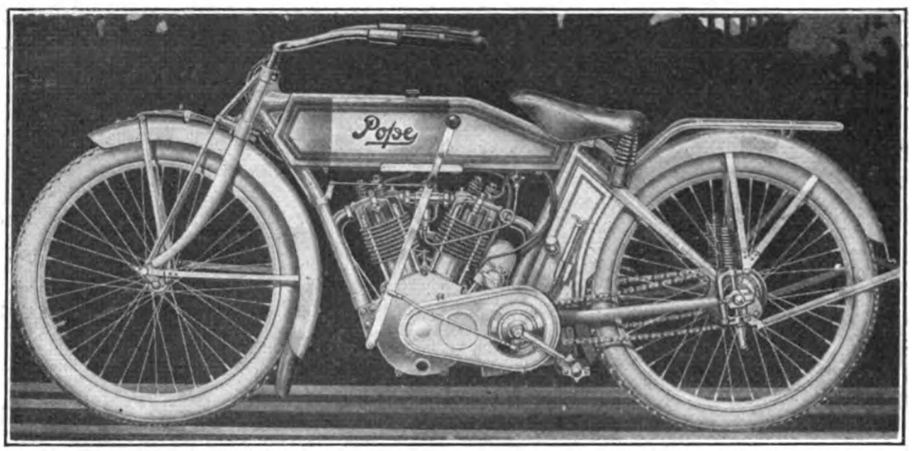
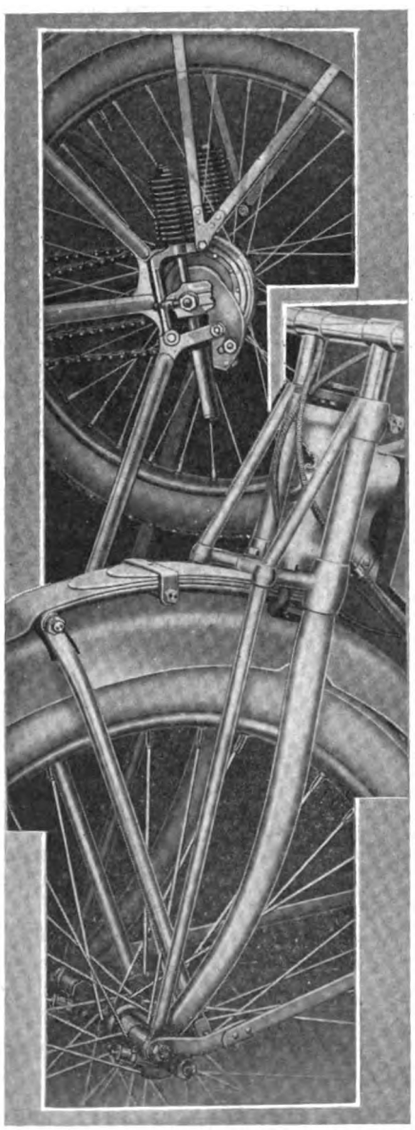
STURDY TWIN COMPLETES POPE LINE

FOUR attractive models round out the motorcycle line of the Pope Manufacturing Company for 1913, these types being so designed as to meet the requirements of every branch of service. The models are listed as L, M, K and H. Models L and M are chain driven, and the former is a twin, rating at 7-8 h. and selling for $250. Model M is a single-cylinder machine, rating at 5 h., which sells for $215. More than a year has passed since the Pope company began the construction and testing of these two models, and they have now taken their places beside models H and K, the single-cylinder, belt-driven machines, that have given good accounts of themselves under widely varying trial conditions. Models H and K, 4 h., sell at $165 and $200.



Model L, the Powerful New Chain-Driven Pope Twin.



Rear Spring Suspension on Models L and M and Front Fork Construction of the Pope.

The 7-8 h. Pope motor used on Model L has a bore of 3 21/64 in., and stroke of 3½ in, thus giving a cubic displacement of 61 in. The power plant is built by the Pope company in its Westfield factory, and is the outcome of exhaustive tests. It has generous bearing surfaces throughout, and is secured in the frame at four points. The cylinders are of high-grade gray iron; the cylinders and heads are separate, annealed to eliminate casting strains and bored and ground to size with the utmost care. The cooling flanges are designed to present nearly double the cooling surface on the heads as compared with some other motors of this general type. The heads are removable for cleaning without disturbing the other parts.

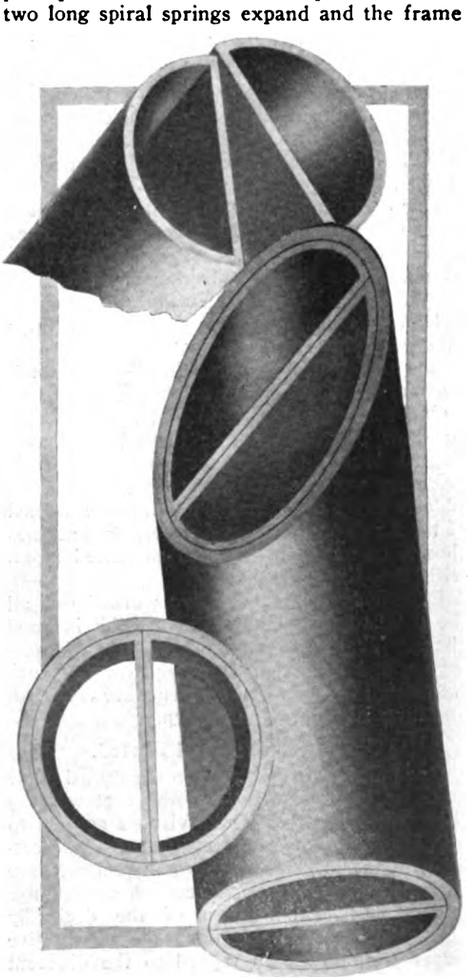
The valves are mechanically operated, and are made of high-grade nickel steel, drop forged, with stems integral. The intake and exhaust valves are interchangeable and are located in the head to permit of quick and complete scavenging of the motor. The valve operating mechanism is so constructed as to require only slight exertion on the grip control to raise the exhaust valve in starting. The camshaft and cams are of nickel steel, forged integrally. The pistons are accurately ground and embody oil grooves to insure proper lubrication. The connecting rods are of high-grade nickel steel, heat treated.

Rear Spring Suspension.

The main phosphor bronze bearings are of generous size, machined and ground, and the magneto driving shaft is carried on Hess-Bright annular ball bearings, in dust-proof cases packed with grease. The Eclipse free-engine clutch is fitted.

Double D tubing reinforcements extend throughout the entire length of the front reach tube in the frame, and the Keystone type, double-tube frame is adhered to. The long dropped top bar affords a low saddle position. The front forks are of the double, four-leaf spring type, with improved rocker plate construction.

The rear springing is on the suspension principle. When the rider occupies the saddle two long spiral springs expand and the frame



Sectional Views of Pope Tubing Showing Heavy Reinforcing System.

Digitized by Google

is suspended on the springs. As the rear wheel strikes a road obstacle the axle is lifted, causing the guide rods to push up and expand the spiral springs so that the shock is absorbed. The springs are compact and still sufficiently strong to meet the requirements of heavy traveling.

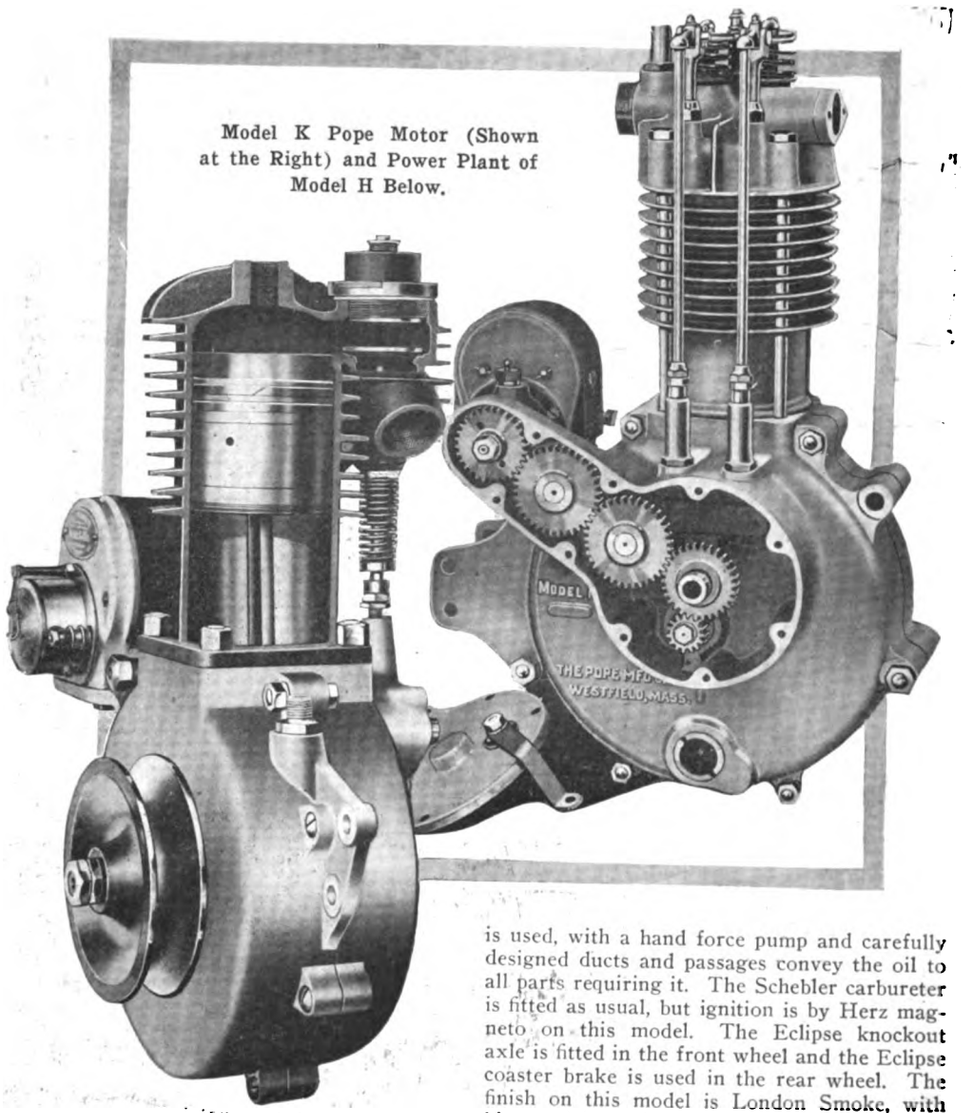
Lubrication is by a mechanically operated oiler, worm and gear driven from the motor shaft, and there is an auxiliary handpump for emergency use. A window in the side of the crankcase shows the oil level at all times. The Schebler carbureter is standard equipment, as is the Bosch armored magneto.

Other Specifications.

The gasoline tank embodies two units, each holding 1½ gallons, and so constructed that they may be used independently or as one. The fillers are extra large and there are independent pet-cocks for drawing off gasoline. The oil tank, holding two quarts, is in combination with the tool-box. A double grip wire control system is used, the right grip operating the throttle and exhaust valve lift and the left controlling the spark. Transmission is by chain, with guards protecting the sprockets and driving agent. The pedal and rear driving chains are interchangeable and adjustable. The wheels are 28 in. with combination 2¾ and 3 in. single-clinch rims. Wheel-base is 56½ in. and there is 5½ in. clearance. One of the new features is the eccentric crankhanger; a chain adjustment is made by loosening a clamping device at the bottom of the crankhanger. The mudguards are 4⅜ in. wide and fitted with side aprons throughout their entire length. The Corbin ball-bearing front hub is used with knockout axle, and the Corbin "V" band coaster brake is fitted in the rear wheel. New Troxel saddle No. 1 is furnished, the stand is of an improved design. United States 28 in. by 2¾ in. tires are fitted and the handlebars have been changed in shape. The gear ratio is 4 to 1; optional, 3.76 or 3.52 to 1. Color, Pope gray, with bright parts heavily nickeled.

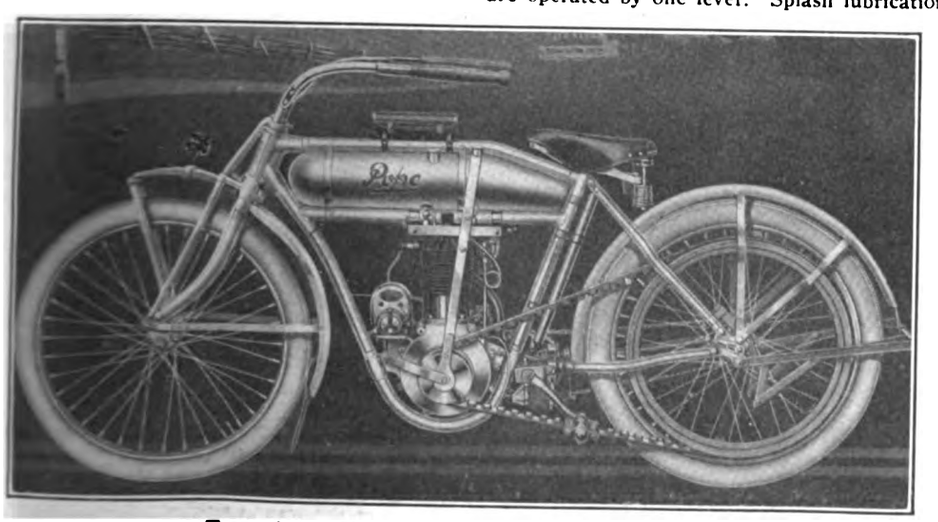
Model M, 5 H. Motor.

The single-cylinder motor fitted to Model M has a bore of 3⅝ in. and stroke of 3 11/16 in., giving a cubic displacement of 38 in. Transmission is by chain, as in Model L, and all the other specifications of the latter apply to Model M except that 28 by 2½ in. tires are fitted instead of the 2¾ in. size used on the twin. The gear ratio on Model M is 4.93 to 1; optional, 4.30 or 5.21 to 1.



Model K Pope Motor (Shown at the Right) and Power Plant of Model H Below.

Model K has a 4 h. single-cylinder motor; bore 3 21/64 in., stroke 3½ in.; piston displacement, 30.50 cubic inches. Offset cylinders are used; the cylinder and head are separate castings of gray iron. The motor has the valves in the head, mechanically operated. Transmission is by 1¾ in. endless flat belt, and the combination idler and free engine clutch are operated by one lever. Splash lubrication is used, with a hand force pump and carefully designed ducts and passages convey the oil to all parts requiring it. The Schebler carbureter is fitted as usual, but ignition is by Herz magneto on this model. The Eclipse knockout axle is fitted in the front wheel and the Eclipse coaster brake is used in the rear wheel. The finish on this model is London Smoke, with blue striping edge with gold, and all bright parts are heavily nickeled as usual. United States 28 by 2½ in. tires are supplied. Aside from the motor one of the most important differences between this machine and the 5 h. Model M is that Model K does not embody the rear spring suspension feature.



Transmission Side of Model H, the Light Road Type.

Details of Model H.

In the 4 h. motor fitted in Model H the bore is 3 in. and the stroke 3 11/16 in. The valve chamber and cylinder are cast integral and deep flanges are afforded to assist in cooling. In this model the frame is of the loop type, thus differing from the frames used in the other three types; the reinforcing is unusually heavy and all joints are given special attention. In lubricating the oil is forced by handpump to the base of the crankcase where it is thrown up on the cylinder walls and on the piston, and thence carried by ducts to all moving parts. As in Model K the Herz magneto is used. The mudguards on Models K and H are 3¾ in. instead of 4⅜ in., as on Models L and M. Model K has the Eclipse knockout front axle and the Eclipse coaster brake in the rear wheel. The gear ratio is 4.6 to 1; optional, 4 to 1. Transmission is by a Spartan leather V belt, the Persons Champion saddle is fitted and the tires are 26 by 2¼ in. The regular gear ratio on Model H is 4¼ to 1; optional, 4⅔ to 1; with Eclipse clutch, 4⅓ to 1.

WITH the publication of designs in the December 26 issue of MOTORCYCLE ILLUSTRATED, the first improvement contest ever conducted by an American motorcycle journal came to a successful close. Upwards of 200 suggestions were received by the editors of the contest, of which about three score and ten were published in various issues of this paper. The contest demonstrated that the readers of MOTORCYCLE ILLUSTRATED are gifted with a technical knowledge with which the average manufacturer would hardly have credited them. In fact, so keen was the competition that the judges found it necessary to draw some very fine distinctions in order to determine the prize-winning proposals. The task of picking out the lucky contestants has been carefully and conscientiously done, however, and it is the confident belief of the contest editors that their decisions will meet with general approbation.

The Prize-Winners.

First prize, $50 in cash, goes to J. R. Paddock, Jr., of East Orange, N. J., who submitted a most ingenious mechanical oiler. Paddock scored 93 out of a possible 100 points. The second prize, $25 in cash, is won by E. P. Phelps, of Bridgeport, Conn., whose oiling system scored one point less than that submitted by Paddock. The third prize winner is Philip L. Allison, of Burson, Cal., who gets $15 for a very clever design for a three-speed gear. C. W. Bergman, of Alpine, Mich., with a two-speed device in a unit power plant is adjudged the fourth prize of $10. Eight others, whose names are given on the next page, submitted suggestions which the editors considered deserving of honorable mention.

As stated in the announcement of the contest, the value of each idea was gauged by a point system, in which all the possible attributes of a motorcycle improvement were rated in proportion as they approximated perfection, as follows:

Necessity and desirability	25 points
Safety, comfort and convenience	15 points
Adaptability	10 points
Mechanical perfection	10 points
Reliability	10 points
Manufacturing cost	10 points
Durability	8 points
Simplicity	7 points
Neatness	5 points
Total	100 points

In adjudging the prize winners, those who undertook the task had no trouble in deciding that practical designs embodying such important improvements as in lubrication and change speed gears were deserving of a high scoring as regards their necessity, desirability, safety, comfort and convenience. No design scored all of the forty points which would have been credited to it had it been perfect in these qualifications. The four prize-winning suggestions were as nearly perfect in these particulars as could have been expected. In fact, however, it will be noted by reference to the detailed tabulation of the best twelve scores that the differences between the highest four are very slight, the margin of points between the four prize-winning scores being but three.

Many competitors submitted suggestions and designs which scored almost perfectly with respect to their adaptability, mechanical perfection, reliability, manufacturing cost, durability, simplicity and neatness. But many of these suggestions, while valuable as a minor improvement, lost points on the first two units of 25 and 15 each because of their necessarily limited general value. There is no question, however, that adaptations of many of these ideas will be found in American motorcycles, their parts and equipment. Although it cannot be said that the results of the contest were at all sensational, it has proven beyond question that it is an excellent thing to bring manufacturers and riders in touch with one another in this attractive and interesting way. Under the circumstances, another improvement contest will be inaugurated by MOTORCYCLE ILLUSTRATED in the near future If it is as successful as the first one has been, a contest of this or similar character will be conducted annually through the columns of MOTORCYCLE ILLUSTRATED.

BEST TWELVE IMPROVEMENTS DESCRIBED

AUXILIARY OIL PUMP

A POSITIVE oiling system which will feed oil according to the speed of the motor, and regularly, instead of at intervals, is here shown; it is adaptable to any motorcycle. All working parts are easily reached for adjustment and the cost of manufacture would be low. The impulse piston is operated by the motor piston, moving to the left on the suction stroke and to the right on the compression, firing or exhaust stroke. As soon as a "working" stroke has been completed, the return spring forces the impulse piston to the left again. Within the pump body is fitted the oil piston, forming part of the impulse piston. When the latter is moved to the left by the spring, the oil piston draws a charge of oil through the supply pipe, unseating the upper ball valve. When the piston moves to the right, the upper ball valve closes and the lower one opens, the oil being sent into the chamber having the oil delivery valve and pressure valve at opposite ends The rider can regulate the amount of oil in this chamber by the pressure regulating valve, there being a by-pass for returning surplus oil to the tank The drop through the sight-feed is regulated by the delivery valve. By adjusting the stroke regulating valve, the pressure (from the cylinder) on the impulse piston can be adapted to suit the running of the motor. Contributed by J. R. Paddock, Jr., East Orange, N. J.

THREE-SPEED GEAR

A THREE-SPEED bottom-bracket or countershaft-mounted gear, with selective control, is suggested in illustration No. 2 as satisfactory for use on passenger and solo mounts. The chain from the motor sprocket leads to the clutch body J, on which is mounted a sprocket. The clutch shaft is prolonged through the gear box and is squared, two sliders with pin teeth (A and B) being mounted on this square portion. Loose on this shaft are gears C, E and G. Meshing with these gears are D, F and H, which are fixed on a countershaft. To C is attached a sleeve, which surrounds the clutch shaft and carries the final drive sprocket K on its outer end. Each gear on the clutch shaft is pierced with holes to accommodate the pin teeth on their respective slider. Thus slider A has its teeth entering into gears C and C., while slider B has its pin teeth into G. The holes are shown in the section of gear C. For the high speed A is moved so that its teeth engage with gear C. The drive is direct from J to K, the shafts being locked together. For the second speed, slider A is moved to engage gear E; the drive is through clutch shaft, gear E, gear F, gear D and gear C to sprocket K. For the low speed, slider A is in neutral and B is engaged with gear C. The drive is from clutch shaft through gears G, H, D, and C to sprocket K. All gears not engaged on the clutch shaft run idly. The ratios are: High, 3:1; second, 5:1; low, 7:1. The gear change and clutch levers are mounted within a sector of the selective type on the frame of the motorcycle. The clutch lever is at L and the gear change lever at M. When M is moved into slot 1 the low gear is engaged, and when placed in slots 2 and 3 the second and high are respectively engaged. Contributed by Phillip L. Allison, Burson, Cal.

POSITIVE OILING

TO insure positive oiling of the motor bearings, pistons and rod-ends, a combination pump and sight-feed system is suggested in drawing No. 3. The crankcase of the motor has fitted to it a pump or well A, from which oil is drawn by a pump D, operated by the motor. A lead E from D goes to three feeds G, each feed being fitted with a sight-glass. Lead F goes to the rear of the cylinder, and oils the piston, while leads H are for the main bearings. Within the pump is a standpipe J, projecting into the crankcase and regulating the height of the oil therein into which the flywheels dip. This standpipe is provided with a hollow and ports K give communication with the interior of the pump L is the oil level in the crankcase and M the outlet to the pump D. A drain plug is fitted to J at C. Contributed by E. F. Phelps, Bridgeport, Conn.

UNIT POWER PLANT

THE crankcase in this unit power plant houses the two-speed gear and clutch, as well as the flywheel, crank and crankarm. F is the crankpin, G the single flywheel, and H the gear driving the valve train. On the extension of the crankshaft is keyed a set of gears A and C, which are in constant mesh, respectively, with gears B and D on the countershaft. A clutch or other device J enables either of the gears B or D to be clutched to the countershaft and thus drive the machine by a chain over sprocket K. The high speed is through gears C and D, while the low speed is through A and B. Contributed by C. W. Bergman, Alpine, Mich.

GASOLINE STRAINER

A GASOLINE strainer is shown in illustration No. 5. It is to be attached directly to the carbureter. B is a brass tube, one inch in diameter and six to eight inches long. A is a chamois-skin strainer held to the part D by nuts, etc. The skin is bent downward as at F to prevent leakage past it. G is the connection to the gasoline tank, and H the screwed connection to the carbureter. E is the base-cap and is integral with D. The fitting is shown in the main view where M is the carbureter and S the fuel shut-off cock. Contributed by Ralph W. Green, Modesto, Ill.

A COMBINATION STAND

A FRONT-WHEEL stand, acting as stand and crankcase guard, is shown in drawing 6. The left hand view shows the bottom (or front) view of the stand, which hinges at H and has a foot at B. There are hinges to the forward part of the crankcase, protecting the front of the case from shock and the sides also by diagonal braces. The full lines show the wheel off the ground when tire repairs are needed on the road and preserves the front tire from supporting the motorcycle when in the garage. The manufacturing cost is small and the design is adaptable to any machine. Contributed by Alan C. Cameron, Riverside, Ill.

FRONT WHEEL STAND

FRONT-WHEEL stand, fitted in the same manner as the regular rear stand. Drops behind the front wheel and raises the machine when pulled backward. Useful when front tire needs attention and in garage, keeping both tires off the floor. Shoulder on front of leg fits under axle pin when stand is in service. Contributed by Roderick G. Drysdale, Westfield, Mass.

A GASOLINE GAUGE

DRAWING No. 8 shows a gasoline gauge fitted to the tank. A glass tube is fitted into a recess in the tank where it is protected from damage in case of shock. Contributed by J. R. Ritchie, Spokane, Wash.

VARIETY OF IMPROVEMENT

DRAWING No. 9 shows a combined front wheel stand and mudguard brace, a starting crank directly on the engine shaft, and footboards with frame running to the rear axle ends. A combined foot-brake and clutch control is also shown. The rear mudguard has continuous sides which are hinged. A sight feed oiler fed by a gear-pump and a celluloid windshield attached to the handlebars complete the list. Contributed by Victor Perry, Batavia, N. Y.

A GASOLINE FILTER

ONE of the vital necessities to the rider, particularly he who tours, is a gasoline filter or strainer. One such device with a settling chamber is here shown, the filtering medium being a chamois disc S. The device consists of two chambers, A the filter chamber and B the settling chamber. B has a removable cup G and a rod F which projects into the passage E and holds a steel ball off its conical seat. Gasoline enters from the tank at C, passes through A and S to P which is connected to the carbureter. On removing cup G, the ball seats itself, closing E, and any water or dirt can be removed from G without leakage from A or interruption of the flow of gasoline to the carbureter. On replacing the cup, the ball is lifted and B again acts as a settling chamber. Contributed by Charles R. Chickering, Philadelphia, Pa.

ENCLOSED DRIVE

AN enclosed drive, with chain running in oil and case readily removable to replace and adjust chains, protects the rider and transmission likewise. A detachable rear mudguard permits of the tire and wheel being quickly repaired, and is essential where a tandem or carrier is fitted. Fastenings are by wing-nuts and slotted lugs. When the valve mechanism is enclosed, wear is saved and the motor is kept free from oil, etc. Lubricating oil tanks should occupy the forward compartment of the main tank, keeping the rider clean and enabling observation and ease of operation of the hand-pump. Large oilers are used on front and rear hubs. Contributed by Thomas O. Wansleben, Washington, D. C.

FOLDING MUDGUARD

CONTRIBUTION No. 12 was forwarded by B. T. Ellis, of Baltimore, Md. It provides for a folding rear mudguard. When the guard is in normal position a lock bar extends across the break and is fastened by thumb nuts; when the lower section of the guard is to be folded upward the thumb nuts are loosened and the lock bar is swung clear of its end fastenings when the guard is free to move as desired.

DEBUT of the MICHAELSON

THREE TWO SPEED MODELS MAKE UP LINE OF NEWLY ORGANIZED MICHAELSON MOTOR COMPANY A SINGLE GENERATING OVER 6. H. A TWIN RATED AT 10-13. H. AND A DELIVERY VAN OUTFIT

TWIN UNIT POWER PLANT A NOTEWORTHY FEATURE

BACKED by six years' experience in the manufacture of two-speed motorcycles and possessed of a keen insight into the requirements of riders in general, J. M. Michaelson, who was prominently identified with the Minneapolis Motorcycle Company from its organization, has now decided to blaze his own trail and as a result the Michaelson Motor Company, of Minneapolis, Minn., has been incorporated, with capital stock of $200,000. The formal announcement of the new company is to the effect that it will market a 5-6 h. single, a big 10-13 h. twin and a tri-car delivery van. These machines will be equipped with an improved two-speed transmission and multiple disc clutch, enclosed and running in oil. It is the avowed intention of the Michaelson company to embody in its models only such features as have amply demonstrated their worthiness.

Mr. Michaelson announces that he has designed and thoroughly tried out a new motor during the last year, and that it meets all his expectations. The Model 5A he considers especially adapted for everyday business service, which will not demand a speed greater than 55 m. p. h. He states that his motor has developed 6½ h. on an actual brake test, and that it has shown remarkable flexibility and ease in starting.

An Iron-Clad Guarantee.

Large, heavy flywheels give smooth running in the new Michaelson motor, and also permit of slow speed. The machine throughout is so well balanced that riders have operated it in tests at remarkably low speed with their hands free of the bars. The multiple disc clutch and two-speed gear in Model 5A are the same as are used in the big twin. The clutch has shown itself reliable and capable of long service. In heavy going the clutch lever on the handlebar gives the rider complete control of his mount without the necessity for removing his hands from the grips. This model combines attractive lines with a low saddle position, and a spring seat-post is a noteworthy feature for the comfort-seeker. The standard color will be dark red, with striping. The company places special emphasis on the fact that each machine will be covered by an iron-clad guarantee.

The Model 10A motor has shown 13½ h. on brake test and is credited with being just a little larger in piston displacement than any other motorcycle motor on the market. The two-speed gear in this model is provided with an ample margin of strength to withstand the unusual strain to which it will be subjected. This model follows the graceful lines of the single type, but carries 3-inch tires, front and rear, with plenty of clearance for tire chains.

The Tri-Car Delivery Van.

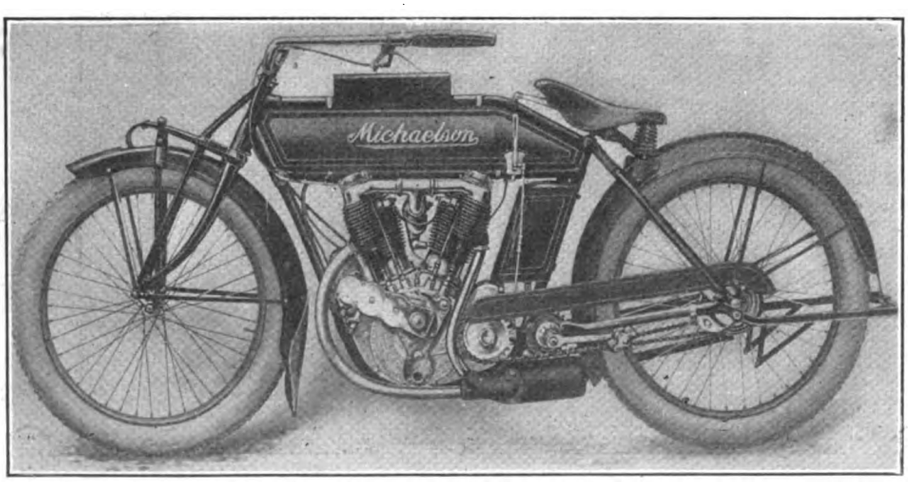
Realizing that the coming season is bound to bring an unprecedented demand for delivery vans, the Michaelson company is producing an attractive commercial vehicle. It has been designed with special regard for long service, simplicity and ease of handling in traffic. The two-speed transmission and clutch permit of perfect control in congested streets, and also make for dependability on hills and in suburban service. The van itself is unusually sturdy and capacious, and it is stated that weaknesses that have developed in the past in connection with such designs have been carefully guarded against.

The box is 40 inches long, 24 inches wide and 24 inches high, and is fitted with double doors on top. The frame is of heavy gauge Shelby steel tubing, and drop forged steering knuckles are provided. Twenty-eight inch wheels are fitted, with a 3-inch tire on the rear and 2¾-inch tires in front. United States or Goodyear tires may be had. The road gauge of the van is 42 inches. The outfit has a capacity, exclusive of the rider, of 300 lbs., and is capable of traveling 35 miles an hour. It is listed at $375, f. o. b., Minneapolis.

Unit Power Plant.

The new Michaelson twin-unit power plant is counted upon to create a lasting impression. An extension of the motor base forms a housing for a countershaft on which is mounted the two-speed gear. Compound gears connect the drive shaft and the countershaft; the disc clutch is mounted on the main drive shaft. Countershaft and intermediate gearing, as well as the main shafts, are mounted on annular ball bearings, and accurate tests show a loss of only 4 per cent. throughout the entire gearing. The complete mechanism is enclosed by an oil-tight cover. Non-fluid transmission grease is used for the transmission and clutch, so that once the lubricant has been supplied no further attention need be given the mechanism for months. An oil window is provided in the crankcase.

Each motor has a bore of 3½ and stroke of 3¾ inches. The twin motors are tested for 13½ h. before they are passed. Mechanical overhead intake valves are used, and the exhaust valves are 1⅞ inches in diameter; all push rods are adjustable. The cylinders have wide thin flanges to facilitate cooling. A 1½-inch exhaust pipe is fitted to assist in rapid elimination of the gases. The Schebler 1-inch automatic carbureter is especially adjusted to this motor, and ignition is by Bosch magneto. A mechanical oiler is embodied in the left base, and a hand pump is also provided for emergency use. Special attention has been given to lubricating.



New Michaelson Twin, Rated at 10-13 H.

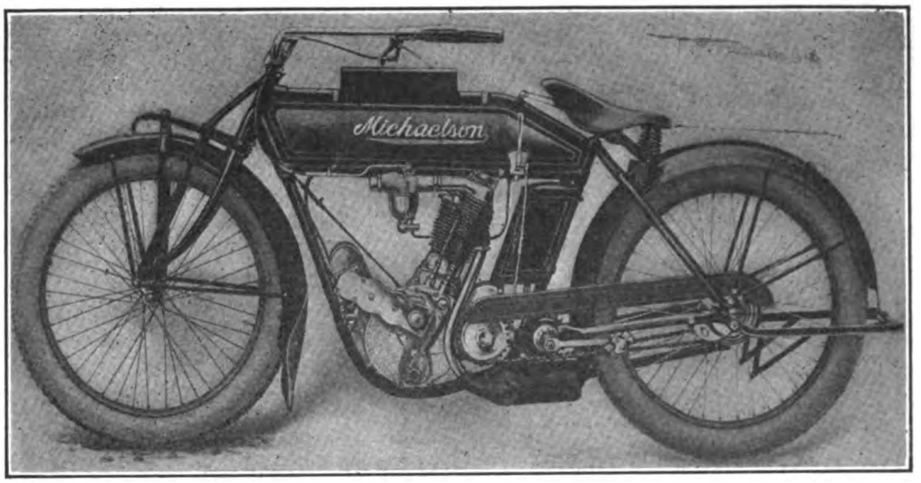
The Two-Speed Gear.

The rocker arms on the intake dome are enclosed

Digitized by Google

with caps which keep out dust and grit; a little cotton saturated with oil is enclosed within the caps so that the rocker arm bearings are properly lubricated for a considerable time. The cylinders are nickel-plated and polished as are other exposed parts.

The gears in the Michaelson two-speed gear all have eight pitch teeth with ¾-inch face, and are large in diameter so that they are afforded additional strength. The main bearings are of the annular ball type. The compound idler gear has wide phosphor bronze bearings, and its lubrication is adequately cared for. On high gear the drive is direct through the countershaft and the compound gear runs idle. On low gear, the drive is through the compound gear, and the reduction is 2 to 1. High carbon steel only is used in every part. The gearcase is packed with transmission grease, sufficient for one season or more.



5-6 H. Michaelson Single; Unit Power Plant.

Other Specifications.

Control is by twisting grips, the right grip operating the spark and the left controlling the throttle and exhaust valve lift. The gasoline tank has a capacity of three gallons and the oil tank holds one gallon. A gasoline priming pump is fitted in combination with the gasoline filler cap. An improved cradle-spring front fork is fitted; the leaf springs are 2½ inches wide and of highly tempered chrome vanadium steel, The wheelbase is 58 inches. Model 5A has 2¼-inch tires, front and rear, and Model 10A has 3-inch tires on both wheels; the tri-car tires have already been specified. The Eclipse multiple disc brake or Corbin band brake are optional. Mesinger or Troxel saddles may be specified.

Model 5A lists at $275 f. o. b., Minneapolis; Model 10A at $325 and the tri-car outfit, as before stated, at $375. The company will furnish 3-inch tires on Model 5A for $2 extra and a luggage carrier for $3 extra.

AN APPEAL FROM BROOKLYN.

IN a letter received a few days ago J. A. Hall, of Brooklyn, N. Y., argues that the 1913 F. A. M. National Meet should be held in Brooklyn. A. H. Patterson, one of the leading dealers of the City of Churches, who has probably done more than any other individual of that city for the general good of the sport, and P. Warlick, a prominent member of the Invincible M. C., of Brooklyn, are also striving to induce the F. A. M. Directorate to consider Brooklyn for the annual session.

"One of the main reasons," says Mr. Hall, "why the meet should be held in Brooklyn this year is because 1913 marks the tenth anniversary of the F. A. M. Ten years ago this coming Labor Day, the F. A. M. was organized in Brooklyn, and in my opinion it would be an altogether fitting means of celebration to hold the meet at the birthplace of the organization. As far as amusements are concerned, it is a well-known fact that no city is better fitted than Brooklyn. The Brighton Beach motordrome would be an ideal place for races, and the popular Long Island speedways would afford excellent riding I would also suggest that the F. A. M. publicity committee send out literature proclaiming next Labor Day as a National F. A. M. Day, and let it so be recognized throughout American motorcycledom."

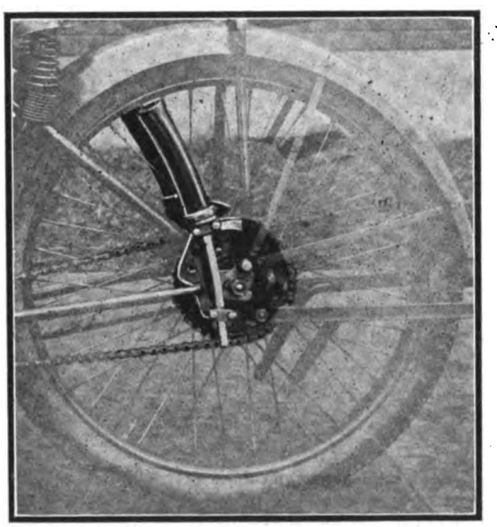
HELD NEW YEAR'S RUN.

CLEVELAND, O., January 3.—A run to Geneva and return was held by the Cleveland M. C. on January 1. This was the first of the quarterly runs, and a large number of the members participated. The schedule called for 20 miles per hour, which, on account of the mud and slush, was difficult to maintain. Those finishing with perfect scores were: W. J. Norton (Indian); Raymond Ray (twin Merkel), and E. Hawkins and Herman Sill, riding Thors. R. S. McConnell acted as referee.

IN a recent letter Secretary Gibson of the F. A. M. states that the parcels post is open to the motorcycle.

REDMOND SHOCK-ABSORBER.

MOTOR PARTS COMPANY, of Detroit, Mich., are bringing out the Redmond shock-absorber, which is adaptable to any motorcycle, and is shown herewith. The device is patented by C. A. Redmond, and is attached to the rear construction of the machine, the



frames forming loops on each side of the rear hub axle, which plays up and down within them. Each frame carries a spring cylinder at its upper portion, and in this cylinder works a pistion to whose rod is attached the fork carrying the hub axle. It is to be understood that there is one cylinder and loop on each side of the machine. The rod and cylinder are curved so that the motion will be in the arc of a circle whose center is at the pedal shaft bracket, and free movement will only be governed by the springs, rubbing friction being reduced to a minimum by this form of curved cylinder and piston. The device clamps to the rear fork and to the slider fork on each side, and there is a brace-bar passing over the wheel for the elimination of side play. The transmission is always kept at the same tension, while the rear wheel has the desirable "cradle effect." A stand is furnished with the complete device, which will retail at $15 complete, ready to fit.

TOUGHER GOODYEAR TREAD.

ANY construction that tends toward giving longer life to motorcycle accessories is much to be desired, especially with the increase in power, weight and speed of the 1913 machines as compared with those of last season. In the realm of tires, to this end, the Goodyear Tire & Rubber Company, of Akron, Ohio, are furnishing a tougher tread on their motorcycle products for the new season, but the fabric will not be changed, it having been found more than amply strong for even the increased strains brought about by the new motorcycle constructions. This action on the part of the makers of the Goodyear product is in keeping with their policy in keeping their tires more than equal to the conditions which confront them in all lines in which tires are used.

Goodyear motorcycle tires sales in the past season were five times those of 1911, and with an increase of 50 per cent. In the number of motorcycles manufactured, not to mention renewals, the increase over both 1912 and the previous season is figured upon as very substantial.

TWO-COLLECTOR SYSTEM.

PATENT number 1,047,573, granted to Max Schafer and Robert Wagner, Stuttgart, Germany, on an application filed April 9, 1912, has been assigned to the firm of Robert Bosch, also of Stuttgart. The claim specifies a two-part collector ring with a brush for each part and a distributer for use with multiple cylinder engines. The distinguishing feature is that there are two collectors.

ELYRIA, O.—W. C. Robbins, of the firm of Cook & Robbins, Indian dealers in Elyria, died from injuries sustained when he was struck by a train on December 11. Mr. Robbins was well known throughout his section of the state.

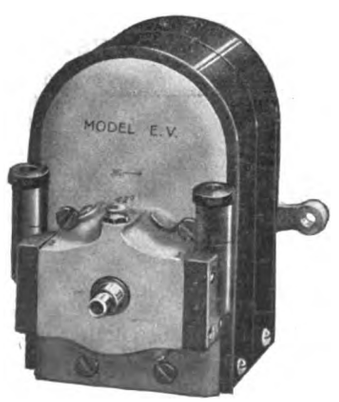
TWO NEW SPLITDORFS

WATERPROOF MAGNETO MODELS for 1913 MOTORCYCLE SERVICE SHOW MARKED IMPROVEMENTS "EU" AND "EV" TYPE FOR SINGLE & TWIN MACHINES RESPECTIVELY

IN keeping abreast of the rapid development of the motorcycle field during the last year or two manufacturers on all sides have come to appreciate fully the importance of dependability in their products, and the policy of working for serviceability at every turn has been applied with special care to the manufacture of ignition fitments. This is exemplified in two 1913 products of the Splitdorf Electrical Company, waterproof magneto types that have been designed with particular regard for the requirements of single and twin-cylinder motorcycles.

Front View; Single Cylinder Type.

Following their highly successful methods of producing a spark plug which is recognized as "standard" because of its simple perfection, the Splitdorf Electrical Company is manufacturing its new magneto types along lines calculated to attract wide attention. The new models are known as "EU" and "EV," for single and twin-cylinder machines, respectively. Both are of the enclosed type, and special emphasis is placed upon the company's announcement that they are waterproof, as well as oil and mudproof. Exhaustive tests of the new magnetos under every imaginable weather



Back View; Twin Cylinder Model.

condition have convinced the company's designers that no machine fitted with one of them will fail to hold its own through ignition trouble.

The Policy of Protection.

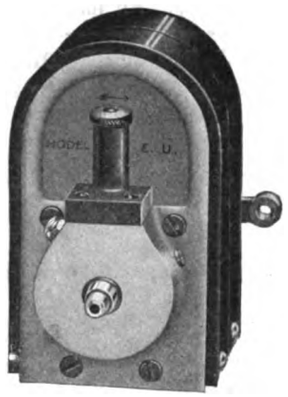
In no details is the policy of adequate protection more apparent than in the brush-holder and cable connection. The cable is easily detachable and a skirted terminal plug makes a waterproof connection, the dissembling of which is simplicity itself. No special screw-driver is required, the terminal plug being removable without touching the brush-holder which is, itself, easily detached while remaining thoroughly waterproof. This construction and other features, are the subjects of patent applications.

Aluminum is used for the base, end plates and cover, and the combination of lightness with strength effects the happiest possible solution of a motorcycle difficulty. The pole pieces are made from steel of high permeability and are rolled according to a special formula of the Splitdorf Electrical Co. Magnets are of Styrian Tungsten steel, of the highest quality, and produce a hot spark at both low and high motor speeds. The magnets are encased in an aluminum cover, strongly ribbed, with the ends turned over the edges of the end plates to exclude water.

The Centrifugal Circuit-Breaker.

The armature is composed of laminations of the highest grade electrical iron, and the windings have been so designed as to make easy starting a certainty. Ball bearings with oil cups are a detail of the general plan for efficiency. The centrifugal circuit breaker—a notable feature of the Splitdorf instruments—revolves with the armature shaft and embodies a breaker-arm, pivoted in such manner that the action of centrifugal force quickly brings the contact points together and minimizes the strain on the actuating spring, thus producing a harder and more positive contact.

On one end of the breaker-arm a fibre roller is fitted and this is provided with four changeable wearing surfaces. Each one of these will last 1,000 miles or more, and each

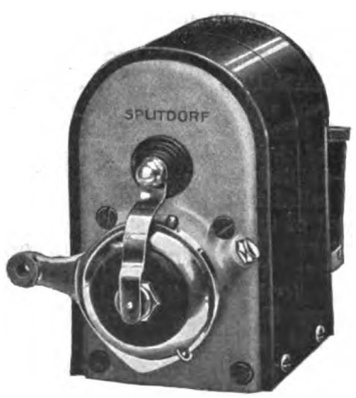


Rear of Single Type.

can be brought into action by simply turning the roller a quarter turn in the proper direction. These features are covered by U. S. Letters Patents.

Instructions for Cleaning.

The contact points are of high quality iridium-platinum of ample wearing surface. They are accurately set at the factory, but can be easily adjusted by loosening the lock-nut on the platinum screw and turning up the same until the points separate 1/50 of an inch, when the roller rests on the cam surface. This distance will give the best results, as



Twin Model; Front View.

Digitized by Google

there is very little wear on the points, owing to the improved condenser absorbing any burning action of the primary current.

The carbon brushes will last a long time, as the collector ring is highly polished. It should be cleaned from time to time by removing one of the high tension brush holders and inserting a clean piece of cloth, on the end of a lead pencil. It is only necessary to saturate the cloth with gasoline and turn the armature over. At the same time, care should be exercised in replacing the terminal and tightening up the three screws carefully to make a perfect joint, a waterproof gasket being provided for this purpose.

Questions and Answers

(Other answers are held for the January 23 issue, owing to the pressure of show matter.)

SIDE-BY-SIDE MOTORS

LEON GIBSON.—The side-by-side arrangement of cylinders is not original, but has probably never been constructed in such high-powered cylinders up to the present time. One of the pioneers in motorcycle construction, Werner, in 1904, brought out the first twin motor for motorcycles (except the Butler of 1897) with the cylinders arranged side by side. Another was the Bercley, of English make, which appeared and disappeared about 1906. For tri-car work several European firms produced special models with this cylinder arrangement as recently as 1908. The chief exponent of this type of motor is the French Alcyon, a T-head air-cooled twin of 2½ horsepower. The bore is 1.84 inches, and the stroke is 2.82 inches, about 15.2 cubic inches total piston displacement. This model first appeared in 1910 and is continued to date.

The Curtiss three-cylinder motor of 10 horsepower had the third cylinder between the other two, and was fitted with two carbureters. One supplied the middle and one end cylinder, and the second made gas for the remaining cylinder. The firing sequence, as far as could be learned at the time, was 0-315-720-990. There were three revolutions necessary to fire all the cylinders in succession. It was not as successful as its designers wished, and was discontinued. The only other three-cylinder motorcycle motor on these lines was the Buchet, of French make, which appeared in 1905-6. It is no longer made.

"ESTIMATING MILEAGE."

JOHN T. REMEY.—The formula given is not intended to be an exact, academic one correct to fractional cubic inches or even leages, as the caption should tell you. It was developed from John Batey's formulae of the theoretical estimated mileage, and answers one of a numerous batch of inquiries about how many miles per gallon such and such a motor can make. Quite a number of factors, naturally, determine whether the formula is accurate or not; some of these are dependent on the manufacturers of the machine and carbureter, while others are dependent on the rider himself.

We must necessarily assume *D* as a constant no matter what the speed, if we are to get a type of formula such as the one under discussion. To go into detail for exactness we would be obliged to treat each individual motor by itself, a rather difficult undertaking for us when the machine is on the Pacific coast. For a more correct exposition of the relation of volume to inlet aperture (throttle opening) consult such works as Heldt's "Gasoline Automobile," Güldner's "Internal Combustion Engine," etc.

NEW YORK TO MADISON.

C. L. CHINNOCK.—We presume that you mean to go in the spring; we cannot advise such a tour at this time of year. Referring to our Touring Number, take route 40, New York to Princeton, N. J., 50.9 miles. From Princeton go through Lawrenceville, then through Trenton. Cross the Delaware river and pass through Oxford Valley, Langhorne, La Trappe, Bustleton, Fox Chase, and Ogontz to Philadelphia (City Hall). The distance from Princeton is 46 miles. Take route 61, to Gettysburg, Pa., 118.5 miles, and route 53, Gettysburg to Hagerstown, Md., 33.3 miles. Here join route 99, and go on to Pittsburgh, Pa., a distance 183 miles.

From Pittsburgh, take route 145 to Cleveland, Ohio, 139.8 miles; then route 104 to Toledo, 116.3 miles. Follow route 125 next to South Bend, Ind., 171.3 miles, and from South Bend follow route 160 reversed to Chicago, 113.8 miles. From Chicago follow route 174 reversed to Madison, Wis., a distance of 149.1 miles. For hotels, etc., consult the Automobile Blue Books, vols. 3 and 4. Figure on $2.50 to $3.00 per day for board and room.

DULUTH TO CHICAGO.

GEORGE NOWAK.—From Duluth go across to Superior, then go on through Allouez, Itasca, Rockmont, Hawthorne, Bennett, Solon Springs, Gordon, Minong Spooner, to Shell Lake, 82.4 miles, varying roads. From Shell Lake go next to Barronnett, then to Cumberland and Barron, 34.1 miles, clay roads. Go on to Barron Prairie Farm, Wheeler and Menominee, 50.9 miles, varied roads. From Menominee go on to Eau Claire via Elkmound, 25.3 miles, some sand. From Eau Claire go to La Crosse, via Brackett, Whitehall, Ettrick, Frenchville, Decora Valley, Holmen and Onalaska, 86.2 miles good clay roads. This is route 192 (Touring Number), in reverse. From La Crosse go to Madison via St. Joseph, Portland, Cashton, Kendalls, Elroy, Wonewoc, Reedsburg, Abelmans, Baraboo, Sauk City and Ashton. The distance is 150.2 miles and the roads sand and clay (Route 176 reversed). Now take route 174 to Chicago, 149.1 miles good dirt with some macadam. For maps write the American Automobile Association, 437 Fifth avenue, New York, asking for the state of Wisconsin. You can get an excellent route book for Wisconsin for $1 from the Scarborough Company, Indianapolis.

WINTER LAY-UP.

CHARLES CHAMBERLAIN.—Before putting your machine away for the winter clean it thoroughly all over. Wash out the motor with kerosene and see that everything is thoroughly dry. Deflate and remove tires and clean rims. Rub tubes with French chalk and place in a bag which you will keep in a fairly warm place, away from the light, until ready for use again. Do the same with the casings. Now go all over the machine looking for rust, which remove, if possible, then coat all metal parts with vaseline or a good gun grease. Set the machine on the stand and finally cover it up. When you next wish to use it, wipe off the grease, put on the tires and fill up.

ADDRESS WANTED.

WILL Doctor E. Dozier, who inquired about a railroad motorcycle, send in his address? We have received a letter on this subject which we will be glad to forward him.

STORAGE BATTERIES

A. H. PAULLUS.—See answer to Frederick W. Steadman, page 56, issue of December 12. We refer you to the Willard Storage Battery Company for further details.

Owing to the unusual amount of material that had to be handled incidental to our Show Forecast issue, the decisions and awards for Question No. 12 will be announced in the January 23 issue.

SUCCESSFUL HOUSEWARMING.

OVER two hundred motorcyclists of New York City and vicinity were the guests of Manager Gene Coughlin, at the Riverside Motorcycle Garage, 533 West 110th street, New York, on the evening of December 28. Nearly all the neighboring clubs were represented, and an interesting program was carried out. The visitors were greeted by Manager Coughlin and President G. E. Wood, of the Riverside company, supplied with eatables and drinkables and incidentally they were introduced to the new R-S and Eagle models for which the Riverside folks have the agencies.

LOOK FOR BIG YEAR.

BALTIMORE, MD., January 6.—The motorcycle business in this city during the past year was splendid, and the dealers express confidence that the present year will far surpass the previous one. Howard A. French & Co., agents for the Indian, sold 231 new machines in 1912 and 142 second-hand ones. During the holidays 12 new models were disposed of and there are plenty more ready to take the two-wheelers as fast as they arrive in the city.

French has an order in the Indian factory for 500 machines for delivery this year and he fully expects to not only sell them but have a demand for more. The improving of streets in this city and the roads throughout the state has made the motorcycle very popular in this section.

A STANDARD PATENT.

IT is announced by the Standard Thermometer Company that its method of driving the speedometer from the front wheel is patented, and that any infringements will not be permitted. The attorney of the Standard Thermometer Company recently served notice on a concern which had announced its intention to produce a similar front wheel drive. On January 3 we received a letter from the attorney for the other company admitting that the latter's device constituted an infringement of the Standard patent, that they had discontinued the manufacture of the same immediately upon receiving notice from the Standard Thermometer Company, and that they are using every effort to stop its sale.

CHIEF GEHLE, of the Piqua (Ohio) Police Department, has requested the city to purchase another motorcycle for use in patroling the local driveways.

A MOTORCYCLE will be purchased for the building inspector at Pueblo, Col.

The HOME of the MESINGERS

MASSIVE against the sky line, like an ancient castle on the Rhine, stands the stronghold of the H. & F. Mesinger Mfg. Co., those past masters of the art of saddle-making. In appearance the new Mesinger factory is quite distinctive, and well deserves the appellation of the largest and most up-to-date saddle factory in America. It is five stories high and fireproof throughout. The entire building is electrically lighted, the current being supplied by a 35 h. electric dynamo. To add to the protection against fire, automatic sprinklers are fitted throughout the plant. This precaution, however, is rendered practically unnecessary by the almost total absence of wood in its construction, iron staircases, cement flooring and hollow brick walls being the general structural scheme in this model factory.

Power is supplied to every part of the works by a 100 h. steam engine. Transmission is by vertical shafting throughout, one center shaft running from the basement to the top floor. The electric dynamo and the steam engine are, of course, situated in the basement, as are also the rolling machines and oil forge for heating and tempering the springs before rolling.

On the first floor are found the commodius offices, the shipping and finishing rooms. Here the motorcycle saddles undergo a final inspection, one of the features of which is a weight and vise test of 350 pounds on each saddle. The finishing touch is here added to the saddle by riveting machines which fasten the tops to the frame. Raw material is also methodically stocked on this floor.

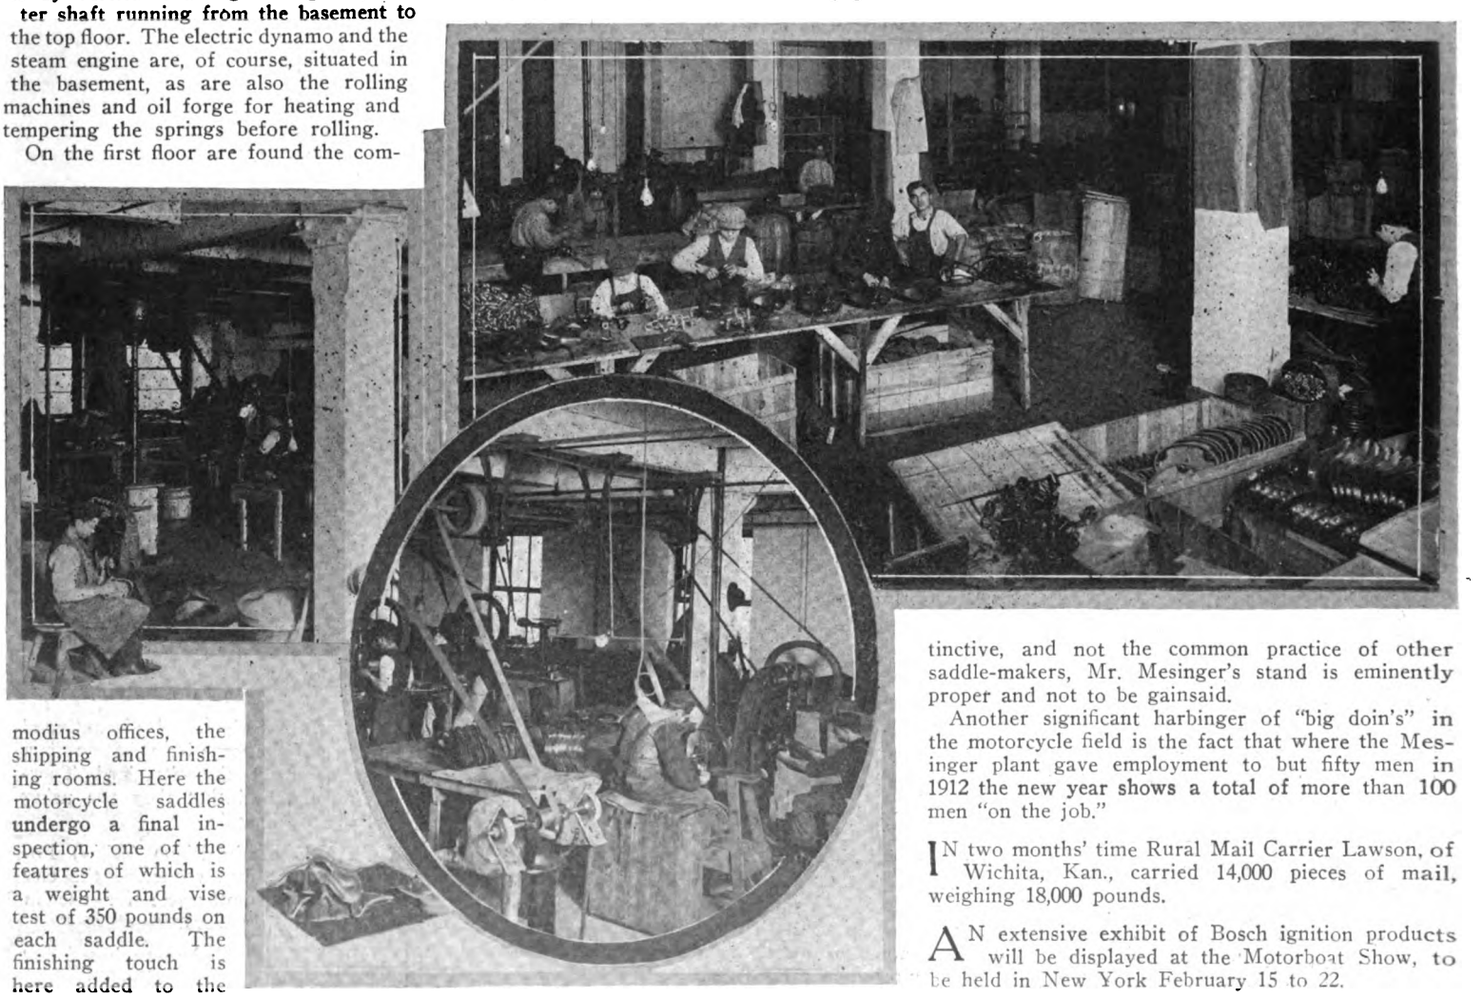
On the second floor are located the machinery and stamping departments. Here tools for the workmen's use are made by skilled and highly-paid mechanics. Here, too, the stamping machines, tremendously powerful, with which the metal parts which do not require hand work are stamped, are seen in operation. A means of rapid access to all parts of the factory is afforded by a large, electrically operated lift, which is also employed for the transportation of cases of raw and finished goods.

Of unusual interest to the visitor is the leather department, which is situated on the third floor. A battery of sewing machines, forming presses and top finishing machines are clamorously engaged in shaping, stretching and finishing Mesinger saddle tops. Not to be overlooked are the men engaged in the multitudinous operations, principal among which is the padding of Mesinger Cavalry saddles.

The fourth floor is given over to the enameling and assembling of metal parts, four coats of enamel being applied to every piece of metal entering into the construction of a Mesinger saddle.

Situated as it is on the Harlem River, Austin Place and One Hundred and Forty-fourth street, New York, the Mesinger plant's shipping facilities are excellent. Freight yards are within a stone's throw of the plant, and this feature, coupled with their good trucking service makes carload shipments a simple matter.

This description has been necessarily brief, due to the reluctance of the general manager to disclose in greater detail the various operations employed in bringing to its final state of perfection the Mesinger saddle. Inasmuch as several details of its construction are distinctive, and not the common practice of other saddle-makers, Mr. Mesinger's stand is eminently proper and not to be gainsaid.



Another significant harbinger of "big doin's" in the motorcycle field is the fact that where the Mesinger plant gave employment to but fifty men in 1912 the new year shows a total of more than 100 men "on the job."

IN two months' time Rural Mail Carrier Lawson, of Wichita, Kan., carried 14,000 pieces of mail, weighing 18,000 pounds.

AN extensive exhibit of Bosch ignition products will be displayed at the Motorboat Show, to be held in New York February 15 to 22.

Digitized by Google

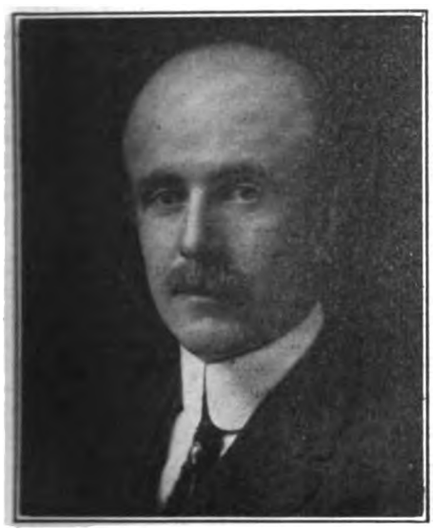
ECCLES IN NEW LINE

Salesman Who Scored Success on Persons Traveling Staff Launches His Own Company in Worcester to Manufacture Metal Accessories.

OF unusual interest to motorcycle trade circles is the announcement that W. E. Eccles, for the last three years an important factor in the sales campaign of the Persons Manufacturing Company, has severed his connection with the well-known Worcester firm to launch his own business. Mr. Eccles has formed the Universal Manufacturing Company with headquarters in Worcester, and the new company is prepared to handle metal specialties of every description as well as a standard line of wire products and sheet metal offerings.

Mr. Eccles' resignation from the staff of the Persons company took effect January 1, and he at once cleared the way for his new manufacturing enterprise. It is worthy of note that special attention will be given in his new line to motorcycle and bicycle accessories.

During his association with the Persons company Mr. Eccles traveled extensively in the firm's interest, and made three highly successful business trips to the Pacific coast. The valuable sales' experience gathered in this way, combined with Mr. Eccles' first-hand knowledge of the requirements of riders and his personal enthusiasm and popularity fit him admirably for the task he has now set himself, the production of accessories that will meet the practical needs of the trade. That Mr. Eccles is not a "prophet without honor in his own country" is evident from the fact that he is

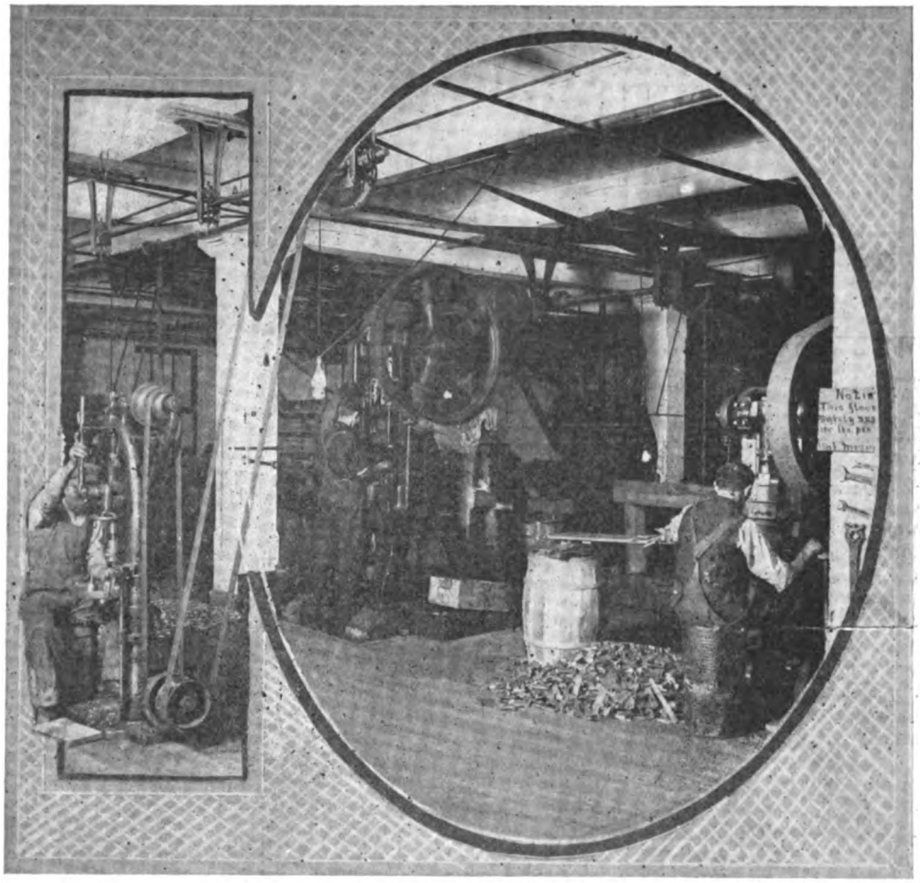


a candidate for election to the presidency of the Worcester M. C. at the next meeting, January 14.

ANNOUNCEMENT is made by the Iver Johnson Arms & Cycle Works, of Fitchburg, Mass., that they will not exhibit at the New York show but hope to have their machines displayed at the New York office, at 99 Chambers street.

IN NEW QUARTERS.

MILWAUKEE, WIS.—The Milwaukee Motorcycle Company of this city has moved to its new quarters at 834 Muskego avenue. New capital has been subscribed and the company is about to incorporate. An output of 200 machines is counted for 1913.



A Corner of the Stamping Department on the Second Floor of the Mesinger Plant, Showing the Modern Machine Equipment Which in Part Explains Mesinger Efficiency.

MAJESTIC FEATURES.

THE prominent features of the exhibition of the Majestic sidecars at the New York show will consist of three of the company's models attached to motorcycles, and ready for the road. These will be a "De Luxe" canoe-front passenger car, listing at $90, which will be shown attached to a 1913 spring-frame Indian machine. (It will be noted that the attachment is by means of a special fitting by which any Majestic sidecar can be used with the spring-frame Indian); there will also be shown one of the popular Standard canoe passenger cars, listing at $65, and attached to an Excelsior twin. A specimen of the new Majestic commercial delivery car will be shown attached to a Harley-Davidson motorcycle.

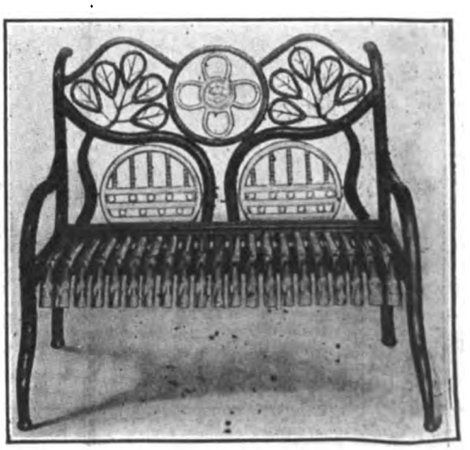
The interesting features of the delivery van are first, the box body, which is built up of five-ply veneer of maple and basewood, with the grain crossed, a construction which while unusually light is much stronger and tougher than a body made of sheet steel. This body has a water-tight cover which can be arranged to open from either side. It is mounted on a new and original system of compound springs which make the car and its load ride very easily, but prevent the swaying which is so undesirable in a vehicle intended to carry unusual weights.

Besides these three models attached to motorcycles there will also be shown bodies of the "De Luxe" curved front model, the Trinity model, with detachable child's seat, and the well-known Standard model.

A line of the Majestic specialties will also be shown, as well as several novelties which will interest motorcyclists.

A NOVEL EXHIBIT.

AN interesting feature of the Standard Welding Company's exhibits at the National shows will be a settee which is built entirely of bent steel tubular parts that the company is manufacturing for the motorcycle, bicycle and traction industries. The parts used are automobile and motorcycle exhaust tubes, manifolds, steering handles, street car strap hangers, robe rails and other parts, making a total all told of 210 pieces. To join them together it was necessary to make nearly 500 welds. Half of this number are welds made by the electric process. Most of the others were made by the autogenous method, while others were made by various processes of welding known to the mechanical world. It will suffice to say that nearly every method of welding known was used.



Digitized by Google

5 YEARS GROWTH of H-D PLANT

FIVE years old, wonderfully big for its age and still growing, tersely describes the Harley-Davidson Motor Company, which boasts Milwaukee as its birthplace and which, in turn, is boasted of by the people of that city as its most precocious child. When Milwaukee is mentioned it always has been customary to remark something about the product "that made Milwaukee famous."

But now, well-informed people do not immediately think of lager beer when the famous product of Milwaukee is mentioned. Milwaukee produces a large amount of beer annually; its malt products are known all over the world. But beer ranks fourth in the list in the value of the city's annual products. Steel products stand first in Milwaukee, and prominent among the large factories in that class is the plant of the Harley-Davidson Motor Company.

The growth of that company in that city of diversified and large manufacturing establishments has excited the wonder and admiration of every person acquainted with the facts. During the past five years the Harley-Davidson Motor Company has had a new building under construction practically all of the time. As soon as one was finished another was started. While the contractors were finishing upper floors the lower floors were being used for manufacturing.

Five years ago when the company was incorporated by William S. Harley, Walter, Arthur and William A. Davidson, there were but eighteen employees and the floor area of the embryo factory aggregated but 2,380 square feet. That was on September 17, 1907.

"Bill" Harley, who had just graduated from the engineering school of the University of Wisconsin, where he specialized in internal combustion engines, was consulting engineer for the little factory. He was holding down creditably a responsible position with a large bridge building concern that kept him busy on week days but his evenings, Sundays and holidays were devoted to the Harley-Davidson Motor Company.

Another well-known member of the Harley-Davidson organization is S. Lacy Crolius, advertising manager. Mr. Crolius joined the Harley-Davidson forces in February, 1907. His first employment was as a drill press hand, but it was not long before he was assisting Walter and Arthur Davidson to crate machines, look after orders, write little advertisements and do other work that could not be classed as mechanical.

Of the seventeen persons who made up the staff five years ago, nine have been continuously employed since that time. The first Harley-Davidson motorcycle was constructed by Walter Davidson with his own hands, after patterns made by Arthur Davidson and drawings made by Will Harley. Notwithstanding the great growth of the Harley-Davidson Motor Company there is not a detail of the business—either production or distribution—with which he is not thoroughly familiar.

William Davidson, general superintendent of the Harley-Davidson Motor Company, came to the little corporation from the West Milwaukee shops of the Chicago, Milwaukee & St. Paul Railway Co., where he had charge of the tool room. His technical and mechanical knowledge proved of great value and gave a decided impetus to the manufacturing end of the then miniature factory.

Ollerman was one of the mechanics who grew up with the business. Five years ago he did whatever there was to be done. When the output increased he was assigned to the testing department. Now Ollerman is foreman of the twin-cylinder engine assembling department. He has held that important position for about a year, and that he has made good in every respect can be attested to by any rider of a twin Harley Davidson.

William H. Fisher is foreman of the frame department. When Mr. Fisher entered the employ of the Harley-Davidson Motor Company in 1907 the output was 154 motorcycles. This year he is confronted with the task of manufacturing 17,000 perfect frames.

Henry Melk, another of the veterans, is one of Mr. Harley's assistants in the experimental department—probably the most important department in the Harley-Davidson factory. Mr. Harley's fertile brain, technical knowledge and practical training have resulted in the perfection of the Ful-Floteing seat, the Free-Wheel control and several other inventions that have contributed to the success of the Silent Gray Fellow. But Mr. Harley generously shares the credit with his able assistant.

When the company was incorporated five years ago Arthur Davidson was general office man; he is now sales manager and vice-president of the company. Few men in motorcycle trade circles, if any, are more widely known than Arthur Davidson. Five years ago he had one assistant; now the office force numbers 101—exactly 100 in addition to Sales Manager Davidson.

How the Harley-Davidson Motor Company has grown in size from year to year seems startling when the figures now are compared with those of 1907. Then there were sixteen persons in the factory and but two in the office. Now there are 975 in the factory and 101 in the office. An increase of forty-six times the number of employees in five years is the record revealed by the books.

That the growth has been steady and healthy is shown by the following:

	Area Sq. Ft.	Employees (Dec. 15)
Season 1907-8.....	2,380	23
Season 1908-9.....	4,760	35
Season 1909-10.....	9,520	149
Season 1910-11.....	22,000	350
Season 1911-12.....	80,550	481
Season 1912-13.....	187,750	1,076

During the season of 1907-8 the output was 410. During the preceding season 154 machines had been built and sold. For the season of 1909 the Harley-Davidson Motor Company made 1,100 machines. The completion of its first big reinforced concrete building in 1910 made possible the construction of 3,300 motorcycles. During the season of 1911 the output was 5,600. Last season 9,600 were produced. For 1913 the output will be 17,000 machines.

PLANS FOR BIG INTERNATIONAL RACE

At Meeting in Paris Newly Formed Federation Decides Upon Four-Days Motorcycle Contest to Be Held in England TO COVER 250 MILES A DAY

WHEN delegates representing the governing bodies that compose the Federation Internationale des Clubs Motocyclistes met in Paris on December 14 to adopt rules and consider any other timely business, interest centered in plans for the first international racing program. It had been previously decided that the Federation should conduct such a program each year, and on motion of E. M. P. Boileau, offered in behalf of the English Auto-Cycle Union, a decision was arrived at to have the first contest staged in England about September 22. The international trial will extend over four days and the distance will be 1,000 kilos., or 250 miles a day. The regulations are to be drawn up by the Auto-Cycle Union.

It was at first suggested that the international trial be conducted in connection with the first section of the A. C. U. trials in the North of England, but it was pointed out that other motor racing programs would clash with the international event if it were held in July, and the delegates finally agreed that September 22 would give entire satisfaction. The governing body of each country represented in the Federation will be invited to send three riders to participate in the big event, and each team will have a distinctive racing color. The colors were decided upon as follows: England, green; France, blue; Germany, white; America, white and blue; Belgium, yellow; Spain, yellow and red; Austria, red and green; Italy, red; Switzerland, red and white, and Denmark, green and white.

At this meeting it was also decided that the international program in 1914 shall be staged in France.

The draft rules, as considered at the previous meeting, were adopted in Paris, the only alteration being the reduction of the annual subscription to 150 francs.

W. H. Wells, of London, who represented the F. A. M. and the Canadian Motorcyclists' Association when the Federation was formally organized, again acted for these bodies at the Paris conference. The other governing bodies were represented as follows:

Austria, Carl Fasbender; Belgium, Messrs. Beukelaer, Michant, Guillot and Fagard; Denmark, R. R. toe Laer; France, the Chevalier Rene de Knyff, the Comte de la Valette, Messrs. Hugo Storr, Greame Fenton, F. G. Fenton, Longuemare, Debouilly; Germany, M. D. Hein; Great Britain, E. M. Boileau, W. Pratt and T. H. Tessier; Holland, R. R. toe Laer; Italy, the Marquis Ferrero di Ventimiglia; Switzerland, M. Negevet.

A special committee was named to consider rules for governing competitions and the delegates of the Automobile Club de France submitted *les Reglements Genereaux des Courses sur route pour motocyclettes et motocycles* of the Commission Sportive of the A. C. de F., as a basis on which to establish regulations for motorcycle competitions in general. The suggested rules were carefully considered and were finally adopted with a few amendments.

Mr. Wells in submitting his official report to the F. A. M. suggests that as many American motorcyclists are touring in England and Continental countries during the late summer of each year, it should be a comparatively easy matter to make up a representative team to take part in the international race. This idea is subject to qualification, however, for the American tourists referred to are usually sightseers, pure and simple, while the other teams would comprise racing talent.

"THE SUNSET RAMBLE."

INSTEAD of holding its usual annual endurance run, the Los Angeles M. C. will this year take what is known as the "Sunset Ramble." This is a ten-day trip, the route and plans of which were mapped out by Paul J. Derkum and submitted to the Los Angeles M. C. The turning point will be San Jose. Banquets and theatre parties will be enjoyed all along the route, and everything possible will be done to add to the comfort of the rider. A relief corps will make the trip and remain behind the riders during the entire run. A repair man from each of the agencies will also accompany the riders, so that no rider need be without assistance in repair work. Seven tire companies, the names of which have not been given, have volunteered automobiles to go along as service cars.

RAPID PROGRESS.

ALTHOUGH the Wilmington Motorcycle Club, of Wilmington, Del., has not yet seen its first birthday, it boasts of more than fifty members. It has made splendid progress under its present staff of officers, which is given as follows: E. F. Burkins, president; A. E. McDaniels, treasurer; C. Jacobs, secretary, and R. Evans, road captain. Runs throughout Delaware, Pennsylvania, New Jersey and the District of Columbia are held every week. A number of the members intend riding their machines to the New York Show, provided the weather is favorable.

A SUCCESSFUL dance was recently held by the Flower City M. C., of Rochester, N. Y. It was an annual affair and 85 couples were present.

MEMBERS of the Pittsburgh (Pa.) M. C. are working for a membership of 100 to open the 1913 riding season. It now has fourscore members.

SPECIAL MEETING

President Patterson Issues Call for Session of F. A. M. Directors in New York, January 15

PRESIDENT PATTERSON has issued a call for a meeting of the F. A. M. directors, to be held Wednesday, January 15, in the office of the Chairman of the National Committee on Legal Action, 51 Chambers street, New York City. The principal object of this meeting is to give the members of the board an opportunity to thresh out the California situation and to agree upon the course of action, with a view to bringing about a better understanding between the Federation's officials and the boys on the Pacific Coast.

The correspondence which has recently passed between the directors indicates their inclination to meet Pacific Coast objections more than half way. The directors know that they cannot please everybody, particularly when, as in this case, there are such radical differences of opinion. Several of the directors have advised both President Patterson and Chairman Thornley to withhold further action until the entire board has had an opportunity to pass judgment and to express its wishes, as a body, in connection with the Pacific Coast situation. It is confidentially believed that as a result of the coming meeting of the directors, Pacific Coast members of the F. A. M. will be convinced that the organization is national in its scope, and that it would be a serious mistake on the part of the Far-westerners to attempt to break away.

LATE club affiliations are reported by Secretary Gibson as follows: The West Side M. C., of Chicago, Ill., and the Wilmington M. C., of Wilmington, Del.

OUSTED THE REINDEER.

SALT LAKE CITY.—Having thrown the horse into the shade, the motorcycle went on the trail of Santa Claus' traditional reindeer in Salt Lake City, Utah, during the Christmas season. Members of the Salt Lake M. C. offered to deliver Christmas packages for the society of Big Brothers and Big Sisters, and in this way hundreds of parcels were distributed without cost and with the utmost expediency. A local newspaper organized a society of Big Brothers and Big Sisters to look out for the poor of the city; citizens flooded the newspaper office with donations, and then the motorcyclists solved the distribution problem by whirling about the city on their machines until the last package had been disposed of. President Classpool, of the Salt Lake M. C., has been liberally commended, and the action of the riders has created an excellent impression in this city and vicinity.

FRISCO M. C. LEADERS.

OFFICERS and directors of the San Francisco M. C. are as follows for 1913: President, H. G. Hodges; vice-president, William P. Streiff; recording secretary, A. W. Green; secretary-treasurer, Volney E. Davis; and Mrs. I. W. Fletcher, G. W. Payton, G. P. Gouglass, William P. Streiff, Volney E. Davis, H. G. Hodges and A. W. Green are the directors.

THE REGISTERED LIST.

THE Bicycle Supply Company (C. W. Brewer), 64 West Broadway, Salt Lake City, Utah; the Vermont Repair Works, (A. L. and H. P. Waters), 3570 South Vermont avenue, Los Angeles, Cal.; Shelton Sturges, 108 Court street, New Haven, Conn.; Albert E. McDaniel, Wilmington, Del., and Glenn A. Scott, 307 Branson street, Marion, Ind., have been added to the list of registered repair shops.

SPEED KINGS of 1912

OFFICIAL records show that the year just closed was one of the most irritating Old Dad Time has ever had to contend with; on more than one eventful occasion motorcycle speedsters came within an ace of making good their threat to reel off 100 miles an hour, and there was never a day when the old chap could settle down without a lurking fear that some of the boys would cut loose and leave him in the rear. On February 11 last Eddie Hasha started the campaign of record-clipping at the new Los Angeles Stadium by wiping out the high marks from one to four miles. He trimmed the mile record down 1⅗ seconds, and set the new mark at 39⅗. The former record mark had been established by Jake DeRosier.

Hasha's stunt was the signal for a general outbreak, and a week later, at the same track, the diminutive Texan erased the old five-mile tabulation. Al Ward also came into the limelight on this day by putting a new 10-mile record on the books. Ward broke loose again on March 17, and a new six-mile record was born. For two weeks all was quiet along the Pacific, and then Hasha on the thirty-first equaled his mile time of February. The boys were revising the table almost over night now. On April 7, Hasha blotted out all previous marks from one to ten miles, incidentally hanging up a 37⅘-second mile.

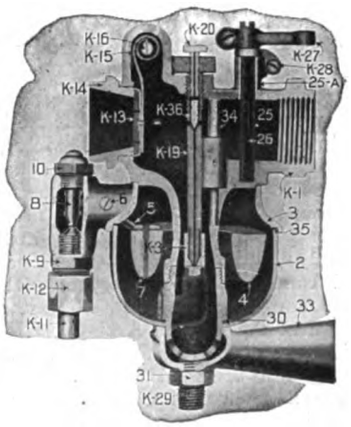
Then came the all-star speed show of the year, at Los Angeles, May 17, when Ray Seymour, a local boy with a national reputation, opened his gasoline artillery, and for 21 miles kept the scorers busy writing new records. This was the birthday of the present mile record, 36⅘ seconds, a 97.82 mile an hour gait and the fastest official time ever made by motorcycle. Before Seymour's engine had cooled, Lon Claflin, of Salt Lake City, secured permission to go against the amateur records with it and established new times from 1 to 17 miles. A week later, on the twenty-fourth, Seymour went out and made a few more changes in the speed table, the distances from 22 to 30 miles being revised downward.

Hasha capped his most successful year in speedland by winning the American professional championship at the national F. A. M. tournament at Columbus, O., in July. John U. Constant, of Brooklyn, captured the national amateur championship in unprecedented fashion, scoring 29 points in a possible 37. No records were broken at this meeting, however. While the championship holders and record breakers hail from all sections of the country, it is worthy of note that the machine used in all the spectacular performances recorded above was the Indian. Naturally the 1912 speed records have brought joy to the Hendee wigwam in Springfield, Mass. Wigwam racing plans for 1913 are at present uncertain.

"The Speed Kings of 1912"—Top, Constant; Center, Hasha; Bottom, Seymour.

DEADWOOD MEETING.

ONE of the best attended meetings of the Deadwood (S. D.) M. C. of 1912, was held December 31. An interesting program of events was laid out for the ensuing season. This was also the occasion of their annual election and the new leaders are as follows: A. J. Walley, president; George F. Edgerton, vice-president; Philip Shoenberger, secretary, and K. F. Henderson, treasurer. Various racing events figure prominently in the 1913 program. The club's membership is booming.



MODEL K HEITGER

THOSE familiar with the Heitger carbureter will welcome the maker's latest model, known as Model K, an illustration of which is shown herewith. The new features of this model are the air-admission valve and its spring, and the two feed gasoline adjusting stem, the latter being marked K-32, K-36 and K-19 in the cut. K-32 is a nozzle from which gasoline is drawn for low speed running, there being four narrow slots in the lower end of the stem K-19. The adjustment for this is by means of the milled head nut at the top of the carbureter. In the upper end of stem K-19 are four other holes, which are controlled by the knurled head K-20. Air is admitted by a slot in this latter part, and its action is to break up the gasoline emerging from the upper holes and form a "mist."

The air valve, K-13, is a pressed steel disc which has a flap action, giving free opening for the auxiliary air through the smooth cage K-14, at highest speeds, but remains seated at low speeds. The spring K-15 is flat with upper spiral around the axis K-16, the latter having at its outer end a lever which works over a toothed quadrant on the side of the instrument. A rearward movement of this lever increases the tension of the spring, and when clear back the air inlet is practically closed, making starting easy even in cold weather. With the lever moved forward the tension on the spring K-15 is reduced according to the amount desirable for low speed work. The lever can be shifted on its stem to adjust spring K-15 where extreme weather conditions warrant it, and any adjustment of the spring tension can be made while riding. The primary air is taken as usual through the horn at the base of the instrument. Either interchangeable glass or metal float bowls can be had as desired.

MOTORCYCLE INSURANCE.

BECAUSE of the receipt of many inquiries regarding motorcycle insurance, this publication has made inquiries to learn that policies are to be had as follows:

Covering loss by fire, premium two per cent. of the principal amount; loss by theft also two per cent.; covering damage to other property, $7.50 for $1,000 insurance. Policies covering personal liability and damage to one's own machine are also to be had. More detailed information in reference to the above may be obtained from A. B. Maillefert, care Weaver-Ebling Co., 2230 Broadway, corner Seventy-ninth street, New York; telephone, 9641 Schuyler.

MY TRIP TO NIAGARA

by J. G. PRATT

MY last year's motorcycle trip to Boston proved so successful that then and there I decided to try Niagara the following year. A pal and I had the trip in view all summer, but at the last moment business interfered and he couldn't go, so I started out alone. I have found on two previous trips that there is a pleasant excitement in being entirely dependent upon oneself. You can take your time and enjoy the scenery because you don't have to keep up with a bunch. And then, it has been my experience that you actually make better time, as there are only your own troubles to hold you back, which in my four tours have been practically nil. Of course you miss the companionship in the evenings, but considering everything, I had no misgivings but that I would have a pleasant trip.

I rode a 1911 6 h. p. twin Merkel, recently equipped with an Eclipse clutch, the same machine which carried me to Boston, and aside from appearances it is as good now as the first month I rode it, although it has now covered about 7,000 miles.

The morning of October 18, 1912, was bright and crisp, and the woolen sweater under my khaki felt mighty comfortable. The first stop was about ten miles out, where a new bridge was being built across a stream at Berwyn, Md. An eight-inch plank leads up to the bridge and a single board lay across the iron girders. As a motorcycle with a fifty-pound suitcase strapped across the back is an unwieldy thing to handle, I tipped a colored boy to help me wheel the machine across. I was soon speeding along the fine macadam road to Baltimore, which is only marred by three miles of what is called the Beltsville sandpatch. By taking the paths and doing a little foot work when the machine skidded I managed to get through without dismounting.

Reviewing Old Experiences

Baltimore is a difficult city to pass through, owing to its ancient cobblestones, but by following Wilkens avenue to Fulton and down Broad to Baltimore street, most of the cobbles can be avoided. It was 11 a. m. when I reached the outskirts of Baltimore, but 12 o'clock before I finally hit the pike on the other side of the city. The dirt road is fair and traverses a rolling country, with hills continually getting longer and higher. Occasionally you cross a stream by means of a covered bridge. Short sandy stretches begin to appear as you approach Havre de Grace, seemingly a prelude to what is in store later on. When you finally cross the toll bridge over the Susquehanna to Perryville, your troubles begin in earnest.

On a previous occasion I had been through the all but impassable twelve miles of sand to Elkton, and well remembered what happened on my tenth spill. I had asked a passing countryman if the road to Elkton was all like that, and he replied: "No, some of it is wusser." So on the recommendation of a teamster at Perryville I took the pike, which turns sharply to the left. This he informed me was a fine road and would carry me completely around the sandpatch to Newark. For about ten miles the road is fairly good, then Cecil County begins to assert her claim of having the poorest roads in the state. To make things worse the country is hilly. The constant pulling through deep sand began to tell on my motor, and when within three miles of Newark a bad hill was encountered which the machine in its heated condition couldn't climb. It was now dark, but with the aid of my searchlight I managed, more by walking beside the machine with the free engine pulling than by riding, to finally reach the top. Then my troubles were over.

An Impromptu Race.

I secured excellent accommodations at the Deer Park Hotel, and made an early start the next morning. There is a fine state pike from Newark to Wilmington, and from there to Philadelphia, at which place I arrived by noon. In spite of threatening clouds and a rainy forecast, I crossed the ferry to Camden and started down the famous White Horse Pike. This is a 60-mile stretch of perfect macadam. While purring along at a 30-mile clip, suddenly there came the bang-bang of a one-lunger at full speed and a man and woman sped by riding tandem on a single Harley-Davidson. I accepted the challenge and was soon alongside. The fellow kept letting her out until my speedometer registered 42 miles, which proved to be the best he could do. I then gave the throttle another notch and showed him my dust.

Atlantic City hove in sight at 3 p. m. I had covered the sixty miles in just two hours, which shows the quality of this speedway, as I care more about comfortable and careful riding than speed. I put up at the Elwood on St. James street. The proprietor allowed me to put the machine in the basement of the hotel. I washed and dressed and then "did the boardwalk," which was well crowded for so late in the season.

Mapp to the Rescue.

I took to the road early the next morning and retraced about ten miles over the boulevard to Absecon. From there to New York the road is a hard white macadam, which permits the motorist to go as fast as he likes. The scenery is mostly a monotonous panorama of cedar trees and marshes. Further on, however, the scenery changes to low spreading farms and meadows, and is pleasing to the eye if not picturesque. At Toms River I made a short stop to view the fleet of fine motor boats and incidentally put another wire to my clutch, as the old one had snapped off and become too short. I reached Perth Amboy at 2:30 p. m. and then ferried to Tottenville. From there I hit a lively pace to St. George, Staten Island, and thence took the ferry across New York Bay to the Battery. I went up Broadway, which is paved with asphalt, to the automobile row, which begins at 155th street. I left the machine at a garage and stopped for the night at the St. Paul Hotel. It was Sunday night, but New York offers many diversions even on the Sabbath, and I spent a pleasant evening at the Lyric Theatre.

I got under way about 9 a. m. Monday, but

Digitized by Google

as my carbureter had not been doing its full duty on the hills, I stopped in at the Merkel agency on Broadway and 183rd street. Right here I would like to commend Harry Mapp as the friend of the touring motorcyclist. He replaced a broken wire to my exhaust lift and spent an hour going over my machine and adjusting the carbureter. He discovered that my trouble was due to a dead spot in the carbureter and that by turning the throttle a little further over it would take the gas in great style. After this my machine gave not the slightest trouble; in fact I climbed the hills a bit faster than I like to travel. Naturally I wanted to pay him for his trouble, but Mr. Mapp would not hear of it, stating that he was always glad to be of assistance to tourists.

On the Albany Post Road.

It was noon before I left the city and struck the Albany Post Road through Yonkers, Dobb's Ferry and Tarrytown, where now and then the road runs close to the river and the rider gets a fine view of the Palisades. October is the month for tourists, especially along the Hudson, where the scenery defies the pen of the writer or the brush of the artist. There is mile after mile of perfect macadam, sprinkled with multi-hued leaves which every gust of wind sends whirling to the ground. Overhead the autumnal foliage forms an arch under which the motorist instinctively slackens his pace in order to feast his eyes on the wonders around him.

I took a snapshot of the river at Peekskill. At Cold Spring I left the state road and followed the river road, which was in excellent condition and for about twenty miles follows along the very shore of the Hudson. I reached Poughkeepsie early in the afternoon and intended going on to Albany, but as I met some of the boys of the motorcycle club, who had entertained me so royally last year, I couldn't resist the temptation to stay over. The morning broke with a fine drizzle, and as it had been raining nearly all night the road was wet and slippery. On inquiry I found that there were no bad stretches between there and Albany, and so decided to risk it. As I was nearing Hudson the weather cleared and by the time the State Capitol was in sight the sun was shining.

On a Scenic Route.

The road follows the trolley on the left side of the Capitol and is in excellent condition except for the first two or three miles, which is bumpy. I found much diversity of opinion at Schenectady as to the best road to take. On the advice of an autoist who had just come from Buffalo, I crossed the bridge and took the road on the north side of the Mohawk. I have since learned that this route is by far the best, as it is one unbroken stretch of macadam and follows close to the river. The river, though not much more than a canal, offers picturesque views of bridges and waterfalls. At Amsterdam I was told to stick close to the railroad track. This I did for about a mile and then began to get suspicious, as the road was nothing but deep ruts and mud, and after a little scouting the pike was found only a hundred yards up the hill.

Some five miles further on the road goes over what is known as Tribes Hill, which for length and steepness would be a good site for hill climbing events. The road is as smooth as asphalt, however, and by turning on a little more gas I managed to get up without pedal assistance. It was now nearly dark, so on reaching Fonda I put up for the night at the Brunswick Hotel. Once more the morning broke cold and rainy, so I decided to stay over a day and await better weather. There were many things of interest in the little village. A dozen Italian laborers had been held up and robbed of their wages, and the trial of the culprits at the county courthouse was well worth seeing. Later on in the afternoon, in company with a party of autoists who were also held up on account of the rain, I walked a couple of miles into the country and visited the old homestead of Walter Butler, built in 1743.

Bad Weather Encountered.

The next day did not bring any encouragement, but as the rain had practically ceased I set out. Some five miles out of Fonda the surface of the road had been removed in the process of rebuilding, and I made the next four miles by wading ankle deep in mud and guiding the machine. The remainder of the way to Utica is state road and the ride was uneventful except that when I had covered about half the distance it rained again and in torrents I left the machine with the Merkel agent at the Utica Cycle Company and made the most of the afternoon by visiting picture shows.

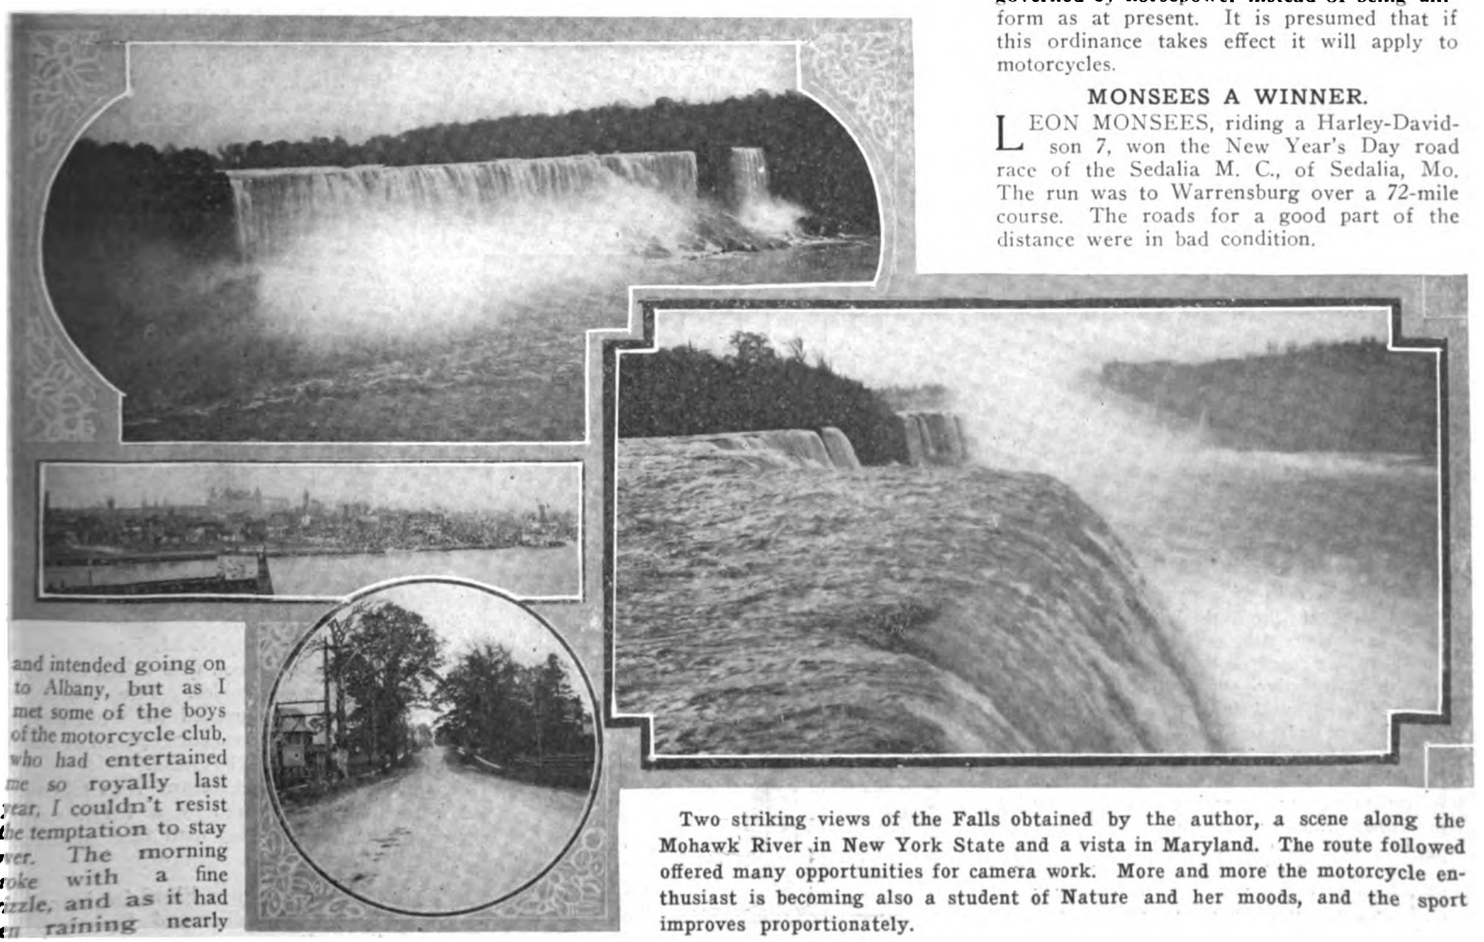
It was now evident that a rainy spell was on in earnest, and as there was no letup on the following day I had the machine crated and shipped to Washington. I then took the train for the remaining 180 miles to Buffalo and Niagara. In the 600 miles I covered on my machine, I used exactly 7 gallons of gasoline and 3 quarts of oil, at a total cost of $1.75, or about one-third of a cent per mile. I had no puncture during the trip and no repair expenses.

TO BASE TAX ON H. P.

A BILL has been proposed in California to change the system of taxing motor vehicles. It is the desire to have the licenses governed by horsepower instead of being uniform as at present. It is presumed that if this ordinance takes effect it will apply to motorcycles.

MONSEES A WINNER.

LEON MONSEES, riding a Harley-Davidson 7, won the New Year's Day road race of the Sedalia M. C., of Sedalia, Mo. The run was to Warrensburg over a 72-mile course. The roads for a good part of the distance were in bad condition.



Two striking views of the Falls obtained by the author, a scene along the Mohawk River in New York State and a vista in Maryland. The route followed offered many opportunities for camera work. More and more the motorcycle enthusiast is becoming also a student of Nature and her moods, and the sport improves proportionately.

NEED PROOF? HERE ARE SOME FIGURES

IT requires no great stretch of the imagination to see in use in the United States, in the near future, 1,000,000 motorcycles. At the present rate of increase, the end of the year 1915 will witness that engaging spectacle—1,000,000 motor-driven two-wheelers, worth about $200,000,000. The figures at the close of 1913 promise to be 300,000 and $60,000,000 respectively, as against 175,000 and about $35,000,000 at the end of last year.

An Interesting Analysis.

A comparative analysis of the output of the Bosch Magneto Co., given herewith, indicates an increased production for 1913 of more than 200 per cent over the 1912 output. This company has already delivered for 1913 use 10,000 more magnetos than the total with which it equipped 1912 models. Last year, by the first of January, it had delivered less than 10,000 magnetos, and in 1911 less than 5,000. For 1913 the same company's deliveries total approximately 50,000, an increase of 400 per cent. Although this rate of increase will, of course, not be maintained for the entire season, the company estimates that its 1913 output of motorcycle magnetos will exceed its 1913 production by more than 215 per cent.; that is, that this company alone will produce not less than 120,000 motorcycle magnetos to be fitted to 1913 machines.

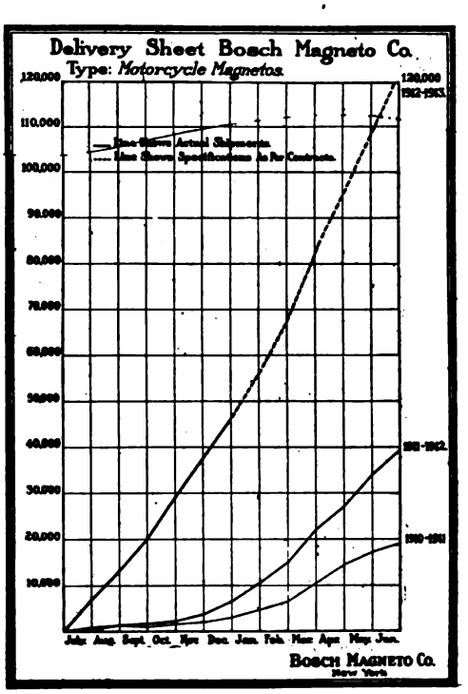
While the figures which measure the size and extent of the automobile industry are vastly greater, the rate of increase in the number and value of 1913 automobiles over those of last year will not be nearly as great as in the production of motorcycles.

The outlook presages wonderful growth and development during the next few years. The industry is now solidly established on a sound foundation of capital, ability and experience, and the uprearing of a magnificent monument as evidence of the substantiality and permanence of this remarkable business is now simply a matter of time.

Expansion Is the By-Word

Advance orders of general accessories also help to indicate the outlook for machine sales, as it is obvious that dealers strive to accommodate their stock of supplies and accessories to the prospective output of motorcycles in their district, and it is conservatively estimated that orders for the latter are already 50 to 75 per cent. heavier than for 1912. On all sides the catchwords are: "Build! Expand!" Some accessory manufacturers are rushing machinery into a new ground floor while carpenters and painters are still busy in the second story, and wherever construction work is in progress the policy appears to call for at least the doubling of the firm's manufacturing capacity. In more than one instance, aside from the remarkable showing of the Bosch Magneto Company noted above, accessory and supply manufacturers find that their orders for 1913 already equal or exceed the total output for 1912, large as that was.

These are days of unprecedented optimism in the motorcycle field and allied circles, but there is nothing that savors of sensationalism in the claims of trade workers. They merely state conditions, and where proof is needed it is at once forthcoming in new factories, larger staffs, doubled and tripled outputs and advance orders that already have some of the biggest plants preparing for night and day schedules. Figures tell their own story, in this instance proving once more that the plain truth can be as startling as fiction.



The Story at a Glance.

SAN JOSE WINNERS.

RAY WATKINS and Ben Torres, mounting a Harley-Davidson twin 8, won the seven-hour race for the $100 Lamolle trophy at San Jose, Cal., on December 8. They covered 346 miles and finished 17 miles ahead of their nearest competitors. The race was held on a dirt track, and the showing made—an improvement of 12 miles upon the best previous record—is for that reason all the more worthy of note.

NEW YEAR'S DAY RUN.

MEMBERS of the Atlantic City (N. J.) M. C. participated in a New Year's Day economy contest. A run was to Somers Point and return, over a 24¾-mile course. Two speedometers and an inner tube were awarded to the winners in the single class, and Presto tank and a Solar lamp were given the winner in the twin class. Second and third prize winners in this class each received cyclometers.

INDIANS AT THE WIGWAM.

WHEN the Carlisle Indian football team, from the government school at Carlisle, Pa., was at Springfield, Mass., to play a local team some time ago, the redskins were the special guests of the Hendee Manufacturing Company. They made a visit to the home of their namesake, the Indian motorcycle, and a party chaperoned by H. M. Stauffer, musical instructor of the school, was taken through the plant by factory guides. The sons of the Great Spirit were amazed at what they saw, having had no previous conception of the magnitude of the Indian business.

In the afternoon the team was taken to the battlefield, and cheered by a large delegation from the factory; they won the game, as was expected.

PLANS for a trip to Florida late in January are being discussed by motorcyclists of Indianapolis.

Digitized by Google

NEW building construction by the acre, the employment of help by the thousand and the utilization of capital running far into the millions—these three factors, among others of almost equal importance, help to explain the tremendously large and valuable output of the Goodyear and Diamond-Goodrich plants in Akron, the world-famous city of tires. A trip to these two huge manufacturing establishments is nothing less than a stupendous revelation of the record-breaking growth of the motor industry and allied trades.

At least it was so to the publisher of MOTORCYCLE ILLUSTRATED. Consider these figures for a moment:

Goodrich Company—Capital, $90,000,000; ground area, 75 acres; distance around the double plant, over two miles; average 1912 output, 4,000 tires a day.

Goodyear Company—Seventeen enormous buildings having 2,000,000 square feet of floor space; nearly 8,000 men and women on the payroll; $15,000,000 worth of $100 shares now quoted at $450, and a production which exceeds 5,000 tires daily.

The writer was escorted around the Goodyear plant by C. E. Falor, who is in charge of the Motorcycle Tire Department. My attention was first called to the four wonderful tire-making machines, easily the most striking feature of this portion of the plant, and of which there are several score in the automobile tire department. Each machine not only does the work of twenty men, but also turns out a product having a uniformity quite unobtainable through human skill and energy. The machines, for example, effect the same amount of stretch on every part at all times, whereas a man, no matter how muscular, is bound to experience a relaxation of his efforts toward the end of a hard-working day. Then, too, dependent upon his physical condition, the amount of energy applied to his tasks varies from day to day. But the machines, ever insatiable for work, perform their duties with unfailing accuracy at all times.

The Goodyear Company is, in a sense, a co-operative concern. Its officials believe in and encourage suggestions from their employees. The stock is widely distributed among those connected with the company. Prizes are awarded to employees for even the most insignificant devices designed to save labor or improve the product. The men are invited to call to the attention of their superiors their slightest grievances. The company's Efficiency and Welfare Department helps the men to become owners of their homes, and a large proportion of them already enjoy that fortunate condition. In the big dining room, meals are served at cost; for a few cents, a substantial lunch is obtainable. There is also a free library, and a free hospital, completely equipped, with a doctor and nurse always in attendance.

"Is it any wonder," declared S. A. Falor, "that we Goodyear folks are enthusiasts?" No, it isn't at all remarkable.

Last May the then office building was so jammed with clerks that they not only crowded elbows in the rooms, but the desks overflowed into the halls. Now the 760 clerks are housed in a new six-story administration building, 50 by 125 feet. Another six-story factory building, 60 by 56 feet, has been finished, and another one of seven stories, 400 by 80 feet, will be ready for occupancy within two weeks. Nor is this all the factory expansion, for the foundations have just been laid for a seven-story and basement structure, 260 by 100 feet, so that on its thirtyacre plot the Goodyear Rubber and Tire Company will have seventeen buildings, aggregating two million square feet of floor space.

Two more buildings are to be built—one of five stories and basement, 250 by 60 feet, and a one-story extension to the curing room, 250 by 30.

On December 7 there was a house warming of the new administration building which took the form of a banquet in the big lunchroom, followed by a ball, which 750 members of the official and clerical staff attended.

At the Goodrich plant, ye publisher had an interesting talk with Frank Harris. Here one almost feels the significance of the vast resources at the command of this big concern.

With its $90,000,000 capital the Goodrich Corporation not only leads the automobile industry in size, but is also one of the biggest individual industrial corporations in the United States, when one leaves the trusts out of consideration.

The plant itself is in keeping with its gigantic capitalization. The figures are too big to need to be spoken of otherwise than in round numbers. It is a two-mile walk around the plant, the ground area being close to 75 acres, the floor space being between 60 and 70 acres, and the employees numbering some 15,000, of which 13,500 are operatives.

Over in plant No. 2, as the old Diamond plant is now designated, they have just completed a six-story factory building, adding seven acres of floor space. In two months there will be complete a new six-story Goodrich administrative building, 270 x 157 feet.

Mr. Harris spoke of the difficulty of keeping and holding good men. Not only need no one be idle in Akron, but the tire companies find it necessary to reach far out from the city to obtain sufficient capable help. There are always plenty of good jobs open in Akron.

WHO IS HE?

EDWARD F. TIBBALS, a photographer of Rhinebeck, N. Y., forwards the accompanying picture of an Iver Johnson enthusiast who rode his mount all through the Catskill Mountain country during the past summer. Tibbals has forgotten the rider's name and is desirous of learning it. "As long as he is a motorcyclist he is bound to read MOTORCYCLE

ILLUSTRATED," writes the Rhinebeck photographer, "and when his picture appears he will probably let us hear from him."

STILL THEY COME.

THE Miami Cycle & Manufacturing Company announces the establishment of another batch of Flying Merkel agencies, as follows: Quincy, Ill., O. H. Kathman Company; Michigan, Ind., Stoddard Electrical Supply Company; Detroit, Mich., W. E. Wandersee; Latrobe, Pa., L. G. Site; Lock Haven, Pa., Ralph T. Myers; Williamsport, Pa., Updegraff & Burkhart; Nashua, N. H., William F. McCarty; Lakewood, Ohio, W. O. Alexander; York, Pa., J. P. Wolf.

SUB-AGENCIES NAMED.

THE Barr Motorcycle Company, East Gay street, Columbus, distributor in central Ohio for the Indian, has closed with the following sub-agencies for 1913: George Atkins, Atlanta; R. L. Brehmer, Circleville; Mattox Motor Car Company, Lancaster; C. H. & S. J. Van Pelt, Washington; E. W. Grant, Ashley, and Walden Haffy, of Canal Winchester.

ATLAS EXTENSION.

WITH increased floor space and new machinery the Atlas Specialty Company, of Chicago, Ill., figures on doubling its last year's output. The company now has a total of 3,500 square feet of floor space.

WINTER DANCES.

AT a recent meeting of the Columbus (Ohio) Motorcycle Club it was decided to hold a series of winter dances.

A Motorcycle SQUIRREL HUNT

By The OLD SCOUT

HAVING made the most of my motor single-tracker for years past I have found it has many fine points—any rider will be only too glad to go into particulars—but in my humble opinion, at least, its greatest value lies in the ease with which it puts me on the spot when I go hunting or fishing. I have always been keen about these matters—so much so that I'd choose to hunt or fish any day in preference to working—but for a long time the transportation problem was a serious one. The best places are always the ones that are hardest to reach. As soon as the trolley line finds its way through a section, farewell to good hunting and fishing. Everybody can go there then, and that settles it as a desirable place. Of course, it is possible to drive a horse out from home, but a rig costs money if you have to hire it from a livery stable, and then, too, it is so deadly slow. A twenty-mile drive before beginning the fun is no joke. And few of us have incomes in the four-wheeler class.

Where the Motorcycle Comes In.

Here enters the motorcycle, and these troubles vanish till they're smaller than the inch patch with which you try to cover a two-inch blow-out. There is one problem left—the transportation of my hunting dog. At present I'm engaged in working out a scheme for putting a padded cell on the suit case conveyor for his express benefit. Whether the setter will appreciate such treatment or not is something of a question; I haven't consulted him about the proposition yet, but his opinion won't count for much, anyway. Meanwhile, I thankfully use the motor for fishing trips and for hunting such game as can be obtained without the help of the dog's keen nose.

One day I received word from some friends living forty miles back in the hills that gray squirrels were so plentiful as to be almost impertinent about there. Accompanying this cheerful information was something even more to the point—an invitation for me to run up on my machine Friday afternoon and put in Saturday attempting to lower the squirrel population. I accepted in a hurry.

Preparations for the Trip.

At first I was undecided as to what sort of musket to take. You see, the proper tool for gray squirrels is a light caliber rifle—hunting squirrels with a scatter gun is not considered proper by many hunters, though it is permitted, provided the game is running. To use a shot-gun on a squirrel that is standing still is rankly unsportsmanlike. It always happens, however, that when I hunt with a rifle it is my fortune to put up a number of Biddies (let me pause to explain that a "Biddy" is a partridge), and I frankly admit that I cannot hit a flying Biddy any too well with a charge of shot, not to mention a rifle bullet. Considering this important matter with due care, I finally decided to tote along my double-barrel hammerless.

I started about four o'clock of a delightful fall afternoon. Most of the leaves were down, but there were enough left to give the landscape a brilliant dash of color with their beautiful brown and gold. My shot-gun was in its case, carefully wrapped in burlap and firmly strapped to the luggage carrier. I was dressed in warm, heavy clothes to keep out the chill, for though the sunny days of Indian Summer may be comfortable enough,

"At this critical time came my first puncture of the season."

the air of late afternoon is likely to be a trifle frosty, particularly so when one is indulging in a forty-mile jaunt by motorcycle.

Two hours seemed a good allowance for the distance, an average of twenty miles per, but as the first part of my journey was over fine macadam roads, I kept the speed needle well above that figure, knowing that the last ten miles of the trip would be over poor roads, and possibly by lamp-light.

First Puncture of the Season.

That very afternoon I had foolishly been boasting of riding the whole season without a puncture. It is always flying the black flag in the face of Providence to brag over such things, and the worst of it was that I had neglected to rap on wood. At any rate, the hoodoo was in working order, and my hard luck jinx did its worst before I'd been on the road half an hour; I found a horse-shoe nail coyly nestling in my rear casing. I made record time snaking out the tube, glued on a patch, and was off again before the engine had begun to think about cooling. That was a short delay, but it was so much off my time limit, and I therefore went on a bit faster than before.

My next adventure was a meeting with a road hog, who sat enthroned behind the steering wheel of a huge car. He came up behind me with a silent rush, giving no warning of his approach, and then snarled a curse as he sped by, because I didn't get out of his way. No self-respecting motorcyclist could bear an insult like that. I kicked open the cut-out, flattened down on the gas tank in the well-known pose of the professional racer—learned, by the way, from a careful study of the pictures in MOTORCYCLE ILLUSTRATED—and jerked the throttle open as far as it would go. Before many minutes I went past that car as if the poor old boat had been stuck in the mud. A fellow certainly can get a vast amount of innocent amusement and heartfelt satisfaction out of driving his motorcycle past some chesty autoist, who hugs to his bosom the fond delusion that he is quite some speed merchant.

At the Farm.

No more incidents worthy of note befell me, but I didn't quite pull through in the two hours, though I arrived in time for supper, which was, of course, far more important. After a good, old-fashioned "farm feed," I loafed around, talking with the folks about hunting and other things. They were all very much interested in the motorcycle and my experiences in riding it, so I naturally felt compelled to spread myself just a little.

"Doesn't it joggle you frightfully? I should think it would simply jolt you all to pieces—shake the life out of you," were some of the

Digitized by Google

early remarks, whereat I had to smile. I knew that first interrogation would come; it always does. Why, if I only had a five-spot for every time I've been asked that—but what's the use.

I told them all about it; that the motorcycle doesn't joggle the life out of one, that it furnishes more fun than the proverbial goat, that it doesn't cost a young fortune to own and run a machine, and so on. By the time I'd run down, the turning-in hour was upon us, and ere long I was peacefully pounding the hay, dreaming of an exciting hunt, in which I vainly strove to shoot some elusive game by ramming bullets into the exhaust pipe and then letting the engine flicker. Finally I succeeded in getting a bullet stuck in the pipe, so that the front cylinder blew up with a frightful roar and bang, which continued on and on without stopping. I leaped up in wild excitement, only to discover that the explosion of my dream was merely a vigorous pounding on the door, a gentle reminder that it was time to arise. An hour later, with a satisfactory breakfast stowed away in the proper receptacle for such things, I was bound for the upper wood-lot, where my host assured me I should find plenty of squirrels.

An Early Morning Walk.

It was a good mile to the wood-lot, but in the cool, brisk air of early morning rapid walking was easy, and I tramped along enjoying myself to the utmost, breathing forth fevent prayers of thankfulness that I was so fortunate as to own a motorcycle. The handy little two-wheeler had made it possible for me to be up there in the woods on that glorious day, instead of back in the dusty city, where one can amuse himself only by listening to the pleasant clang of a trolley gong, and by wishing he were elsewhere.

I picked out a likely place near some chestnut trees and waited to see what would turn up. In a short time I heard a squirrel bark; then another one answered, probably giving information that the coast was clear, and soon I could hear them all around me. There was hardly a breath of air stirring, and sounds traveled a long distance in the woods. The sound of an axe came distinctly to me from a farm house, fully half a mile away.

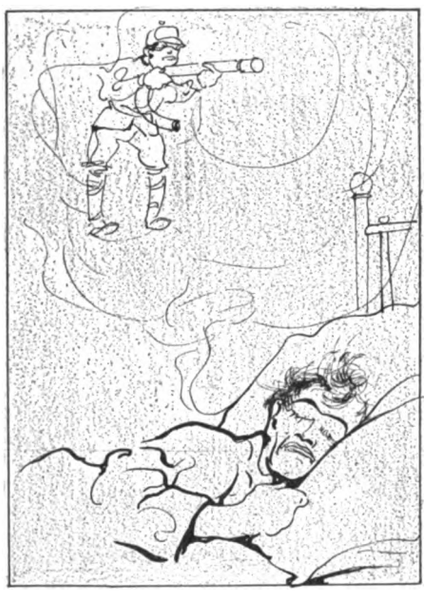
First Shot a Winner.

Two squirrels presently appeared, looking for nuts among the leaves, and I watched the little fellows with interest, almost forgetting why I was there. When I at length remembered the gun in my hands, it seemed a shame to use it; to have killed those squirrels would have been too much like murder in the first degree, and I therefore looked about for some other victim. A big squirrel suddenly rushed at the others like a fiery tornado, evidently determined to drive them away from what he considered as his private grounds. They promptly fled, the big fellow in hot pursuit, but just at that moment I cut loose with the right barrel, and that particular squirrel ceased to interest himself more in worldly matters.

Back in the wood-lot was a small swamp, and there came to my ears from that direction a dull, muffled sound, rapidly repeated. I knew it well; that sound was a partridge drumming. In an instant the squirrels were forgotten, and I was hustling down towards the swamp, bent on getting a shot at the old Biddy. Of course the partridges—there were three of them, as it happened—chose the very worst time—for me, that is—to fly up. Just as I was heaping maledictions on a thorny creeper that was doing its best to cut my throat, and trying to disentangle my feet from the loving embrace of a wild grape-vine—whir-r-r—up they went with a tremendous beating of wings. I managed to fire both barrels after the last one as he disappeared, but it only served to accelerate his progress. Then I concluded I had had enough partridge hunting, and went back to have it out with the squirrels.

Back for a Big Meal.

It is not needful to follow out my further adventures in detail. I didn't do much shooting, as knocking about the woods on that wonderful morning was sufficient pleasure of itself, without taking life. I killed just enough squirrels to avoid being jollied as a poor hunter on my return to the farmhouse, and although I didn't have all the game I could have carried in my shooting coat, I did have one big chunk of emptiness inside me. But that always happens on a hunting trip.



"I dreamt of firing bullets from my exhaust pipe at elusive squirrels."

Too few of us realize just how much we are benefited by an occasional trip off into the big outdoors. A tramp that makes one so tired that he could sleep ten hours without a peep, and hungry enough to eat buttered bricks, is of more value than all the doctor's dope that ever came over a prescription counter. All honor to the machine that helps make these excursions so delightful and so easily to be enjoyed!

A MIDNIGHT TRIP.

BY way of ushering in the New Year a number of riders of Toronto, Ont., made a midnight trip to Hamilton. Six machines, all carrying sidecar passengers, left Toronto at 9 p. m., and sped at a terrific pace over the frozen roads. The return trip was made the next day, but the going was rather slow as the sun had thawed the roads leaving about four inches of mud.

CARRIES HEAVY LOADS.

THE University Grocery Company, of Redlands, Cal., uses a motorcycle almost exclusively in its delivery. No sidecar, trailer or any such attachment is used; the rider simply carries two large baskets. A photograph recently taken showed the rider mounted with a load of about 200 pounds, and consisting of more than thirty packages.

A DRIVER of cattle near Trinidad, Col., uses a motorcycle in his work.

PATROLLING FORESTS BY MOTORCYCLE

Michigan Company Protects Vast Timber Tracts By Supplying Its Fire Wardens with Single-Trackers—Results Are Highly Satisfactory.

MOTORCYCLES are to figure prominently in a carefully-mapped campaign of the Michigan Hardwood Manufacturers' Association for protecting its vast timber holdings against fires during 1913, according to an announcement made following a recent meeting. The riders of these machines, long trained to forestry work, will cover great areas for the purpose of instructing the farmers in fire-fighting methods, distributing helpful literature and acting as fire-fighters themselves when an emergency arises.

The members of the Michigan Hardwood Manufacturers' Association own practically all the timber of commercial value in Michigan. The association holds monthly meetings at the Hotel Pontchartrain, Detroit, and at these meetings are gathered the best timber and forest experts in Michigan. Following the forest fires which consumed Au Sable, Oscoda and which were responsible for the loss of millions to the association members through whose timber holdings these fires swept, plans were devised for a forest fire protective department, under the direct control of the association.

A short time ago the association members decided to furnish their fire wardens with a means of facilitating their patrolling the respective districts, and accordingly motorcycles were purchased. With these the men can get over their territory several times each week, and keep in closer touch with the people residing in their districts, as well as taking cognizance of every fire started to sweep a patch of clearing and watch its daily progress.

So successful was the last season's work that the association will soon enlarge its motorcycle force and increase its operations in every practicable way. During the season closed the department handled 227 fires, many of which were prevented from reaching disastrous proportions by the prompt work of the motorcycle fire wardens.

PLAN BIG MEETING.

IF present plans do not miscarry, an unusually busy F. A. M. State meeting will be held in Indiana in the spring. President O. F. McClain, of the Indianapolis M. C., is working to get the clubs of the State to cooperate with the Indianapolis club, in order that the riders of the State may act in unison on matters of general interest.

DAYTON'S SHOW.

MEMBERS of the Dayton (Ohio) Motorcycle Club, recently met in the club rooms to map out plans for the local motorcycle show.

ENGLISH NOTES by "BRITISHER"

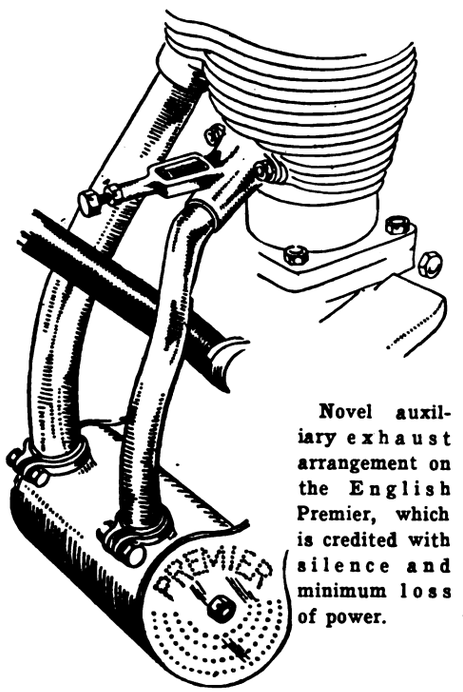
A. C. U. Ruling on Classification Problem Jars "Shamateurs"; Auxiliary Exhaust on Premier; Sidecar Ambulance; New Drip Oiler and Other British Wrinkles That Attracted Attention at the Show.

WE have long been troubled in all our sports with the difficulty of defining an "amateur," or perhaps I should say, with the difficulty of enforcing our definitions. The problem has been sidestepped for years past in motorcycling competitions. As a rule, the entry will consist principally of men engaged in the trade, openly riding for payment by the makers of their machines. Side by side with these frank professionals will be found a number of "shamateurs," or men engaged in non-mechanical professions as their main source of livelihood, but secretly subsidized by the trade to ride in competitions during their leisure time. In some cases these men receive machines free gratis, and even have all their expenses, including entry fees, paid.

Others are on the graft in a smaller way, and possibly purchase their machines and equipment at wholesale prices or less, paying their own entry fees and hotel bills. A small minority are genuine amateurs, paying full the catalog price for machines and accessories. It is impossible to enforce a stern definition of amateurism, because the trade as a body refuses to hold aloof from shady practices; last year, for example, one firm I know sold several £50 machines to "shamateurs" at £30, but supplied a stamped receipt for £50! Consequently special awards for "amateurs" and "private owners" have fallen into some disrepute, being generally won by men whose amateurism was under grave suspicion. This year our governing body, the Auto-Cycle Union, has planned a new method of belling the cat. The worst effect of the abuse was to prevent the genuine amateur and novice from riding in competition.

The A. C. U. Solution.

In future no attempts will be made to distinguish between "amateurs" and "professionals," but every open event will contain classes for "novices." Riders are to be ranged in two classifications, "Novices" and "Experts." No permit will be granted for any open meeting which does not limit at least 50 per cent. of its classes to "novices," and if promoters desire, any meeting may be "expert-barred." Single event meetings must offer equal awards to novices and experts. A "novice" is defined as a rider who has not won during 1912 or any subsequent year one first and two second prizes in open competition. The winning of a first and two seconds automatically transfers a rider to the "expert" list of the Union's register.



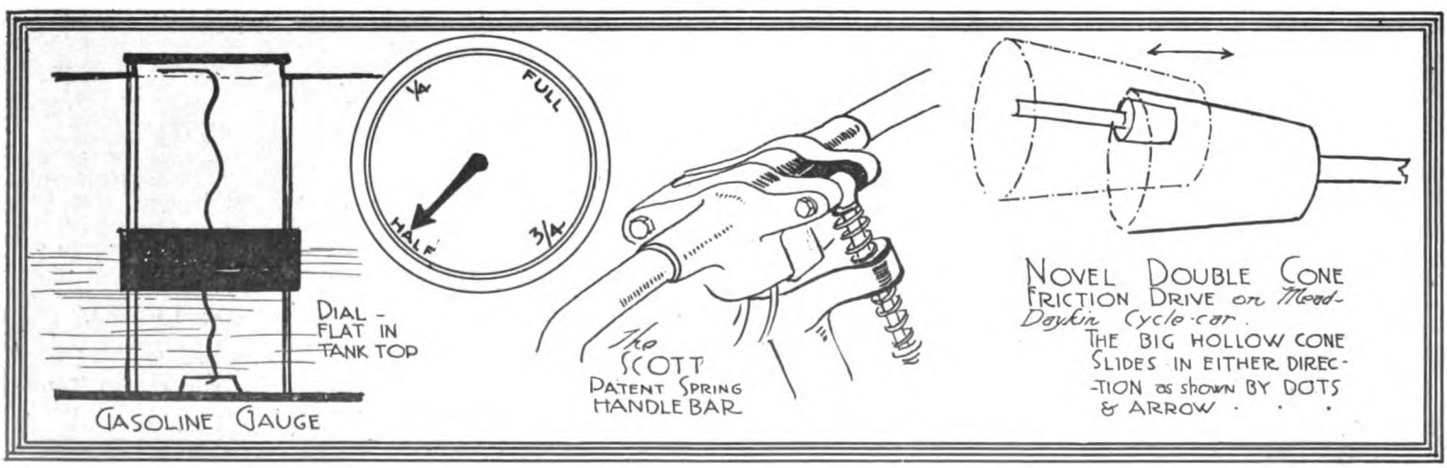
Novel auxiliary exhaust arrangement on the English Premier, which is credited with silence and minimum loss of power.

In single events with unlimited equal awards (such as "perfect scores"), the Union shall decide and endorse on the permit whether such awards shall count as first or second prizes. An "expert" who in any year fails to start in any open competition reverts to the "novice" class automatically. An "expert" who starts in open competitions but fails to win a first or second prize in any year may be replaced in the novice class on request. This method frankly recognizes the impossibility of exposing the "shamateur"; but it confines the regular prize winners to a class by themselves, and gives the private owner and the duffer a chance of victory.

It should be stated that every competitor in open competitions has to obtain a license from the governing body, so that registration is already fully organized, and the sole labor required will be to add a record of performance to an existing rollcall.

A Novel Friction Drive.

THE Olympia Show produced one absolutely novel transmission in the Mead-Daykin cone friction drive. Most friction drives depend on a pair of discs of dissimilar diameters, set in movable contact at right angles. The Mead-Daykin, as the cut shows, operates by cones. A small solid taper cone terminates the driving shaft, and this cone works against the inside of a larger hollow cone, from which the drive goes to the wheels. The two cones are of similar angle, and the larger cone can be slid backwards or forwards by a side lever and toggles. As the hollow cone is moved forwards, the gear ratio is raised, and vice versa. The friction surfaces



Digitized by Google

are covered with a special heat-resisting material, of which the composition is a patented secret, and the contact is maintained by very strong coil springs. The motion has the effect of varying the angles of the two shafts, and consequently an extremely efficient universal joint is required in the driven shaft. The gear is fitted to a cyclecar, and has proved exceedingly efficient in road experiments.

Auxiliary Exhausts.

SEVERAL British makers are paying great attention to better clearance of the exhaust gases. I illustrate the plan adopted on the Premier engine. A light mushroom valve is located in the front of the cylinder, near the foot of the stroke, kept on its seat by a light spring, and adjusted by a setscrew and locknut. It operates automatically. It is covered by the piston for the best part of the induction stroke (when the piston is of course descending), but on the exhaust stroke (when the piston ascends from the bottom), it is forced open by the rush of gas almost before the piston has begun its stroke, and it disposes of quite an appreciable amount of gas before the rising piston covers it. The escaping gas is conducted by a separate pipe into the muffler.

Testing two Premier engines against each other, one having the auxiliary device and the other being on standard lines, I found a marked gain in efficiency ascribable to the device. The fresh charge is purer, thanks to the more complete scavenging. The valve gets a little foul in time, owing to the oil which enters it by dint of its low situation, but the oil which penetrates past it is mostly clean and uncharred. Testers say the exhaust valve proper maintains a gastight fit much longer, because the auxiliary valve relieves it of much heat.

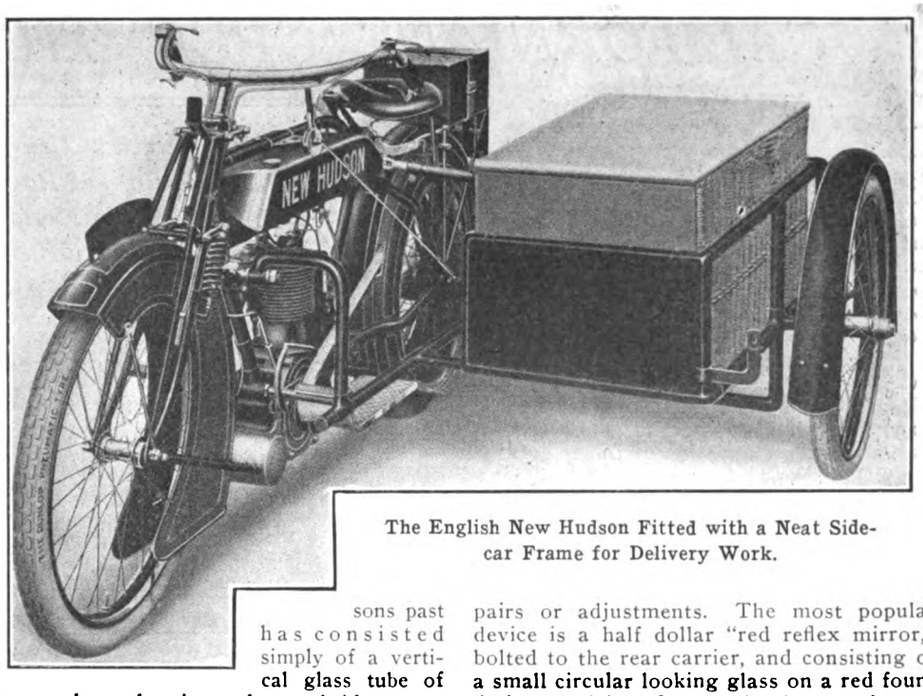
New Hudson Tank, Typical of British Design.

Sprung Handlebars.

FOILED in their efforts to notably improve the spring fork, some of our most refined designers have returned to the spring handlebar. None of them have as yet shown real originality in their efforts. The accompanying cut shows a very simple device, revived from the old Ormonde fork of 1902. It mounts a swaying bar against compression and tension springs which certainly damp the up and down vibrations which the forks fail to intercept. It may be said to damp down "steeple waves" into gently undulating oscillations, and so secures a slight addition of comfort and luxury. Over really bad bumps it is defective, and doubles the clash. First, the main fork springs clash violently, and a fraction of a second later the handlebar sustains a minor clash. But it smooths out ordinarily uneven roads like velvet.

A Revived Gasoline Gauge.

REVIVALS are quite popular just now. Gasoline gauges have already become standard, and the fixed type for two seasons past has consisted simply of a vertical glass tube of narrow bore let into the tankside, communicating with the tank by a tiny orifice at the foot, and closed—in case of a broken glass—by a long screwdown needle, with milled top projecting at the summit. These gauges were well enough, but a rider had to dismount to read them. The new gauges are a revival of another 1902 Ormonde fitment. Let into the tank top is a small dial, marked "¼—½—¾—full"; the revolving needle is fixed at the top of a flat piece of steel, spirally curved, and revolving in a skeleton frame anchored to the bottom of the tank. A cork float is threaded over the spiral strip; its sides nick into the skeleton frame, so that the float cannot revolve, and the twist of the spiral causes the needle to revolve as the float sinks. These gauges are less accurate than the tube type, but the dial can be read without stopping.



The English New Hudson Fitted with a Neat Sidecar Frame for Delivery Work.

A Typical British Tank.

THE cut shows the New Hudson tank, typical of conventional English design. It is dropped astern, following the curve of the frame, which allows the rider's feet to touch the ground. It has two taps, one to gasoline pipe to carbureter, the other over petcock in cylinder head, for starting injections when engine is cold and gummy; two baffle plates to prevent gasoline swishing about; double partition between oil and gasoline compartments; vertical tube gasoline gauge; inclined hand oiler; large filling caps, with gauze tube strainers dropped in. It holds two gallons of gasoline, and half a gallon of lubricant. It is rectanguar, flat and wide. To prevent the rider's knees chafing the enamel off its sides, when gripping with thighs in speed work, a pair of "knee grips" would be worn, viz., flat pads of rubber, mounted on a leather foundation and strapped round the tank.

A Novel Tail-Light.

OUR roads are so crowded that some form of tail-light is required by night to prevent a motorcycle from being run down from behind, especially when the machine is standing by the ditch side for repairs or adjustments. The most popular device is a half dollar "red reflex mirror," bolted to the rear carrier, and consisting of a small circular looking glass on a red foundation, which reflects ruby beams thrown into it by the headlamps of any overtaking car. Another device, staged at Olympia, is the bijou Miller combined red lamp and mirror. This is very tiny, and is mounted on the handlebar by a long bracket arm. It is reversible, having a reflecting mirror for daylight use and also a tiny burner and ruby glass, which can be fed by a bypass and rubber tube from the main lamp at night.

Cyclecar Seating.

THE tandem type of seating is selling well on cyclecars, because its wind-resisting properties are the maximum; but the appended cut of the Swift body shows how some designers cut down width in their coachwork and yet provide better sociability than the tandem type permits.

Sidecar Ambulance.

ON the Motosacoche stand at the Paris Show was staged the first application of a sidecar chassis to ambulance work. A light stretcher framework was mounted on a standard sidecar chassis, the sidemembers being joined by a broad strip of canvas webbing, which should provide very comfortable riding for the injured passenger. The head is covered by a neat canvas hood, bearing the Geneva Convention cross on its side.

THE sketch herewith shows an attempt to correlate oiling with the throttle opening. It is an ordinary hand-pump-fed Best and Lloyd drip oiler, on which the needle taper controlling the rate of drip is interconnected by a flexible wire with the carbureter control. A latch is fitted to hold the pump plunger down when not in use. The system is giving good results.

CALIFORNIANS OPEN THE NEW YEAR

Cowboys Temporarily Usurp Los Angeles Stadium, but Race Fans Look for Early Meets; Prince is Back; Clubs Are Busy with Dirt Track Meets and 1913 Gossip Is In the Air.

LOS ANGELES, Jan 2.—After seven splendid board track race meets at the Los Angeles Stadium, Manager "Ric" Young came to the conclusion that the Southern California public had become weary of the motorcycle racing game and needed a rest, so he closed the Stadium as a motorcycle arena for two months and is now arranging to have programs of the bull bating variety, with cowboys, cowgirls, outlaw horses, wild ponies and still wilder steers.

In a little town in Oregon is a corporation which does the bronco busting, steer bulldogging and cowboy race stunts for the moving picture makers, and for the tourists who know that the old-fashioned cowboy performances are nearly a thing of the past. Most of the contestants in these Rodeo shows are salaried actors for moving picture companies, and the Pendelton (Ore.) people put on these "frontier celebrations" and Rodeos' even abroad. Last year when Prince was completing the motorcycle track here he turned down these Rodeo people, who were willing to give him almost the total cost of the Stadium for the use of it for ten days. Now the Rodeo people will try to show Los Angeles that the horse and cowboy are more interesting than the motorcycle and saucer track. We shall see.

Prince Is Back.

Speaking of John Shillington Prince, he is with us again; he arrived in town in time to see the last meet at the Stadium. In his absence last summer, the owners of the land upon which the Stadium track stands wiped out whatever interest Jack Prince had, also the interests of all his lessees. The rent had not been paid and the lumber company, which was as usual selling Prince the lumber on the installment plan—taking 30 per cent. of the gate receipts as payments—took certain legal action under the California law which made the land liable for the debt.

Jack Prince calls Los Angeles his home now and Mrs. Prince returned here ahead of him with the family parrot, their pet of the last fifteen years, and such other household goods as they transport east each summer. Jack reports a poor year for the board tracks, excepting in Cleveland and St. Louis, where they scored hits, thanks to cheap talent and big crowds.

Clubs Are Busy.

Berger is doing well with the *Pacific Motorcyclist*, the little journal he secured from Charles Fuller Gates, and has become a confirmed California climate boomer. At present all his song is that factories should send out new models to California instead of distributing them through the East where the riding season is closed. A timely song, too.

The motorcycle clubs are all busy pulling off club runs and getting in new members. Several California clubs had meets or road races on Thanksgiving Day and other contests are being arranged by clubs that did not hold meets or races on November 28.

The San Bernardino and Redlands Clubs had a good dirt track meet at the mile horse track near San Bernardino, this being the third meet during 1912 conducted by one or the other or both of the clubs. The Riverside M. C. sometimes combines with the other two clubs and there is a tri-club challenge cup that is usually up at each meet. Riverside is getting ready to pull off a meet on the half-mile dirt track there which is being banked and improved to hold the high power machines.

Building Towns and Roads.

It has become quite the thing now for the big real estate operators to draw on the motorcycle and aeroplane as features for opening new towns, and as is generally known, California has a new town born about once a month. Speaking of these new towns, there was a 47,000-acre ranch a few miles to the northwest of Los Angeles two years ago, mostly in wheat and barley. It was sold for eight millions and cut up into small ranches and homes. There are now three well-built towns in a row on this ranch, and one of the roads leading out of Los Angeles was paved by the owners of the ranch, so there is now an asphalt avenue in that direction for nineteen miles, which is much appreciated by both the motorcycle riders and the auto users.

New Models Arriving.

The new models are coming to the coast slowly, although there is a feverish desire on the part of all riders to inspect the 1913 machines. The first 1913 Indian reached Los Angeles this week and has been examined by a host already. The Merkels seem to be machines that will attract much attention, as this make has never been supplied in California as fast as demanded and the radical changes are interesting.

The big tour for next summer of the Los Angeles Motorcycle Club, which is to have the "Dare-Devil Derkum" title of the "Sunset Ramble," is already being planned for by many couples, and no doubt a majority of the machines in the run will be tandem ridden. Much of the 1,000 miles or more of the ten-day journey will be over ideal roads and through good sized towns, where creature comforts and amusements will be plenty.

RAPID PROGRESS FOR ROAD CLASSIC

PROMISES of entries for the Chicago Motorcycle Club's big road race, to be held July 4, have been pouring in at the headquarters so rapidly of late that it has been considered advisable to limit the number of contestants to 100, and interest in the event has reached a high pitch. It was not believed at first that the club would be called upon to limit the entries, and the fact that it has been forced to adopt this measure gives an insight into the enthusiasm with which the project is being received. Among the clubs that have promised entries and general support are the Invincible M. C., of Brooklyn, N. Y., and the Cedar Rapids M. C. The Marietta (Ohio) M. C. has pledged its support, but is unable to guarantee entries at present.

The Chicago club has opened negotiations with several foreign stars with a view of giving the race an international aspect, and strenuous efforts are being made to obtain at least one entry from across the water. The club now states positively that the first prize in the 250-mile classic will amount to $500, aside from a trophy; a cash prize of $200 pledged by the V-Ray Company, manufacturer of spark plugs in Marshalltown, Ia., with the other cash awards, will bring the total for the first prize at least to the $500 figure. The trophy to be donated by the Marshalltown company will be known as the V-Ray Spark Plug Cup.

It is expected that the entry blanks will be ready for distribution at the National Shows. The entry fee until May 15 will be $10; from that date until June 15 it will be $25. All entries after June 15 will be regarded as post entries, for which the fee has been placed at $100.

A POPULAR PRESIDENT.

AT the annual election of the Oshkosh (Wis.) M. C., Noel J. Houze, who has already served as president for two terms, was re-elected. Guy Oaks was elected vice-president; E. F. Nelson, Jr., secretary; Eugene Shannon, treasurer, and Guy Hanson was chosen road captain.

AT the annual election and business meeting of the Englewood M. C., of Chicago, officers for the coming season were elected. R. T. Purdy is president; J. Brandt, vice-president; C. Shiplock, secretary, and P. C. Thom, treasurer.

NOT less than forty-one members and guests were present at the annual banquet of the Reading (Pa.) Motorcycle Club, held at the Fairgrounds Hotel.

BAKERSFIELD STAFF.

MEMBERS of the Bakersfield (Cal.) M. C., recently held their annual election of officers. The new executives are as follows: L. C. Dunn, president; Arthur Nagle, vice-president; Fred Stoekl, recording secretary; Frank Lightner, secretary-treasurer and L. C. Dunn, sergeant-at-arms.

GOING ABROAD.

JOE ESLER, of Quincy, Ill., and John E. Hogge, a well-known aviator, who at the present time is attending the University at Urbana, Ohio, are planning to make a tour of Europe during the coming summer.

CLUB IN NEW BERN.

A NUMBER of motorcyclists of New Bern, N. C., recently formed the New Bern M. C. J. Leon Williams was elected president; David Morris, vice-president, and Dr. Ernest Dunn, secretary-treasurer.

MAY AMEND LAWS.

A RECENT statement from Mayor S. C. Park, of Salt Lake City, is to the effect that the laws governing motorcycles will probably be amended early in 1913 in a way that will be pleasing to the riders. This is due largely to the efforts of the Salt Lake City M. C.

During the first seven months of 1912, 7,000 motorcycles were licensed in Pennsylvania.

President

EDITORIAL VIEWPOINTS

THURSDAY JAN. 9, 1913

Entered as second class matter July 6, 1908, at the Postoffice at New York, N. Y., under act of Congress, March 3, 1879.

H. N. CONDICT
Secretary

THIS issue of MOTORCYCLE ILLUSTRATED, both in its editorial scope and the character and number of its advertisements, proves conclusively the breadth and the stability of the motorcycle industry. A number such as this is not possible except in a trade of big dimensions and even larger promise. Each year we have witnessed the realization of our fondest hopes, and we are today more confident than ever before that predictions of a really wonderful Nineteen Thirteen are entirely in order.

Elsewhere in this issue is published a diagram showing a comparison of 1911 and 1912 motorcycle magneto deliveries with those made thus far for 1913 use. The analysis is tremendously interesting and, as well, decidedly gratifying. It indicates a production which no one could have dreamed of two years ago, an output which will all but double the number of motorcycles now in use.

Our 1913 prophecy has to do with conditions *three years* from date, and is to the effect that in January, 1916, there will be in use in the United States one million motorcycles.

We hope that all who read this will be spared to review it all in 1916, thus: Now in use, 175,000; 1912 output, 125,000; 1913, 175,000; 1914, 225,000; 1915, 300,000—total, 1,000,000.

DISAFFECTION on the Coast will occupy most of the attention of the F. A. M. Directors when they meet in New York the fifteenth of this month. The Board, it may be said, has always been kindly disposed towards the Pacific Coast members of the organization, no matter what some of their number may think to the contrary. Nor do the Directors feel at all nettled over the fact that there is talk on the Coast of another organization. Movements with that object in view are quite inevitable in the ordinary course of events.

If members on the Pacific Coast, or in any other part of the country, for that matter, have grievances, the Directors want to know what they are, and to do all in their power to remove the cause. This will not be as difficult as it may seem to some. If the Pacific Coast boys, because of their distance from headquarters, desire a greater measure of self-government, why shouldn't they have it? If they feel that dues and sanction fees paid by them should be returned in proportionate benefits, why should their wishes be disregarded? And, if these two concessions are granted, they will be vastly better off within the fold of the F. A. M. than they would be as a separate organization or the small end of some automobile association.

IF there is anything which brings a smile to the lips of an F. A. M. Director in these strenuous days, it is the insinuation that the manufacturers of motorcycles are disposed to attempt to wield an influence in the affairs of the organization. At the expense of being personal, the writer is pleased to cite his own experience in the premises. Being both a publisher and an F. A. M. Director, he might be made the victim of these alleged solicitations. In justice to the manufacturers, however, it should be stated that not once since his election as a Director of the Federation has any manufacturer, dealer or anyone else in the trade even suggested his course of action in any single matter concerning the F. A. M. The talk of trade influence in the organization is so utterly absurd that those who indulge in it thereby prove themselves absolutely unworthy of confidence in anything they may say. It is only fair to the manufacturers to make it plain that their attitude towards the F. A. M. has always been liberal, generous and broad gauged. They have always been ready to help the F. A. M. in every worthy project, and still they have never asked a single favor of the organization. In view of the actual facts, as against the wild allegations of folks who simply do not know whereof they speak, it is high time that this silly babble about the trade trying to run the F. A. M. came to a halt. The trade is too busy trying to meet the demand for machines to even have time to worry about the F. A. M.

MEN who know the direction of trade currents are all but unanimously of the opinion that 1913 business in the United States will be excellent. Congress may succeed in preventing anything resembling a real boom but, no matter what course the politicians may pursue, trade in general lines will be uniformly satisfactory, and the so-called side lines will be liberally included in the public's demand for merchandise. Even though business were to slump, it is not probable that this trade would be seriously affected by the recession The sale of motorcycles will be record-breaking under all conditions except those of an unprecedented panic, which no one fears.

Under the circumstances, it ought not to be difficult for any reputable company producing a popular motorcycle line to finance any reasonable proposition. It can be demonstrated to the holders of capital that the motorcycle business offers a promising opportunity for good investments, turned into enterprises which stand strictly on their merits. Stockjobbers, who have already made their unpleasant influence felt in the automobile industry, need not, however, apply.

ELMIRA CLUB DOINGS.

ELMIRA, N. Y.—At the annual meeting of the Elmira Motorcycle Club an amendment to the constitution was adopted providing that candidates for membership be voted upon at the first meeting after their names have been considered by the membership committee. The following officers were elected: Harry R. Burgess, president; Phay B. Rutan, vice-president; Leroy Morris, recording secretary; T. C. Sayles, financial secretary; George Ells, treasurer; W. B. Allen, captain; William Mahoney, first lieutenant; Henry Rohver, second lieutenant; directors—F. S. Ellett, B. A. Forsythe and P. B. Rutan; membership committee for one year, George Ells, Phay Rutan, and Marsden T. Gerity; house committee, Leon Peters, three months; George Morris, two months, and W. B. Allen, one month; entertainment committee for one year, B. A. Sayles, M. T. Gerity and T. C. Sayles.

Toward the end of the meeting, Mr. Sayles presented his resignation as financial secretary, and President Burgess appointed Marsden T. Gerity to act until a successor to Mr. Sayles is elected at the next monthly meeting. Talk of a banquet is strong among the members, and it is probable that a committee of arrangements will be appointed in the near future.

On New Year's Eve, the club held open house, and about 200 guests were entertained.

CHICAGO PROGRAMS

A MASQUERADE BALL will be given by the Chicago M. C. at its headquarters on January 18. On Wednesday evening, February 5, during the Chicago Show Week, the club will give a stag party and smoker. Elaborate arrangements are being made for the program. The affair will begin after the close of the show on that evening and special cars will be run from the exhibition building to the club-rooms.

MINNEAPOLIS ENDURANCE RUN

MOTORCYCLISTS of Minneapolis, Minn., held an endurance run on January 1. The route was over a 105-mile course. The roads were ragged and unfamiliar to most of the contestants, only two of whom finished the run.

PITTSFIELD ALLIANCE

RUMORS of an alliance between the Western Electric Company, 463 West street, New York City, and the Pittsfield Spark Coil Company, have now been confirmed by officials of both firms and unusual interest is being aroused by the announcement of the merger. It has long been expected that the enormous increase in the demand for electrical appliances to be used on motor vehicles would lead one of the big electrical companies to enter this field, and the advent of the Western Electric Company, allied with the Pittsfield firm, is therefore a development of prime importance. The Western Electric Company is one of the biggest firms in its line in the United States, its business footing up to $70,000,000 a year. The large engineering force of this company will work in conjunction with the Pittsfield engineers in developing new apparatus, and big things are expected as a result of the combination.

Under the arrangement between the two companies the entire line of Pittsfield products including magnetos, spark coils, spark plugs, timers and switches will now be marketed exclusively by the Western Electric Company, under the name "Western Electric-Pittsfield." For a while the Pittsfield company will continue to sell some magnetos direct.

It is stated that a sales campaign will be launched, covering the entire line of Western Electric-Pittsfield devices which has been materially extended to take care of the allied business.

The Pittsfield magneto has, during the last few years, been undergoing a process of careful development. Extended tests under severe operating conditions show it to be one of the best. The new line now to be placed on the market includes the fixed spark magneto known as type "F" for the smaller automobiles and automobile trucks. These will be furnished for all sizes of engines. In addition to this the type N magneto for variable spark control will be furnished for both independent and dual ignition systems for all sizes of engines. A peculiar characteristic of all Western Electric-Pittsfield magnetos is, that while they are of the true high tension type, there are no moving wires.

The Pittsfield spark coils have always enjoyed a reputation for high efficiency and reliability. Under the new arrangement several new types are offered to round out the line. The "Jewel" mica spark plug which the Pittsfield Company has so long manufactured has always been one of the leaders in the market. To this has been added a complete line of porcelain spark plugs and combination porcelain and mica spark plugs all of which will be built along the same conservative lines heretofore pursued by both the Pittsfield and Western Electric companies, and will embody the best of materials and workmanship.

The sales efforts of the Western Electric Company will be directed largely toward manufacturers and supply houses. Ample stocks will be carried at each of the twenty-eight Western Electric distributing houses, located at shipping centers throughout the country. Descriptive booklets of the new apparatus are now being sent out.

V-RAY SPARK PLUGS

MARKED changes have been made in the V-Ray spark plug, as manufactured for 1913 by the V-Ray Mfg. Co., of Marshalltown, Ia. It is credited with being the first plug without a chamber or recess of any kind in the section of the shell exposed to the cylinder, and is thus free from sooting and carbonization troubles. This plug has no porcelain and no mica exposed to the heat of the cylinder; its construction embodies a block of flint-like lava which is not affected by heat or oil. The only mica used in the plug is that which protrudes above the top of the plug itself, where it does not suffer from the heat. The terminal cap fits all cable terminals and has a novel self-cleaning feature. The 1913 V-Ray electrodes are of uniform length, adaptable to the valve clearance of any motor.

V-Ray plugs are made in four sizes, ½-inch standard, metric, ⅞-inch A. L. A. M. and standard motorcycle type. In addition to the new style of plug the V-Ray company will continue its porcelain plug, which also shows improvements for 1913.

TO YELLOWSTONE PARK.

J. E. GRONE.—Leaving St. Joseph go directly south and then southeast to Kansas City, Mo., at which point cross the Missouri River to Kansas City, Kan. From the latter town go west, via the Belt road, passing through Topeka, Manhattan, Solomon, Salina, Wilson, Russell, Hays, Wakeeney, Oakley and thence north to Colby. Leaving Colby, go west again to Goodland, then over the Colorado line to Limon and Riverbend, at which town turn northwest to Denver.

From Denver go north to Cheyenne, Wyoming via Greeley. Leaving this city go west to Corbett, Borie, Otto, Granite Canyon, Ozone and Buford. From Cheyenne to Ozone the road is just north of the railroad tracks, and from Ozone to Buford it is on the southern side. After leaving Buford the road again crosses the railroad and from this point to Colores you will not be within five miles of the tracks. The route leads west for about fifteen miles, then north for several miles, and thence west again. At Colores you cross the railroad tracks and continue west for about five miles until you come to the second pair of tracks, and then north to Red Buttes. From this town go directly north, on east side of the railroad to Laramie.

In leaving this town, follow the road farthest west, passing through Bona, Howell and Wyoming, at which point cross to the east side of the tracks. Continuing in a northwesterly direction you will cross and recross the tracks at the various towns. Your route passes through Bosler, Lookout, Rockriver (leaving this town follow the road to your left), Medicine Bow and Allen. Continuing westward, just south of the Union Pacific tracks, you will pass Hanna, Walcott, Fort Fred Stele and Greenville to Rawlins. Leaving Rawlins you will leave the route alongside the railroad and go north. At a fork in the road just north of Rawlins keep to the left, passing through Lorey, Lost Soldier Ranch, Rongis, Fletcher, Myersville, Hailey and Lander.

Shortly after leaving this town you will enter what is known as the Wind River or Shoshone Indian Reservation. Your route leads northwest through Shoshone Agency, then northeast to Ft. Washakie. From this point go northeast for a couple of miles, then north and northwest to Lenore. Continuing along the same road you will pass through Angelos Ranch, Dubois and then, just before you reach the town of Union, follow the road to your left. Going northwest along this road you will have a very long stretch with no towns, the first being Moran.

OFFICERS of the Board of Health, of Dayton, O., have asked for an appropriation with which to buy a motorcycle.

NEW INDIANAPOLIS FIRM INCORPORATES

INDIANAPOLIS.—The Wizard Motor Company was incorporated January 2 for the purpose of manufacturing motorcycle motors. The officers are: Edward H. Habich, president; P. S. Florea, vice-president and treasurer, and O. C. Forbes, secretary. All are residents of Indianapolis and have been actively engaged in business in this city for the past ten years. The company is made up exclusively of Indianapolis capital and has ample funds to push the business as fast as conditions warrant.

The company will build a two-cylinder, 10-horsepower twin motor, which has been designed by J. L. Yarian, who for the past two years has been connected with the Pope Company, and previous to that was identified with the Yale. He designed the motors now being used by the Pope Company, and got up the 1910 and 1911 models for the Consolidated Manufacturing Company.

The sales end of the business will be handled by H. T. Roberts, of Chicago.

MEMBERS of the M. M. C., of Middletown, N. Y., recently held their annual election of officers. The new staff is as follows: President, C. Girning; vice-president, E. Dexter; secretary-treasurer, F. S. Gillespie; Raymond Foote, captain.

WHAT LOS ANGELES DEALERS ARE DOING

Uniformly Enthusiastic Reports from Coast City Tell of 1913 Agencies and Extensive Preparations Now Being Made to Handle Them — Unprecedented Demands for the New Models.

LOS ANGELES.—To possess the agency for a leading make of motorcycle in Los Angeles is better than to own a factory almost. C. Will Risden, pioneer motorcycle agent in Southern California, who has sold the Indian since it was introduced, sold 1,169 Indian motorcycles during the first 11 months of 1912, and could get no more, so had to stop selling new 1912 machines and begin gathering in second hand machines from those who were willing to wait delivery of the 1913 Indians. The last shipment from the factory was on September 14, and as 347 orders are booked on 1913 Indians, it is plain that Mr. Risden could have sold 1,500 machines during the whole of 1912 if he could have had them on hand.

On December 10, Mr. Risden opened a branch house at Riverside, which is about 65 miles east of Los Angeles, and one of the three cities of the orange belt in a district that is only separated from the great desert by the mountains. Clyde Hafer, who has been traveling for Stevens & Co., of New York, is in charge of the new Riverside branch.

The only outside territory handled by the Los Angeles Indian agency is the Southern California district, about 300 miles long and not averaging 50 miles wide. Mr. Risden says he expects to sell 2,500 Indians during the coming year, as he expects that the factory will now be able to supply machines as fast as he can sell them. There are 20 men on the pay roll of the Risden establishment, which is just off Spring and Broadway, on Eighth; it is the headquarters of the racing men. The repair department keeps 7 men busy.

Outside of C. W. Risden, the only other old timer, now in the motorcycle trade is C. L. Smith, whose present establishment is on the northwest corner of Olive and Eighth streets. Mr. Smith really introduced the Merkel to Southern California, although it had been sold to some extent by several others before Mr. Smith took it up. The past year Mr. Smith has introduced the Pope and has sold 125 machines of this make. Most of these were of the small type as the first of the 1913 models did not arrive until the middle of November. Only about a score of these have been received and no twin-cylinder machines have arrived as yet.

Recently Smith has gone into jobbing motorcycle supplies and now has accounts with every motorcycle dealer in Southern California. His son Harry W. does the traveling and is meeting with great success. "Most used parts of all makes of machines," is the slogan. Two men are employed in the repair department, and the pay roll consists of seven. A larger store will soon be needed.

The Appeal Mfg. & Jobbing Co., with a warehouse and bicycle factory of its own, controls both the Harley-Davidson and Merkel agencies in California, and for the former it also covers several adjoining states and the islands. About 1,200 Harleys and 600 Merkels have been sold during the last year, while the retail business of the Harley-Davidson motorcycles and the various brands of bicycles is controlled by a retail house, the Passmore & Sayre Co., on Main street, near Ninth, on the new Motorcycle Row.

The Passmore & Sayre Co. operated for several years just around the corner from the Indian agency. During 1912 the retail agency of the Harleys reported 420 sales, which for months at a time were all single-cylinder machines.

Five men are kept busy in the repair department and for some time P & S did all the police machine repairing Naturally there was a big sale of bicycles. The estimate on Harley sales for 1913 is 600 in the retail, while the wholesale department is 3,000 sales.

The Los Angeles Motorcycle Co., which was the pioneer second-hand motorcycle store on the Coast, secured the agency for the Merkel last spring, contracting for 200, all of which have been sold. H. B. Drollinger is manager. In the repair department four men are kept busy all year and eight in the busy season. Mr. Drollinger expects to have the Merkel retail agency during 1913, but one of his former salesmen announces that he has obtained the agency. A big business in parts of various makes and in supplies of all kinds is carried on by the L. A. Motorcycle Co., which is located at the junction of Spring and S. Main streets.

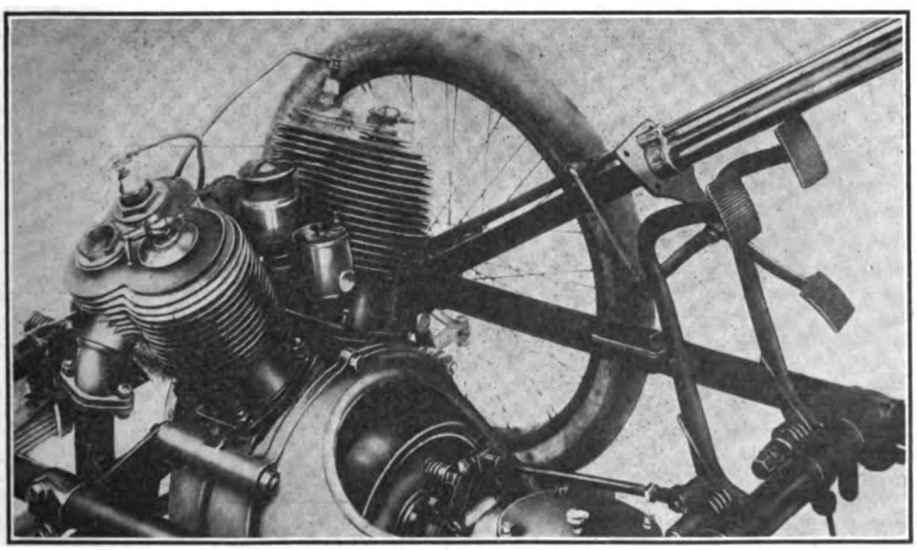
W. H. Whitesell, California distributer and Los Angeles retailer of the Excelsior motorcycle, reports a record-breaking year and claims to have handled about 1,800 machines in California. He expects a bigger year in 1913 and will give up his line of bicycles and sell nothing but motorcycles and supplies. Four men are kept in the repair department and several salesmen are employed. Mr. Whitesell does most of the traveling. Recently the Excelsior store was removed from 628 S. Spring to the present large store below Ninth on Main, where the new motor district is located.

A. M. Kupfer opened in the former store of W. H. Whitesell and operated there as sub-agent for the Flanders and Yale until the building was torn down, when he moved to the new store adjoining the Harley-Davidson agency and took the state agency for the Henderson. Nine of the 1912 Henderson machines were sold and the first 1913 has just arrived. The county road police have ordered eight of the new Henderson motorcycles and will soon receive them. Mr. Kupfer has a few Yales on his floor, but will not have the Yale agency this year. During 1912 he delivered about 100 Yales. In February he will open a branch in San Francisco to sell the Henderson.

Sexton & Berry is a new firm at 918 South Main street, which announces that it will have the local Merkel agency.

C. M. Frink introduced the Wagner machine in this state and sold it with considerable success until the factory stopped making machines on July 1. He sold the 50 he was able to secure before July. Recently he took up the Yale and expected to job as well as retail, but will now handle accessories exclusively as a branch of the Motorcycle Accessories Co., of St. Paul, incorporating as the Motorcycle Accessories Co., of Los Angeles. He will be joined by his father, C. E. Frink, who is on his way here from Minnesota. The present store, with a big repair department, is located on Olive street, between Eighth and Ninth, but a new place will be opened at 914 South Main, in the heart of the new district. It will be the finest motorcycle supply house in the far west, Mr. Frink says enthusiastically.

Thors are sold in Los Angeles at the branch house of A. Freed, of San Francisco; E. Lebell, manager, and A. Tee Wilson, sales manager. Mr. Lebell reports 900 Thors sold south of the Tehachapi this year. He says if he could have gotten them he would have sold 150 machines during November and December. Only wholesale bicycle business is done by this house, but this will be given up after the first of the year when the new double store is occupied at 924-926 South Main street. The big repair department will be enlarged and generally improved.



The Humberette Motor, an Interesting Cyclecar Feature of the Recent British Show in Olympia.

"I NOTICE the national information bureau for motorcycle dealers is advocating the planting of sales seed during the cold weather months, in order that a full measure of business may be reaped throughout the summer," said the Veteran Dealer, as he wiped his hands on a ball of waste, "but I have not seen a suggestion as yet to the effect that part of the winter season should be devoted by the dealer to systematizing his establishment preparatory to the time when the sales begin. In my opinion it is quite as important to be ready for the sales as it is actually to stir up the business. I don't mean simply that a dealer should fill his salesroom with the new models, in order to be prepared for prompt deliveries, but that he should look around his shop, decide how he can improve it and how he can change his whole policy for the better, and then get busy—now.

"In a short time 1913 business will be in full swing and any contemplated improvements will put aside for another season. Sales will be made, patrons and prospective patrons will take up the dealer's time, and once more the shop—and to some extent, the salesroom—will have to work out its own salvation. In the latter process profits will dribble away, and, no matter how carefully the dealer has planted his sales seed, he will not reap more than about seven-tenths of what really is due him.

Making the Most of the Business.

"The best motorcycle establishment I ever saw still offered opportunities for improvement," continued the Veteran Dealer, as he tucked the ball of waste neatly into a little closet with a snap lock, "and I know from personal experience that a single glance around a shop at any time will disclose numerous details that need attention. If parts are kept, is there a series of drawers or carefully marked boxes for them? Is there a properly arranged section for the storing and handling of gasoline and oils, and is a strict account kept of the sales of these wares? Is there a full stock of the commoner tools, in good working condition, and a designated place for each tool. Is there a space and a few standard tools set aside for the patron who insists upon doing his own tinkering now and then? Is the shop so separated from the store proper that the more or less untidy, greasy goings-on in the former do not lap over into the salesroom to create an unfavorable impression?

"I might continue asking such questions for half an hour," persisted the Veteran Dealer, "but the whole situation simmers down to this: Is the dealer ready for the business when it comes to him? When he cuts up each sale and lays aside the profit due him, is he going to retain the bulk of that profit or is it going to get away from him in any one of a dozen ways? The profit-cutting is going to be rapid and widespread during the coming season, but after all is said and done we are not half as much interested in the number of sales as in the amount that will be left in the dealer's cash drawer when the snow flies in the fall of 1913. With anything like reasonable handling the sales will be plentiful enough, but keeping a few real shekels to show for them is almost a fine art.

An Easy Payment Plan.

"Getting back to that idea of planting sales seeds during the winter so that we may reap in the summer," said the Veteran, "I have just received a circular from the dealers' information bureau, which suggests a simple method of disposing of a machine. It is pointed out that when a motorcycle is sold on an instalment basis the dealer is obliged to charge interest on the deferred payments, and to avoid this a plan is outlined by which the order is taken and the payments started during the winter. Delivery is guaranteed on a certain date, and the payments are so arranged that about half the price of the machine has been turned over when the time arrives to place the motorcycle in the purchaser's hands. In this way no interest is charged, the buyer has made half the payments on his machine during the winter when there are few other demands made upon his money and the dealer has only a few more collections to make before he can call the deal closed.

"This strikes me as a good idea. The buyer reaps the benefit of the easy payment plan without being charged interest for it, and the dealer has a good part of the purchase price in the spring when he needs it most, as a rule. There is another very important point: If the order is placed during the winter, the dealer will certainly be able to make the delivery as specified. Late orders often mean late deliveries and consequent dissatisfaction.

The Premium Inducement.

"I notice in the same circular a reference to a dealer who has agreed to give a $10 gas tank to each purchaser of a machine who places his order within a certain period, and this is another worthy idea. It has its limitations, of course, but it should help to round up a lot of early orders. Where premiums are given, the dealer must count upon rapid sales and quite a large number of them, in order to offset the cut into his profits, but it is likely that his policy of generosity will bring about just such results.

"There is just one more idea for dealers that strikes me now," said the Veteran, "and if properly handled it should be as fruitful as any we have considered thus far. It involves the organization of a club by a dealer in every town where the motorcyclists are not already banded together. A club, even a very modest one, is a valuable publicity factor and an ever-present influence for the spread of interest in the sport. In motorcycling, more than in any other sport, one enthusiast makes others, and when the element of sociability is combined with the general fascination of the motor two-wheeler the making of recruits is greatly simplified. It is obvious, of course, that the dealer's aim is to make recruits, in view of the fact that they stand for business expansion.

"Now is the time to launch new clubs. The boys should be brought together and interested in plans for the riding season, and it is my opinion that the dealer who works along these lines will soon obtain his reward. As soon as the boys begin to take a fraternal interest in him, they will help him plant the aforementioned sales seed and assist him with many small but important details. A club is an asset for the dealer in any city, but in a country place, where the agent needs every possible influence behind him, it is practically a necessity. The dealer who organizes a club will probably have to spend a few dollars in the undertaking, but the money will be well invested. And now's the time."

S. B. ROBINSON, of Ocean Park, Cal., has just completed a trip from Grand Forks, N. D., to Los Angeles. He made the trip in 25 days, riding a Reading-Standard, belt-driven machine.

BULLETINS FROM BUSY CLEVELANDITES

AS this issue goes to press Cleveland's Show is in full swing. Every local motorcycle dealer is represented at the Show and every prominent make of motorcycle is on exhibition. The Casino Cycle & Supply Company and the Lister Motorcycle Company are the largest exhibitors in the motorcycle line. Among the other dealers represented are: L. J. Mueller, I. H. Silsby, The K-V Motorcycle Company, Vincent Brothers, P. J. Carlton, The Hall Cycle Company and L. Layman.

CLEVELAND, O.—"Gus" Tyler and "Brownie" Brown, both well known to Cleveland motorcyclists, have opened a repair and manufacturing establishment at Union street and Broadway, this city. They intend to feature the production of a new design of sidecar which Brown has perfected during the past year, in addition to catering for general motorcycle repair work. The firm will handle a sub-agency for Flying Merkel machines and may also sell the Yale.

"Bill" Lister, of the Lister Motorcycle Company, has been putting crimps in the pride of some of Cleveland's speedsters of late with his new Harley-Davidson twin. Lister tips the scales at about 200 pounds, but he has a standing offer of a fifty-dollar side bet for a race with the owner of any stock seven in the city.

"Louie" Mueller found it necessary to display a "We-are-open-evenings" sign during Christmas week in order to meet the demands made upon his staff by prospective purchasers of 1913 Indians.

I. H. Silsby, Merkel agent for 1913, in Cleveland and five surrounding counties, has returned from a business trip through his territory on a Merkel 4.

Annual Show in Sixth City is in Full Swing and Dealers are Primed for Big Things—Late News of the Agencies.

John Zucker, manager of the Casino Cycle & Supply Co., has moved his business into a new establishment four doors east of the old headquarters, and is displaying the new Thor and Excelsior models. His repair department will be in charge of Herman H. Sill, formerly connected with W. D. Andrews, of Buffalo.

The Guide Motor Lamp Co. is erecting a new factory building on Madison avenue between West One Hundred and Fourteenth and One Hundred and Fifteenth streets, where it plans to double the output. A motorcycle lamp is included in the 1913 catalog.

The repair department of the Lister Motorcycle Co., which occupies a building apart from the salesrooms, has received the finishing touches and is in charge of C. A. Leonard, formerly connected with the Peerless Automobile Company. The salesroom is being redecorated in the Harley-Davidson colors.

Vincent Bros. have received their 1913 twin Pope demonstrator, and several orders have been filed. The other models are also on display.

A. J. Hall, Inc., 3732 West Twenty-fifth street, will continue to handle the M. M. line for 1913, and he has also taken on the De Luxe. Nine of the latter have been sold for spring delivery. The firm is producing a patented package carrier which will be marketed at $25. It consists of a wire basket that extends over and beside the rear wheel in such a way that it affords a large capacity while retaining strength and pleasing lines.

The Goodyear Tire & Rubber Co., recently conducted tests of tire wear on a sidecar, the Motorcycle Quick Delivery Co., of Cleveland, furnishing a van outfit for the trial. It was found that driving in car tracks was one of the most noticeable causes of unusual wear on the tires.

What is known as the West Side Motorcycle Quick Delivery has been established by the K-V Motorcycle Company, of Cleveland, Ohio. The company is using Henderson and Wagner machines with sidecars.

I. H. Silsby has closed with the Clifton Park Auto Co., to handle the Flying Merkel for Rocky River during 1913.

Glen Crandall, a former Akron boy, is now on the sales force of L. J. Mueller. Crandall is quite widely known as a speedster.

Announcement is made that the Bosch Magneto Co. is to open a branch in Cleveland where the exceptional service afforded Bosch patrons in other cities will be afforded. The location of the branch has not been decided upon.

PAPERS providing for a change in name have been filed with the secretary of state by the Auto Rubber and Cycle Supply Company, of Youngstown, O. The new name is the Auto Rubber & Mill Supply Company. The company will continue to handle a complete line of automobile and motorcycle supplies.

JOHN T. BILL, of Los Angeles, agent for the R-S, Pierce and Emblem lines, is recovering from a rather serious illness. Following an injury to his back he was threatened with pneumonia.

MILWAUKEE SHOW.

ARRANGEMENTS have been made for an impressive display of motorcycles at the Milwaukee Automobile Show, January 11 to 17, and it is stated that the motor two-wheeler will be exploited more satisfactorily than ever before at a display in the Wisconsin city. The show will be held in the main hall and annex of the Auditorium.

OUT OF BICYCLE RANKS.

MRS C. C. HOLLISTER, of Wauseon, Ohio, for several years an ardent bicyclist, has now joined the motorcycle ranks and is accustomed to join her husband on long trips. Mrs. Hollister piloted a Yale 4 during 1912, but has set her mind on mounting one of the 7-8 h. Yale twins for the coming season. Mr. Hollister uses a Yale twin.

OLD COPIES OFFERED.

ONE of our subscribers has in his possession a series of old copies of MOTORCYCLE ILLUSTRATED, which is almost complete, beginning with the second issue in June, 1908. As he has no further use for these copies, he is willing to let a club or individual have them at the cost of express only. Anyone interested should write to this office.

RUTAN A BENEDICT.

PHAY RUTAN, agent for Indian and Flying Merkel machines in Elmira, N. Y., was married to Miss Mary Cromer, a school teacher of Elmira, a few weeks ago. M. Rutan was one of the organizers of the Elmira M. C.

SPEEDWAY FOR NEW YORK?

LATE reports are to the effect that the New York Motor Speedway Association has acquired a ten-year lease of the aviation field at Garden City, L. I., a tract of 650 acres, and will build an oval track two miles in circumference. The company is capitalized at $1,000,000. A decision has not been reached relative to the material for the track surface. The plans call for a start on the work on March 15, and for the erection of grandstands to seat from 75,000 to 100,000 spectators. Previous experience with such speedways has not shown the best results in motorcycle racing, but this has not prevented motorcyclists throughout the metropolitan district from manifesting considerable interest in the enterprise.

CANADA TO THE GULF.

FINAL arrangements have been made for the construction of the Meridian Winnipeg to Gulf motor road. This highway will have Winnipeg as its most northerly point and Galveston, Tex., as its southern termination. The distance between these points is about 2,000 miles. The road will be cut up into divisions, corresponding to the states through which it passes. There will be the Canadian, the North Dakota, the South Dakota, the Nebraska, Kansas, Oklahoma, North Texas and Gulf divisions.

REPORTS from the Pacific coast concerning Jake DeRosier are now more favorable. It is said that he will soon be able to walk.

WOMAN RIDER SEEKS OFFICE.

MISS IRENE KIMBERK is one of the candidates for secretary of the Hoquiam (Wash.) M. C. Other nominations are: President, F. A. Polson; vice-president, E. A. Truitt and Ray Kimberk; secretary, Miss Irene Kimberk and C. Lewis; treasurer, F. H. Whitcomb and Percy Hall; captain, Clem Fellzer and W. L. Schumate; first lieutenant, E. French and J. S. Devendorf, and second lieutenant, R. M. Seater and C. F. Smading.

BURNSIDE MAKES CHANGE.

OAKLAND, Cal.—Frank H. Burnside, of this city, who for some time has been engaged in the motorcycle business as a salesman, has accepted a position with the Fireman's Fund Insurance Company. Mr. Burnside will continue to interest himself in the motorcycle and its followers.

GOOD BOYS REWARDED.

ONE of Santa Claus' stops in Providence, R. I., was at the motorcycle headquarters of B. A. Swenson, where he distributed gold pieces and boxes of cigars to the Swenson employes. By way of reciprocating the staff presented Mr. Swenson with a large leather-upholstered chair.

NEW YORK TO DAYTON.

POWELL and Richard Schubert, of Dayton, Ohio, have just completed a motorcycle trip from New York to Dayton. They were on the road nearly a month owing to poor road conditions and bad weather.

St Paul to Denver

by WALTER A TEUBER

MY preparations for the St. Paul to Denver motorcycle tour I am about to describe did not require much time, my main purchase being a game bag, which I used in place of a suitcase. I exchanged the cushion on my tandem seat for a good-sized horn, this being a very desirable fixture on such a trip. Before starting I had a good road map safely stowed away in my inside pocket, as one always finds a serviceable guide very welcome when exploring unknown territory, and the section I was about to travel was unknown to me.

I got under way about noon and reached Farmington, 25 miles distant, in less than an hour. The wind was blowing a gale and the road was rather sandy. At times it was difficult to make progress. A bunch of thistles became entangled in the spokes of my machine and broke the brackets which held the cyclometer, so that I had to take it off and put it in my toolbox. From Farmington I rode on to Faribault and then to Mankato. Nearing Waterville I got off the main road, and covered about ten extra miles. The road for about 20 miles was rough and full of ruts and chuckholes. Good speed could be made from Madison Lake, but the numerous sharp curves make caution necessary. I reached Mankato a little before 6 p. m., having covered 107 miles. I remained here overnight and being in a strange bed did not bother me as I slept soundly.

Striking Trans-Continental Route.

I got an early start the next morning but found deep sand and also encountered a few steep hills before reaching Amboy. After passing into Iowa I found good roads, of a black dirt formation. It is during this season (October) that the farmers haul their grain to town thus practically repairing the roads. The going soon became hilly and it was an up-and-down trip to Fort Dodge, where I arrived at 3 p. m. Having covered about 142 miles, I decided to stay over until morning, and in the meanwhile visit some relatives.

Before starting the next day I gave my machine a cleaning. When I did finally get started it was only to take the wrong road. This took me out through the hills, and they sure were hills; something like a scenic railway, only the course was not so smooth. At last I hit the right road and was soon in Grand Junction, on the transcontinental route, as well as on the Chicago and Northwestern railroad. From this point I went due west and had good roads for about 25 miles, when they again became hilly, and full of chuck-holes. Once more I got off the main road but did not go far wrong this time. Now and then the road would run along the railroad tracks and I had many an interesting race with the trains. In most cases I was the winner; where the road was at all good I could lose them.

Some Spectacular Spills.

Between Glidden and Westside the road had just been graded and it was very chucky and full of ruts, especially after the rain. I took my first spill near Carroll, by running off the grade and into the dug-out side of the road, which was very soft. My handlebars were pretty badly bent and as the throttle had been opened wide the ditch was practically cleaned out, my rear wheel throwing the water and mud about thirty feet into an adjoining cornfield. After a short rest I took to the saddle again, finding the roads for the most part hilly and rough. Nearing Woodbine I got my second spill, doing almost the same kind of a stunt as before, only this time I was a little further away from the machine when I landed. Fortunately I was not hurt in either case.

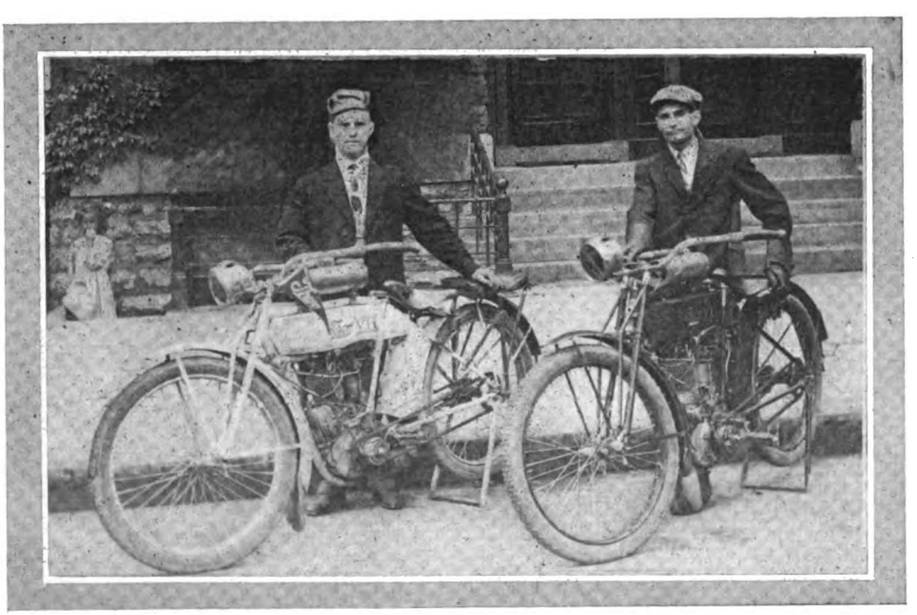
It was now getting dark and finally a light shower began to fall, accompanied by wind. I did not stop as the road was only a little sandy and the going was getting considerably better. It was dark when I reached Logan and the rain had ceased to fall so I decided to ride on ten miles to the next station. Although my lamp gave me a good view of the road ahead I did not particularly relish the idea of night riding on such roads and determined not to try it again. It was 7 p. m., when I reached Missouri Valley and I was ready to eat a hearty meal, having traveled 157 miles.

Pacing an Automobile Party.

In the morning I left for Omaha but had another spill before reaching Honey Creek, where I laid over about five hours. While here I met a motorcyclist from Lincoln, Neb., who had ridden up the night before on his Harley-Davidson. I arrived in Omaha at 3 p. m., and spent the rest of the afternoon visiting a number of old acquaintances and cleaning the Iowa mud off my wheels. During the afternoon I purchased an Eastman vest pocket Kodak which came in handy on a number of occasions. Up to this time I had covered 475 miles in 24 hours of actual riding.

I left Omaha heading an automobile party but had not gone far when I took another spill and broke off a pedal. I reached Fremont, where I had dinner, just at noon. Leaving here I decided to let the automobile take the lead as this party knew the road. About 39 miles out the automobile had a tire blowout and as I did not care to take the lead I helped them with what proved to be an hour job. When we started again I took the lead, and in less than ten miles had lost my friends. In another 40-mile run to Clark's I beat them by half an hour. This day's riding put 120 miles to my credit.

I left Clark's about 8 a. m. the next morning and had fairly good going. The towns were now quite far apart and the land looked deserted, with only an occasional farm house in the distance. It was 6.30 p. m. when I reached North Platte and I had covered 197 miles, thus doing better than on any other day of the trip. During the evening I met H. Sorenson and several other boys who had participated in the Short Grass Tour of last August.



C. Weller (at left) and W. A. Teuber on St. Paul to Denver Tour.

Meeting Some Congenial Spirits.

Leaving Platte the next morning I noticed the tracks of another motorcycle and so made inquiries at the next village. When I learned that a rider had left only half an hour ahead of me I put on extra speed and caught up with him after a four-mile run. We rode on together to Ogalalla, where I met Charles Strang and F. C. Kaylor. Both rode twin Indians and were headed for Brule. Here we met an M. M. rider, R. C. Kinsman, who was bound for Denver, so I immediately adopted him for my partner.

We rode to Julesburg and then along the

Digitized by Google

north side of the Platte River, which has practically no banks, nothing but a sandy valley on each side. The traveling was good but darkness overtook us and as my partner had no lamp I let him get about thirty feet ahead of me and by keeping to the left he got the benefit of my light. In this fashion we rode about 16 miles over a strange road, which was really only a cow trail. The end of the 15 miles brought us to Crook, Colo., where we had some trouble in finding a night's lodging. The next morning we had good roads alongside the Union Pacific tracks and at one time had an 18-mile race with a passenger train.

We crossed the Platte River at Merino, at which place the sand was so fine one could hardly keep his machine up when standing alongside of it. The roads were very poor and before reaching Fort Morgan I broke the left side of my saddle frame. After visiting four blacksmith shops I finally got it welded. Just out of Fort Morgan we ran into a bad wind storm which was followed by a thunder shower. After an hour's wait in a farmhouse we again started out, but found the roads very sticky. For half a mile the gumbo clung to our wheels so thickly that we had to get off and walk, letting the machines push themselves. After that we were able to make fairly good time for 80 miles to the next station. This is a section of the country which has just recently been thrown open for homesteads and naturally it is not very thickly populated. We reached a farmhouse by sundown, where we obtained some supper and were allowed to sleep in the stable overnight.

Nearing Denver.

We started out early the next morning on the last lap of our trip. A cold breeze was coming from the snow-capped mountains, which were now well in sight. Every now and then we had to get off and run or swing our arms in order to keep warm. As the hotel in Bennett did not appear very inviting we decided to ride to Denver for breakfast. A wagon road to this city seemed as good as a boulevard compared to the cow trails which we had been riding for so long, and we reached Denver by 9.30 a. m.

I put my machine over the wash pit at the Williams Motor Company establishment and gave it a thorough cleaning and then scoured the engine. As the rest of my course lay through the mountains, which were full of snow, I decided to crate my machine and finish the trip by rail. During the entire trip on the motorcycle I covered 1,075 miles in 65 hours of actual riding. I used 20 gallons of gasoline and 14 quarts of oil. The average consumption of gasoline was one gallon to 54 miles.

AN AUSPICIOUS START.

THE newly-organized motorcycle club of Kalamazoo, Mich., already has forty members. At a recent meeting the following officers were elected: Fred Forgarty, president; Fern Spannagel, vice-president; Emmet Rooney, secretary, and Ray Newland, treasurer.

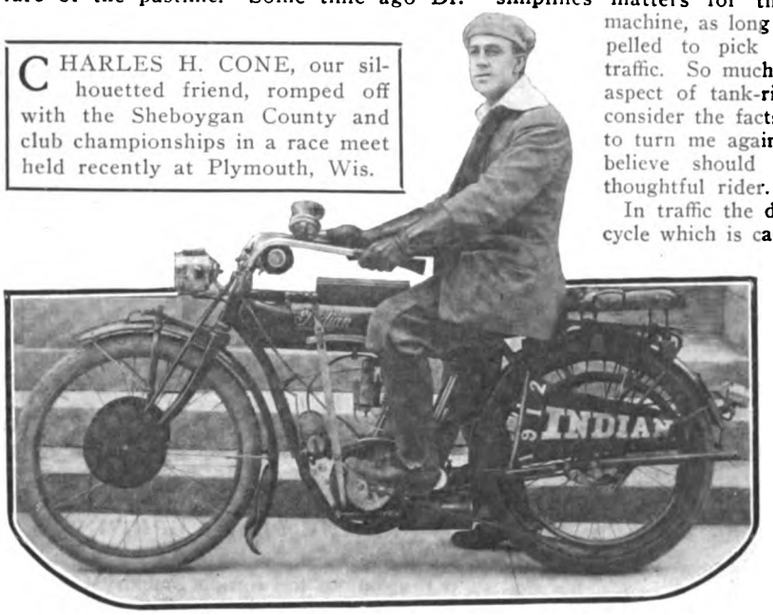
F. A. M. WORKERS.

OTTO E. ROBINSON, 510 K street, Hoquiam, and Aubrey Archer, 809 West Wishkah street, Aberdeen, are local appointees in Washington. C. N. Brown, of Hutchinson, is a local appointee in Kansas.

PATTERSON CONDEMNS TANK-RIDING

F. A. M. President Points Out That with View of Road Ahead Obstructed by Passenger on Tank a Motorcyclist is Handicapped

IN the letter which follows President Patterson, of the F. A. M., announces that his opinion has changed regarding the advisability of tank-riding on motorcycles and that he is now convinced the practice is one which entails unreasonable danger and exerts an unfavorable influence upon the future of the pastime. Some time ago Dr. Patterson argued that the wholesale campaign against tank-riding was hardly justifiable, as he considered a passenger quite as safe on the tank as on a tandem attachment, but his views have been changed materially, and with characteristic straightforwardness he makes known his new attitude. President Patterson's letter is substantially as follows:



CHARLES H. CONE, our silhouetted friend, romped off with the Sheboygan County and club championships in a race meet held recently at Plymouth, Wis.

About a month ago one of the F. A. M. directors wrote me that he wanted to change his vote on a certain matter, as he had found his original conclusions were wrong and he had the courage to say so. I am in a similar position just now with reference to the practice of tank-riding on motorcycles, a matter to which I have given much thought. Some time ago I noted without enthusiasm that the F. A. M. was decidedly against tank-riding, and knowing that there were two sides to the question I feared that the Federation might go too far in its condemnation. Now I am of the opinion that the tank-riding practice cannot be too vehemently condemned, for I have had some striking facts brought home to me. I still believe that the experienced rider who is traveling in the country can carry a passenger on the tank of his machine with safety, sometimes with greater safety than on a tandem seat, but wherever traffic has to be contended with the tank-riding habit is a dangerous one.

As far as a tandem attachment is concerned I have personal reasons for knowing that it requires a really muscular chap to handle a machine with a passenger on the rear, and that it is much easier to carry the extra weight over the tank. On a recent tour I observed a young rider get into serious trouble through improper balancing of the passenger's weight on the machine, while the tank-riders went along without mishap. I do not claim that tank-riding is either graceful or perfectly safe—even in country riding—but I do believe that it simplifies matters for the driver of the machine, as long as he is not compelled to pick his way through traffic. So much for the favorable aspect of tank-riding; now let us consider the facts that have served to turn me against it, facts that I believe should appeal to every thoughtful rider.

In traffic the driver of a motorcycle which is carrying a tank passenger is seriously handicapped through being unable to see ahead. He may look out to either side, but this entails more or less acrobatic work, and besides something may happen on the opposite side of the machine at the same instant. This arrangement is obviously not safe for the rider, his passenger or the pedestrian in the street. In a traffic emergency it is also difficult for the tank passenger to get clear of the machine very speedily, while a person may step off an ordinary tandem attachment with little trouble. Still the whole question simmers down to the fact that the driver cannot see the street ahead while carrying a tank passenger, and no matter how comfortable said passenger might be, the practice is one to be condemned. A rider may carry a passenger on his tank a dozen times without mishap, but sooner or later the fact that he is driving with little knowledge of the road ahead is going to get him into serious trouble. The rider with the tank habit always endangers the pedestrian as well as himself and his passenger, and the non-rider in the street must not be ignored if we are to obtain the best results for the motorcycle. I trust that all riders will give this matter calm consideration, and that tank-riding will give way to the extra seat, which at least always permits of a clear view from the driver's saddle.

REPAIRS COST A NICKEL.

CLYDE McMURTY, of Boulder, Col., has just completed a 1,765-mile motorcycle trip through Kansas, Oklahoma and Colorado, expending just five cents for repairs.

OFFICERS of the Poughkeepsie (N. Y.) M. C. for the 1913 season were recently elected as follows: Thomas Jordan, president; Charles Senk, vice-president; Eugene Davis, treasurer; Harry English, secretary, and H. J. Burger, press agent.

MANUFACTURERS

ON GOODRICH FORCE.

LUCIUS B. LYMAN, widely known in trade circles, particularly in connection with tire lines, has just been appointed sales manager of the motorcycle and bicycle tire department of the B. F. Goodrich Company, at Akron, O., and from now on he will direct the sales of both the Goodrich and Diamond brands. Mr. Lyman is credited with

exceptional selling ability, and with a thorough knowledge of the policies and principles that go into a successful sales campaign. For several years he has been connected with the motorcycle and bicycle business, and has a large circle of friends among manufacturers and dealers throughout the country.

Mr. Lyman is especially enthusiastic over the new Diamond motorcycle tires. Referring to them in a recent statement he said:

"There are more good features in the new Diamond motorcycle and bicycle tires than I have believed it possible to embody in a tire. It is no exaggeration to say that the motorcyclist in 1913 can obtain in Diamond motorcycle tires the same material, construction and workmanship that go into the best automobile tires. We have simply adapted our automobile tire principles to the motorcycle in such a way that all the distinctive features of the large tires are placed at the disposal of the owner of a motor two-wheeler. Motorcyclists can now get the well-known Diamond Safety (Squeegee) tread in motorcycle tires; this is the tread that has given such remarkable results in automobile casings."

Mr. Lyman will be in charge of the motorcycle and bicycle tire departments at the Diamond Rubber Company's exhibits at the New York, Chicago and Boston Shows.

R. L. MILLER, of West Lafayette, Ind., in a 55-mile motorcycle ride over muddy roads with a tandem passenger, used only five pints of gasoline.

TO SHOW NEW ECLIPSE BRAKE.

PROBABLY the most interesting feature of the Eclipse Machine Company's exhibits at the national shows will be the new Eclipse motorcycle disc brake, which will be displayed in the regular model and in the type that is being supplied especially to the Harley-Davidson Motor Company. The brake is designed along the lines of the Eclipse free-engine clutch, and comprises a series of discs which afford a braking surface of over 100 cubic inches. In addition, the Eclipse company will show its new sidecar hub with knockout axle, which involves an entirely new principle in sidecar hub construction.

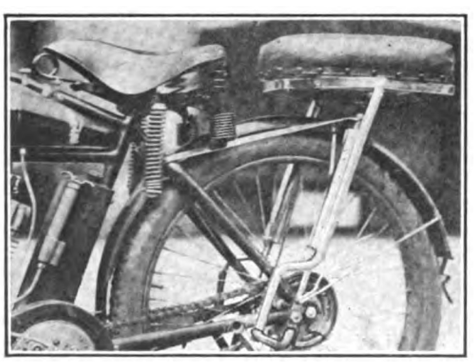
Besides these articles the Eclipse booth will show samples of the company's 1913 line of clutches, front motor hubs, head sets, and also a complete line of bicycle hubs and coaster brakes. The company announces that it has made quite a few minor changes in its clutch for the coming season.

RACINE PLANT GROWING.

A NEW core room has been added to the plant of the Racine Foundry Company, of Racine, Wis., this being the second core room added within the last year. The company is also erecting a new office building and a vault for the patterns. Heavy orders for cylinders are being received.

ADAMS TANDEM ATTACHMENT.

EASY riding accompanied by an extraordinary sense of comfort and security is a feature of the Adams tandem attachment, the product of the Henry T. Adams Co., 6823 South Chicago avenue, Chicago, Ill. The seat is fitted to a horizontal frame which is carried by two supports terminating in stirrups for the passenger's feet. To these supports are attached parallel tubes which play over struts attached to the rear frame at their lower ends and to braces to the rear stay crown at their upper ends. The movement of the seat and supports is controlled by springs on the struts on either side of the wheel and the passenger thus rides on springs, the stirrups moving up and



down with the seat. Luggage can be carried on this attachment by the removal of the seat-cushion.

EXCELLENT TIRE SERVICE.

WILLIAM H. GRAVES, of Chicago, reports 7,000 miles of service from the Pennsylvania Vacuum Cup tires with which his machine is fitted, and states that they show comparatively little wear. Mr. Graves uses his motorcycle in business, much of the time carrying a passenger. At the time the accompanying photograph was taken the tires had covered 4,000 miles, and it will be noted that the treads had hardly been affected.

NEW CORPORATION.

THE Stewart-Warner Speedometer Corporation was organized December 19 under the laws of the State of Virginia, with a capital stock of $1,000,000 7 per cent. cumulative preferred, redeemable at $110, preferred both as to dividends and assets, and $10,000,000 common.

The corporation has purchased the entire capital stock of the Stewart & Clark Manufacturing Company and of Warner Instrument Company, also all of the speedometer patents owned by the Warner Instrument Company and by A. P. Warner, C. H. Warner and J. K. Stewart, which comprise all of the United States patents of any value relating to magnetic speed indicators.

The officers, directors and sales forces of the Stewart and Warner companies will remain as at present, and the product of each factory will be marketed separately. White, Weld & Company, bankers, of New York and Chicago, underwrote the proposition and financed the purchase.

J. K. Stewart will be president of the new company, and C. B. Smith, secretary and treasurer. The board of directors will be composed of representatives of the selling interests and of the bankers.

R. A. Peters, a motorcyclist of Oakland, Cal., recently averaged 30 miles an hour on a 275-mile trip from Oakland.

Digitized by Google

THE FEDERAL DISPLAY.

THE Federal Rubber Manufacturing Company, of Milwaukee, will exhibit at the New York Show a complete line of automobile and motorcycle casings and tubes, tire accessories and mechanical rubber goods. The chief features of this exhibit, however, will be the Federal "Rugged Tread" auto tire, which has made such a favorable impression on the motoring public generally. This tire is built on absolutely mathematical lines to prevent skidding; large studs built in parallel rows of three offer the same lines of resistance to skidding at any angle and in any possible position. This type of tread construction also gives the tire a wonderfully strong grip on pavement or road, thus utilizing every unit of engine power and giving maximum mileage under all conditions. The extra thick tread guarantees about twice the mileage of an ordinary tire. In construction, this tire has the advantage that comes from the carcass and tread being vulcanized at one operation, thus insuring perfect adhesion between carcass and tread, and eliminating the likelihood of separation of these parts in service, as often happens with tires of which the treads are vulcanized independently from the tire carcass and attached thereto by a second application of heat.

BUMILLER-REMELIN TANDEM.

A NEWLY-DESIGNED tandem attachment for use on the 1913 models of the Indian is being featured by the Bumiller-Remelin Company, distributors of the Hendee products in Cincinnati, Ohio. Owing to the fact that standard tandem attachments are not adaptable for fitting to the new Indian cradle spring frame, the Cincinnati firm lost no time in perfecting its improved passenger-carrying device, with the result that orders are already piling up.

The new attachment embodies several very important features, such as adjustable handlebars, extremely low saddle position (same height as the front saddle), and Standard rubber pedals, mounted on detachable brackets that are easily replaced at slight expense

if damage is sustained in a fall. The Bumiller-Remelin attachment lends additional strength to the cradle spring frame and, by way of reciprocating the spring frame, eliminates about 50 per cent. of the road shocks that would ordinarily be transmitted to the rear saddle. This is assisted by a horizontal instead of a vertical movement of the saddle, the former motion not being possible on ordinary rigid frames. The Bumiller-Remelin Company is finishing the new attachment in Indian red with nickel-plated fittings. This firm was also a pioneer in introducing practical electric lamps for motorcycle service, and has marketed a number of other specialties of merit for motorists.

Another important offering of this company is the Bu-Rem electric lighting outfit for motorcycles. It is made in two models. Model No. 1 consists of a nickel plated lamp, with 5-inch front, silver plated reflector, Tungsten bulb and metal battery case. Two Tungsten 3-cell batteries are supplied, guaranteed for 14 hours' continuous service. One battery is used at a time and the other is held in reserve. A more powerful outfit is supplied in Model No. 2 at the same price as No. 1, but only one battery is furnished with it.

A SIDECAR ENTHUSIAST.

J. H. HARPER, of Lima, O., is one of those enthusiasts who believe in making the most of a sidecar outfit on every trip (note photograph) and of late he has established a reputation for getting unusually heavy loads over the roads on long runs with minimum trouble. The Reading-Standard machine which is depended upon to propel the outfit is giving entirely satisfactory service.

SIMPLEX OIL GAUGE.

FOR motorcycles not ordinarily fitted with an oil gauge in the crankcase the Simplex sight gauge, manufactured by the Buck Sales Company, of 211 No. Twelfth street, St. Louis, Mo., is a fitment of such value that few riders who give it consideration will be without it. The Buck device is 2 inches in diameter and only ⅜ of an inch thick. It is handsomely nickel-plated and screws firmly to the crankcase on a level with the bottom of the case. Instead of cutting a hole the full size of the gauge in the crankcase and using the flywheel as a background against which to view the oil level, only two small holes are used. One admits the oil at the bottom and the other is an air vent. As a result the oil level shows clearly against the white aluminum surface of the crankcase.

In drilling for the screws that hold the gauge it is advisable to use a small drill with a guard and penetrate only ¼ of an inch into the crankcase. As the steel machine screws are placed in position they make their own thread and a tight job is the result.

MOTORCYCLE TIRES INCLUDED.

ANNOUNCEMENT is made by the Fisk Rubber Company, of Chicopee Falls, Mass., that motorcycle tires will be included in its New York Show exhibit. The company will display its Premier type of Bailey and corrugated treads and its heavy motor type in two treads. Endless and butt-end pure gum inner tubes will also be featured in the exhibit.

HALCO LEGGING LINE.

AN unusually attractive line of leather and canvas leggings for motorcyclists is offered by the Hagerstown Legging Company, of Hagerstown, Md., and described in a neat booklet published by this firm. The Napoleon, Toreador, spring puttee and the stud-loop leg coverings are among the thirty-one styles illustrated in the regular catalog. A special contract held by this company with W. D. Byron & Sons, of Williamsport, Md., the largest manufacturers of oak-tanned leather used for this purpose, enables them to produce leggings at an unusually low cost. In ordering leggings produced by the Hagerstown company, the buyer should ask for the Halco brand. The Halco list includes button, lace, strap and buckle fastened leggings in both knee and thigh sizes. They are manufactured with russet, black grain imitation pig skin, pig skin, imported pig skin, black grain and chocolate smooth grain leathers.

In order to meet the rapidly growing demand for automobile and motorcycle leggings the company is now producing a special line in addition to its regular stock. These leggings are also sold under the trade name of Halco brand and embrace both knee and thigh sizes. A special gusset patch at the under part of the knee is used on the latter to permit of free use of the limbs and ease in walking.

CONTINENTAL GRIPS.

WOVEN steel reinforced grips are the latest products of the Continental Rubber Works, of Erie, Pa. Considerable trouble has been experienced in the past with motorcycle grips breaking, due to the fact that the bar has cut through the rubber. With the new steel reinforcement it is claimed that the grips are absolutely indestructible. This grip, as will be noted, has a woven shell in the center or relief part, thus strengthening it at its weakest point. This steel reinforcement is pliable and does not in any way detract from the resiliency of the grip. They are made in

C. R. Jones, of Scranton, Pa., Now Traveling in Ohio for the Reading-Standard Company.

the regular motorcycle and corrugated types. Patents on the new product are pending and no other firm will be licensed to use this principle in manufacturing. Several manufacturers have closed contracts with the Continental company for large quantities of these grips.

MEMBERS of the Wilmington (Del.) M. C. recently made a Sunday run to Glen Loch, Pa.

ON the TRADE FIRING LINE

A TIP FOR DEALERS.

OF late several manufacturers of sidecars have been moved to protest against the tactics of some dealers who place three, four and even five men in one of the passenger attachments by way of demonstrating its stability. A recent letter from the Majestic Manufacturing Company is to the point. This company calls attention to the fact that its sidecars are built with an ample margin of strength, and that they have met all reasonable tests—and many that were unreasonable—but it is argued that there is a limit to the resistance of any material and any type of construction, and the company suggests that dealers keep this in mind. The Majestic company has arranged to build the chassis of Majestic sidecars of even heavier tubing for 1913 to offset the unfair strains to which they are often subjected, but the tip for dealers is still worthy of consideration.

"GRIFF" HOME AGAIN.

A. E. GRIFFITH, the New Departure Manufacturing Company's stellar salesman, has returned home for a brief rest after seven months of remarkable success on the road. Incidentally he is framing a batch of good resolutions for 1913 anent new methods of boosting the New Departure line. On his long trip the popular business-builder went as far south as Texas and westward to California. "Everything looks good to me for 1913," said Griff on his return.

COAST NEEDS ATTENTION.

H. C. BUSH, of the Eclipse Machine Company, Elmira, N. Y., who spends most of his time calling on the western trade, and who has just put in a few weeks in Los Angeles, is of the opinion that eastern manufacturers should give more attention to the coast trade.

A WEEK'S LIST.

FLYING MERKEL agencies appointed during the week ending December 28, are reported by the Miami company as follows: C. W. Nicodemus, Newton, Kan.; A. P. Naylor, Salina, Kan.; W. V. Hollingsworth Company, Zanesville, O.; James Mayo, Reading, Pa.; Motorcycle Sales Company, Scranton, Pa.; H. L. Gregory, Wilkes Barre, Pa.; G. E. Waters Hardware Company, Junction City, Kan.; Georgie Auto Exchange, Montgomery, Ala.; W. A. Duff, Pontiac, Ill., and Charles B. Hill, Warren, Pa.

P. E. M. AGENCY.

A CONTRACT has been closed with the Southern California Motorcycle Company, of 1046 South Main street, Los Angeles, to handle the P. E. M. in southern California. The company is comparatively new and is composed of W. G. Hamilton, of Chicago; L. C. Freeman, a Kansas booster, and R. Starky from the Buckeye state.

THE THOR IN CHICAGO.

THOR agencies in Chicago are reported as follows: Leonard & Schuyler, Robey street, central district; Staubner, Lichtner & Co., Humboldt Park, northwestern section; W. Barker, 1119 East Fifty-fifth street, South Side; Wellington Kirk, Evanston; Addison Cycle Company, 5403 Clark avenue, northeastern district; P. Lorwnzon, South Chicago.

HOLLAND'S TRIP.

ACCORDING to a statement from Lincoln Holland, Jr., who has just completed a two-months' trip through New England, New York and New Jersey, in the interest of the Ives Motorcycle Corporation, of Owego, N. Y., everything in this district is ready for the 1913 boom. Mr. Holland covered the territory on his Monarch 5.

Guy Campbell, of Waterloo, Iowa, Demonstrating the Pulling Power of the 1913 Indian for Which He Is Agent.

1913 POPE AGENCIES.

FOLLOWING is a list of some of the 1913 Pope agencies: George S. Uniss, Brooklyn, N. Y.; G. H. Poppenburg, Buffalo, N. Y.; E. W. Fisher, Rochester, N. Y.; Edward Berghoff, Asbury, N. J.; Ward Brothers, Camden, N. J.; William E. Wandersee, Detroit, Mich.; A. W. Erpenstein, Saginaw, Mich.; Vincent Brothers, Cleveland, O.; Flory Brothers, Lancaster, Pa.; Auto Motorcycle Company, Philadelphia, Pa.; W. W. Bennett, Pittsburgh, Pa.; Pope Motor & Cycle Company, Oklahoma, City, Okla.; J. H. Tubman, Lincoln, Neb.; O. C. Allenbach, Eldorado, Kan.; New England Motorcycle Company, Boston, Mass.; Eastern Cycle Company, Hartford, Conn.; J. N. Boyce, New Haven, Conn.; C. W. Ellison and Auto Tire & Repair Company, Bridgeport, Conn.

Later additions to the list are: H. W. Vandever Company, Wilmington, Del.; H. W. Higham, Jr., Washington, D. C.; H. E. Johnson, Daytona, Fla.; Harper & Powers, Jacksonville, Fla.; Dilts & Jeffiffe, Miami, Fla.; Island City Electric Work & Supply Company, Key West, Fla.; W. H. C. Dudley, Americus, Ga.; L. S. Crane, Atlanta, Ga.; W. H. Holmes, Augusta, Ga., and Ellis Bicycle Company, Wichita, Kansas.

H.-D. IN TORONTO.

STEVE LICENCE, of 763 Yonge street, formerly agent for the Harley-Davidson in Toronto, has been succeeded by the Planet Bicycle Company, of 96 Queen street. Samuel Bulley, manager of the latter firm is well known in bicycle and motorcycle circles in Toronto.

SHOWING NEW HENDERSON.

BY way of announcing the arrival of the 1913 Henderson, the New York and Brooklyn Auto Supply Company, of 1717 Broadway, New York, is sending out an attractively printed card, inviting an inspection of the new model.

A DAYTON DISTRIBUTOR.

THE Davis Sewing Machine Company announces that arrangements have been made with the Dayton Cycle Company, of 840 Union avenue, North, Portland, Ore., to distribute Dayton motorcycles in the State of Oregon and in Vancouver, Wash.

NEW DESIGN PROMISED.

A NEW type of motorcycle, which is being built by the Mooney-Hoye Company, of 512 Eleventh street, Milwaukee, Wis., is near completion. Mooney has been connected with the Harley-Davidson Co., and has had considerable experience in general motorcycle production.

GEORGE C. WILDERMAN, of 111 Front street, Marietta, O., has taken the agency for the Dayton and Yale lines.

EXHIBITORS AT CHICAGO

BELOW is given a list that tells its own story of the enthusiasm with which manufacturers have rallied to the support of the Independent Motorcycle Show in Chicago. Embracing as it does all the representative firms, it is tangible proof of the contention made a year ago by President Coffman, of the Motorcycle Manufacturers' Association, and other trade boosters, that the motorcycle is well able to hold its following, regardless of other motoring interests. Although the Show Committee was kept on the anxious seat for a time owing to the unexpected demand for booths and for space extensions, all applicants have now been dealt with satisfactorily and the exhibitors are in a position to make the most of their display opportunities. An unusually fetching decorative scheme is being worked out.

The official list of exhibitors is given as follows:

Space No. 1, Pope Mfg. Co., Hartford, Conn.; space No. 2, Ives Motorcycle Corporation, Owego, N. Y.; space No. 3, Chicago Cycle Supply Co., Chicago, Ill.; space No. 4, Bosch Magneto Co., New York City; space No. 5, H & F. Mesinger Mfg. Co., New York City; space No. 6, Excelsior General Supplies Co., Chicago, Ill.; space No. 7, Mead Cycle Co., Chicago, Ill.; space No. 8, Purdy Bros., Chicago, Ill.; space No. 9, Van Cleef Bros., Chicago, Ill.; space No. 10, Angsten Koch Co., Chicago, Ill.; space No. 11, Eclipse Machine Co., Elmira, N. Y.; space No. 12, Bicycling World Co., New York City; Space No. 14, Fox Mfg. Co., Seattle, Wash.; space No. 15, North Chicago Machine Co., Chicago, Ill.; space No. 16, Greyhound Motor Co., Buffalo, N. Y.; space No. 17, Beckley Ralston Co., Chicago, Ill.; space No. 18, Allied Motors Corporation, Chicago, Ill.; space No. 19, Excelsior Motor, Mfg. & Supply Co., Chicago, Ill.; space No. 20, R. S. Crawford, Saginaw, Mich.; space No. 21, Aurora Automatic Machinery Co., Chicago, Ill.; space No. 22, Sarco Engineering Co., New York City; space No. 23, Motor Cycling, Chicago, Ill.; space No. 24, Fowler Carnes Co., Aurora, Ill.; space No. 25, Wheeler & Schebler, Indianapolis, Ind.; space No. 26, Weed Chain Tire Grip Co., New York City; space No. 27, Atlas Specialty Mfg. Co. Chicago, Ill.; space No. 28, National Cycle Accessories Co., Aurora, Ill.; space No. 29, Graton & Knight Mfg. Co., Worcester, Mass.; space No. 30, Majestic Mfg. Co., Worcester, Mass.; space No. 31, Reading Standard Co., Reading, Pa.; space No. 32, Harley-Davidson Motor Co., Milwaukee, Wis.; space No. 33, Hendee Mfg. Co., Springfield, Mass.; space No. 34, Miami Cycle & Mfg. Co., Middletown, Ohio; space No. 35, Kokomo Rubber Co., Kokomo, Ind.; space No. 36, Aermore Mfg. Co., Chicago, Ill.; space No. 37, Victor Auto Parts Co., Cincinnati, Ohio; space No. 38, Standard Welding Co., Cleveland, Ohio; space No. 39, Corbin Screw Corporation, New Britain, Conn.; space No. 40, Hawthorne Mfg. Co., Bridgeport, Conn.; space No. 41, Standard Thermometer Co., Boston, Mass.; space No. 42, H. T. Roberts, Chicago, Ill.; space No. 43, Schickel Motor Co., Stamford, Conn.; space No. 44, Minneapolis Motor Co., Minneapolis, Minn.; space No. 45, Pierce Cycle Co., Buffalo, N. Y.; space No. 46, American Motor Co., Brockton, Mass.; space No. 47, Henderson Motorcycle Co., Detroit, Mich.; space No. 48, Emblem Mfg. Co., Angola, N. Y.; space No. 49, Consolidated Mfg. Co., Toledo, Ohio; space No. 50, Waverley Mfg. Co., Jefferson, Wis.; space No. 51, MOTORCYCLE ILLUSTRATED, New York City; space No. 52, Excelsior Cycle Co., Chicago, Ill.; space No. 53, Barco Brass & Joint Co., Chicago, Ill.; space No. 54, Herz & Co., New York City; space No. 55, Badger Brass Mfg. Co., Kenosha, Wis.; space No. 56, Great Western Mfg. Co., Laporte, Ind.; space No. 57, Iver Johnson's Arms & Cycle Co., Fitchburg, Mass.; space No. 58, Baxter Side Car Co., Cambridge, Mass.; space No. 59, Chicago Belting Co., Chicago, Ill.; space No. 60, New Departure Mfg. Co., Bristol, Conn.; space No. 61, Splitdorf Electrical Co., Newark, N. J.; space No. 62, Black Hawk Motor Co., Rock Island, Ill.; space No. 63, F. W. Spacke Machine Co., Indianapolis, Ind.

HAGSTROM LEADERS.

TWO of the leading 1913 offerings of the Hagstrom Brothers Mfg. Co. are the Hagstrom suction priming cup and auxiliary cold-weather carbureter, and "Zim" pulley lag. The latter article is the conception of "Zim," general manager of the firm, after whom it is named. "Zim" lagging comes in 60-inch rolls and is easily applied. It requires no screws, as it vulcanizes itself. It is made of the strongest Sea Island fabric obtainable, and is not only thoroughly impregnated with friction rubber, but also has a heavy coating of pure raw rubber cement. This adheres firmly to the metal pulley and becomes vulcanized from the ordinary heat produced by the pulley in motion.

The suction priming cup is a very simple device, easily attached and insuring an instant start in the coldest weather. It vaporizes the fuel and differs from priming plugs and petcocks in that it does not damage the cylinder by introducing the fuel in its liquid form.

AMONG THE MISSING.

WALTER H. EMES, 564 Eddy street, San Francisco, Cal., F. A. M. member 15702, reports the loss of his twin Indian. The motor number is 70B210. The machine was equipped with Prest-O-Lite tank, tandem, skirtguard and watch. The regular F. A. M. reward of $25 will be given for its recovery.

NATHAN SPECIALTIES.

THE ubiquitous Mr. Nathan, as usual, comes across with an innovation distinctly in keeping with the times. His latest is a sidecar storm apron, which is of great utility, and will be sold at a comparatively low price.

This storm apron is made of waterproof cloth and designed so as to cover not only the sidecar passenger, but the top and lower part of the sidecar itself, so that no moisture can penetrate. The Nathan sidecar storm apron meets a demand which has long been felt by the unfortunate sidecar riders who have been drenched owing to the absence of a suitable covering.

Another new Nathan product is a cushion tandem seat. This seat is modeled along automobile cushion lines and bids fair to become very popular with those riders who have heretofore found their rear seat attachments more or less uncomfortable. Strongly constructed of steel, hair-padded and fitted with tremendously strong car spiral springs and an air adjustment for the weight of the rider, the Nathan tandem seat is an exceedingly comfortable little device.

CORRECTIONS.

IN a recent issue, in our advertising columns, the Pope Model M was announced as a 4 horsepower machine, when it should have been credited with 5 horsepower. This was due to a mistake in advertising copy, and in our last issue the proper classification was made. The Model K was then also announced as a 5 horsepower motorcycle inadvertently, when it should have read "Model K—4 h. p. belt drive." The corrected reading is: Model M, 5 horsepower, chain-drive machine, listing at $215; Model K, 4 horsepower, belt-drive machine, listing at $200.

GOOD NEWS FROM TEXAS.

STATISTICS gathered by the county clerk of Harris county, Tex., show that more than $20,000 was expended for motorcycles in the past year. Houston is the principal city in this county. Extensive road improvements throughout this section of the country have encouraged the use of the two-wheeler.

HELPING METER READERS.

AN order from the Columbus Railway & Light Company for two motorcycles to be used by their meter readers has been filled by the Barr Motorcycle Company.

HERE AND THERE WITH THE PHOTOGRAPHERS—GLIMPSES INTO BOTH PLEASURE AND BUSINESS POSSIBILITIES OF THE MOTORCYCLE.

IN the upper left hand corner is shown a section of one of Boston's beautiful boulevards. In and about Boston the poplar trees to be seen on each side of the road add much to the scenic beauty of the landscape. In the foreground of the picture is shown Edson Miner, with his son occupying a tandem seat. Mr. Miner is connected with the police department of the New England city. In the rear are three riders who are evidently enjoying the boulevard to the utmost.

Miss "Cy" Woodman, with her Flanders machine, is shown at the right. This photo was forwarded from Des Moines, where it was taken after Miss Woodman had recovered from a fall. She has not given up the idea of reaching Frisco and is making steady progress westward.

Below the Boston scene is a line-up of Hudson County (N. J.) Reading-Standard riders. The picture was forwarded by Andrew Lardino, agent for the R-S in Jersey City, N. J. It was taken after a recent run over Jersey roads. Lardino's shop is situated in the center of the Jersey City motor district and is an up-to-date establishment.

In the left-hand corner at the bottom of the page is an illustration of the sidecar delivery van used by Franklin Simon & Company, of New York City. The car is driven by an Indian single. The big clothing firm has found the motorcycle to be an economical means of delivery, in addition to being speedy in handling suburban orders.

A picture of the shop of the recently established Reading Standard Sales Company of Chicago is shown in the lower right-hand corner. This firm has been doing a remarkable business since succeeding the Angstren-Koch Company, in handling the retail sales. A good-sized squad of repair men is kept busy.

MANHATTAN, Kan., January 3.—The motorcycle was one of the prominent features on the program at the State Institute of Gas Engineers, held at the Mechanics' building of the Kansas State Agricultural College here today. A State Farmers' Institute was in progress at the same time, and a number of farmers attended the meeting to hear the talk on motorcycles.

These institutes are held under the auspices of the college, and the college authorities mould the program. As originally planned, the motorcycle was given no part, but the dean who had charge of the arrangements for the Gas Engine Men's Institute is progressive, and has up-to-date ideas, so he realized that there would be a serious vacancy if the two-wheel power-driven machine was omitted.

Elmer Kittell, the Yale agent in Manhattan is a graduate of the college, and a "live wire" in motorcycle circles, being president of the Motorcycle Club as well as an active figure in a business way. He was of great assistance to the college authorities, and procured Advertising Manager Bailey from the Yale factory, at Toledo, as speaker on the subject of motorcycles.

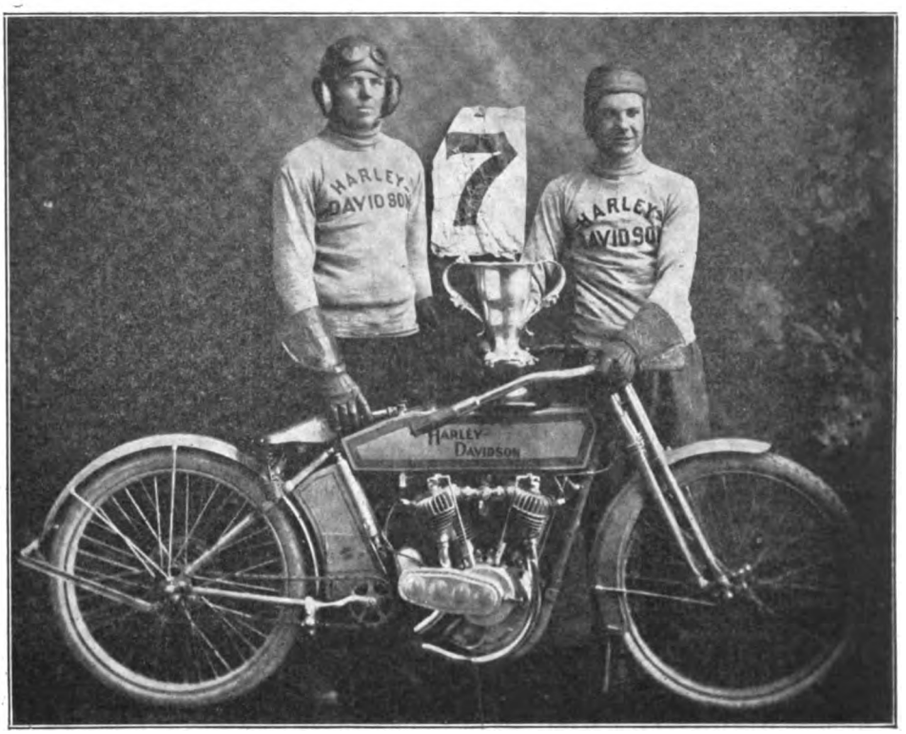
A New World's Record

Ray Watkins and Ben Torres ride 346 miles in 7 hours on a dirt track with an 8 horse-power Harley-Davidson

AT San Jose, Cal., Dec. 8th, the regular stock eight horse-power Harley-Davidson established a new world's record by covering 346 miles in 7 hours.

The winning Harley-Davidson team finished 17 miles ahead of their nearest competitor and in addition to winning the first prize the Harley-Davidson also made the fastest mile in the contest.

During the whole run not a single repair, replacement or even adjustment was made to the Harley-Davidson and not a stop of any nature whatsoever was made except for change of riders and to take on gasoline and oil.



Ray Watkins Ben Torres

AS manufacturers we do not support racing and do not build racing machines. This new record came as a complete surprise to us. The contest was conducted entirely without our knowledge and the first we heard of it was a newspaper clipping sent in to the factory.

We have repeatedly asserted that the eight horse Harley-Davidson was the fastest stock machine made, barring none. This has been proved time and again in contests where private owners competed with their own machines. This San Jose victory furnishes more actual proof that the Harley-Davidson will stand up under the most trying conditions possible and at a maintained high speed. The Harley-Davidson averaged 49.43 miles per hour for the entire 7 hours, including all stops for gas and oil.

The San Jose contest was conducted under F. A. M. sanction.

PARCELS POST OUTFITS

Five Motorcycle Vans Have Been Purchased for City of Cleveland and Ten Others May Be Placed in Service.

CLEVELAND, O.—Postmaster Floyd recently took steps to lease five motorcycle van outfits for use in the delivery of parcel post matter, and it is stated that ten more will be contracted for at an early date. The first batch of machines is to be given thorough tests, in order that an official report may be made as to their advantages for parcels post service.

Included in the first order is an Indian with forecar locked box, a Cycomo sidecar with P. E. M. machine, and a Minneapolis Big Five two-speed with van equipment. At present the officials are somewhat at sea as to the best transportation system to be put into effect, and the way will be paved for big things in the motorcycle line if the test machines meet the requirements as it is expected they will. It is the intention to make two parcels deliveries daily to all parts of the city.

TO INCREASE CAPITAL.

CHICAGO.—The North Chicago Machine Company is planning to increase its capital stock from $25,000 to $100,000. This is the company of which E. S. Palmbla is the general manager and the inventor whose contrivances have been pushed by the company.

The new article which he recently produced which called for the increase of capital stock in order to push its manufacture is the silent sleeve valve phantom motor.

Mr. Palmbla and others in the company believe the future of the company is very promising; therefore they decided to increase the capital stock in order to increase their output.

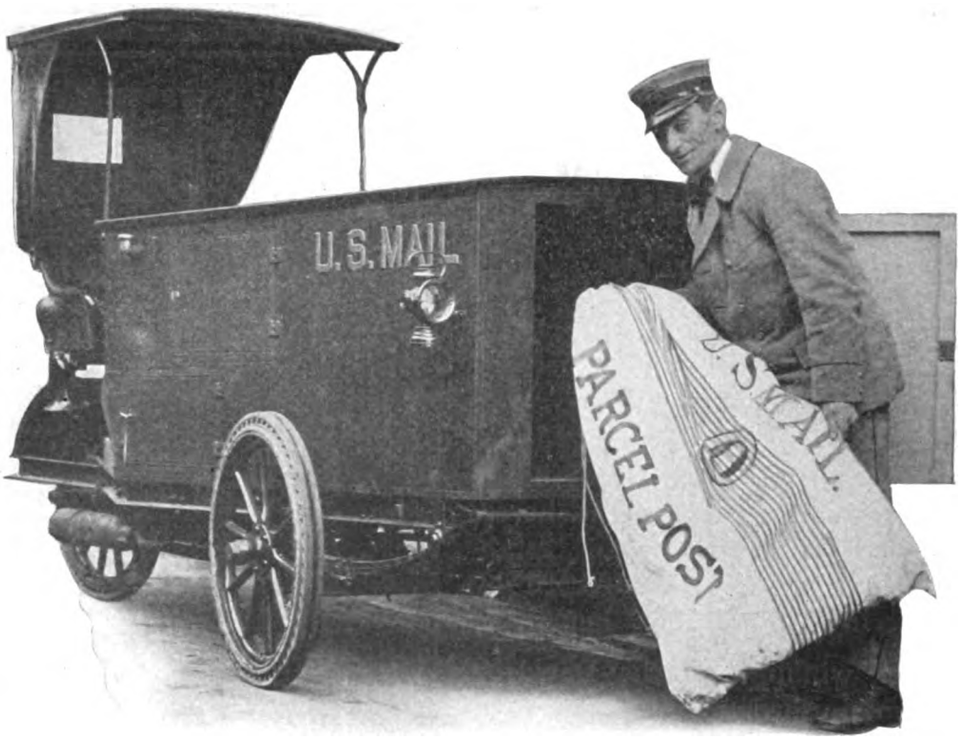
1913 MOSLER SPECIALTIES.

A NEW departure in the ignition specialties field is the manufacture of special models of Spit-Fire spark plugs for a wide range of motors, one model being adapted particularly to each make of motor, and bearing a tag stating this. Until after the New York show, A. R. Mosler & Company will give a handsome leather spark plug case with snap fastening, holding six plugs, with each order of six Spit-Fire plugs. This case affords the best protection for the plugs and is invaluable for a long tour, for example. The third edition of the "Spark Plug Bulletin," a Mosler publication, is ready for distribution and contains valuable information in this line. It will be sent free on request from the company's address, P. O. Box M, Mt. Vernon, N. Y.

THE SIDECAR TO STAY.

BRITISH riders are asking whether the cyclecar has sounded the deathknell of the sidecar? I doubt it. The best cyclecar will be more costly and less sporting than a motorbicycle to the end of time, and for solo work the motorbicycle will always have the scoop. Few motorcyclists can afford to buy a motorbicycle and a cycle car. Every owner who does much solo work will want a motorcycle; and he will find the sidecar more attractive for his occasional jaunts with the best girl than the purchase of a costly cyclecar, which must rust in its stable for six months of each year.

Moreover, the modern motorcycle, now that variable gears are standardized and engines are powerful, can pull a heavy sidecar so efficiently, that sidecar sales are likely to beat the record in 1913. The cyclecar may oust the sidecar in a few years; when motorcycle design becomes more stereotyped, we shall treat these jiggers as we now treat our pushbikes, and buy them for keeps, conquering the habit of a new mount every spring. In the second year we shall have the price of a new mount to play with, and the average stable may then run to a bike and a cyclecar; for the present a motorcycle and sidecar will be preferred, in order that we may get a new motorcycle next spring.



New Vehicle Closely Verging on Cyclecar Type That is Being Used for Parcels Post Collections in tests now being conducted in New York City.

Two More Cyclecars.

FROM a huge waiting list I select two more cyclecar designs which are characteristic of British industry. The New Hudson is a 5-cwt. vehicle, illustrating the future development of the lighter and cheaper type. In appearance it is a small car in miniature, selling at $450. It has an air-cooled engine of 85 mm. x 130 mm. mounted in front under a dummy bonnet, with rounded wiremash cooling panel. The first drive is by belt over pulleys of 6 in. and 12 in., respectively. On the countershaft is situated a swollen edition of the popular three-speed epicyclic hubs (Armstrong make), from which the final drive goes by roller chain, with 50 per cent. sprocket reduction, to a differential axle. A neat decompressor facilitates engine starting, and the carbureter is of the single lever type.

The brough is of weightier construction, and shows what can be effected by a small maker who buys many of his parts. It has an 8 h. air-cooled engine, of 85 mm. x 88 mm., remarkable for a special valvetiming gear which gives slightly better synchronization than the normal V types. The clutch is on the engine shaft, and the drive is by chain to a sliding three-speed gearbox, and thence by a second chain to a solid rear axle on which one wheel runs free and idle. The cost of this vehicle is $500, and the total weight is about 6½ cwt.

New Carbureters.

GENIUS is always simple, and the air device fitted to the 1913 Brown and Barlow carbureters certainly seems inspired. A prolonged air intake tube houses two springs, one of which is tapered, and terminates in a small metal choke tube; the other has coils of even diameter throughout, and serves as a lining for the air intake pipe. When the engine is running slowly all extra air is inhaled through the tiny choke tube. As soon as the engine speed rises, the parallel coil spring is sucked in towards the engine, the suction being effective on the taper spring, the light choke tube and the parallel spring. This tensions out the coils of the taper spring, and additional air enters between the coils of the taper. It functions most admirably.

The other details of the carbureters deserve no special attention, merely embodying such familiar principles as the horizontal air column, and the needle-controlled variable jet; the sole other feature of interest is that the taper needle controlling the variable jet is fixed to the throttle piston. A greater variety of settings could hardly be obtainable with a single lever, for one lever controls the throttle, varies the jet and induces the automatic springs to function. The Amac has rather a unique jet chamber. Below the spray proper there is a small gasoline reservoir, fed through a small hole, which predetermines the maximum flow of spirit. The spray holes proper are many in number, and of exceedingly fine bore; they are drilled through the roof of the gasoline reservoir, and their number and fineness causes the gasoline to be very completely atomized. No carbureters insures a more homogeneous mixture. Both these carbureters are procurable with accelerator pedals for cyclecar use.—BRITISHER.

You *must* reckon with the 1913 Jefferson

The 1913 JEFFERSON will not permit itself to be ignored. By sheer force of merit and quality it will as consistently come to the front in 1913 as it did in 1912, under the name of P. E. M.

Into the JEFFERSON has been incorporated the experience of veteran engineers, masters in their line. In perfecting the JEFFERSON, they have always kept before them these four cardinal points—SPEED—COMFORT—POWER—DURABILITY.

That the JEFFERSON has speed has been conclusively demonstrated during the past year. Under the name of P. E. M., the JEFFERSON IV won 37 races out of 47 which it entered and came second in 10. The JEFFERSON won **six races against twins.**

We hold the original patents for perfecting the cradle frame with leaf springs. For smooth, vibrationless, "floating" riding comfort, the JEFFERSON automobile spring frame is absolutely perfect.

For quick acceleration, for tremendous power, for smooth, vibrationless clean-cut action, the Waverley Engine is easily the peer of motorcycle motors. Bosch Armored Magneto, Mechanical Valves, large ball-bearing parts and perfect balancing complete a motor that **cannot help but be perfect in service.**

Aside from the automobile leaf springs, which not only make comfort a striking feature in the JEFFERSON, but add immeasurably to the strength of the JEFFERSON'S frame, the construction of the JEFFERSON—re-enforced frame parts, no cast steel tanks, etc., makes it proof against wear.

Dealers—In the preceding paragraphs we have briefly outlined a few of the JEFFERSON'S strongest points. We have made no attempts to give vent to the tremendous enthusiasm, the almost uncontrollable satisfaction we feel in the knowledge that we have a masterpiece of motorcycle manufacture. We prefer to state plain facts, and rely upon your discrimination and knowledge to impel **you** to make the next move.

Our catalog is ready for you

WAVERLEY MFG. CO. - Waverley Place, Jefferson, Wis.

OPINIONS OF READERS ON TIMELY TOPICS

ON TWO-CYCLE MOTORS.

AN unusually interesting letter dealing with two-cycle motors has been received from William E. Slater, of San Francisco, in which the writer takes exception to certain statements of contributors whose letters have appeared recently in these columns. Mr. Slater's letter indicates such practical consideration of the question at issue that it is printed in full. However, it need not be regarded as the last word upon the subject, and space will gladly be set aside for other thoughtful letters along this line. Mr. Slater's letter follows:

"Taking great interest in the various questions published in the Motorcycle Illustrated for the enlightenment of your readers, also in the answers thereto, I must say that I find that you make your awards justly, according to the answers submitted to you, and as a rule the answers are very good and show a fine knowledge of the subjects under discussion, but it is to set right a fallacy that is too prevalent amongst gas engine users, concerning two-cycle motors, and it with those who submitted the articles on that subject, Question No. 8, and not you, as publishers, that I take issue.

"What I have to write concerning two-stroke cycle, or more commonly called two-cycle motor is based on long experience with such motors, first with marine and then with motors for motorcycle users, having built and used them for several years, and therefore I feel qualified to write on this subject in particular.

"I am of the belief that arguments are gymnastics for the brain, also that the two-cycle motor will be the ultimate type of motor for motorcycle use, owing to its inherent simplicity, and when the motoring public will demand a good, reliable motor, rather than speed, then the two-cycle will come into its own, and I am willing to give your readers the benefit of my experience in such matters, start a lively discussion, and thereby make it so that the cleanest, simplest prime mover in the world will be better understood and receive the honor and attention that is its due.

"The most noticeable fallacy that came to my notice was the fact that all three winning contributors were, and I dare say are, under the impression, because they make the assertion, that the incoming charge of gas assisted in expelling the burnt charge, after it had driven the piston down. Such is not the fact, as I have proven to my entire satisfaction, and all two-cycle experts agree that not only is the burnt charge not forced by the incoming charge, but that there is a vacuum in the cylinder at that moment caused by the inertia of the burnt gas rushing out of the cylinder by the rapid opening of the exhaust port and said vacuum is in some instances put to work by the designers of two-cycle engines to assist in drawing in the fresh charge of gas, an action that is diametrically opposite to the one given by the contributors of the articles in question.

"The fact that a two-cycle motor of poor design will misfire and "four cycle" is evidence of the truth of the above, misfiring and four-cycling is always caused by the fresh gas becoming contaminated by burnt gas being drawn back into the cylinder from the muffler by the vacuum already referred to, or by back pressure due to a muffler of too small a capacity causing the gas to become so poor that it fails to ignite and will only fire, after two or more charges have been sent into the cylinder enriching the gas so that it will explode."

FROM A DENVERITE.

EDITOR MOTORCYCLE ILLUSTRATED: In view of the fact that the F. A. M. directors will soon decide on the city where the F. A. M. convention will be held for 1913, I think it is our duty to let them know a few of the attractions that Denver has to offer. We have hotel accommodations for any crowd that may come; in fact, Denver is known as a convention city. Never yet has it been overcrowded at any convention and accommodations are never at a premium, even with a convention like that of the G. A. R. As for garage and repair shop accommodations, Denver dealers are wide-awake enough to see that the boys will be properly taken care of. We have tracks here to satisfy both the dirt and board track fans. We have a one-mile dirt track as good as there is in the United States, and the Tuileries one-third-mile board track is already too well known to need extra mention.

As for park attractions, we have the White City, where every known kind of amusement is to be found. We have various natural mountain parks, which can be reached in from thirty minutes to two hours by motorcycle. We can have a snow-ball game in the middle of July by going up the Moffat road in a solid vestibuled train, only three hours out of Denver, to an altitude of 11,366 feet. We have hot springs at El Dorado Springs, twenty-five miles from Denver, where there are two immense swimming pools heated by the natural hot water that comes from the earth. We have an aerial railway, a funicular railway and cog roads on the mountains, within easy reach of Denver. In fact, Denver has as many and as varied attractions as any other city in the United States, barring boating. There are splendid roads southeast of Denver, via Pueblo and La Junta, over the Santa Fe trail, which would make a splendid route for visiting tourists from the East. As for the tourists coming from the West, all they would have to do would be to get to the top of the Divide and coast the rest of the way into Denver. Roads from Omaha to Denver via Cheyenne are also good.

Now Denver's climate is too well known to mention, so why shouldn't the F. A. M. convention for 1913 be held in Denver?

W. W. WHITING.

Denver, Col.

SOME SUGGESTIONS.

EDITOR MOTORCYCLE ILLUSTRATED. — A knock-out axle is very handy, but I believe one nut should be made solid on the axle. If one works a little tighter than the other (and it always does), it is very difficult to get both where they ought to be—equally on the rod.

After a rider has had two or more motorcycles he naturally wishes to extend his runs, and those of us having only Sunday to set aside for our trips feel the need of a lamp, in order to insure safe riding when coming home after dark. The trouble in having a Presto outfit is this: There is no proper place for the tank. The best position for the Presto tank is on the top of the gasoline tank, just back of the handlebars, but then the filler cap is interfered with. The filler cap could just as well be near the saddle on all machines, leaving the forward part of the tank free for the Presto. Some standard fixtures for fastening should also be supplied when a Presto tank is to be fitted.

In my opinion manufacturers should determine the best place for the lighting tank and make provision at the time the frame is made for fastening it there. The makers of the Presto tanks could then provide suitable fittings, and a vast amount of trouble would be avoided. We would also have a neater appearing outfit.

I consider a standard foot pump much better than a frame pump, and some regular provision should be made for fastening one to the motorcycle frame. W. A. SIEGBAHN.

North Tonawanda, N. Y.

THE PARTS PROBLEM.

EDITOR MOTORCYCLE ILLUSTRATED: I would like to enter a protest against something that to me does not seem fair, although there may be circumstances with which the average motorcycle rider is not familiar.

Through curiosity, I went over the parts catalogue of one of the prominent motorcycle manufacturers and took a list of the parts and prices necessary to build a 1912 machine that lists at $250 and was not much surprised that the total cost of parts bought in this way amounted to $425.93.

Why should unassembled parts cost more than a finished machine? Had I taken every individual part the amount would undoubtedly have been higher, but wherever parts were listed complete, such as saddles, carbureters, magnetos, I took the price as listed complete and not of each individual part.

In looking over a parts catalogue for the Ford automobile, I find that the cost of the parts is the same as that of the finished machine. Having access to parts catalogues of different makes of machines, I took one which to me seemed the lowest, and in some of the other catalogues I found identical parts that were listed at 10 and 15 per cent. higher.

R. L. BREHMER.

SIDECARS POPULAR IN FRANCE.

THE fair sex in the larger French cities is reported to have taken to the sidecar with alacrity, following the examples set by their American and British sisters. That the "voiturette laterale," as the sidecar is euphoniously named in France, did not sooner become popular with both sexes is due to the fact that the French constructors never built bigger than 2¼ horse singles except for use in racing, until very recently.

ENGLEWOOD M. C. STAG.

AT a recent meeting of the Englewood M. C. of Chicago, it was decided to hold a dance on the evening of January 25. The club gave a Stag Party Saturday, January 4.

TIPS And TOPICS

NOT long ago I was talking things over with a rider who tips the scales at about 120 pounds in full kit, and among other news he announced that his 1913 'bus would be an 8 h. twin. While admitting that 285 pounds of motorcycle would be a little stiff to handle, and a balky 8 h. motor almost beyond his strength, still he felt that the hill-climbing ability of the mount and its battleship-like cleaving of sand would compensate for the "beef" necessary to start it off, etc. It was up to Ye Scribe to give his regular lecture on gearing immediately—and he did.

What 8 H. P. Can Do.

A HORSEPOWER is a horsepower, no matter whether developed by an electric motor, steam engine or gasoline motor. It will perform a certain amount of work when conditions are favorable, but at the expense of certain other conditions. On 5-ton brewery trucks, a pair of 4 horsepower electric motors are used, year in and year out, carrying big loads, in addition to the weight of the vehicle itself, over all kinds of surfaces. The highest speed possible with such an outfit is hardly nine miles an hour; if we take one of the elementary rules on mechanics we find that the truck user is carrying a big load at the expense of a loss of time, or a slow speed in this case. The total load carried is 8 tons (5 tons live load + 3 tons weight of truck). With an 8 h. motor, and a 400 pound total load (weight of motorcycle + that of rider), there will be a *gain* in time—a speed of over 70 miles per hour, following the rule that with constant power, the speed varies with the load.

A Question of Gearing.

THERE is no mechanism exempt from this law of mechanics, whether it be a lever or a complete motorcycle power-plant. When there appears a device which is not dependent on this law, the inventor will be the most renowned genius that the world has ever produced: he will have gotten out of the device more than there was in it; he will have actually got something for nothing. If there is only 5 horsepower to be obtained from a motor, no one can get 10 from it; however, if the gear ratio is 3.1, another ratio of 6.1 will in many cases give the *equivalent* of a 10 horsepower motor, at 3.1, but at the expense of *half* the speed, or *double* the load for the same speed. It is a question of gearing with limitations of cooling only for motorcycle service, and a big-powered motor is not absolutely necessary for solo work, unless extreme speed is desired.

Load, Speed and Power.

I RECEIVE inquiries from readers of MOTORCYCLE ILLUSTRATED at intervals as to how much power they should have in a motorcycle for country where there is much sand, steep hills or the like. I consider the following conditions as *load*, in calculating the power necessary for the inquirer's 'bus: weight carried, steepness of hills, kind of road surface. If he desires a round speed at all times, something approaching the manufacturer's stock gearing will, in conjunction with the load conditions, give an approximation of the power desirable in our friend's case. Thus, with the ordinary 7 h. motor and gear-ratio, anything reasonable in the way of load can be taken at a good round clip. This refers only to single-geared machines, however, and if the prospective rider desires a variable-gear mount for solo work, I would consider the 7 too large under most conditions, and suggest a 5 or even a 4.

Five Horsepower.

AS a matter of fact, with a variable gear (two speeds), with a 4⅞ or 5 to 1 top ratio, a sidecar and passenger can be taken over roads which are not pitched as steeply as a peak roof, or which do not resemble cattle-wallows. The low ratio of a two-speed gear should enable the outfit to go almost anywhere that the driving wheel will "bite," especially if it is about twice the reduction of the top ratio. This may sound strange—the recommendation of a single five for sidecar work, but we stand by it, nevertheless. When there is no two-speed fitted, I would certainly not recommend such a mount for the sidecar, except where roads are good.

Fan Cooling.

IT may be necessary in the future to assist cooling by means of a fan, driven from the motor. Tricar outfits cut off considerable of the front draft of air, and firms like the N. S. U. invariably employed a fan, and a two-speed gear for such a rig. The sidecar interferes only with a portion of the circulation, from the side, but this is generally the valve side, and some motors beside which I have ridden have shown tendencies to run rather warm, when baggage was carried or the lap robe cut off part of the air current. But the fan shows at its best when running on the lower gear, as it cools the cylinders in spite of the slow passage of the motor through the air and its relatively high speed. But there are only a few variable gear models on the market, and the need for more will soon manifest itself. We cannot all afford big-twins, and the sidecar is *the* passenger attachment most desired.

Slow Development.

TO my mind, the development of the variable gear has been too slow, here in the United States, considering our position in the motorcycle world and the quality of our machines. American mounts hold speed records which have never been equaled. In 1911 we won the Senior T. T. Race, something that no motorcycle of other than British make can claim today. Yet, there are not five American firms that fit two-speed gears regularly at this time, and to equip other makes involves the use of imported devices and much machine work. We literally throw the work on our clutches which should be taken by the low ratios of the variable gear devices, and that the clutches occasionally fall down is no fault of their makers. Take the Kansas Short Grass Tour, for instance. Would not the going have been at least slightly easier if the contestants all had two-speed machines? Would there not have been less pushing in places? Roads like those encountered by the Kansans are by no means rare, and the variable gear ought to be fitted wherever there is heavy going, where sidecars are used or where hills are steep. This is my opinion, and I feel that I have lots of fellow-riders who will agree with me.

Snow and the Sidecar.

NEW YORK had about a foot of "the beautiful" just before Christmas and I took a sidecar trip as soon as the fall stopped sufficiently to see the road ahead. It was a wet fall, and soon packed to form ice which was broken up into chunks by the ploughs and general heavy traffic. Going was by no means sweet, but we made over 14 miles, in about half of which we had to break our own way through the snow. I counted over 50 gear changes in that distance and then gave it up as too much of a job. We covered the usual riding sections for the two-wheeler crowd, but were as lonesome as if on the Mojave Desert; there wasn't a solo mount out, much less a sidecar rig. We had chains on both rear and sidecar wheels, yet I doubt if we could have made any progress were it not for the two-speed gear with the 7 h. twin. I have since learned that another sidecar rig started out, but being single-geared burnt out the clutch and had to be pushed back by hand. Our own ride was brought to an end by the rider getting saddle-sore and the passenger wet to the knees from pushing up steep grades covered with drift snow. That certainly was an occasion where a variable gear was necessary, and proved it.

FLOYD DELONG, of Lima, O., recently rode from his home to Buffalo, covering the 369 miles in one day.

A TOUR of 2,000 miles to be held in the autumn of this year is being planned by the National Capitol M. C., of Washington, D. C.

MACK

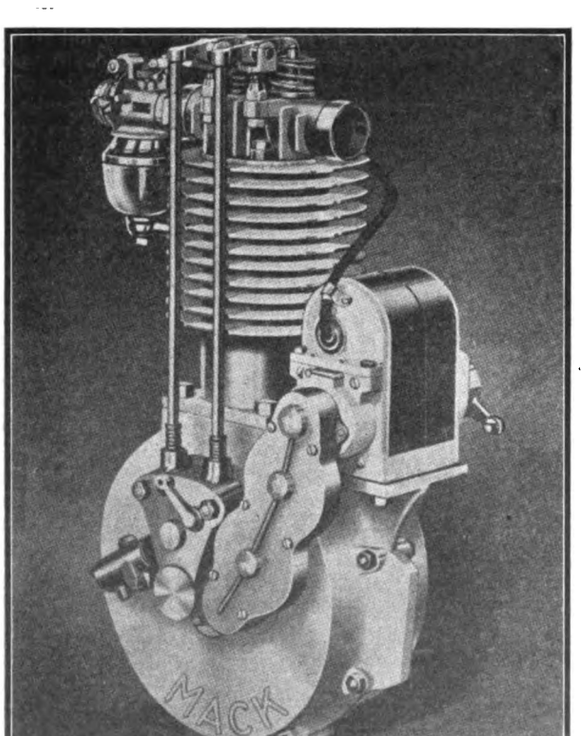
"The Mighty Motor"

4 and 5 H. P. Single - Interchangeable
7 and 9 H. P. Twin - Interchangeable

Everything that is considered ideal and nothing that is considered detrimental for perfect motor efficiency is contained in the MACK MOTOR.

It is the product of keen and intelligent study of road conditions in America and of an unusually comprehensive grasp upon what is good in motorcycle motor designing.

Large cylinders, ball-bearing crank shaft of drop forged special alloy steel, oil-tight crank case, overhead valves and, last but not least, perfect interchangeability of parts, assured by micrometric measurements—these features and more are offered in the MACK MOTOR.



The problem of oiling a motor has been given careful consideration in the building of the MACK, and as a result of ceaseless investigation and experimentation the MACK positive mechanical oil pump was evolved. With the use of this oil pump the lubricant is delivered directly to the crankcase and necessary parts. There are no valves to clog with dirt and the pump is exceedingly economical in its oil delivery.

The MACK is going to "do things" this year. It will be seen on the road and it will be very prominent on the track.

We want to hear from those who are interested in knowing more about "THE MIGHTY MOTOR."

A Few Words With Every Motorcycle and Accessory Manufacturer

Do you realize that pennants will advertise your product in the most attractive and efficient manner?

As a Show Souvenir, a pennant is a very desirable little remembrance and one which will never fail to attract attention. Dealers will utilize them as wall-hangers, riders will attach them to their machines or hang them up in their dens.

And you, Mr. Dealer, should appreciate the big business possible with a line of our pennants. We are manufacturers and stand ready to make pennants in large quantities to order on extraordinarily short notice.

We reproduce machines or accessories with lifelike realism. All colors are waterproof and cannot be eradicated.

Write us at once for quotations and send 10c. for sample pennant.

Spiegel Art Company

111 Broadway, Brooklyn, N. Y.

Here are the Side Cars that Have the Long Desired Rocker Motion

We ask that you send for our catalog so you can compare the "Anders" with every other sidecar. We urge you to give all makes the hardest tests you know of. We ask that you compare all features—point for point—for we know that your choice will be the "Anders" and it will be well that it should for "Anders" sidecars are ideal—they answer every sidecar purpose and demand.

They are cleverly designed, well made and priced from $60.00 to $90.00. A real sidecar in every way and manner.

THE ANDERS SIDE CAR—ROCKER MOTION

The springs in the "Anders" are made of oil tempered Swedish Spring Steel, body resting on body loop, bringing springs on either side of body instead of directly under it, therefore doing away with the side motion. We use one type of chassis—made to fit *your* machine.

Front spring on which foot of body rests, is a departure from the old time spring and is called the Rocker Spring. This is fastened to the frame by a "T" socket. Thus, instead of the usual swaying motion, you have the rocker motion, the spring under the foot of the car working in unison with the rear spring, which insures comfort and safety for the passenger. Frames are seamless steel tubing. Sidecars are attached by two lock joint couplings. No clips or clamps to get loose and rattle.

CLASSY DESIGNS

"Anders" Side Cars are designed to give genuine service and pleasure. You'll be proud of the "Anders" because it adds distinction to your mount. Our catalog, which is waiting for you, tells the story.

NATIONAL ACCESSORIES

Our National Tandems should be your choice. They are fitted with handle bars, making them safe and comfortable. They fit any motorcycle. The bearings being in front of rear axle, thus eliminating all danger of tipping without regard to weight carried on the rear seat. There's no jarring, but a "velvet-like" ride. We also make luggage carriers, etc.

We are pioneers in the manufacture of sidecars and accessories. We won our way through sheer merit of values and service. Eight years of actual experience are behind goods of our manufacture.

DEALERS and RIDERS: Write us today for full particulars.

What A Veteran Rider, Repairer and Rebuilder Has To Say About Belt versus Chain

St. Louis, Mo., 12/3/12.

The Graton & Knight Mfg. Co.,
Worcester, Mass.
Gentlemen:—

I have read your articles in defence of the belt drive in the various motorcycle journals with much attention and I believe that I am as well informed and able to express an opinion on same as the average rider, as I have not only ridden practically every standard make of machine on the market, but I have taken down, repaired and rebuilt nearly every known make. This letter is not intended as a comparison of the merits of any make or makes of machines, but I want to put myself on record as EMPHATICALLY IN FAVOR of the belt drive.

Now, let me tell you the difference that I found between belt and chain drive machines when I took them down and built them up again after they had been on the road from 5,000 to 10,000 miles. On the chain machines practically every bearing was badly worn from the rigid, jerky pull of the chain. Not only new chains were necessary, but (on the countershaft-type machine) four new sprockets had to be replaced, for they were worn to a knife-edge and a new chain would not fit them. I generally found the spokes loose and some of them missing, literally pulled through the steel rim by the jerky action of the chain. I always found the wear more severe on tires and coaster brake parts on the chain models.

Regarding the comparative wear between the belt and chain, I can give any number of instances where a good flat belt has gone 10,000 miles, real miles, and pulling tandem at that for a good part of it. I believe it is pretty well known that 2,000 miles is good mileage for the short chain.

Did you ever see a new belt break? I never did see one break; perhaps they do when they are very old. A broken belt is about as scarce as a dead mule.

Did you ever break a new chain. Of course you did.

Once I had a chain break 'way out on a country road, tried to get in half link, found it made chain too long, then I tried to adjust my long chain, only to find that the pedalling chain was so tight that I couldn't turn the engine over and all the time it was getting darker and a soft patter of rain started to

Digitized by Google

come down. I sent the blamed 'bus in on a wagon and spent three hours the next day adjusting the whole outfit to my satisfaction.

Another unpleasant experience is to soak your chain in a messy lot of grease and graphite to stop that confounded rattle, and then, after riding a few miles, find that your clothes were spotted all over with black blobs of graphite and grease until you looked like a prize coach dog, and then I found that what grease remained on the chain had picked up a heavy coating of limestone dust that was cutting the very gizzard out of my chain.

The fit of a roller chain on a sprocket is a beautiful piece of work, that is, before it starts to stretch, and they do stretch, believe me, worse than some belts. When the chain starts to stretch the rider gets a jerky action in his machine that worries him and then someone advises him to tighten up his chains. Alas, this only aggravates the matter, as the chain now starts to "ride" the top of the sprocket, and the first thing the rider knows he starts to break chains in earnest.

About the best test of the effect of chain transmission on the wearing parts of a motorcycle is the fact that second-hand belt machines bring about twenty-five per cent. more than similar chain drive machines. A dealer can safely allow a customer a better price for a used belt machine than a chain driven one, as in the largest majority of cases they are in better shape all round, mechanically, owing to the flexible belt drive which has spared bearings, tires, brakes, spokes, etc. There is no possible doubt of this, any fair-minded dealer who has handled a number of used machines knows this fact.

I want to make a statement here that anyone who has studied the transmission problem will understand. There has to be a "slip" somewhere to ease the shock of the explosive impulses and it must be an "automatic slip" slight, but constant. The compensating sprocket, which the chain drive people will find they made a mistake in discarding, came the nearest to the smoothness of the belt drive machines, for no rider can constantly "jockey" his clutch to obtain the automatic flexibility and smoothness which a well-adjusted, compensating sprocket gave.

Now, if there must be a slip somewhere and if the leather belt takes the wear off the different parts of the engine which are expensive to buy and difficult to replace, why not use it?

Yours very truly,
BUCK SALES CO.,
George D. Buck.

SPARTAN BELTS

are used on 90% of all Belt driven Motorcycles.
A sure indication as to their merits.

The Neverout

TRADE MARK

MOTORCYCLE OIL LAMP

(Patented)

SHOWING A RED REAR LIGHT

THE ONLY RELIABLE MOTORCYCLE OIL LAMP

LAMP WEIGHS ONLY 12½ OUNCES.

The Neverout complies with the laws of the various States and Municipalities.

The Neverout burns kerosene ten hours with one filling, and will stay lighted under any and all conditions. All riveted—will not rattle or jar apart over roughest roads.
Made in gun metal, brass or nickel finish. Double clamp bracket furnished; fastens lamp securely to fork of motorcycle. No danger of shaking off, and *shows red rear danger signal.* Sold by leading jobbers and dealers everywhere.
The Neverout is equipped with a *Patent Glass Covered Reflector of German Silver,* instantly removable; never loses its original brilliancy.

Guaranteed to stay lighted or money refunded

FOR SALE BY LEADING DEALERS.

Made Only by **ROSE MANUFACTURING COMPANY**
933 Arch Street, Philadelphia, U. S. A.

Make your motorcycle a 24-hour servant

Dare you ride your machine any time and place you please? Or does nightfall catch you worried and anxious, creeping along in fear and trembling?

If so, you're missing most of the fun of motorcycling—you're tied down to the daylight limit.

But—a RELIABLE source of light, with a lamp large enough, will make your night riding pleasant and SAFE.

Oil lamps won't do—gas generators won't fill the bill either—they're unreliable and troublesome. What you need is a **brilliant, unflickering light,** that floods the road ahead, searching out every bump, rut, puddle and other source of dangerous spills.

Prest-O-Lite Owners

"The only light for me," says A. G. Zellmer, of Elysian, Minn., who drives an Excelsior.

HERE'S THE ANSWER!

Prest-O-Lite Motorcycle Gas Tank

This is your only source of satisfaction—because it's the *only* PRACTICAL lighting system for motorcycles.

It means a *brilliant* and RELIABLE light for you—steady under all road conditions. Turns on and off like a gas jet. The neat, attractive nickel-plated Prest-O-Lite Tank will add to the beauty and service of your machine, without adding materially to the weight.

Prest-O-Lite is not expensive. The money you invest in the tank itself is not *spent*, because a genuine Prest-O-Lite Tank never becomes second-hand, is always in demand—and therefore saleable for almost what it cost.

Price of Tank $10

(Equipped with Gauge)

Dimensions: Length, 13¼ inches; diameter, 4 inches; weight, 8¾ pounds. 40 hours of light. Easily attached to any motorcycle.

And any experienced rider will tell you that Prest-O-Lite exchanges cost no more, usually less, than the carbide to feed a generator. Wherever you may be, exchange service can be had from one of our 20,000 dealers (motorcycle and automobile). We will arrange for prompt exchange service for anyone anywhere.

You shouldn't deprive yourself of the added pleasure and convenience Prest-O-Lite will give you. You can't afford to do without its SAFETY. One accident due to poor light will cost you more than a year of Prest-O-Lite service.

Just a Word on Imitations

The genuine Prest-O-Lite Tank, when empty, can be immediately exchanged for a full one, ANYWHERE and ALWAYS. Imitations cannot.

The dealer who slips on a counterfeit in exchange for your Prest-O-Lite Tank gets the best of you. Don't let him!

We will not be responsible for short measure or poor gas in tanks not filled by us. Protect yourself by accepting only tanks filled by the Prest-O-Lite Company.

The Prest-O-Lite Co. 246 E. South St. INDIANAPOLIS, IND.

Canadian General Office and Factory, Morritton, Ont.

Branch offices in all principal cities. Charging plants in all parts of the country. Extensive foreign service.

EXCHANGE AGENCIES EVERYWHERE

Mr. Dealer! There's a good profit in Prest-O-Lite Tanks and Exchanges. You may as well be getting it, for a simple statement of the facts about the Prest-O-Lite Motorcycle Tank will make the sale. And remember it's a bad idea to get your customers into the habit of going elsewhere for their Prest-O-Lite Exchanges if you want their trade on other things.

Here are some *Facts* about the "R-S"

which the cautious buyer should note

IN all our advertising we have always carefullly refrained from making exaggerated statements. An honest, straightforward presentation of facts has been, and is, our policy.

Time and again we have demonstrated the superiority of the R-S Cork Insert Cone Clutch. We have shown why the R-S Motor, with its integral cams and gears of specially treated Vanadium steel, its large cooling flanges, its long stroke, its mechanically operated valves, is the most reliable, the most flexible, the most powerful, the most durable—a motor that stands the test of time—that triumphs over the worst road conditions, that survives the most gruelling test and remains fresh and sweet through it all—never taxed to its utmost, always with plenty of reserve power upon which to draw.

Comfort—that quality which a motorcycle **must** possess to make it in any way desirable, is assured by the R-S vibrationless motor, foot-rests, shock-absorbing spring seat posts, adjustable to

Digitized by Google

features —which, by the way, we first introduced into America—we have remained within reasonable bounds. Though the temptation was great, we have refrained from burdening the R-S with so-called "improvements" which would only tend to make the machine more difficult to operate, and whose value is still to be proven.

Therefore—we have made the R-S as simple, as easy to operate, as clean-cut and graceful as the preceding model. We have devoted our time, brains and money, not to devising new "selling-points," but to making every detail in the R-S **absolutely perfect.** The 1913 R-S is simple, strong, durable and comfortable, with a tremendous amount of speed at its command, and each quality is better and more consistently represented in the R-S than in any other motorcycle on the market today.

Now, Mr. Dealer, It's Up to You!

Are you going to let this opportunity to corral a live agency slip by? Or are you going to quietly make a note of the fact that we are exhibiting at Space No. 709 at the Grand Central Palace and determine to investigate our proposition as soon as you enter the exhibition hall?

It is the ability to act upon a thought that distinguishes the successful man from the "down and outer."

So, REMEMBER! We're at Space No. 709 at Grand Central Palace.

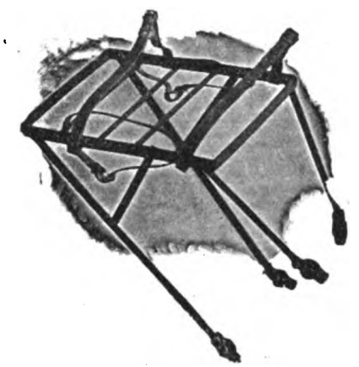
Catalogue on request.

The Star Luggage Carrier Is Built For Heavy Duty

For the rider who wants to carry an excessively heavy weight behind the saddle, the Star Luggage Carrier fills the bill.



Scientifically constructed of steel, heavily reenforced at points of wear, the Star can withstand considerably over 300 lbs. weight. For tandem riding the spring action makes it an exceedingly comfortable seat. The Star is handled by the leading jobbers in America. Write us.

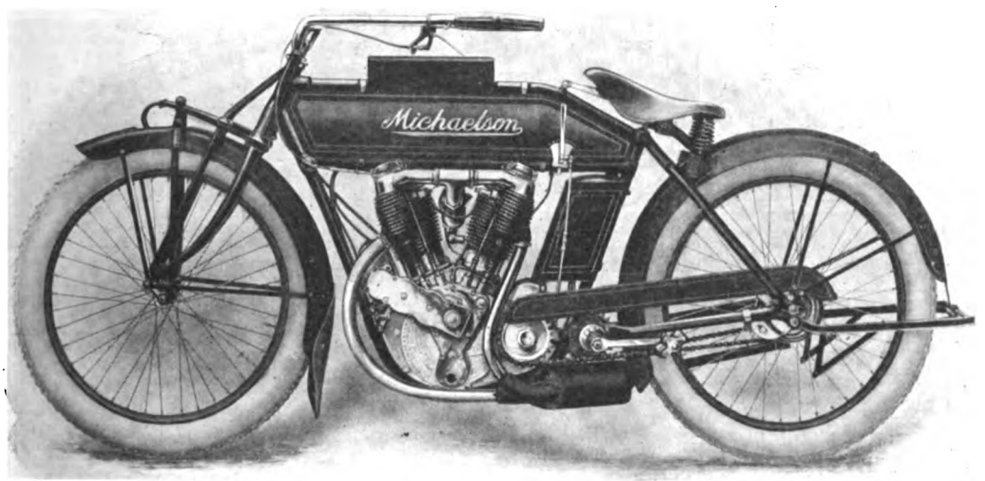
1913 Michaelson MOTORCYCLES TRICARS

NEW IN NAME ONLY

Designed, tried out, and perfected by the same engineer who has built the Minneapolis line of Motorcycles and Tricars in the past.

THE NEW MODELS GREATLY SURPASS THE OLD.



Model "10A," 10-13 H. P.

During the exhaustive tests this machine was put thru in the tryout of the past season the motor proved itself a wonder. Remarkable for easy starting, flexibility and smooth running.

FOR POWER AND SPEED IT IS THE LIMIT.

Improved Two-Speed Gear, Extra Heavy.
Enclosed Clutch running in oil.
Clutch Control Lever on Handlebar.
Mechanical Oiler, also Hand Pump.
Enclosed Rocker Arms.

Extra Heavy Roller Chain. 5/16" x ¾" pitch.
Chain Guard full length
Cushion Seat Post.
3" Tires, front and rear.
1½" Exhaust Pipe, Silent Muffler.

Our 5 H. P. Single and our TRICAR are also winners for 1913.

AGENTS. We have the line of machines that you should handle. We have the **Factory,** the **Men** and the **Resources** to build the best machines on the market. We have had five years' experience in building Two-Speed motorcycles. We are prepared to make **Early Deliveries.**

Better get our agency proposition at once. Illustrated Bulletin No. 1 now ready, giving full information regarding our line. A postal will bring it.

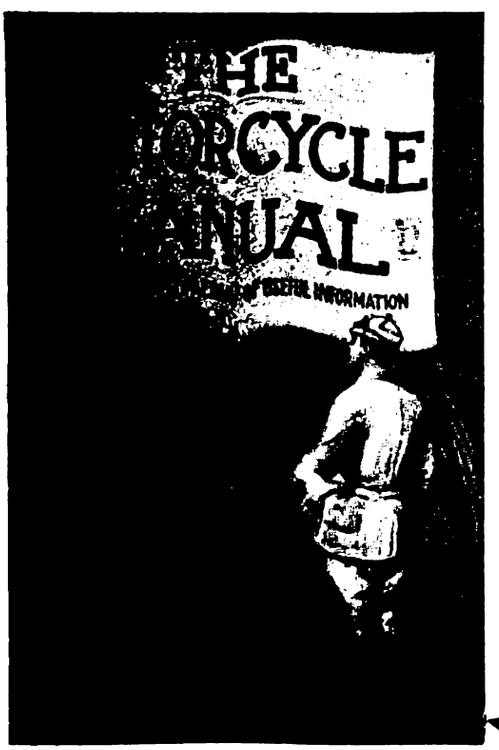
There are times when Ignorance is Not Bliss

Let us enumerate:

For instance, on a sweltering day while you're happily breezing along, your motor suddenly develops the "fidgets." You get off and investigate. If you know all about a motor's internal construction and are "wised up" on how to handle a cranky magneto, and know all there is to know about the carbureter—you will EVENTUALLY locate the trouble. But if you don't—you're STUCK!

Then is the time to dig into your tool box and consult your tried and true friend

The Motorcycle Manual



Its trouble chart tells how to locate the trouble and REMEDY IT. It tells all there is to tell about every part of your motorcycle. It gives concise information regarding license laws in every State in the Union. It gives the official racing records. It explains horsepower and other mechanical formulae; it is a handy motorcycle trade directory; it enlightens you as to the F. A. M.—who's who and what he is doing—it—oh, well!—do you think you can afford to be without it?

And it costs a quarter. We don't have to tell you what to do with the coupon in the corner.

Motorcycle Publishing Co.
51 Chambers Street, New York

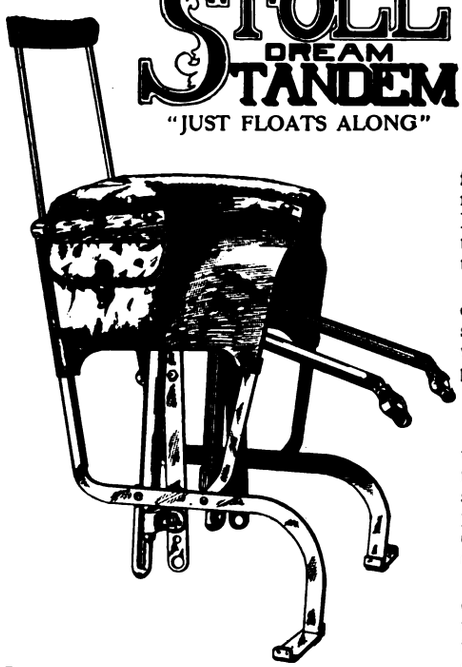
STOLL DREAM TANDEM

PATENTED

"JUST FLOATS ALONG"



A few of the features that help make the STOLL DREAM TANDEM the easiest riding tandem in the world.

Genuine leather cushions gracefully shaped and provided with skirt guard and pockets.

Folding foot-rest.

Rocking motion which allows the tandem to remain steadily in the same position, regardless of the jolting of the machine.

The back-rest combined with the rocking motion give the rider a sense of security and comfort found in no other tandem. Can be raised or lowered instantly while riding.

Send for catalog. Dealers' proposition now ready.

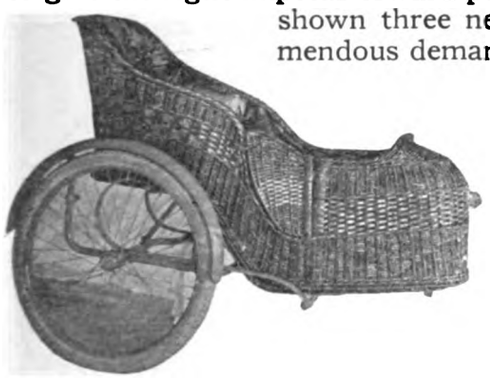
Baxter

The Sidecar Luxurious

Never before has the sidecar been so universally popular. There must be a reason for this, and it is not hard to find. The consistently satisfactory service given by Baxter Sidecars—their comfort, their durability, their lightness and their generally ideal construction did more in 1912 to give the right impetus toward popularizing sidecar riding than anything else. Here are shown three new models of the Baxter that cannot help but be in tremendous demand.



Model No. 1.

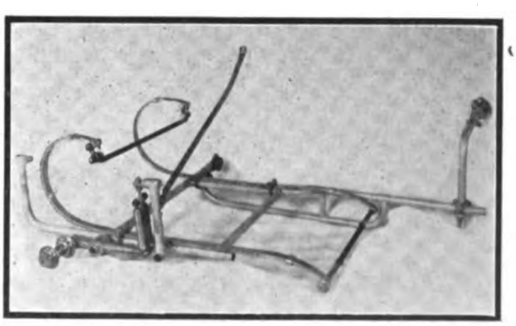
¶ Body made of small reed. This model is one of the most popular in England. It is staunchly constructed and water cannot affect it. Chassis of seamless steel tubing, double truss frame construction, rigid mudguard. Price, $80.

Model No. 2

¶ Body made of willow, steel reinforced throughout, deep leather cushions, non-fraying. A splendidly light and substantial body. Same chassis construction as No. 1. Price, $75.

Model No. 4

¶ A combination of canoe and open front type. Body of Indian rattan. Price, with same chassis as No. 1, $65.



Here is shown the famous Baxter chassis which is the basis of our success as sidecar builders. Note that there are only two points of attachment, both quick-detachable. Tension spring, absolutely absorbing all shocks, fitted to any of our models, $10 extra. Write for our complete catalog, describing the Baxter Delivery Van, the last word in commercial sidecars.

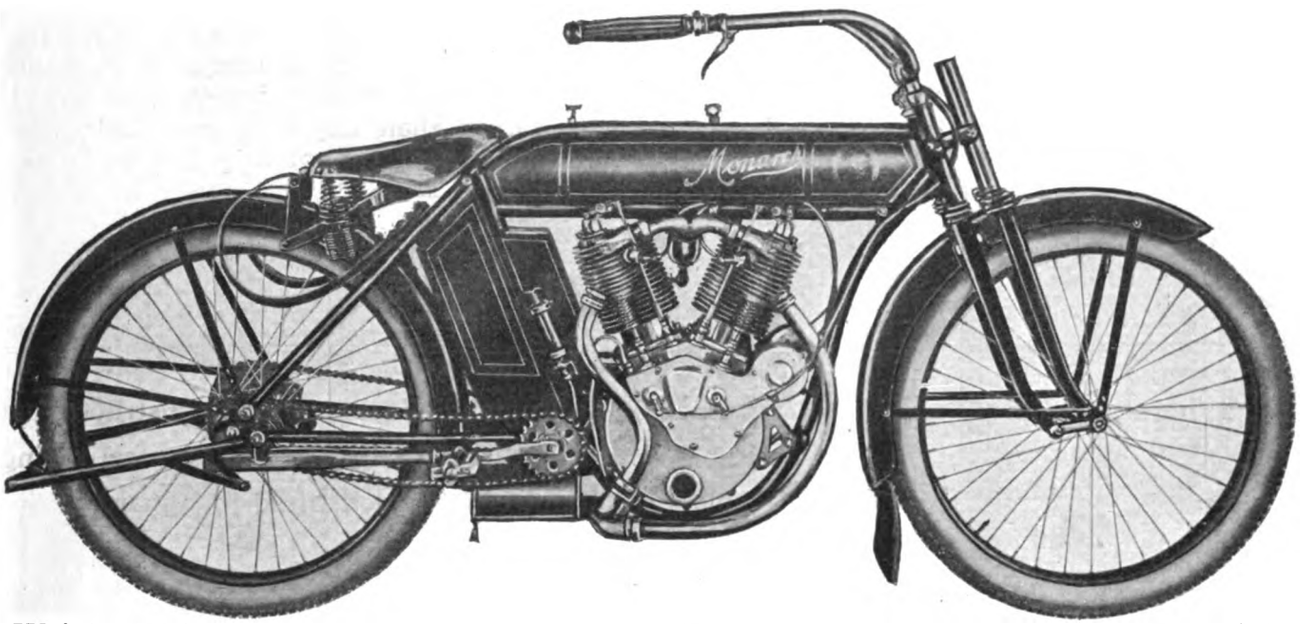
Monarch 1913 Announcement



Weight 250 lbs. **10 H. P.** **Price $275**

MONARCH Motorcycles are built by men who KNOW that they are building the BEST motorcycle; and not by men who guess and experiment at the expense of the motorcycle buying public.

The Big 5 single, tried and tested, is the most powerful and simple motorcycle on the market. Furnished in either chain or V-belt drive.

The 10 h. p twin, has all the tried and tested features of the Big 5, with the added power and speed of the second cylinder, and is the only machine for those who want the best that it is possible to build; a motorcycle that will take its rider anywhere and back, with no further attention than seeing that the tanks are filled, and that the motor gets gas and oil.

The MONARCH leaf spring seat suspension is the swellest and most easy riding contrivance ever invented. Like the most expensive cars, it suspends the rider stationary and allows the machine to take all the bumps without transmitting any to the man on the saddle. It is indeed a triumph by men who know how and are only willing to build the BEST.

The MONARCH agency for 1913 will be the most satisfactory proposition possible to obtain, for the Motorcycle dealer. Send for advance sheet No. 1 and testimonial book by MONARCH riders, that will convince anyone that our claims are founded on facts.

Single Cylinder—Weight 225 lbs. **5 H. P.** **Price $225**

We exhibit at the New York Show, Space No. 722. Chicago, Space No. 2.

"Don't envy a smooth running motor. Use Hagstrom Spark Plugs and have one."

MORE POWER on LESS GASOLINE

Ask any Harley rider to verify this.

That porcelain-and-mica feature is an exclusive Hagstrom idea.

The electrodes are genuine imported "Meteor" metal—so expensive that few plug makers are using it.

The "Hagström" is the regular equipment of 1913 "Yales" —"Marvels"—"Indians" and "Velies."

Your dealer has them or will get them for you.

$1.00 Each

Send 35c. in stamps today for a sample roll (60 inches) of Genuine "Zim" Pulley Lag—the first correct-in-principle lagging offered to the riders of America. Doubles the life and adds to the pulling power of your belt.

Your money back if "Zim" is not the best you've ever used.

SPECIALISTS IN TANDEM ATTACHMENTS AND OTHER MOTORCYCLE ACCESSORIES

Model 47.

MODEL 47

The biggest value for the money ever offered. The luggage carrier is our Model 2, with the rear arch extended and formed into foot-rest. Cushion is our Style B, spring top, an extremely comfortable seat. Very light. Combination attachment, complete, with skirt-guard and spring top cushion, $8.75.

MODEL 1

Readily attached to any motorcycle. Made of 1¼ x ¼-inch spring steel. Non-breakable and non-twistable handlebar. Low, comfortable saddle position. Foot rests on spring pedals, well forward, whose wonderfully smooth action absorb all jars and assures the permanent foothold on the pedals. Model 1, price, complete, as shown, fully nickel-plated, $15; without saddle, $12.

Model 1.

The cuts show only two of the many exclusive and attractive models of tandem attachments and luggage carriers carried by us. All these attachments have proven great sellers and enormously popular. They actually offer the biggest value for the money.

If you don't know about the **Ero Stand Latch,** the handiest and most useful attachment, write today.

Just press the trigger with the foot, when the stand will instantly drop out.

If the stand is lifted into position with a spring, it is then only necessary to press the foot, first upon the trigger to release the lock, and then follow the pressure down till the stand strikes the ground. Easily attached. Price, postpaid, 50c. complete, except clip.

Don't Take Chances With Inferior Engine Oils—

If you use "cheap," inefficient lubricating oils, you not only damage your motor, but increase the cost of operating your machine.

The best oil costs but a trifle more than the "ordinary" kind and you get more power, added mileage and freedom from soot deposits. Therefore, it is a wise economy to use—

HARRIS
TRADE MARK REG. U.S. PAT. OFF.
OILS

We've been making high-grade cylinder lubricants for over 25 years. We were manufacturing the very best lubricants long, long before the inception of the motorcycle. Therefore, we "know how"—we know a little more about the lubricating question than the manufacturers who have only recently entered the field.

We use, as a basis, the finest Pennsylvania crude stock. We test our product during every step in manufacture.

We do not make a large quantity of oil—but prefer to devote our attention to making HARRIS OILS *right!* We give personal attention to the production of our special motorcycle oil.

HARRIS OILS for motorcycle use are positively the best—QUALITY lubricants that make the machine work as smooth as silk. Here's an oil that will increase engine efficiency and decrease cost, because—

A Little Goes A Long Way And Every Drop Counts.

Ask Your Supply Man—or get it from us. Write for information.

Do You Get Road Mileage or Paper Mileage From Your Tires?

In selecting your tires do not let the so-called "guarantee" affect your decision. Your guarantee avails you nothing if the quality of makeup prohibits the perfect service which you should get from your tires.

Kokomo Tires

represent the highest achievement in tire construction. Sixteen years of tire manufacturing experience are back of them, and the best, and only the best, of material and workmanship go into their makeup. The result, proven by many tests, is that Kokomo tires are Economical—Efficient—Enduring.

Write for our booklet.

ECLIPSE

The Brake You Can Trust

THE unexpected emergencies often met with upon the road demand instant action. Insure your safety and the safety of others by equipping with "THE BRAKE YOU CAN TRUST," the ECLIPSE Perfection Multiple Disc Brake, the most positive motorcycle brake built. It combines the unerring accuracy of a watch with the grip of a bull dog.

This brake is different in design from previous Eclipse Brakes, in fact it is different from any other brake yet made.

The Brake operates on the multiple-disc idea, similar to the Eclipse clutch. The discs are mounted on one side of the hub, instead of inside it. There are six discs 5¼" in diameter.

These give immense braking power, as there are more than 100 square inches of braking surface.

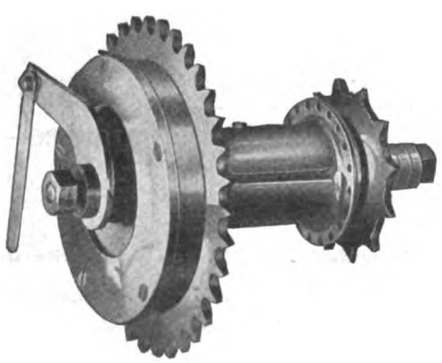
Extreme simplicity is a characteristic of this new brake. It has a very small number of parts, and adjustments are conspicuous by their total absence.

The bearings contain ⅜-inch balls. Lubrication is a matter that will require little attention, for the hub can be packed with hard oil at the start of the season and this supply will last the entire year.

The great working surface and simplicity make this brake fine for heavy service, such as tandem or sidecar work. Big 7 h. p. twins with two riders can be brought to an abrupt halt from fair speed without effort.

Manufacturers have recognized the desirability of the ECLIPSE Perfection Brake—as you will note from their 1913 specifications.

Why say more?



ECLIPSE MACHINE COMPANY

Digitized by Google

ECLIPSE

The Clutch of a Thousand Speeds

"—— AND THE ECLIPSE FREE ENGINE CLUTCH"

On how many 1913 specifications have you seen these words prominently displayed?

The year 1913 will be a "large" year for motorcycles. Just as popular as was the "bike" five or six years ago, will the motorcycle become in 1913.

And why? Mainly because the ECLIPSE FREE ENGINE PULLEY AND MULTIPLE DISC CLUTCH has eliminated from the motorcycle that one last objectionable feature—uncertainty of control. With the ECLIPSE, the rider can get automobile service from his motorcycle. He can stop, while the motor is still running. He can start without violent pedalling for half a block, or running alongside. He can, by the aid of the ECLIPSE, "make" hills absolutely impossible without it. He can glide through the worst roads, shifting sand, treacherous mud, deep snow—easily and surely. In traffic riding, its many discs insure the right speed at the right time. The rider can slow down to a walk and then quickly dart into an opening. THE ECLIPSE BELONGS ON YOUR MOTORCYCLE.

If it isn't—why not?

Standard

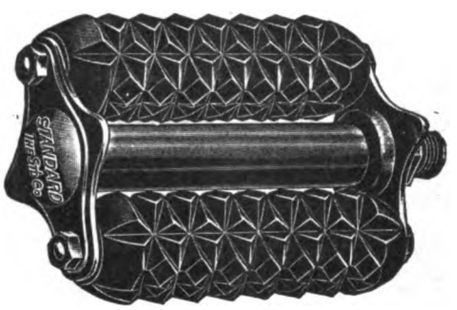
In Name and Quality

For **STANDARD** products, the manufacturers will accept no substitute. They know they are safe in buying goods that are **STANDARD** both in name and quality.

The unexampled reputation of

Diamond "E" Spokes

for strength, temper and all-around durability is based on solid merit. The manufacturer unhesitatingly specifies Diamond "E" Spokes because they are entitled to the highest consideration due to their proven merit.



STANDARD PEDAL No. 3

For pedal safety and footboard ease, **STANDARD No. 3 PEDAL** fills the rider's wants to perfection.

The deeply corrugated, broad rubbers insure maximum comfort and keep the feet in proper position. The majority of motorcycle manufacturers have consistently specified **STANDARD PEDALS** for many years, and from all indications, 1913 will emphatically be no exception.

For the manufacturer who wants to assure perfect service as far as spokes and pedals are concerned, **STANDARD** products are eminently fitted.

THE STANDARD COMPANY
TORRINGTON CONNECTICUT

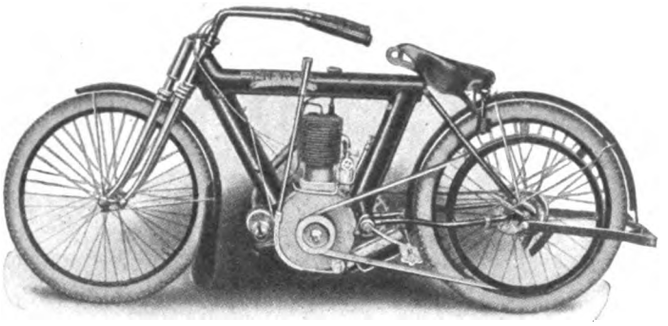
FOR $165



The Pierce Motorcycle

5-36 Model, Single Cylinder

Manufactured by The Pierce Cycle Co., Buffalo, N. Y.

A rare opportunity to secure one of these notable machines at a big reduction. A limited number are now offered at the exceptional price of $165.

5 Horsepower, 36 cubic inches, Belt drive. Equipped with Herz high tension magneto; Breeze new style, double adjustment carbureter; double spring fork; U. S. Tires, 2½ inch, studded; free engine; hand grip controls.

The Pierce engine is remarkable for its power, smooth running and reliability. The long-stroke motor combined with the fair-sized bore makes the Pierce a splendid hill-climber. Free engine pulley, operated by convenient hand lever, is invaluable to the rider in traffic, on steep hills or rough roads and for starting on up-grades.

NOTE: We are able to offer a limited number of these machines to dealers.

WHY THEY BUY STANDARD FRAME PARTS

Buyers of all kinds of material prefer to transact business with well established concerns. This fact is true of individual consumers, as well as of quantity consumers.

Little do you care what a salesman says about quality, service or price, if the company making the product has no reputation for these things.

The Standard Welding Company stands pre-eminent in the motorcycle industry. Our proof of this statement is this fact:

That from May 1st, 1912, to June 30th, 1912, we received specifications equaling 83.9% of our total 1911 business. These specifications cover ***rims, pulley rims, mud guards, forksides, rear forks, rear stays, loop tubes, handle bars, seat posts, exhaust tubes*** *and* ***straight lengths of tubing.*** *The buyers of this material include manufacturers who will produce from May 1st, 1912, to April 30th, 1913, 100 to 25000 machines each.*

A company that can individually transform this tremendous amount of raw material into the finished product is the type of organization that you, whether manufacturer, jobber, dealer or rider, want to deal with.

The high reputation of the American-made motorcycle of today is due largely to the excellence of our material. Foreign manufacturers acknowledge American machines to be the strongest made. While we do not attempt to claim the whole compliment, we do claim, as manufacturers of over 75% of all frame tubing, rims and mud guards, that the pride which you are justified to have in your machines is due largely to the perfection of

"Standard" rims, "Standard" mud guards, "Standard" tubing. *Standard Welding products represent the "Utmost in Utility."*

MICHIGAN AVE.=RANDOLPH ST.

"A FEW CENTS IN THE LOCK IS WORTH FIFTY IN THE REWARD"

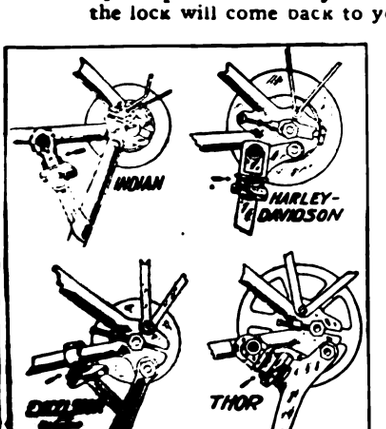
"Motorcyclist's Book of Proverbs"

¶ Keep your name off the list of "Stolen Motorcycles." Almost daily you see mention of another machine stolen. Laws against motorcycle thieves are weak and the only way to thoroughly protect yourself is by locking your machine so it cannot be moved except by YOU—and the only lock that prevents machine being moved and that cannot be picked, pried or cut, is the "SABO."

¶ You can safely leave your motorcycle anywhere if you have a Sabo lock. It fits tight to the frame—cannot be pried off—there are no chains to be cut by pliers. You've got the goat of every motorcycling "Jimmy Valentine" that wants a ride on your gasoline. The lock is scarcely noticeable. The would-be thief will perhaps not see it; will walk up to the machine acting as if it were his own. But when he tries to move it from the stand he'll learn "Sabo's on the Job."

¶ It's made of bronze metal, neat, simple, strong—fits your smallest pocket—lasts forever. The stand is locked securely to the frame—the machine cannot be moved while the lock is there—no danger of breaking spokes or chain by forgetting the lock and pushing machine from stand. It is impossible to wheel or ride the machine away.

¶ We prefer to have you buy from your dealer, but, if he does not have it, send this order blank with $1.25 and the lock will come back to you, satisfaction guaranteed, prepaid, by return mail.



JOBBERS

List this in your 1913 Catalog. Cuts, literature and advertising matter furnished. Write for proposition.

FEDERAL MOTORCYCLE TIRES "EXTRA SERVICE"

Federal Rubber Manufacturing Co. - Milwaukee

Digitized by Google

TIRE PROTECTION WITH A GUARANTEE

No longer is it necessary for motorcyclists to worry about PUNCTURES, BLOW-OUTS, GLASS CUTS, SKIDDING and unnecessary tire expense, which heretofore has MARRED the pleasure of all motoring—"BRICTSON" DETACHABLE TREADS will eliminate all this.

10,000 Mile Guarantee

SEND FOR COPY OF SAME

Yes, we will give you a 10,000 mile written guarantee with every "BRICTSON" MOTORCYCLE TREAD on a daily mileage basis of twenty-five miles per day. Can you get this kind of a guarantee on your rubber tires? Figure this guarantee out and you will see that it covers a period of 400 days.

Design and Construction

Made of select, specially prepared chrome tanned leather, soft and pliable, which gives with the "BRICTSON" the full benefit of the pneumatic tire. Studded on the surface with small neat-looking steel studs, designed to give perfect traction as well as a perfect "non-skid." There are layers of the best tire fabric between the layers of leather, which add strength and keep the tread from stretching. In addition to all these important features, the "BRICTSON" is lined perfectly smooth on the inside so there are no rivets or studs in contact with the rubber casing, making it impossible for the tread to injure the casing in any way.

The "BRICTSON" is the only scientifically constructed tread in that it CANNOT slip or slide on the rubber casing in ANY direction, owing to the patented, scientific method of fastening. It is held in position on the rubber casing by equal tension from all points of the circle, and for this reason may be adjusted to PERFECTLY fit the casing over which it is applied, which CANNOT be accomplished with any other method of fastening, and also envelops the entire casing, excluding sand, stones, mud, or even water from coming in contact with the rubber casing.

The "BRICTSON" is the ONLY TREAD THAT HAS PERFECT TENSION ADJUSTMENT FROM ALL POINTS OF THE CIRCLE, which other tread manufacturers have tried to imitate with metal contrivances that only detract from the appearance of the tread, add weight, and destroy the pneumatic feature, but still do not accomplish the desired result.

The "Brictson" Exclusive Patented Way of Fastening

The "BRICTSON" has no HOOPS, HOOKS, BUCKLES, SPRINGS, or any other unnecessary metal contrivances to add weight, break or eat into the rubber casing; neither is it cemented, laced, vulcanized, riveted or fastened to the rubber casing in any way—NATURAL INFLATION OF THE TIRE DOES THE TRICK—Simply clamped between the head of casing and rim—strictly Quick Detachable.

PRICES: One-half the price of a rubber casing and guaranteed three times as long. Compare the following prices:

26 x 2¼ $6.05	28 x 2½ $7.43	29 x 2¾ $8.15
26 x 2½ 6.60	28 x 2¾ 7.70	29 x 3 ..... 8.25
28 x 2¼ 7.15	28 x 3 ..... 7.98	

Other sizes on application.

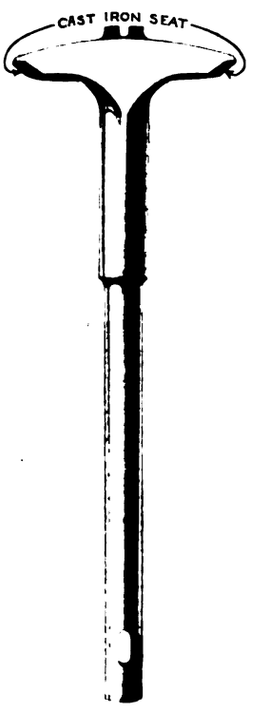
Electric Welding is the Scientific Process for Making Valve Stems



Valve stems must be made with heads that will not pit or warp, in order to insure perfect compression and the full power of the motor.

Breakage must be guarded against by material that is tough enough to stand the strain of the terrific heat and the continual battering.

No one material can meet both of these demands.

By electric welding we unite a head of nickel steel to a stem of tough carbon steel. To the head we then weld —by the oxy-acetylene process—a seat of cast iron, thus securing a valve, each part of which is scientifically adapted to the work it has to do.

The majority of motorcycle makers and thousands of motorcycle users have put this valve to the test and found it right.

Send us your blue prints for quotations.

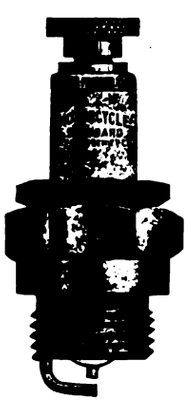
A Porcelain Motorcycle Spark Plug!



$1.00

Made for Motorcycle Service Only

No need any longer to use the inferior mica plug or a makeshift porcelain. This new Motorcycle Standard Spark Plug, built by the greatest manufacturer of spark plugs in the world, gives motorcycle riders a plug with a porcelain insulator that is faultless, defies heat and insures perfect ignition.

Motorcycle Standard Spark Plug

Leading motorcycle engineers of the country have pronounced this plug right in principle and construction. The length over all is 2¼"—just the right size for the limited dimensions available for a spark plug in the motorcycle motor. The porcelain is made in our own potteries. Heat cannot crack it. The bushings are case hardened. The terminal nut will take ordinary wire, ring, or special "Indian" terminal.

Comes in half-inch or metric sizes. Your dealer will supply you —or sent prepaid on receipt of price and size.

PRICE—$1.00 per plug

Our guarantee—"Your money back or a new plug, unless you are absolutely satisfied."

Start Your Engine Easily
Even on the Coldest Day

When you have the proper amount of oil in your engine you can start and pedal with the utmost ease. Even on the coldest day.

Only with the Simplex Oil Gauge can you tell the exact amount of oil that is in your engine.

Fits all machines that have no oil gauge on the crankcase. Easily attached in a few minutes. Riders often ruin their engine cylinder because of insufficient oil. With the Simplex you can run thousands of miles without taking down your engine to remove carbon, because it keeps oil at the right level.

THE SIMPLEX OIL GAUGE.
"In sight and out of the way."

The Simplex is handsomely nickelplated—a little larger than a silver dollar and is only ⅝" thick.

The Simplex keeps clean. It prevents your plugs from fouling—saves its cost in oil in a few weeks.

Fits Harley-Davidson, Excelsior, Thor, Flanders, Etc.

Order One Today—$1.50, Postpaid.

Without any obligation or charge on your part, you can try the Simplex Oil Gauge for 30 days. If it is not O. K. you can return it and your money will be refunded. Nothing could be more fair.

Order today. Mention your dealer and name of machine. Circular free.

Necessity is the Mother of Successful Invention

THE insistent demand for a Motorcycle Anti-Skid Chain proved to us that it was a *necessity*. We have therefore produced **Weed Anti-Skid Chains for Motorcycles**—just as perfect in principle, construction and workmanship as **Weed Anti-Skid Chains for Automobiles,** which are so recognized as a tested, tried and time honored necessity that we are now *manufacturing and selling over forty miles of Weed Chains every day in the year.*

Weed Anti-Skid Motorcycle Chains

With the "Creeping Grip"

Give perfect traction, *prevent skidding and slipping.* Make motorcycling absolutely safe—sixty miles an hour—with perfect safety—make *all roads good roads.*

The continuous "creeping" prevents injury to the tires and keeps them clean, minimizing the chances of punctures.

The secret process of hardening the the cross chains, just adopted, gives extreme lasting qualities.

Easily carried, as the small bundles they make in their canvas bags take so little room that they could be carried in your pocket, when not in use, without inconvenience.

Order them from your dealer or write us direct for full particulars.

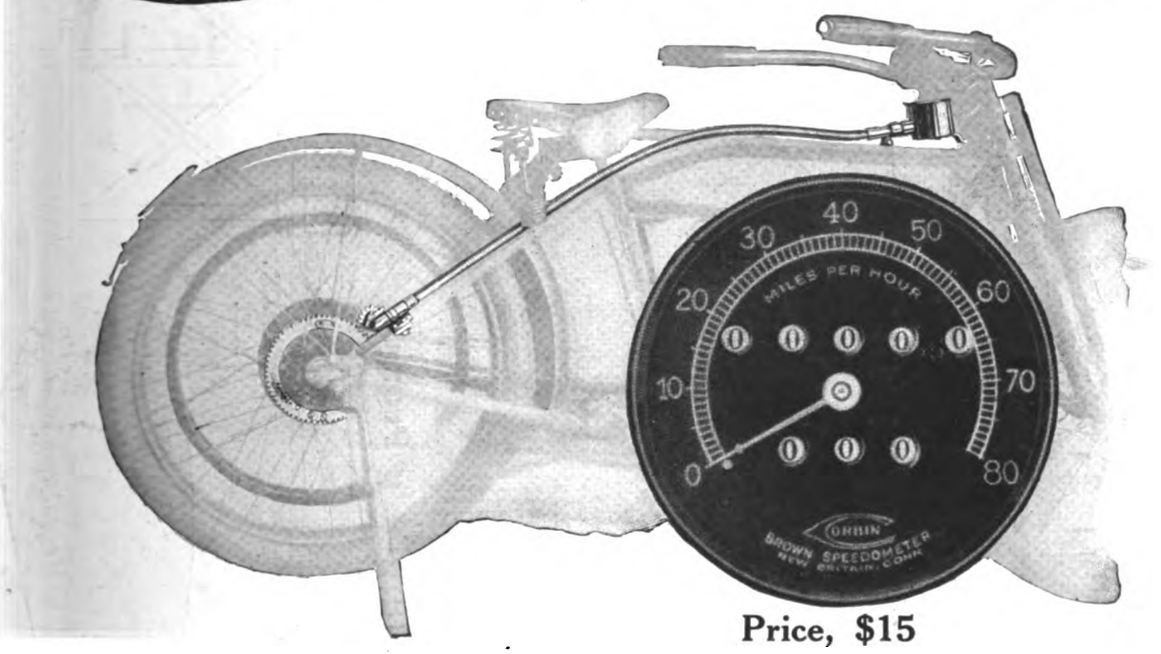
CORBIN-BROWN SPEEDOMETER



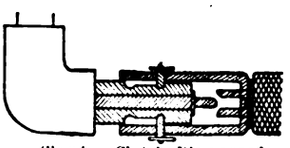
Price, $15

An Entirely New and Invaluable Feature

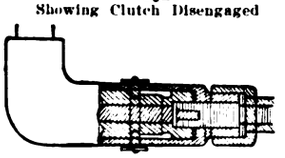
The Corbin-Brown REAR DRIVING ATTACHMENT is so constructed that the speedometer may be instantly DISENGAGED from the driving sprocket. A slight pull of the cable does it. This is a distinct advantage and an entirely new feature applied to speedometer drives. As a result, there is no recording of mileage while motor is being tuned up on stand. False registration for the season is therefore prevented.

For the rear wheel the driving sprocket is made in two parts so that it may be easily slipped into place without disturbing even slightly the motorcycle's wheel or chain adjustment. These two parts are held securely together by clamps and to spokes of wheel by clips.

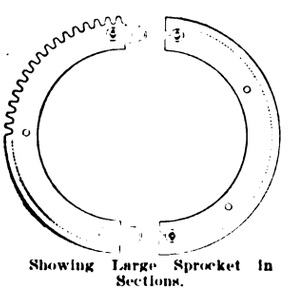
The Corbin-Brown can be equipped by any motorcycle dealer or repair shop.
When ordering speedometers, please give name of motorcycle and size of Tires.



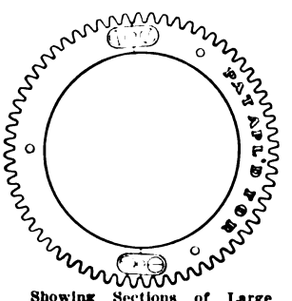
Showing Clutch Disengaged



Showing Clutch Engaged



Showing Large Sprocket in Sections.



Showing Sections of Large Sprocket Joined.

The Two Welcome Arrivals-1913 and the Bullet Electric Lamp

Here is a truly efficient and attractive electric motorcycle lamp that is distinctly a 1913 product.

Strongly built of heavy gauge brass, highly nickelled and fitted with a powerful Tungsten bulb. Silvered parabolic reflector throws a tremendously powerful shaft of light. Shell is made in one piece and fittings are all machine made and interchangeable. The Bullet is guaranteed not to rattle or jar loose. Fitted with a strong flat prop on back of lamp and held in position with one flat bracket. Lamp is both dust and wind proof.

Lamp complete, with Bulb, wiring and connectors	$3.50
Brackets, extra	.50
Complete outfit, including two highly concentrated Tungsten Batteries, Switch, and in fact, everything necessary to install the outfit on your machine	6.50
Extra Batteries, each	.45

It is your option whether you buy the Lamp alone or the Lamp with bracket—or further still—the complete outfit. **Send for our Illustrated Booklet NOW.**

YALE
THE CONSOLIDATED MFG. Co. TOLEDO, O.

National Shows, the Time to

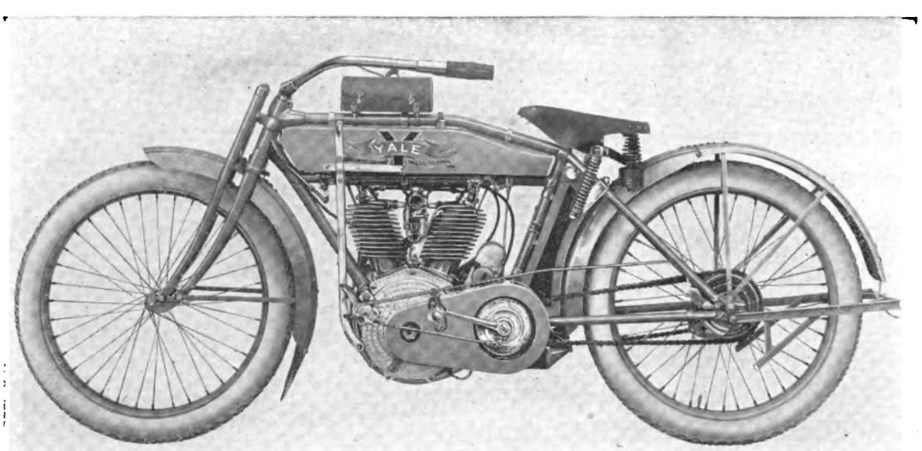
AT THE big show was the great opportunity to decide relative merits. All the evidence was there before you—for your judgment to decide where your dependence should be placed in 1913.

You could examine all the machines, find out what their claims are really worth.

Comparison of the Yale with any other motorcycle made the wise riders notice how distinctly its superiority stands forth—how the man who buys a Yale gets more for every dollar of its price than the man who gets another make—for even though other machines sell at a lower price, they cost far more in a season's riding.

Compare the three-inch tires, powerful motor, positive lubrication, comfort-insuring cushion fork and Y-A shock absorber, perfect balance and other "quality" features of the Yale to the inadequate tires, inferior engines —with single-cylinder cooling systems for twin motors—oiling systems that burn up bearings if the rider's attention wavers, wobbly and dangerous seat-posts and hinged spring frames, and equally faulty or "low-priced" construction used on other machines.

The comparison is overwhelmingly in favor of the Yale.



BIG 7-8 H. P. Twin Yale. Note the "classy," racy appearance. Drive by roller chain or big V belt (no flat belt could hold the full power of this motor) with Eclipse free-engine clutch on all machines. Yale cushion fork and Y-A shock absorber. Troxle saddle. Three-inch tires (automobile size), Goodyear, U. S., Federal or Diamond. Hinged rear mudguard. Footrests, with auxiliary foot lever for operating brake when feet are on rests. Corbin band or Eclipse multiple disc-brake. Wheelbase, 57½ inches. Large separate tanks carrying three gallons of gasoline and a gallon of cylinder oil. Throttle and spark controlled from grips, with exhaust-valve lift operated by independent lever under right grip. Unusually efficient muffler with cutout that when opened gives free, straight-line outlet for gases. **$275**

Digitized by Google

YALE
THE CONSOLIDATED MFG. Co. TOLEDO, O.

Test Claims and Compare Scores

The man who buys a motorcycle of another make because it sells for less than a Yale, soon comes to appreciate the moral pointed by a poem in the old Appleton's Fourth Reader. It is:

THE RAZOR-SELLER

By Pindar.

A fellow, in a market town,
Most musical, cried razors up and down.
And offered twelve for eighteen pence,
Which certainly seemed wondrous cheap,
And, for the money, quite a heap,
That every man would buy, with cash and sense.

A country bumpkin the great offer heard;
Poor Hodge, who suffered by a broad black beard,
That seemed a shoe-brush beneath his nose.
With cheerfulness the eighteen pence he paid,
And proudly to himself in whispers said,
"This rascal stole the razors, I suppose.

"No matter if the fellow be a knave,
Provided that the razors shave,
It certainly will be a monstrous prize."
So home the clown with his good fortune went,
Smiling, in heart and soul content,
And quickly soaped himself to ears and eyes.

Being well lathered from a dish or tub,
Hodge now begun, with grinning pain, to grub,
Just like a hedger, cutting furze;
'Twas a vile razor; then the rest he tried;
All were impostors. "Ah!" Hodge sighed,
"I wish my eighteen pence was in my purse."

In vain to chase his beard and bring the graces,
He cut and dug, and whined and stamped and swore;
Brought blood, and danced, blasphemed, and made wry faces,
And cursed each razor's body o'er and o'er.
His muzzle, formed of opposition stuff,
Firm as a Foxite, would not lose its ruff;
So kept it, laughing at the steel and suds.

Hodge, in a passion, stretched his angry jaws,
Vowing the direst vengeance, with clinched claws,
On the vile cheat that sold the goods.
"Razors! a vile, confounded dog!
Not fit to scrape a hog!"

Hodge sought the fellow, found him, and begun:
"Perhaps, Master Razor-Rogue! to you 'tis fun
That people flay themselves out of their lives,
You rascal! for an hour have I been grubbing,
Giving my crying whiskers here a scrubbing
With razors just like oyster-knives.
Sirrah! I tell you, you're a knave,
To cry up razors that can't shave."

"Friend," quoth the razor-man, "I'm not a knave.
As for razors you have bought,
Upon my soul, I never thought
That they would shave."

"Not think they'd shave?" quoth Hodge, with wondering eyes,
And voice not much unlike an Indian yell,
"What were they made for, then, you dog?" he cries.
"Made," quoth the fellow, with a smile, "to sell."

And after comparing the Yale score with others, get action quick. There are just a few more agencies left, and he who delays will miss the good things that are in store for the Yale dealer in 1913.

SOLD

$4,505,000.00 worth of Harley-Davidson output of 17,000 machines—weeks—actually contracted for

WE are completely sold out—we admit it—we are proud of it. We are not exhibiting at the Chicago Show to secure dealers, for we can handle no more this year. We are simply there to give all an opportunity to inspect our 1913 line and examine carefully the machines it has taken eleven years for us to perfect and which are directly responsible for this, our latest sales record.

Harley-Davidson Motor Co.

Digitized by Google

OUT

Davidsons—our entire 1913 were sold to our dealers in 12½ and secured by deposits.

THIS is the first time any motorcycle manufacturer has made such a sales record—the first time any maker has actually turned away business. Our success has been due entirely to the fact that we realized years ago that our own future depended on *how* we made Harley-Davidsons—not on how *many* Harley-Davidsons we made, and not to any *general* demand for motorcycles.

SPLITDORF

"Always There"

Here is the magneto you have been looking for!

Every motorcyclist owes it to himself to investigate. Don't be put off by specious argument—inquire about the new SPLITDORF and insist upon its use.

Racer and road-plugger alike have demanded a waterproof, efficient, reliable and easy starting instrument.

The SPLITDORF "EU" and "EV" enclosed models—for the single cylinder and "twin," respectively, fill the bill.

Fill the bill perfectly, too. First of all, the newcomers are **waterproof.** No short circuiting troubles through rain and mud—no water, mud or waste oil can penetrate SPLITDORF MAGNETOS.

The best engineering skill has been devoted to the construction of these instruments to make them electrically efficient, aside from the all-important waterproof feature.

Windings have been made, to insure the fat, live, spark that, although retarded, makes the **starting easy.**

In crowded traffic or by hill or dale, the "punch" is always there in a SPLITDORF MAGNETO to "get going."

And once "going" SPLITDORF MAGNETOS know no miss or skip. It is the constant hot, fat spark that can always be depended upon to give joy to the motorcyclist's heart.

INSURE against ignition trouble and responsibility, and ASSURE yourself of all the pleasure and comfort of motorcycling by insisting on SPLITDORF EQUIPMENT.

If interested in any form of ignition for gasoline motors, just write in for our free literature. Our new catalog, our "Racing Record" or our "New Lights for Old" is yours for the asking. Do it TODAY.

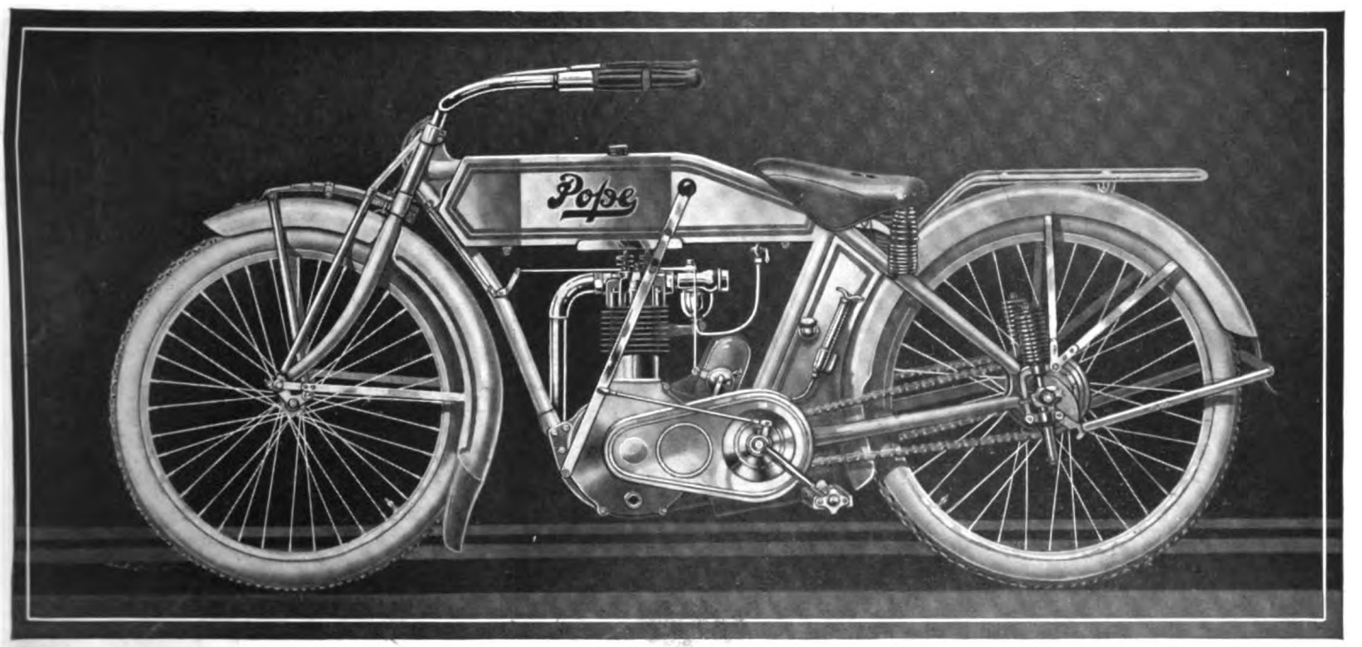
New Pope 5 H. P. Chain Drive

PATENT REAR SPRING SUSPENSION, POPE SPRING FORK, OVERHEAD VALVES, 5 H. P. MOTOR, MAGNETO IGNITION, MECHANICALLY OPERATED OILER - $215.00



56½ inch Wheelbase—28 inch Wheels fitted with 2½ inch Tires.

MODEL M, A HIGH-POWERED "SINGLE" HAVING MANY FEATURES IN COMMON WITH NEW POPE "TWIN"

In Comfort, Power, Speed, Silence and Attractive Lines, this Pope "Single" cannot be Approached

THE PATENT REAR SPRING SUSPENSION

which Model M has in common with Model L (the Pope "Twin") solves the problem of producing a really smooth-riding motorcycle. The normal position of this helical spring device attached to the rear forks is shown in the above cut. When the rider's weight causes the springs to expand, the load is suspended. As the wheel strikes an obstacle, the rear-axle, bearing-blocks, and guide-rods, rise easily, bringing the helical springs into expansive play and absorbing the shock.

FULL DETAILS OF REAR SPRING SUSPENSION AND OTHER FEATURES IN 1913 POPE CATALOG NOW READY

New Pope "Twin" 7-8 H. P., Patent Rear Spring Suspension, Overhead Valves, $250

Full Pope Line for 1913—4 Models—Model L "Twin", $250; Model M, 5 H. P., Chain Drive, $215; Model K, 4 H. P., Belt Drive, $200; Model H, Lightweight, $165.

Jobbers and Dealers—Listen

The big cities are passing ordinances prohibiting the use of big flaring lamps on automobiles and other vehicles, because they dazzle and confuse the approaching driver or pedestrian. A broad, dazzling ray of light seems to blind and surround inextricably the one approaching.

20th CENTURY LAMPS

(Motorcycle and Bicycle)

Can be used just as well in the large, crowded cities as in the less populated country. Their **long range** power with **direct concentrated** ray—not broad and scattered—quickly reveals dangers a long way off and at the same time their rays, being long and fairly narrow, do not engulf the approacher with a blinding, confusing glare.

This is a supremely important feature, and found only in the 20th Century Lamps. It is one of the many reasons why the demand for these Lamps is ever increasing. They are also popular because of their Reliable Quality and Unfailing Dependability.

Catalogue and Quotations cheerfully sent on request.

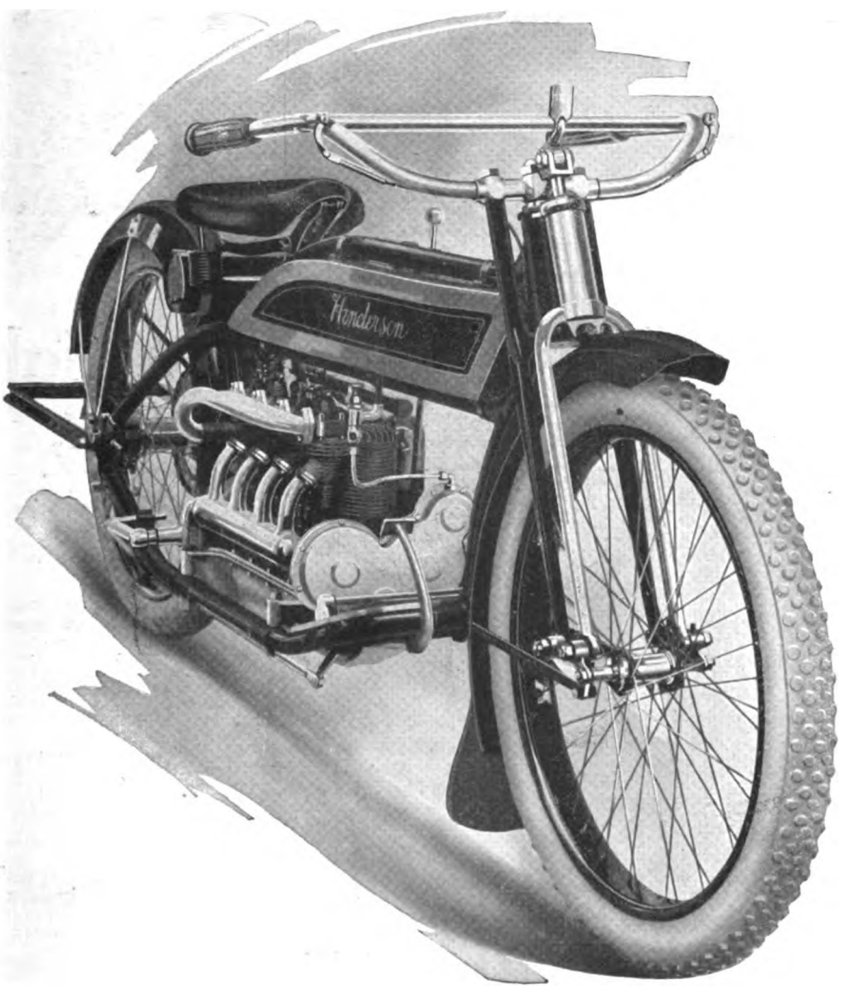
Ready Buyers Will Take All The Machines We Can Build This Year



The new 8 H. P. four cylinder Henderson—$325. Schebler Carbureter, Bosch Magneto, 3-inch tire, External Band Brake.

The dealer who sells the Henderson is not likely to experience difficulty in disposing of his allotment.

Why? Because of the Henderson's Country-wide popularity.

Because the Henderson fully and completely answers the demand for silence, greater power, greater comfort, no vibration—and all the other advantages of four-cylinder construction.

And because the Henderson, in one year, has taught the public that these advantages, as it combines them, are real and worth having.

Literature, terms, etc., sent on request.

Henderson Motorcycle Company, 1158 Cass Ave., Detroit, Mich.

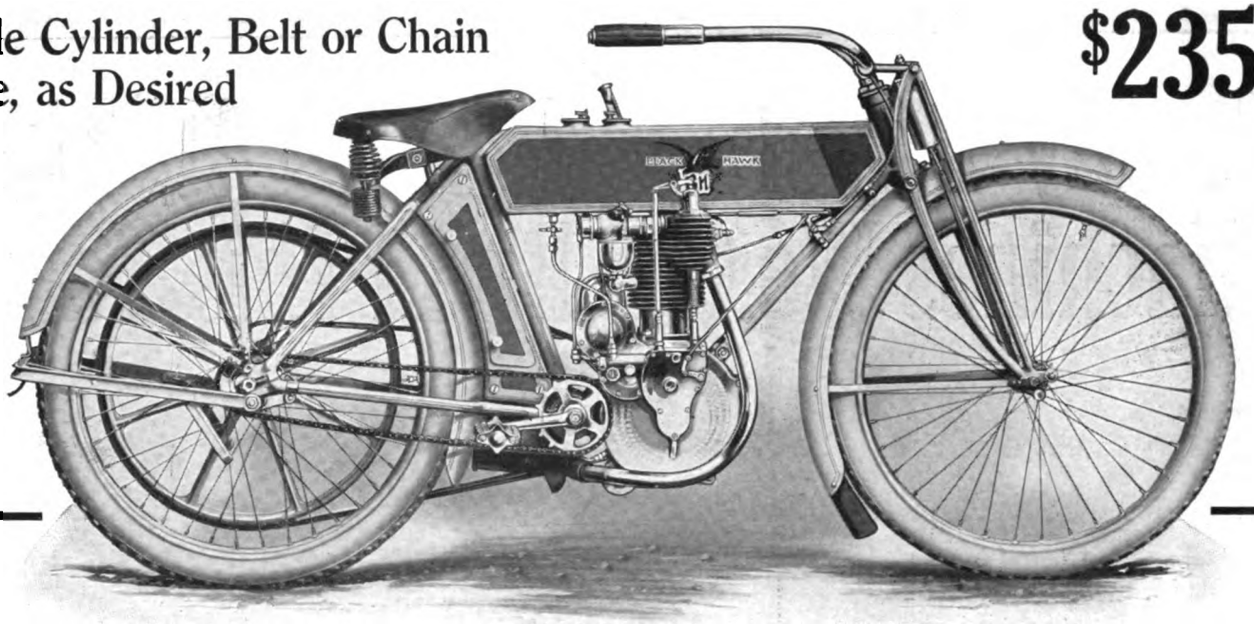
Single Cylinder, Belt or Chain Drive, as Desired

$235.00



The Most Interesting Sight At the Chicago Show

At the Chicago Show you will have your best chance to compare all motorcycles—to decide which is best. Begin at Booth No. 62 and compare there what you see in the other exhibits.

Note the big difference in favor of the "Black Hawk" and remember when you look at this motorcycle that it sells for only $235.00.

We began the construction of this motorcycle nearly two years ago. During all this time we have worked it out, tested it, perfected it.

This is no makeshift motorcycle, no made-over model. Every device, every feature is a real betterment—and the result is that the "Black Hawk" is

The Most Up-to-Date Motorcycle on the Market

Rivals may have motorcycles which possess some feature or other of advantage, but the "Black Hawk" is the one machine that possesses every feature of the best motorcycles (without the faults of either) besides scores of other features of excellence which are exclusive with us.

The leading features are

—**Motor** develops 6 H. P. on brake test.

—**Spring Fork** of trussed arch type, guaranteed not to bottom.

—**New Free Engine Clutch** and **Coaster Brake** combination in **rear hub.**

—**Steel Tank Integral with Frame.** This design admits of **very low saddle position** without sacrifice of frame lines.

—**Spring Seat Post** of exclusive design, provides for heavy or light shocks without weakening saddle or spring. May be changed to suit the rider by reversing lever link.

—**Mechanically Operated Oil Pump.**

—**Appearance.** Graceful, neat and trim in every detail, possessing long, straight lines and symmetry lacking in other machines.

—**Color**—Light gray with dark panels on tank and tool box and blue striping is the enamel scheme and all bright parts are nickel plated.

—**Equipment** includes Bosch Magneto, Schebler Carburetor and Troxel saddle. The tires are 2¾ inches on both front and back wheels.

BLACK HAWK

The Men Behind the "BLACK HAWK"

The "Black Hawk" is not built by unseasoned experimenters, but is the product of men who have long been prominently identified with the motorcycle industry.

These men, by careful study of every modern discovery in motorcycle construction and by eliminating ideas which have proven unwise, have helped us to accomplish that which other manufacturers have striven years to do—and that is to build a motorcycle without a fault or flaw anywhere, a motorcycle that for length of service, luxuriousness and easy-riding qualities stands supreme.

Handsome Book FREE

Our catalog, which fully describes and illustrates the "Black Hawk"—a motorcycle which contains more motorcycle value for the money than any other machine, at any price—is yours for the asking. Send for it today.

TO RIDERS Write for name of dealer who is nearest you, so that you can see for yourself that when compared with other motorcycles the "Black Hawk" sets the highest standard of value that has ever been offered to the American public.

We want you to read the balance of the "Black Hawk's" mechanical details at your leisure, so send for our handsome book which fully describes and illustrates this best of all motorcycles.

We believe the "Black Hawk" is suited to meet the demands of the rider more than any other motorcycle in the world. You will believe so, too, when you have seen our machine, for we have no competition when it comes to real quality, real merit.

Other motorcycles, no matter what the price, will seem very poor to you in comparison with the "Black Hawk"—and with you, as with other riders, other dealers, it is bound to be first choice.

Dealers

from all parts of the country **are** applying for agency contracts to sell the "Black Hawk" in their locality. There is still much desirable territory open which we will assign to those who are prepared to represent us properly and aggressively.

Write at once for dealer's proposition and we'll lay our plans bare before you.

BLACK HAWK MOTOR CO., Dept. B, Rock Island, Ills.

Let Me Demonstrate This Musical Horn to YOU

G. V. P. Lansing

I want you to ***hear*** this musical MOTORCYCLE horn —to listen to its courteous signal. I know that I can't ***describe*** its tone. All I can say is that it has a clear, distinct, chime-like warning, produced by four musical notes. I want to demonstrate the Aermore to you. I want you to hear it ***yourself.*** Just write me today for my special offer.

When Mr. Fulton put one on his machine he told me: "It sings like an organ and you can hear it a mile away." You'll say the same when you hear

The AERMORE Exhaust Horn

—the Horn Harmonious

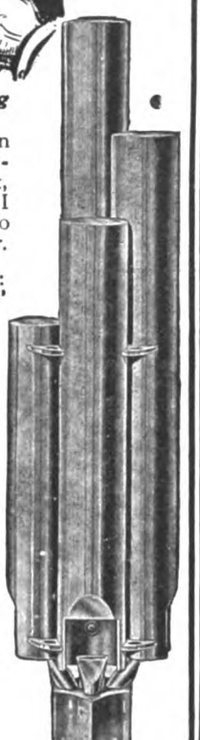
It's the only self-cleaning exhaust horn on the market. Can't clog. Can be attached to any exhaust pipe in a few minutes. Price $7.50 for motorcycle horn. We also make Aermore Horns for automobiles. Three sizes: $10, $11 and $12.

Write Me Today for Literature

Get my offer to demonstrate this musical horn to you. Write me today. I'll also send you descriptive literature. When you see the principle of the Aermore Horn you'll decide right then that it's the most efficient signal device made. Now send me a postal and get my special offer to demonstrate the Aermore to you. Write me today. G. V. P. LANSING, Pres.

Aermore Mfg. Company

Dept. 603, 1536 Michigan Blvd. CHICAGO, U.S.A.



Patented Jan. 23, '12 Aug. 20, '12

(23A)

Aermore Mfg. Co. is a wide awake concern which is buying one by one as it can, the best ideas and inventions in the motor accessory line and manufacturing for the trade.

The Aermore Horn made this concern famous.

The Sabo Motorcycle Lock is now here.

It speaks for itself

The Shlosberg Muffler is coming.

It is what the Motor world is waiting.

We are determined that what we make shall be

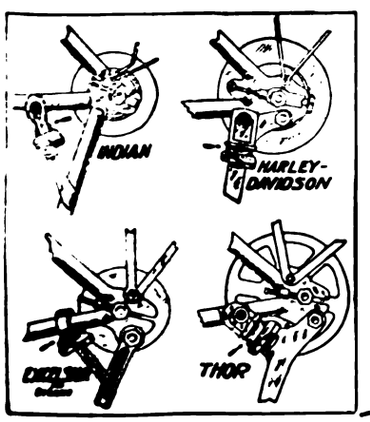
The best kind of the best of its kind

Stop Thief!—Police?? No a Sabo Lock

Keep your name off the list of "Stolen Motorcycles." Almost daily you see mention of another machine stolen. Laws against motorcycle thieves are weak and the only way to thoroughly protect yourself is by locking your machine so it cannot be moved except by YOU—and the only lock that prevents machine being moved and that cannot be picked, pried or cut, is the "SABO."

You can safely leave your motorcycle anywhere if you have a Sabo lock. It fits tight to the frame—cannot be pried off—there are no chains to be cut by pliers. You've got the goat of every motorcycling "Jimmy Valentine" that wants a ride on your gasoline. The lock is scarcely noticeable. The would-be thief will perhaps not see it; will walk up to the machine acting as if it were his own. But when he tries to move it from the stand he'll learn "Sabo's on the Job."

It's made of bronze metal neat, simple, strong—fits your smallest pocket—lasts forever. The stand is locked securely to the frame—the machine cannot be moved while the lock is there—no danger of breaking spokes or chain by forgetting the lock and pushing machine from stand. It is impossible to wheel or ride the machine away.



We prefer to have you buy from your dealer, but, if he does not have it, send this order blank with $1.25 and the lock will come back to you, satisfaction guaranteed, prepaid, by return mail.

JOBBERS

List this in your 1913 Catalog. Cuts, literature and advertising matter furnished. Write for proposition.

DEALERS

Stock this lock. Showing it means selling it. We refer inquiries, furnish cuts, literature, etc. Send for proposition.

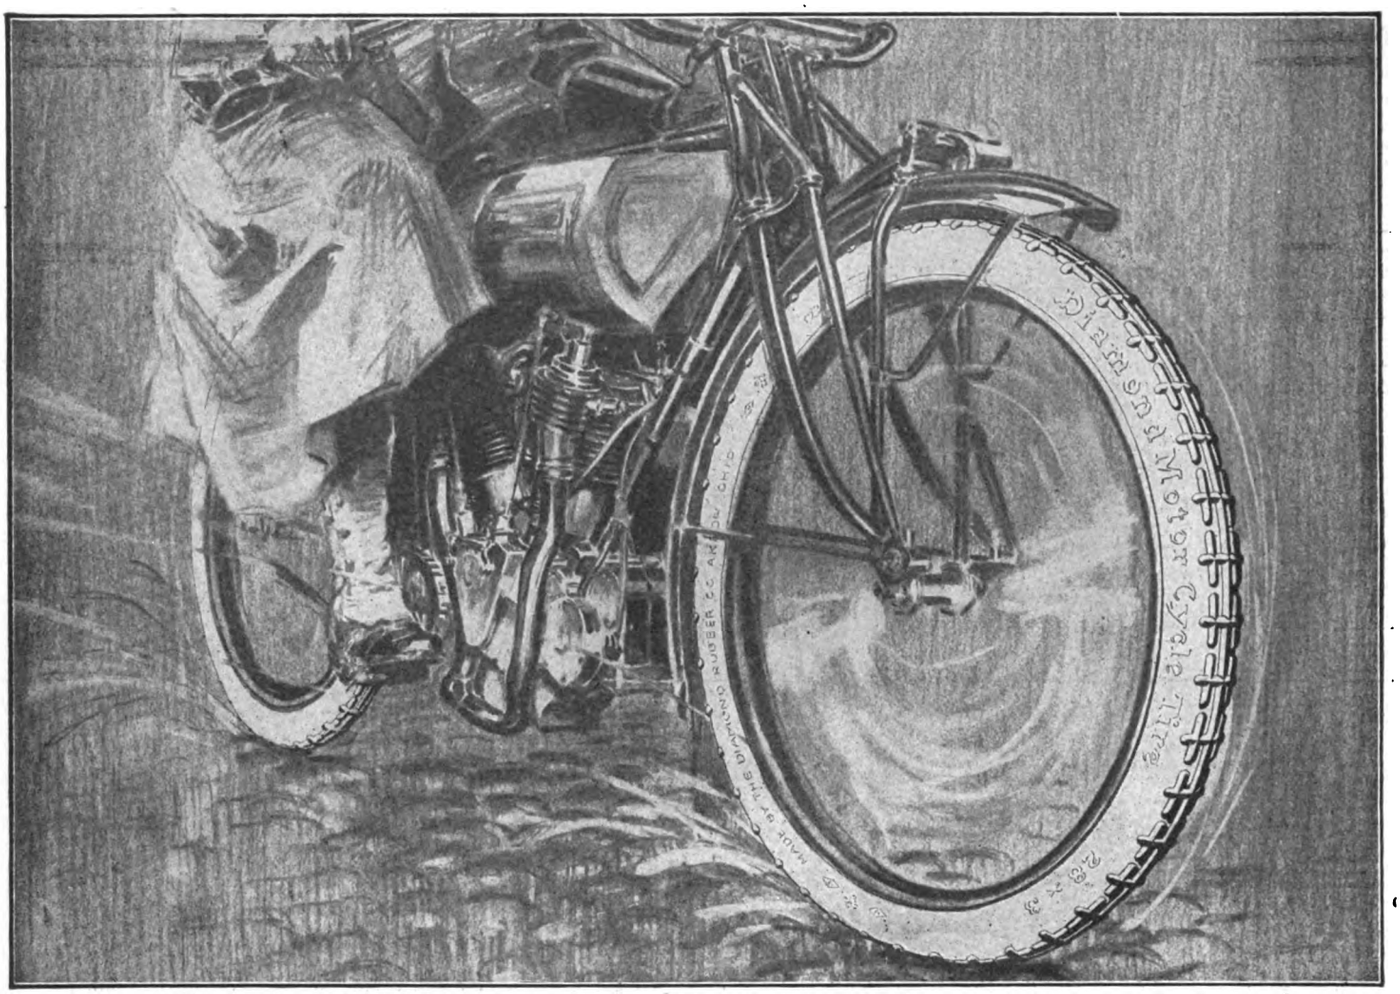
ANY CURBSTONE WILL STOP A SKID

But Only Diamond SAFETY TREAD (SQUEEGEE) TIRES WILL PREVENT ONE FROM STARTING



Diamond Safety Tread Motorcycle Tires obey your will. Your machine is always under your control—you go where you steer.

No matter how slippery and treacherous the pavement, they grip and hold. You ride in safety and you ride with pleasure on Diamond Safety Tread Tires.

But that's not all. There's real economy in Diamond Safety Tread Tires. Extra mileage is built into them and you get it. The mileage strip adds 20% to the wearing surface of the tread and assures you of a correspondingly high mileage and freedom from trouble.

Get this clearly in your mind—The Diamond Safety Tread Motorcycle Tire is not a tire that stops a skid, but prevents one from starting.

Diamond MOTORCYCLE TIRES

MADE OF

VITALIZED RUBBER

AND IN TWO FAMOUS TREADS

SAFETY and STUDDED
(SQUEEGEE)

BOTH WITH A DISTINCTIVE DIAMOND FEATURE

THE MILEAGE STRIP

Vitalized Rubber is pure young rubber combined—by a secret process known only to ourselves—with a toughening compound and the result is the toughest, most wear-resisting material every put into a motorcycle tire.

A brand new and exclusive Diamond feature is the mileage strip—extending all round the tire and adding 20% to the wearing surface of the tread. It not only means greater mileage, but it puts the side-slip bugaboo into the discard.

You have the choice of two treads—Safety (Squeegee) and Studded. The sharp, clear-cut studs on the new Diamond motorcycle tire, combined with the mileage strip, will hold your machine where you want it better than any other studded tread tire you can buy.

And, in addition to all these things, you get perfect 3-point rim contact—an assurance that the tire will sit perfectly in the rim. No unnatural distortion or bending of plies to break down the tire before it has given the mileage you pay for and should get.

UNIVERSAL SIDECARS

Unequalled for Quality and Elegance

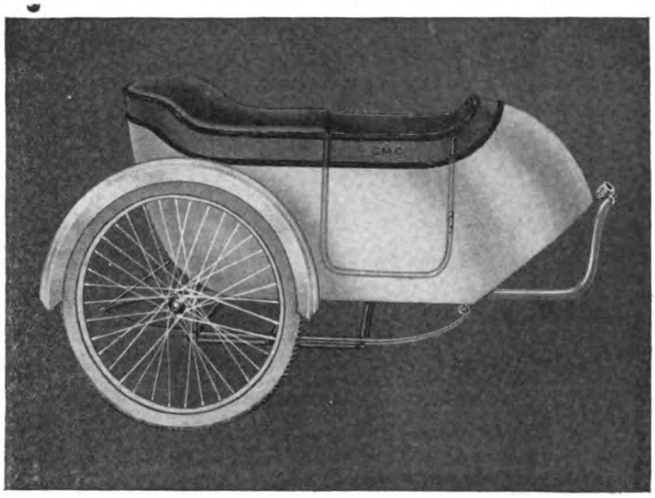
Built by practical people along mechanical lines for discriminating purchasers.

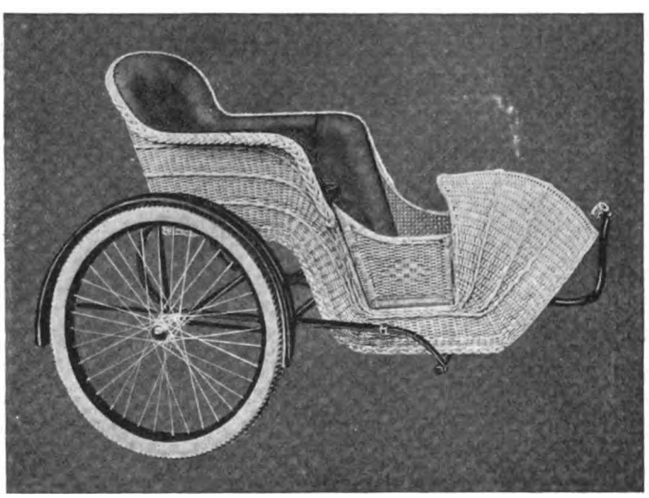
Quality is the keynote in the selection of materials, and with this is coupled master workmanship.

We submit for the approval of experienced riders and roadmen every detail of the construction of our cars.

"Auto-Car" Model

Aluminum Body (No. 16 Gauge Metal) Flush Sides, Automobile doors; ¾" elliptical springs, underslung frame, steel fittings, couplings quick-detachable. Luxuriously upholstered in true automobile fashion. Brass foot rail. Compartment under seat for storing light luggage or spares. Enamel or nickel trimmings. Finished in the best possible manner. Eclipse "Knock-out" Axle, Large Tires.





Model S. D.

Chassis of extra heavy cold drawn seamless tubing, especially annealed and reinforced at all joints. All fittings are of steel, carefully machined, pinned and braced.

Best imported reed body, frame of wood reinforced with steel, equipped with floor board which materially strengthens frame and prevents weaving. Heavily upholstered with best grade of imitation leather. All bodies equipped with tool and luggage receptacle under seat. Finished in Baronial stain, shellaced and varnished. Mounted on Chassis No. 2.

DELIVERY VAN

Made of sheet steel with body well reinforced with ash. Cover removable by withdrawing three pins. Body removable by unloosing four wing nuts, leaving flat platform suitable for bulky articles. Van mounted on flexible springs. Size of van 20 x 20 x 42. Maximum capacity 400 pounds. Frame constructed of heavy cold drawn seamless steel tubing, with crucible steel fittings throughout. Delivery Van is readily attachable to any motorcycle.

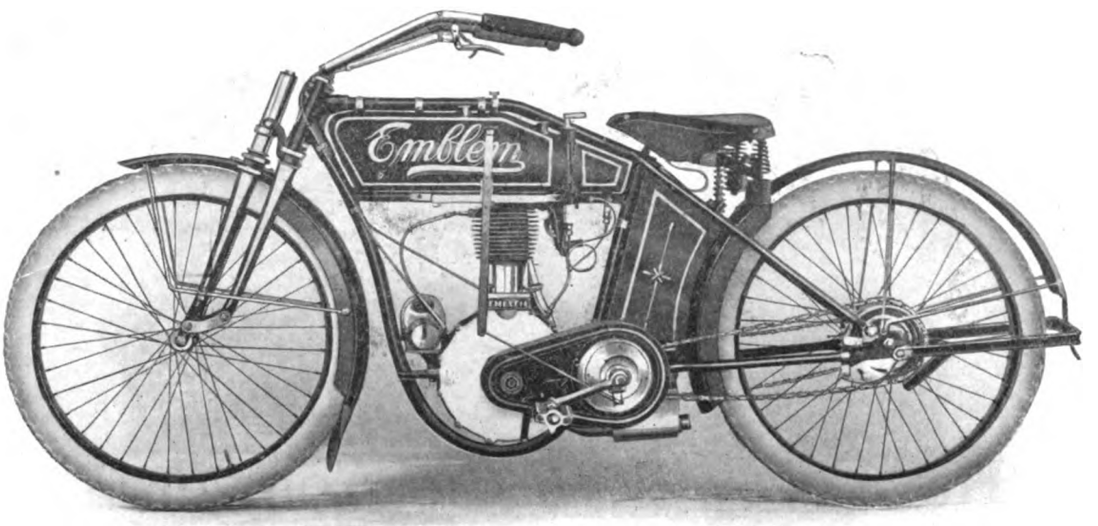
Emblem



EMBLEM single, 38.3 C. D. $175 and $200.

DEALERS—DO THESE EMBLEM PERFORMANCES MEAN ANYTHING TO YOU?

100 miles World's Record for a belt-driven, twin-cylinder motorcycle on a dirt track, won by George Evans on an EMBLEM at Columbus, September 17, 1911.

Chicago to New York record, over 1050 miles, established by M. E. Gale on an EMBLEM TWIN, August, 1910. Time, 35 hours. This record has never been broken.

The EMBLEM holds the 100 miles World's Record for a belt-driven single on a dirt track, won by L. S. Taylor, on an EMBLEM 4, September 10, 1910.

Not to mention that memorable ride by Mr. and Mrs. Gale from Angola to Los Angeles, Calif., last summer.

These performances are significant of many things—but the principal conclusion which every rider is bound to reach is that the EMBLEM is worth thinking of seriously.

You as a live dealer should make it your business to visit our space at the Chicago Motorcycle Show at the very first opportunity. Your territory may not yet be closed, but it won't remain open very long.

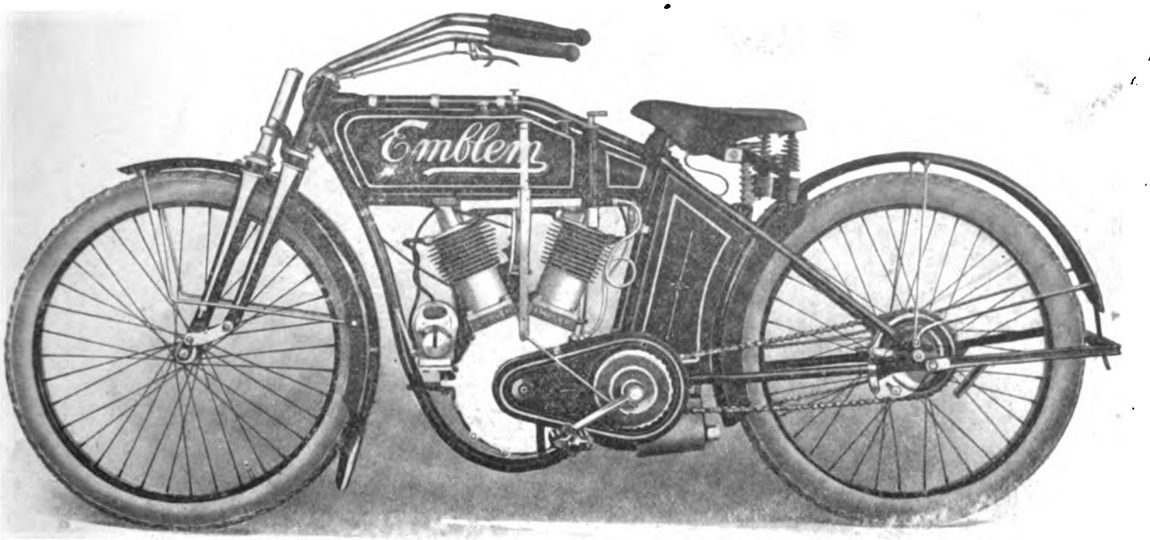
Emblem



EMBLEM TWIN, 67 C. D. CHAIN DRIVE. $250.
EMBLEM TWIN, 76.6 C. D. $300.

For quiet, efficient, powerful and vibrationless service, the EMBLEM TWIN has yet to be equalled. Since we began to make motorcycles, we have consistently profited by the teachings of experience of the preceding years.

Therefore, it is no wonder that the 1913 EMBLEM is a concrete assembly of every one of the former EMBLEMS' good points, with a total absence of faults.

The EMBLEM is comfortable—speedy as the wind—enduring as granite and as easily controlled as a bicycle.

To meet the demand for a motorcycle with more power than the rider ever dare use, we have constructed the EMBLEM TEN. Boys—it's a pippin! It has a tremendous lot of power and is the thing for sidecar trips 'cross country.

Eclipse Means Safety

THE unexpected emergencies often met with upon the road demand instant action. Insure your safety and the safety of others by equipping with "THE BRAKE YOU CAN TRUST," the ECLIPSE Perfection Multiple Disc Brake, the most positive motorcycle brake built. It combines the unerring accuracy of a watch with the grip of a bull dog.

Built as no other brake was ever built before, with more than 100 square inches of braking surface, the ECLIPSE is amply powerful to instantly annul the most terrific momentum and bring the machine to an abrupt halt.

The lubrication problem has been fully provided for in the ECLIPSE Perfection Multiple Disc Brake. The hub can be packed with hard oil at the beginning of the season and this supply will last the entire year. The bearings contain 3/8-inch balls.

For the sake of absolute safety, and the ease of mind which its assurance brings, you MUST demand the ECLIPSE.

Dealers should anticipate the tremendous demand for the ECLIPSE MULTIPLE DISC BRAKE, the only brake of its kind in the world —and stock heavily.

Our new handsome illustrated catalog will be forwarded on receipt of your name and address.

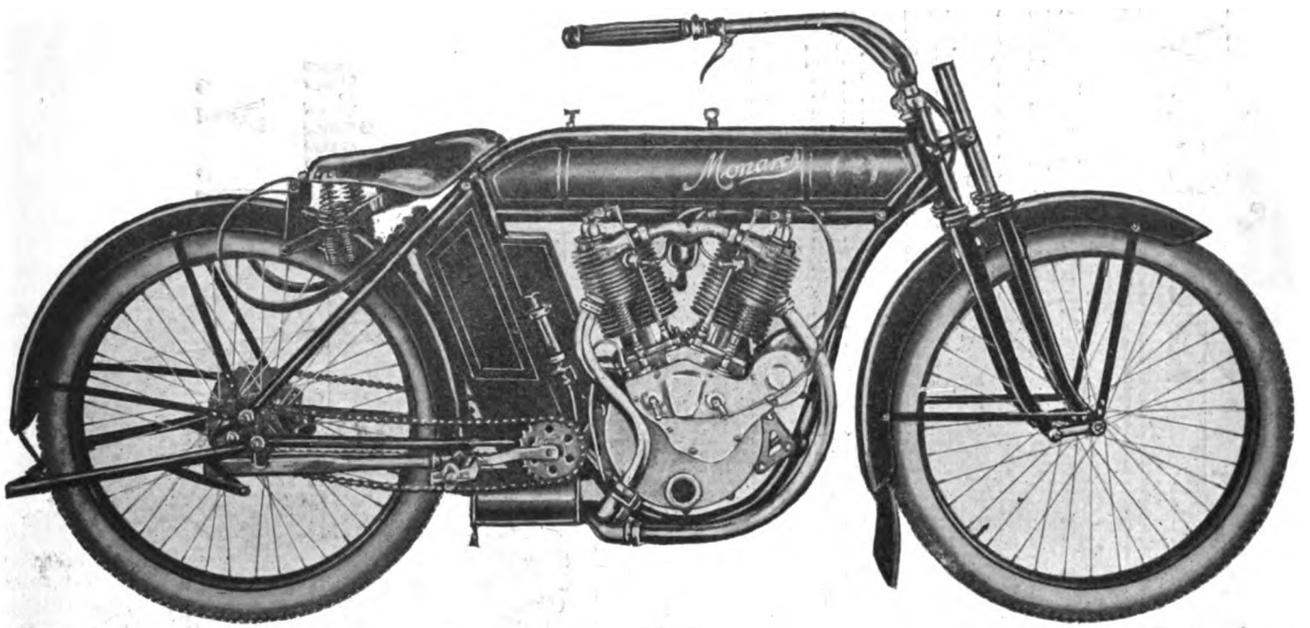
Monarch 1913 Announcement



Weight 250 lbs. **10 H. P.** **Price $275**

MONARCH Motorcycles are built by men who KNOW that they are building the BEST motorcycle; and not by men who guess and experiment at the expense of the motorcycle buying public.

The Big 5 single, tried and tested, is the most powerful and simple motorcycle on the market. Furnished in either chain or V-belt drive.

The 10 h. p twin, has all the tried and tested features of the Big 5, with the added power and speed of the second cylinder, and is the only machine for those who want the best that it is possible to build; a motorcycle that will take its rider anywhere and back, with no further attention than seeing that the tanks are filled, and that the motor gets gas and oil.

The MONARCH leaf spring seat suspension is the swellest and most easy riding contrivance ever invented. Like the most expensive cars, it suspends the rider stationary and allows the machine to take all the bumps without transmitting any to the man on the saddle. It is indeed a triumph by men who know how and are only willing to build the BEST.

The MONARCH agency for 1913 will be the most satisfactory proposition possible to obtain, for the Motorcycle dealer. Send for advance sheet No. 1 and testimonial book by MONARCH riders, that will convince anyone that our claims are founded on facts.

Single Cylinder—Weight 225 lbs. **5 H. P.** **Price $225**

We exhibit at the New York Show, Space No. 722. Chicago, Space No. 2.

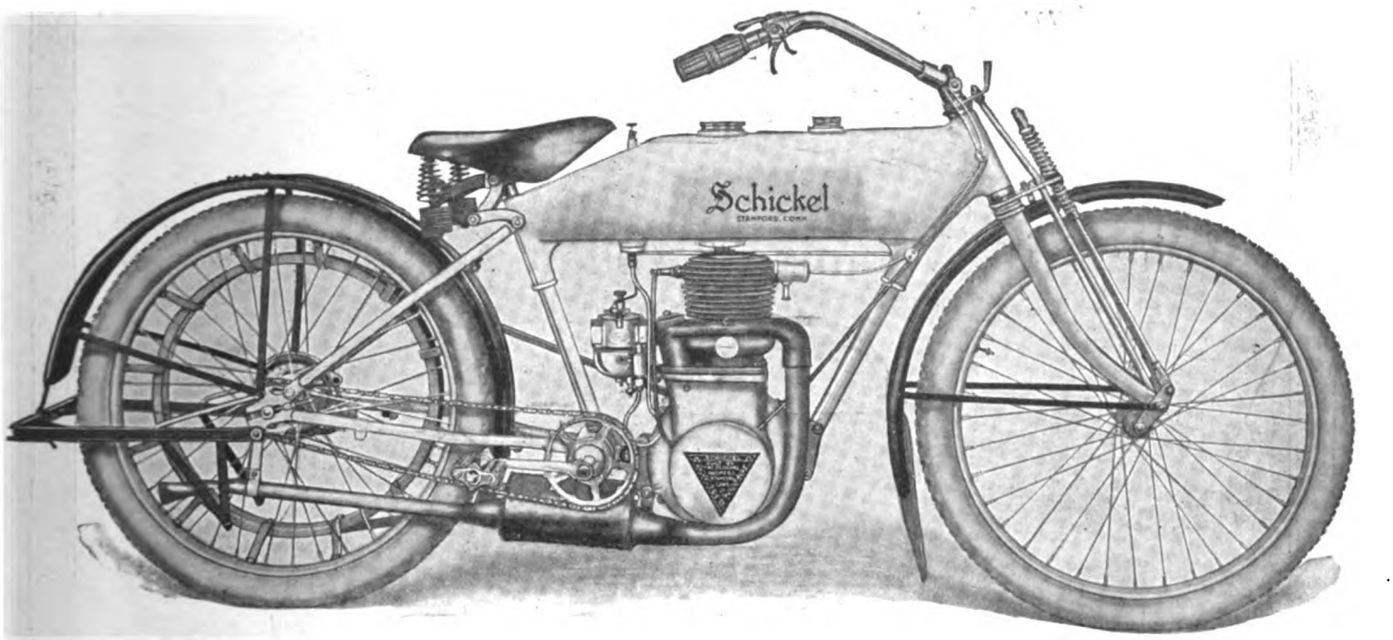
"THE BIG SIX"



The Verdict of the New York Show

Thousands upon thousands came to New York last week just to compare motorcycles at the show.

Each make attracted its share of inquiries. By direct comparison with other machines, it was generally conceded that the SCHICKEL excelled all others in these points:—

SIMPLICITY and NEATNESS OF DESIGN
CLEAN CUT and ATTRACTIVE LINES
RUGGED and SUBSTANTIAL CONSTRUCTION
QUALITY OF FINISH and WORKMANSHIP

Chicago alone offers such another opportunity to compare 1913 models.

See the SCHICKEL at the Chicago show and remember to compare it carefully with the other machines. Arrange for a demonstration on the street.

FOUR MODELS

Five Horse Power, Belt Drive, $225.
Five Horse Power, Chain Drive, $230.
SCHICKEL "BIG SIX," Belt Drive, $235.
SCHICKEL "BIG SIX," Chain Drive, $240.

Dealers should apply for our 1913 proposition without delay.

Some 1913 Michaelson Features

The Michaelson is the highly perfected product of an engineer whose time, brains and experience have been concentrated upon his work, and he has been the severest critic of his own product. As the designer of the Minneapolis, he built for himself the plinth of a good reputation. As the builder of the Michaelson, he is alone in his class. In its construction he has called to his aid the knowledge wrested from the sweating toil of years, the result of keen and conscientious study of road conditions and of the requirements of American riders. And now he presents the finished work for your approval. He knows the verdict beforehand.

Improved Two-Speed Gear, Extra Heavy.
Enclosed Clutch running in oil.
Clutch Control Lever on Handlebar

The Excelsior is the Magnet that Draws Big Business

Mr. Dealer, if you have our agency get busy and stock up now; if you haven't, act quick or it will be too late. The EXCELSIOR agency means BIG BUSINESS. It is no boastful assertion on our part when we claim that we have the STURDIEST, the FASTEST, the BEST BUILT, MOST COMFORTABLE and HANDSOMEST motorcycle built. We have a solid basis for our assertion, in that the EXCELSIOR with a motor of absolutely stock design and material, attained the long-looked for record of ONE HUNDRED MILES AN HOUR at Playa del Rey, Lee Humiston riding. Every record from one mile to 100 was broken. Consider this, Mr. Dealer. Consider the tremendous prestige this gives the EXCELSIOR agent. Consider the active publicity co-operation we are giving you. And last, but not least, consider the fact that the EXCELSIOR is a machine that needs practically no further selling argument than its RECORD and its APPEARANCE. Every Excelsior motorcycle as well as every agent ALWAYS MAKES GOOD.

So write us—better wire for our proposition.

HUMISTON'S TIME
One Mile in 36 seconds flat.

5 miles, 3.07⅗.	50 miles, 33.55⅕.
10 miles, 6.18.	75 miles, 50.55⅖.
20 miles, 13.29⅖.	100 miles, 68.01⅘.
25 miles, 16.54⅖.	

Average for 100 miles, 40⅘ seconds.

The ONLY Practical Light for Motorcycles

The rider who stays close at home for fear he will not get back before dark, misses half the joy of motorcycling.

Night riding in safety is made both possible and pleasant by the use of a large enough lamp and a RELIABLE source of brilliant light.

The Prest-O-Lite Gas Tank is the ONLY lighting equipment that meets these needs.

A gas generator, besides being a troublesome nuisance, is not reliable. Small generator lamps are too feeble.

Prest-O-Lite Motorcycle Gas Tank

Prest-O-Lite floods the road far ahead with brilliant light—shows up the bumps, ruts and puddles.

The flame neither flares up nor dies down—it is STEADY under all conditions. Turned on and off like a gas jet.

Exchange service wherever you may be is provided by over 20,000 dealers (motorcycle and automobile). We will arrange prompt service for anyone, anywhere.

The money you invest in the tank itself is not SPENT, because a genuine Prest-O-Lite Tank never gets to be second-hand, is always in demand, and is always a READY CASH ASSET.

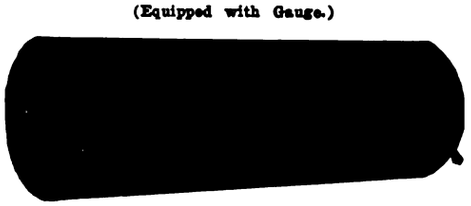
In fact, no rider can afford to be without this combined CONVENIENCE, PLEASURE and INSURANCE. One accident due to poor light might cost you more than years of Prest-O-Lite service.

You Can Easily Afford It

Prest-O-Lite service costs no more—usually costs less—than the carbide a generator consumes.

Price of Tank $10

(Equipped with Gauge.)



Dimensions: Length, 13¼ inches; diameter, 4 inches; weight, 8¼ pounds. 40 hours of light. Easily attached to any motorcycle.

Don't Let Anyone Cheat You With an Imitation

The genuine Prest-O-Lite Tank, when empty, can be immediately exchanged for a full one ANYWHERE and ALWAYS. Imitations cannot.

The dealer who slips on a counterfeit in exchange for your Prest-O-Lite Tank, gets the best of you. Don't let him!

We will not be responsible for short measure or poor gas in tanks not filled by us. Protect yourself by accepting only tanks filled by the Prest-O-Lite Company.

The Prest-O-Lite Co. 246 EAST SOUTH ST. Indianapolis, Indiana

CANADIAN GENERAL OFFICE AND FACTORY, MERRITTON, ONT.

Branch offices in all principal cities. Charging plants in all parts of the country. Extensive foreign service.

EXCHANGE AGENCIES EVERYWHERE.

Mr. Dealer: In this one ad alone there are plenty of reasons why you ought to be pushing the Prest-O-Lite Tank, for your customer's sake as well as your own.

And if you want to retain your customer's trade on other things, don't get him into the habit of going elsewhere for Prest-O-Lite exchanges.

Digitized by Google

The strongest guarantee a manufacturer can give

"STANDARD SEAMLESS STEEL TUBING." If a manufacturer's specifications contain these words, you need no further assurance of the machine's strength and durability. That is the strongest guarantee a manufacturer can give. The use of

STANDARD TUBING

in a machine's manufacture means that no road conditions can cause the frame of that motorcycle to break. It means that wherever you may ride, on the road or track, fast or slow, the frame of your motorcycle is immune from disaster.

More and more manufacturers are learning that a motorcycle, in order to be built right, must have a solid foundation. That no matter how powerful the motor, how perfect the machine's construction, insofar as propelling power is concerned, if the skeleton which holds the vital parts of the machine together and must bear the weight of the rider and the impact of the road—if this frame has any fundamental weakness, the machine **must** make way for others whose ability to stand up is assured by STANDARD SEAMLESS STEEL TUBING.

We make over 75% of all frame tubing, rims and mudguards used in the United States. And we feel justified in claiming that we are directly responsible for the reputation of American motorcycles as the strongest made.

WE ARE PREPARED TO TALK 1913-14 BUSINESS NOW.

ON this page are shown four views illustrative of current motoring developments in England, and also a photograph of the Laird Menteyne Degaille machine gun, mounted on a water-cooled Scott, which attracted much attention at the recent Olympia Show. This gun weighs only 16 pounds and is capable of firing 300 rounds a minute. The idea of mounting such a weapon on a speedy motorcycle is one of the latest and most interesting refinements of the military game abroad. Picture No. 1 shows Bidlake on the starting line at Brooklands; No. 2, Meredith at Sundown control in Hertz County A. C. Winter Trial; No. 3, a P. M. C. motorette passing through Stratford-on-Avon; No. 4, Buckley nursing his triumph through the Oxford hill climb.

41%

OF THE
MOTORCYCLES
EXHIBITED AT THE
NEW YORK SHOW WERE
EQUIPPED WITH

United States Tires

They Are Unquestionably

AMERICA'S PREDOMINANT TIRES

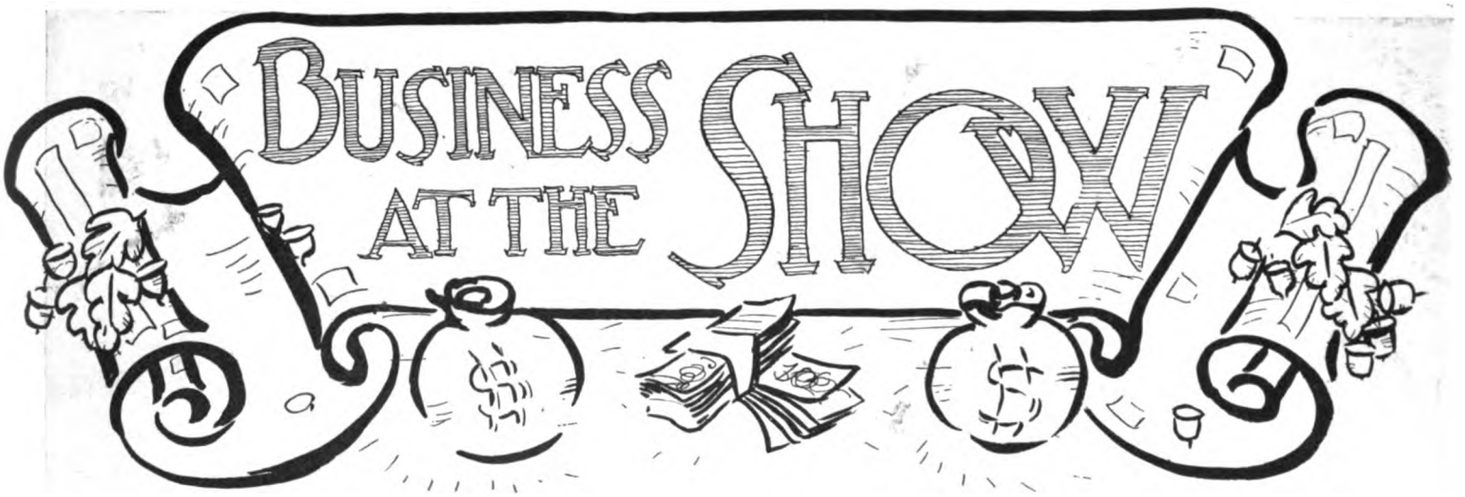
Digitized by Google

VISITORS who thronged the motorcycle section of the New York Show were unanimous in the opinion that the exhibit was a fitting climax to a year of unprecedented activity, and that its significance as a forerunner of the epochal season upon which the trade is entering could hardly be over-estimated. On all sides were evidences of progress in designing, the ingenuity of factory wizards being focused, as usual, upon comfort and dependability. Abreast of the motorcycles themselves were the sidecars, holding out hitherto unknown inducements in variety of design and equipment, and hedging the other displays on all sides was the choicest crop of accessories that has sprung so far from the fertile furrows of our manufacturing field. Enthusiasm reached its high-water mark for the motorcycle trade in America.

This was New York's verdict. Still, the metropolitan display, a highly creditable feature of the greatest motor show the city has known, will in all probability be eclipsed at Chicago within a fortnight. The motorcyclist at the New York exhibit profited richly by his manifestation of interest, but he has merely seen the ball of 1913 business started on its long roll.

More than three-score and ten manufacturers of machines and accessories will be represented at the Chicago Show, which will be the first exclusive national motorcycle exhibition held in the United States. From present indications, the Show will establish a precedent for both Chicago and New York.

Digitized by Google



PRESIDENT CHADEAYNE, of the Greyhound Motor Company, manufacturers of Universal sidecars, is one of the many who left the show entirely satisfied with the results of his week's work. "I admit," he said, "that I came here very much in doubt as to how a $125 sidecar would figure in this year's business. But it was not long before I became convinced that both the dealers and riders thoroughly believe in quality sidecars. Although our wicker cars are high class in every particular, the business done at the show satisfies me that the sales of our best car will exceed those of the other type fully three to one. I won't tell you how many sidecars we expect to sell this year, as the figures are almost beyond belief. I know that we can sell our entire output, and that the dealer or rider who expects spring delivery on Universals had better file his order right now."

W. W. Shoemaker, Jr., who is financially interested with Mr. Chadeayne in the manufacture of Universal sidecars, has no intention of leaving Graton & Knight, as was erroneously reported last week. Shoemaker has made an investment in Chadeayne's company because of his confidenct belief that 1913 will be a big year for sidecars, and because of his strong faith in the making-good qualities of the Universal. At the same time, Spartan belts will have no heartier spokesman in the country than the selfsame Shoemaker.

SALES MANAGER KIRK took home with him orders for six carloads of 82 Excelsiors each, all for shipment to the East. Just when Mr. Kirk was informing a representative of MOTORCYCLE ILLUSTRATED that he had already taken orders for four carloads Max Sladkin, of the Haverford Cycle Company, approached. "Make it one more carload, Kirk, for the Haverford Cycle Company," said Sladkin. A sixth carload will be necessary to complete a batch of smaller orders. In this connection Mr. Kirk stated that Excelsiors were now being shipped to the coast at the rate of a carload every ten days, and that the rate of shipment would soon be increased to a carload every week. Mr. Kirk estimates that during the past four years more than 6,000 Excelsior machines have been sold and are now in use in southern California alone.

FOR three days the writer tried his level best to have a word or two with E. J. Knight, Thor sales manager. It was only by actually stepping up between the energetic Westerner and a prospective agent that greetings could be exchanged with the Aurora man. To say that Knight was busy from Saturday to Saturday, even at lunch and dinner and, yes, breakfast, too, is putting it altogether too mildly. J. D. Hurley came along about the middle of the week, and soon convinced himself that the best thing he could do would be to arrange to increase the proposed output of 1913 models. At the Thor booth were also Edward Rischel and George Rheutan.

RALPH D. WEBSTER and Messrs. Ferguson and Biddle, a triumvirate of pioneers, seemed never to tire of talking the merits of Eclipse free engines, brakes, hubs, fork-heads, etc. It must have done their hearts good to note the extent to which Eclipse free engines were equipped to the machines on show. From Mr. Webster ye scribe learned that another test suit had been instituted by the Eclipse Company with a view to establishing its patent rights to license the manufacture of the Eclipse type of clutch, and to prevent infringement of the same.

ONE of the earliest arrivals was C. A. Persons, who superintended the installation of the Persons and Majestic exhibits. At the latter booth were also W. F. Hapgood, O. A. Jones and Thomas Crabtree. Persons reported his health to be fine, business even better, and the outlook simply great. W. E. Eccles, formerly sales manager for Persons, was busy all week assisting Chadeayne at the Greyhound booth, and also lining up matters for his own Universal Novelty Company.

GEORGE W. SHERMAN exhibited blue prints of a most promising planetary two-speed, in combination with a metal disc clutch, of his own invention. The device is designed for hub fitment, is perfectly lubricated and so controlled as to make it absolutely impossible to strip the gears, as the enmeshing of the gears automatically precedes the engagement of the clutch. A machine fitted with the Sherman two-speed and free engine is now on the way East for demonstration.

Sherman believes he has a find in an electric horn operated by the magneto. This warning signal is simplicity itself, and will commend itself to the discriminating rider by reason of its substantial construction and absolute reliability. It is manufactured by the Kosmack Electric Horn Company, 299 Ocean avenue, Jersey City, N. J.

WITH a keen eye for features out of the ordinary, F. L. Valiant, of the Miami Cycle and Manufacturing Company, introduced into the show a striking novelty in the form of a human "Yellow Jacket" who, with true Oriental disregard of the attention he attracted, sat for hours astride one of the machines of that designation. "Val" reported no little difficulty in persuading the "heathen Chinee" to become an actor, as the fellow much preferred to remain faithful to his dope pipe. But the persistent Merkelite finally landed his quarry, and the yellow one occupied the saddle for hours at a stretch, totally oblivious of his surroundings, and every bit as non-talkative as the piece of mechanism beneath him.

W. G. SCHACK, of the Emblem Manufacturing Company, philosophized thusly: "Let us wait and see how the separate show works out in Chicago. I am sure that the results will be most satisfactory. But, aside from that, we have to consider the fact that we have always had rather liberal treatment at the hands of the Automobile Board of Trade here in New York. As much could not be said of the Chicago Auto Show management. I am not sure that a separate show in New York, while it would no doubt attract the dealer, would bring a large enough attendance of the general public to make it fully worth while. I think that last year's arrangement—the first week in Madison Square Garden—was the best of all in New York. The machines were displayed to advantage, and thousands who knew little or nothing about the motorcycle were given an opportunity to be agreeably surprised. Their accidental acquaintanceship with the two-wheeler resulted, I believe, in many sales. The same applies, though to a lesser extent, to this show. On the other hand, a separate show in New York, with a low admission price, and the difference in the cost of space devoted to local publicity, may be worth a trial. It really isn't easy to decide the question."

H. N. KIRK, sales manager of the Excelsior Motor Manufacturing and Supply Company, expressed himself similarly. Mr. Kirk felt quite sure that the motorcycle would be missed from the commercial vehicle end of the Chicago show, in view of the manner in which the crowd bore towards the motorcycle section of the Chicago show last year. "This is easily the prettiest show," said Mr. Kirk, "we have ever had, and the attendance of dealers at our booth has broken all former New York records. And our dealers have done well here. The floor arrangement, with the exhibtion spaces so broken up by the

Digitized by Google

columns which support the building, is not what it should be. In Chicago, we shall have an open space, which will, of course, be much more impressive from an exhibition point of view. It remains to be seen whether it is best to make a direct appeal to those interested in motorcycles or, sandwiched in among automobiles and accessories, to have the opportunity of interesting hundreds who come to look at the big cars, and finish by purchasing motorcycles. The success of a separate show would undoubtedly depend, not only upon the publicity obtained in the city where the show was held, but as well throughout the entire section supposedly influenced by that show."

IT is estimated that about forty cycle and motorcycle jobbers were in attendance. In view of the fact that the total number of jobbers of this class in the entire country is approximately 125, the jobbing end of the trade may be regarded as having been very well represented.

L. B. LYMAN represented the motorcycle tire interests of the Diamond Rubber Company. There was shown for the first time, at the Diamond booth, the new Diamond motorcycle safety tread, constructed exactly the same as the similar cross-bar tread on Diamond and Goodrich automobile tires. Much favorable comment was elicited by the new Diamond studded tires, with their new tread and side strip stock and improved quality throughout. This tread has a center rib known as a "more mileage strip," and its makers say that it will increase the wearing qualities of the tire fully 20 per cent. The tire is made in standard sizes to fit the new rims. The construction of the 3-inch tires is unique in that it consists of four plies of fabric, with the addition of a breaker strip at the base of the tread, practically making five plies.

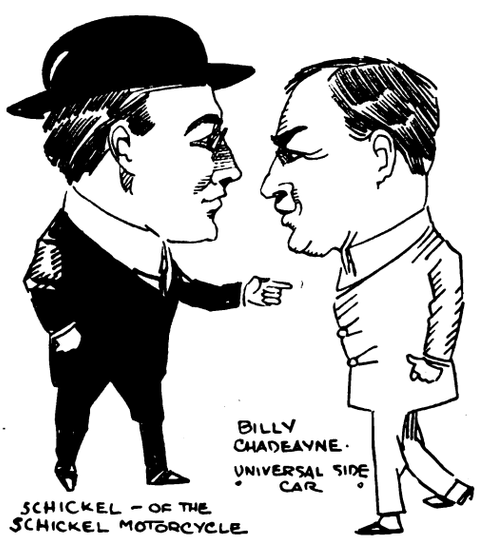
GENERAL C. EDGAR MURRAY gave a dinner in the Nimrod Room of the Hotel Astor on Monday to the branch managers of the Empire Tire Company, of Trenton. About thirty were present, and the dinner was followed by a business conference. Reports were rendered, and plans for the season discussed. The Empire Company's exhibit was at Madison Square Garden, with J. B. Frisbie, of the Cleveland branch, in charge, he was assisted by Branch Managers McKay, Todd, Shadburn, Weiland and Richison, of the Chicago, New York, Boston, Indianapolis and Philadelphia branches, respectively. The company has just gotten out a new tread of the non-skid type, and so designed and constructed as to serve equally well on smooth city pavements and rough country roads.

NO one, whether or not interested in motorcycles, passed the Henderson booth without stopping at least a moment to admire the graceful lines of the popular four-cylinder machines. President T. W. Henderson was assisted by R. W. Wheat, J. Bice and C. Goffner in pointing out to interested ones the many original features of the three 8-horsepower chain-driven models occupying the Henderson booth. The ladies were seen to cast longing glances at the tandem model, different from anything else on the market in that it is made a tandem before and not after it leaves the factory.

AN Indian motorcycle was recently stolen from the New York Telephone Company's garage, at 207 South State street, Syracuse, N. Y. The engine number is 80-D-262.

IN the matter of nifty printed matter, ye scribe feels safe in declaring that none "had it on" the Davis Sewing Machine Company or the Miami Cycle & Manufacturing Company. The catalogs and pamphlets issued by these two concerns are real works of art, and one feels a genuine pride in the trade when handling such fine examples of typographical beauty. Representing the Davis Sewing Machine Company were the Huffmans and Messrs. Howe and Hinds. Explaining the self-starter, two-speed gear and the other striking features of the 1913 Merkel were President K. R. Jacoby, Joe Merkel, F. L. Valiant, J. W. Ash, W. K. Aurandt C. A. Van Doren, C. R. Mershon, W. M. Sheets, H. C. Mapp, F. B. Widmayer and C. G. Lee.

D. R. NIVER, of the Aermore Manufacturing Company, announced the marketing of a new sidecar, described and illustrated elsewhere in this issue. The Aermore Company, whose musical exhaust horns and motorcycle locks have achieved popularity wherever motorcycles are used in this country, is planning an extensive motorcycle accessories cam-



paign, featured by its promising sidecar models. In addition to Mr. Niver, there were in attendance at the show in the interests of the Chicago concern Messrs G. V. P. Lansing, R. P. Lightfoot, H. B. Jones and G. V. Wilson.

ACCORDING to W. F. Hapgood, of the Majestic Manufacturing Company, makers of Majestic sidecars and delivery vans, two widely separated parts of the country have thus far afforded the best markets for commercial two-wheelers, viz., the Northern section of the Pacific coast, and the South near Chattanooga and Birmingham. Mr. Hapgood attributes this rather remarkable condition to the fact simply that the dealers doing business in the two mentioned districts go about the task of introducing motorcycle vans in an intelligent, business-like manner. There is no reason, in Mr. Hapgood's opinion, why dealers in all other parts of the country should not be equally successful. The Majestic van and pleasure sidecar are interchangeable, the same chassis being used on both. The change from one to the other can be made in fifteen or twenty minutes.

CORBIN-BROWN speedometers constituted the show equipment of eight different makes of machines.

TRADE LUNCHEON

At the Astor Thursday Noon—Best Attended of Any—Wainwright Toastmaster.

MORE than 150 trade folk enjoyed the hospitality of the Cycle Parts and Accessories Association at a luncheon at the Hotel Astor Thursday noon. Every seat in the banquet hall was occupied when, after the dessert, coffee and cigar portion of the gastronomic program had been reached, Toastmaster Wainwright introduced W. H. Crosby, of Buffalo. Mr. Crosby set an example of brevity to which all of the succeeding speakers faithfully adhered, and the oratory of the occasion was thus disposed of in record-breaking time.

Mr. Crosby stated that these affairs reminded him of an Old Home Week, in that they brought together every now and then scores of kindred good fellows of a trade whose "middle name" was good fellowship. Taking the cue from Mr. Crosby's suggestion, the toastmaster extended an invitation to all to attend the midsummer meeting in Atlantic City early in August next.

Robert Leacock, of St. Louis, spoke for the jobbers, and "got away" with it in about four sentences and thirty seconds by the clock. He insinuated that he didn't know why he had been called upon, unless for the fact that he was far away from home, and had no friends here. That the reorganized jobbers' association would now rapidly forge ahead was his confident belief, he concluded.

Leacock's views were echoed by John Henry, of the Vim Cycle & Hardware Company, of Buffalo. Mr. Henry called the attention of his audience to the fact that the Jobbers' Association had just adopted a resolution denouncing the issuance of syndicate catalogs. This welcome news was enthusiastically received.

Secretary Hardin, of the M. M. A., "handed it over to Coffman," and the latter made a hit with his enthusiastic recommendation of the Chicago Show. "If you'll all come," he urged, "and pay your quarter, it will help to beat the band."

Arrangements for the luncheon were made by Dave Smith and Charlie Moorehouse, of the Standard Company. "Uncle Dave," at the luncheon, at the show, everywhere, in fact, proved himself, as he has for a generation in the past and is likely to for another generation, a prince of good fellows. But why mention the fact? Everybody knows it only too well.

ARTHUR DAVIDSON received a letter from the factory stating that the number of deliveries of 1913 Harley-Davidsons had already reached the 4,000 mark, about double the total which had been attained this time last year.

A TELEGRAM was received at the Consolidated booth from Jesse Campbell, who is now covering the far Northwestern corner of the country, that he had just closed a big contract with E. E. Peterson, in Tacoma, Wash.

BIG RACE SUGGESTED.

INTEREST has been aroused in the proposal of Don Lee, a motorcycle dealer of Los Angeles, Cal., to hold a road race from Los Angeles to San Francisco. The date suggested for the run is July 4. Lee has offered to contribute a good round sum toward a purse.

OFFICERS RETAINED

Cycle Parts and Accessories Association Re-elects Staff at Busy Session During New York Show Week.

PRESIDENT L. M. WAINWRIGHT, Vice-president David B. Smith, and Treasurer W. J. Surre, of the Cycle Parts and Accessories Association, were re-elected at the meeting held in the Hotel Astor, New York City, on January 16. C. E. Morehouse, of the Standard Company, was chosen to succeed Louis Schwab as secretary, Mr. Schwab having announced his disinclination to serve for another term.

With a view to broadening the scope of the organization steps were taken to revise the constitution and by-laws, and President Wainwright was authorized to appoint a special committee whose duty it will be to interest motorcycle manufacturers in the association. Vice-president David Smith, Treasurer Surre, and DeWitt Page were named as a committee to make arrangements for the annual convention of the Cycle Trades Industries. The assembly will be held in Atlantic City early in August.

President A. B. Coffman, of the Motorcycle Manufacturers' Association, discussed the work and plans of the Dealers' Information Bureau in an interesting address before the Cycle Parts and Accessories members, and called attention to the fact that the latter can advance the interests of the bureau materially by making the most of their opportunities for co-operation.

JOBBERS' MEETING

MOST important among the actions taken by the Jobbers Association at its mid-winter session last week was the passage of a resolution expressing the organization's disapproval of the issuance of so-called syndicate catalogs, and calling upon the manufacturers and dealers to decline to patronize them. This action on the part of the Jobbers' Association naturally meets with the heartiest commendation of those who will be benefited by a diminution of this trade evil.

The meeting adopted a constitution and by-laws, and voted in favor of incorporating the association in Indianapolis, under the laws of the State of Indiana.

President F. I. Willis, of Indianapolis, occupied the chair.

ROCHOW-ROSQUIST

AMONG those who were the recipients of particular congratulations was A. Rochow, of F. A. Baker & Co. On December 28, at Richmond Hill, Mr. Rochow brought to a close the days of his bachelorhood. Mrs. Rochow was formerly Miss Magda M. Rosquist.

MORE BOSCH SERVICE.

THE lack of sufficient show space having induced them to forego their usual part in the automobile Shows, the Bosch Magneto Company devised a new plan to assist the exhibiting makers of cars and motorcycles using Bosch magnetos. Heretofore the Bosch stands have been open particularly for the convenience of exhibitors, who referred their customers, actual or prospective, to the engineers in charge for detailed advice and demonstration. This year an extensive exhibit of all forms of Bosch instruments was held, during Show Week, at the office of the company, Forty-sixth street, west of Broadway, and the technical men were on hand there.

In addition, 146,000 special booklets, each descriptive of the Bosch magneto used by the manufacturer on his product, were prepared for the car and motorcycle manufacturers to give those who visit the exhibits in search of ignition advice and construction. The books called for the preparation of considerable type matter and the project was made possible by the fact that the majority of manufacturers employ Bosch ignition.

NEXT YEAR'S SHOW . . . .

AS in former years, a great variety of opinions was expressed in reference to next year's program in New York. Exhibitors were all in agreement, though, on the point that the measure of success of the separate show in Chicago would, to a large extent, determine the Manufacturers' Association's decision in regard to the 1914 show in New York. Confidence in the outcome of the Chicago exhibition was general, and not a few seemed to feel that the Chicago precedent would be adopted in New York, if not next year, then at least in the near future.

MANY DEALERS THERE.

IT was a first-class show with reference to the number of dealers in attendance. There seemed to be twice as many as there were in Gotham during the week of the 1912 show. They came from as far south as Birmingham and Atlanta, and from all parts of New England, New York State and the Middle West. . . .

R-S STOLEN.

A READING-STANDARD twin 1912 model, finished in green, was stolen Tuesday, in New York City, from T. Beyer, 655 Lenox avenue. Mr. Beyer offers a reward for the recovery of the machine.

B. C. MOSS, of 3308 Eighth street, Meridan, has been appointed State F. A. M. Commissioner of Mississippi by President Patterson.

MANUFACTURERS MEET

Action Looking to Recovery of Excess Freight Charges Features New York Session of M. M. A.

MEMBERS of the Motorcycle Manufacturers' Association gave special attention to the freight rates situation at their mid-winter meeting held in the Hotel Breslin, New York City, January 15, but time was found for detailed consideration of several other matters with which manufacturers are vitally concerned. In connection with the freight rates discussion three new members were added to the traffic committee, Messrs. Duggan (Hendee Mfg. Company), Murray (Harley-Davidson Motor Co), and Brown (Miami Cycle and Mfg. Co.). The committee has made arrangements to meet in Chicago, February 4, when a plan will be perfected to assist dealers in the recovering excess freight charges they have paid on motorcycles in Western classification territory. This action follows the recent decision of the Interstate Commerce Commission that the railroads were not justified in collecting the full rates that have been imposed.

A report submitted by the committee on tariff was to the effect that a protest has been filed with the United States Senate against the recently proposed reduction in the tariff on motorcycles. The committee is made up of W. G. Schack, Col. George Pope and David B. Smith. The committee in charge of the organization's plans to have an effective display of motorcycles at the Panama-Pacific Exposition at San Francisco in 1915, reported that it has communicated with United States Commissioner Baker, and that official information as to what steps will be necessary to provide for the display is now being awaited.

An interesting report was submitted relative to the results that have been obtained by the Dealers' Information Bureau. It was shown that the bureau has 1,300 dealers on its list, and that there has been a rapid and consistent increase in the interest manifested in the efforts of the bureau officials.

Following is a list of those who were in attendance at the meeting: President A. B. Coffman, L. D. Hardin (Pope Mfg. Co.), E. J. Knight (Aurora Automatic Machinery Co.), R. L. Hinds (Consolidated Mfg. Co.), W. G. Schack (Emblem), H. N. Kirk (Excelsior), Arthur Davidson (Harley-Davidson Motor Co.), Frank J. Weschler (Hendee Mfg. Co.), A. S. Deyscher (Reading Standard Co.), T. W. Henderson (Henderson Motor Co.), F. L. Valiant (Miami Cycle & Mfg. Co.), W. A. Johnson (Pierce Cycle Co.), N. F. Schickel (Schickel Motor Co.).

Applications for membership were received from the Excelsior Cycle Co. and the Allied Motors Corporation, of Chicago, and both firms were taken under the association's banner. The next meeting of the manufacturers will be held at the New Southern Hotel, in Chicago, at 10 a. m., on February 5.

HENDERSON ADDITION

ADDITIONAL evidence of Henderson activity is contained in the announcement that the Detroit firm has arranged for the erection of a plant extension 90 by 75 feet. The new structure, affording 12,000 square feet of space, will be devoted to the brazing and shipping departments. This extension makes it possible for the Henderson folks to install twenty-five more machine tools, and facilitate the output proportionately.

YELLOW JACKET ARRIVES.

BY way of celebrating the arrival of Mademoiselle Yellow Jacket, F. J. Barr, of Davenport, distributor for the Flying Merkel in Iowa, entertained his friends and patrons in his salesrooms. Prior to the entertainment Mr. Barr started the new mount at the bottom of a 37 1/3 grade and had no difficulty in reaching the top. Mr. Barr has just returned from a 700-mile trip through Iowa which he made on the 1913 Merkel.

A CORRECTION.

ON page 48 of the January 9 issue, in an advertisement of the Twentieth Century Manufacturing Company, it was erroneously stated that the back of the bicycle model No. 2 opens to permit cleaning of the lens. This applies instead to the motorcycle searchlight No. 102, the opening of the back being only one of the attractive features which characterize the 1913 Twentieth Century searchlights.

SOCIAL AND ELECTION

AT the semi-annual meeting of the San Jose Motorcycle Club, recently held at the club rooms, officers for the ensuing six months were elected. There was a good attendance of members, and at the close of the business session refreshments were served and a delightful social hour was enjoyed. Following are the officers elected: President, H. Sofge; vice-president, J. Pogue; secretary and treasurer, J. C. Harris; captain, H. F. Manchester; first lieutenant, E. House, and second lieutenant, W. Herman. D. Dangerfield and C. D. Reade were named members of the executive board.

Makers of Show History

PERSONAL SIDELIGHTS ON THE MEN WHO HANDLE THE MOTORCYCLE & ALLIED EXHIBITS

BIG CHIEF THERE

GEORGE M. HENDEE, the very picture of good health and the personification of a wonderful dream realized, attended the trade luncheon at the Astor Thursday noon. Mr. Hendee, though modest almost to a fault, impresses one immediately as a fine type of successful manufacturer and business executive. When in conversation with President Hawthorne, of the Hawthorne Manufacturing Company, makers of Old Sol lamps, the latter recalled having recently seen a photograph of the Indian chief in racing togs astride a bicycle. Nor is it so very long ago that the picture referred to was taken. Since that time Mr. Hendee has organized and developed a manufacturing business worth several millions, and is at the head of a factory having a daily capacity of more than 200 motorcycles, which are sold and ridden in all parts of the world. The story of these few years is nothing less than a business romance of a simply astounding character, supplying one more proof of the adage that truth is stranger than fiction.

THE R.-S. STAFF

DEMONSTRATING the many merits of the green and brown beauties which decorated the Reading Standard booth were Engineer Franklin Dolt, G. E. Atkins, William R. Spear, Jene Coughlin, of the Riverside Garage here, and Harold King. President A. S. Deysher was also on hand as was W. F. Remppis, though for the first time in many years not actively engaged in signing up R-S agencies. There is no gainsaying the fact that the R-S 1913 models carry conviction on the score of their combining, to fine advantage, elegance in appearance with sturdiness and power.

GALE'S EMBLEM

ASSISTING W. G. Shack at the Emblem booth were H. R. Lark, W. Hudson, H. F. Seamark and M. E. Gale. The latter's transcontinental travel-stained machine, with its mud-plow, luggage carriers and other equipment, told the story of Emblem sturdiness more effectively than the best line of arguments possibly could. Mrs. Shack was also a much interested visitor.

G. & K. ET ALS

SPARTAN belts, of Grafton & Knight manufacture, were boosted by Superintendent F. H. Willard and Motorcycle Sales Manager W. W. Shoemaker, Jr. President A. B. Coffman, of the F. A. M., represented the American Wood Rim Company, and the Bear Motorcycle Chain Tool Company. H. Guernsey Van Ripèr, of Indianapolis, F. A. M. publicity man, spent a day or so at the Show stocking up facts and enthusiasm for his widely-read weekly bulletins. Sales manager Williams represented the Mott Wheel Works, and "Lon" Sproker, Kokomo tires.

SCHICKEL DEMONSTRATIONS.

NOEBERT H. SCHICKEL, G. Benziger, William C. Schickel, Leo J. Carling, Howard Skinner and Clifford Wright demonstrated to many deeply interested folk the only two-cycle models on exhibition. As at the Chicago Show last year, a demonstrating model was kept in almost constant service on the streets in the vicinity of Grand Central Palace, and attracted much favorable comment from the curb on account of its smooth-running qualities and its absolute quiet.

H. T. AND MRS. ROBERTS

H. T. ROBERTS, manufacturers' agent, was accompanied by Mrs. Roberts. At the expense of making a personal remark, a practice which Mrs. Roberts informed the writer was not good form, the fact that Mrs. Roberts easily proved herself the most charming woman ever attending the New York Show, simply cannot be denied. Mrs. Roberts arrived in New York in advance of the opening of the Show, and did not leave until Thursday night. Roberts showed an extensive line of standard accessories, and lined up a number of Eastern jobbers for healthy-looking orders. The leading motorcycle manufacturers' agent in the country, in position as he is to accurately gauge the trade situation, did not hesitate to predict a 1913 business of simply remarkable proportions.

FOUR MORE EXHIBITS

W. T. MARSH, George P. Jenkins and Henry Heyer, representing the American Motor Company, demonstrated the M. M. and Eagle. Nearby, J. J. McGurkin and M. F. Hansley, Jr., showed, and what is more, sold Simplex sidecars. Across the hall, under the direction of Percy B. Pierce, W. A. Johnson and S. E. Weiner, the Pierce single and four were on display. Further down the line, Jimmy Baxter gave vent to a lot of genuine Scotch enthusiasm over the fact that he had just closed with a Detroit manufacturer for 200 Baxter sidecars. As Baxter put it, referring to the big increase in the number of firms turning out sidecars: "Let 'em come; it will take a score of us to supply the demand."

AT THE POPE STAND

AN interesting lay-out of motors and parts added to the attractiveness of the Pope exhibit, which was effectively demonstrated by Special Representative B. L. Edgar, L. C. Hardin, Assistant Manager Starr, Superintendent Hinsman, H. A. Lienhardt, R. H. Smith, of the traveling staff; Fred Mercer, K. C. Conklin, C. Burbank, F. R. Carpenter, C. H. Clark, G. A. Carey, H. C. Lyman, E. G. Ryan and a number of the company's agents in the New York district.

GOODYEAR BANQUET

S. A. FALOR, of the busy Goodyear staff, came early upon the scene. Accompanying him were his brother C. E. Falor, Chicago branch manager, W. J. Cameron, assistant factory superintendent, William Stephens and Arthur Chapple, of the travelling staff. This quintet and some five score other Goodyear folk enjoyed a banquet at the Astor, Tuesday night. President F. A. Seiberling and Secretary G. L. Stadelman honored the occasion with their presence.

A LIVE ONE

THERE are few men in the trade who have such accurate technical knowledge with clever salesmanship in such happy proportions as does George Squier, of the Consolidated Manufacturing Company. George is too well known in the trade to make this statement really necessary. With the sunny disposition and the optimistic outlook of a boy, there is associated in his compelling personality the valuable knowledge which results only from actual experience and in business, and it is not at all stretching a point to say that Squier has had no experience from which he has not derived some benefit. There are few in the trade who have done more to help dealers by pointing out to them the right and the wrong ways of conducting an agency. Squier's advice is always practical; he knows whereof he speaks, and an increased sale of Yales will always be assured where he does the missionary work.

DINED THE PRESS.

AT the invitation of "Long John" O'Connor, of the publicity department of the Hendee Manufacturing Company, representatives of the three trade papers enjoyed a fine dinner at Shanley's Thursday evening. Kelsey, Sullivan and Sauer were the entertained, their entertainers being the aforesaid "Long John," Vice-President Oscar Hedstrom and Greater New York Distributor F. A. Baker. These six spent happily, and soberly withal, several jolly hours.

Digitized by Google

COFFMAN GIVES LUNCHEON

A LUNCHEON was given at the Breslin Friday by A. B. Coffman to those of his trade in attendance at the show. Coffman reported progress with a capital "P," especially in his automobile lines. It seemed strange to have the Toledoan's attention shared by other than strictly motorcycle lines, in view of his previous intimate and active identification with the motorcycle business. But he seemed happy just the same. For the information of those who do not know, A. B. Coffman can always be reached by addressing him at 6 Glenwood Court, Toledo, O.

THE YALESIONS

D. J. WELSH, who was on hand early at the Yale booth, found it necessary to return to Toledo on account of the illness of his wife. Consolidated interests were energetically conserved, however, by Bob Hinds, George H. Squier, Paul J. Bailey, Frank Cornish and a number of Eastern dealers. Goldsmith, who handles the Yale in the Metropolitan district, made the first sale at the Show at 2 o'clock Saturday afternoon.

PAYING THE DINNER BILL

TOM HENDERSON, of the Henderson Motorcycle Company, adopts a rather interesting method of "matching" one for a meal. He pulls from his husky wallet a $10 bill; if you have the equivalent you do likewise. The man holding the best poker hand, according to the serial number of the two bills, eats at the expense of the other fellow. Henderson tried it out on a representative of this publication. He held five 3's, and the MOTORCYCLE ILLUSTRATED man six of them. Henderson paid the bill.

AT THE WIGWAM

AS is usually the case at the shows, demonstrators aplenty were always ready to satisfy inquiring dealers and others regarding the numerous big features of the 1913 Indians, which was the first-installed exhibit. There were Oscar Hedstrom, F. J. Weschler, Edward Buffum, Edward Jackson, John J. O'Connor, Charlie Gustafson, F. L. Hunt, J. H. O'Brien, August Zimmerman, T. K. Hastings, Don McDow and scores of neighborhood Indian agents.

MESINGER'S ENTERPRISE

H. MESINGER, of the H. & F. Mesinger Manufacturing Company, was the recipient of hearty congratulations upon his enterprise as shown in his handsome eight-color lithographic advertisement in the New York Show Forecast Number of MOTORCYCLE ILLUSTRATED. Mr. Mesinger reported his new factory was being operated to capacity, and that his output of 1913 saddles would easily reach double the total attained by Mesinger saddles in 1912.

WESTERN SALES MANAGER

IT was announced at the Show that W. J. Zucker, formerly factory representative for the Stewart & Clark Mfg. Company, will hereafter manage the company's western sales, with office at the company's branch on Diversey Boulevard, Chicago.

SALT LAKE PROGRESS.

AT a recent meeting of the City Commissioners of Salt Lake City, Utah, an appropriation was made for the purchase of two motorcycles for official service.

BOSCH BOOKLET

A HANDY little booklet, explaining the Bosch ignition system, is issued by the Bosch Magneto Company, for distribution by manufacturers who equip their machines with the Bosch. Makers of Bosch-fitted motorcycles will do the users of their machines a distinct service by sending out to each of them, with their other tool-box literature, one of these pamphlets, which can be had from the Bosch Company in quantities to meet requirements.

FOR UNITED STATES TIRES.

WELCH, Webb, Alexander and others were constantly on the job in both places of exhibition in behalf of United States tires. These tire folk are a jolly lot, measured by any standard, and one might have fine-tooth-combed both Garden and Palace in vain to find a happier bunch than the United States tire representatives.

TWENTIETH CENTURY BOOSTERS

ALTHOUGH its line of lamps was not exhibited at the Show, the Twentieth Century Manufacturing Company, of Newark, N. J., was well represented there by Manager C. J. Henderson and Charles B. Brooks, and orders are reported to have been plentiful. The long-range, direct-ray feature of the Twentieth Century lamps has made a strong appeal to motorcyclists.

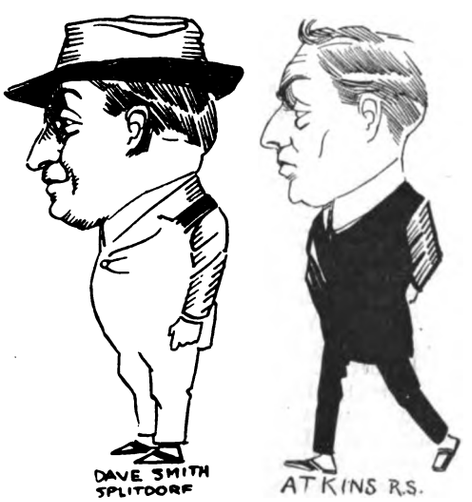
FOR THE MILWAUKEE PRODUCT.

SHOWING the "Sturdy Grey Fellows," of Harley-Davidson manufacture, there were, first and foremost, Sales Manager Arthur Davidson, also T. A. Miller, W. J. Rule, W. T. Walker, Joseph Buckingham, Bob Brozenor, C. B. Vaughan, and numerous other enthusiastic Harley-Davidson tradesmen.

BUFFUM SATISFIED.

EDWARD BUFFUM, of the Hendee staff, took the Show and its trappings, as is his wont, quite as a matter of course. It takes plenty to arouse enthusiasm in Buffum, but it was plain that the 1913 Indian had produced that effect upon him.

F. W. SPACKE, Edward Spacke and F. S. Lawrie, of the F. W. Spacke Machine Company, fondly showed a brand new twin motor, which is described in detail on another page of this issue of MOTORCYCLE ILLUSTRATED.



MORE FIGURES

ADVERTISING Manager Al Bartsch, of the Bosch Magneto Co., always statistical and keen for figures, reports that his survey of the Show disclosed 77 per cent. of the exhibited motorcycles fitted with Bosch ignition. This is an increase of eight per cent. over the showing of last year, in spite of greatly increased competition. The 77 per cent. figure applies to 63 machines that were on show. Mr. Bartsch also calls attention to the fact that all the Show machines were magneto-equipped; three or four years ago batteries were found on nearly 50 per cent. of the motorcycles displayed.

HERZ AND EXCELSIOR.

REPRESENTING the Herz Magneto Company were E. J. Shirley and L. Kimsteer. Across the hall, at the booth of the Excelsior Motor & Manufacturing Company, there held forth H. N. Kirk, Frank Schwinn, Max Sladkin, J. W. Grady, John Henry, Stanley T. Kellogg, W. F. Carroll, and, in quick succession, a score or more of Eastern dealers who, it should be added, make the most of their opportunities.

CONTINENTAL ERIE.

PRESIDENT T. R. PALMER, "Bill" Surre, Walter Tullis, E. H. Strickland, W. M. Johnston and Miss M. A. Casey, enthusiastically represented the Continental Rubber Works, of Erie, Pa. Nor must Mrs. Strickland be overlooked, as she added materially to the gayety of divers happy after-the-show supper parties.

ALWAYS HAPPY.

HARRY HOWE, J. W. Grady's rotund salesman, was much in evidence with the stout man's proverbially genial smile and hearty handshake.

"OLD SOL."

THOMAS N. DUNHAM showed a line of Old Sol lamps the completeness of which is nothing less than remarkable. E. A. Hawthorne, president of the Hawthorne Manufacturing Company, makers of the Old Sol, also attended the Show and the trade luncheon at the Astor Thursday.

FROM OWEGO, N. Y.

FOR the Ives Motorcycle Corporation, showing both single and twin models, there were on hand W. H. Ives, L. Howland, Jr., G. W. Sayer and Frank D. Carroll.

STANDARD WELDING COMPANY was particularly well represented. In the vicinity of its handsome booth in the Palace could be found at intervals J. C. Manternach, T. W. Guthrie, Fred Wilhelmy, B. G. L. Dodge, S. W. Hartley and the irrepressible Bert Quayle.

JACK FULTON represented the Fulton-McCutchan Company, of Chicago, manufacturers of the "Speedo" economizer and carbonizer.

MESSRS. DOWSE, Githens and Hamilton were on hand most of the week, representing the Federal Rubber Manufacturing Company, makers of Federal "Extra Service" tires.

W. D. ANDREWS, of Buffalo, N. Y., corralled a number of sales for his new tank-cap, gas and oil gun and the Andrews' auxiliary air valve.

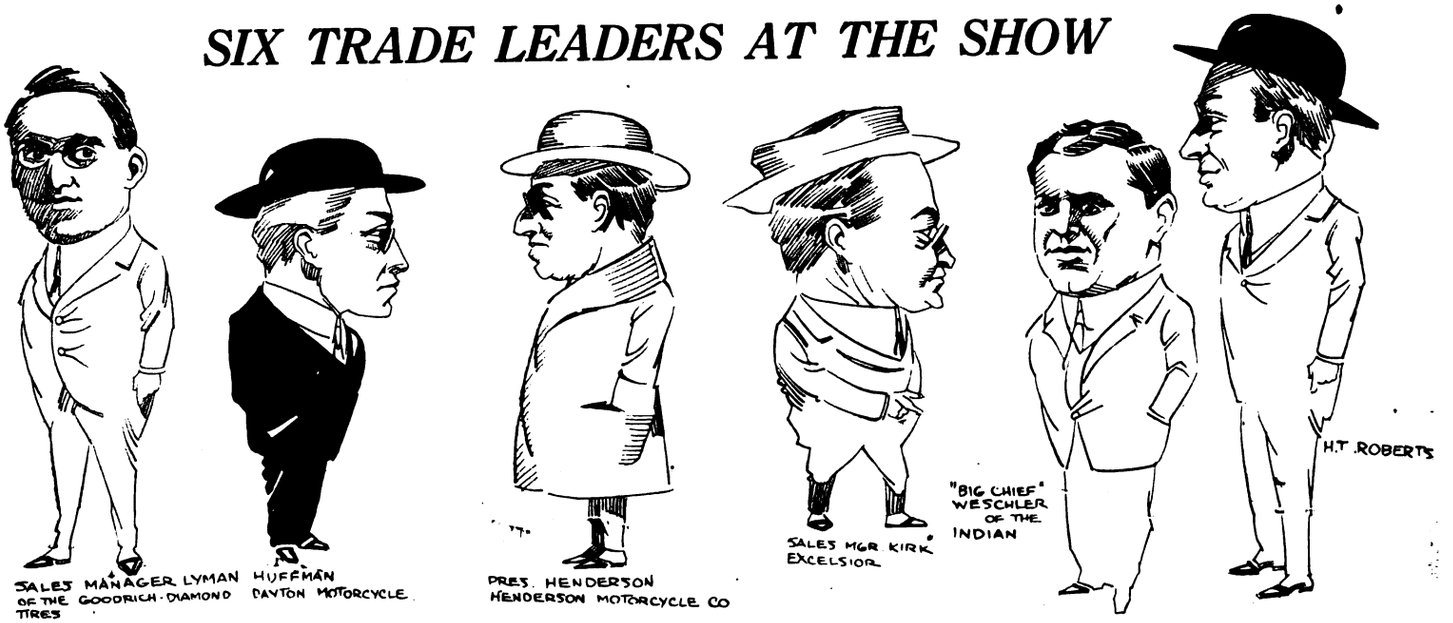
SIX TRADE LEADERS AT THE SHOW



LONG POPE LIST.

THE latest additions to the list of Pope dealers are announced as follows: Rhode Island Motor Car Co., Providence, R. I.; H. C. Hansen & Co., Ogden, Utah; Western Arms & Sporting Goods Co., Salt Lake City, Utah; T. A. Quisenberry, Richmond, Va.; Jesse Smith, Clarion, Ia.; W. M. Chelf, Leoti, Kan.; Fort Wayne Hardware & Sporting Goods Co., Fort Wayne, Ind.; E. A. Coburn & Son, Waterloo, Ia.; A. J. Gladwell, Lima, O.; S. Page, Jr., Waverley, Ia.; H. A. Routson, Piqua, O.; Allentown Razor Co., Allentown, Pa.; W. J. Urich, York, Pa.; Lyons & Company, Grand Forks, N. D.; Jos. Kegal & Co., Freeport, Ill.; Zeaman Cycle Co., Two Rivers, Wis.; W. Bell, Kansas City, Mo.; Koch Outfitting Co., Evansville, Ind.; Van Brunt-Bleeg Co., Sioux Falls, S. D.; J. H. Kuentzli, Milwaukee, Wis.; E. L. & A. M. Burr, Rockford, Ill.; Geo. C. Detch Co., Indianapolis, Ind.; Kellington & Dieckhoff, Decatur, Ill.; Wm. Johnson, St. Paul, Minn.; C. B. Jansky, St. Louis, Mo.; Dallas Rubber & Cycle Co., Dallas, Texas; Walter Box Co., Georgetown, Texas; Alamo Cycle Co., San Antonio, Texas; Amos Shirley, New York City; F. W. Anderson, Albany, N. Y.; Boone Auto Co., Boone, Ia.; C. H. Swab & Co., Cedar Rapids, Ia.; J. H. Peterson, Des Moines, Ia.; Shewmake-Hall Co., Dublin, Ga.; R. R. Oakman, Savannah, Ga.; Thomasville Motor Co., Thomasville, Ga.; E. C. Lord, Belgrade, Me.; Randall Mfg. Co., Baltimore,, Md.; Theo. Behrendt, Billings, Mont.; Missoula Mercantile Co., Missoula, Mont.; Pecos Valley Drug Co., Roswell, N. M.; High Point Motor Co., High Point, N. C.

WILL OPEN GARAGE

ALLAN M. BLAKE, of Charleston, W. Va., announces that he will open a motorcycle garage at 211 Hale street, on February 1. A fully equipped repair shop will be conducted in connection with the garage, and Mr. Blake states that particular attention will be given to F. A. M. tourists.

PATHFINDER TURNS AGENT

FRANK CRAYTON, for some time past employed by the Scarborough Map Company, in the capacity of pathfinder, is now connected with his brother Charles C., of Chilicothe, O. The Crayton Brothers will handle the Harley-Davidson motorcycle.

PLENTY OF ACTIVITY IN WASHINGTON

THERE has been a noticeable tendency of late on the part of the dealers in Washington, D. C., to locate on Ninth street, N. W., between "H" and "L" streets. This has been further emphasized by the recent removal of T. N. Mudd, Jr., Reading-Standard agent, and one of Washington's pioneer dealers, from his old location to Ninth street, between "H" and "I" streets. P. M. Corr, agent for the Flanders, was the first to locate on this block. About three years ago the Harley-Davidson agent, John H. Berryman, located in this section and shortly after, George W. Beall, representing the Thor, followed suit. Last year the store adjoining the Thor shop was secured by the local Schickel agent and at about the same time Messrs. Osborne & Leishear, agents for the Excelsior, made their new quarters on the same block as the R-S store. Frank Hazelton, Yale agent, and the Haverford Cycle Company, are located on Tenth street, N. W., and it is reported that the latter firm intends building an up-to-date motorcycle garage on Ninth street, which will help to complete the motorcycle center. Harry Seamark, distributor for Flying Merkel and Emblem machines, has added a three-story building to his establishment at the corner of Sixth and "G" streets, N. W.

Despite the fact that local legislation had, if anything, a domineering effect upon the sport, the dealers report a fairly good 1912 season. This is shown by the fact that 350 permits were issued to new riders by the local license board. Sales by some of the individual dealers for the past season are here given: J. S. Berryman disposed of about 100 new and second-hand Harley-Davidsons; P. M. Corr reports the sale of about 50 Flanders and Yale machines; about 100 Flying Merkels were distributed by Harry F. Seamark; T. N. Mudd, Jr., sold about 25 Reading-Standards; Osborne & Leishear, about 75 Excelsiors; George W. Beall, 25 Thors; Howard A. French & Co., 50 Indians; Haverford Cycle Company, 50 Haverfords, and Harry W. Higham sold about 50 Pope models. Several sales were made by the newly-established firms of Miller Brothers, and L. W. Sakers; the former handles the Minneapolis, Henderson and Pierce lines, while Sakers represents the P. E. M. and the Schickel.

DAYTON AGENCIES.

THE Western branch of the Davis Sewing Machine Co., located in San Francisco, Cal., announces that agencies for the Dayton motorcycle have been closed with the Ashley Motor Co., Olympia, Wash.; James F. Stack, 23 Riverside avenue, Spokane, Wash.; A. L. Hall, 1021 First avenue, Seattle, Wash.; R. H. Brown, 947 Commerce street, Tacoma, Wash.; Richardson's Cyclery, Riverside, Cal., and E. A. Meyers & Co., San Diego, Cal.

The Dayton Cycle Co., Portland, Ore., will distribute the Dayton motorcycle throughout the State of Oregon.

W. E. & W. H. Jackson, San Francisco, Cal., will distribute the Dayton motorcycle in Northern California.

Messrs. Jackson reports that they have closed agencies with Wilson & Allen, Los Gatos, Cal.; Louis Krohn, Oakland, Cal.; Schaackey & Viera, San Jose, Cal., and The Stockton Motorcycle & Supply Co., Stockton, Cal.

OMAHA EXHIBITORS.

ANNOUNCEMENT is made by the Omaha (Neb.) Automobile Show Association, Inc., that the motorcycle dealers of Omaha will be represented at the annual automobile show, to be held February 24 to March 1. Considerable interest has been shown in the two-wheeler in this section of late, and many automobile dealers in near-by towns are contemplating handling motorcycles in addition to cars. The motorcycle dealers who will exhibit at the show are reported as follows: V. H. Roos, Harley-Davidson and Yale; Omaha Bicycle Company, Indian; Reading-Standard Motorcycle Company, Reading-Standard; Nebraska Cycle Company, Excelsior, Thor and Henderson, and the Powell Supply Company will show the Pierce line.

FIGURES FROM LOS ANGELES

IT is estimated that there are 8,000 riders of motorcycles in Los Angeles, thus making it the leading motorcycle city in the United States.

Digitized by Google

AT THE GARDEN

MESSRS. Rolin, Abell, Atwood and Howlett were in attendance at the booth of the Standard Thermometer Co., of Boston, Mass., demonstrating the well known Standard Speedometer.

Souvenirs in the form of a package of cigarettes were given out at the booth of the Texas Co., of New York City, manufacturers of "Texaco" oil. This booth was in charge of H. Tipper, L. A. Jacobs and Ben Hart.

Electric horns were shown by the Dean Electric Co., of Elyria, O., its booth being presided over by W. H. Scott, R. W. Davis, R. H. Manson and C. B. Harlow.

G. H. Piel, Arthur Piel, H. W. Fanning and J. B. McCaw demonstrated to many interested motorcycle dealers and riders the new Long Horn, electrically operated, and manufactured by the G. H. Piel Co., of Long Island City, N. Y.

Hess-Bright Ball Bearings were demonstrated by A. K. Nairn, R. E. Clingan, Wm. V. Lowe.

Wolfshead Oil, manufactured by the Wolverine Lubricants Co., of New York City; represented by E. F. Kalklof, H. Plowman and H. Wilkine.

Mossberg Wrenches: Frank Mossberg Company, Attleboro, Mass.; Frank Mossberg, W. I. Tuttle, W. H. Sternberg and W. Chase.

C. O. Tingley & Co., Rahway, N. J.: Tires, cement and patches; C. O. Tingley.

United States Tire Gauge Co., New York City: Tire gauges; Wayne Burns, Otto Herborn, M. M. Lawler.

Nathan Novelty & Mfg. Co., New York City: Auto fabrics, leggings and motorcycle clothing; E. B. Nathan, C. S. Schwarz, Henry Baer.

Stevens & Co., New York City: Accessories manufactures; Louis Schwab.

Riley-Klotz Mfg. Co., Newark, N. J.; Horns; A. B. Underwood.

Nonpareil Horn Co., New York City: Horns; J. J. Cohn.

Standard Woven Fabric Co., Worcester, Mass: "Multibestos" brake lining; A. H. Burdick, T. J. Daly, R. D. Northrop.

New Departure Mfg. Co., Bristol, Conn.: Ball-bearings, brakes, etc.; DeWitt Page, M. J. Horton, A. E. Griffith, L. W. Sigourney, E. W. Mink.

J. H. Sager, Rochester, N. Y.: Springs and spring-frames; J. H. Sager, C. J. Iven, C. M. Sager.

N. Y. Lubricants Co., New York City: Monogram oil; C. G. Stowe.

Benford Mfg. Co., Mt. Vernon, N. Y.: Spark plugs; E. N. Benford.

Royal Equipment Co., Bridgeport, Conn.: "Raybestos" brake-lining; S. Simpson, R. Everett.

A. Schrader's Son, Inc., New York City: Tire gauges and tire valves; M. C. Schweinert, M. H. Tiene, K. S. Van Seiver, B. W. Yockers.

Indian Refining Co., New York City: "Havoline" oil; F. L. Sample.

American Ever Ready Co., New York City: Batteries, speedometers, etc.; H. W. Scholl.

Improved Gauge Mfg. Co., Syracuse, N. Y.: Tire gauges; W. F. Albrecht.

Edelmann & Co., Chicago, Ill.: Tire gauges; B. M. Asch.

White & Bagley, Worcester, Mass.: "Oilzum"; Robt. L. Sim.

Voorhees Rubber Co., Jersey City, N. J.: Puncture-proof tires; John Caldwell.

Hartford Machine Screw Co., Hartford, Conn.; "Bulldog" spark-plugs; W. J. Millard, H. E. Penfield.

Corbin Screw Corporation, New Britain, Conn.: Corbin-Brown speedometers, brakes, etc.; Col. W. C. Brown, J. J. Bonney. At the Palace.—H. A. Harrop, Otis M. Scripture, R. O. Renknagel and E. C. Bowman.

Geo. A. Haws, New York City: Panhard oil; J. W. Braid.

Rose Mfg. Co., Philadelphia, Pa.: Neverout lamps; H. C. Rosenbluth, G. W. K. Voight, H. R. Koslowsky, W. R. Hicks.

Ajax Tire Co., New York City: Tires; E. D. Winans, R. Clunan, H. S. Pettingill, Edgar Storms.

A. W. Harris Oil Co., Providence, R. I.: Oils; E. J. Waters, H. A. Gaunt.

Standard Roller Bearing Co., Philadelphia, Pa.: Roller bearings; Mr. Watkins.

Whitney Mfg. Co., Hartford, Conn.: Chains; Clarence Whitney, H. L. Sevin.

U. S. Tire Co., New York City: Tires; H. E. Sheldon, W. C. Tolliver.

Best Ignition Co., New York City: Spark-plugs; Mr. Specht.

Pennsylvania Rubber Co., Jeannette, Pa.: Vacuum Cup tires; D. Dudley Yard, G. C. McCullough, F. R. Hanse, Chas. Vincent.

Manufacturer's Foundry Co., Waterbury, Conn.: Castings; F. C. Fromme, E. W. Beach, H. F. Rogers.

The Weed Chain Tire Grip Co., New York City: Weed anti-skid chains; Wm. Morris, F. E. Sparks, W. B. Lasher, W. F. Walker and A. D. Williams.

Coes Wrench Co., Worcester, Mass.: Wrenches; Chas E. Braman, Walter Robbins.

A. R. Mosler & Co., Mt. Vernon, N. Y.: Spark-plugs; A. R. Mosler, C. B. Boynton, H. A. Watty, Miss A. L. Lummis.

Fisk Rubber Co., Chicopee Falls, Mass.; Tires; Chas. Gage, M. R. Brown, Jas. Fitzgibbons, W. J. Heathcock, W. W. Adams, Geo. Adams, J. Klingler, J. Quinn.

Rhineland Machine Works Co., New York City: Ball-bearings; Stewart R. Shepard.

The Emil Grossman Co., New York City: Spark-plugs; Emil Grossman, Louis Schwarz, J. J. Briefer.

R. I. V. Co., New York City: Ball-bearings; H. Neata, E. L. Smith, E. E. Brennan, C. R. Mabley.

Sarco Engineering Co., New York City: Coventry chains and Acme sirens; H. L. Funke.

Barthel, Daly & Miller, New York City: Schaefer ball-bearings; E. F. Daly, Fred Seuffert.

Vacuum Oil Co., New York City; Mobiloil; S. G. Robinson, Frank Killian, H. G. Caldwell and Messrs. Hayes, Callahan, Eames, Larke, Welch, Spencer, Bowman and Cohen.

Splitdorf Electrical Co., Newark, N. J.: Magnetos and spark-plugs; C. W. Curtis, W. J. Murray, H. Hinley and Mr. Girdlestone. The Splitdorf Company also had an exhibit at the Palace, in charge of Dave Smith and Michael Toepel.

BROOKLYN SHOW

FROM February 22 to March 1, the retail dealers of Brooklyn, N. Y., will hold forth at their annual automobile and motorcycle show in the Twenty-third Regiment Armory, on Bedford avenue, between Atlantic avenue and Pacific street, and an attractive folder is now being distributed to call attention to plans for the display. One of the features is to be an especially interesting program, for which advertising space is now being set aside.

LOCKPORT OFFICERS

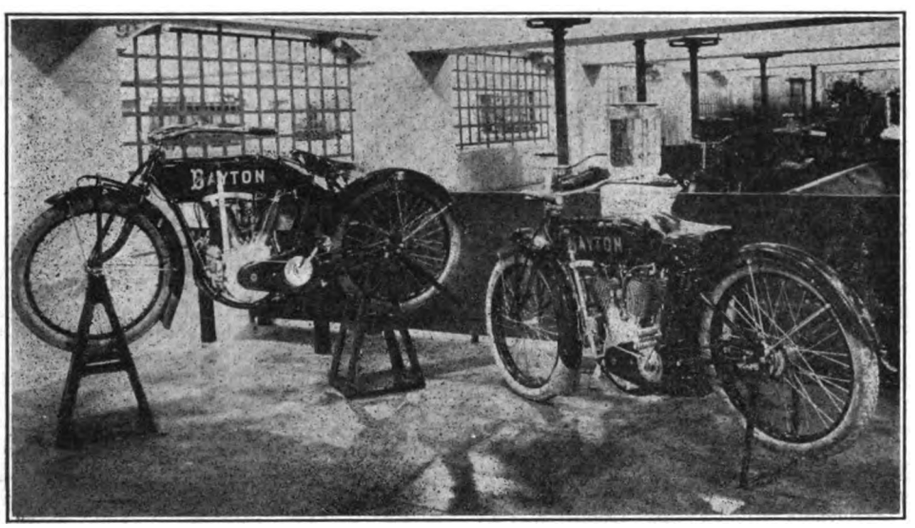
EXECUTIVE leaders of the Lockport (N. Y.) M. C. were chosen at the January business meeting. William F. Smith is president; E. Roth, vice-president; H. Blackley, secretary; M. Cleverly, treasurer, and F. Neis, captain. R. Skellan and L. Flecker were named lieutenants and H. Finch and R. Rignal directors at large.

Digitized by Google

SALIENT POINTS at THE STANDS

DAYTON

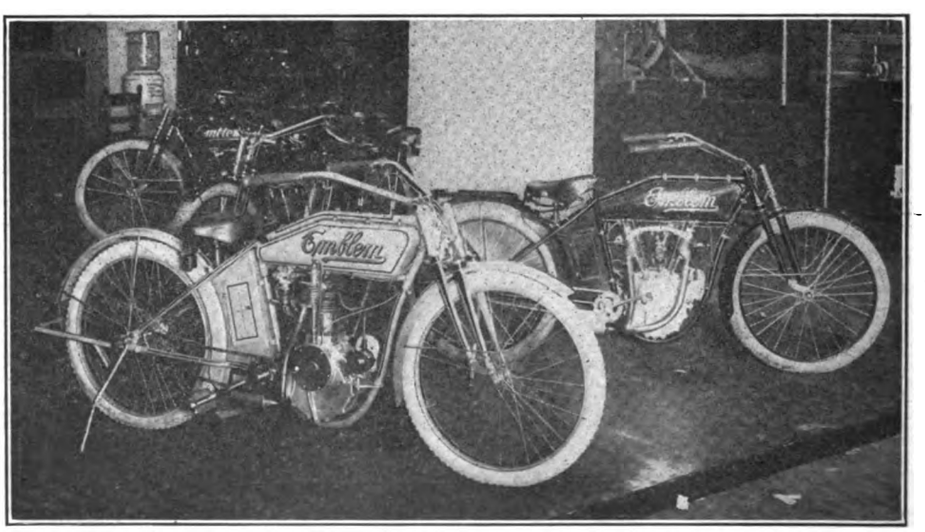
FOUR twin machines characterized the exhibit of the Dayton motorcycle, the product of the Davis Sewing Machine Company, Dayton, Ohio. Finished in the firm's red tone and with De Luxe motors, they looked as powerful as their 7 and 9 h. engines gave evidence of. A coach-spring type of front fork with scroll end was fitted on all models, as was also a spring seat post; the Eclipse countershaft clutch was operated by a side lever with wood ball grip. Three inch tires as stock equipment were fitted, and a wrinkle that should be on every motorcycle was the magneto cut-out on the right handlebar. The bore of the 7 h. twin is 3.25 inches and the stroke 3.67 inches, giving a capacity of 60.92 cubic inches. For the 9 h. machines, the bore and stroke, respectively, are 3.50 and 3.67, giving a piston displacement of 70.62 cubic inches. The oiling system is double, consisting of a drip-feed with sight glass as the regular system, and a hand pump buried in the oil compartment of the tank and readily accessible to the hand of the rider, as an emergency fitting. The brake is new, being of the center-braking type and of Lester make. The gear ratio is 3¼ to 1, representing a speed of 56 miles per hour at 2,500 r. p. m.



Dayton Twins for 1913, rated at 7 and 9 h.

EMBLEM

FOUR machines, embracing single and twin models were to be seen at the stand of the Emblem Mfg. Co., Angola, N. Y. The single models were of 5 horsepower and were fitted with chain and V-belt transmission. The twins were of 8 and 10 horsepower and both were shown fitted with the firm's tandem attachment. Mechanical inlet valves are fitted to all models, and the cams are machined integral with the half-time gear, there being four on the one shaft in the twins and two in the singles. Graduated cooling flanges are fitted, and the frame is given a greater drop, located further forward, than in previous models. The forks will be seen to be wider and the silencer shown was of aluminum sheet instead of iron. The Eclipse clutch is handlebar controlled, the lifter lever being on the right bar, while that for operating the exhaust valve lift is under the left grip. Oiling is by sight-feed with auxiliary hand-pump buried in the oil compartment of the tank. The transcontinental 10 horse automatic inlet twin ridden by M. E. Gale was staged in the exhibit during the latter part of the Show, just as it came off the road, and attracted great attention.



Four Models Made up the Emblem Exhibit.

A SAVANNAH OUTING.

SAVANNAH, Ga., January 11.—About 75 members of the Savannah M. C., participated in an informal jaunt arranged by O. A. Meyer, sporting editor of the *Press*, today. Although the event was called a mid-winter run, the temperature reached the 80 mark during the afternoon, and those of the boys who wore winter clothing were far from comfortable. Chief of Police Austin started the boys off at 9.30 a. m. Chief Austin is a booster of the motorcycle and now has four machines in his department.

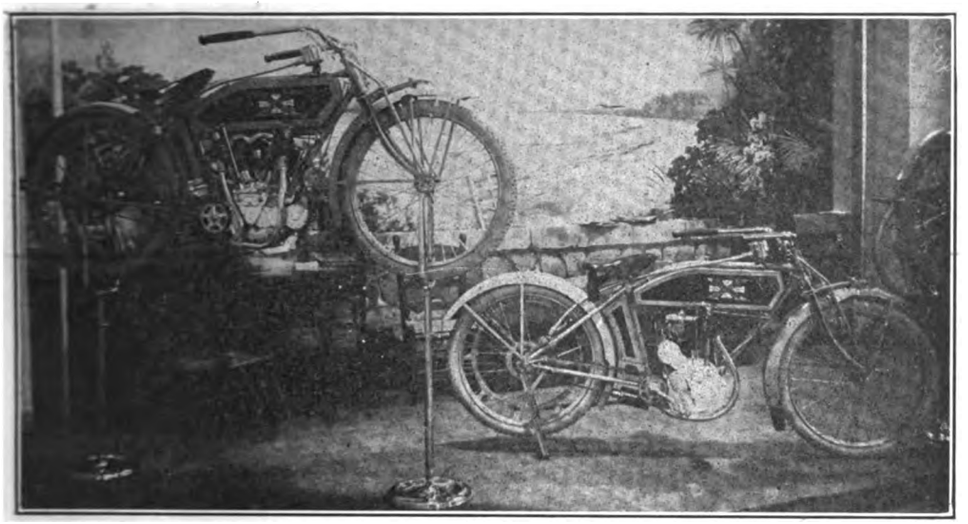
The run was first directed to the county farm where the convicts are confined. Part of the going was over the Grand Prize course, but the roads near the farm were very rough. The boys returned to Savannah for dinner and by 2.30 p. m. were again on the road. They covered about 150 miles during the day.

REGISTERED REPAIR SHOPS.

SECRETARY GIBSON announces the registration of the following repair shops during the week ending January 11: Amos S. Meginness, San Juan Baitista, Cal.; Woolley & Henderson, 118 North Main street, Lead, S. D.; F. A. Shottenheimer, Barr street, McDonald, Pa.; Dolezal Brothers, 1845 South Wood street, Chicago, Ill., and Fred B. Jones, 407 Rantoul street, Beverly, Mass.

A recent F. A. M. affiliation is that of the Lindsay M. C., of Lindsay, Cal.

Digitized by Google



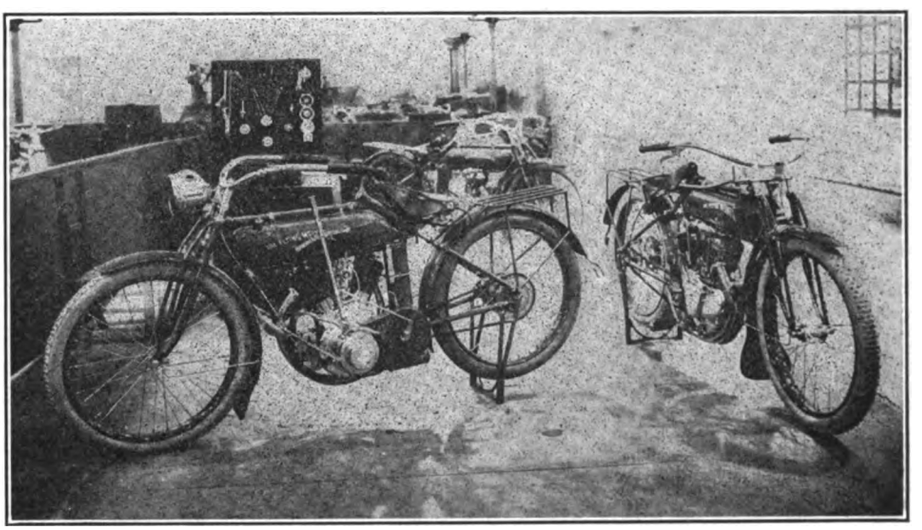
Six Excelsior Touring Models and one Racer were Shown.

EXCELSIOR

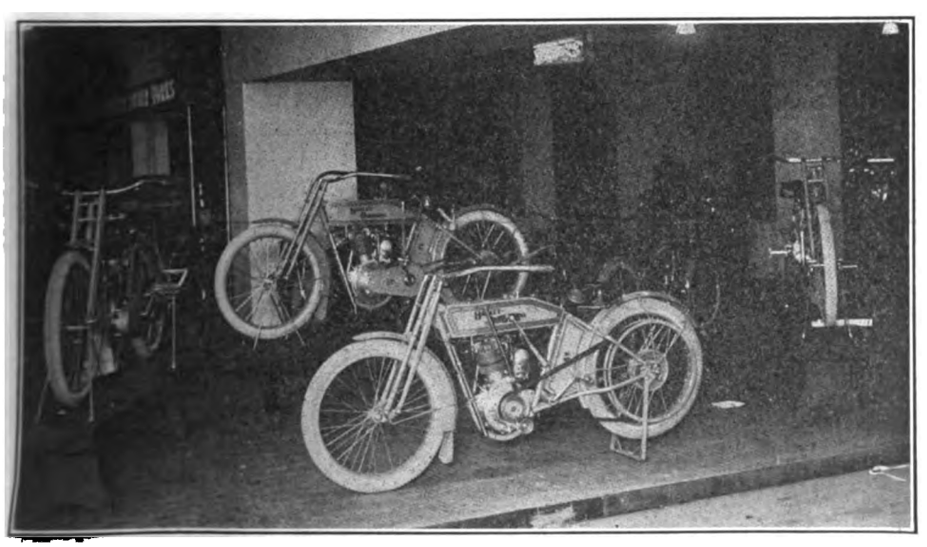
AT the exhibit of the Excelsior Motor Mfg. & Supply Co., Chicago, Ill., were displayed six touring models, and one rigid frame racing type with coaster brake, it being claimed for the latter that it was the machine on which Humiston made the records of 36 seconds to the mile. The left grip on this mount operated the oil pump mounted at the left side of the tank. Four machines shown were twins and the remainder singles. The twins were fitted, two with flat belt and two with chain transmission and the characteristic features of clutch control by twisting the left grip were found on all models, the Eclipse clutch being fitted. The individual spark lever on the tank was another feature of the 1913 models of this product. Pistons have been lightened, and the front fork spring has been made slightly heavier, while on the belt models, the width was 2¼ inches. The singles, of 4 horsepower, were respectively belt and chain drive and the changes were in the same lines as that on the twins.

FLYING MERKEL

MERKELS in four models were exhibited at the space given over to the Miami Cycle & Mfg. Co., 300 Hanover street, Middletown, Ohio. The chief model which attracted attention was the "7-75" or two-speed self-starting model. This is fitted with the new long-stroke motor, and "Ever Ready" self-starter and a planetary two-speed gear in the rear hub. The starter incorporates a coil spring which, when released by pressing a pedal, turns the motor over about eight times before being unwound. When the motor runs under its own power it rewinds the spring to the proper tension and then acts no further upon it. The two-speed gear is operated by a side lever near the rider's hand, and foot boards are fitted well forward. The brake on this model is a large band, operated by the right heel. A compensating sprocket is also fitted to the rear hub to relieve the shocks of the chain drive. The other models were a clutch twin of 7 horsepower, a 4 horsepower single with chain and another twin with V-belt drive. The control of the clutch on these models is by side lever in a similar position to that of the gear lever on the first mentioned model. All have the new spring frame with lower saddle position and seat post tube forming the oil tank. The motors, single or twin, were of 3¼ by 3 43/64 inches, in place of being "square" as in previous seasons. The shape of the tank was seen to be altered and the pistons are hour-glass form and the gears have the cams machined integral. The valves have been changed also.



Merkel Stand; Note Self-Starter on Model in Foreground.



Two 8's and Two 5's were the Harley-Davidson Drawing Cards.

HARLEY-DAVIDSON

TWO 8 horsepower chain driven twins and two 5 horsepower singles made up the total of machines shown on the stand of the Harley-Davidson Motor Co., 341 C street, Milwaukee, Wis. One of the twin motors was sectioned to show the construction, while the frame and motor parts were also exhibited for inspection. The new frame showed longer reinforcing members in the front fork tubes, bushed fork rockers, and wider spread to take three inch tires on the twins. The single motors have mechanical inlet valves and a stroke of 4 inches as compared with the 3½ of former models. The wheelbase of these models is one inch shorter than on the twin, and there has been made a slight change in the form of the clutch lever operating the "free wheel." On the flat belt models a belt guard is fitted.

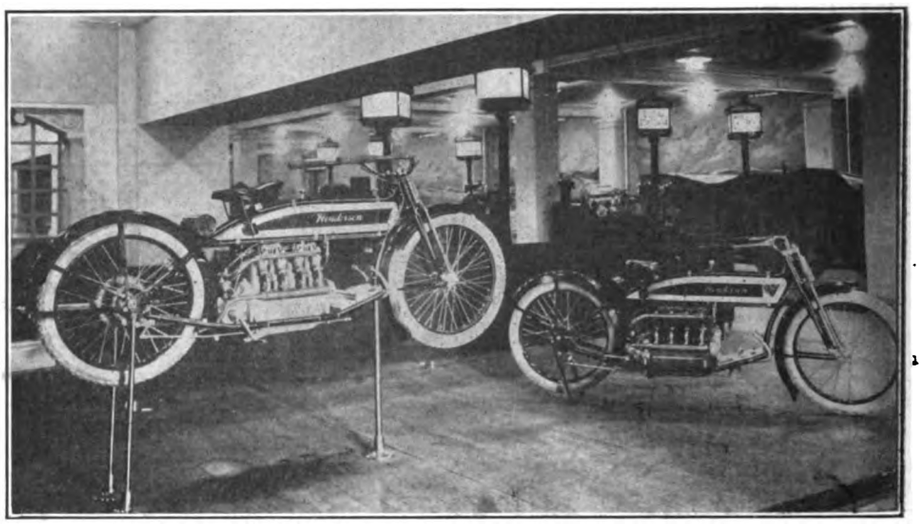
DENVER BOOSTERS ACTIVE

PRESIDENT PATTERSON and the directors of the F. A. M. have been bombarded of late with communications from officials in Denver, Col., who desire to see the 1913 convention of the Federation brought to the "Mile High City." Letters have been received from Governor John F. Shafroth, the Greater Colorado Highways Association, Mayor Henry J. Arnold, of Denver, the Denver Hotel and Restaurant Keepers' Association, the Denver Chamber of Commerce and other officials and organizations.

Digitized by Google

HENDERSON

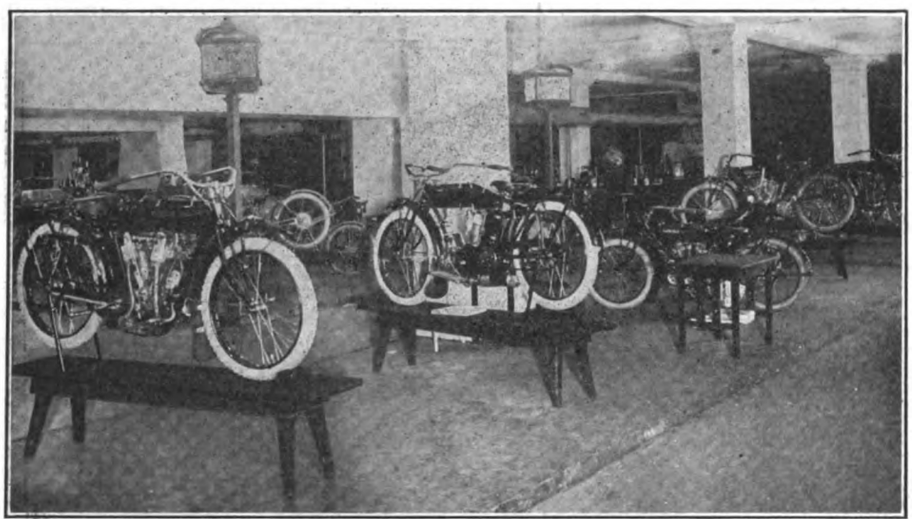
THE Henderson Motorcycle Company, 1158 Cass avenue, Detroit, Mich., exhibited three models of their four-cylinder machine, one of which was fitted with a tandem attachment and fabric splash guard over the rear wheel. The exclusive features of this make are the trapezoidal cradle frame of 13-gauge wall tubing with aluminum footboards, dual brake control and band brake on the right hand side of the rear axle. The spark control is fitted to operate by the left grip in place of the short lever at the side on the previous models, and the fuel tank is square in section instead of cylindrical. Other features are the folding hand starting crank, four-cylinder distributor type Bosch magneto and ball grip side lever clutch control. The tool bag is of metal and circular in form, fitted back of the saddle ahead of the fork junction. Finish was in royal blue with aluminum banding and light striping.



The Henderson Four, Viewed from Two Angles at the Show.

INDIAN

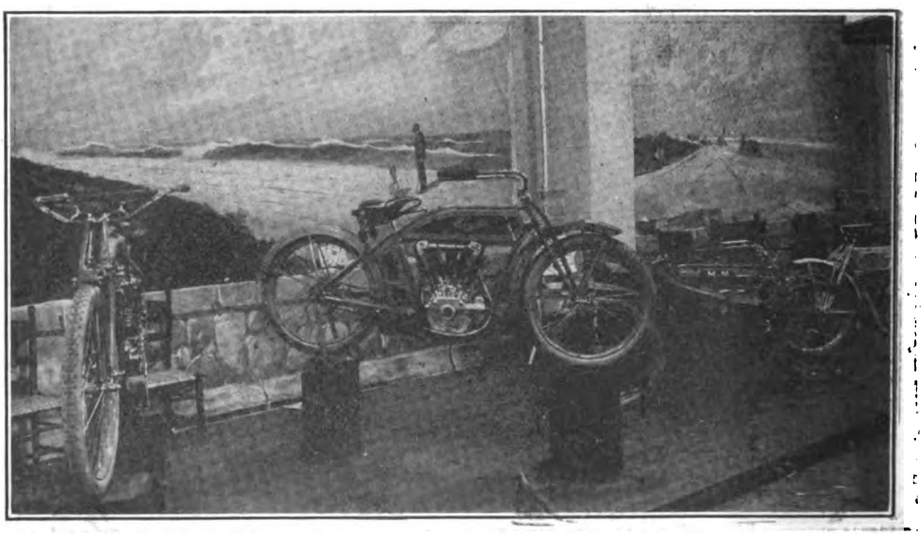
SIX red Indians were shown at the space occupied by the Hendee Mfg. Co., Springfield, Mass. Four of these were twins, and the remainder singles, and one of the twins was shown with a sidecar. Of the twins, two were fitted with the bottom-bracket two-speed gear suspended below the bracket, and the others were clutch models. The two-speed models were fitted with heel-and-toe clutch pedals alongside the left footboards, while the clutch models of all powers had the side lever control. Footboards were fitted to all mounts shown in this exhibit, as was the new coach-spring frame having one spring of this type fitted at each side of the rear wheel and acted at its scroll end by a connecting yoke attached to the rear stays. The latter were pivoted at a bearing just behind the bottom bracket and the springs have their butts supported by pads forming the arms of a U-piece behind the saddle and part of the frame. On the two-speed models, there is an additional brace bar extending to the rear of the bottom bracket from this piece. The chain drives are both guarded and the starter on the two-speed models is slightly improved, the tread being arranged to swing to one side when not in use. An auxiliary brake pedal was shown fitted to the clutch models in both single and twin types. One of the singles shown was a two-speed model also. The sidecar was on the coach-built type with rigid frame and wheel and had a side-entrance door and black upholstering. The frame is underslung and the connection is three point. A tool box is fitted as regular equipment to this car. The saddle on all models is of the Superba type and a substantial luggage carrier is fitted to all machines of this make.



The Indian Display was a Comprehensive One as Usual.

M. M.—EAGLE

AT the stand of the American Motor Co., Brockton, Mass., were shown one M. M. 90 degree twin of 8 horsepower, one 4½ horse single, and two Eagle 9 horsepower twins with flat belt and chain transmission respectively. The M. M. twin is fitted with the Eclipse clutch, operated either by hand lever or finger lever on the left grip, and was seen in the new gray finish with black panelling and spring snap-up stand. The dome for the inlet valve is slightly changed, and the pistons of new type are shown separately as are also the roller bearings in the connecting rod big ends. The Eagle machines have a distinctive control, all but the brake being operated by the grips. The left grip operates the spark and clutch and the right grip the valve lifter and throttle. The handlebar anchorage is new, the clamp being a forging bridging the fork stem and acting as a lock-nut for the latter. The color scheme is gray with black lettering, and the motors used are the de Luxe. At this stand was shown the Simplex sidecar, made by the Simplex Machine Works, 45th street and 5th avenue, Brooklyn, N. Y. The body was of the canoe type, with side door and metal panelling. It was finished in red upholstering and the chassis was fitted with a removable hub and the Simplex quick detachable fittings.



M. M. and Eagle Combination Display; M. M. with Sidecar.

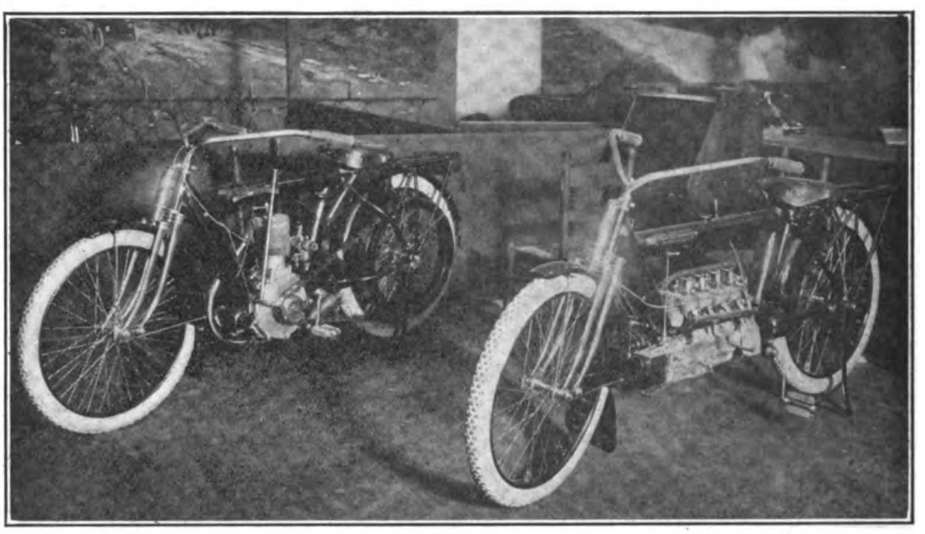
Two 1913 Models at the Monarch Stand.

MONARCH

TWO models, a single and a twin, represented the Monarch product, made by the Ives Motorcycle Corporation, 200 John St., Owego, N. Y. Finished in the distinctive brown with gilt lettering, the machines were shown with inlet valve fitted over exhaust and with the loop spring saddle suspension which distinguishes this make. The single was shown in chain drive, but is offered also in V-belt, while the twin, of 10 horsepower, is in chain drive only. The latter machine is a duplicate of the single in general lines, and both are fitted with separate exhaust valve lifter on the right handlebar. The front fork is of the spiral spring type and the main fork behind the rocker portion.

PIERCE

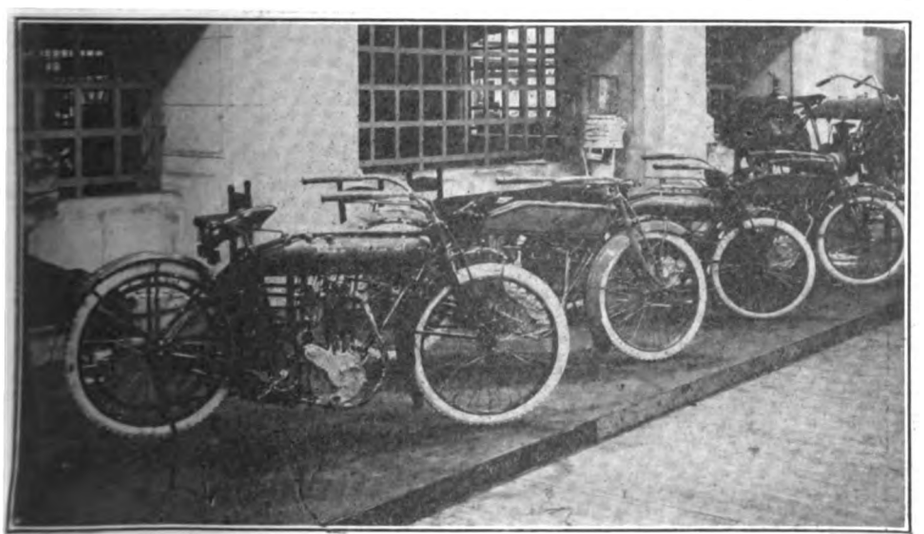
ONLY two models of the Pierce motorcycle were shown at the space of the Pierce Cycle Company, 12 Hanover street, Buffalo, N. Y., these being the 4-cylinder, 7 h. model and the 5 h., single cylinder model with belt drive. The tank-frame construction in which are incorporated the gasoline and oil tanks is characteristic of this make and appear on both machines, as in previous seasons, but the four-cylinder mount is fitted with foot rests for 1913. The single model was shown with Eclipse clutch operated by hand lever and V-belt transmission, while the combined change-gear and clutch control lever on the 7 h. model is located at the right side of the frame. Parts in the rough and finished states were an interesting feature of the exhibit.



The Pierce was Shown in Both Its Single and Four-Cylinder Types.

POPE

FOUR models of the Pope Manufacturing Company's product, from Hartford, Conn., were shown, these consisting of the 3½ single V-belt model, the 4 h. single flat belt model, the 5 h. chain model and the 7 h. twin, with chain transmission. The first of these was for some seasons the only lightweight machine built in this country, while the others with the exception of the "Big Four" are new. Overhead valves are fitted on the three larger motors and the five and twin are fitted with a novel rear wheel springing, consisting of rods attached to the ends of the axle playing in bearings in half-pedestals under command of spiral springs fitted above the latter. The parts carrying the axle ends and corresponding to the slider forks are provided with rollers which bear against the forward faces of the pedestals and thus reduce friction. The wheel thus moves up and down while the frame remains stationary, except as to the front cradle spring fork. On the twin, the magneto, located behind the cylinders, is worm driven, and adjustments are readily made in timing by removing the cap of the upper worm housing and changing the position of the armature with relation to the gearing. The Eclipse disc clutch is controlled by a wood grip hand lever at the left side of the frame, and lubrication is by mechanical pump with hand auxiliary.



The Quartet of Pope Machines for the Coming Season.

SAUCER FOR WASHINGTON.

WASHINGTON, D. C.—Motorcycle owners and dealers of Washington are looking forward with enthusiasm to the completion of a motordrome within the next three months which will compare favorably with anything of the kind in the country. Thomas R. Dedge, a member of the National Capital Motorcycle Club, and a well-known racer, is at the head of the project. The plans provide for the building of the track at Glen Echo, an amusement resort owned by the Washington Railway & Electric Co., just over the District of Columbia line, in Maryland. Dedge plans a third of a mile board track, banked at an angle of 60 degrees.

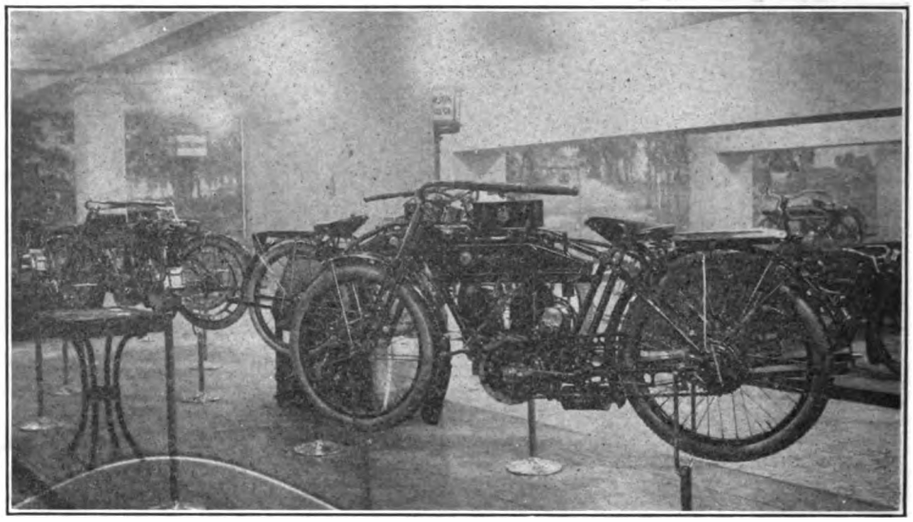
BANQUET AND ELECTION.

A WELL-ATTENDED and enthusiastic meeting preceded the first annual banquet of the West Philadelphia M. C., of Philadelphia, Pa. After the feast the boys proceeded to the election of officers. William H. Lokes was elected president; Walter Moon, vice-president; Roland Cummines, secretary; Donald F. Hopkins, treasurer; Fred Lavengood, captain, and Roland Cummines and Walter Moon, lieutenants.

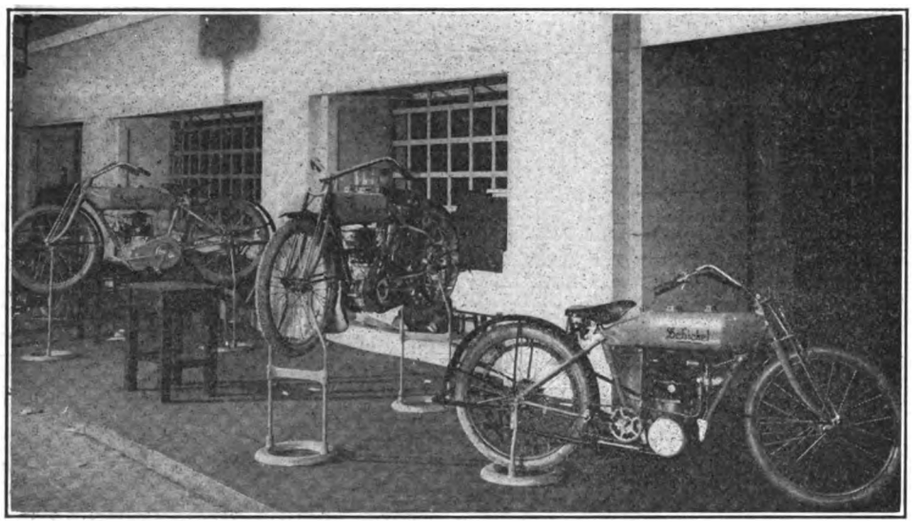
Digitized by Google

READING-STANDARD

THE Reading-Standard Company, 306-340 Water street, Reading, Penna, showed five machines, two 8 h. twins, a 5 h. single tourist, with chain drive, another of the same model with flat belt drive, and a 4 h. single with flat belt drive. Sectional models of both the twin and single motors were also exhibited, enabling inspection of the characteristic features of this make; inlet and exhaust cams integral with the half-time gear, side-by-side valves, scientifically-designed inlet manifold giving the proper flow of gas to the cylinders, vanadium-alloy gears and clean cylinder castings. Various parts of the motor were shown separately, as was the leather-faced cone clutch with cork inserts and control lever. The new tool-bag mounted on the top tube and the spring seat post and fork and adjustable footrests, the three latter points having been characteristic of R-S construction for several seasons, attracted considerable attention, as did the double braking and oiling systems. The substantial exhaust valve lifter under the right grip and the undergear drive were to be seen on the chain mounts, while the flat belt Tourist type shows a substantial shoe brake working on the outside of the belt rim. Finish was in the company's brown shades and in Sylvan green. The piston displacement of the 5 single is 33.5 cubic inches, and on the 8 twin, 67 cubic inches.



Complete Line of Reading Standard Models.



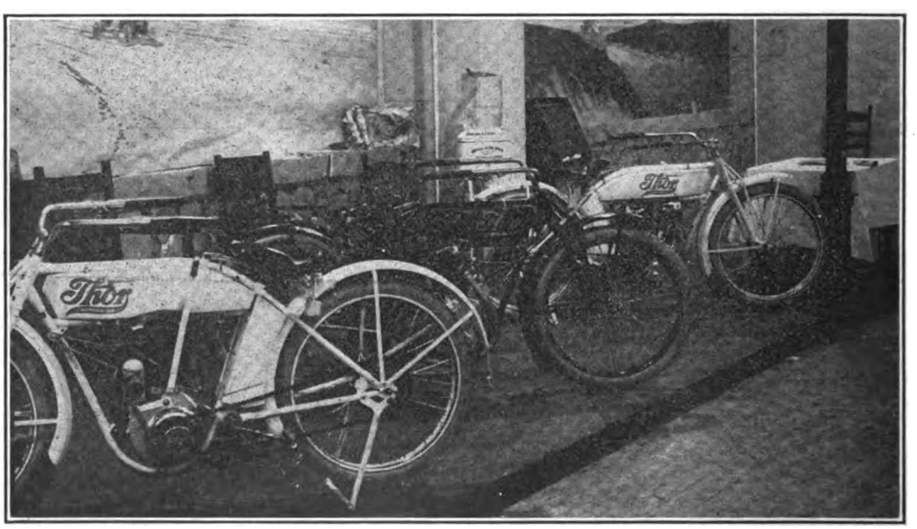
The Two-Stroke Schickel in 5 and 6 h. Types.

SCHICKEL

THE sole representative of the two stroke principle was seen at the booth of the Schickel Motor Company, 59 Garden street, Stamford, Conn., where the 5 and "Big Six" models occupied the space allotted to Schickel mounts. One model of the "Big Six" with chain drive and Eclipse countershaft clutch was shown, the clutch control being by twisting the left grip. The Bowden wire connection was attached to the end of a long lever which actuated the clutch operating lever, so that a slow and gentle engagement was rendered possible when desired. The motor in this model has the inlet passage around the sides of the cylinder, with the carbureter at the rear, and the fresh charge is passed through one part of this passage into the crankcase, where it assists in cooling the piston by being deflected into the under part of the latter when in its lowest position. The charge then passes through the transfer passage into the cylinder. The bore of this motor is 4 inches, probably the largest of any air-cooled two-stroke motor in existence. On the 5 h. models, shown with both flat belt and chain transmissions, the carbureter is fitted at the front of the motor and has a metal splash guard over the air intake, preventing oil from the relief valve from splashing in. The compression relief valve is fitted with a casing whose apertures are walled so that all possible oil is retained therein until drawn off through a plug in the bottom. A spring seat post with shock absorbing device of novel design and the characteristic grip and hand lever control on the right handlebar single out these machines in a field where novelty is rampant, as does the cork insert pulley with grip operated idler on the flat belt models.

THOR

THOR machines, the product of the Aurora Automatic Machinery Company, 1307 Michigan avenue, Chicago, Ill., were exhibited in three models, 13-M, 13-W and 13-V. The M model was of 4 h. and fitted with chain drive with under-gearing and Thor multiple disc clutch; the W model was of 5 h. and chain driven, but had the company's planetary two-speed gear in the rear hub. This gear and the disc clutch on the crankshaft was controlled by a T-head lever which "selected" the high or low speed as the grip was turned to be parallel to the frame or at right angles to it. The rearward position of this lever was with the clutch disengaged and the gear at neutral, while a forward movement first engaged the gear and then the clutch. The U model was the twin, with its distinctive 50-degree cylinder angle and ball-jointed inlet operating rods, these also being found on the 5 h. single. The firm's mechanical oiler was also fitted.



The White Models Featured the Thor Exhibit.

Twins and Singles Shared Interest at the Yale Stand.

YALE

FOUR machines, two of which were twins, were shown at the exhibit of the Consolidated Mfg. Co., 1730 Fernwood avenue, Toledo, Ohio. The third and fourth mounts were singles, while the twins were shown in both chain and belt drives. To one of the twins a sidecar, of the company's manufacture, was attached and to another the Yale tandem attachment. All were fitted with the characteristic Y-A seat post device, foot rests and auxiliary brake pedal leading to the operating lever of the Corbin coaster brake in the rear hub. On all models, the cylinder flanges are horizontal, which means that on the twins they are at an angle to the cylinder axes. A clean crankcase and positive feed oil-pump are features. The exhaust valve lifter is operated by a finger lever on the right handlebar under the grip and an oil window is fitted to the crankcase at the right side. The gears are unique in this product in having helical teeth instead of being of plain spur type. Dust sleeves are fitted to the valve mechanism to keep out grit, etc. The singles were of 5 horsepower with flat belt and chain drive, and the twin of 7-8 horsepower with chain or V-belt. The sidecar was of the canoe type with metal body and a unique four-point suspension, the front bars leading to a U-piece which fits to the top and brace tubes of the frame, but does not touch the tank. An electric lamp with storage battery having a capacity of 60 ampere-hours was shown.

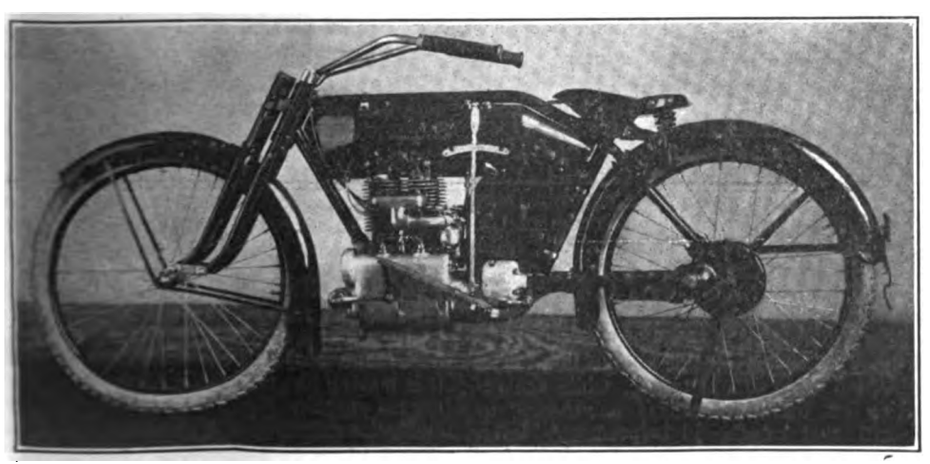
The 7-8 Yale twin has shown 9.2 horsepower at the rear wheel on block test, although having the same piston displacement as other 7 h. twins. The flywheel has been increased to 11 inches diameter, and the weight is 22 pounds, making for steadier pulling. The motor is of the T-head type, with inlet over exhaust valve in a common chamber. The fork is of the compound spring Yale construction, fitted with shock absorbers, in the front member. Quarter-inch steel balls are provided in the fork head set, cones and cups being turned out of the solid stock, and ground and hardened. Pounding out of these parts is eliminated as far as possible, and steering is rendered easier by this construction.

VERTICAL T-HEAD MOTOR ON M-B

WITH a two-cylinder vertical motor and final drive by shaft and bevel gearing, the Morse-Beauregard Mfg. Co., 460 Mt. Elliott avenue, Chicago, Ill., is bringing out the M. B. motorcycle, Model A, for the 1913 season. The general lines of this model are similar to those used in the 1912 product, but a two-speed sliding gear is now fitted, this being controlled by a lever at the left side of the frame.

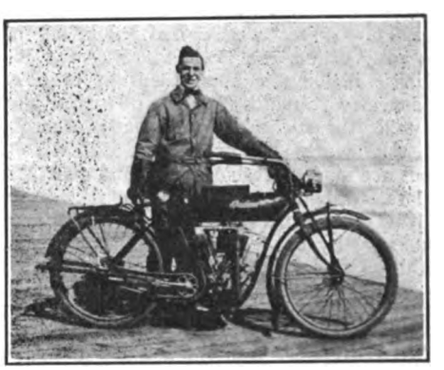
The motor is of the T-head, air-cooled type, with inlet valves at the left and exhaust valves at the right. The crankcase is very deep and is split horizontally. Integral with the case is the covering housing the multiple-disc clutch and change gear, and the unit so formed occupies the lower part of the frame. The cubic capacity of the motor is 50 inches, and the rating is 6½-9 horsepower. The ignition apparatus is located within a casing at the rear of the motor and directly above the front end of the drive shaft. A Schebler carbureter is fitted and lubrication is by splash, with sight-feed on the inlet side of the motor under the manifold. An external band brake, operated by pedal, is fitted, and the clutch is operated by a heel pedal near the left footboard. No pedals are fitted, handle starting giving the initial impulses to the motor.

The frame is of the keystone type, with dropped top-tube giving low saddle position. The front fork is of the spiral spring plunger type and the wheel has a true caster action, making for easy steering. The mudguards have continuous side wings and a rapid-action latch holds the stand in place. The wheelbase is 57 inches and 28 x 2½-inch U. S. tires are standard equipment. The price is $275 with Mesinger saddle. Interest in this mount naturally centers in the vertical motor.



GOOD TIRE SERVICE.

E. FERRIS LAMSON, of Bordentown, N. J., appears in the accompanying photograph on his Indian motorcycle. Mr. Lamson reports having ridden



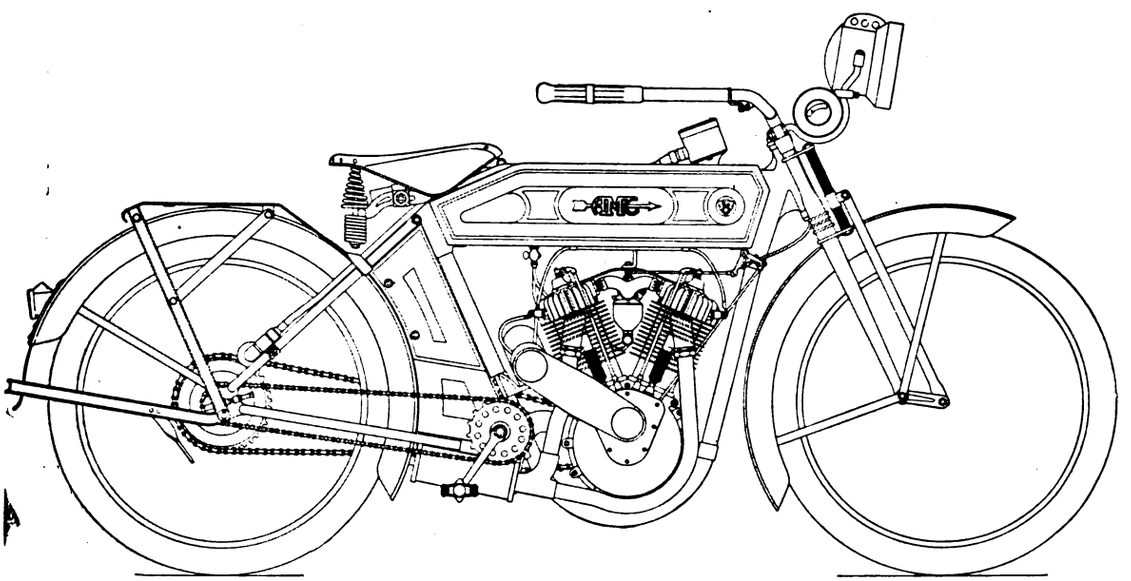
5,700 miles, and still has the original tires. "This is not only a proof of the durability of the Goodyear tires," says Mr. Lamson, "but it also speaks well for the quality of the New Jersey roads. The tires used are of the 2½-inch size."

SECOND ANNUAL BANQUET

MANY out-of-town guests were presents at the second annual banquet of the Cleveland Motorcycle Club, which was held on Wednesday evening, December 8, at the Gillsey Hotel. Toastmaster John Henry, of Buffalo, N. Y., was unable to attend on account of illness. P. H. Goodull, of the U. S. Tire Company, acted in his place. Among the out-of-town visitors to speak were George Puls, of the Harley-Davidson Company, and I Schreyer, of New York, who gave an interesting address on the good roads movement and also made arrangements whereby accounts of the week end runs of the club will be published in the Cleveland *News*. Rubber hatchets which were furnished by the City Auto tire Company were distributed as souvenirs.

AT the business meeting of the National M. C., of Washington, D. C., to be held January 29, the club will decide whether to accept a proposition for the use of a clubhouse on the new Baltimore-Washington Boulevard during the summer months.

Digitized by Google



UNUSUAL interest attaches to the accompanying illustration of the "AMC" machine, in view of the claim made by its manufacturers that it is the first mount to be placed on the market with complete equipment for the road. It will be noted that the machine carries a headlight, tail-light, luggage carrier and speedometer with rear wheel attachment. While this innovation naturally involves additional expense, it is one calculated to impress riders favorably because of the fact that the mount is prepared to meet all requirements when it is sold.

STANDARD BEARINGS

ROLLER and ball-bearings, for service in all parts of the complete motorcycle and of "Standard" manufacture, are the product of the Standard Roller Bearing Company, Fiftieth street and Lancaster avenue, Philadelphia, Pa. These "enemies of friction," as they are aptly called, are made to carry any load which will be put upon them in even extraordinary circumstances, and are made to take thrust and radial loads according to the work to be done. The roller types are made with both taper and cylindrical rollers, while the ball types are "filled" and "silent" in annular and in cage thrust types. The same type of construction is to be had with rollers in place of balls. The slogan of this firm is "Why not Standardize?"

TIMKEN ROLLER BEARINGS.

ESPECIALLY adapted for use in hubs in place of the ball type of bearing frequently used is the Timken roller bearing, made by the Timken Roller Bearing Company, Canton, Ohio. Bearings so fitted need no adjustment and take both radial and axial loads by the characteristic Timken cone construction. A full line of these bearings was shown on the company's stand.

GARGOYLE MOBILOIL.

GARGOYLE Mobiloil, manufactured by the Vacuum Oil Company, of Rochester, New York, was displayed at the Garden. This company produces a grade of oil for each type of motor, according to the catalog, which contains a tabulated list of all makes of machines and recommends the grade of oil best suited for each.

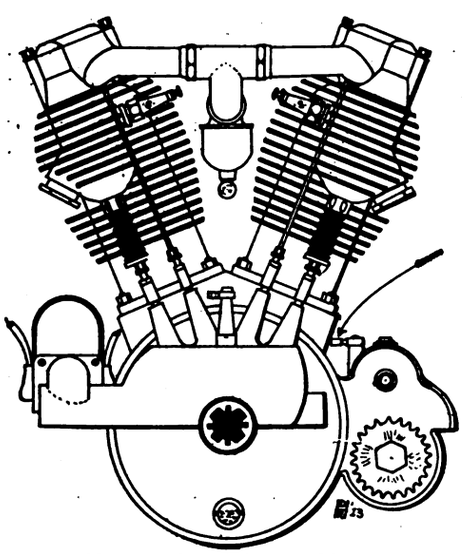
ELECTRICAL SPECIALTIES.

MOTORCYCLISTS who have interested themselves in electrical lighting systems for their mounts found several features to attract their attention in the exhibit of the J. Alexander Manufacuring Company, 1931 Broadway, New York City. The firm markets its electric lighting systems under the trade name of "Jaco."

HENRY SMITH, of Allegan, Mich., states that he has ridden his Emblem more than 2,000 miles without making an adjustment; also that the air put in the tires at the Emblem factory is still in use.

SPACKE UNIT POWER PLANT

ENGINEERS in all lines of mechanical propulsion favor the construction of the motor and change-speed gear in a unit, as making an exceedingly compact, light and clean arrangement and eliminating tendencies toward misalignment, such as when the several units are separate. These qualifications are particularly desirable in motorcycle construction, and the F. W. Spacke Machine Company, Indianapolis, Ind., has brought out a unit power plant in the 5 h. single and the



New Model of Spacke Motor.

9 h. twin De Luxe motors. The latter type, which is here illustrated, has the two-speed device housed in an extension at the rear of the crankcase and practically a part thereof. On the right hand side of the motor a train of gears is driven from the extension of the motor shaft, and the final gear of this train drives a shaft in the two-speed device. Gears on this first shaft are always in mesh with others corresponding to them on a second shaft which carries the drive-sprocket on the left-hand extension outside of the unit. The high-speed ratio is one-to-one, while the reduction on the low-speed is one-to-two, or one-half that of the high-speed. A lever, shown by the arrow, operates individual clutches which lock the idle gears to the shaft to get the desired speed. With this construction no friction clutch or free-engine device is necessary, an intermediate position of the change-gear lever releasing both clutches and allowing the motor to run disconnected from the transmission, giving a free-engine position.

PERSONS BOOKLET.

THE Persons Manufacturing Company, of Worcester, has published a booklet which is very interesting and profitable reading to those who are interested in motor seats, particularly in view of the fact that so many methods of suspension are being introduced, not only in motorcycle seats, but also in motor frames. It is printed in quiet elegance in four colors and is really an artistic piece of work. This pamphlet is to be placed in the hands of every dealer, and those who have not yet received a copy may have one by writing to The Persons Manufacturing Company.

HESS-BRIGHT BALL BEARINGS.

AS usual, the Hess-Bright ball bearing exhibit at the Show was a comprehensive and highly interesting one. It embraced the firm's motorcycle ball bearing type, which has proved its entire dependability in Flying Merkel motorcycles, in addition to a wide range of bearings of high quality for other uses. A practical folder, giving tabulated information relative to the various Hess-Bright ball bearing series, was distributed at the company's Show stand.

SCHAFER BALL BEARINGS.

SCHAFER ball bearings, for motorcycles as well as for motor cars and general machine work, were exhibited effectively at the Show by Barthel & Daly, sole American importers of these products. The Barthel & Daly firm has its headquarters at 42 Broadway, where a capable staff is working at top speed to keep abreast of 1913 business.

TOWNSEND GREASE GUN.

IN response to a demand for smaller sizes of its grease gun, the S. P. Townsend & Co., of Orange, N. J., announced at the Show that it is making its guns with a range from 6 to 16 ounces capacity for 1913. A patented device ejects the grease when a small crank is turned, thus working for ease and economy.

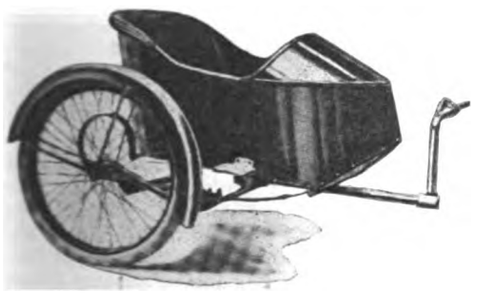
The 1913 SIDECARS

ROGERS SIDECAR A NEWCOMER

AN unusually attractive addition to the list of 1913 sidecars is the Rogers, produced by the Aermore Manufacturing Company, of 1536 Michigan boulevard, Chicago. It is an all-metal type, featuring automobile construction and carrying a torpedo body which is so designed as to reduce wind resistance to the minimum. The length of the sidecar is



The New Rodgers Model.

55 inches over all. Access to the car is assisted by an aluminum step, placed a little above the bottom line of the body; from this step to the top line of the car at the entrance point is only 12½ inches. This is a feature of special interest to women enthusiasts, and serves to overcome the objection sometimes raised that entrance to a sidecar is difficult, especially where side doors are not fitted.

A COMBINATION TYPE.

The seat and back in the Rogers model are a unit, and detachable, so that it is possible to strip them from the attachment and provide a package carrying vehicle. The body is finished with an excellent grade of imitation leather carried over the back in a heavy roll. Maximum resiliency is afforded through the use of long C springs, of special design. These springs are so made that shackles can be eliminated, as these fittings have a tendency to work loose, rattle and permit of lost motion. The springs are fastened with drop-forged clips, 5-16 inch in diameter, with positive lock washers under the nuts. All nuts and bolts in the outfit are secured in this way.

The frame is made of 1¼-inch tubing, dropped for a low center of gravity.

The axle, the right-angle adjusting tube in front and the diagonal brace are of 11 gauge material. The balance of the frame is of 13 gauge. The frame is welded with the oxygen acetylene process, instead of braced, which means that the tubes are melted into each other and thus are stronger at the joining point than at any other place owing to the increase in the amount of metal at that point. The axle stub is also welded, not brazed, to the frame.

The fittings are all of steel of large size, the coupling pins being hardened steel, 9-16 inch in diameter. The clamp fittings are also of steel. The fittings that are applied to the frame of the motorcycle are nickel plated, together with clamps and nuts on the upper right-angle adjusting tube.

All adjustments for lining up the motorcycle and sidecar are by threaded parts that cannot slip, instead of by clamping, and by drawing two coupling pins and loosening one handle nut, the sidecar may be detached in one minute or attached in three minutes.

The rim used on the sidecar wheel will take a 2¼-inch, 2½-inch or 2¾-inch motorcycle tire. The 2½-inch studded tread will be standard, so that the customer or agent can change to a larger size if he wishes.

The fender is of the new deep, semi-circular type, enclosing half of the tire so that there is no possibility of mud splashing either way. Access is given to the wheel for tire repairs by loosening one nut at the rear, driving out the retaining bolt going through the center of the sidecar hub, and swinging the fender clear on its forward support.

A WATERPROOF COVER.

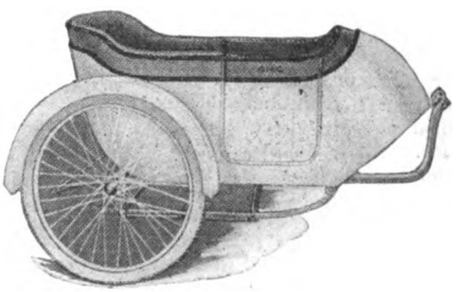
A waterproof canvas cover can be furnished as an extra, snapping down over the top and protecting the trimming and interior of the car from the weather. When the outfit is used as a pleasure car this covering may be utilized as a lap robe for the occupant, and to cover the packages when the sidecar is used as a package carrier.

The car can be used as a passenger vehicle nights and mornings without interfering with is use during the day as a package carrier. The frame and general construction of the sidecar is sufficiently strong to carry all of the loads that can be put in the body up to 400 pounds.

THE GREYHOUND

AT the stand of the Greyhound Motor Company, of Niagara street, Buffalo, N. Y., was shown three models of the "Universal" sidecars, two of which are for passenger service and the third for parcel carrying. That which attracted the most interest was the "Torpedo" model, with underslung chassis and three-point connection to the machine. The body is of torpedo form, with side-door constructed of two plates of 16-gauge aluminum plate and unusually well upholstered, the seat being sprung coach fashion. The color scheme was grey with red leather upholstery and red top band.

Universal Wicker Type.



Universal with Aluminum Body.

To this car was fitted three stands, enabling the user to rest the outfit upright when detached or by the use of the side stand to raise the wheel off the ground when tire repairs are necessary. The other passenger model was in cane, with similar upholstery in red, but used a regular, overslung chassis, and had a much lower side-door. The commercial or van model has a rectangular body with arched cover in black, the cover and body being removable, leaving a tray for carrying large objects, etc. This body was fitted to a frame similar to that of the second model described. The liberal use of forgings and large diameter tubing in the frame was most noticeable in this product.

MAJESTIC SIDECARS.

MAJESTIC sidecars, produced by the Majestic Manufacturing Company, of Worcester, Mass., were shown in several attractive types at the Grand Central Palace. Special attention was attracted to an improved model fitted for attaching the new "De Luxe Auto Top" now being supplied by the company. This top has a light, tough frame of wood which is covered with waterproof material. The top is attractive in appearance, and will undoubtedly find favor with experienced sidecar users. It folds down neatly when not in use and has double side curtains and a waterproof storm apron. This outfit includes the heavy floor mat which is furnished with the other models.

Another new Majestic feature is a neat and sturdy luggage rack, designed to carry a full-sized suitcase. It materially increases

Digitized by Google

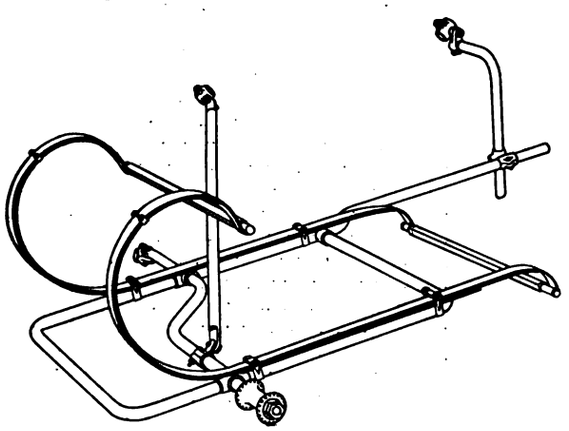
the utility of the sidecar outfit without detracting from its appearance.

A new type of combination tandem and luggage carrier attachment, designed especially for use with the new spring-frame Indian, was also shown included in the Majestic display. A notable feature of this attachment is that provision is made for removing the Indian tool box with its shelf rack and attaching it to the carrier. The tandem seat is well sprung and strong enough to meet all the demands made upon it on the road.

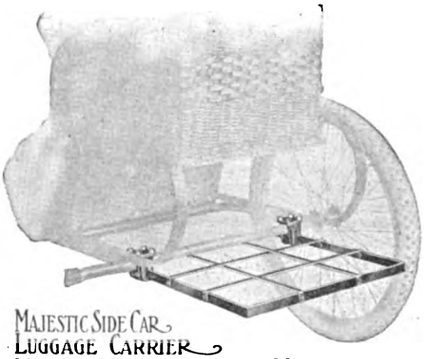
SIMPLEX SIDECAR.

AN improved model of the Simplex sidecar manufactured by the Brooklyn firm was shown at the Grand Central Palace. While following the general lines of the models produced in 1912 the new car presented several features which attracted special attention. The Simplex frame has been strengthened for 1913 and the drop feature is continued, so that in a commercial vehicle it is possible to fit a van at least three inches deeper than could ordinarily be carried.

This enables the outfit to carry an unusually capacious box without having the latter appear cumbersome. More sturdy springing is noticeable on the 1913 model and additional precautions have been taken to avoid trouble with the connections to the machine. The noteworthy point in the Simplex car is that the case carried on the mirror luggage rack makes provision for batteries to supply current for the lamp. The car is well upholstered and the body is finished with gray and black stripping. A new product of the Simplex firm is an auxiliary brace, which may be attached between the frame of the sidecar and the motorcycle frame, just forward of the motor, to give an additional point of fastening to the outfit. With this brace in position the sidecar has four-point suspension.

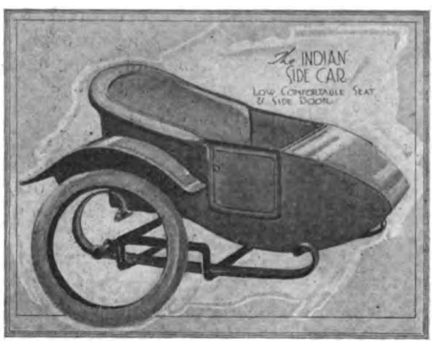


Simplex Sidecar Chassis.



INDIAN SIDECAR

OF Hendee manufacture throughout is the Indian sidecar with underslung chassis and all-metal body of the side-entrance type. The framing is of staunch tubing and double trussed with three connections to the motorcycle. The sidecar wheel is not sprung but, as fitted to an Indian motorcycle, the outfit is in fine balance, enabling the rider to run "hands off" and rendering steering of the outfit remarkably easy. The body has a side door and is most comfortable, having ample leg room and seat space for the passenger. It is upholstered in black leather and the general color is Indian red with this exception. The mudguard is five inches wide and is provided with a cowl at the side and front, being attached to the body instead of the frame. The equipment includes storm aprons and a foot mat, and a tool-box is fitted in the body under the removable seat.

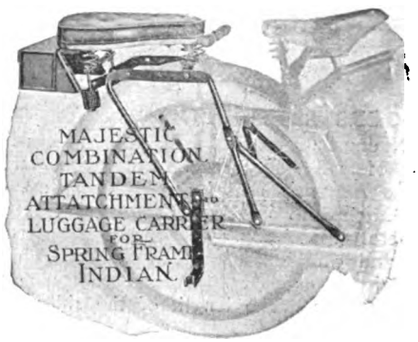


BAXTER DELIVERY VAN.

FEATURING the Grand Central Palace exhibit of the Baxter Side-Car Company, 119 Broadway, Cambridge, Mass., was a new commercial van, which, like the pleasure attachments of the firm, is supplied with special joints for attaching to spring-frame motorcycles. The delivery van is to be furnished in two types, No. 1 being constructed for loads up to 600 pounds and listing at $75, while No. 2 is built to carry 400 pounds, and is sold at $65. Both models are supplied in either wood or metal body construction, and there is little difference between them, aside from the extra capacity of Model No. 1 and some minor refinements. The standard line of Baxter pleasure sidecars was also shown; three of these have the special Baxter spring wheel feature, which contributes materially to easy going on heavy roads. The pleasure cars are made in reed, willow and rattan.

RAPID FEDERAL GROWTH.

RECENT reports from the Federal Rubber Manufacturing Company's plant, at Milwaukee, Wis., show a remarkable growth in this company's business. The main factory building is a ten story structure, and there are five others, embracing 250,000 square feet of floor space. Additional factories are being built on a five-acre plot, and the construction work is being pushed to the utmost. The growth is due largely to the efforts of the present management, B. C. Dowse, president;

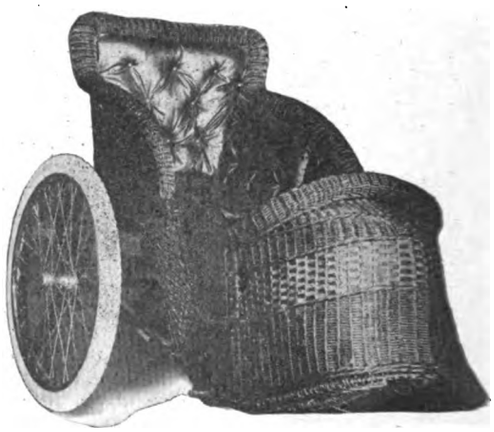


H. A. Githens, vice-president, and Richard Ward, secretary-treasurer. Here are some figures that will show the company's rapid growth. Its original capital was $1,000,000. On January 1, it was doubled to meet building and production requirements. During the first six months, to January 1, 1912, the business footed up to $96,000. In the next six months, to July 1, it jumped to $510,000, and by January 1, 1913, it is believed it will have passed the $1,000,000 mark. President Dowse states that indications pointed to a $4,000,000 output in 1913. Looking at the company's growth from another angle, there were only 38 men at work on July 1, 1911. On July 15, 1912, the workmen numbered 825. The Federal rugged tread non-skid has scored a remarkable success.

STOCK OF SUPPLIES SOLD

HAVING sold its stock of bicycle and motorcycle supplies to the New York Sporting Goods Company, of 15 Warren street, the Wilson Trading Company, of 46 Cortland street, New York City, announces that it will devote its entire attention to the retail trade.

MINNEAPOLIS, Minn., has been added to the list of cities employing motorcycles in their fire departments.



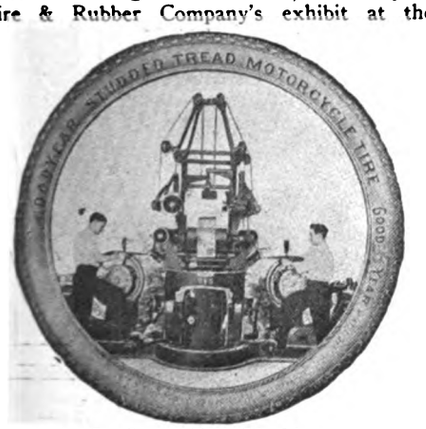
A Roomy Baxter Model.

Digitized by Google

With the TIRE-MAKERS

TIRES THAT STOOD THE TEST.

THE tires that withstood 21 hours of continual pounding at the terrific speed of 65 4/10 miles an hour, for 1,374 miles on the Brighton Beach Motordrome, were one of the most interesting features of The Goodyear Tire & Rubber Company's exhibit at the



Goodyear Tire Machine.

Show. "The result of this race marks an epoch in the history of tire manufacturing," says S. A. Falor, manager of the motorcycle tire department of the Goodyear company. "Not only was such a tire record never accomplished before, but no tire manufacturer had ever hoped to achieve such durability as these tires developed. For 1,374 miles, 21 hours, Goodyear motorcycle tires were run under load by George Lockner and William Shields, the Brighton winners. McNeil and Eckel finished second, having a total of 1,371 miles to their credit. Chapple and Wray finished third after reeling off 1,365 miles. All had Goodyear tires. At the end of that period the tires were taken off and but little wear was noticeable."

Notable at the Goodyear booth were the accessories. There were two show-cases, displaying a complete line of quick repair outfits, protection patches, etc. These cases were offered to the trade the first of the year and have had a remarkable sale. The adoption of show cases will aid dealers in giving motorcycle owners service; they will have on hand the little things riders need.

BROWN SCIENTIFIC TUBE.

WITHOUT a doubt one of the most interesting exhibits in the "Rubber Section" at the Show was the Brown Scientific tube, which is being manufactured by the Voorhees Rubber Manufacturing Company, with main office and works at 18-46 Bostwick avenue, Jersey City, N. J. No fluid or "filler" of any kind is used in the Brown tube and the principle on which it operates is surprisingly simple. The tube is made about the same thickness as an ordinary tube on the rim side and at the center line of circumference it is gradually thickened until it is considerably heavier than the tubes in general use. After the manufacturing process is finished the tube is turned inside out with the heavy frabric surface against the casing. The inner layer of rubber is thus compressed so that any ordinary puncture sustained is immediately filled by the rubber of the tube itself, thus making it self-sealing. Nails were repeatedly driven through the demonstrating tube at the Show without appreciable loss of air.

UNITED STATES TIRES

PRODUCTS of the United States Tire Company were exhibited at both the Palace and Madison Square Garden. U. S. Motorcycle tires in all standard sizes were shown at the Palace with a full line of Morgan & Wright and U. S. inner tubes. In addition to the tire display were shown inside patches, outside tire sleeves, tire tape and motorcycle grips. As usual, this tire exhibit was an impressive one.

NEW DIAMOND FEATURE.

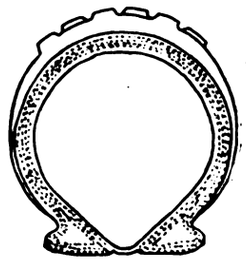
AMONG the rubber companies showing a line of motorcycle tires at the Garden was the Diamond Rubber Company, of New York and Akron. A new feature claimed for the Diamond motorcycle tire is the mileage strip, extending all around the tire and adding twenty per cent. to the wearing surface of the tread. These mileage strips are used on both the safety (Squeegee) and the studded tread types of the Diamond Company.

HEAVIER FEDERAL TIRES.

STUDDED and corrugated tread motorcycle tires in every standard size were exhibited at the Garden by the Federal Rubber Manufacturing Company, of Milwaukee, Wis. In order to keep pace with the extra demands made upon motorcycle tires the Federal company has built its 1913 tires of unusually heavy treads with big studs.

A NEW TIRE.

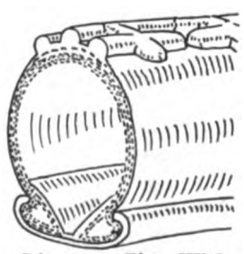
ALTHOUGH the Marathon Tire & Rubber Company of Akron, Ohio, displayed no motorcycle tires at its booth at the Garden, the stand attendants stated that a motorcycle tire, which is being built on the same lines as the firm's well-known automobile tires, will soon be on the market. A catalog describing this product will be mailed upon application.



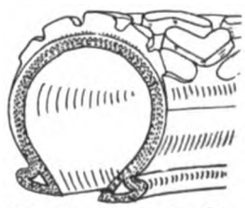
The Republic, in Section.

MOTORCYCLE GARAGE PUMP.

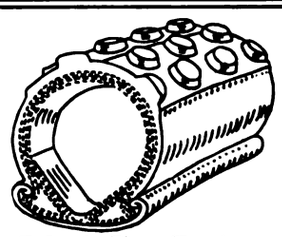
A SMALL electrically operated tire pump, suitable for either automobile or motorcycle garage service, is a product of the Ingersoll-Rand Co., 11 Broadway, New York City.



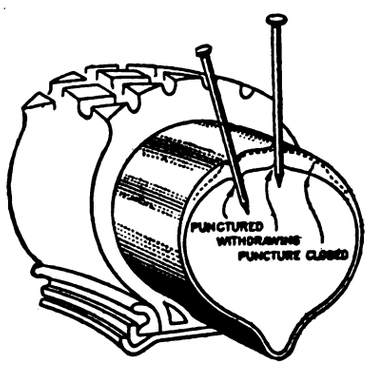
Diamond Tire With Distinctive Tread.



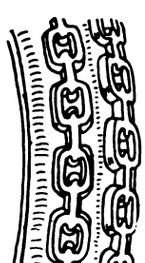
The Marathon, to be Made in Motorcycle Size.



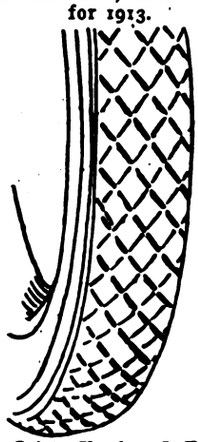
Federal Tire, Heavier for 1913.



Brown Scientific Tube.

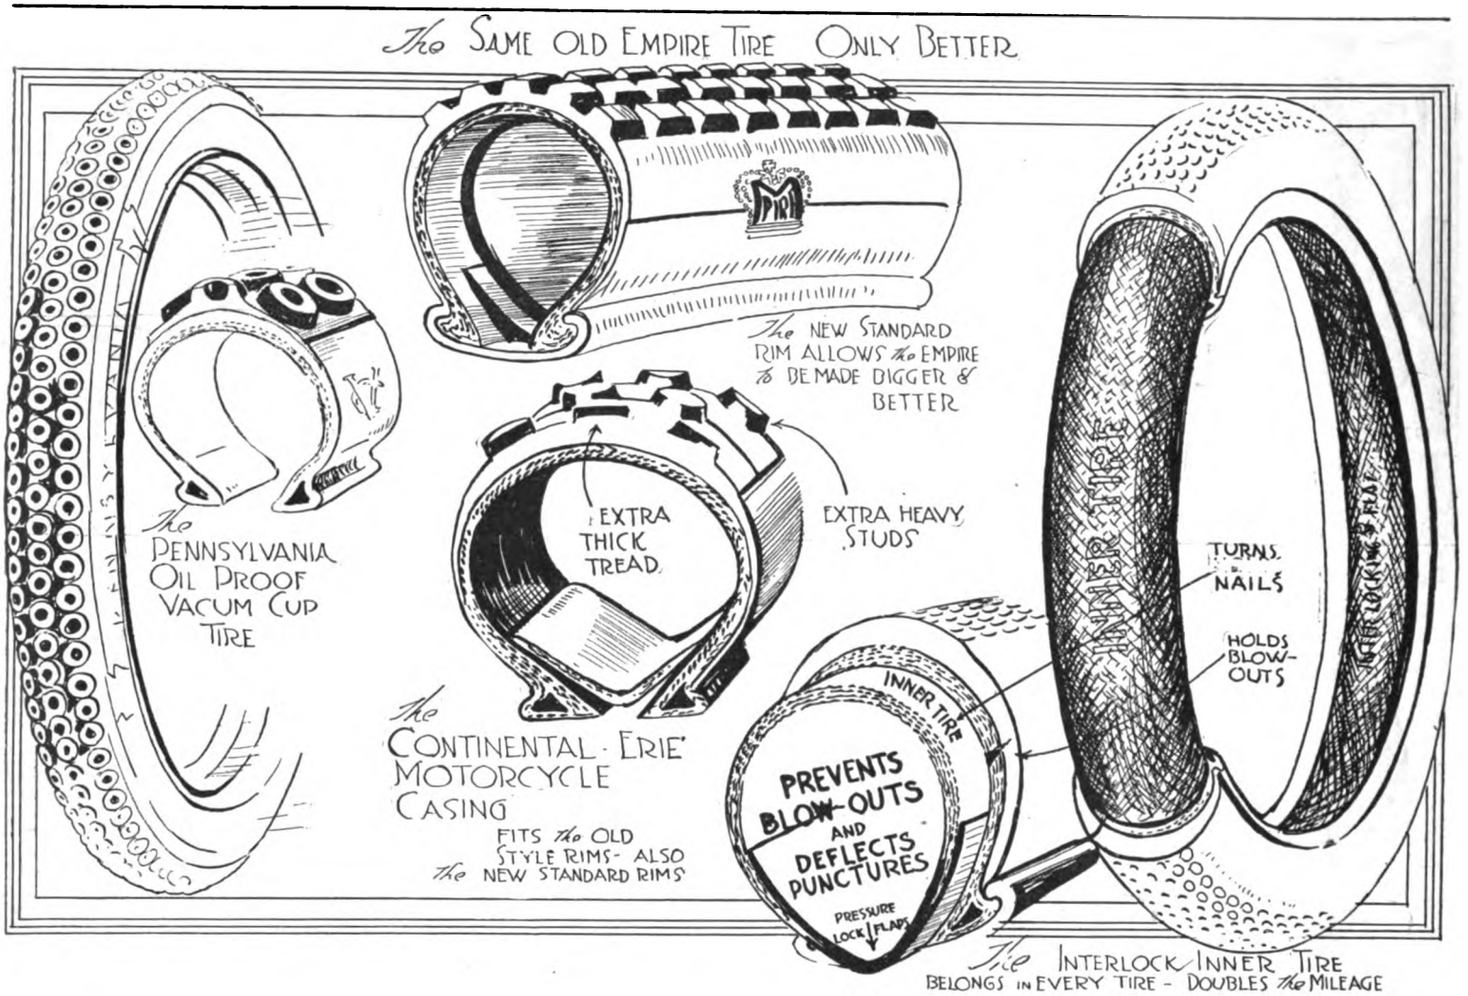


United States Chain Tread Type.



Ajax-Grieb Checkered Tread.

Digitized by Google



PENNSYLVANIA TIRES.

MOTORCYCLISTS who were not already acquainted with Pennsylvania Vacuum Cup Tread tires, manufactured by the Pennsylvania Rubber Co., of Jeannette, Pa., found much to impress them in the company's Show exhibit. Stress was placed upon the declaration that the new Pennsylvania tires are positively oil-proof. The lines of automobile tire construction are followed scrupulously in the motorcycle casing, and as a result it is capable of unusual mileage. The firm is making a feature of its red inner tube of pure gum, which it backs with a guarantee of 4,000 miles.

NATIONAL PRODUCTS.

"TIRENEW," a compound of rubber in liquid form, prepared for filling cuts in tires and for waterproofing the fabric underneath, is being featured for 1913 by the National Rubber Co., of St. Louis, Mo. The firm is also manufacturing the "Narco" tire cut filler, a pure rubber filler in semi-liquid form, and a special liquid for reviving all rubber materials. Each product is sold in such form that it may be obtained either by dealers or individual motorists.

DYKE CLINCHER SLEEVE.

IN addition to its line of automobile tire accessories the John L. G. Dykes Co., of Chicago, is marketing a special clincher sleeve for motorcycle service. This sleeve is made in one size only for the motor two-wheelers. The firm is represented in New York City by the Clucker-Hixon Co., 32 Park Place.

CONTINENTAL-ERIE LINE.

IN addition to its popular line of motorcycle tires the Continental-Erie Rubber Works, Erie, Pa., showed standard rubber accessories of interest to all riders and directed special attention to its improved motorcycle grips, which have an inner reinforcement of woven steel. This system of construction obviates breaking of the grip at the end of the handlebar, and still permits of the necessary resiliency, so that a combination of comfort and durability is effected. Inner tubes, Non-Slip lag, pedal rubbers, rim strips for fitting to double clinch rims so that single clinch tires may be fitted, spring fork sleeves, spring fork bumpers, inside vulcanized patches, blow-out patches, repair sleeves and other rubber accessories were also displayed.

INTERLOCK INNER TIRES.

THREE sizes of Interlock Inner Tires, manufactured by the Double-Fabric Tire Co., of Auburn, Ind., were shown for motorcycles at the company's Show stand. The Interlock is a complete inside tire; it is placed between the inner tube and the outer casing, thus rendering the tire practically puncture-proof and reducing to the minimum the danger of blow-outs. The resiliency of the tire is not affected and it is stated that tests show an increase of fifty per cent in mileage through the use of the Interlock reinforcement.

NEW TIRE COATING.

A NEW impervious coating for either automobile or motorcycle tires is being offered by the Essex Rubber Co., Inc., of Trenton, N. J. It is claimed that this solution is composed of the finest quality of rubber, often superior to the material in the tires themselves, and that it protects the casings from the harmful oxidizing influence of the air. The Essex solution is highly recommended for the tires on machines that have been laid up for the winter; it may also be used for filling cuts and stone rips in tires. The firm makes outside hook-on patches for motorcycle tires and inside blow-out patches.

TIRE REPAIR SPECIALTIES.

IN addition to its line of automobile tires the American Tire & Rubber Company, of Akron, Ohio, displayed an attractive layout of tire repair materials suitable for general use. One of the company's specials is its "Five-minute" cure vulcanizing cement.

CEMENTLESS PATCHES.

CEMENTLESS patches for tire repairs interested motorcyclists in the Show exhibit of the Braender Rubber and Tire Co., of Rutherford, N. J. The remainder of the display was given up to rubber automobile accessories. Braender cementless patches are made of strong red stock, and are simply moistened with gasoline before being applied to a puncture. No time need be allowed for drying as the patch is vulcanized to the tube in service. The Braender company has a New York sales office at 1987 Broadway.

MORE than forty members of the Richmond (Va.) M. C. attended the club's recent annual banquet.

Digitized by Google

LAMPS and GENERATORS' HORNS, SPEEDOMETERS & CYCLOMETERS

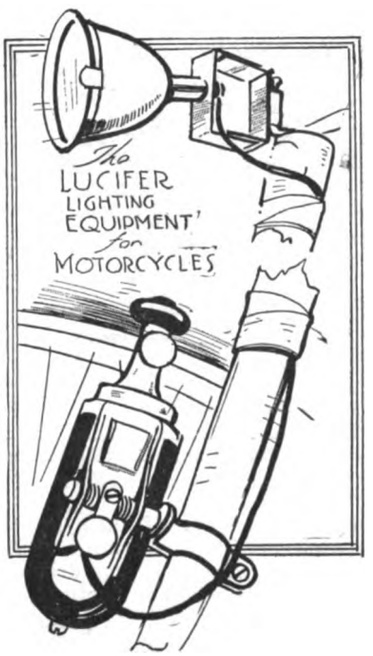
"LUCIFER" ELECTRIC LAMP.

MARBURG BROTHERS, INC., who are now entering the motorcycle accessory field, attracted extraordinary attention with the Grand Central Palace exhibit which was featured by the "Lucifer" electric lighting outfit for motorcycles and bicycles. The small dynamo designed for this lighting system employs a bell-shaped magnet which has proved a complete success in the Mea magneto, introduced to the American market by the Marburg firm. The armature is mounted in the axis of the bell-shaped magnet and is supported by suitable bearings located at the open end of the magnet. At the outer end of the armature shaft a small friction wheel is arranged, which will be in contact with the tire of the wheel when light is desired. The whole device is so mounted that the friction wheel can be brought into contact with the tire or removed by means of a spring and set screw, the latter requiring only a few turns by hand to establish contact between friction wheel and tire. A cable leads from the dynamo to the reflector, which is of simple and neat design.

The dynamo is enclosed and so constructed and supported that the vibration of a motorcycle will have no detrimental effect upon it.

OLD SOL LAMPS.

SPECIAL attention was called to a new type of sidecar lamp and to the company's improved tail lamp at the Show stand of the Hawthorne Mfg. Co., of Howard avenue and Spruce street, Bridgeport, Conn. The new sidecar lamp is listed as Old Sol No. 13. It is a compact and attractive lighting attachment which throws a powerful light in the form best suited for sidecar traveling. It shows a red rear signal and is rated at 100 candlepower. It weighs only 10 ounces and is listed at $2.50. The Old Sol tail lamp has a combination bracket which holds the number plate, and is an unusually compact fitment. Among the most attractive types in the firm's line of larger motorcycle lamps is Old Sol No. 17 and the powerful No. 8; the former has 1,000 candlepower and the latter 1,500 candlepower.



New Marburg Electric Outfit.

SOLAR LAMPS

SOLAR motorcycle lamps were on exhibiplacing on their machines the Never-Brass Manufacturing Company, of Eleventh avenue and 36th street, New York City, and also at the F. A. Baker stand at the Palace. Several new models which had not previously been listed were on display, as well as the old line of Solar lamps. The company reports sales of large quantities of the No. 102 G model. The No. 4 G. H. self-contained gas lamp remains the same as last year, except that it will be fitted with an improved water valve.

NEVEROUT OIL LAMPS.

A LARGE number of motorcycle riders are placing on their machines the Neverout patent oil lamp in addition to a gas headlight. They find it necessary to have with them constantly a reliable oil lamp, as in many of the large cities headlights are not permitted on certain streets, and, furthermore, should the headlight for any reason not prove available, the Neverout oil lamp is always ready for service.

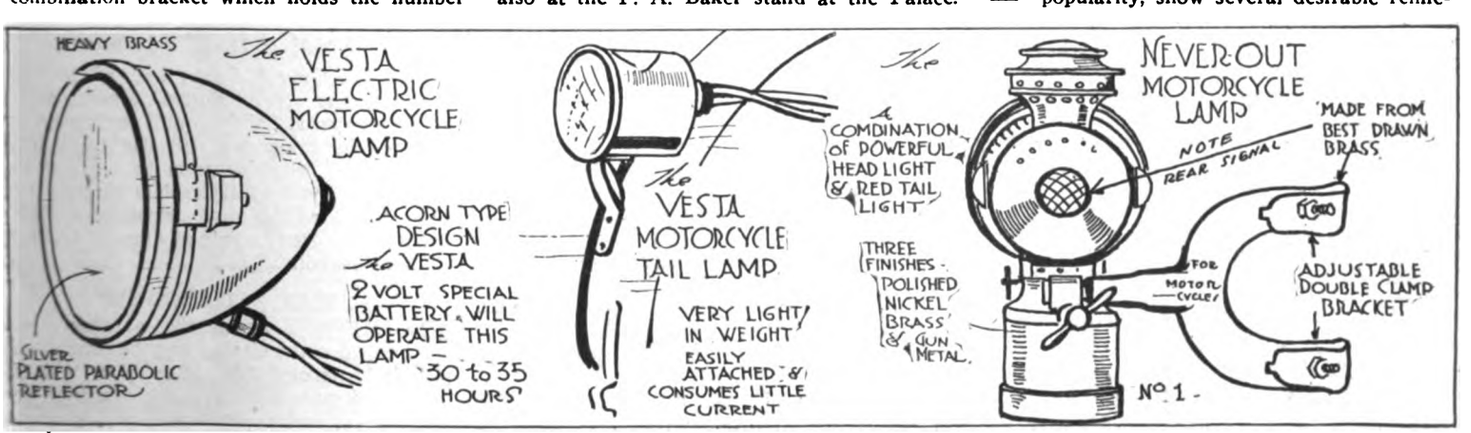
The Rose Manufacturing Co. of Philadelphia, that manufactures this lamp, backs with the strongest possible guarantee, and is putting out a large number of these lamp models. The firm had its usual attractive exhibit of up-to-date lamps at the show.

VESTA ELECTRIC LAMPS.

AN electric headlight of the "Acorn" type and a compact electric tail light for motorcycle service, were shown with the general line of electric lighting outfits displayed by the Vesta Accumulator Co., of 1336 Michigan avenue, Chicago. It is stated that a Vesta 2-volt battery will operate the headlight from 30 to 35 hours on a single charge. The headlight is sold for $6.50, with battery extra. The tail lamp is so constructed that it may be easily attached to the rear mudguard. It sells at $1.75, complete with 2-volt bulb.

INDIANA LAMPS

LUNAR lamps, which already enjoy wide popularity, show several desirable refine-

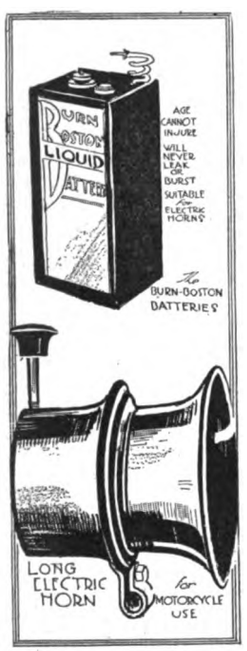


Digitized by Google

ments for 1913, and the Indiana Lamp Co., of Connersville, Ind., is preparing for a busy season. A leading feature of the Lunar lamp is that it is constructed in one piece, with no rings or pockets to collect dust. The double reflector is another feature to which the manufacturers call special attention.

LONG MOTORCYCLE HORN.

THE G. PIEL CO., Thirteenth street and Boulevard, Long Island City, L. I., is now offering its Long warning signal in a highly attractive model for motorcycles. This horn has won much favor on motor cars, and it is worthy of note that the same features which paved the way to success in the larger instrument are carefully embodied in the smaller device. It operates direct from a push button in the motorcycle type, although the automobile horn may be fitted with a Bowden wire attachment. When the operating button is pressed it sets in motion ingeniously devised mechanism in a small chamber at the back of the horn, and a warning signal of great range is produced. It is stated that the horn is as responsive as any electrically operated instrument, and that its simplicity of construction insures greater dependability. The motorcycle model is listed as the J. M., selling at $10, ready for fitting.



AERMORE EXHIBITS.

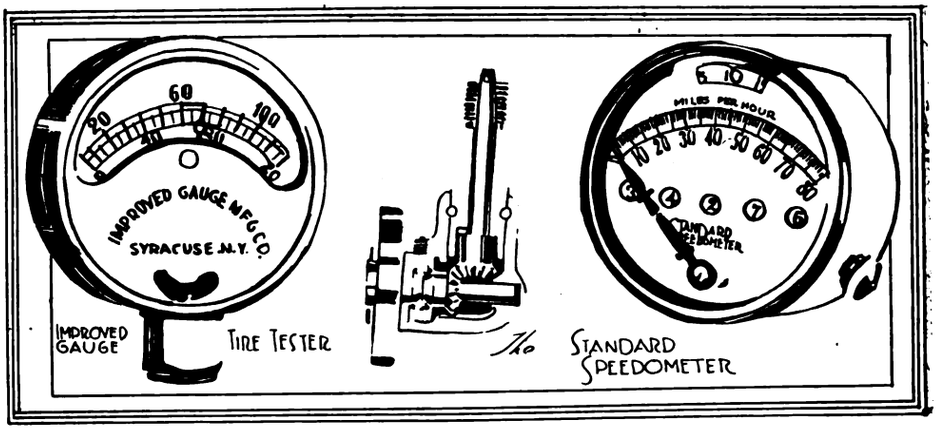
AT the stand of the Aermore Manufacturing Company, of 1536 South Michigan boulevard, Chicago, "The Horn Harmonious" was the center of interest. This warning signal, which is adapted for motorcycles as well as larger motor vehicles, gives a clear, far-reaching signal without being offensive, and is unusually simple in construction. It is self-cleaning and is, therefore, free from clogging troubles. The Aermore horn is operated by the exhaust, four notes being sounded simultaneously when a foot pedal is pressed. The horn is supplied in four sizes, ranging in price from $7.50 to $12.

This firm also handles the Sabo motorcycle lock, the simple but sturdy device which locks a motorcycle securely on the stand and thus protects it against the most ingenious thief. The lock sells at $1.25 and is now being constructed for fitting to the leading types of machines.

NEW MOTORCYCLE LAMP.

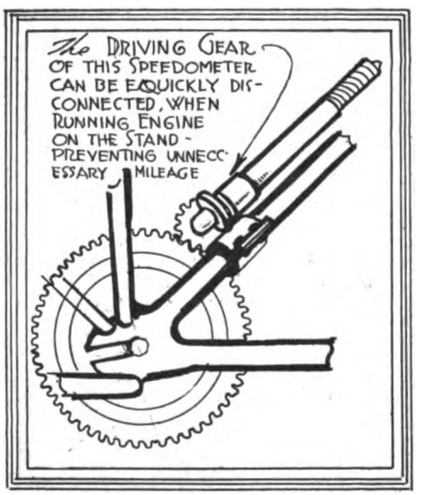
ONE of the latest products of the Chicago Cycle Supply Company, of 22a West Lake street, Chicago, is its new motorcycle lamp. A special feature of this lamp is that no bolts or screws are used in its construction, rivets only being employed to guard against breakage and rattling.

A run to Xenia was recently held by the Lebanon (Ohio) Motorcycle Club.



CORBIN-BROWN SPEEDOMETER.

LATEST types of motorcycle speedometers were displayed at the Palace by the Corbin Screw Corporation Division (American Hardware Corporation), New Britain, Conn. One of their newest improved speedometers was shown attached to a motorcycle wheel. It was demonstrated that the needle will not fluctuate, but remains absolutely steady, no matter how rough the road may be. Another valuable feature is that the instrument may be released when testing on the stand. This latter device will enable the rider to avoid rolling up any mileage, except that which he wishes to be recorded. When the instrument is to be disconnected it is simply necessary to pull out the cable.



Corbin-Brown Attachment.

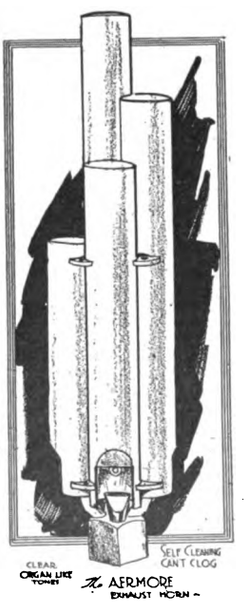
STANDARD SPEEDOMETERS.

THE Standard Thermometer Co., 65 Shirley street, Boston, Mass., displayed its usual line of motorcycle instruments at the Show, and in addition featured the Abell ball bearing pump, one type of which is recommended for use in agencies and motorcycle garages. The pump is operated by a ¼ h. electric motor, which is portable, and will inflate a 28 inch motorcycle tire in about 12 seconds. The pump is supplied complete with reel, hose, wire, plug, switch and pressure gauge.

JERICHO HORN.

A MOTORCYCLE type of the well known Jericho horn is now being shown by the Randall-Faichney Co., of Jamaica Plain Station, Boston, Mass., embodying the same features that have won favor for the firm's larger Jericho and Jubilee horns. This horn can be fitted to any motorcycle that has two inches of straight exhaust pipe. It sells, complete with fittings, at $4.50. It is simple to attach and operates perfectly on either single or twin machines.

The company is also making the Copley motorcycle oil gun with leather-packed plunger. The gun has a capacity of one-half ounce. Another type, with the same capacity, is furnished with solid metal plunger. Still another offering is a special motorcycle plug, called the Mac-Kae Blitz. Even though the porcelain may be broken the spark is unaffected owing to double insulation.



GRAY & DAVIS LAMP.

WHILE Gray & Davis, Inc., of 55 Lansdowne street, Boston, Mass., do not market a special lighting outfit for motorcycle service, the company's representatives at its Show stand called attention to the fact that its smaller type of automobile electric sidelight has been in some demand by motorcyclists who desire a light of unusual brilliancy on their mounts.

THE ACME SIREN.

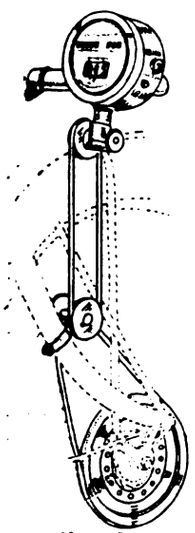
PROMINENT among the warning signals found at the Garden was the Acme Siren, popularly termed "the little horn with the enormous range." It is stanchly built of nickeled brass, and produces a sound similar to

Digitized by Google

that of the high priced electrically-operated automobile sirens. The construction is unique and simple to a degree. A plain rubber bulb forces the air through a reed which is protected from the entrance of foreign substances and is practically indestructible. This horn promises to enjoy as wide a popularity in 1913 as it did in 1912. The Acme Siren is handled in the United States by the Sarco Engineering Company, 112 Broad street, New York City.

STEWART SPEEDOMETER

AN interesting feature of the Stewart-Warner Speedometer Corporation's output for 1913 is a new motorcycle instrument, with a novel driving system. In order to offset the movement of the front spring fork two belts are used to operate the speedometer. The instrument is installed on the mudguard, or tension spring, where it can be easily read from the saddle. The first belt drive is from a hub pulley to a smaller pulley clamped about half way up on the forkside. From this point the drive is by another small pulley to a fourth pulley which transmits the action to the speedometer proper. This arrangement has been found entirely dependable, and its chief feature is that it permits of unusual flexibility. The new motorcycle instrument is listed as Model D, and is priced at $12, with 3-inch dial, 75-mile speedometer, 100,000-mile season odometer and 100-mile trip register.



New Stewart Speedometer.

NEW GEMCO HORNS

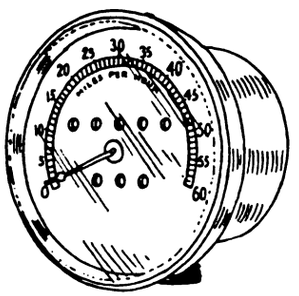
SOMETHING new in the line of an exhaust horn was displayed at the Garden by the Garage Equipment Manufacturing Company, of Milwaukee, Wis. A notable feature of the new horn is that it weighs a little less than three-quarters of a pound. It is attached to the exhaust pipe and operated by a small lever which opens and closes the exhaust valve. The Gemco is the first motorcycle product of this firm. They are made in 1, 1⅛ and 1¼-inch valve sizes and are listed at $2.90 and $3.

B. & L. LAMPS

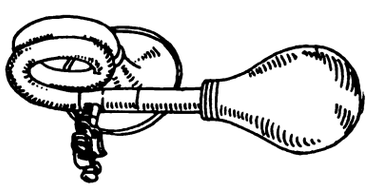
AN attractively arranged line of motorcycle head and tail lamps was featured at the Garden by the B. & L. Auto Lamp Company, of 507 West Thirty-fifth street, New York City. The line of electric motorcycle lamps ranges in price from $3.50 to $4.50, while the No. 24, 8-inch front gas lamp for motorcycles lists at $5. The gas lamp is all nickeled and extra charge is made for brackets.

THE VEEDER LINE.

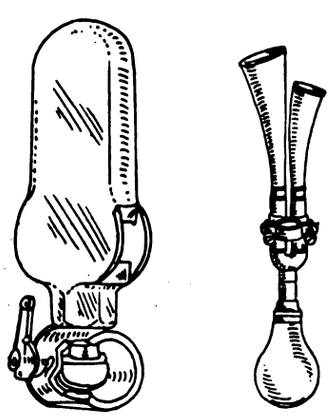
IN addition to the regular line of cyclometers displayed at the Garden by the Veeder Manufacturing Company, of Hartford, Conn., was a model of the firm's latest motorcycle type. This is considerably stronger than the cyclometer which has heretofore been sold for use on motorcycles by this firm. A special bracket supplied with the new motorcycle trip cyclometer makes it easily adjustable to all machines.



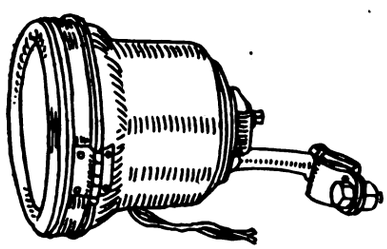
Corbin-Brown Speedometer.



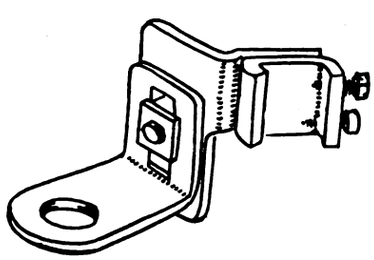
Auto Supply Company Horn.



"Gemco" Horn. Riley-Klotz Horn.



B. and L. Lamp.



Improved Veeder Cyclometer Bracket.

OLD RELIABLE LAMP.

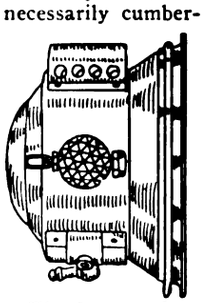
A NEW motorcycle lamp, the Old Reliable, a product of the Victor Auto Parts Company, of Cincinnati, manufacturer of the X-Ray lamps, was exhibited by the Fulton-McCutchan Company, of 1146 Michigan avenue, Chicago. The Old Reliable will be furnished in all nickel, black, red, gray, blue or orange, with nickel trimmings, the colors matching the enamel on machines.

RILEY-KLOTZ HORNS.

THE Riley-Klotz Manufacturing Company, of 8 Division place, Newark, N. J., featured an attractive line of motorcycle horns and Nightingale motorcycle whistles. The whistle, with clamps, is listed at $4, while the horns are sold at various prices, according to size. An unusually striking line of warning instruments was exhibited at the Garden by this enterprising firm.

WEED TIRE CHAINS

WEED tire chains were shown fitted to a motorcycle in the company's practical exhibit at the Grand Central Palace, and this method of display proved especially effective in dispelling the idea entertained by some riders that such chains are necessarily cumbersome. There are no new features in Weed chains for 1913, road reports for 1912 having demonstrated that the product is meeting every requirement. The Weed Chain Tire Grip Co. has its headquarters at 28 Moore street, New York City. Weed chains attracted much attention on M. E. Gale's transcontinental Emblem at the Show.



The Improved Solar Lamp.

A NOVEL TIRE

A PRODUCT of unusual interest for every user of tires on a motor vehicle, motorcyclists included, is the radically new tire offered by the Favary Tire & Cushion Company, of 111 Broadway, New York City. The Favary tire is built up of rubber and leather in such a way that there is nothing to puncture, but owing to a novel method of construction resiliency is provided for to a satisfactory degree. Despite the rather startling disregard of accepted standards of tire construction and total elimination of the pneumatic principle, the makers claim that the product has stood up well under tests. Literature will be sent on application.

EMPIRE INCORPORATION.

ANNOUNCEMENT is made that the Empire Rubber & Tire Co., of Trenton, N. J., capitalized at $1,000,000, has been incorporated and has taken over the assets and liabilities of the Empire Rubber Mfg. Co. and the Empire Tire Co. Empire tires have established a reputation for durability and hold wide favor among motorists.

GRAY SPECIALTIES.

TIRE repair kits, tire bands and other rubber accessories made up the Show exhibit of the Gray Specialty Company, 148 Avon avenue, Newark, N. J. The firm directed special attention to its dust-proof goggles, made with either white or amber lenses.

Digitized by Google

CHAINS & BELTS

COVENTRY CHAINS

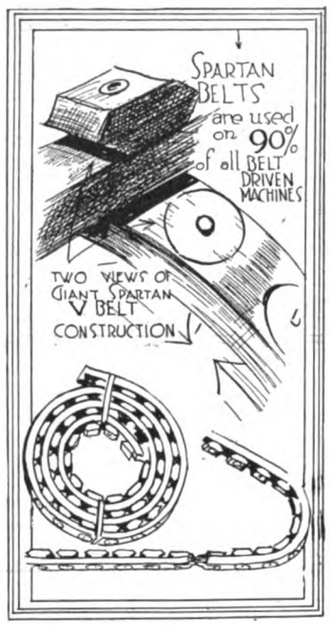
AT the Show stand of the Sarco Engineering Co., of 112 Broad street, New York City, there was a most effective display of Coventry chains, manufactured by The Coventry Chain Co., of England. The Sarco company is sole American agent for the Coventry products, and its exhibit at the Show was the climax of a broad-gauge advertising campaign that has been waged for some time past. As is generally known, the most distinctive feature in the Coventry chain for motorcycles is a "nose," or slight extension of the sides of each link. This provides greater strength and wearing qualities without making the chain heavy or cumbersome. It is stated that this unique construction strengthens the chain at least twenty per cent.

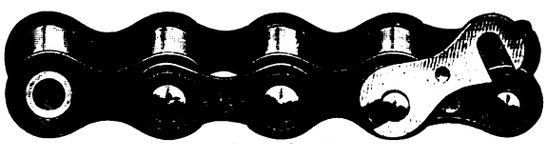
THE FRASSE EXHIBIT.

A STRIKING feature of the Peter A. Frasse & Co. display at the Show was a board, five feet square, on which was illustrated the complete process of manufacturing Renold roller chains. These chains, as is well known, are widely used in motorcycle service, and their reputation for durability and efficient work under all conditions could hardly be strengthened. The Frasse firm is distributing a new fifteen-page booklet just received from abroad which contains much information of prime interest to motorcyclists. A copy will be forwarded upon application to the company's headquarters, 417-421 Canal street, New York City.

SPARTAN MOTORCYCLE BELTS.

IN both V and flat profiles, the Spartan motorcycle belts are one of the leading products of the Graton & Knight Manufacturing Company, Franklin and Norfolk streets, Worcester, Mass. The tannage which bears the name of "Spartan" is used by this firm only, and makes for an ideal grade of belt leather for two-wheeler service. Over 80 per cent. of the belts used on motorcycles by manufacturers making machines with either form of belt transmission are of Spartan make for 1913, according to the statements made by the Worcester firm. Although a large factor in Graton & Knight business, oak-tanned leather is not recommended by them as suitable for motorcycle service, and is not used in the construction of their belts. According to W. W. Shoemaker, the 1913 outlook is far in advance of any previous season. The Graton & Knight company did not exhibit at the New York Show, but will be represented by a comprehensive display at the Chicago Show, its booth number being 29.





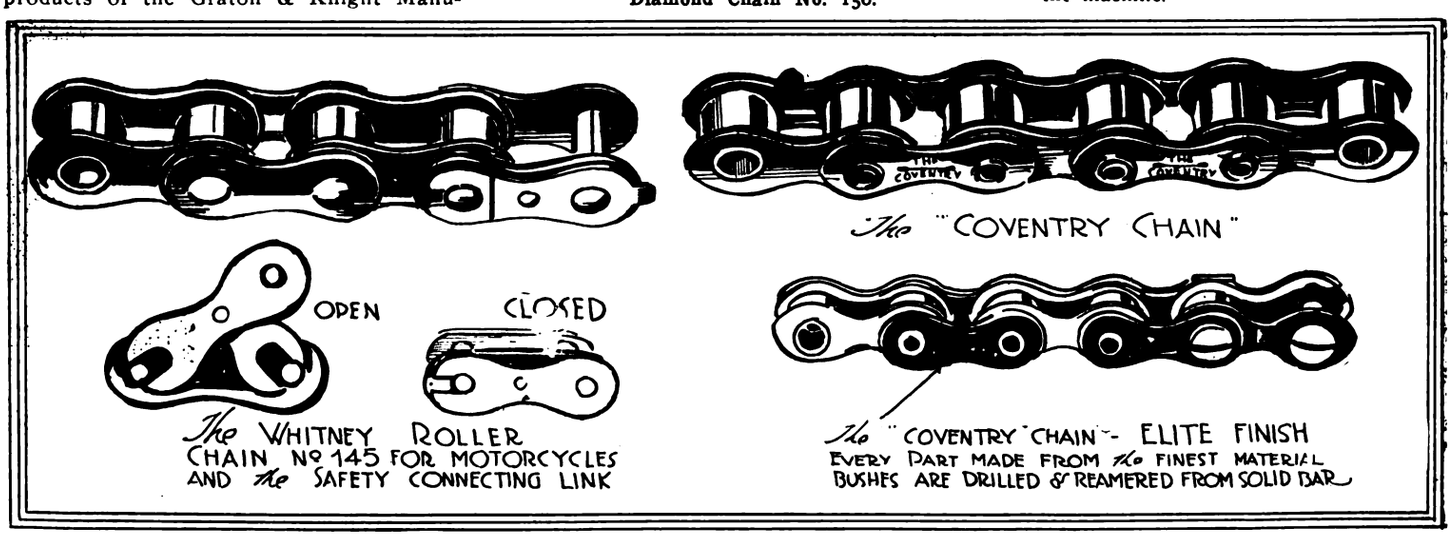
Diamond Chain No. 150.

WHITNEY CHAINS.

NO changes in 1913 products were reported at the Show stand of the Whitney Mfg. Co., of Hartford, Conn., but this did not deter throngs of Show visitors from making a careful examination of the display. The Company's special offering for motorcyclists is Model 145, a roller chain type that has proved its claim to recognition through long and arduous service under the most trying conditions.

BALDWIN CHAINS.

IN both block and roller models, for the pedal side or for the transmission of the motor's power to the wheel, were shown the Baldwin chains, the product of the Baldwin Chain & Manufacturing Company, Worcester, Mass. The well-known detachable type of roller chain was demonstrated and a complete line of sprockets and chain parts completed the display. The block types are designed for the pedal side, while the roller models are for either the transmission or pedal side of the machine.

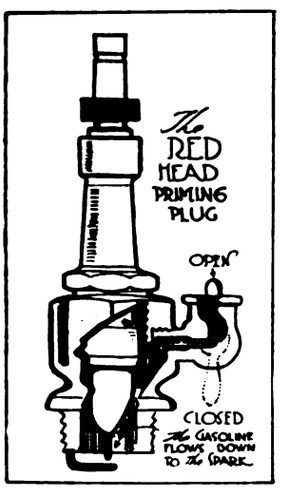


Digitized by Google

MAGNETOS SPARK PLUGS and other IGNITION DEVICES

RED HEAD PRIMING PLUG.

MOTORCYCLISTS at the Show evinced particular interest in the improved Red Head priming spark plug, manufactured by the Emil Grossman Co., of 250 West Fifty-fourth street, New York City, which was a feature of the full Red Head line. Gasoline introduced through the cup of the Red Head priming plug passes down a canal drilled in the shell, flows along the porcelain and drips directly to the sparking points, where it vaporizes and is ignited. The feature upon which special emphasis is placed is that the gasoline reaches the immediate vicinity of the sparking points, and is therefore capable of exerting its greatest efficiency to effect an easy start. The Red Head priming plug can be cleaned without removing it from the cylinder; if the pet-cock is opened while the engine is in operation the compression will shoot out the carbon. Aside from the priming feature this plug is the same as the Red Head magneto plug.

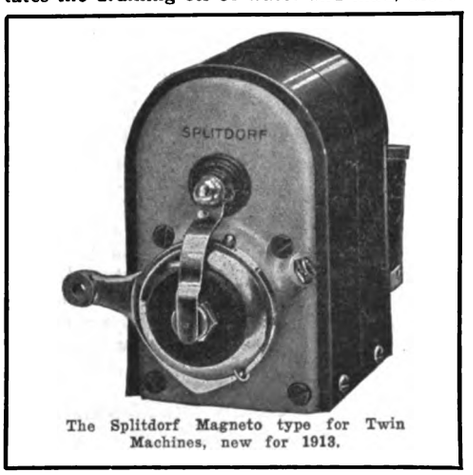


HERZ MAGNETOS AND PLUG

A NUMBER of striking improvements were shown in the Herz magnetos for 1913. Changes have been made in the segment box, which is of heavier metal than in the past, and the advance levers are more substantially fastened on it. The secondary binding posts are arranged so that the insulated cable terminal can be attached on same, thus protecting this connection and making it dust and waterproof. They can be easily detached without dismantling any other part of the apparatus, and as a result no inside parts are exposed so that grit or other foreign matter can reach the working parts. An improvement is shown in the condenser, which has increased capacity, and special care has been exercised to prevent injury to the part through jarring or vibration.

The company has added to its line a new type, Model N, which has the pole pieces extended. It will start the motor easily in a retarded position, thereby avoiding back-kicks and pounding of the motor, and in addition the engine can be operated at very low speed, a material advantage in city riding and wherever caution is necessary.

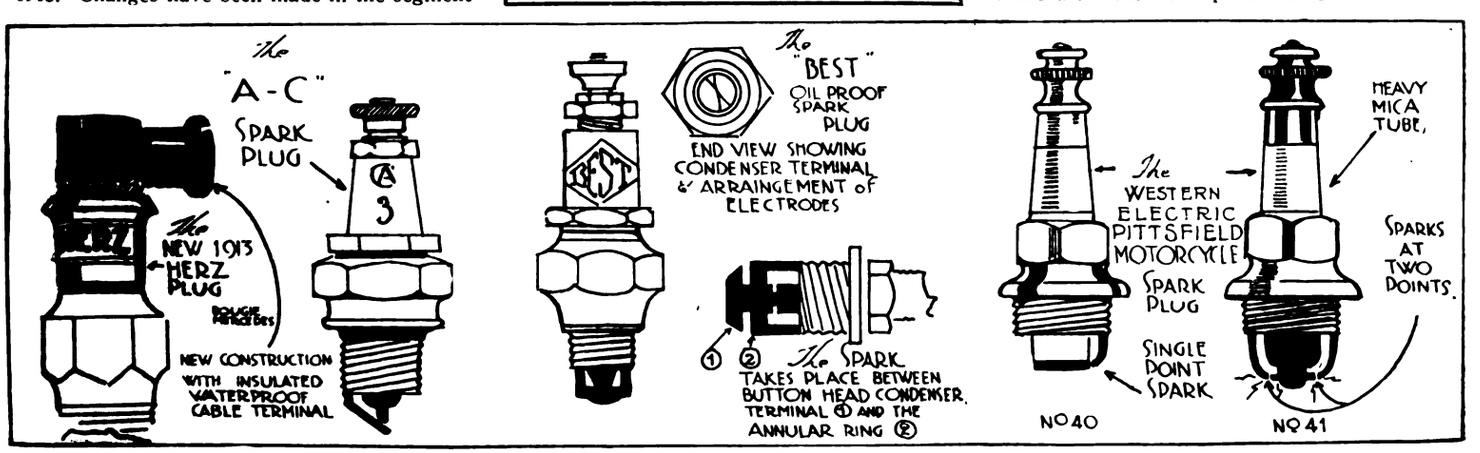
The Herz company is featuring a new motorcycle plug for 1913. It is constructed of unbreakable stone with a taper seat, ground carefully to effect a perfectly gas-tight joint. The outside stone is of a shape which facilitates the draining off of water and mud, thereby avoiding short-circuiting and gapping over of the high tension current to the fitting. The insulated terminal is water and dust-proof and is self-adjustable to the direction in which the cable is running. This obviates strain and trouble from vibration. The new plug is fully described in a leaflet which will be sent on application to the headquarters of the firm, Puck Building, Lafayette and Houston streets, New York City.



The Splitdorf Magneto type for Twin Machines, new for 1913.

JEFFERY-DE WITT SPARK PLUGS.

JEFFERY-DE WITT spark plugs came in for their share of attention, as usual, from students of motorcycle ignition problems. The full J. D. line was shown, including the conical open-end plug for magneto service, the conical closed-end type, the "Petticoat" plug with special alloy electrode and the J-D visible type with a window for determining the condition of the spark. The conical open and closed-end plugs with platinum points supersede the Reliance plug formerly manufactured by this company, which gave such uniformly satisfactory service. Attention was called to the fact that Humiston, in his recent record-breaking trial on the Pacific coast, used one of the Jeffery-De Witt motorcycle plugs which gave him no trouble throughout his 100-mile chase after the new speed marks.



Digitized by Google

BURN-BOSTON BATTERY.

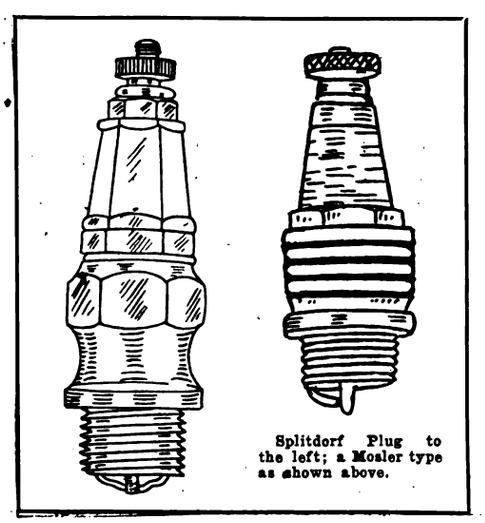
OF unusual interest to the thoughtful motorcyclist was the battery exhibited at the Show by the Burn-Boston Battery & Mfg. Works, of Boston, Mass., in view of the fact that it combines the two essential qualities of efficiency and economy. It is credited with yielding three to twelve times the service of dry cells, will not leak or burst and is being used by the War Department and for many purposes where reliability is the first requisite. A square durable case encloses a strong zinc shell which contains the active elements, zinc, carbon and salt solution. Current is produced through the destruction of the elements. In dry cells the process continues whether the battery is in use or not, but in the Burn-Boston product the process is arrested when the current is not being drawn. This explains the long life of the battery. It is especially adapted for use with electric horns.

MONARCH SPARK PLUGS.

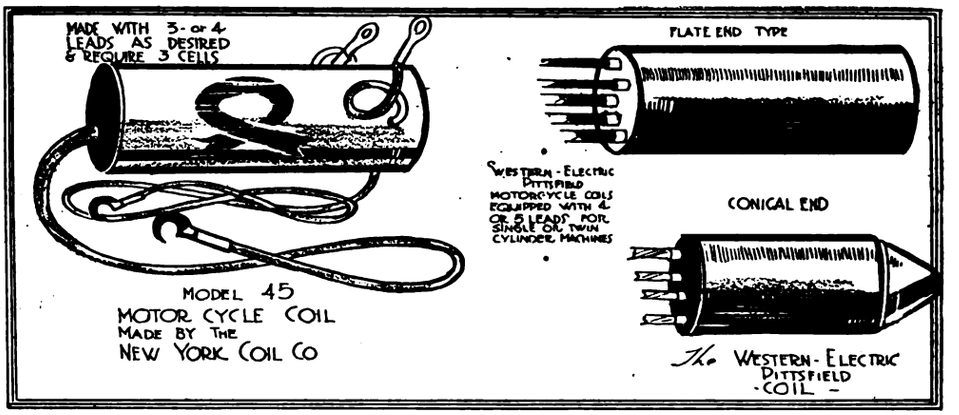
MONARCH spark plugs figured prominently in the exhibit of the Benford Manufacturing Company, of Mt. Vernon, N. Y. Attention was called at the Show booth to the fact that Monarch plugs are fitted on the 1913 models of Excelsior, Iver Johnson, De Luxe, Minneapolis, Thor, Eagle, Jefferson and Flanders machines, and all machines with Spacke engines. The Benford company also displayed models of the Monarch motorcycle priming cup and Monarch timer. The priming cup lists at 75 cents, and can be fitted to all makes of motorcycles. Indian machines are tapped to receive this priming cup, which can be attached in a moment.

MOSLER SPARK PLUGS.

AT the stand of A. R. Mosler & Co., it was stated that the firm is featuring no changes in its standard plug line for 1913, but it is announced that in response to requests from dealers a spark plug with mica insulation is now being offered for motorcycles at a considerably lower price than the firm's highest grade article. This is intended to meet the demand for a cheap but efficient mica plug.

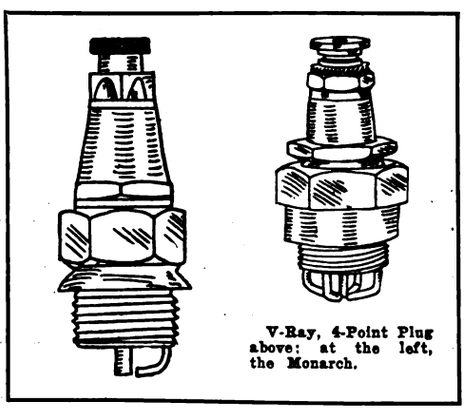


Splitdorf Plug to the left; a Mosler type as shown above.



NEW YORK COIL.

NO changes have been made for 1913 in the motorcycle coil, Model 45, manufactured by the New York Coil Co., 338-340 Pearl street, New York City. The standard type, which has given eminently satisfactory service, was included in the firm's display of high-grade ignition specialties at the Show.



V-Ray, 4-Point Plug above; at the left, the Monarch.

V-RAY SPARK PLUGS

ONE of the busiest firms in its field is the V-Ray Co., which manufactures spark plugs in Marshalltown, Ia. This firm produces a special motorcycle type, embodying the distinctive four-point feature, and attention is being called to the new 1913 price, one dollar. The V-Ray plug is short and stocky and is constructed with the best imported Koalin porcelain. The electrodes are of Hermann Boker's imported meteor wire, and are guaranteed not to corrode or burn out.

SPLITDORF DISPLAY.

AT the stand of the Splitdorf Electrical Co., motorcyclists gave their attention primarily to the new motorcycle magneto types "EU" and "EV," for single and twin-cylinder machines. These improved magnetos were illustrated and fully described in these columns in the issue of January 9, Splitdorf Common Sense spark plugs, representative of the highest skill of the company's designers and engineers, also attracted attention and rounded out an exhibit which was as entertaining as it was instructive for the student of the ignition problem in any of its phases.

"BEST" IGNITION PRODUCTS.

A FULL line of "Best" ignition products was displayed at the Garden by the Best Ignition Company, 200 West Sixty-fourth street, New York City. A motorcycle oil-proof spark plug attracted chief attention among the motorcycle features.

WESTERN ELECTRIC-PITTSFIELD.

FOR motorcyclists the special coil offered for service on motor two-wheelers was a center of interest at the Show stand of the Western Electric-Pittsfield Company, which has branches in many of the large cities throughout the country. The Western Electric and Pittsfield companies recently merged their interests. High quality spark plugs, for motorcycles and automobile service, high tension magnetos, switches, timers and other ignition devices rounded out an attractive display. The New York headquarters of the company is at 463 West street, and the Chicago branch is located at 500 So. Clinton street.

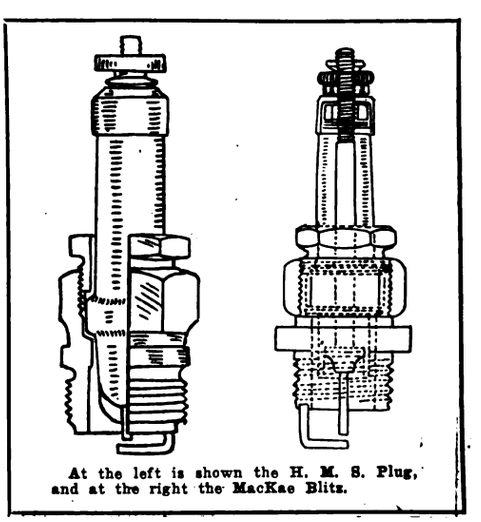
"AC" SPARK PLUGS.

A FULL line of "AC" spark plugs was shown by the Champion Ignition Co., of Flint, Mich., at the Garden. Of particular interest to the motorcycle trade was a special plug for motor two-wheelers, with porcelain or indestructible steatite insulators. This is an unusually short and compact plug, these features aiding it materially to offset the effects of heat and vibration.

WRIGHT AND AUBURN PLUGS.

WRIGHT and Auburn spark plugs were shown by the New York Mica & Manufacturing Company, of Auburn, New York. The Auburn plug is made especially for motorcycles and is said to have been much in evidence on recent race winning machines. Spark plugs manufactured by this company are distributed by the Specialty Sales Company, 802 Homewood avenue, Pittsburgh, Pa.

MEMBERS of the Knickerbocker Motorcycle Club, of Albany, N. Y., recently attended the first annual dance of the club.



At the left is shown the H. M. S. Plug, and at the right the MacKae Blitz.

Digitized by Google

CONNECTICUT SWITCH.

A SIMPLE and effective handlebar switch for motorcycles is offered by the Connecticut Telephone and Electric Co., Inc., of Meriden, Conn. The switch is clamped to the handlebar, close to the grip, and has one wire leading from it direct to the magneto. A pressure of the thumb on a handy button cuts out the ignition, and by giving the button a quarter turn it can be removed from the switch, and with the ignition cut out the switch acts as a lock on the machine.

NEW PRIMING CUP.

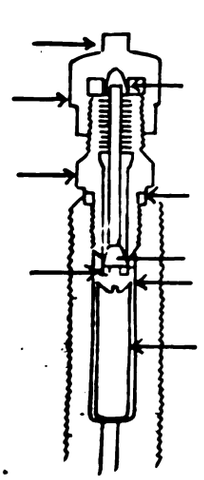
RIDERS who experience difficulty in starting their motors in cold weather will be interested in a new product of the Hagstrom Bros. Manufacturing Company, of Lindsborg, Kan. This is an improved priming cup which is credited with starting the most obstinate motor in frigid weather. The primer is attached to the intake manifold, and is so constructed that it acts somewhat in the nature of an auxiliary carbureter. The gasoline is introduced through a push-down cap in the top of the fitment and is then carried to a small reservoir in the body of the primer. Through one side wall of this reservoir are two holes, opening into a bore, which in turn leads to the intake manifold. The lower of these holes is intended to be below the gasoline level in the reservoir when the primer is ready for action, and the other simply opens out of the air pocket above the gasoline. When the motor is turned over the intake stroke of the piston simultaneously sucks in gasoline through the lower hole of the primer reservoir and air through the upper hole, thus creating a mixture which ignites readily. In other words, the Hagstrom primer introduces an auxiliary mixture into the manifold instead of necessitating the passage of gasoline directly into the cylinder.

SIMMS ANNOUNCEMENT.

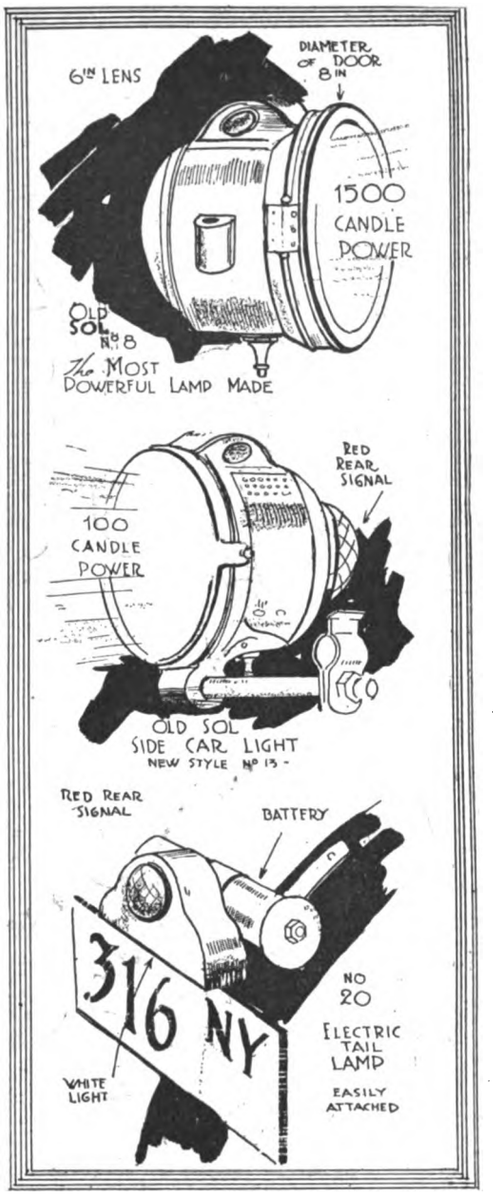
OWING to the fact that its magneto types for motorcycle service had not been completed the Simms Magneto Company, 1786 Broadway, New York City, was obliged to forego a motorcycle display in connection with its Show exhibit, but it is stated that a formal announcement of the new Simms magnetos for the motorcycle will soon be forthcoming.

BURKE TIRE VALVES.

"CUT off two-thirds of the time and labor of tire pumping," is the slogan of the Burke Valve Company, of Cleveland, Ohio, whose product, adapted for automobile, motorcycle and bicycle use, was exhibited in the Show. The Burke device eliminates the usual spring in the tire valve and thus removes the necessity for forcing the valve open against heavy pressure with each discharge of the pump. An ingenious plunger arrangement replaces the spring system.



DURING the latter part of this month the Jefferson (Wis.) M. C. will move into its new clubrooms.



STARK VULCANIZER.

THE Stark improved tire vulcanizer, weighing two and a half pounds and especially adapted for motorcycle repair work, is being featured by the Electric City Specialty Co., 163-165 Adams street, Buffalo, N. Y. It is stated that any ordinary job of vulcanizing can be done, either at home or on the road, in about fifteen minutes. The vulcanizer sells at $2.

ENDURANCE INNER TUBES.

FOR 1913 the Endurance Tire & Rubber Company, of New Brunswick, N. J., is offering a new motorcycle tube. Heretofore the company confined its line to automobile products. The tube is made of a high-grade of rubber and is given a special treatment which adds to its life and permits of more satisfactory repairing in case of a puncture.

A PUNCTURE FILLER.

THE Zip Company, Ltd., 471 Yonge street, Toronto, Ont., offers something new in "Zip," a liquid which is placed in a tire through the valve to prevent loss of air, following a puncture. It is stated that the liquid takes up only 4 per cent of the air space in the tire and that it has given satisfactory service under road tests.

"SLIKUP" FINISHES.

"SLIKUP" metal finish, and a silver finish sold under the same trade name, manufactured by N. B. Arnold, 1 Sigourney street, Brooklyn, N. Y., are among the new offerings likely to interest motorcyclists. The metal finish is a glossy black, which may be used on lamps or any other surfaces that give the rider cleaning trouble. The silver finish may be used to give a lasting nickel surface on any bright part. These products will probably solve the problem of rejuvenating old machines for many motorcyclists when the mounts are taken out for the spring "slicking up" and overhauling.

CYLINDERS AND PISTONS.

SPECIMEN cylinders and pistons in motorcycle sizes were exhibited at the Show by the Manufacturers' Foundry Company, of Waterbury, Conn., in addition to a line of automobile castings. This company has no standard products and makes up its output from customers' designs.

COES WRENCHES.

COES wrenches, in a wide range of sizes, were displayed at the Show by the Coes Wrench Co., of Worcester, Mass., and the stand attaches were kept busy telling the story of progress from the formation of the first Coes company in 1843 to the present efficient factory staff and selling organization. Visitors to the Coes stand were presented with neat stick-pins, made up with a tiny wrench and the souvenirs were in great demand before the Show was an hour old.

YOUNG SUPPLIES.

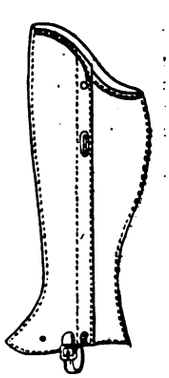
TIRE repair outfits and incidentals in great variety were shown by O. W. Young, 174-180 Frelinghuysen avenue, Newark, N. J. Special attention was directed to the self-vulcanizing patch outfit, which is intended for quick and lasting repairs on the road.

RAYBESTOS FACING.

RAYBESTOS friction facing, the product of the Royal Equipment Company, is of prime interest to motorcyclists, being adapted to multiple-disc clutch facings, cone clutch facings and band brake linings. The fabric is asbestos of long fibre mounted around a wire carcase, and the resultant facing is heat-proof and resists oil, water and gasoline. For use in clutches the facing is given a special treatment for a high co-efficient of friction. Another Royal fitment is the pressed steel brake drum adapted for the operation of either internal or external brakes, or both, on the same drum, without heating.

A WIDE range of metal garage fixtures, suitable for motorcycle as well as automobile service, is offered by the Dover Stamping & Mfg. Co., of Cambridge, Mass. The firm makes strainer funnels in many types and sizes, oil cans and other metal specialties likely to interest motorists in general.

AT the last meeting of the Savannah (Ga.) M. C., the club was reorganized and plans were laid for a 200-mile road race on next Thanksgiving Day.



The Premier legging, manufactured by the Premier Novelty Manufacturing Company, of 83 White Street, New York City.

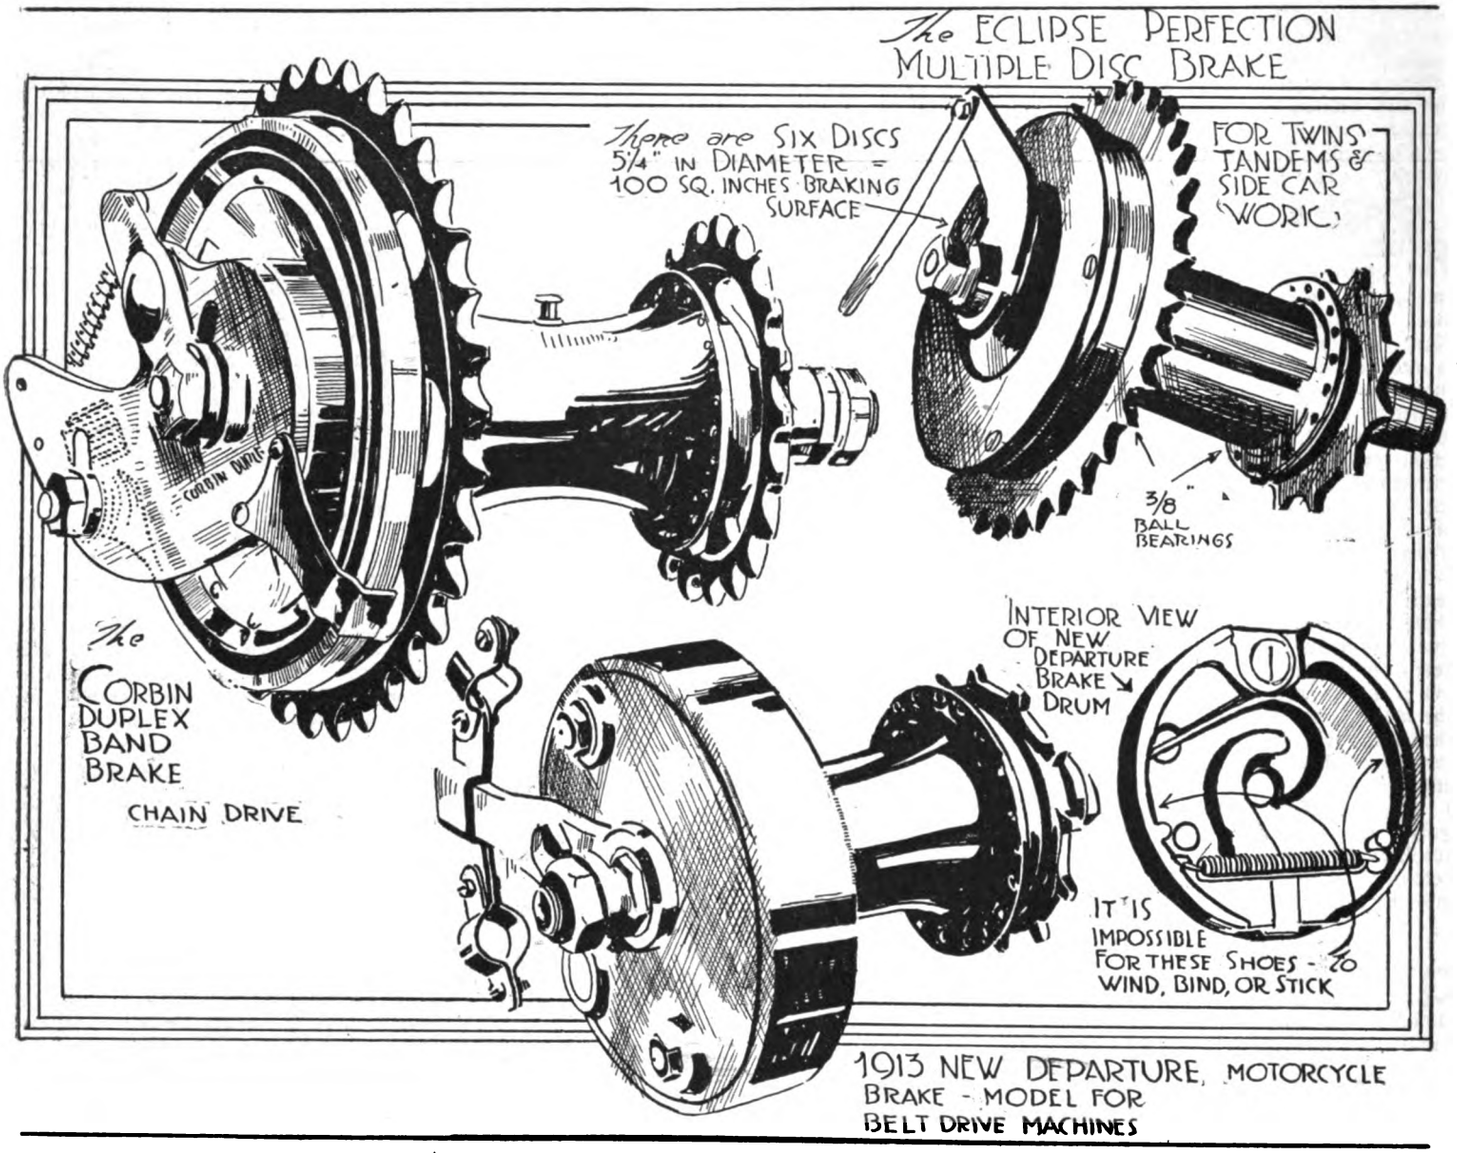
BRAKES SEEN AT THE SHOW STANDS



ECLIPSE MACHINE CO.

FREE engine clutches of the multiple disc type and Eclipse make were the center of attraction at the stand of the Eclipse Machine Company, Elmira, N. Y. Of only slightly less interest to visitors were the coaster brake types, with their ingenious construction and reliability of service. Both the engine shaft and countershaft types of clutch were shown, and models for V-belt, flat belt and chain drive were exhibited, assembled and dismounted. Changes have been very minor; a slight change in the inner worm-supporting ball-race being noted. The Eclipse brakes of the Perfection type have six discs giving a surface of 100 square inches area. Specimens of front and sidecar hubs were also shown.

CORBIN BRAKES.

THE Corbin duplex brake and the front hub for motorcycles attracted their usual attention at the Show from those who make the most of their machines by giving every essential fitting the consideration it deserves. These features with others equally as interesting for bicyclists, made up a display which was not overlooked by any single-tracker enthusiast. The Corbin duplex band brake for motorcycles embodies several improvements for 1913. The arm connecting band is now provided with two projections, thus forming an effective lock nut which securely holds the nut and prevents its jarring loose. It is also much easier to attach than heretofore. A bracket attached to the lower side of the brake arm keeps the brake band from dragging on the drum or sagging when expanded and thus prevents loss of power or overheating.

NEW DEPARTURE BRAKE.

AN absolutely new type of motorcycle brake, seen for the first time at the Garden Show, was displayed by the New Departure Manufacturing Company, Bristol, Conn. The new model has been designed after the automobile type, and embodies all the good qualities known to the auto brake. In talking with a prospective buyer the manager of the booth said: "So rapid has been the growth of the motorcycle of late that some of its supplementary parts have been unable to keep pace with it, and among these is the coaster brake. However, we figure on meeting all demands with our new motorcycle model."

MULTIBESTOS BRAKE LINING

A WIDE range of samples of Multibestos brake lining and friction material, produced by the standard Woven Fabric Co., of Worcester, Mass., was exhibited at the Show. The firm displayed samples of all its products, from the small lining used on the band brake of the Indian motorcycle to the four-inch size used for an oil well drill. It is stated that the Multibestos product is being sold in large quantities to several motorcycle manufacturers, and that it is reported as entirely satisfactory.

IMPORTED SPECIALTIES.

J. B. GROSS, importer for America and Canada of Haedge & Richter products, showed a line of sheet steel parts, pressings and stampings, in addition to tools for the manufacture of automobile and motorcycle tires. The Haedge & Richter company is located in Hanover, Germany, while the Gross headquarters is at 141-145 West Thirty-six street, New York City.

MISCELLANEOUS

BRETZ ANNOUNCEMENT

"ALTHOUGH not exhibiting the F. & S. product directly at the National shows in New York and Chicago, we are, however, exhibiting them indirectly, as nearly all the cars at the shows use F. & S. ball bearings," said J. S. Bretz, president of the J. S. Bretz Company, sole importers of F. & S. ball bearings.

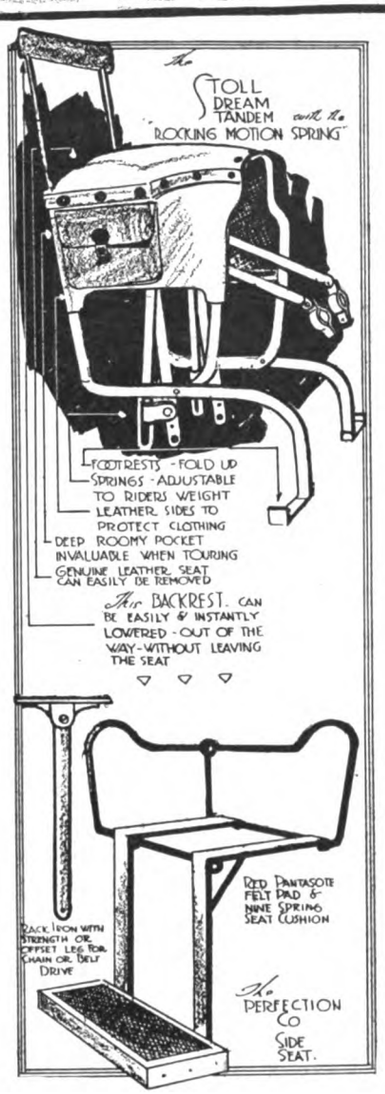
For 1913 Messrs. Fichtel & Sachs, of Schweinfurt, Germany, manufacturers of the well known F. & S. radial and thrust ball bearings, have recently added a new type of ball separator to their other types, the most prominent of which, of course, has been the die-cast aluminum separator so well known in the various arts and industries in which it has been employed. The new separator, a one-piece steel separator, will be known as the "Ribbon" type. This separator is formed from a one-piece, patented unit sheet steel stamping, drawn and formed without joints, welds or rivets in its construction. The separator itself is heavily corrugated and ribbed on one side for added stiffness, and finished in gun metal blue, is light in weight and frictionless.

Its use permits of normally grooved raceways of deeper cross-section than any other make, its correct radius lines thus adding enormously to the lateral wall strength of the inner and outer raceways. The radius of curvature of the raceway on the inner race is made somewhat smaller than that of the outer race, since looking at both races sideways, the outer race curves in a manner concave to the ball and the inner race convex; the outer race, therefore, encloses more of the ball than does the inner race.

YALE MOTORCYCLE LOCK

THE Yale & Towne Manufacturing Company, of 9 Murray street, New York City, makers of the well-known Yale lock for all purposes, also produce a motorcycle lock that is rapidly winning favor among riders. A steel shackle, resembling a long staple, encircles both front fork tubes of the machine, and the ends of the shackle are held in a Yale lock of special construction. The device is adaptable for all makes of machines.

F. & S. Ball Bearings.



HAYES METAL BOXES.

IN its attractive line of metal boxes for general service the Hayes Mfg. Co., of Detroit, Mich., includes a special model for motorcyclists. The latter is intended for use as a tool-box. It has a sturdy lock, is carefully lined to prevent rattling of tools and is provided with bands for attaching over the gasoline tank. This box, with lock, lists at $2.50. It is 10 inches long, three inches wide and three inches high.

NEW PITTSURGH QUARTERS.

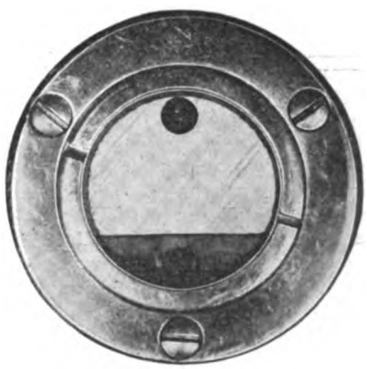
AN informal gathering marked the opening of the new quarters of the Pittsburgh (Pa) M. C. The club now occupies a cozy four-room apartment at Penn avenue and Whitefield street, East End.

STOLL DREAM TANDEM.

ONE of the most complete offerings for the motorcyclist who wishes to carry a tandem passenger is the fitment produced by the Queen City Iron & Wire Works Co., Thirty-third street and Walnut, Denver, Col., under the name of the Stoll Dream Tandem. This tandem is made in two types, No. 1, with a specially shaped seat and back-rest, a mud-shield and a unique spring system that effects unusually easy riding, and No. 2, a light, strong attachment at a lower price. Model No. 1 is well upholstered and has roomy side pockets, held by a strap and buckle, which will be found exceedingly handy on all occasions, and especially in touring. The footrests are so constructed that they may be folded flat against the tandem frame when not in use. The rocking motion in the Stoll Dream Tandem is its most distinctive feature. The saddle remains in the same relative position regardless of the jolting and jarring to which the machine may be subjected. The back-rest may be raised or lowered by the passenger without leaving the seat. This company also makes a sturdy luggage carrier in two sizes, 12 and 18 inches long.

RHINELAND BEARINGS

ANNULAR bearings, adaptable for motorcycle service, are being offered by the Rhineland Machine Works Company, of 140 West Forty-second street, New York City, in addition to a full line of bearings for heavier work. This firm operates factories in Germany, France and the United States. One of its feature products is a self-aligning bearing, in which the entire bearing follows disalignment and the balls are not obliged, when following this disalignment, to slide across the outer race at right angles to the direction in which they are rotating, as is the case in some other self-aligning bearings.



Simplex Oil Gauge.

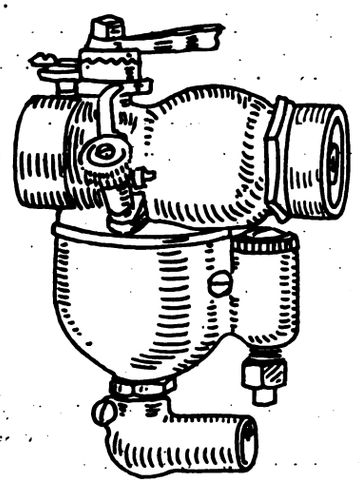
Sturdy Adams Stand.

SCHEBLER CARBURETERS.

IN the New York Show the Schebler carbureter display embraced both the motorcycle and automobile types, but it was announced that arrangements have been made for a special exhibit at the Chicago Motorcycle Show. The latter, being devoted to the motorcycle type exclusively, will treat in greater detail of the firm's offerings for motorcyclists. No marked changes have been made in the motorcycle model for 1913, in view of the fact that the instrument turned out in 1912 met all the expectations of manufacturers and riders.



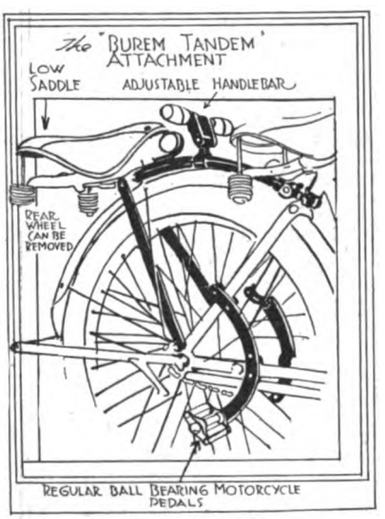
The Schebler.

KINGSTON CARBURETER.

AT the stand of Byrne Kingston & Company, of Kokomo, Ind., it was stated that the firm's Model "Y" carbureter, specially designed for use on small automobiles, is adaptable to motorcycles. This model embraces the latest features of automatic carbureter construction. All air entering the carbureter is taken from a common source, the air inlet being located so as to make it convenient for the attachment of fittings for the conducting of warm air to this point, a necessary feature to properly vaporize the low-grade gasoline used generally at this time.

AT THE ROBERTS STAND.

NO less than nine manufacturers of motorcycle specialties are represented by H. T. Roberts, Railway Exchange Building, Chicago, Ill., and these included clutches, saddles and tool-boxes, carbureters, stands and luggage carriers, belts, and motors. The Eclipse clutches of the multiple disc type for engine or countershaft as well as multiple-disc brakes and sidecar hubs were an important feature of this exhibit, as were also the Adams stands, International Stamping Co.'s mud-guards and chain-guards, Wetprufe belts, Troxel saddles and bags, Ero attachments, and the Heitger carbureters. The Wizard motor is a new addition to Mr. Roberts' line, as well as the Tucker wood-lined rims.



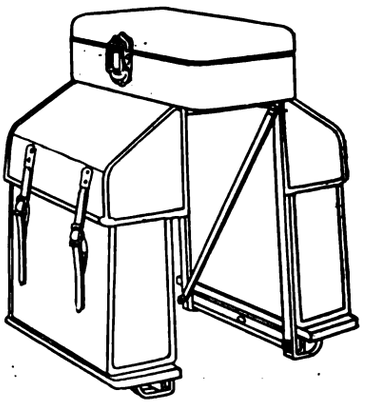
STANDARD TUBING.

AN excellent display of steel tubing parts, for motorcycles as well as for a wide variety of other uses, was shown by the Standard Welding Co., of Cleveland, O., at the Show. The company's line and its standing in trade circles are too well known to need detailed mention, and a feature of special interest was a settee made up entirely of Standard tubing parts which demonstrated more effectively than a catalog the company's scope and the skill of its mechanics.

THE NATHAN EXHIBIT

AN extensive assortment of motorcycle fabric supplies was displayed at the Garden by the Nathan Novelty Manufacturing Company, of 84 Reade street New York City. The firm's latest styles of Koveraul riding garments, and the complete line of Nathan leggings were on exhibition. Such articles as heavy leather tool bags, repair bands, motorcycle covers and lamp covers were also shown, and the booth was a busy one. There is a heavy demand for the Koveraul garment, because of its adaptability for all riding conditions.

Nathan "Koveraul" Riding Suit.



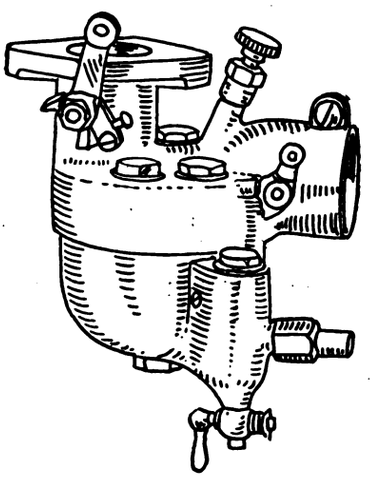
Improved Type of Ero Carrier.

HALCO LEGGINGS

AMONG the exhibitors displaying a line of riders' furnishings was the Hagerstown Legging Company, of Hagerstown, Md. Halco leggings are noted for their long wearing qualities, and the thigh legging, with a gussett at the knee to permit of flexibility, was of unusual interest. Various types and styles of knee sizes were also shown.

HAVOLINE OILS.

INDIAN REFINING COMPANY, 17 Battery Place, New York, have been refining oils for a number of years, and have for some time put out special motorcycle brands, which this season will be placed in special motorcycle size containers. These cans will be of such size that they can readily be carried by the rider if desired without being unsightly and without wearing him down should he elect to carry them from the belt. In addition to these oils, all parts of the motorcycle can be supplied with suitable lubricants of Havoline trademark. A line of further interest to garages and riders is the metal polish of this make.



Kingston Carbureter.

BAKER EXHIBIT

F. A. BAKER & CO., 10 Warren street, New York, showed a full line of motorcycle accessories, including a number of their own devices, as the "Infallible" speedometer, an exhaust horn, and a special muffler cut-out fitment. As distributors for the Indian in Greater New York, they showed one model of this machine fitted with several of their accessories, and also a Pierce motorcycle.

EDITORIAL VIEWPOINTS

THURSDAY
JAN. 23, 1913

Entered as second class matter July 6, 1908, at the Postoffice at New York, N. Y., under act of Congress, March 3, 1879.

Western Representative, Harry G. Jacobs, 1220 First Natl. Bank Bldg., Chicago. Tel., Central 5908.

THE F. A. M. ON THE COAST.

SATISFACTION will no doubt be general over the action taken by the F. A. M. Board of Directors, in reference to the California situation, at its meeting in New York the 15th of this month. After having been in almost hourly receipt, for more than a month, of a hodge-podge of more or less contradictory letters and telegrams, the Directors came to the conclusion that any immediate solution of the problem was simply out of the question. Accordingly, the Board authorized State Commissioner E. L. Moore to visit the "scene of hostilities" to make a preliminary investigation and report pending the arrival on the Coast of the Chairman of the Legal Action Committee.

Pacific Coast members of the F. A. M. who feel any disposition to line up with the outlaw movement recently started in San Francisco, would do well to await the developments of the next two months. There is no record in the history of American sports of the success of any outlaw organization, and the so-called Western Motorcycle Federation will not prove an exception to the rule. Everything within attainment by a separate district organization, and much more, can be accomplished through the National Federation, provided only the National officials enjoy the right sort of intelligent and active local co-operation.

As a matter of fact, Pacific Coast feeling, such as it may be, against the F. A. M., is due entirely to the impression among some of the members there that they are entitled to some sort of local autonomy and a kind of guarantee that the funds contributed by members from that section of the country should be devoted to their interests. Now, the constitution and bylaws of the F. A. M., as revised at the Columbus National Assembly last July, provide for all the local jurisdiction which Pacific Coast members could possibly desire. The constitution calls for the organization of each state, the latter to have the same relation to the National organization as do the States of the Union to the Government at Washington. The constitution was revised with that very object in view, and if many of the State officials of the F. A. M. do not exercise all the jurisdiction allowed under the constitution of the Federation, they have no one to blame but themselves.

In view of the action taken by the Board of Directors, it is now practically certain that no outlaw movement can succeed on the Pacific Coast. Thoughtful Pacific Coast members of the F. A. M. will stick by the organization, realizing that if they go about it the right way they can have all the local autonomy they want, and with it the strength, influence and the benefit of the experience of the National organization. In any event, nothing of very great importance is likely to take place until the members on the Pacific Coast have had an opportunity to discuss the entire situation with the Chairman of the National Legal Action Committee who, representing the Board of Directors and the entire organization, plans to spend a fortnight in California, Oregon and Washington betwen the 15th of March and 1st of April.

A GASOLINE SCARE.

WITH the exception of a few occasions, due to financial operations, gasoline has averaged about 25 cents per gallon in Great Britain since the commencement of the motor era, the price having been a few cents higher in remote regions, owing to freight charges. Within the last year or two the syndicates controlling supplies have got into such harmony with each other that the price has already soared up to 40 cents per gallon, and there is every likelihood of its rising still higher. The average Britisher pays a high price for commodities with tolerable grace, so long as he is sure it is what he calls a fair price. He has no objection to paying a price that allows good wages to be paid in an industry, and that permits reasonable dividends. But he gets very restive when he fancies that a trust is exploiting him in the interests of a few rich shareholders; and rightly or wrongly, he has got hold of this notion in respect of the gasoline prices.

As a consequence he is furiously interested in alternative fuels for petrol engines, and the fact that the gasoline supplies would be totally cut off in case of war is helping the "new fuel movement." The top notion at the moment is the distillation of benzole from small coal. It is questionable whether chemical experience can suggest a remunerative method at present, but the Welsh collieries have "gobbed" or scrapped millions of tons of coal dust in the last few years, and it is thought that there may be possibilities in the installation of by-product ovens with a view to transforming this waste coal into motor fuel.

PROPELLER DRIVE.

SOME years ago Anzani, the famous French road racing crack, covered a flying kilometre at over seventy miles an hour on an experimental motorbicycle, driven by an aeroplane propeller. The idea is cropping up again in Great Britain, and during the last three months several cyclecars and one motorbicycle driven by this method have been seen. Riders who have tried the notion assert that it is extraordinarily efficient for straightway sprints on the flat, but that the power developed at low speeds is negligible, and that consequently there is no hill-climbing efficiency.

This is obvious when we remember that every propeller is shaped to develop efficiency at a certain rate of revolution. Until this speed is reached, and after it is exceeded, the thrust is ludicrously inefficient; and the introduction of gears to maintain the propeller revolutions cancels any other advantages. In any case the dangers of such a drive render its common use impossible. A test propeller recently went clean through a factory wall, slicing a lot of tackle to bits on its way. If such a drive became popular, the alleged dangers of the road would become real indeed.

PULS "STARTS SOMETHING."

WHILE on a business trip recently George Puls, of the Harley-Davidson traveling force, landed in Fort Wayne, Ind., and discovered that this otherwise attractive city was rated as a poor motorcycle center. Puls met C. F. Schory, talked the situation over with him and finally offered to become his partner in a motorcycle establishment. Schory accepted the proposition, and as a result "Cap's Motorcycle Garage" is now doing business at 1110 Broadway, Fort Wayne. Puls was captain of Company B on the F. A. M. tour to Columbus last summer, and Schory captained Company D. They met and became fast friends on the tour, and it is for this reason that the word "Cap's" found its way into the name of the new firm; each rider having been a captain. Puls will not sever his connection with the Harley-Davidson company, and, as might be expected, the new headquarters in Fort Wayne will be the local home of the Milwaukee company's product.

A CHAIN OF STORES.

HARRY SWENSGAARD, manager of the Excelsior stores in Detroit, reports that before the spring he will have in operation a chain of stores in Michigan's leading cities. Two new branches have been opened in Detroit and one in Flint. Within the next month Swensgaard expects to invade Battle Creek, Kalamazoo, Grand Rapids, Lansing, Saginaw and Bay City.

CAPTAIN AS HOST.

CONFORMING to the usual custom of the New Jersey M. C., of Newark, the newly elected road captain, Fred Cordes, treated the boys to a dinner.

Digitized by Google

The NOVICE RIDER at the SHOW

Impressions Received by a One-Season Enthusiast, Who Found Something to Interest Him at Every Turn at the Grand Central Palace Display of Motorcycles and Sidecars —Breezy Observations Anent Visitors and the Show Exhibits.

BEING a novice, which means that my cyclometer was not much above the 500-mile mark when I sent the mount into winter quarters, I may have a few surprising angles in my motorcycle philosophy, and trade aspects that weigh heavily with me now may be scrapped unceremoniously before I am half through another season, but it is only fair to qualify the latter admission by stating that if my address were not New York it probably would be Missouri. I like to be "shown." After two dizzy days in the motorcycle section at the Grand Central Palace I arrived at two conclusions, one full of promise, the other a trifle disquieting. First, I became convinced that even the most sanguine friends of the motorcycle are underestimating the epochal significance of the season upon which we are entering; second, that we have yet to assume the calm, deliberative, cooly-discriminating attitude of our British cousins toward the motor two-wheeler.

As far as our opportunities for 1913 are concerned, we will no doubt make the most of them; making the most of opportunities happens to be a national trait, but the practical I-want-to-know viewpoint that characterizes the motorcyclist abroad will have to come to us with time—the sooner the better.

THE SCARCITY OF QUESTIONS.

When I reached the motorcycle section and accustomed my eyes to the glittering lanes of new models I was loaded to the brim of my Stetson with mechanical questions, and had I been approached suddenly by an attendant I should no doubt have run amuck, firing queries right and left until the reserves arrived. As it was, I merely approached a machine and stared at it intently, knowingly. Several other men followed my example. One of them asked another something in an undertone. The inquiree shook his head. Any one of us would have been glad to ask fifteen questions about that machine in as many seconds, and the attendants would have been glad to answer them, but we lacked the proper viewpoint. We didn't start anything.

I toddled hopefully from exhibit to exhibit, trusting to hear some one get down to bedrock, strike at fundamentals, probe the stand attaches until they didn't have an undiscovered fact left in their systems; but I must admit that practical queries from visitors were few. What was wrong? I have a theory, subject to the conditions set forth in the opening paragraph, that we do not get close enough to our mounts, that we lack intimacy with those features in our machines which really count, and that as a result we are able to ask only superficial questions. We were fairly effervescing enthusiasm, every one of us, and in one way or another we did learn a great deal during the show, but most of us might have acquired five times as much practical, helpful information if we had made the most of our opportunities. I am not working off a mechanical grouch, for the show found me simply an ardent recruit and left me a four-ply, double-dyed, skyhooting enthusiast; I simply long for the day when every second visitor who approaches a show attendant will know almost as much about the machine as said attendant. That's all. This condition of affairs will indicate to me that we are at last getting our motorcycle interest down to the solid foundation on which we believe our sons and their sons will find it.

THE SIDECAR FEVER.

Having made only a few desultory excursions into sidecardom, I don't care to step into the limelight with a lot of extravagant predictions as to what 1913 is going to do in the way of developing interest in the third-wheel attachments, but the first spring robin will have to be right on schedule in order to beat me into the country with my prospective new car. What's more, I am of the opinion that about one-third of the other show visitors went home with the same idea. As was expected, the show just closed brought out more sidecar exhibits than ever were displayed in the past, and if there had been twice as many I know none of them would have lacked attention.

I happened to be passing the Majestic stand when a Swastica cross, small and enameled in modest gray, caught my eye. It was fastened just below the arm of one of the wicker sidecars and might have escaped detection had I been looking directly down at the outfit. I asked why it had been used.

"In the first place, we thought the outside of the car needed just that last touch," replied Attendant W. F. Hapgood, "and besides, the Swastica is generally accepted as a good luck symbol."

The answer impressed me. When a manufacturer gets to the point where he studies his finished product so minutely that he discovers the need of a single decorative touch, he's on the right track and going strongly. At least, that's my opinion as a novice.

COMFORT A PRIME FEATURE.

The Majestic model with a miniature automobile top held my eye while I was at this stand. It gave a pleasant suggestion of preparedness for anything that might happen, and the ladies backed me in my belief that it would prove comfortable. Oh, yes, the ladies were on hand wherever there was a sidecar. They punched the upholstering, tried the springs and gurgled over the roomy chairs to their hearts' content. Not being up on feminine adjectives I am going to forego a detailed report of their comments, but the vote of the gentler sex is solid for sidecars. I'll give any odds on it.

I also liked the baggage-rack idea on the Majestic outfits. If I'm going in for sidecarring I want to carry something besides a cigar-lighter and a tooth brush. I can hardly get along without a suitcase, and the Majestic rack will carry one.

I noted, too, that the Worcester folks have provided a special telescoping connecting tube to take up extra play when the sidecar outfit is hooked up to an Indian motorcycle. Very simple little arrangement, but obviously effective, as the boys who "count 'em on the road" will no doubt demonstrate before many weeks have passed.

ATTENTION TO DETAILS.

At the Simplex sidecar stand I found two feminine enthusiasts poking handkerchiefs, show programs and catalogs into a roomy pocket on the inside of the car body next the machine. That "pocket" had caught their attention and they were "trying it." It looked mighty handy and it was. You could tuck no end of little essential things away in it on a trip. The "comfy" looking red upholstering of the Simplex proved another asset. Taking a more practical tack for a moment, I noted that the case for tools and miscellaneous articles which occupies the rear rack on the Simplex also provides for batteries with which the sidecar lamp is supplied with current.

The Simplex folks are going after some parcels post business, and they're likely to get it. Their drop frame permits of using a van 3 inches deeper than would ordinarily be possible, and this, combined with the fact that they can already fit a capacious box and carry it satisfactorily, is a point worth some consideration.

Some experienced sidecarists demand four-point moorings for their outfits, not without reason, presumably; and to meet this demand the Simplex firm is supplying a neat auxiliary brace which is clamped to the sidecar frame and the front downrunner of the motorcycle, just above the motor, to give the foot of the sidecar additional rigidity.

AN ALUMINUM BODY.

At the Universal stand I found a tidy sidecar with a body of bent aluminum plate, which is bound to be heard from if its price, which is somewhat higher than the present accepted schedule, does not dampen the ardor of its admirers. I do not believe it will, for in appearance the outfit lives up to its price ($125, I believe), and there is every indication

Digitized by Google

that it will improve with road acquaintance. It follows automobile construction to a most interesting degree, is underslung and has a spacious locker under the seat. The seat and chair upholstering, by the way, is built over spiral springs after the fashion of motor cars, and holds out a temptation to the enthusiast to cuddle down on the cushions and let some one else worry about whether the next town is four or forty miles distant. That's the way it appealed to me, but not being scheduled as a feature of the exhibit, I was led gently away.

Before submitting to eviction, however, I inspected the Universal company's van, and I suggest that it be booked as a comer. It has a big, roomy box which may be lifted off to leave a flat truck body on the sidecar when four thumb screws are loosened. Bill Chadeayne (Bill sounds more blase and experienced than William C.), remarked that arrangements are being made to fit an even larger van body, so it is a fair guess that this firm also has an eye on a slice of that much-talked of parcels post business. Well, there should be enough to go around, once Uncle Sammy discovers how the motorcycle and van system is going to keep shekels in his official pocket.

NO END OF SELLING POINTS.

It struck me as I made the rounds of the sidecar stands that with little or no effort I could dig up enough "talking points" for any one of the models to keep a prospective purchaser awake and thinking hard o' nights until he had figured just how he could spare the money—and I'm not a salesman. Far from it. I'm a prolific buyer of things I don't need, and that my patient helpmeet can't even give to the neighbors, but I have never been able to sell anything. Still I had to fight off that impulse to start an individual sales campaign for sidecars on the spot; all because it's such a simple matter for me to see five hundred dollars' worth of recreation possibilities in an attachment that represents an outlay of only $75 or $100. One hundred dollars for a summer on the open road, with a congenial tourmg partner cuddled in the big chair at your elbow, and the best things of all outdoors spread before you! Why, you'd be driving a good bargain at ten times the price.

In this frame of mind I strolled up to the Indian stand, and my first impression of the Wigwam sidecar was concerned chiefly with its symmetry. It gained in this direction, as might be expected, through being fitted by the makers of the machine, and it seemed the most natural thing in the world to find it hooked up and ready for the road. In fact, I had a momentary feeling that it would be nothing short of unkind to detach the "basket" and take the machine out solo. They shaped up like good pals, intended for each other from the moment the mechanics went at them. The color scheme was red throughout, of course, the sidecar upholstering had that welcomy look about it and the frame and body impressed me as being sturdy without having undue weight. Naturally, the new fittings make allowance for the 1913 Indian spring frame.

STRONG INDIVIDUAL FEATURES.

I am not a one-feature enthusiast at any stage of the game, but I must confess considerable interest in the Baxter spring wheel as a distinctive point in the makeup of this firm's sidecar frame, and in the new fitting designed by the Yale folks to facilitate the attaching of a sidecar to their machines. Both these details seem worthy to rank with the essentials, at least if the opinion of a novice is worth the trouble I am taking to write it. Shocks to the sidecar wheel in the Baxter outfit are taken up in a suspension spring which appears to be fully capable of doing the work without being intricate. It's simple, and I'm an all-season rooter for simplicity.

The new Yale offering is a strong mooring for the two front attaching tubes of the sidecar, nothing more, but it occasioned considerable comment. It is placed just back of the head on the machine, where it has a bearing on both frame tubes, and thus affords about the most dependable base possible for holding the braces and lending rigidity to the foot of the sidecar. It also provides four-point suspension, by the way.

"Are the Yale people going to turn out a sidecar?" We fired this offhand at Attendant F. C. Cornish.

"We're doing so many things these days that I wouldn't be surprised if we did build a car," was the reply, "but I haven't heard of it as yet."

Then the Cornish smile got in its work, and its owner had so much to say regarding the special new front fitting that we decided to accept it, regardless of whether it is intended to hook up to a sidecar or a monoplane. It appeared equal to almost anything.

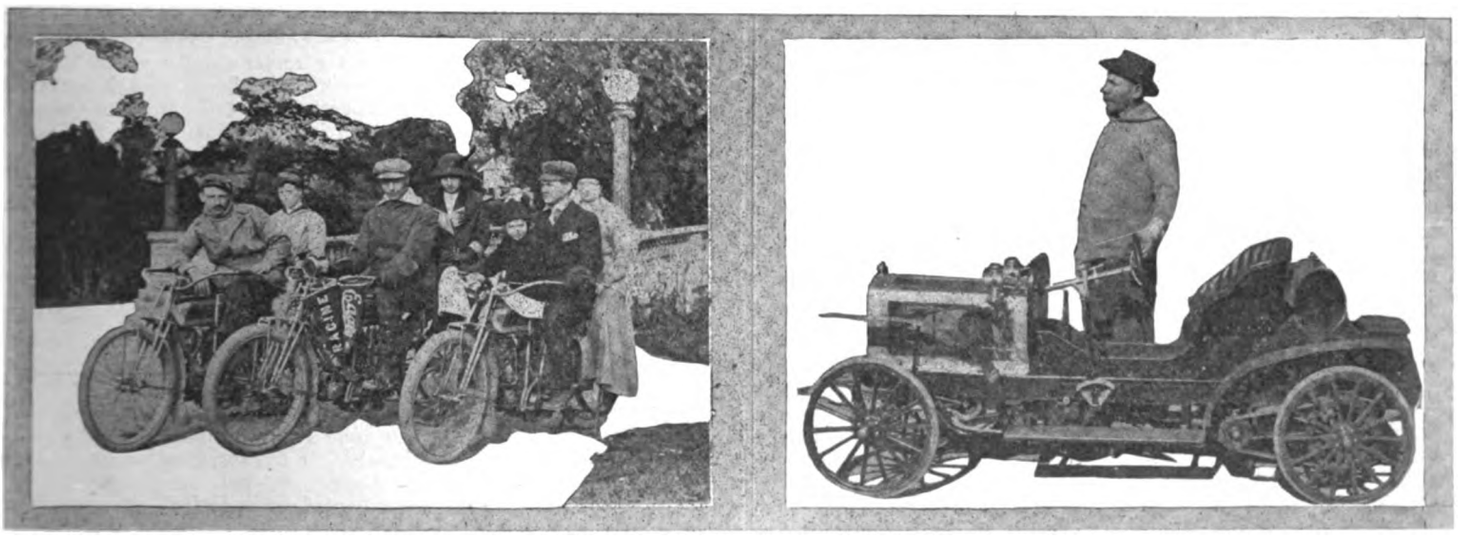
WHY SIDECARS CAME FIRST.

It may seem a bit strange that I turned my attention to sidecars immediately upon my arrival at the motorcycle section, but there was a reason, two of them in fact. One was lodged in the calf of my right leg and the other occupied similar territory in the left half of my power plant, and each took the form of a dull ache, acquired in my three-story climb up the Grand Central Palace stairways to the realm of the motor two-wheelers. Oh, yes, I walked up. I couldn't afford to take a chance on having a motorcycle or two tucked away somewhere among the automobiles where I might overlook it, so I prowled through the ground and second floors on my way to the third. Then, as intimated above, my mixture was so weak that anything with a seat in it looked good to me. After trying out the upholstering and springing in two or three sidecars, at the suggestion of the attendants, I was rested a bit and by that time the sidecar fever had me from toe-nails to forelock. That's how it happened.

I did get to the machines in due time, however, and having one or two mental pigeonholes not already jammed with sidecar data, I proceeded to assimilate information wherever any happened to be loose. At the Indian stand I gave my attention chiefly to the new spring frame, from which it may be inferred that I am a great little prober for comfort. Not that I have unearthed much of this elusive commodity in my travels so far; not that. I'm simply looking for it; in the market for it, so to speak.

"Looks like an easy rider," I remarked to a bystander with a smudge of black on his cheekbone, which indicated that he had been getting some first-hand show data.

"Sure," he replied, "I know a fellow in Newark, N. J., who rode up a curbstone with one of these frames and never knew he was off the road." (The Woolworth building gentleman who handles Indian publicity please note. I had you pointed out to me and don't



At the left is shown a party of riders of Racine, Wis., on an outing in Horlick's Park. E. J. HENRIQUES, one of the most consistent riders in Sioux City, Ia., appears at the left with his white Thor. At the right are Nels Westergard (beside the machine) and a companion with a string of game brought down near Racine, Wis. The machine was used to reach the hunting ground.

mind your using my tip.) After hearing of the curbstone incident I could hardly be expected to interest myself in mere details, and when an opening presented itself in the crowd I sardined myself along to other fields.

THE LAST WORD IN CLEANLINESS.

Being a novice, I may overestimate the importance of cleanliness in a motorcycle, but I'm willing to take a chance in that direction and don't mind saying that the two-stroke, tank-in-the-frame Schickel interested me mightily. I couldn't locate any exterior part or fitting to collect dirt, and owing to the fact that everything is enclosed, the mount seemed a bit mysterious to me. I'm so used to seeing valves and their mechanism, probably, that the clean exterior of the Schickel rather bowled me over. I didn't enthuse over the protruding effect of the motor base at first, but when I learned what the inventor had managed to get into it without detracting from operating efficiency I stopped objecting and marveled a bit. Besides, I noted that the crank case on the protruding side does not extend out beyond the pedal line, and is not at all likely to be in the way. I was also given something of a jolt by the toolbox built into the tank section of the frame. It is not roomy, naturally, but that it is there at all is an evidence of ingenuity that hooked itself in my memory.

Speaking of cleanliness, I want to give the white Thor its due. It strikes me that it would be extremely difficult to produce a motorcycle more pleasing in general effect. Of course, it follows standard exterior construction and will collect some road marks, but there is always the striking white foundation to fall back upon when the dust of travel has been removed. If you don't lean toward white as a finish you may have the Thor in black or blue color schemes, but I'm for the white. Among other impressions of this machine I carried away mental notes on the unusually sturdy fork and the capacious toolbox. I favor the Schickel idea of extreme compactness with reference to the tool kit, but I am not yet past the stage where I like to carry tools for every emergency, and then some; hence my interest in the roomy Thor toolbox.

FOR THE EYE OF THE ARTIST.

Being something of a stickler for the artistic, I spent most of my time beside the "Sylvan Green" model while I was in the Reading Standard booth. The makers say the green finish has scored a hit, and it is easy to believe this. If there ever was a machine that appeared to be cut out for close communion with the open road it is that same green model of the R-S. I discovered that it has a low saddle position, footrests and other features that are included in my category of essentials, or near-essentials, but I was dazed a trifle by the amount of nickel-plating. There is a lot of work mapped out for the chap who keeps it always bright, but no doubt the results will fully justify the effort. The vets who visited the stand while I was there gave most of their attention to data on the new cone clutch with cork inserts, which features the 1913 R-S 7, and as a result I managed to tuck away some valuable clutch information.

Judging from what I heard in and about the Flying Merkel stand the new self-starting device had practically a monopoly on the interest of those who inspected the Middletown product. Nor was this surprising, for we are inherently a nation of trouble-dodgers, and an attachment designed to start our motors without fuss or flurry, or genuine physical effort on our part, is bound to find us in a friendly mood. We are demanding more of the motorcycle each season, rightly enough, and what's more to the point, we are getting it. We have all the traveling advantages now of our motor car brethren except extra room and freedom from balancing, and if we had those we would knock the sporting edge clear off the greatest pastime on the calendar. We don't want 'em. We can carry one companion, and one's enough, and when the day arrives on which we can't do our own balancing we'll be ready to totter into our carpet slippers, pull a chair up to the fire and wait for neighboring funeral directors to drop in and pay their respects. That's the way we feel about it.

EASY RIDING ASSURED.

However, I'm getting a bit afield from the Miami self-starter. Always was a great chatterer in congenial company. To get back: Foot pressure on a lever releases compact mechanism that turns the flywheels over half a dozen times, and when the motor picks up it rewinds a spring to the proper tension for another start and then automatically drops off the starter and goes about its regular business. I was surprised to find the whole operation so simple.

I had previously made the acquaintance of the Merkel spring frame, but I inspected the 1913 refinements and rather liked them. As before intimated, I can't help regarding comfort as a requisite, and while I have never straddled a spring-frame mount I know they must be easy travelers.

While I am on the subject of "easy going" I may as well skip around to the Harley-Davidson stand and record an impression or two received there. After all, I am dealing only with impressions—novice impressions, at that—for MOTORCYCLE ILLUSTRATED has highbrow gentlemen whose business it is to track the mechanical detail to its lair and drag it into the publicity limelight. I'm only a volunteer.

At the Harley-Davidson booth I poked and gum-shoed around the Ful-Floteing seat, until the attendants began to think I had a few tools up my sleeve and was about to decamp with the saddle and its fittings. Under different conditions their fears might have been justified, for I like the idea of floating, and full floating must be at least one notch better. Yes, the Ful-Floteing seat looked mighty comfortable to me, and the remainder of the machine appeared to be in tune with it.

THE DEMAND FOR GREATER POWER.

I am not a rooter for the unusually high-powered twin (I can knock enough thrills out of my modest single to meet all my requirements), but it is only just to say that I was interested in the 8 horsepower Harley-Davidson model. It is a competent-looking chugger, and in a man or a machine I like the competent looker.

I'd extend thanks, by the way, for a little inside information as to how far the boys are going in their demand for more power in motorcycles. Our machines are capable of making headway now on any road or trail that leans at all appreciably from the perpendicular, so why are we running in circles, so to speak, and whining for another horsepower or two every time a manufacturer puts out a new model? I put the question to a visitor at the Show.

"Search me," he replied, in the vernacular. "I can't tell you, unless it is that the boys like to feel they always have a few reserve kicks in their motors." There may be something in that.

At the Henderson stand I had the power

Digitized by Google

question brought home to me again, but here it seemed quite natural to find the motor rated at 8 h. The long wheelbase and the four-cylinder type of power-plant give the suggestion of exceptional strength on the road, and the horsepower simply backs up your expectations. With my limited experience in judging tank lines, I should say that the new Henderson tank is a vast improvement over the round type of last year's model. I had plenty of backing in this opinion, too. They tell me the Detroit product is not primarily intended for speed work, but it looks speedy, and I am convinced that it must have quite a jump in it.

LIVING UP TO A REPUTATION.

Some time ago I was over in Jersey when several Newark riders checked out after a gruelling road run, and three of the first to pull into the home station mounted Yale machines. Those performances gave the Yale a place in my memory as a "stayer," and I learned later that the riders referred to were in the habit of running off with clean scores in nearly every run they entered. Naturally, I had these reports in mind as I approached the Consolidated Manufacturing Company's exhibit. I looked for sturdy machines and was not disappointed. With its cushion fork and Y-A shock-absorber, the Yale is no doubt an easy rider, but the suggestion I received was not concerned so much with details; it implied rather that the Toledo product would continue to turn its drive-wheel as long as there was anything to turn it on.

From endurance work to record-crimping speed is something of a hop, but being of an elastic temperment I managed to accommodate myself to the conditions at the Excelsior stand, where I made myself at home for a quarter of an hour after leaving the Yale stamping-ground. One glance at the Excelsior twin informs you that there is a fine bundle of quick-action possibilities wrapped up in it. You'd pick it for a speedy mount, even though you had not heard of Humiston's latest achievement with it on the Pacific coast. From my novice viewpoint the twin looks a bit complicated in exterior motor construction, but a set of world's records probably is worth the trouble incident to keeping 7-10 horsepower in working trim between your knees. There are two singles for the folks who don't care to knock the edge off old Father Time's scythe.

A TRANSCONTINENTALITE.

During my comparatively short term as a single-track enthusiast I have come to look upon the Emblem as a mount that goes ahead calmly doing worth-while things without making a fuss over them. The machine has that look about it. It seems to be pretty well satisfied with itself in a quiet way, and when you hear M. E. Gale's story of how he rode from Angola to the Pacific coast, with his plucky little life partner tucked into a cross-frame seat at his elbow, it's not hard to believe that Emblem modesty really has something to back it up. There was some tough going in that trip, take it from the Gales, but the Emblem saw them through it.

I noticed that the bend in the Emblem top tube has been moved forward about six inches, and that racier lines and a lower saddle position were thus obtained. A genial young chap at the stand loaded me to the brim with other information, hot from Angola, but being an impressionist I lost a lot of it. Besides I was due to pick up a few other impressions before dinner, and my compression was getting low.

AN ENTERTAINING QUARTET.

Just by way of breaking into the realm of vaudeville for a moment, let me say that I encountered a mighty entertaining quartet at the Pope stand. Models L, M, K and H were there, warbling as harmonious and seductive a ditty of mechanical attractions as ever was chirped across the business footlights. Ever note how the basso, the baritone, the second-tenor and the flutey first tenor line up for action when the Ladies' Guild is giving a program for the Childrens' Home back in your town? Well, that's just the way the Pope quartet was arranged along the aisle.

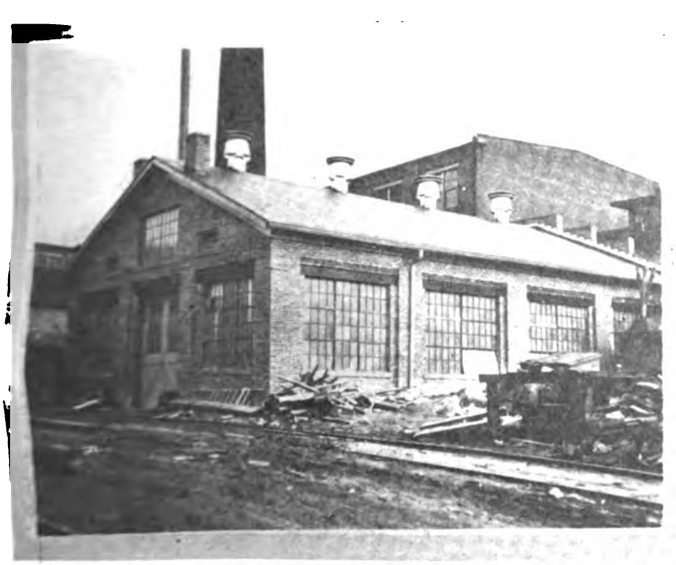
Model L has 7-8 horsepower, Model M is a 5 and K and H are 4's. I was quite deeply interested in the original Pope 4, a lightweight with which the company felt its way to motorcycle popularity. This is a neat little mount, V-belt driven, and I wouldn't ask a handier one for town work and light road service. The others are higher in price, with additional advantages. The rear spring suspension on models L and M attracted my attention, and gave me further reasons for believing that I am not the sole kicker for comfort in road work.

The M.M. was not entirely new to me, but the Eagle models displayed at the American Motor Company's stand gave me an opportunity to freshen up a bit on the latest trade offerings. I looked them over carefully and went off with the impression that they are due to figure in road reports quite generally during the coming season. The twin Eagle is another of those wallopers for the lads who want plenty of power, and then some. It rates at 9 h. and looks it. It may be had with either flat or V-belt or chain, and the same transmission options apply to the single 5's.

A VETERAN AND A NEWCOMER.

I found a four-cylinder model and a single at the Pierce stand, and inspected both with interest. The tank-in-the-frame construction has always given the Pierce an air of distinction, in my opinion, a sort of robustness of makeup that prevents the rider from having any qualms of conscience when he puts it to hard service, and they tell me the motor is a bear for work. As before stated I don't hanker for four-cylinder work, nor even twin riding, but I think I'd feel pretty much at home aboard the Pierce four. I'm not shifting allegiance from my "one lunger," as the boys call it, but when a machine creates a favorable impression with me, I'm fair enough to say so regardless of the number of its "lungs."

I knew the Dayton was a comparative newcomer, and hardly looked for the air of finish and refinement that marked the Davis company's product. The Dayton is offered only in twin power, but in two models, one rated at 7 h. and the other at 9. Both are chain-driven, and have fork and seat-post springing, but a rigid frame. With reference to these details I was most interested in finding that the single type had been passed over for twins. That was the point that started me back over the line of thought previously referred to, that moved me to consideration of the mysterious influence that is at work in behalf of high-powered mounts. Who is going to step up and say a few words for the modest but capable single? I'm with you, brother, whenever you want to speak your piece.



In keeping with its policy of steady expansion the Miami Cycle Mfg. Co. recently moved into its new punch and press department; the photo at the left shows the building ready for occupancy. At the right: Officer Edwin Bradley, of Fresno, Cal., one of the stoutest policemen in the country to ride a motorcycle.

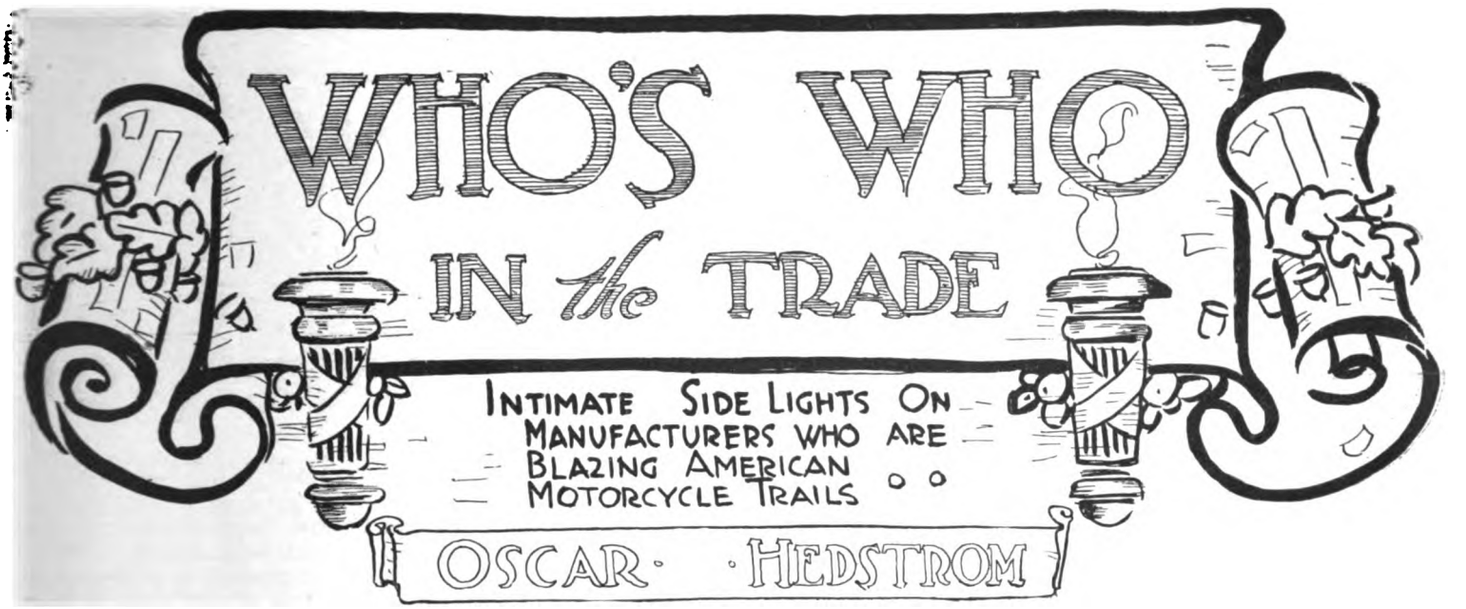
OSCAR HEDSTROM

Digitized by Google



A MAN in the street once remarked: "When I think, or hear, or see motorcycles I always think of the Indian." This psychology might be applied further in the sense that to think of the Indian is to think of Oscar Hedstrom, its creator, for the two are inseparably linked. In the vocabulary of the day, Hedstrom was the man who put the "mote" in motorcycles, 'way back in 1901, and the Indian has been "moting" pretty steadily ever since.

Sweden has a reputation for turning out some pretty good inventors, and the standard was not lowered any by the production of Oscar Hedstrom. Rather it was enhanced measureably. America, the land of opportunity, looked pretty good to Hedstrom's parents about the time he was nine years old, and they "obeyed that impulse." Brooklyn schoolmarms were entrusted with grounding the lad from the Land of the Midnight Sun, in the three "R's." Their lot was an unenviable one, for, although an apt pupil, young Hedstrom much preferred the teachings of Peck's "Bad Boy."

BEGINNING A SHOP CAREER.

When the grammar institution finished with Hedstrom, his shop career commenced. He entered a watch case factory, and when he came out he was a crackajack toolmaker. Before graduating from the shop classroom, he took up bicycle racing, which was the proper thing in those days, 1894.

At first he raced outside of shop hours, and gradually made the sport his profession. Hedstrom was more than an ordinary rider, for he won the one-half-mile indoor championship at Madison Square Garden in 1899, with Eddie Bald, Arthur Gardiner, Nat Butler, Harry Caldwell and other stars in the final. Before he had been racing long, Hedstrom was conceited enough to think that he could build better racing wheels than a lot of other people were building.

He went ahead and built a few, and the men who rode them won so easily with them that the builder became well known almost overnight. Big manufacturers who were in racing strong, and had strings of stars, immediately saw in Hedstrom's ability a chance to "put something over," so they told him to go ahead and build the best wheels he could, and famous nameplates were put on them.

In the late '90's Kenneth Skinner, of Boston, brought the first DeDion motors to this country, and Hedstrom thought he would like to see what kind of a motor tandem he could build, particularly as he wasn't highly impressed with some of the French types. This kind he built "cleaned up" the others pretty regularly, and won the 10-mile tandem championship at the Pan-American Exposition, Buffalo, in 1901. It was the smallest motor in the race, but it could "go some," as witness a record mile in 1:18, and the ten in 13:22, breaking the old mark of 14:50. The team of Henshaw and Hedstrom was famous throughout the country. Henshaw did the steering and Hedstrom was the engineer.

A MOTOR WIZARD.

Hedstrom knew more about motors in those days than any of the other racing men, and when they wanted their machines "dinged" they asked him to do it. He would thoroughly overhaul an engine for the modest sum of $10 and feel that he was "squeezing" the owner.

Middletown, Conn., 40 miles below Springfield, on the Connecticut River, was the birthplace of the Indian motorcycle in the spring of 1901. Here, in the plant of the Worcester Cycle Manufacturing Company, where earlier he had built racing bicycles and motor tandems, Hedstrom secluded himself from the world, put on his apron and went to work, and in four months the Indian was born. He made all his drawings, and some of the patterns for that first machine.

Now Hedstrom had the utmost confidence that his machine would run, and he insisted on having every part nickeled or enameled and completely finished before he took it out for trial. There were some who had serious doubts that the machine would run, and they couldn't understand why Hedstrom insisted on wasting time, as they thought, finishing a machine which had never been tried.

THE TRIAL DEMONSTRATION.

Hedstrom wasn't saying anything, but the first time he took the machine out, he gave a demonstration that made the skeptics feel like a flat tire. Although the engine was only 1¾ horsepower, Hedstrom picked out a 9 per cent. hill and towed a 180-pound rider on a bicycle up it, to the utter astonishment of his audience, including George M. Hendee. This was President Hendee's first demonstration of the capabilities of the machine, on the manufacture of which he staked his fortunes.

Then Hedstrom came back to motor racing, not with a tandem, but with the Indian, to which he now gave himself over entirely. Early in the twentieth century there was a bicycle track circuit in New England, and Hedstrom used to go to these meets and give exhibitions with his machine, paying his own expenses. This was along in 1902 and 1903. At one of these meets, in Hartford, he went up against Carl Ruden on a 3½ h. French Aster pacing machine, and trimmed him good with a 1¾ Indian.

At the first big automobile race meet on the beach at Daytona, Fla., in 1903, Hedstrom was on hand and made some of the big cars look like canal boats for speed. For the next few years he was on hand at all the big motorcycle events. In 1907 he stopped racing and settled down to develop the Indian.

A MAKER OF CHAMPIONS.

Not only has Hedstrom made a winning machine, but he has "made" men who could win. The champion motorcyclists we have had were "made" by Hedstrom. Kellogg, Goerke, Huyck, DeRosier, Hasha, Seymour, Constant, never amounted to a row of pins until Hedstrom put them on Indians and showed them how to ride to win. True, some of them could ride well when they came to him, but he "made" them. He gave them a machine they could win with, and he showed them how to win even against their own comrades.

Of late years Hedstrom has played a new role. After starring as an inventor, designer and rider, he went into the architectural field and planned all the new buildings of the Indian plant, since it first was moved to the present site. He also keeps tabs on the experimental work, and is a sort of advisory board all in himself. When something in the shop gets snarled up they come to him.

Hedstrom doesn't live in Springfield any more; that is, legally. He has a beautiful country place at Portland, 40 miles down the river, and travels back and forth in his car. His present hobby is motor boating, and he has won the motor boat championship of the Connecticut two years in succession, with Indian I. and Indian II. His clubs are the Royal Automobile Club of Great Britain, Springfield Yacht and Nyasset.

MORE SPACE CHICAGO'S CRY

CHICAGO, Jan. 15.—Once more the Show Committee of the Motorcycle Manufacturers' Association has found it necessary to arrange for additional space in order to accommodate those who will exhibit at the independent Motorcycle and Bicycle Show which will be held February 3-8. When the committee closed its first contract for 13,000 square feet of space it was taken for granted that this would be sufficient to meet all the demands of patrons, but the officials have since been obliged to make several extensions. Applications piled up so rapidly that at the M. M. A. meeting in Chicago on October 9 an option was obtained on 4,800 additional square feet. This was subsequently leased by the committee and quickly disposed of.

A few days later it became apparent that this increase in the space would not permit of accommodating all the prospective exhibitors, and without delay steps were taken to obtain another option on an extension of the Show area. At this point difficulty was encountered, as the Furniture Exhibition Building, in which the Show is to be held, is leased to furniture manufacturers by the year, and it was necessary to obtain the consent of these lessees before the Show committee could arrange for another foot of space. Finally the committee received permission to store some of the furniture elsewhere to make room for the motorcycle and bicycle manufacturers and the makers of accessories.

The last addition to the space comprises only about 800 square feet, and it is the only extra room to be obtained in the building under any conditions. It is desirably situated, however, being on the entrance aisle where the articles displayed will be bound to receive attention, in spite of the fact that they will not be in the section comprising the other exhibits. The new section is close to the elevator.

The Show will be held on the second floor of the building, which is located at 1319 Michigan avenue. Visitors will walk up one flight of stairs and will pass the newly acquired space on their way to the main floor on which the Show is held. The extra section has been allotted to the following firms: Fentress-Newton Mfg. Co., of Detroit, Mich.; J. W. Bottomley, of Chicago; Hughes & Wessling, of Chicago; Queen City Iron & Wire Works, of Denver, Col.; Morrison-Ricker Co., of Grinnell, Ia.; Feilbach Motor Co., of Milwaukee, Wis.; Jenkins & Co., of Des Moines, Ia.; Hine-Watt Mfg. Co., of Chicago.

Committeemen A. B. Coffman, Arthur Davidson and F. J. Weschler, who are in charge of the Show arrangements, and Manager J. S. Vogel are growing more enthusiastic daily over the outlook for the display. They assert that it will be the biggest and most important showing of motorcycles, bicycles and their accessories ever seen in this country, and all indications seem to back up their prediction. Dealers who have never before attended a show announce that they will be on hand at the coming exhibition, and letters received from all sides evince interest far in excess of anything heretofore manifested. Some of the enthusiastic trade men are preparing to travel from such distant points that they have written the committee to inquire whether special railroad rates will be obtainable during Show Week.

A week ago Committeemen Coffman and Davidson visited Chicago and went over the situation in detail with Manager Vogel. They expressed themselves as perfectly satisfied with the progress that was being made and the manner in which plans are being developed for accommodating the crowds that will throng the exhibition building. It is stated unofficially that Manager Vogel will at the close of the Show accept the position of sales and advertising manager for a motorcycle manufacturing firm that has just entered the field, his ability to obtain results having created a favorable impression.

BRIDGEPORT SHOW.

A COMBINATION automobile, motorcycle and motor boat show will be held in Bridgeport, Conn., March 3-8, under the auspices of the Bridgeport Auto and Motor Boat Show Committee. This will be one of the largest shows of its kind in the State, and will have about 130,000 square feet of floor space.

AN IOWA CARRIER.

HARRY HULIN, rural mail carrier No. 2, who travels out of Gilman, Ia., is shown on his new Harley-Davidson. This picture was taken when Hulin had an unusually light load; as a rule his mount is loaded nearly to the limit of its capacity, but he succeeds in making good time on his route.

GALE'S TRIP TO THE SHOW

Emblem Tourist Found Hardest Kind of Going on Run from Angola to New York City Through Snow-drifts.

M. E. GALE, the Emblem transcontinentalite, was one of the most interesting figures at the New York Show, from the viewpoint of visiting riders. Gale made the trip from Angola to the metropolis on his Emblem, leaving on Sunday morning, January 12, and reaching New York in time to report at the Grand Central Palace on Wednesday evening. Although the trip was a comparatively short one for a motorcyclist of Gale's experience, the veteran tourist states that it was one of the most severe runs he has undertaken.

On his first day out of Angola (Sunday) he rode through a drizzling rain which froze almost as fast as it fell, and after sliding, skidding and falling on the glazed roads he managed to reach Le Roy, Sunday night. At 8 o'clock Monday morning he again headed for New York, encountering bitterly cold weather. Snow drifts that reached halfway up on his front fork were met with, and finally to avoid bucking the drifts Gale made a detour and plugged over railroad ties for five miles. The second night was spent at Syracuse. On Tuesday a start was made at 9 a. m., and Schenectady was reached at 4.30. Aside from a blowout no trouble was experienced, until bad roads were struck east of Albany. The trip over this 8-mile rough stretch resulted in another blowout, and it was necessary to put on a new casing at Hudson.

A short time later heavy mud was encountered, but with the aid of his Weed Anti-Skid chains, Gale managed to keep his mount upright. About nightfall he reached the outskirts of New York City, and the rest was comparatively easy.

CONTEST IN ILLINOIS.

MOTORCYCLISTS of the State of Illinois have united in a fight against the appointment of J. F. Donovan as state highway commissioner. It is argued that his appointment would mean poor highways for the state as he has frankly stated that in his opinion there is no necessity for hard roads. An opposing legislative committee has been appointed to battle against the hard road question and to obtain the appointment of Donovan.

OREGON'S SHOWING.

OUT of the 1,183 licensed motorcycles in the State of Oregon, Marion county claims 751. Salem, the capital of this county, is credited with 486 of that number.

COUNTRY WIDE MAD SERVICE

IN a full-day session, held in New York City, January 15, the F. A. M. Board of Directors disposed of a surprising amount of business and cleared from the official calendar a number of matters of prime interest that have come to the fore since the recent meeting in St. Louis. Among the most important developments of the session was a decision by the directorate that funds should be set aside for the purchase of a series of maps of national scope to be used by the Federation's Touring Bureau. Robert Bruce, of the A. A. A., and S. Schreyer, of the Indian Refining Company, were given hearings in this connection. Each was prepared to supply maps suitable to the Bureau's requirements, and after a discussion of the aims of the F. A. M. concerning its Touring Bureau and of the expenditure that might be considered justifiable at this time, the map experts were requested to submit their propositions in writing to the board.

Mr. Bruce's suggestion involved the use of sectional and state maps that have been prepared by the touring department of the three-A organization, and which the latter is willing to place at the disposal of the Federation Touring Bureau on a contract basis. Mr. Schreyer, on the other hand, offered to sell the plates from which maps in a series of recently published route books have been printed. These maps cover the country fairly well and could be incorporated in sectional books or distributed on single sheets as might be found most advantageous by the Bureau. The propositions to be submitted in detail by the map experts will probably be acted upon the directors within a week or two, so that there will be no unnecessary delay.

The meeting opened at 10:00 a. m., with the following directors present: Messrs. Willis, Hamilton, Estabrook, French, Thornley and Sauer. Secretary-Treasurer Gibson was also present in his capacity as secretary of the board. There were absent, President Patterson, whose vote on certain questions was stated in a personal letter to Director Hamilton; Director Johnson, whose proxy was held by Director Willis; and Director Collins, whose proxy was held by Director Hamilton. Director Willis was elected Chairman Protem. The entire Board of Directors therefore was represented either in person, by proxy, or by written vote.

The minutes of the Board of Directors in relation to its meetings held since the 1912 National Assembly, at Detroit, Mich., and St. Louis, Mo., were read and approved.

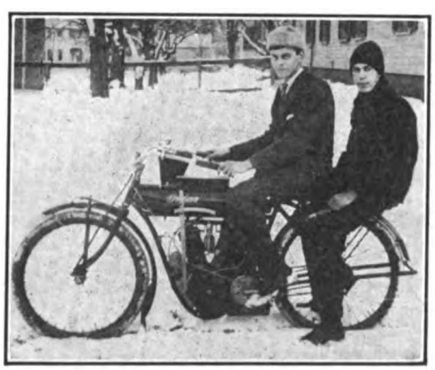
J. Leo Sauer, chairman of the F. A. M. Uniform Committee made a report which was adopted, and he was instructed to carry to completion the plans relative to the uniforms. Two sample uniforms were shown.

Treasurer Gibson read a financial statement for the first six months of the present fiscal year, up to December 31, which was accepted. This report showed a balance at his office on January, last, of $5,248.04. Treasurer Gibson was requested to get up a new itemized financial statement regarding a different division of the F. A. M. expenses.

Chairman Esterbrook, of the Membership Committee made a general statement regarding his work, and also outlined his plans for the coming year.

J. Leo Sauer of the Legal Action Committee, read W. H. Wells' report regarding his representation of the F. A. M. at the formation of the International motorcycle association, at its meetings in London and Paris. It was voted that Mr. Wells' action in this matter be referred to the Legal Action Committee, which, if it sees fit was instructed to ratify the agreement.

Secretary Gibson was instructed to write the Secretary of the Canadian Motorcyclist's Association to the effect that the F. A. M. will be glad to issue to trade C. M. A. members, F. A. M. registered repair shop certificates and signs, provided that such Canadian trade members shall first have been issued a registered repair shop certificate from the C. M. A. A letter was read from the President of the Canadian Motorcyclist's Association stating that their Association had adopted the F. A. M. competition rules, practically entirely.



A SNOW-PLUGGER.

ALLAN H. SAWYER, of Millers Falls, Mass., forwards the accompanying photograph of himself mounted on his twin Indian, with a friend astride the tandem. The picture was taken after a spin over the snow-covered roads of Massachusetts on Christmas day. Sawyer states that he enjoys his machine as much during the winter season as in the summer months, and the photo appears to back up this claim.

Chairman Thornley, of the Competition Committee, made a financial report for the six months ending December 31, 1912, showing receipts for sanctions of $6,744.50, out of which there was paid to referees $2,912.50.

It was voted, on motion of Director Thornley, that all monies coming into the hands of the competition committee chairman, be immediately forwarded to Treasurer Gibson with the formers voucher and that the chairman of the competition committee make drafts on the treasurer for all expenditures, as provided for by the Board of Directors. This order was voted to become effective on February 1 next.

It was voted that Treasurer Gibson be instructed to bring to the attention of the entire board, any F. A. M. bill of $100 or over, if he has not absolute knowledge that the bill is correct.

On motion of Director Thornley it was voted, that inasmuch as all monies in the hands of the competition committee chairman are to be turned over to the National Treasurer on February 1, that his books be audited. This was left in charge of the chairman of the Legal Action Committee.

It was decided that the chairman of the competition committee should get in touch with the chairman of the competition committee of the Auto-Cycle Union, of Great Britain, regarding the classification and publishing of world's records.

A suggestion that $100 be taken out of the Professional Riders' Relief Fund and given to Jake G. DeRosier, who is slowly recovering from his accident in Los Angeles.

A number of recommendations made by President Patterson in a recent letter were taken up separately by the board and acted upon with little delay. In connection with the first recommendation it was voted that the chairman of the competition committee submit an itemized account of the receipts and expenditures of his office to the directors on the fifth of each month, covering the transactions of the month preceding, and that the national treasurer follow the same rule. It was also voted that no F. A. M. shall accept notes in lieu of cash in any financial transaction of the Federation. A suggestion with reference to a conference between the officers of the F. A. M. and the A. A. A. was laid on the table for future consideration. With a view to furthering organization work and assisting in the general movement for rapid upbuilding of the F. A. M. during 1913 it was decided that each director should write to state commissioners located near him and thus stimulate the state heads to greater endeavor.

CLOTHED with the full authority of the Federation, State Commissioner E. L. Moore, of Seattle, Wash., is now on his way to California to confer with Dr. R. Y. Leslie, California State Commissioner, regarding the F. A. M. situation on the Coast and also to make a thorough investigation of conditions in the Pacific coast states of California, Washington and Oregon. Mr. Moore will act under an appointment by the Board of Directors at a special meeting in New York on Wednesday, January 15, at which time conditions in California and elsewhere on the Pacific Coast were fully discussed by the directors, with the result that they unanimously adopted a resolution appointing Mr. Moore to temporarily take full charge of F. A. M. affairs in the three above-mentioned states, pending the adjustment of any grievances which members on the Pacific Coast may have. Mr. Moore was also instructed to make a thorough investigation of all alleged grievances, to confer with Dr. R. Y. Leslie, California State Commissioner, particularly in reference to the appointment of a state referee and, after giving these matters his attention, to make his recommendations to the Board as soon as possible. Mr. Moore will act under the instructions of the chairman of the Legal Action Committee, who will reach the coast some time in March, while making a lecture tour of the United States under the auspices of the F. A. M.

Immediately after the passage of this resolution Chairman Sauer wired Mr. Moore advising him of his appointment and of the Board's instructions. Mr. Moore wired back that he was ready to make the trip at once. At the time of the transmission of the telegram to Mr. Moore announcing his appointment, the chairman of the Legal Action Committee also wrote the following letter, in behalf of the Board of Directors, authorizing Mr. Moore to take prompt action:

New York, Jan. 16, 1913.

"Mr. E. L. Moore, Arcade Annex Building, Seattle, Wash.

"My Dear Sir—

"At yesterday's special meeting of the Board of Directors of the Federation of American Motorcyclists, eight of the nine members of the board being present in person or represented by proxy, a resolution was unanimously adopted appointing you to act at once and until further notice, with full authority, in the Pacific Coast States of Washington, Oregon and California. Through me, the board wishes to instruct you to make a thorough investigation of whatever grievances there may be among our Pacific Coast members, and to report the same, with your recommendations, to the Board as soon as possible.

"To this end, you are authorized and urged to make a tour of the important motorcycle centers on the coast, the F. A. M. to pay your transportation expenses and hotel bills. At the same time, you will continue to issue sanctions for race-meets in the States of Washington and Oregon, and also confer with Dr. R. Y. Leslie, State Commissioner for California, on all matters concerning the F. A. M. in that State, and also agree with him upon the appointment of a State referee for California.

"It is the sentiment of the Board that those of our members on the Coast who may be dissatisfied for any reason should be given a prompt hearing and their alleged grievances brought before the Board for its consideration. The Board wishes it understood that it is anxious to ascertain the present and possible future wants of Pacific Coast members, and it is the hope of our directorate that you can spare the time to investigate at once all Pacific Coast F. A. M. matters. The Board has also instructed the undersigned to make a tour of the country as soon as the necessary arrangements can be perfected, but as this will require a few weeks' time and as the Pacific Coast situation demands immediate attention, it is our wish that the preliminary work be done in advance of my arrival on the Coast.

"Please let me have your acknowledgment as soon as possible. Any requests, by mail or wire, for further instructions, will have my prompt attention. Keep me fully posted from day to day, and I shall do likewise.

"Fraternally yours,

"J. Leo Sauer,

"Chairman Legal Action Committee."

Upon receipt of Mr. Moore's acceptance of the appointment, Secretary-Treasurer Gibson was instructed to forward to Moore a check for his transportation and hotel expenses, as authorized by the Board of Directors. This check was immediately sent forward from the office of the Secretary-Treasurer, with the following letter:

"Westboro, Mass., Jan. 17, 1913.

"Mr. E. L. Moore, Seattle, Wash:—

"Dear Sir—The F. A. M. Board of Directors held a business session in New York on Wednesday, Jan. 15 last.

"As you have probably been informed by J. Leo Sauer, Chairman of our Legal Action Committee, the Board voted to send you South into California to ascertain conditions there and report to the Board.

"A sum of money was voted to be used by you for expenses on this trip; and I have to-day received a wire from Director Sauer regarding the matter.

"At his request I am sending you my F. A. M. certified check for $200, to be devoted as you may need on this prospective trip.

"Please make return to me regarding the sum spent of this $200, so that I may have a proper voucher in our voucher files on the matter.

"I wish you good luck on this trip, and may success attend your efforts.

"I am sending a copy of this letter to Director Sauer.

"Fraternally yours,

"G. B. Gibson,

"Sect.-Treas. F. A. M."

The Board of Directors now has before it Dr. Patterson's charges against Charles Fuller Gates, and also Mr. Gates' defense. Pending the latter's suspension, no action is likely to be taken by the Board on these charges until Mr. Moore has rendered a full report. The organization of an outlaw association, with headquarters at San Francisco, is not taken seriously by the directorate, particularly in view of the fact that the president of the new association is not a member of the F. A. M. It will be Mr. Moore's duty to deal entirely with F. A. M. officials and members, to ascertain their wants, and to report the same back to the Board. At a later date Mr. Sauer will reach the Coast and continue the investigation. Every director is disposed to meet the Pacific Coast members more than half way, and it is the confident belief of the directorate that, as a result of its action of last Wednesday, absolute harmony between F. A. M. members in all parts of the country is now assured, and is only a matter of time.

N. C. M. C. LEADERS

AT the last weekly meeting of the National Capitol M. C., of Washington, D. C., held Wednesday evening, December 15, a new set of officers were elected. The new staff is reported as follows: President, E. M. Dodson; vice-president, Paul A. Draper; corresponding secretary, Thomas O. Wansleben; recording secretary, Fred M. Mills; treasurer, Harry B. Cohen; captain, W. F. Troop; first lieutenant, Frank Hazelton; sergeant, W. F. Troop. P. H. Moulden, George W. Parezo, H. H. Dodson, Paul A. Draper, T. O. Wansleben, F. M. Mills, W. F. Troop and Harry B. Cohen were appointed members of the board of directors. Harry B. Cohen was reappointed publicity secretary.

F. A. M. NATIONAL LECTURE TOUR.

AT a special meeting of the F. A. M. Board of Directors, held in New York on Wednesday, January 15, Chairman J. Leo Sauer, of the National Committee on Legal Action, was authorized to make a lecture tour of the leading motorcycle centers in the United States, and requested to start his trip as soon as arrangements could be completed. With the co-operation of Federation officials, the F. A. M. Publicity Bureau and the dealers and clubs in the cities on his schedule, the Legal Action Chairman proposes to conduct a transcontinental motorcycle educational and F. A. M. membership campaign, beginning about the first of March and concluding about the first of May.

It is Mr. Sauer's plan to arrange for nightly meetings in about forty centers of population in something like 32 or 35 states, from Massachusetts to Texas and from the Atlantic to the Pacific Coast. The subject of the lecturer's address will be "The Motorcycle and the F. A. M." In addition to delivering this address, Mr. Sauer will endeavor to get in touch with the leading newspapers along the route with a view to convincing their writers that the prejudice which exists against the motorcycle in some sections is entirely unfounded. He will also explain the workings of the National organization, offer suggestions as to how the States should be organized, give hearings on all matters in dispute, ascertain from riders in different localities in what way the F. A. M. can be of greater service to them, and also point out how they can co-operate with the organization so as to make it more valuable to every one of its members. In connection with his tour, Chairman Sauer will conduct a National membership campaign, the details of which are yet to be worked out. It has been decided, however, that a silver loving cup will be awarded to the city delivering to Mr. Sauer, upon his arrival, the largest number of memberships.

In order to make the trip a success, the heartiest kind of local co-operation will be required, and club officials, dealers and others are requested to begin at once to make arrangements to insure a large attendance at the various meetings. In all probability, the Legal Action Chairman will leave New York about the first of March and go South, taking in Philadelphia, Baltimore, Washington, possibly Richmond, Atlanta, Savannah, Memphis, Dallas, San Antonio and El Paso. From El Paso he will cross to Los Angeles, reaching that city about March 15. The two weeks between the 15th of March and the first of April will be spent in Los Angeles, San Francisco, Portland, Tacoma and Seattle. Next in order, between the first of April and the middle of that month, will come Salt Lake City, Denver, Kansas City, St. Louis, Omaha, Des Moines, St. Paul, Minneapolis and Chicago. Between the fifteenth of April and the first of May Mr. Sauer plans to visit Milwaukee, Detroit, Toledo, Cleveland, Indianapolis, Louisville, Cincinnati, Columbus, Pittsburgh, Buffalo, Syracuse, Boston, Hartford and Newark.

The above itinerary is only tentative, and suggestions for its improvement will be gratefully received. Mr. Sauer's address is 51 Chambers street, New York City, and he desires all interested parties to get into immediate touch with him, so that he may be ready to start according to schedule.

PROPOSE NEW MOTOR LAW

IN connection with the proposal to pass a motor vehicle law in California, the following is self-explanatory:

New York, Jan. 20, 1913.

"Miss S. C. Geary, Secretary, Automobile Club of Southern California, Los Angeles, Cal.

"Dear Madam:—

"We have been informed that your association will recommend the passage by the California State Legislature, of a bill regulating the ownership and operation of automobiles and motorcycles. In view of the fact that there are only local ordinances affecting motorcycles in California at the present time, our organization is naturally interested in the move your association is making. Under the circumstances, we would appreciate being kept posted. At the same time, we wish to assure you of our willingness to co-operate in any reasonable way and, if it is necessary, to contribute our financial support to a moderate extent.

"There are so many riders of motorcycles in California, that no law should be adopted without reference to their interests. The Federation of American Motorcyclists would like to have the opportunity of working in harmony with your association in this matter, and as Chairman of its National Committee on Legal Action, I would appreciate your co-operation to that end.

"Thanking you in anticipation of an early reply, I am,

"Yours very truly,

"J. Leo Sauer,

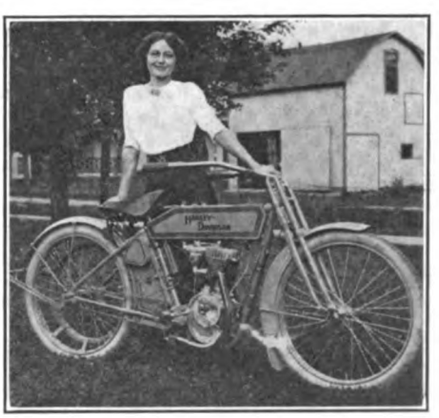
"Chairman F. A. M. Legal Action Committee."

NEW RICHMOND M. C. STAFF.

MEMBERS of the Richmond (Ind.) M. C. held their annual election in connection with the January business meeting. The new staff follows: President, Roy Harvey; vice-president, Walter E. Moore; secretary, Alvin Alexander; treasurer, Elmer Smith; road captain, Paul McBride; first lieutenant, Charles Meyers, and second lieutenant, Earl Wright. Emil Weist and Frank Cook were named directors at large.

A BUSY SALESMAN.

WILMER REICHERT, formerly connected with the Chicago branch of the Hendee Manufacturing Company, appears in the accompanying photograph. Since leaving Chicago Mr. Reichert has traveled through Georgia in the interests of the Hendee company, and is now making an extensive trip through Florida.



A FEMININE BOOSTER

MRS. W. T. RAYPOLE, wife of the Harley-Davidson dealer at Churubusco, Ind., is shown in the accompanying photograph. Mrs. Raypole is a loyal booster of the two-wheeler and enthusiastically asserts that she will have at least a half dozen feminine riders in Churubusco before the close of the 1913 riding season.

THORNLEY WILL ACCEPT RECORDS

THAT Lee Humiston, who claims to have battered down all motorcycle records from one to one hundred miles in his trials on the Playa del Rey saucer, near Los Angeles, is practically assured of full official credit for his remarkable performances is evident from Chairman Thornley's decision in a letter printed below, and as a result there is widespread satisfaction among motorcyclists. No question has been raised concerning Humiston's fairness or the sincerity of the Excelsior Motor Mfg. and Supply Co., which produced the record-breaking machine, and as might be expected there was strong feeling against the new speed marks being ruled out on the ground of irregularity in the sanction. It has been shown that Humiston believed the sanction to be in keeping with all F. A. M. requirements, and, as pointed out in Chairman Thornley's letter, he will not be held responsible for anything except his actions on the track and the measurements of his machine. Reports thus far received from the coast indicate that in these respects the trials were entirely satisfactory.

In discussing the matter before the F. A. M. directorate at the meeting held in New York City during Show Week, Chairman Thornley stated that if the affidavits relative to the machine measurements and the timing have been given due attention, and if they are received at the office of the Competition Committee in proper form, he will officially accept the records. The Chairman is most emphatic in his statement that the Competition Committee will not seek to take advantage of any technical irregularity in the sanction, and that Humiston will receive full credit for his spectacular work, provided all other essential requirements have been complied with. The hitch relative to the sanction is made clear in the letter published below.

As a startling climax to his performance of December 31 last, in which he started his record breaking, Humiston appeared on the Playa del Rey saucer on January 7 and lowered another set of long-standing marks. The 100-mile record had been held by Jake De Rosier, at 75:24⅗, and Humiston lowered it to 68:01⅘. Humiston's new marks, established in his record-breaking trial, are as follows:

Miles.	Time.	Miles.	Time.
1	:38⅘	27	18:16
2	1:17⅗	28	18:56⅘
3	1:57⅕	29	19:37⅗
4	2:37⅗	30	20:18⅕
5	3:17	31	20:38⅘
6	3:57⅖	32	21:39⅗
7	4:38⅗	33	22:20⅕
8	5:19	34	23:01
9	5:59⅗	35	23:42
10	6:40	36	24:22⅘
11	7:20⅘	37	25:03⅘
12	8:01⅕	38	25:44⅘
26	17:35⅗	39	26:25
40	27:06	71	48:12⅗
41	27:47⅗	72	48:53
42	28:29⅗	73	49:34
43	29:10⅗	74	50:14⅗
44	29:51⅘	75	50:55⅗
45	30:32⅕	76	51:36
46	31:12⅘	77	52:16⅘
47	31:53⅖	78	52:57⅘
48	32:33⅗	79	53:39⅗
49	33:14⅖	80	54:19⅗
50	33:55⅕	81	55:00⅕
51	34:36	82	55:41⅗
52	35:17	83	56:26
53	35:57⅘	84	57:05
54	36:38⅕	85	57:46⅗
55	37:19⅖	86	58:27⅘
56	38:00⅘	87	59:10⅕
57	38:40⅘	88	59:51
58	39:21⅕	89	60:31⅘
59	40:02⅕	90	61:12⅖
60	40:42⅖	91	61:53⅕
61	41:23⅕	92	62:33⅘
62	42:04	93	63:14⅗
63	52:44⅖	94	63:55⅖
64	53:25	95	64:36⅗
65	44:06⅗	96	65:17⅘
66	44:47⅕	97	65:58⅘
67	45:28⅗	98	66:40
68	46:09	99	67:20⅘
69	46:50⅕	100	68:01⅗
70	47:31⅕		

Thornley's letter is in part, as follows:

"It has been publicly stated that the records claimed to have been made in California recently would not be accepted in this office because there was some confusion and irregularity regarding the sanction issued.

"I wish to most emphatically state that the Competition Committee would never be guilty of such an injustice. There is every reason to believe that the man trying for these records did so in good faith, under a sanction that he considered was entirely legal and regular. If the affidavits regarding this trial have been properly made out, and the necessary formalities in the matter of measurement of the machine, etc., have been complied with satisfactorily and properly, the records will unquestionably be accepted. In other words, the question of whether the sanction was regularly issued or not is a matter between the President and the Board of Directors, and has nothing to do with the question of whether the man made the distance in the time claimed or not."

PLACING THE PRESTO

HERBERT D. SHERWOOD, of 11 Parkwood boulevard, Schenectady, N. Y., in a recent letter states that he believes he has found an ideal position for a Prest-O-Lite tank. He attaches it to the seat-post tube under the saddle.

The Humiston Comet, now Exciting Students of the Racing Firmanent.

A Photograph of the Razoux Forecar Model.

MOSSBERG SPECIALTIES.

WRENCHES of S, alligator and socket types made up the bulk of the exhibit of the Frank Mossberg Company, Attleboro, Mass., as far as the interests of riders of two-wheelers was concerned, but there were other novelties which also attracted attention. Among these may be mentioned the belt-couplings, pressed steel parts such as sprockets and cups, and for the sidecarist, foot-operated gongs to be worked by the passenger.

CRAWFORD TWIN

ONE model only, and that a 9 h. twin, known as the Model A Crawford, will be the product of the Midland Manufacturing Company, 1912 Michigan avenue, North, Saginaw, Mich., for 1913. The motor is of De Luxe make and fitted with Bosch armored magneto and an Eclipse clutch, the final drive being by chain. Lubrication is by splash, with drip feed from the tank, and a hand pump is fitted as an auxiliary. The frame is of the loop type and the fork of the coach spring or cradle type with recoil bumper.

The wheelbase is 57½ inches and 28 by 2¾-inch tires are regular equipment. The brake is of the Eclipse multiple disc type, and the saddle equipment is the Troxel. The price complete is given as $285. Further details will be given in a later issue.

NEWARK AGENCY

HERBERT AUSTIN, of Newark, N. J., has taken the agency in Essex County for Reading-Standard machines. Mr. Austin has been in the bicycle business for years past, but has not heretofore handled motorcycles. It is stated that the Reading-Standard folks have recently placed 1913 agencies in Chattanooga, Tenn., West Point, N. Y., and that many other new dealers are ready to blaze trails for the Reading product during the coming season. G. E. Atkins, of the Reading-Standard sales staff, reports that an unexpectedly large number of prospects were lined up during the New York show.

BIG YALE CONTRACT

AN unusually large contract is that recently closed by the Los Angeles Motorcycle Company, of Los Angeles, Cal., for 1,000 Yale motorcycles, to be delivered in 1913. The company will cease handling other makes and devote its time exclusively to the Toledo product.

R. I. V. BALL BEARINGS.

R. I. V. radial ball bearings in a special narrow series, suitable for motorcycle service, were shown in company with a wide variety of other sizes in the Grand Central Palace display of the R. I. V. Company, 1771 Broadway, New York City.

BIG EXTENSION NEEDED

THE increased volume of business swinging to the Pennsylvania Rubber Company, due in a large measure to the heavy demand aroused by the recent introduction of the oil-proof feature in their Vacuum Cup tires, has necessitated the formation of plans for immediate extension of the factory at Jeannette, Pa. At a recent meeting of the board of directors it was decided to erect a three-story addition to the plant. The new building will cover an area of 8,000 square feet and will cost approximately $100,000.

For 1913 the advance orders insure a sale of at least twice the volume of the 1912 shipments. At the present time as large a force of workmen as can be accommodated is kept constantly at work, in an effort to catch up on orders before spring. With the opening of the new addition to the factory the capacity of the mill line will be doubled. The operating staff in the tire rooms is to be greatly increased with as little delay as possible and the production of oil-proof and other tires will proceed with increased speed.

HARRIS OILS.

MOTORCYCLISTS at the Show had their attention called to the fact that the Harris Oil Company, of 326 South Water street, Providence, R. I., is marketing a high-grade of heavy cylinder oil, which has been found to give excellent results in motorcycle service where the firm's light or medium grades did not meet all the requirements. The company's sales of motorcycle oil are large.

FORECAR ATTACHMENT.

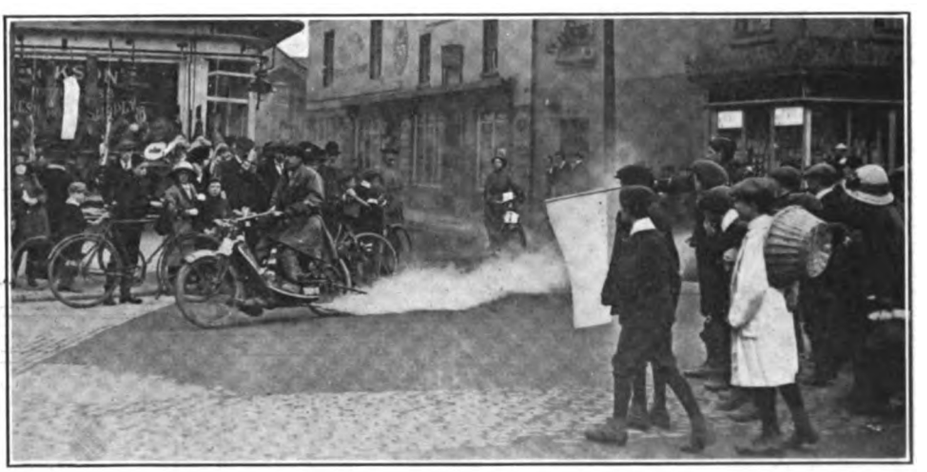
A UNIQUE forecar attachment which does not involve rebuilding the motorcycle to which it is fitted, is the invention of T. W. Razoux, of 209 St. Marks avenue, Brooklyn, N. Y. The frame of the forecar is prolonged rearward to form braces whose ends attach to the rear axle, and intermediate braces attach these longitudinal members to the frame of the motorcycle. It is not necessary to remove the front wheel; its tire is fitted into a curved shoe which is attached to the steering linkage turning the front wheels of the forecar. The seat is hollowed at the rear to accommodate the front wheel of the motorcycle. Steering is very easy, and it will be apparent that it is only necessary to loosen four bolts to release the motorcycle ready for solo work, or to set up the same bolts and drop the front wheel in the steering-shoe to have a tricar ready for use. The inventor has seventeen patents covering this attachment and is in the market to dispose of them. Its adaptability to a motorcycle for alternating pleasure and business service is very apparent.

PRESTO-O-LITE TANKS

IN these days of rapid motorcycle developments, one of the most interesting and significant inclinations is toward night riding, and in order to make the most of his mount after nightfall the thoughtful rider is studying the lighting problem with great care. As a result the already country-wide interest in Prest-O-Lite gas tanks is being still further stimulated, and reports from the factory are to the effect that the most consistent efforts will be necessary to keep abreast of 1913 orders. The Prest-O-Lite folks are calling attention to the fact that it is now possible to obtain special fittings for attaching the gas tank on the machine at almost any point the fancy of the rider may dictate.

CHANGE IN FIRM.

CHANNING BURBANK has succeeded H. F. Bidwell in the Bidwell-Conklin Company, motorcycle dealers in New York City, and the firm now operates under the name of Burbank, Conklin & Co. During 1913 they will seel a complete line of Pope models and parts. The Bidwell Trophy Race, now an annual event, will be run off in the spring.



AN ENGLISH TRIAL

THE accompanying photograph shows two of the contestants in the recent Midland motorcycle reliability trial, conducted by the Sutton-Coldfield Automobile Club, in England. It will be noted that the first rider is not at all solicitous about his exhaust, and that the second contestant, who is ploughing through the smoke, is of the fair sex.

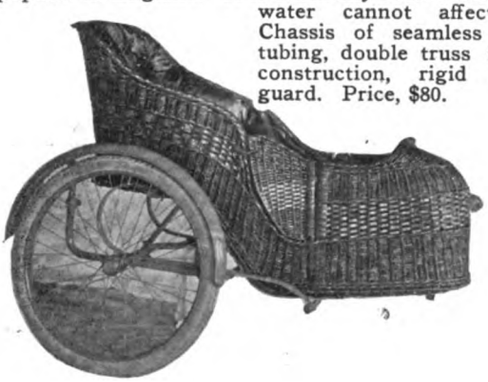
BAXTER

The Sidecar Luxurious

Never before has the sidecar been so universally popular. There must be a reason for this, and it is not hard to find. The consistently satisfactory service given by Baxter Sidecars—their comfort, their durability, their lightness and their generally ideal construction did more in 1912 to give the right impetus toward popularizing sidecar riding than anything else. Here are shown three new models of the Baxter that cannot help but be in tremendous demand.

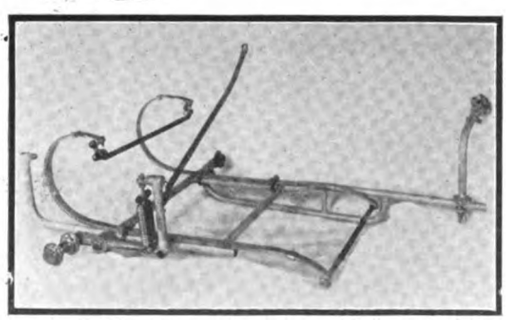
Model No. 1

Body made of small reed. This model is one of the most popular in England. It is staunchly constructed and water cannot affect it. Chassis of seamless steel tubing, double truss frame construction, rigid mudguard. Price, $80.



Model No. 2

Body made of willow, steel reinforced throughout, deep leather cushions, non-fraying. A splendid, light and substantial body. Same chassis construction as No. 1. Price, $75.



Here is shown the famous Baxter chassis which is the basis of our success as sidecar builders. Note that there are only two points of attachment, both quick-detachable. Tension spring, absolutely absorbing all shocks, fitted to any of our models, $10 extra. Write for our complete catalog, describing the Baxter Delivery Van, the last word in commercial sidecars.

BAXTER SIDECAR CO., 119 Broadway, Cambridge, Mass.

The Miller Non-Skid "Block Tread" Tire

Satisfies the demand for a stronger and larger tire. Its construction is such that it can withstand the most severe road conditions with minimum wear.

PREPAID TO ALL POINTS

Miller's Non-Skid "Block Tread" Motorcycle Tires

There Are Times When Ignorance Is Not Bliss

Let us enumerate:

For instance, on a sweltering day while you're happily breezing along, your motor suddenly develops the "fidgets." You get off and investigate. If you know all about a motor's internal construction and are "wised up" on how to handle a cranky magneto, and know all there is to know about the carbureter—you will EVENTUALLY locate the trouble. But if you don't—you're STUCK!

Then is the time to dig into your tool box and consult your tried and true friend

The Motorcycle Manual

Its trouble chart tells how to locate the trouble and REMEDY IT. It tells all there is to tell about every part of your motorcycle. It gives concise information regarding license laws in every State in the Union. It gives the official racing records. It explains horsepower and other mechanical formulae; it is a handy motorcycle trade directory; it enlightens you as to the F. A. M.—who's who and what he is doing—it—oh, well!—do you think you can afford to be without it? And it costs a quarter. We don't have to tell you what to do with the coupon in the corner.

Motorcycle Publishing Co.

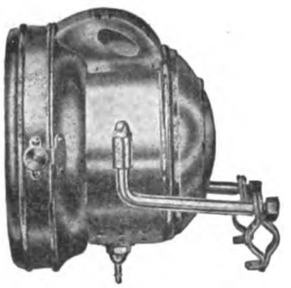
OLD SOL
MOTORCYCLE LAMPS
LENS

We are great believers in making an article that gives entire satisfaction.

READ THIS

"I have sold over 100 'Old Sol' Lamps this season and not one complaint. Will handle no other Lamp but 'Old Sol.'
"Ernest Broadbent, Attleboro, Mass."



OLD SOL No. 8

Power—Efficiency—Quality are the arguments for "Old Sol" Lamp No. 8.

You ride a twin because it has the reserve power to draw on.

By using this large lamp you obtain a light penetration to be secured in no other way. No. 8 is the most powerful motorcycle lamp made by 500 candle power.

No. 8 is equipped with ball pin hinges, special German lava burners, automobile type, heavy double thick door glasses, and specially ground Mangin mirror lenses. Bodies are made of heavy gauge brass, drawn from one piece of metal, and door frames of special beaded construction to give them strength.

Diameter of door, 8 in. Diameter of lens, 6 in.
Candle power, 1500. Weight, 4 lbs. 2 oz.
Brackets, per pair, $1.00; Bezel, 50c. extra.

PRICE $6.50

OLD SOL No. 17

No. 17 is second to No. 8 in Power, Efficiency and Quality. It also has abundant power to draw on. It is next to the most powerful motorcycle light manufactured, being only exceeded by Old Sol No. 8. Like No. 8 and No. 1 and No. 2 it is equipped with ball pin hinges, special German lava burners, automobile type, heavy double thick doors, glasses, and specially ground Mangin mirror lenses. Body is made of heavy gauge brass, drawn from one piece of metal and door frames of special beaded construction to give them strength. Old Sold No. 17 differs from No. 8 in that it is smaller, lighter and less powerful.

Diameter of door, 7 in. Diameter of lens, 5 in.
Candle power, 1000. Weight, 3 lbs.
Brackets, per pair, $1.00; Bezel, 50c. extra.

PRICE $5.50

OLD SOL ELECTRIC TAIL LAMP

Description. Weight, 22 ounces. Combination bracket holds number plate and allows white light from lamp to illuminate same. Red jewel on head throws rear signal. Burns from 20 to 25 hours intermittently. Supplied complete with 1 candle power bulb and battery No. 790.

Model No. 20

PRICE $3.00

Parts for No. 20 "OLD SOL" Electric Tail Lamp

Red Jewel complete	$0.25
1 C. P. Mazda Bulb No. 1198	.50

Edelmann Economy Gauge Enjoined—Twitchell Patent Again Sustained—Injunction issued in favor of A. Schrader's Son, Inc.

Notice is hereby given to the trade that:

In a suit brought by *A. Schrader's Son, Inc.*, of New York, against **E. Edelmann & Co.**, of Chicago, for infringement of **Twitchell** patent No. 927,298, Judge Humphreys, of the U. S. District Court of Illinois, issued on December 18, 1912, a preliminary injunction restraining **E. Edelmann & Co.** from the manufacture, sale and use of the **Edelmann Economy Gauge.**

This injunction, which was granted despite vigorous opposition by **E. Edelmann & Co.**, is the last of an unbroken series of victories for the **Twitchell** patent, now the sole property of *A. Schrader's Son, Inc.*

The decision of the Illinois court sustains the contention of the owners of the **Twitchell** patent that this patent covers all "pencil type" gauges now upon the market.

The following gauges have been held to be infringements of the Twitchell patent:

The Northam Gauge—held to be an infringement by the U. S. Circuit Court for the Southern District of California in the suit of Chas. R. Twitchell vs. Northam Auto Pressure Gauge Co.

The Prest-O-Lite Gauge—held to be an infringement in the suit of Chas. R. Twitchell vs. Prest-O-Lite Co. in the Southern District of New York.

The Safety Tire Gauge—held to be an infringement by the Supreme Court of the District of Columbia in the suit of Chas. R. Twitchell vs. Rudolph & West Co.

Furthermore, in the suit against the New York Sporting Goods Co., the *sale* of the Edelmann Economy Gauge was enjoined.

All other infringers will be promptly prosecuted.

The only gauges authorized under the **Twitchell** patent are the *Schrader Universal Tire Pressure Gauge*, the **Twitchell Tire Pressure Gauge** and the **Allen Tyrometer.**

The trade is warned that the sale or use of the **Edelmann Economy Gauge,** or of other infringing gauges, is as much an infringement of the **Twitchell** patent as the manufacture of the gauges themselves.

Consequently, jobbers and dealers handling infringing gauges are liable to injunction and damages.

Schrader gauges may be obtained for $1.00 from all tire manufacturers, jobbers, supply dealers, garages, or from

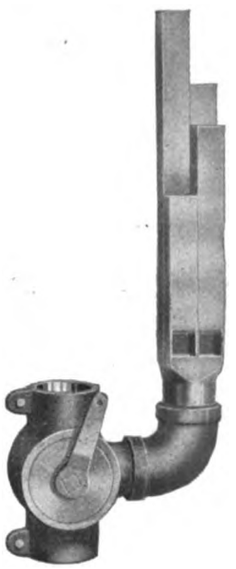
TRINITY CHIMES
Motorcycle Chimes



Every motorcyclist, no matter what make of machine he rides, should have a Trinity Chimes. The tones of the four tubes blended together give a mellow sound. Its pleasant warning will avert many an accident. It is easily attached and easy to operate. Its upkeep is nothing.

Every dealer should carry Trinity Chimes. Cuts furnished free for catalogues.

"A Chain is as strong as its weakest Link"

No truer saying was ever coined than this. A chain may be beautifully made, in ideal works by skilled mechanics, but—if for one instant only the constant vigilance which is absolutely necessary in the making of chains is relaxed, that chain is **not reliable.** There are no weak links in the

RENOLD CHAIN

because every one of the six thousand operations employed in each chain's manufacture is carefully inspected.

Because integrity of manufacture is the keynote of the success of RENOLD CHAINS.

Because our system of inspection is positively flawless.

Because quality of raw materials in conjunction with skilled and conscientious manufacture make for

RENOLD RELIABILITY

We make 90% of the chains used on foreign motorcycles. But we do not want this fact to influence you solely in your decision. We want to have you learn **why** the discriminating motorcycle manufacturers and riders in England and other foreign countries choose RENOLD CHAINS.

And as the most convincing argument we can put forth is a demonstration of the chain on YOUR machine, we want to send you a set of RENOLD CHAINS. The true test of quality is service and that is where the

RENOLD CHAIN

shines.

You can assure for yourself supreme transmission service by ordering the RENOLD CHAIN of your dealer. If he does not stock RENOLD CHAINS, write us.

TRADE MARK

Standard

In Name and Quality

Never has there been a truer saying than the time-worn old adage, "It's the little things that count." And it is the degree of attention paid to these "little things," that determines oftimes the success or failure of a machine to "get across."

Wise manufacturers are equipping with Diamond "E" Spokes and Standard Pedals because they are quality goods—because they reduce the number of repair shop trips for the rider—because farsighted manufacturers realize that a motorcycle's weakest points are its strongest—and it is that infinite attention to detail which bespeaks perfection.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond "E" Spokes and Nipples. The motorcycles that are not so equipped will inevitably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

Everyone knows the superiority of Standard No. 3 Pedals, their deep, soft rubber cushions, the interchangeability of the rubbers, and the thousand and one other good features that are not found in other pedals. The feet cannot slip no matter how rough the going. And the perfection of Diamond "E" Spokes is proverbial.

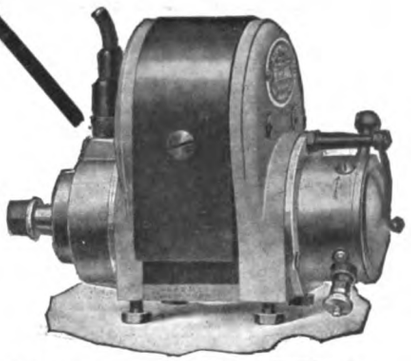
NATHAN NOVELTY MFG. CO.

84A Reade Street - - - New York City

This is the new 1913 Model HERZ MAGNETO



Dust-proof Moisture-proof
Highly Efficient

During the entire first week of the New York Automobile Show, a HERZ MOTORCYCLE MAGNETO ran **completely submerged in water.** The same unprecedented demonstration will be repeated at the Chicago Shows.

In breaking all world's records from 1 to 12 miles, at Playa del Ray, Dec. 30, 1912, Lee Humiston used a new model HERZ MAGNETO on his Excelsior machine.

The New HERZ PLUGS are also provided with insulated terminals. The combination of these Plugs with Herz Magneto forms the ideal ignition system.

WE SELL EXCLUSIVELY TO DEALERS

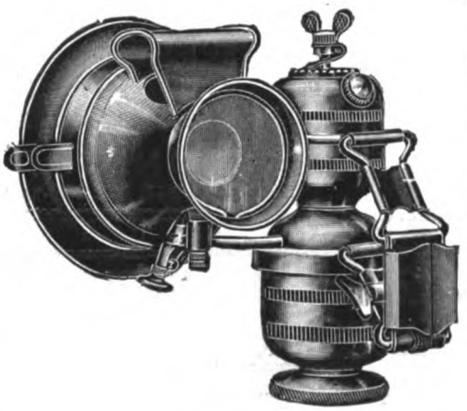
Our strict adherence to the policy of Protecting the Dealer by Not Soliciting Trade From His Customer, has given us pre-eminence in the automobile, motorcycle and bicycle supply field. We are amply equipped to give the **best** in **quality, service** and **price.** Here are Three Stunning Successes Any Dealer Can Handle with Amazing Results.

Musical Signal Horn

The Most Popular Two-Tube Motorcycle Warning Signal Produced. Designed for Efficiency and Service. Nickel Plated, with Bulb and Clamp Attachment. Length, 11½ Inches.

No. 14. Price, $2.00.

Duplex "Self-Lighter" Lamp



The law in most States requires rear lights on bicycles and motorcycles. The combination Duplex MEETS THIS REQUIREMENT. It lights up the road in front of the rider and also shows a RED LIGHT WARNING SIGNAL in the rear. This lamp is finished in nickel, has a flare-front door 4½ inches across and is fitted with a compact generator 2¼ inches in diameter. Height of lamp 5½ inches. This lamp attaches to fork on left side of wheel.

Price, $3.00 each

Let Us Send You This Sight Glass Oil Gauge

—AT OUR EXPENSE—

Mr. Harley-Davidson rider! Mr. Excelsior rider, and all the other riders that have no oil gauge on the crankcase of their engine! We have so much faith in our oil gauge that we wish to send it to you at our expense so that you can see it yourself—and then you can decide whether you want one or not. We want you to see the finest crankcase gauge ever put on a motorcycle, a gauge that will show you EXACTLY how much oil you have in your engine ALL THE TIME, and will do what no other one will—IT WILL KEEP CLEAN.

The gauge is handsomely nickel plated, an ornament to any machine, the size of a thin watch, only ⅛ of an inch thick. It screws firmly on the crankcase, is out of the way and won't jar or get knocked off. It will save its cost in oil in a few weeks. It will keep your plugs from fouling. After you have used it a week you would as soon be without your watch. It can be attached in ten minutes with the tools furnished. Do you know that if you have the right amount of oil in your engine you can start easily in the coldest weather?

We Have Lots of Letters Like This

Buck Sales Co., St. Louis:

Gentlemen—I received your Simplex Oil Gauge which is in service now and am very glad in having equipped with it, and I would say every careful rider should have it as it is a most practical and easy thing to put on. I also do not hesitate to advise any rider to get one. Yours truly,

H. UJITA, Menlo Park, Cal.

A FEW WORDS WITH EVERY MOTORCYCLE AND ACCESSORY MANUFACTURER

Do you realize that pennants will advertise your product in the most attractive and efficient manner?

As a Show Souvenir, a pennant is a very desirable little remembrance and one which will never fail to attract attention. Dealers will utilize them as wall-hangers, riders will attach them to their machines or hang them up in their dens.

And you, Mr. Dealer, should appreciate the big business possible with a line of our pennants. We are manufacturers and stand ready to make pennants in large quantities to order on extraordinarily short notice.

We reproduce machines or accessories with lifelike realism. All colors are waterproof and cannot be eradicated.

Write us at once for quotations and send 10c. for sample pennant.

Brown Scientific Non-Deflating Pneumatic Tube

AN AIR-FILLED MOTORCYCLE TUBE POSSESSING VERY UNUSUAL FEATURES:

First: It withstands a tread puncture without deflating the tube.
Second: The higher the pressure the tighter the puncture closes.
Third: It eliminates the risk of destroying casings by reason of punctures.
Fourth: The danger of loss of control of machine is removed.
Fifth: It assures you of not being obliged to repair a puncture on the road and gets you "there and back" on full tires.

AIR FILLED ONLY.

Punctures are self-closing by reason of a scientific but simple principle of construction.

NO "DOPE," GUM, PASTE OR OTHER STUFFING MATERIALS.

Write for prices, full description and sectional sample.

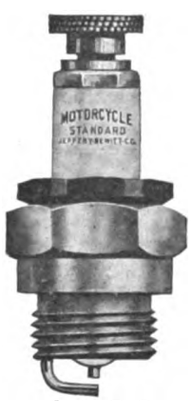
A Porcelain Motorcycle Spark Plug!



$1.00

Made for Motorcycle Service Only

No need any longer to use the inferior mica plug or a makeshift porcelain. This new Motorcycle Standard Spark Plug, built by the greatest manufacturer of spark plugs in the world, gives motorcycle riders a plug with a porcelain insulator that is faultless, defies heat and insures perfect ignition.

Motorcycle Standard Spark Plug

Leading motorcycle engineers of the country have pronounced this plug right in principle and construction. The length over all is 2¼"—just the right size for the limited dimensions available for a spark plug in the motorcycle motor. The porcelain is made in our own potteries. Heat cannot crack it. The bushings are case hardened. The terminal nut will take ordinary wire, ring, or special "Indian" terminal.

Comes in half-inch or metric sizes. Your dealer will supply you —or sent prepaid on receipt of price and size.

PRICE—$1.00 per plug

Our guarantee—"Your money back or a new plug, unless you are absolutely satisfied."

Mott Rims for Strength

THE superiority of the Mott motorcycle rim lies in the little points that the average riders never notice, but that show up strongly in hard service. For instance, take the way the spoke holes are punched. On Mott rims this is carefully and accurately done so that there is ample strength to hold the nipple securely. Sketch No. 1 shows the idea.

Most other rims come out like No. 2. This part of the work is hurried over, carelessly done, and as a result the holes are counterpunched too deep, making a weak spot, which often allows the nipples to pull through the rim.

Mott thoroughness shows up in the tests. Note the wheels that come through the severe endurance runs in the best condition. You'll find them fitted with Mott rims. To be sure of satisfaction, specify Mott rims for your machine.

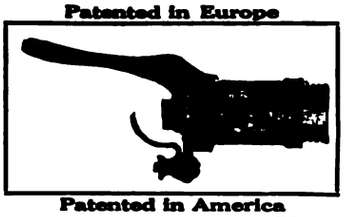
Will You Agree With Us That Air is Necessary to Increase Your Speed?

Patented in Europe



Patented in America

The M&M Economizer admits auxiliary air above the carbureter, through the six portholes. The gas coming from the carbureter is broken up and sprayed by the incoming air. This vaporizes the fuel so that when it reaches the cylinders it is a gas **OF THE HIGHEST EXPLOSIVE POWER.**

The M&M requires a ¼" pipe tap to insert into manifold. It is the only known carbureter adjuster on the market, and can also be used for priming the engine.

WE GUARANTEE that the M&M will increase your **SPEED AND POWER** 20% with less gasoline and less carbon. It is also guaranteed to save you from 40 to 50% of gasoline.

The M&M is nickel plated and highly polished. It is positively air-tight when closed.

BEWARE OF INFRINGEMENTS. **PRICE, $1.25 Prepaid.**

ASK YOUR DEALER OR JOBBER ABOUT IT. GUARANTEED TO GIVE SATISFACTION. SOLD EVERYWHERE ON THIRTY DAYS' TRIAL.

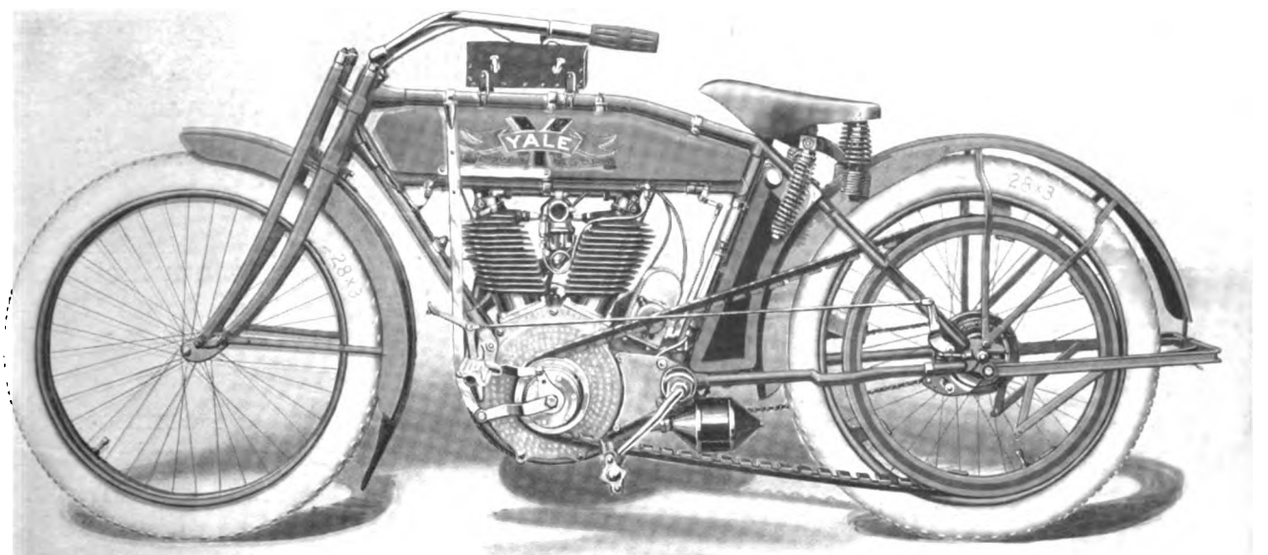
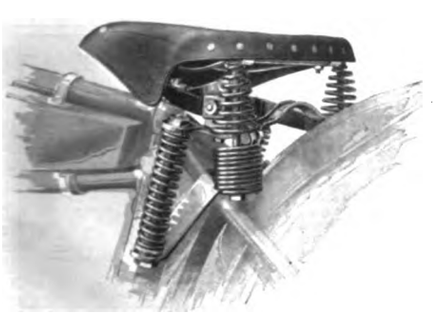
Invest Business Proposition for Dealers



CHAIN SIDE of the Yale 7-8 H. P. twin. This model furnished with either roller chain or big V belt transmission —no flat belt of size small enough for a motorcycle would hold the tremendous power of this motor. All machines fitted with Eclipse free-engine clutch as regular equipment. Quadrant for clutch lever fastened to lower frame bar—no strain on side of tank. New footrests ahead of motor base, with foot lever for operating brake when feet are on rests. Corbin band or Eclipse multiple-disc brake. **$275**



THE Y-A SHOCK ABSORBER—fitted to all 1913 Yales—is the most efficient device made for eliminating rear-wheel jolts. Two big springs take up every road jar, large or small, thoroughly insulating the rider from all road shocks. There is none of the weakness or sideplay that is in every spring frame or spring seat post; no frame joints to wear and destroy correct alignment.

and accurate, skilled labor combine to produce mechanical perfection.

The thousands of motorcyclists, and people who will become motorcyclists in 1913, want just such a machine, and wide knowledge of the Yale insures immense volume of sales for every Yale agent. We are spreading this knowledge by a $125,000 national advertising campaign that reaches over 10,000,000 people. Get your orders in quick for there will be a long waiting list ahead of those who delay.

Yale Agents: Send at once specifications for delivery of 1913 models. Order machines for stock so that you can be sure of having a quantity of machines when you need them. Those who delay will be far down the waiting list.

Give The Pedestrian A Courteous Warning

The AERMORE Exhaust Horn

—the Horn Harmonious—

This is the only horn in the world whose melodious tones give a sure, far-reaching, courteous warning. The pedestrian is not frightened—does not lose his presence of mind—when he hears the unmistakable warning of the Aermore, distantly signalling your approach. Aermore music gets instant attention and does not startle. There is no raucous "honk" or jarring bell alarm to set the nerves on edge.

The Aermore is especially adaptable to Motorcycles. Thousands of motorcyclists and automobile owners attest their superior service. The Aermore requires absolutely no upkeep. The first cost—**extremely low**—is the last cost. It's the only self-cleaning exhaust horn on the market. It cannot clog or get out of order. All dirt, dust or oil is blown out by the exhaust.

The strength of the Aermore tones can be regulated to give a soft, cheerful warning, or a loud, imperative signal, but always harmonious.

Four sizes for different horse power engines. Prices—$7.50 to $12.00. See them at the Chicago Automobile and Motorcycle show. If you are a dealer, write for our special proposition.

The SABO Motorcycle Lock

The Thief's Worst Enemy

Patent applied for.

Don't wait—until too late. Thieves and joy-riders are stealing motorcycles daily. Get a Sabo lock—a midget in size—a giant in strength. Then you're safe. Sabo locks the machine to the stand. You can't break spokes or drive chain by accidentally pushing machine off stand. Thousands are being used.

Here's Big News for Motorcyclists

The Aermore Manufacturing Company will exhibit the **Rogers Motorcycle Side Car** —a combination pleasure and delivery service —at the Chicago Motorcycle Show.

It's just what thousands have been demanding. As a pleasure car it gives spacious body room—rides as easy as a touring car. Remove the seat and trimmings and it is converted into a package carrier. A Rogers delivery service will build up your business.

It eliminates the objectionable rear seat. **She** can ride beside you and enjoy all the pleasures of motorcycling.

See it at the Show. Study its big features. It's a sure winner for a progressive dealer. Write us and we will send a booklet telling you all about the Rogers.

What Happens in Turning a Corner?

YOU always experience centrifugal force. You demonstrate to yourself practically that speed of rotation and centrifugal force always go together. You cannot have one without the other.

For every speed there is a definite value of centrifugal force. For every centrifugal force there is a definite value of speed. One means the other—both mean the same.

JONES SPEEDOMETER

uses centrifugal force to measure speed—the scientific relation accounts for the permanent accuracy of the Jones. We measure speed by related speed results.

Magnetic speed instruments are not permanently accurate. Magnetism has no relation to speed. Each can be had without the other. Magnetic speedometers convert speed into magnetic energy and magnetic energy into the movement of a dial. The conversion of energy always involves a loss. Temperature variations render the instrument still more inaccurate.

The Jones Speedometer is geared-to-the-truth. No influence can disturb or alter the permanent relation of centrifugal force to speed.

Centrifugal force always tells the speed truth.

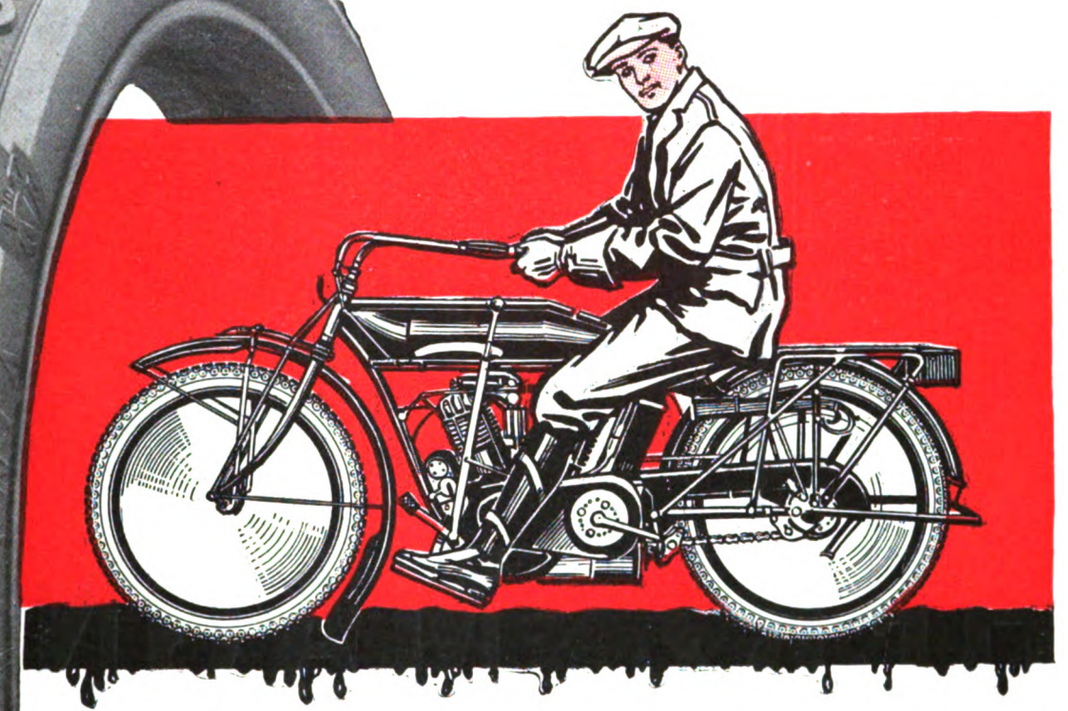
Concerning Your Share of the Two Millions



PENNSYLVANIA Oilproof VACUUM CUP TIRES

For Motorcycles

Experts forecast the expenditure of $2,000,000 for motorcycle accessories during 1913.

By far the biggest slice of this sum will go for TIRES—and the bulk of that to the tires that are plainly THE BEST.

Vacuum Cup Tires now embody the "Big Three" of tire service—Anti-Skid, Oilproof, Long Wearing.

The "Oilproof" feature is the finishing touch. These tires may now be accurately termed **trouble proof. The money expended for oil disease in other tires is put into extra service in these.**

Guaranteed for 4,000 miles service—but good for a far greater mileage with reasonable care.

See that you are the dealer to supply Oilproof tires in your territory. 80,000 new motorcycles will be put on the road this year.

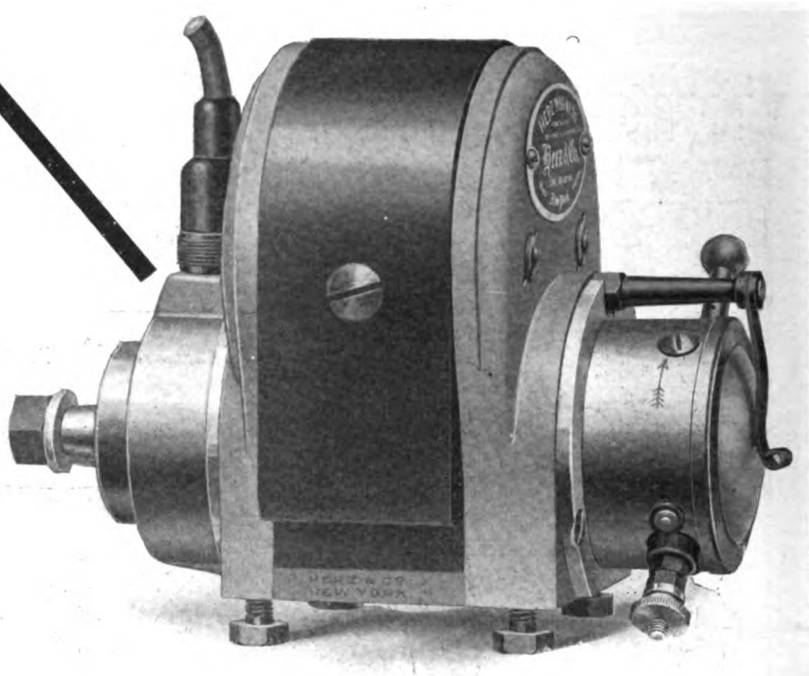
This is the new 1913 Model



HERZ MAGNETO

Dust-proof Moisture-proof
Highly Efficient

During the entire first week of the New York Automobile Show, a HERZ MOTORCYCLE MAGNETO ran completely submerged in water. The same unprecedented demonstration will be repeated at the Chicago Shows.

In breaking all world's records from 1 to 100 miles at Playa Del Ray, Dec. 30, 1912, and Jan. 7, 1913, Lee Humiston used a new model HERZ MAGNETO on his Excelsior machine.

The New HERZ PLUGS

are also provided with insulated terminals. The combination of these Plugs with Herz Magneto forms the ideal ignition system.

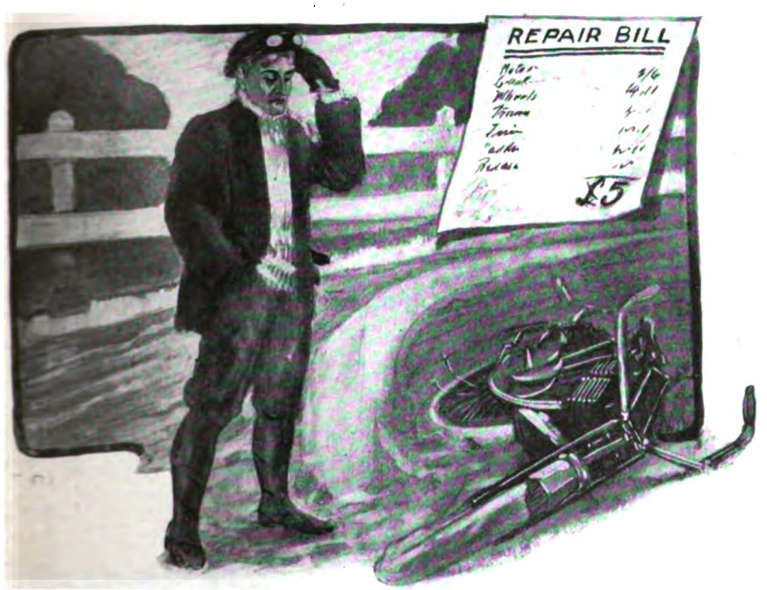
THE MAN WHO USES WEED CHAINS

A Few Ounces of Prevention Is Worth £5 ($25) of Cure



THE MAN WHO DID NOT

Weed Anti-Skid Chains

With the "Creeping Grip"

Give perfect traction, prevent sliding and slipping. Make motorcycling absolutely safe—sixty miles an hour with perfect safety—make all roads good roads.

The continuous "creeping" prevents injury to the tires and keeps them clean, minimizing the chances of punctures.

The secret process of hardening the cross chains, just adopted, gives extreme lasting qualities.

Light and easily carried, as the small bundles they make in their canvas bags take so little room that they could be carried in your pocket, when not in use, without inconvenience.

Order from your dealer or write for full particulars

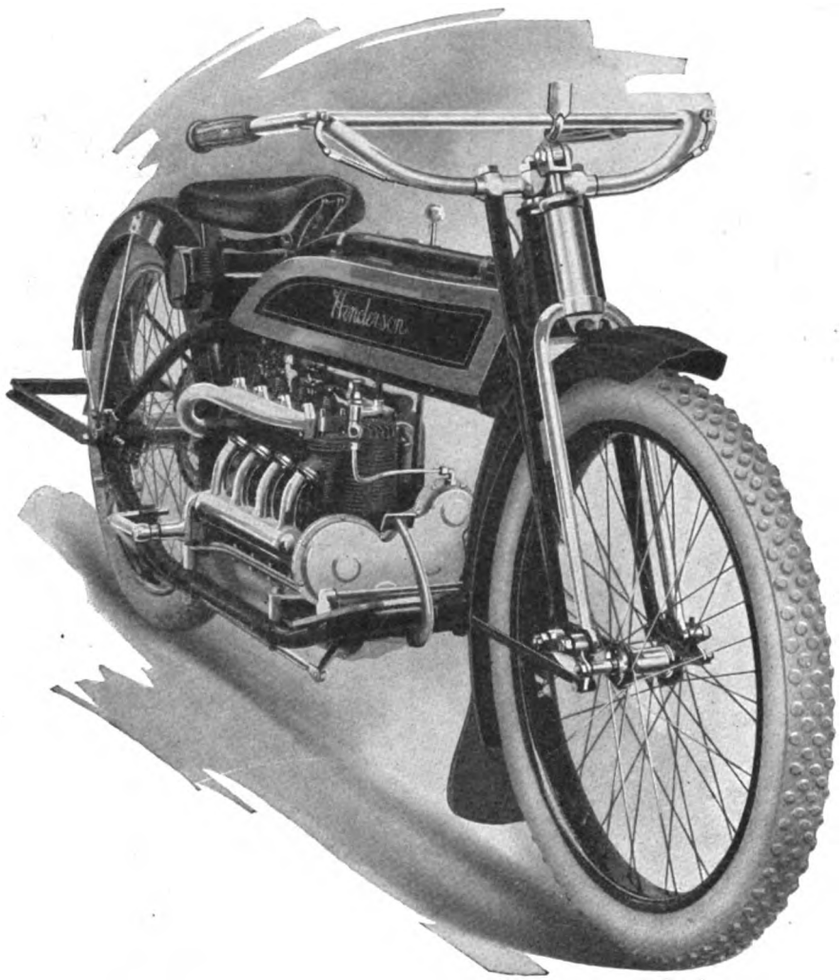
Henderson, the powerful that is displacing



The 1913 Henderson 8-65, 8 H.P., 4 cylinders, free engine, chain drive, $325.

The dealer who is looking out for his own best interest should be interested in the Henderson because it is the most advanced type of motorcycle in existence.

But the fact that should interest him vastly more—a fact that is truly vital in importance—is that the Henderson is actually displacing the ordinary "singles" and "twins."

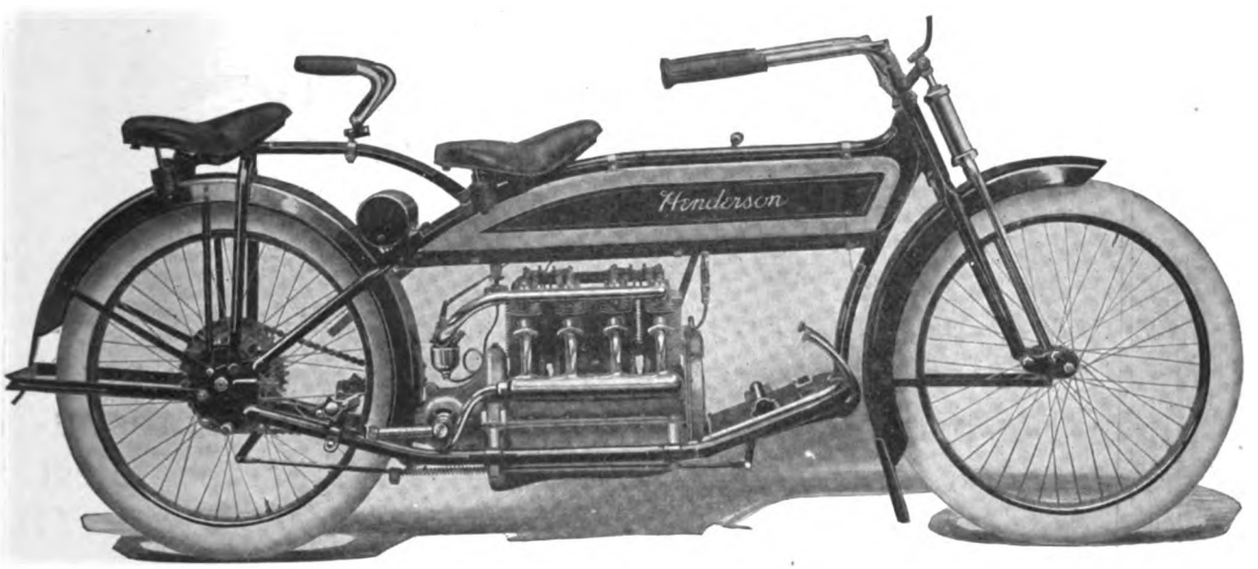
In other words, buyers who want the greatest power, combined with maximum flexibility and ease of riding and comfort, are naturally turning to the Henderson; because the Henderson is the only motorcycle that offers this combination.

Dealers who have the opportunity should not fail to see the Henderson at the Chicago show; or write us at once regarding their territory.

Henderson Motorcycle Co., 1158 Gass Avenue, Detroit, Mich.

Digitized by Google

four cylinder machine the ordinary types



Showing the well-placed tandem saddle of the 1913 Henderson.

Note the position of the tandem seat on the Henderson—

Right over the rear axle—comfortable for the second rider, with no overhang or back-lash to unbalance the steering.

This is only one of the Henderson advantages and a powerful one with the buyer.

Add to it the great power of the Henderson, its smooth flexibility, its silence, the absence of vibration, the actual comfort produced by big tires, long wheelbase and low saddle position—and you have a line of talking points that ring true and bring the business.

If business is what you are after, see the Henderson at the Chicago show, or write us.

Henderson Motorcycle Co., 1158 Gass Avenue, Detroit, Mich.

SCHAFER BALL BEARINGS

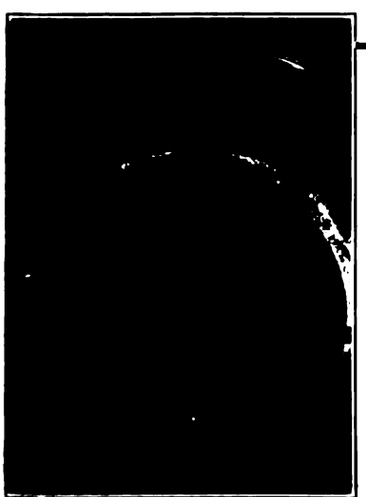
MADE IN GERMANY

Are Used in the Best Motors

Because by actual service they have proven to be of the quality necessary to withstand the shocks and strains which eliminate the use of the ordinary ball bearing.

Schafer Ball Bearings are used exclusively and with great success in the Spacke De Luxe Motors and are also used almost exclusively by the most prominent motor manufacturers in England.

BARTHEL DALY & MILLER, 42 Broadway, New York City



AT LAST

A Perfect Tandem Attachment

The most comfortable and the easiest riding attachment made. It is notable for the following exclusive features:

1. Equipped with *both* compression and recoil springs, absorbing both downward and upward shocks and vibrations.
2. Lowest possible saddle position. Only 33 inches from ground to top of saddle.
3. It is built entirely of cast steel and strongly reinforced at vital points.
4. Has absolutely no side-sway common to most tandem attachments.
5. Equipped with Handlebars, Pedals, Mesinger saddle and Foot Rests. The Foot Rest leg will swivel round on tubing to prevent snapping off in case of a fall.
6. Can be attached in 8 minutes to any make of motorcycle. Detached in 7 minutes.
7. Sold under absolute guarantee for freedom from imperfections.

Mott Rims Protect Me

If They're Mott Rims He's Safe

The rider can attempt these "stunts" with impunity if they're Mott Steel Rims.

For MOTT STEEL RIMS welcome this sort of abuse—it shows the stuff that's in them.

In durability runs, occasions offer where it is necessary to negotiate some bowlder-strewn road. That's where the difference is proven between MOTT RIMS and others of inferior make.

Far-sighted manufacturers are awakening to the fact that a machine's reputation is made or marred by ability to withstand the grinding test of every kind of road and emerge triumphant and without injury. MOTT STEEL RIMS assure this kind of durability in that they combine in the highest degree strength, elasticity and perfection of construction that is flawless.

We solicit manufacturer's specifications.

ECLIPSE

The Brake You Can Trust

THE unexpected emergencies often met with upon the road demand instant action. Insure your safety and the safety of others by equipping with "THE BRAKE YOU CAN TRUST," the ECLIPSE Perfection Multiple Disc Brake, the most positive motorcycle brake built. It combines the unerring accuracy of a watch with the grip of a bull dog.

This brake is different in design from previous Eclipse Brakes, in fact it is different from any other brake yet made.

The Brake operates on the multiple-disc idea, similar to the Eclipse clutch. The discs are mounted on one side of the hub, instead of inside it. There are six discs 5¼" in diameter.

These give immense braking power, as there are more than 100 square inches of braking surface.

Extreme simplicity is a characteristic of this new brake. It has a very small number of parts, and adjustments are conspicuous by their total absence.

The bearings contain ⅜-inch balls. Lubrication is a matter that will require little attention, for the hub can be packed with hard oil at the start of the season and this supply will last the entire year.

The great working surface and simplicity make this brake fine for heavy service, such as tandem or sidecar work. Big 7 h. p. twins with two riders can be brought to an abrupt halt from fair speed without effort.

Our catalog tells the rest. We will gladly send it to you.

As Usual—
Another Merkel Score

Wherever endurance contests are held—in any event where Power, Speed and Durability are factors—heading the perfect score winners you always will find

"The Motorcycle Without A Regret."

In the 232-mile Midwinter Endurance Run recently conducted by the San Francisco M. C., G. P. Douglas, riding a dependable Flying Merkel "7", finished the strenuous road test with highest honors—1,000 points. This despite a fall which compelled him to ride a major part of the distance with an injured shoulder.

Another Endurance Run victory was scored in the Cleveland M. C.'s Midwinter Run when Raymond Ray, Flying Merkel "7", scored perfect.

In 1912 The Flying Merkel won more Endurance Contests than any other motorcycle. In 1913 the Flying Merkel again will demonstrate its right to be called "The Premier Road Machine."

The Monarch's Claims for Power, Quality Construction, Correctness of Design and Perfection of Finish are Upheld by the American Society of Automobile Engineers

A committee from the American Society of Automobile Engineers, after a careful examination of every machine displayed at the Shows, adjudged the Monarch motor one of the three most perfect, from the standpoint of excellence of design and perfection of finish.

This decision does not surprise us in the least, for we **know,** as does every Monarch rider, how absolutely flawless is the Monarch power plant.

But—Monarch excellence does not end there. Every detail of the Monarch's construction is in keeping with the standard set by the Monarch motor. Its every detail makes for a surplus of efficiency.

Comfort is another powerful feature of the Monarch. The Monarch Leaf Spring Suspension Saddle solves the comfort problem for every Monarch rider. Its perfect bottomless action affords a riding ease obtainable in no other way. It is the only successful and practical application of the leaf spring to a rigid frame, the only safe framework for withstanding the motor's vibration and the never-ending impact of the road.

The Monarch has been before the public but one season thus far. But it is an "old-timer," in that it is a composite type of every desirable feature possible to include in a motorcycle. Its makers are men who have not hesitated to profit by the example and experience of others. They have taken for their models the most successful types of machines, both American and foreign, and have added to this their own ideas.

When writing to advertisers, please mention MOTORCYCLE ILLUSTRATED.

Digitized by Google

That we have been successful in producing a really superior machine has been proven first by the thousands of enthusiastic letters received from riders and dealers, commenting on both its exceptionally perfect service and its easy-selling qualities, and finally by the endorsement of this supreme authority on internal combustion engines, the American Society of Automobile Engineers.

We make two models, one a "Big Single," 5 H.P., selling at $225, and the other the twin, shown here, at $275. The single has the power of the average twin. The Big 10 has the power of—oh, well, you'll never have to "open her wide." It's **the** machine for hill climbing, sidecar work and long distance tours.

Let us send you our catalog. It will be of tremendous interest to you—we guarantee that.

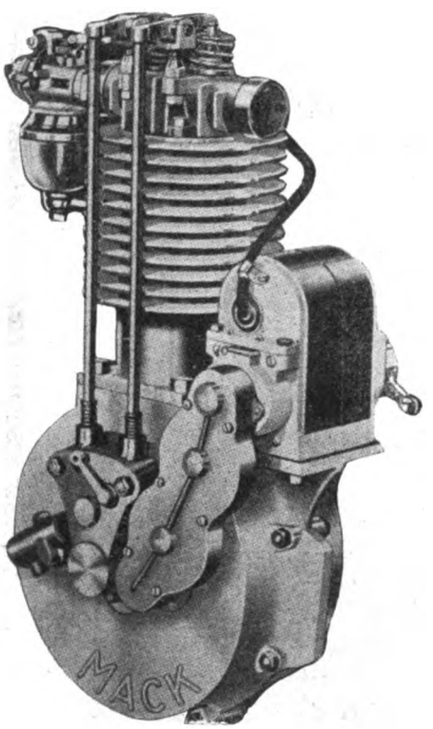
MACK

"THE MIGHTY MOTOR"

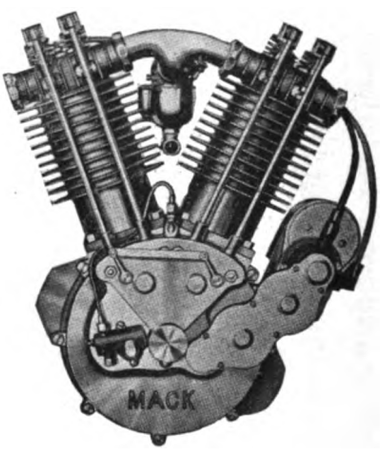
4 and 5 H. P. Single—Interchangeable
7 and 9 H. P. Twin—Interchangeable

In building the MACK, we have made no radical departures from the accepted type of motorcycle motor. In appearance, the MACK is similar to the majority of popular motorcycle motors. But in three points we emphatically claim **indisputable superiority** for the MACK. These are—QUALITY OF MATERIALS—METHOD OF CONSTRUCTION and POWER.



MACK Motors are made of drop-forged special alloy steel. The most powerful automobile motors are made of this material. Imported annular ball bearings support the crank shaft. Aluminum crank case absolutely oil-tight. High nickel finish on cylinder and small parts.

The problem of replacements is one which has been seriously considered by us. Every part on MACK motors is micrometically measured and all parts are interchangeable. The rider will readily appreciate the convenience of this method.



Unexcelled power is afforded by overhead valves, preventing overheating and assuring a sufficiency of reserve power for all occasions. A recent test of a MACK single was the negotiation of a 22½ per cent. grade with a 600 lb. weight. The MACK did it with ease.

Another special feature is the positive mechanical oil pump. There are no valves to become dirt clogged and in action the pump is positive in delivering the oil to the proper places.

Take each part of the MACK separately and you will find in the minutest detail that pride in workmanship, that evidence of keen inspection and conscientious labor that always distinguishes masterpieces of manufacture.

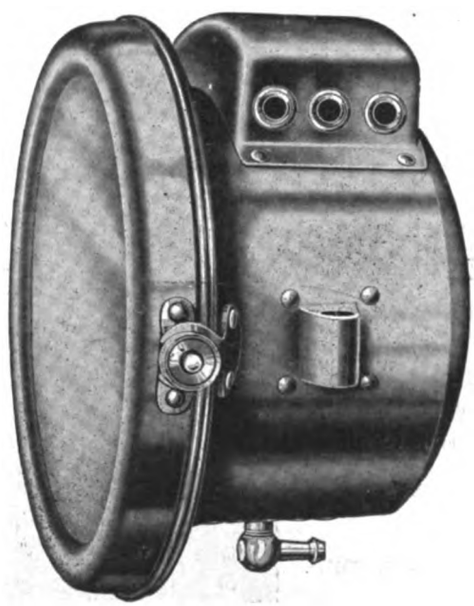
Morse Universal Bracket

A pair of these brackets will fit any motorcycle handle bar and accommodate any standard lamp on the market. All parts are drop forged and highly finished. This bracket is a great boon to jobbers as it will take the place of an assortment of possibly twenty different styles of motorcycle lamp brackets. List price, per pair, $1.50. Packed one in a box.

The X-Ray

The X-Ray Motorcycle Lamp has been produced to meet a demand for a strong, substantial and handsome lamp at a popular price. There is no lamp on the market as securely put together, as modern in design, or as popular in size and price.

The fact that in the first sixty days we have contracts for over 40,000 of them is evidence that the X-Ray Motorcycle Lamp will for 1913 be the standard.



The Father of Them All

Construction: Drawn in one piece from 20 Gauge Sheet, all parts securely riveted. Extra heavy catch and hinges. Cast props, inside screw fastened and securely riveted. Genuine Ground Mangin 5 inch Mirror, removable, secured with screwed-in steel lugs and backed with asbestos. Gas tip adjustable to focus.

Dimensions.

Front Diameter, 8 ins.
Body Diameter, 6 ins.
Props—Centers, 6⅜ ins.

The New Light That Is Making a Big Hit at the Chicago Motorcycle Show

A big, powerful, never-failing electric lighting system. First successful application of automobile lighting principle to motorcycles. Burns whether motorcycle is moving or standing still. Steady, no flickering. Gives daylight path on darkest night. Same current runs headlight, tail light, electric horn and lights the speedometer. Nothing to clean. No matches. Supply never gives out. No disappointment or annoyance.

The New Lite is a new system of motorcycle lighting. Different from anything you ever tried. The final achievement in motorcycle lighting. Unconditionally guaranteed.

Made in Three Types

Straight storage battery and lights, automatic dynamo and lights or storage battery and dynamo combined, with lights. Special lamps and fittings for all machines. The New Lite system is in no sense a toy or an experiment. It is a new invention carefully worked out by a practical electrical engineer and is destined to revolutionize the present unsatisfactory system of lighting motorcycles.

Let Us Mail You Descriptive Literature or See This Wonderful System for Yourself at Our Exhibit Here, Space 70

Big Opportunity for Dealers

We want one dealer agent in every town for this new proposition which is being extensively advertised. If your town is still open write at once, as we have a dandy proposition.

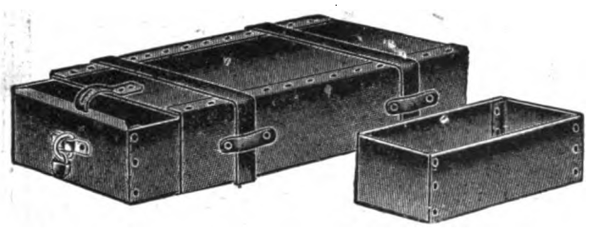
One of Our Many Specialties



LOWE TOURIST KIT

"BUILT TO STAND HARD KNOCKS"

14 INCHES LONG
8 INCHES WIDE
4 INCHES DEEP
} COMPLETE WITH LOCK AND KEY AND TWO HEAVY STRAPS.

"BIG ENOUGH TO HOLD EVERYTHING"

DID YOU EVER?

DID YOU EVER sprinkle the road behind you with your tools because the stitched seams of your kit had opened?

DID YOU EVER find your extra inner tubes full of holes from contact with your other tools, or eaten with grease?

DID YOU EVER spend half an hour undoing the straps and cords that hold your tool-cases in searching for a much needed tool?

DID YOU EVER find your tools all rusted and ruined because your tool-case was not waterproof?

DID YOU EVER want to carry a few needed spares and not have room for them?

DID YOU EVER want to carry a clean collar, a comb and brush and a raincoat and keep them **clean** until needed?

Perhaps you have suffered from some of these ailments

WE OFFER YOU A CURE

A LOWE TOURIST KIT WILL PREVENT ALL OF THESE TROUBLES AND LOTS OF OTHERS TOO NUMEROUS TO MENTION.

FITS ANY LUGGAGE CARRIER

THIS is a strong, indestructible, waterproof case of imported fibre, containing a sliding drawer of same material. Put together with **steel** rivets—no stitches to break in the seams and cause the loss of tools, as in leather cases.

It will be noted from the illustration that our method of fastening the case permits the drawer to be opened and contents exposed to easy access without the necessity of touching the straps.

An extra removable compartment of imported fibre for holding two inner tubes free from damage by contact with tools, etc., is furnished to fit the drawer and will be found invaluable for this purpose.

The material of which this Kit is manufactured cannot be injured by falls or rough usage and we guarantee its wearing qualities.

A strong feature of this case is its lightness, as it weighs less than the smaller leather tool bags now in use.

In brief, we offer you in this article, not a toy, but a **substantial, roomy luggage carrier**, such as motorcyclists have needed for years, and which will be an ornament to your machine.

Order today—we'll ship tomorrow. Prepaid on receipt of price.

Price—$4.00 Complete

Made in colors to match your machine for 25c. extra.

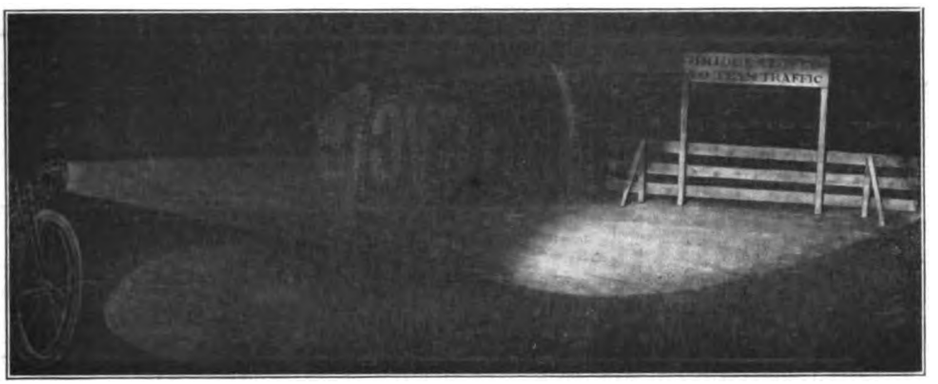
GENOLITE

The Only Complete Electric System for Motorcycles

GENERATOR **GOVERNOR** **STORAGE BATTERY**

An Actual Photo-graph



Demonstrating a "Genolite" in Action

The One You Have Been Waiting For

Why are our cities electric lighted?
Why are 90% of our automobiles electric lighted?
Because they want the best light at the least cost.

Why buy a 1913 model motorcycle which in every way fulfills your dream—the one you have been waiting months for, and then equip it with a lighting system as of 1903, 10 years behind the time?

The "GENOLITE" is not simply a headlight. It is a lighting system identical in principle with those installed in the highest grade automobiles, which throw a light a quarter of a mile in front of them.

The "GENOLITE," being adapted to use on a motorcycle, is smaller and simpler—throwing a straight shaft of white light 500 feet ahead.

With the "GENOLITE" the light is always the same, no matter how fast or how slow you travel. It is mechanically governed and absolutely controlled.

"GENOLITE" means a perfect electric generating plant that is small enough to be mounted on a motorcycle and yet strong enough to operate anything you wish to put on your machine—headlight, tail-light, speedometer light, trouble light, or horn—all at one time if need be, either when standing or when riding.

Send a post card for our descriptive booklet, and if your dealer does not handle it, order from us direct.

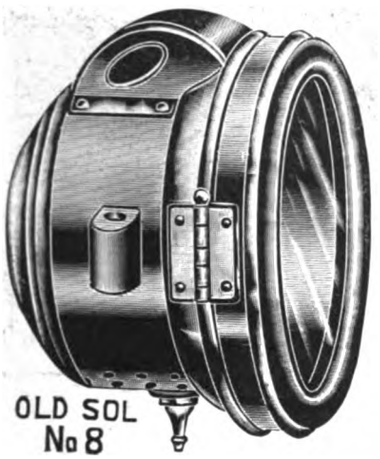
"OLD SOL"



A Few Members of the "Old Sol" Family

We want to say without fear of contradiction that we carry the largest and most complete stock of perfect motorcycle lighting equipment of any concern in the United States. From OLD SOL No. 8, the largest and positively the most powerful motorcycle light made, to OLD SOL No. 20, an electric tail-light, every requirement of the rider has been carefully considered and successfully met.

For tremendous light throwing capacity, for incomparably sturdy construction, for durability, for clean-cut beauty of appearance, OLD SOL No. 8 is easily the superior of any motorcycle lamp made. It has the perfected German Lava burners so much sought after in automobile lamps, heavy door glasses of double thickness, making it practically immune from breakage in the advent of a "spill"; specially ground Mangin mirror lenses, dioptic specifications for which were carefully compiled by us after a keen and comprehensive study of the most efficient automobile lamps. Body is drawn from one piece of heavy gauge brass and the door frame is of specially beaded construction designed to give the maximum of strength. Truly no more fit companion for the big twins of 1913 manufacture can be found than OLD SOL No. 8.

PRICE $6.50

Diameter of door, 8 in.
Candlepower, 1,500.
Brackets per pair, $1.00.
Diameter of lens, 6 in.
Weight, 4 lbs., 2 oz.
Bezel, 50c, extra.

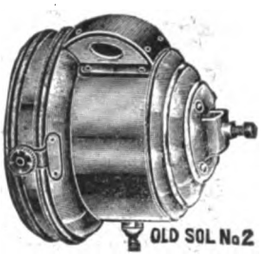
PRICE $5.50

Diameter of door, 7 in.
Candlepower, 1,000.
Brackets per pair, $1.00.
Diameter of lens, 5 in.
Weight, 3 lbs.
Bezel, 50c. extra.

PRICE $4.25

Diameter of door, 6¼ in.
Diameter of lens, 4½ in.
Candlepower, 600.
Weight, 2 lbs.
Bezel, 50c. extra.

WITH THE "OLD SOL" MOTORCYCLE LAMPS OVERSIZE LENS



PRICE $4.25

Diameter of door, 6¼ in.
Diameter of lens, 4½ in.
Candlepower, 600.
Weight, 2 lbs.
Bezel, 50c. extra.

For the rider who desires a lamp that is slightly less powerful than "Daddy OLD SOL," we recommend OLD SOL No. 17, 1,000 candlepower or OLD SOL Nos. 1 or 2, 600 candlepower, differing only in bracket arrangement. These lamps had a tremendous vogue in 1912 because of their all-around perfect service, their sturdy durability and their handsome appearance. All indications point to a steady increase of their popularity for 1913.

Then there are riders who demand lamps that combine generator with headlight. We pride ourselves upon having most closely approximated the rider's ideal of what a combination generator-headlight lamp should be. Made of the same material and with the same conscientious care as the larger and more powerful OLD SOL lamps, models 3 and 4 (differing only in bracket arrangement) are truly efficient and durable light throwers. The famous OLD SOL generator with its new type double clamp, sifting carbide chamber and large capacity is only one of the many good features of these close coupled types. Sufficient carbide can be stored to feed even the largest OLD SOL lamp for six hours, at full candlepower.

We will be glad to send a full description and prices of our line to anyone upon request. If you, Mr. Dealer, want to handle the most widely known and most admired line of lamps on the market, write us at once for our proposition.

Prest-O-Lite
For Motorcycles

"Wouldn't ride at night without it"

That's what every experienced rider says about Prest-O-Lite. You know, if you've ever tried to do any road work at night that the oil lamp won't do. Small carbide lamps are but little better.

But with a Prest-O-Lite Tank and a lamp big enough you can tour safely any time and anywhere. You have a brilliant, dependable light that turns on and off like a gas jet.

Money Invested

Regard the money paid for a Prest-O-Lite Tank not as money spent,—but as money invested. It's extra insurance against accident. And, besides, a Prest-O-Lite Tank never gets to be second-hand. It can always be sold for about what it cost, owing to the universal use and demand. Exchanges cost little—never more than the carbide to feed a generator—and in most cases less.

$10

Try Prest-O-Lite for 30 days at our risk

You need Prest-O-Lite to make your night riding pleasant and safe. So that you can see how much you gain by it, we want to have it on your machine for 30 days' trial. Then if you decide you can do without Prest-O-Lite, the trial won't cost you a penny. Fair enough, isn't it? We want every rider who isn't using Prest-O-Lite to take advantage of this offer. Write for booklet and plan today.

The Prest-O-Lite Co. 246 East South Street Indianapolis, Ind.

CANADIAN GENERAL OFFICE AND FACTORY, MERRITTON, ONT.

Exchange Agencies Everywhere

TO DEALERS—It's a poor idea to train your customers to going elsewhere for Prest-O-Lite Exchanges. The other dealer may sell them other things as well.

EMBLEM TWIN, 67 C. D. CHAIN DRIVE. $250.
EMBLEM TWIN, 76.6 C. D. $300.

Is the 1913 Emblem Radically Different? No. Because It Is Permanently Correct

The basic principles upon which was built the first Emblem—STRENGTH, DURABILITY, COMFORT—were so essentially correct that each succeeding year brought only minor refinements in the Emblem's construction.

The experiences of Emblem riders, as attested by their enthusiastic letters, plus our own mechanical ideas, prevented our departing from the distinctive Emblem construction, despite the various so-called "revolutionizing improvements" so loudly heralded by our competitors.

Instead, we devoted our entire time and the knowledge and experience gained by each succeeding year in perfecting each salient feature of the Emblem, discarding features that time and experiments proved undesirable, strengthening others—in a word, confining our entire energies toward bringing to the highest point of perfection every smallest detail in the make-up of the sturdy Emblem.

And now, we feel that we have reached the apex, the millenium as it were, of motorcycle perfection. The Emblem is sturdy, simple, comfortable, speedy. But, above all, it has that indefinable air of finish which distinguishes all masterpieces of construction. And year after year the Emblem has gone on in its solid, substantial way piling up honors, performing spectacular deeds in an unostentatious way, and building for itself a reputation which is as flawless as its construction.

The Emblem line for 1913 comprises a

4 H.P. Single,
7 H.P. Twin, and
10 H.P. Twin.

We want every dealer and rider to get acquainted with the merits of the Emblem. We have some territory left—not much—and we want every dealer who is awake to his opportunities to write at once for our proposition. The coupon below will receive our immediate attention.

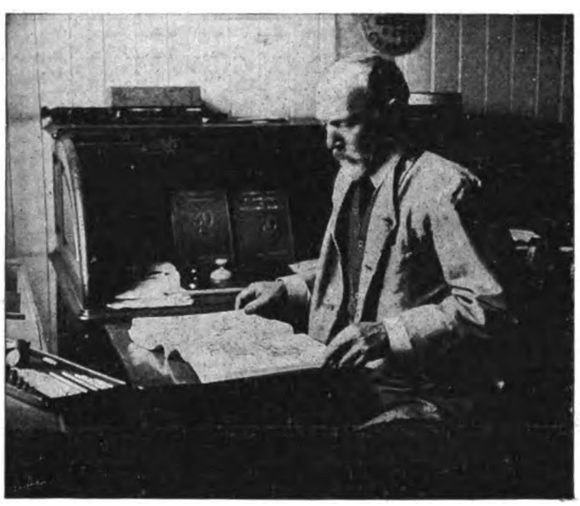
Here is the Maker of the First Cycle Chain

RENOLD CHAIN

RENOLD CHAIN

Thirty-three years ago, while the high cycle, or "elbow-breaker," was at the zenith of its popularity; when to think of the eventual practicality of the motorcycle was to be suspected of a mild attack of insanity, Mr. Hans Renold, whose picture is shown here, was conducting a series of experiments with a view to perfecting a chain drive for cycles. His experiments proved even more successful than he anticipated, and to him belongs the credit for revolutionizing the cycle industry, insofar as the mode of transmission was concerned.

Hand in hand with the growth of the cycle industry grew the RENOLD plant and the confidence of users in the RENOLD CHAIN, until today HANS RENOLD, Ltd., has on its payroll upwards of 1,300 skilled employees and occupies a floor area of more than seven acres. Each year RENOLD chains established themselves more firmly in the confidence of riders. Today, throughout the world, RENOLD CHAINS are conceded to be the highest attainment of chain manufacture. Ninety per cent. of chain-driven motorcycles in England are equipped with RENOLD chains.



Accuracy in manufacture, highest quality of materials and keen inspections are the three essentials rigidly observed in the manufacture of RENOLD chains. Before a chain is permitted to leave the factory, it must be 100 per cent. perfect in flexibility, strength, straightness, accuracy of pitch and fit on sprockets.

In every stage of the RENOLD chain's manufacture, the safety of the rider is assured by the countless inspections which each one of the 6,000 operations necessary in the making of a RENOLD chain undergoes.

Small Pictures, but Big Plants

In the above, we have stated simply FACTS, with no elaboration. We have left it to you to read between the lines. We have left it to you to grasp the significance of the fact that THIRTY-THREE YEARS of exclusive chain-manufacturing experience are behind the RENOLD CHAIN. We have left it to your intelligence to appreciate WHY the RENOLD CHAIN is almost exclusively used by English motorcycle manufacturers. And we leave it to your good judgment as to what chain will have your earnest consideration.

But, in any event, we want to make you a present of a valuable booklet entitled "Hints on Chain Drives for Motorcycles," compiled by Renold Experts. We will send it free on receipt of your name and address.

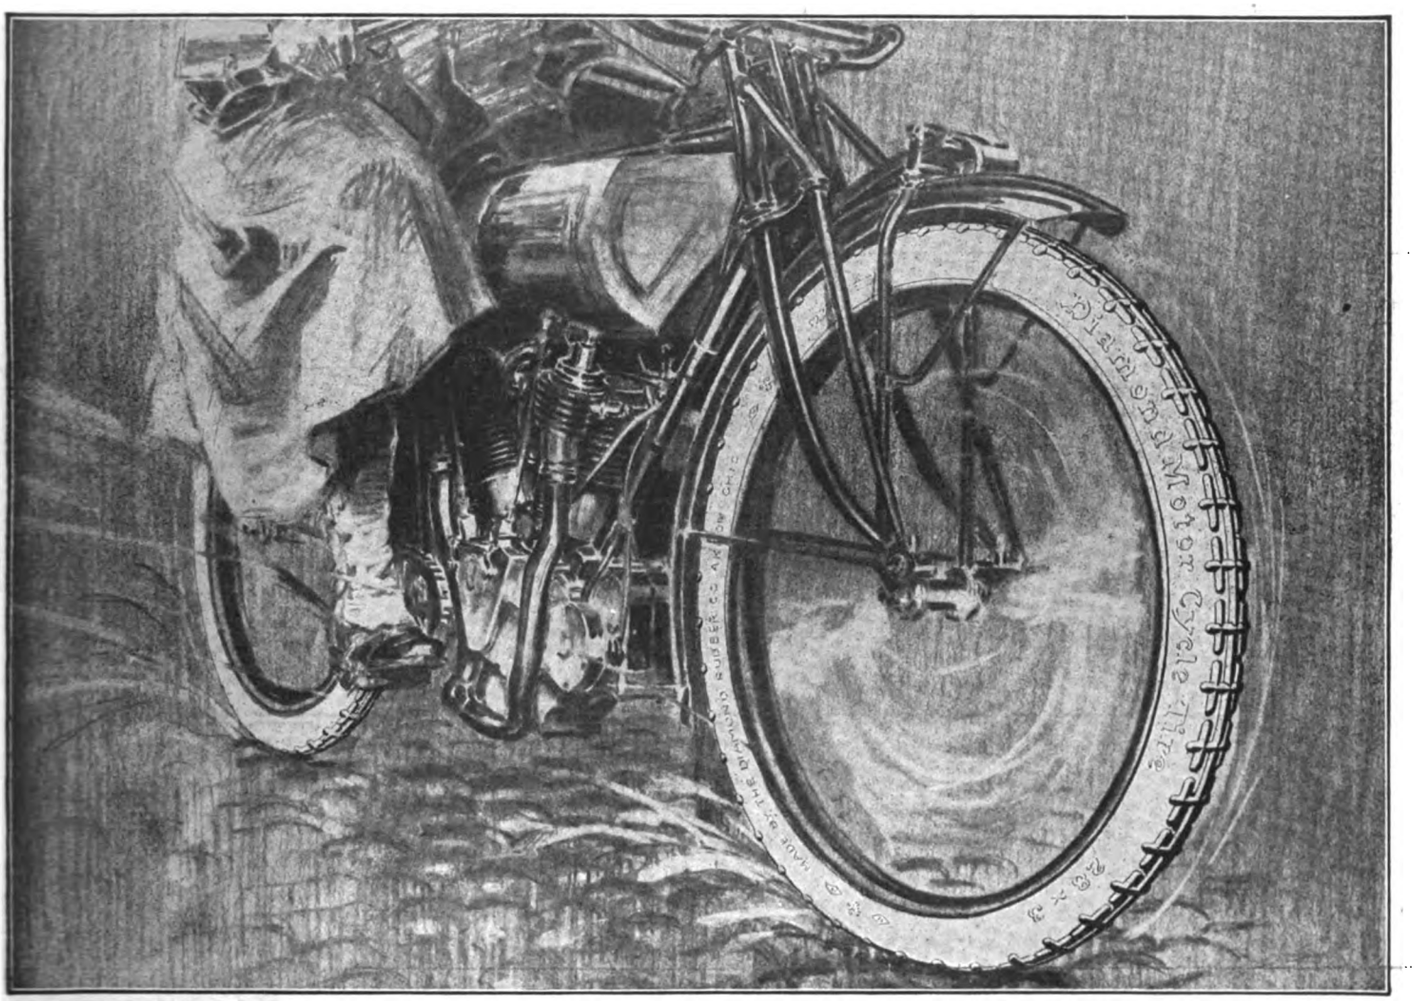
Diamond
SAFETY TREAD MOTORCYCLE TIRES



INSURE YOUR SAFETY AND SECURITY

This tread solved the skid-problem for the automobilist and its marked effectiveness as a skid-arrester induced us to put this "Safety Tread" on Diamond Motorcycle Tires. They are now on sale everywhere. Inspect them at your first opportunity.

WHY RISK SKIDDING?

Diamond Safety Tread Motorcycle Tires won't slip, slide or skid—they grip and hold you to your course no matter how fast you are going, or how short you turn or stop.

THE MILEAGE STRIP

on Diamond Motorcycle Tires adds 20% to the wearing surface—this increases your tire mileage and decreases tire troubles.

VITALIZED RUBBER

Of which all Diamond Tires are now made is a recent Diamond discovery. It adds toughness and lasting life—thereby cutting your tire bills to a marked degree.

STUDDED TREAD

Diamond Tires are also made with a Studded Tread.

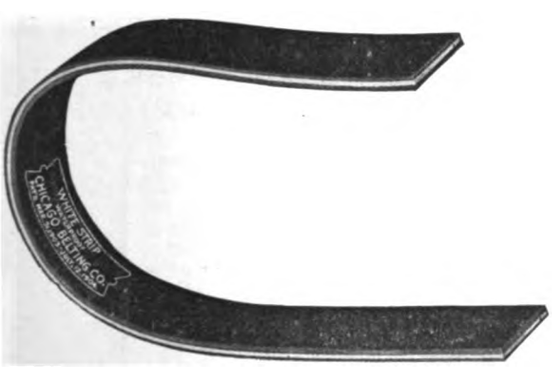
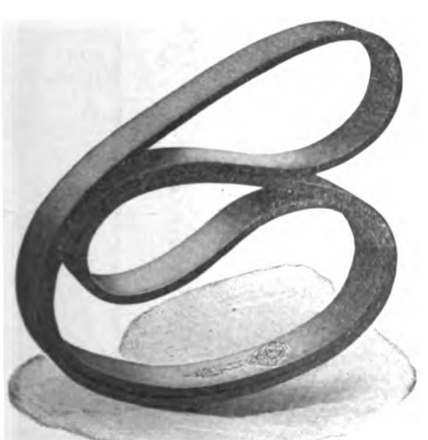
A Little Talk on BELTS

Mr. Dealer, this talk is for you. We want to make it so personal, so impressive and so direct that you can feel our presence, sense our earnest desire to interest you and grasp the spirit of co-operation that exists between us and our dealers.

In the first place your interests demand that you handle belts that yield legitimate profit. We do not doubt but what you are perfectly familiar with both WHITE STRIP and SEA LION Belts. If you are, you know that these belts give 100% service for every dollar they cost.



A Chibeco Repair Outfit is a necessity for every up-to-date dealer. With this outfit you can shorten and repair belts, and thus increase your profits and save your customers annoyance and expense, for you know that every time it is necessary to send a belt away to be repaired or shortened, it means express charges and several days' wait for the return of the belt.



SEA LION Dressing is now put up in attractive counter display boxes, each containing twelve tool kit cans. One of these display boxes would be an ornament to your show case and assist materially in the sale of the dressing.

Your name may be on our list of dealers, but to make sure, write us today for our dealer's proposition for 1913. The season is approaching, and you want your share of the big business.

If you are coming to the Chicago Show, you will find our exhibit at Booth No. 59; stop and get acquainted, but by all means get our 1913 dealer's proposition before the riders get out on the road.

MY ARGUMENT IS THIS—

"Every article manufactured by me is good enough to be guaranteed. The Nathan mark is equivalent to my **personal pledge** to you as to honest value in every article and a square deal. This makes it safe for your dealer to say, 'Nathan's goods are the best you can buy.' Since Nathan quality specialties cost no more than the ordinary kind and since the offer be greater value for your money, it's up to you to say 'Nathan' when buying. Think it over."

Nathan Koveraul Garments Protect Your Health and Clothes

Made as per F. A. M. Specifications.

This famous garment is the only one that permits you to make a trip over muddy and dirty roads without soiling your clothing. At the hotel, restaurants or home you may remove your KOVERAUL in a moment and your clothing will be as neat and clean as when you started.

The KOVERAUL is an ideal garment. Its olive shade does not show dust or grime. It's very durable and sheds water like a duck's back. The KOVERAUL garment consists of trousers and coat. Please note the picture.

The KOVERAUL is exceptionally well tailored and made to withstand long wear and hard use. Our catalog describes it in full. Write for it today. Or, better still, look up a dealer handling the Nathan Line.

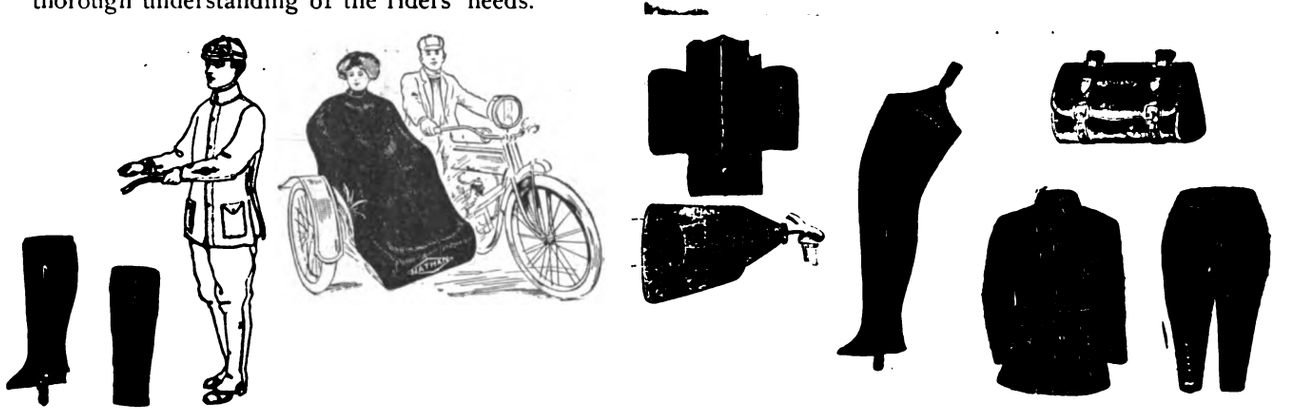
Nathan Quality Leggins— Other Specialties

We manufacture a line of leggins that is complete in every detail. The patterns were especially designed and, by practical tests, have proved their fitness for their particular use. You'll find our leggins are true to measure. That's why they are comfortable and easily adjusted. NATHAN LEGGINS give absolute protection. We have just what you want and at a price you'll like to pay.

Our catalog explains everything. Get it today. We also manufacture tire covers, gas lamp covers, tool rolls, motorcycle capes, mud guards, inner tube bags, magneto covers, luggage carriers, etc. All bear the Nathan mark. Get our catalog today. Ask for name of dealer nearest you if you can't locate him.

The Mark that Marks NATHAN The Top Limit in Quality

I have convinced thousands by the merciless test of comparison that NATHAN goods are higher in quality than any other. I want to tell you about my high class materials, perfect workmanship and thorough understanding of the riders' needs.



SEND THE COUPON NOW

Riders—Send the coupon now for our catalog. Or write on a postal card. It will do. The main thing is to get the book and our prices before doing any buying.

DEALERS: GET READY NOW

1913 will be the banner year in the Motorcycle Trade. We have been telling your customers all about Nathan Specialties. Naturally they want them. Be prepared to serve. Write us today for prices and terms. We furnish electros and selling descriptions for your catalogs.

Big Naval Searchlights

AND

20th Century Lamps

are constructed on the same lighting principle. Both throw a long **concentrated direct** ray which reveals danger a great ways off.

The street lamps should light up the sidewalks and roadsides—Motorcycle and Bicycle lamps should illuminate the road far ahead, too. That's what

20th CENTURY LAMPS

do and do it beter than any other lamp marketed.

One of their notable features is the "Open-door-to-the-lens," which permits the back to open and allows rider to clean the lens easily, and also when lamp is open and lighted, allows sufficient light to be thrown back to illuminate the motorcycle if repairs are needed at night.

All Good Jobbers and Dealers like to sell them. All Good Riders like to use them. They are the "Old Reliable" kind and are **Handsome, Strong, Compact and Powerful. Accept No Substitute.**

20th CENTURY GENERATORS

Are as efficient in their way as 20th Century lamps. They are exceptionally sturdy, being made of strong brass heavily nickel plated. Their patented locking device assures easy locking and unlocking for filling purposes, and absolutely eliminates the chance of screw threads tightening or corroding.

Catalog on request.

SEE IT AT YOUR DEALER

The New 1913 Stewart Motorcycle Speedometer

Model D Price $12

Insist on getting this Stewart MAGNETIC speedometer Refuse to accept an obsolete CENTRIFUGAL instrument.

This splendid MAGNETIC instrument is modeled after our high priced automobile speedometers that are world famous for accuracy, durability and beauty. It is installed on the mud-guard or extension spring as shown below—in which position it is easily read from the driver's seat and is

illuminated at night by the headlight!

See the New Front Wheel Two-Belt Drive

Simple—Strong—Trouble-Proof!

The large driving pulley is solid steel nickeled; the small pulleys, fibre. The belts are coiled steel piano wire—they ***"grip the grooves"*** in the pulleys and render slippage impossible. They will give to a strain, but cannot break. This instrument and drive has stood the most severe road tests for eight months. It's perfect.

Handsome catalog with art cover "Motorcycling in the Yosemite" will be mailed you free on request

Kraft-Knit

The Ideal Sweater for Motorcyclists

Wool—all wool—and nothing but wool—is what enters into the making of the KRAFT-KNIT MOTOR COAT. Warm, yet not uncomfortably so, elastic, perfectly fitting, with hand-made button holes that keep their size and shape as long as the coat is worn, with large pockets, strongly made, for the convenient carrying of small tools, a coat that will not shrink with washing, but will retain its perfect proportions throughout its life—The KRAFT-KNIT COAT cannot help but be JUST WHAT THE WINTER RIDER WANTS.

Knit in four colors, gray, maroon, cardinal and white. Price, $6.00 prepaid. When ordering state chest measurement, length of arm and color desired.

.. Personal to Dealers ..

The Kraft line is the line for YOU to handle. Why?

Because it gives quality always.

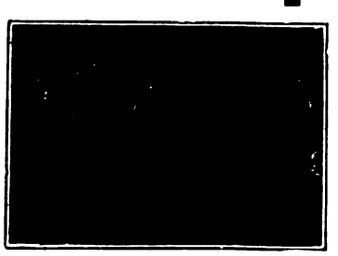
Because it contains only goods of undoubted merit.

Because the terms we can make you will mean a good, clear margin of profit for you.

Abesto Pull-E-Tape

To bring your belt up to the maximum of its efficiency and **keep it there,** you need ABESTO PULL-E-TAPE. It prevents belt from becoming glossy. It gives it a better grip on the pulley rim. No screws to cut the belt.

Applied in a minute. Abesto Pulle-E-Tape vulcanizes itself. Made in all standard widths. A roll of five feet for 50c. Order one today and try it. You won't do without it as long as you ride a motorcycle.

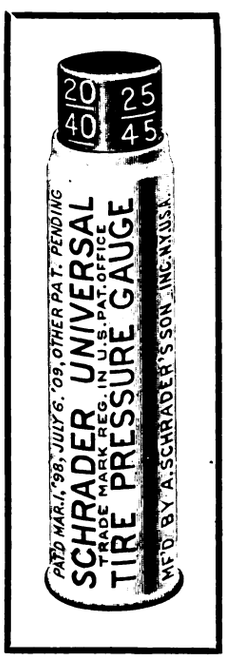


Kraft Knitting Co.
146 E. Exchange St.
Akron, O.

Keep Your Tire Pressure Up and Your Tire Expense Down

You cannot run your motorcycle with any old pressure in the tires AND EXPECT THE TIRES TO LAST. Tires are built to withstand a definite and specified air pressure. You can only get maximum service when you inflate them to the EXACT air pressure needed, and maintain that specific pressure at all times.

A SCHRADER Universal Tire Pressure Gauge



PRICE ONE DOLLAR

Will tell EXACTLY what pressure you carry in your tires.

Kicking the tire won't tell you and guessing won't do.

Nearly right isn't enough, the pressure must be EXACTLY right.

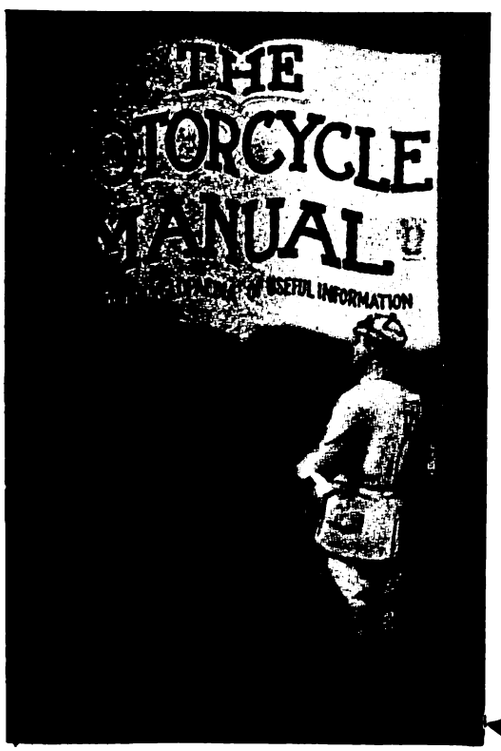
There are times when Ignorance is Not Bliss

Let us enumerate:

For instance, on a sweltering day while you're happily breezing along, your motor suddenly develops the "fidgets." You get off and investigate. If you know all about a motor's internal construction and are "wised up" on how to handle a cranky magneto, and know all there is to know about the carbureter—you will EVENTUALLY locate the trouble. But if you don't—you're STUCK!

Then is the time to dig into your tool box and consult your tried and true friend

The Motorcycle Manual



Its trouble chart tells how to locate the trouble and REMEDY IT. It tells all there is to tell about every part of your motorcycle. It gives concise information regarding license laws in every State in the Union. It gives the official racing records. It explains horsepower and other mechanical formulae; it is a handy motorcycle trade directory; it enlightens you as to the F. A. M.—who's who and what he is doing—it—oh, well!—do you think you can afford to be without it?

And it costs a quarter. We don't have to tell you what to do with the coupon in the corner.

Motorcycle Publishing Co.

Thor

"THE WHITE GHOST OF THE ROAD"

What We Offer You

In the THOR motorcycle, we offer you every desirable feature that can possibly be contained in a motorcycle.

Speed, silence, comfort, endurance, these are most strongly represented in the THOR. Add to this a matchless beauty of appearance and you have a combination hard to resist.

BUT—to prove that these features are contained in the THOR, and reenforcing our claims, is the reputation the THOR has always enjoyed as the motorcycle that always "delivers the goods."

After all is said and done, the machine the rider invariably prefers is not the machine that distinguishes itself by spectacular speed on the track and then fails to stand up on the road, but the motorcycle that unostentatiously goes on year after year, giving the same unvarying perfect service. Such service is assured the rider who invests his money in a THOR.

It is hard to find a machine that can equal the THOR in appearance. It is harder still to find one that can come anywhere near the THOR in quality construction. But the hardest task of all is to find a machine that can equal the THOR in powerful, quiet, effortless, comfortable and enduring service.

We want to send everyone our catalog, be he rider or dealer or about to become either.

Aurora Automatic Machinery Co.

Thor

"THE WHITE GHOST OF THE ROAD"

Have You Clinched the Thor for Your Territory?

If not, don't delay an instant. Sit down and write for full particulars. Just so long as you are without the THOR agency you are losing money that might be easily made.

Think a moment! Behind the THOR there is a reputation which is second to none, and which is a distinct asset to your business if you will only make use of it.

THORS possess many features which are well-known to the public and are everywhere appreciated.

Easy sales are assured—and, what is equally as much to the point, a good profit is secured on every transaction.

Immediate deliveries on all Models:

4 HP. Single cylinder, Magneto ignition . . .	**$225.00**
5 HP. Single cylinder, Magneto ignition . . .	**240.00**
7 HP. Twin cylinder, Magneto ignition . . .	**290.00**

$40.00 additional for THOR two-speed when ordered with machine.

Take the first step towards a prosperous season NOW.
A postcard will do it.

VOL 8 NO. 3

MOTORCYCLE ILLUSTRATED

Thursday February 6, 1913

The CHICAGO SHOW

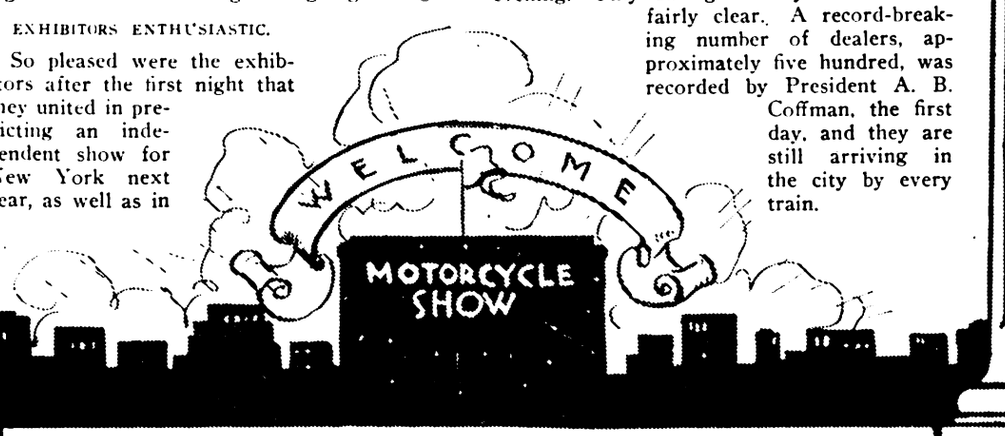
"SUCCESSFUL from every point of view and exceeding the expectations of officials by far." was the announcement that greeted visitors at the opening of the first independent American motorcycle, bicycle and accessory show, which is in progress this week at Chicago, under the auspices of the Motorcycle Manufacturers' Association. For weeks the event has been looked forward to by those who have felt that the motorcycle industry is strong enough to support its own show, apart from the automobiles, and for the last time have the motorcycles been shoved away in some comparatively out-of-the-way corner of a motor car show. That the motorcycles and accessories can carry their own exhibit was proved beyond doubt the first day at Chicago —or the first evening, rather—when over three thousand visitors packed the spacious exhibit hall to the doors. When the doors opened at 7:30 p. m. Monday hundreds of enthusiasts were waiting to gain admission, and as they poured into the show, an eight-piece orchestra struck up "On the Robert E. Lee," and the big event was in full swing and "going strong."

EXHIBITORS ENTHUSIASTIC.

So pleased were the exhibitors after the first night that they united in predicting an independent show for New York next year, as well as in Chicago, for, as A. B. Coffman, chairman of the M. M. A. show committee, expressed it, "It's a success beyond all doubt."

Before the opening night was an hour old, Chairman Coffman made the prediction that 25,000 people would visit the motorcycle show during the week. "It will prove the greatest motorcycle show on record," said Mr. Coffman. "The New York show just held can't begin to compare with this one; no prettier show decorations have ever been seen, and the crowds are breaking records."

The 74 different exhibits were well arranged in the show room, which is on the second floor of the Furniture Manufacturers' Building, 1319 Michigan avenue. There were 77 motorcycles shown, and these were divided among 24 different makes. With almost three times as much floor space as was used at the Chicago show last year, the booths were so arranged as to give the exhibitors plenty of actual working and demonstrating space, but despite the fact that the aisles were wide they were jammed to their capacity on the opening evening. Only during the day are the aisles fairly clear. A record-breaking number of dealers, approximately five hundred, was recorded by President A. B. Coffman, the first day, and they are still arriving in the city by every train.



Digitized by Google

FINISHING TOUCHES FOR THE SHOW.

It was late Monday morning when the carpenters and painters got in their first work in preparing the hall for the show, which opened on schedule time in the evening. At 9 o'clock in the morning not all of the furniture and other fixtures had been removed by the furniture manufacturers, and no booths were in sight. At 7 o'clock at night, the hall was transformed, and nothing more could be asked for in the way of decorations or arrangements.

Strict uniformity is the rule of the show. The predominating colors are yellow and green in the drapings, while above each booth hangs a large canvas sign, bearing the firm name in white, on a red background. Particular pains were taken to have all signs hang the same distance from the ceiling, and no firms were permitted to do extra decorating of any nature, with the possible exception of using flowers. The accessory booths were furnished with neat cloth-covered counters, while wooden partitions marked the dividing lines between the motorcycle booths.

INTEREST IN SIDECARS.

As was the case in the New York show, the sidecar products at Chicago attracted much attention, especially from the ladies, and close inspection of the handsome outfits was the rule. The great majority of visitors seemed to show an intelligent interest in the displays, and they were not at all backward about expressing their opinions and asking questions.

It was interesting to note that there was no such thing as a "favorite" section in the show room, and for that reason the crowd was well distributed; none of the exhibits suffered from bad locations. Not even the late comers—those exhibitors who were provided for at the "eleventh hour"—could complain, for room was made for eight additional exhibits close to the entrance of the hall, and that small section of the show was always crowded.

There were a number of new exhibits shown at the Chicago show which were not seen in New York, and these especially attracted attention. These few exhibitors were mostly from the Far West, and they found it far more convenient to show at Chicago than to make the long trip to the eastern coast. The West was very strongly represented at the show, and the spirit of the progressive westerners was in evidence everywhere. Tales of the great progress being made in the West were heard on every hand, and every man from west of the Mississippi who was present seemed exceedingly anxious to make the booming conditions of his district known.

CHICAGO BOOSTERS BUSY.

It was a Chicago event, especially on the first night, for the Windy City boosters were much in evidence. Before the evening had progressed far, everyone was wearing a printed tag, bearing the words, "Boost Chicago for the F. A. M." The Chicago Motorcycle Club ribbons were much in evidence also, and the club operated an exhibit to boost its membership list. Two active teams of the club were working at the show all the time, and the results were gratifying. On Wednesday evening the Chicago Motorcycle Club gave a big stag smoker at its clubhouse, on the Midway, for the out-of-town riders and dealers, and the event was one of the biggest side issues of the show. Wednesday night was officially carded as "Chicago Motorcycle Club Night."

Band concerts were held every afternoon and evening, and at all times the show committee was on the jump. A noticeable feature was the smooth and systematic manner in which everything was carried out. The usual "red tape" in regard to securing admission was lacking, and the first independent show smacked of business throughout.

GOODYEAR BANQUET

MORE than 135 Goodyear tire men were present at a banquet given by the Goodyear Tire & Rubber Company at the Congress Annex, Tuesday evening, February 4. F. A. Seiberting, president of the company, was the toastmaster, and the main thought of his address was that the Goodyear business, with its increased facilities and hard-working sales organization, should approximate $40,000,000 this year. Other speakers on the programme were: C. W. Seiberting, G. M. Stadelman, A. F. Osterloh, H. S. Quine and W. D. Shilts.

A LETTER TO WILSON

THE following letter speaks for itself:

"Hon. Woodrow Wilson,
"Princeton, N. J.

"Dear Sir:

"If information to that effect circulated through the public press is correct, we are soon to have the pleasure of seeing inducted into the presidency the first advocate of the 'Two Wheeler,' represented in your case by the bicycle.

"Such a signal event in the history of the sport should not, we think, be allowed to proceed uncommemorated. There being, to our knowledge, no local bicycle club sufficiently well organized and equipped to offer themselves as your escort on March the Fourth, next, we take the liberty of offering our services in this connection.

"We will furnish, subject to your acceptance, a well mounted body of fifty motorcycle riders, members of our club, equipped in the official uniform recently adopted by the Federation of American Motorcyclists, with which our club is affiliated. This uniform is olive-drab in color, and makes a very military appearance.

"Assuring you that the acceptance of this offer by you would be appreciated as a signal honor by ourselves and all other devotees of the sport we represent, we remain,

"Very respectfully yours,
"THE NATIONAL CAPITAL MOTORCYCLE CLUB,
"per E. M. Dodson, president."

ST. LOUIS M. C. ELECTS

OFFICERS for 1913 were elected and committees were appointed to arrange for a series of runs, at the last meeting of the St. Louis M. C. The new staff is as follows: P. G. Kennett, president; D. P. Hyman, vice-president; W. F. Oster, secretary; George Peach, treasurer; R. R. Steel, captain; Harry Collins, lieutenant; A. Gerdel, sergeant-at-arms. A. M. Vagades was appointed director for two years.

NEWARK FANS PUZZLED

ANNOUNCEMENT is made that two companies have been formed to promote motorcycle racing in Newark, N. J., and race followers of the city are puzzled as to how the local situation will be handled. A few days ago the Newark Motordrome Amusement Co. was incorporated with a capital of $50,000 and almost at the same time it became known that another company had filed papers under the name of the Newark Stadium Motordrome, also capitalizing at $50,000. At latest reports the mystery had not been disposed of.

CLUB CHANGES NAME

AT a recent meeting of the Penn Avenue M. C., of Pittsburgh, Pa., it was decided to operate under the name of the Pittsburgh Press Motorcycle Club. This change was made in appreciation of what the Press has done for the good of the motorcycle in Pittsburgh during the past season. Officers of the club were elected at the same meeting, and are reported as follows: A. W. Stiner, president; J. A. Allgier, secretary; H. Devers, treasurer; T. E. Spencer, tourmaster, and J. J. Gross, lieutenant. Dr. R. V. Swanton was appointed chairman of the racing committee and J. J. Stanley, chairman of the house committee.

CLEVELAND PLANS

"WATCH our membership grow" is the slogan adopted by the Cleveland M. C. At a recent meeting plans were discussed for the coming season's program, and it was suggested that there be a three-day reliability run, a hill climb and a 24-hour continuous run in addition to the regular outings. At least one meet on the Randall track will be held during the summer.

PASCALL LEAVES HOSPITAL

ROY S. PASCALL, president of the New Jersey M. C., of Newark, has returned from the New York Hospital where he was operated upon for the second time in the hope of restoring the use of the fingers on his left hand, which were paralyzed in a spill from his machine in a race at Olympia Park, Newark, in 1910. Pascall was clerk of course at the Newark Motordrome, and proved an efficient track worker.

PROGRESS IN BAY CITY

REPORTS submitted by the retiring treasurer of the Bay City (Mich.) M. C. at the recent annual election showed the club to be in a flourishing condition. Charles Porter is the new president; Russell Burnbridge, vice-president; Thomas Madden, secretary; Carl Meisel, treasurer, and George Ford, road captain. Messrs. Stevenson and Billington were appointed lieutenants.

TO REVISE CONSTITUTION

A SPECIAL meeting of the Indianapolis M. C. has been called for the purpose of amending the club constitution. The recent membership campaign carried on by this club resulted in the addition of forty riders, making in all 130 members. Certain revisions have become necessary to meet to the requirements of the increased membership.

TO BUILD SAUCER

CHAIRMAN THORNLEY, of the F. A. M. Competition Committee, recently received a communication from D. W. L. Harvey, of the Portland *Evening Telegram*, stating that the Portland (Ore.) Motorcycle Club has arranged to form a $10,000 company for the purpose of building a saucer track.

J. F. PTACEK, agent for the Indian at St. Paul, Minn., reports selling twenty-eight 1913 models within the last three weeks.

PLANS for the first club run for the 1913 season by the Harrisburg (Pa.), M. C have been completed and the outing will be held Easter Sunday.

Digitized by Google

M. M. A. HAS FRUITFUL CHICAGO SESSION

Action is Taken Looking Toward Big Display of Motorcycles at Panama Exposition—Committee Develops Plans to Help Dealers Obtain Freight Rate Refunds and President Coffman Agrees to Serve Out Term.

CHICAGO, Feb. 5.—Sixteen companies were represented at this morning's session of the Motorcycle Manufacturers' Association. Action was taken with reference to the proposed exhibit of motorcycles at the Panama Exposition. President A. B. Coffman was urgently requested to continue in office until the annual meeting in August, and he consented to do so. The traffic committee rendered an interesting report, and the show situation was discussed in an informal way.

THE REPRESENTATION.

The companies represented were as follows: American Motor Company, Guy Green; Aurora Automatic Machinery Company, E. J. Knight; Black Hawk Motor Company, A. W. Mitchell; Consolidated Manufacturing Company, Robert Hinds; Emblem Manufacturing Company, W. G. Schack; Excelsior Motor Manufacturing & Supply Company, Ignaz Schwinn; Harley-Davidson Motor Company, Arthur Davidson; Hendee Manufacturing Company, F. J. Weschler; Henderson Motorcycle Company, T. W. Henderson; Miami Cycle & Manufacturing Company, F. L. Valiant; Minneapolis Motor Company, F. E. Starnes; Pope Manufacturing Company, L. D. Harden; Reading-Standard Company, G. E. Atkins; Schickel Motor Company, H. A. Skinner; Allied Motors Corporation, A. J. Musselman, and the Excelsior Cycle Company, Peter Ohoro and F. D. Freeman. President Coffman occupied the chair, with Mr. Harden as secretary.

The Davis Sewing Machine Company, of Dayton, Ohio, was admitted to membership in the association at this meeting.

EXPOSITION PLANS.

In connection with motorcycle exhibit at the Panama Exposition, in 1915, Secretary Harden was requested to learn from the exposition management whether the latter could assure the manufacturers of motorcycles not less than 7,500 square feet of space in the Transportation Building. If such arrangements can be made, the motorcycle industry will be well represented at the exposition.

When, some time ago, after having left the Consolidated Manufacturing Company, Mr. Coffman offered to resign the presidency of the M. M. A., he was prevailed upon to hold the office until after the Chicago show, at least. Today, in view of the big success of the separate show proposition, the members of the association were less disposed than ever to agree to Coffman's resignation. The upshot of it all was that the Toledoan finally gave his consent to remain in office until the expiration of his term. So that his successor will not be elected until the annual meeting in Atlantic City next August.

INDEPENDENT SHOW TODAY.

It was the concensus of opinion that the separate Chicago show had come to stay. The only question in the minds of many had to do with the fact whether the motorcycle show should be held during the same week as the automobile exposition, or before or after the latter. There was also some talk in favor of confining the exhibition of motorcycles to one national show, instead of two, but there is hardly any likelihood of the New York show being abandoned. In any event, no action was taken in regard to the shows, this matter being postponed until the April meeting.

THE FREIGHT RATE MATTER.

Messrs. J. G. Murray and C. F. Duggan, traffic managers of the Harley-Davidson and Hendee companies, respectively, who, with Arthur Davidson and A. B. Coffman constitute the traffic committee of the association, were instructed to prepare a letter to be sent to dealers who are entitled to a refund on payments for freight on motorcycles shipped to points west of the Mississippi during the past two years. They will send a draft of this letter to the secretary of the association, who in turn will send a copy to each manufacturer, so that the latter may give the information to all of their dealers in the affected territory.

This letter will recite the fact that on November 11, 1912, the Interstate Commerce Commission rendered a decision ordering a reduction of the freight rate on motorcycles in less than carload lots from two and a half to one and a half times the first class rate. The reduction applies not only on future shipments, but also to shipments made during the past two years, on all of which the consignees will be entitled to a refund provided they present their claims in the proper form. For example, the difference between the old and the new classification will entitle a dealer in Texas to $5.01 on each 300-pound shipment from the East or Middle West during the two years preceding the presentation of his claims.

HOW TO OBTAIN ACTION.

In order to obtain a refund on these shipments the dealer should submit a statement addressed to the secretary of the Interstate Commerce Commission, American Bank Building, Washington, D. C. This statement should cite all the shipments made during the past two years, the dates of shipments and arrival, the name of the railroad in each case, the amounts actually paid and the amounts which should have been paid under the new classification of one and a half times the first class rate. These statements should be accompanied by all the freight bills. If the latter are not available, duplicates may be obtained from the railroad agents and in such cases the dealer must give a bond indemnifying the shippers against any obligation on the original bills.

In filing such statements dealers should refer to the decision rendered by the commission, November 11, 1912. Upon receipt of properly prepared claims the Interstate Commerce Commission will notify each dealer of the receipt of the same, and also order the railroads to make the proper refund. If no adjustment is made within a reasonable time, say sixty days, dealers having filed their claims should notify the secretary of the commission.

THE Excelsior General Supply Company has a complete line of accessories on show. Smiling Jim Morrow was on the job, as were E. A. Grover, J. Nicol and M. Alsen.

PIERCE SINGLES AND FOURS

SINGLE and four-cylinder models, as exhibited at the New York Show, make up the display of the Pierce Cycle Company in Chicago, and the company's interests are being ably cared for by H. G. Pauer. Owing to the increasing interest in high-powered machines in western territory, the Pierce four is coming in for more interest than it attracted at New York, where the attention of visitors was about equally distributed between the single and four-cylinder types.

THE JEFFERSONS

A. F. HABERMAN, Erwin Klug and Edward Punzel are in charge of the exhibit of the Waverley Manufacturing Company, which includes a 4 h. single and an attractive twin model rating at 7 h. The attention of visitors at the Waverley booth is occupied chiefly with the novel springing system in the Jefferson machines.

SCHICKEL MODELS

SIMPLICITY is the predominating feature of the exhibit of the Schickel Motor Company, of 59 Garden street, Stamford, Conn. As at the New York show, the sole representative of the two-stroke principle is found at the Schickel booth. The line of the Schickel Motor Company for 1913 consists of four models, the 5 horsepower belt-drive and 5-horsepower chain-drive, listing at $225 and $230, and the "Big Six" chain and belt drive machines, listing at $235 and $240, respectively. The neatness of design and the clean-cut and attractive lines of the Schickel are creating an excellent impression.

THE POPE LINE

ALMOST identically the same exhibit that occupied the stand of the Pope Manufacturing Company, at the New York Show is being featured at Chicago. The four types that make up the Pope motorcycle line are being effectively displayed in addition to bicycles and supplies. L. D. Harden, manager of the company's motorcycle and bicycle department is in charge of the stand, and is being assisted by M. G. Littlefield, O. J. Oberwegner, H. M. Musselman, Otto Gidenswager and R. H. Smith.

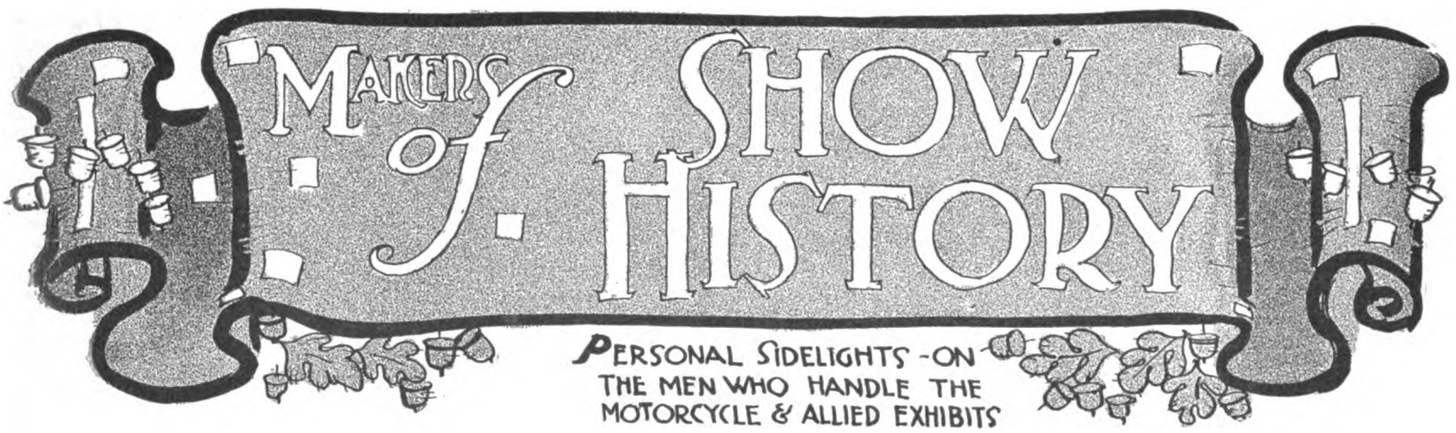
HENDERSON DISPLAY

VISITORS at the stand of the Henderson Motorcycle Company, of 1158 Cass avenue, Detroit, are being welcomed by President T. W. Henderson, Vice-President W. G. Henderson and R. H. Wheat, John P. Garner and John Bice, of the Henderson branch in Chicago, are lending valuable assistance. The Henderson display is identical with that at the New York Show.

WITH THE MONARCHS

PRESIDENT W. H. Ives, of the Ives Motorcycle Corporation, and Lincoln Holland, of the sales staff, are to be found at the Show booth of the Owego company, where the 1913 Monarch models are exciting favorable comment.

Digitized by Google



EVERY time Tom Henderson was approached on the subject of being the next president of the M. M. A. he would hurriedly change the subject to Henderson motorcycles. He said that he sold more motorcycles the first two days at Chicago than he did the whole week at New York. R. W. Wheat got in his good work when it came to Los Angeles contracts.

The Purdy Bros. exhibit shows their new four-tone horn, which is being well demonstrated by Jack Purdy, the inventor. R. T. Purdy and H. W. Meyer are also "tooting the horn."

Fred C. Robie paid a visit to the show and was well pleased with the showing made. He is now connected with the International Motor Company, as manager of the Chicago branch. Mr. Robie was accompanied by his wife.

The Reading-Standard Company was very well represented, and Sales Manager G. E. Atkins has been kept busy writing orders. He is assisted by C. R. Jones, W. E. Dewey, J. E. Starr, P. C. Thom and O. F. Sumbaum.

Sales Manager Kirk, of the Excelsior Motor Manufacturing and Supply Company, was so pleased with the Chicago show that he stated he did not care whether they held any more shows at New York or not. Ignaz Schwinn was kept very busy entertaining the dealers, and he is some entertainer when it comes right down to showing a good time. Frank Schwinn says, "New York for mine," as he considers a trip to New York once a year a good vacation. "Gid" Haynes, their popular road man, was kept very busy steering the representative of MOTORCYCLE ILLUSTRATED away from the Excelsior booth.

Sales Manager Knight, of the Aurora Automatic Machinery Company, is on the job very early in the morning. Retail Sales Manager Edward Rischel and George Huetasel are always extending the glad hand of welcome. J. D. Hurley is present and busy as usual.

The "youngster," Dave Smith, was there as usual with his many cigars and eight cups of coffee each day. He was chuck full of Splitdorf magneto talk. M. E. Toepel was doing the explaining at the Splitdorf booth, by the way.

The Black Hawk has a very neat machine exhibit which is making a hit. R. W. Gould, manager; A. W. Mitchell, president; A. J. McCullom, superintendent; A. L. Yeatman and Charles Desalvo are on the job.

W. J. Ash, of the Chicago Cycle Company, had just returned from a successful trip from the coast, and livened up the Chicago Cycle booth considerably. Ash is known to be one of the most clever lamp salesmen in the country, and has a way of getting big results.

The F. W. Spacke Machinery Company stand is, as usual, in charge of Sales Manager Lawrie, who certainly knows how to explain motors. Fred Spacke and D. Shorman Spacke were also very much on the job.

Wheeler & Schebler were represented by their famous pair, Okey and Briggs, who are known to be capable of some clever team work when it comes to selling carbureters.

E. L. Morse was in charge of the Victor Auto Parts exhibit, and when not busy selling lamps he was spending his money on sidecars, etc. William and Ed. Corcoran were also on hand meeting the trade.

George W. Sherman was very active on the Motorcycle Manufacturers' Association committee, and also in demonstrating a new carbureter for motorcycles.

H. M. Huffman, the real "live wire" behind the Dayton, was on hand to assist the Beckley-Ralston people, who had the Dayton on display. J. C. Lesler, Colonel Huffman and G. H. Gorman were also on deck.

E. C. Wolf, of the Tucker Woodwork Company, of Sidney, Ohio, got acquainted very rapidly with the motorcycle trade, and did very good work as to sales.

Frank Hart announced his intention of riding his Indian T. T. back to New York after the show, and he will take some one along in his Rodger sidecar, which he has attached to his machine during the show.

The Van Cleef exhibit was one of the prettiest at the show, on account of its attractive sign advertising the Dutch Brand products, and because Miss Gabrielle James, who was dressed in a Dutch costume to correspond with the trade mark, fitted the occasion admirably. Noah Van Cleef was in charge and his two brothers, Felix and Maxine, who travel for the company, were also in the booth. Paul Van Cleef, the chemist, was too busy at the factory to find time to visit the show. The firm is working night and day to fill orders. Their sign was lit up with small electric bulbs inside of the midget tail lamps which they are producing.

The Graton-Knight Company was represented by W. W. Shoemaker and G. W. Urhu hart. Mr. Shoemaker admits that he learned something more about belts, and it was a rural mail carrier who had to teach him. Must have been pretty weighty information if W. W. didn't possess it.

The Hendee Manufacturing Company, as usual, has its long string of salesmen at the show, with F. J. Weschler and E. M. Jackson in charge. The others were Wm. Teubner and Ray Seymour, of racing fame; Z. Godin, J. E. Hogg, D. E. Dunn and P. B. Whitney, the latter Chicago branch manager, and Messrs. Reams and Cameron.

The Harley-Davidson booth did not have the stuff that made Milwaukee famous on hand, so they gave out packages of cigarettes with their imprint on each cigarette and box. They were "some smokes" at that. Arthur Davidson acted as chief at the exhibit. George Puls was there also, with H. W. Haskall, J. G. Murray, J. G. Kilbert and W. Kleinenhagen; Advertising Manager S. Lacy Crolius arrived on Tuesday.

Just as the show was about to close Monday night, G. H. Hamilton, of the Federal Rubber Company, arrived to take in the exhibit. He was well pleased with what he saw.

H. T. Roberts, of Chicago, played the part of visitor at the motorcycle show, as he decided at the last moment not to exhibit.

Frank L. Valiant, chief space appropriator for the Merkel company, gave a theatre party for his friends Wednesday evening.

Lee Humiston's now famous Excelsior record breaker was on exhibit at the Chicago show and it attracted its due share of attention.

Harry Svensgaard, of Detroit, was one of the arrivals for the show on Wednesday.

R. W. Sayre, of Los Angeles, and P. L. Ruplinger, of South Dakota, made their headquarters at the Harley-Davidson exhibit most of the time.

F. B. Rodger and Hugh Sharp, the publicity men from Harley-Davidson plant in Milwaukee, were on the job spreading the fame of the "Silent Gray" products.

C. J. Welch, of the United States Tire Company, entertained a number of prominent motorcycle manufacturers Monday evening at the College Inn.

The Pope Manufacturing Company has its complete line of motorcycles and bicycles on display. L. D. Hardin, sales manager, was at the helm. M. G. Littlefield, R. H. Smith, H. M. Musselman, Otto Gudenschwager, and Otto Oberwegner were also present. Oberwegner is spending a very quiet week, as Mrs. Oberwegner is on hand to see that he turns in early each night.

The Ives Motorcycle Corporation is represented by Lincoln Holland, Jr., N. E. Yapp, W. H. Ives and E. C. Carroll.

STILL IN A PERSONAL VEIN

SALES MANAGER J. C. FERGUSON, of the Eclipse Machine Company, was, as usual, in charge of the Eclipse booth. Mr. Ferguson is known as one of the best mixers in the industry, and is very enthusiastic over the wonderful process the Eclipse clutch has made in the past year. He was assisted by T. N. Biddle, the Morrow brake expert; M. McPherson, W. Lupton. President Ralph D. Webster was also there as an early arrival.

LINCOLN HOLLAND, JR., of Los Angeles, who was in attendance at the show, was pulling for the west for the next F. A. M. convention. "The climate is great for riding, and the country is the most progressive to be found. It would only be doing the west justice to hold the next F. A. M. convention in Denver, as thousands of. riders will swarm to attend."

W. E. KLUG, of the Waverly Manufacturing Company, showing at Chicago, has announced that the Waverly concern expects to go after racing a little stronger this season with its stock models. The company is planning to enter a single and twin in the road race at Elgin next summer. W. G. Hamilton, Ray Comstock and Rudolph Thoms will ride for the company.

WHEREVER there is a motorcycle show there is always Don C. Spraher, the man behind the Kokomo Rubber Company. He was assisted by S. G. Rigdon and R. R. Bowen at Chicago.

ARTHUR DAVIDSON was a day or two late in arriving at the Chicago show, and at first it was believed that he was trying to make the trip from the east in his new Cadillac which has just been delivered to him. Later, however, it was learned that Mr. Davidson took the Pullman, but before he did that he is reported as spending much time in the East talking up the merits of his new motorcar. "I should worry," said Arthur when he pulled in finally; "we are all sold up on Harleys, anyhow."

J. C. FOX, president of the Fox Manufacturing Company, of Seattle, Wash., experienced all kinds of weather getting to the Chicago show. He claimed to be the "farthest north" exhibitor and no one disputed him. "When I left Seattle," he said, "there was fine spring weather, but before I had traveled eastward many hours I experienced 22 degrees below zero weather in North Dakota. The train was late on account of storms. It took me four days to get to Chicago.

"The Pacific coast highways and roads are improving fast," said Mr. Fox. "Roads leading from Seattle to Tacoma and to Mt. Rainier National Park are being improved extensively, and with the fine riding weather all the year around on account of the warm Japan current on the coast, we believe we have the best country for motorcycle riding, with the exception of California. Things are booming in the West and dealers should have no trouble in disposing of all the motorcycles they can get."

THE members of the trade press were given their annual dinner in Chicago Wednesday evening by W. G. Schack, of Emblem fame. The typewriter teasers were taken to the Illinois Athletic Club, as they were last year, and after the dinner the party went in for bowling. "You couldn't have a party without bowling," said Mr. Schack.

THE Fowler Carnes Company, of Aurora, had a large sign showing a fat Dutchman with an F. A. M. uniform and a notation as follows: "We fit them all." I. N. Wilson was in charge, assisted by E. Lamb and J. Adams.

WHEN passing the Allied Motors Corporation booth one noted A. J. Musselman, E. H. Doud, Frank Gilfeather, Thomas F. Rush, C. R. Wagner and Calvin Brown—everyone a hustler.

A. FREED, of San Francisco, the well-known Thor distributor, was an early visitor to the Chicago show. His patent on the Duck shock absorber was allowed, when taken to court, and Freed is contemplating getting after infringing manufacturers.

H. L. OGG, of Newton, Iowa, inventor of New-Lite generator outfit, was present at the show demonstrating the features of the New-Lite. The outfit has sufficient capacity for the largest automobile headlight, tail-light, speedometer light and electric horn, and delivers a constant supply of current regardless of driving speed. The fittings are well worked out for every machine on the market. Jenkins & Co., of Des Moines, Iowa, are the sales agents.

THE merits of the De Luxe twin were explained by F. D. Freeman, James C. Baine, Ernest Unger, superintendent; Joe De Salvo (who kept his hand on his pocketbook), John Merz, of Indianapolis, and Smiling Pete O'Horo, who was also kept busy shaking hands and buying distilled water for his hosts of friends.

THE Chicago show prides itself on bringing together two of the greatest pool players in the industry, W. W. Whitesell, Pacific coast champion, and Excelsior distributor, and W. Shoemaker, champion of Pennsylvania, and also of the Graton & Knight Company. They are going around with chips on their shoulders looking for a match with another pair for a dinner as a stake.

THE Morrison-Ricker Manufacturing Company, of Grinnell, Iowa, makers of Grinnell gloves, have a very elaborate display of motorcycle gloves. B. G. Ricker and Frank Fabian are in charge.

J. R. JENKINS and L. A. Schuben are busy demonstrating the Jenkins tandem attachments, and H. L. Ogg, inventor of the New-Lite generator is also busy showing the New-Lite outfit. A day before the show Jenkins had a fire in his store which destroyed all his show literature, but he managed to have some more printed in Chicago in time to pass around by Monday night.

THE Stoll Dream Tandem attachment is being very well demonstrated by F. M. Stoll, who is ably assisted by Walter W. Whiting. Whiting is also the Harley-Davidson agent in Denver, and a hard-working booster.

RAY SEYMOUR, of the Hendee Manufacturing Company's traveling staff, who was present at the show, states that he is being tempted to re-enter the motorcycle racing game for next season. "If the proposed track circuit is materialized," said Seymour, "I will probably go back into the game. Racing would then be more worth while. However, I am very well satisfied with the work I am doing now, so I don't have to worry about the future just at present."

AT the New Departure booth were found the well-known Griff-Horton duo. A. E. Griffiths, M. J. Horton and DeWitt Page were kept very busy demonstrating New Departure hubs and brakes, and were still busier giving out their souvenir watch chains.

THE Chicago Cycle Company had a bench covered with its well-known cushions, and seated thereon were H. E. Kenyon, H. P. Hanson, C. J. McCormick, Victor Sandeen, D. B. Stevenson, E. B. Steffen, E. L. Kendall, W. J. Ash (the lamp expert), and A. J. Mitchel, the racing phenom., who now travels for them. The firm had a very complete line of motorcycle and bicycle accessories.

THE Consolidated Manufacturing Company had its flying squadron on the job, with Robert Hinds and Frank Cornish in charge. George (Newlywed) Squiers, "Shorty" Matthews, who is now the father of a future racer; Advertising Manager Paul J. Bailey, H. M. Baird, Carl A. Leander, R. L. Binney, superintendent of the tube department; Claussen Bros., Chicago agents, and Charles, the mascot, were there.

AT the Emblem booth the following were on the job: W. G. Schack (when not very busy selling motorcycles he was on the lookout for a bowling match); W. H. Snyder, Columbus agent; Raymond Snyder, A. P. Colwell, R. M. Brown, Chicago agent, and his assistants, George E. Miller, R. B. Cunliffe and Edward Dooley.

ADVERTISING MANAGER A. H. BARTSCH, of the Bosch Magneto Company, is responsible for the statement that no battery motorcycles are at the show, and, according to his figures, the Mosch magneto will be found upon 63 of the 77 machines displayed. Bartsch figured it out that 82 per cent. of the machines are equipped with the Bosch.

THE Corbin Screw Corporation had more souvenir knives than usual, and it was there that the crowd was thickest. Hanop states if he wasn't kept so busy handing out knives, he could have written up more orders. C. J. McCuny, the little fat man of the Chicago office, was Hanop's side kicker, and when not demonstrating the brakes, speedometer, etc., he was busy entertaining the fair sex. A. W. Westlake and R. A. Sundvahl were also on hand. Wm. E. Diehl, manager of the Corbin Chicago branch, was the overseer.

THE Badger Brass Manufacturing Company showed a complete line of motorcycle lamps and was in charge of W. A. Bell, H. G. Haft and C. E. Crawford. R. H. Wells found time to get away from the Auto show, and was well pleased with the Independent exhibition.

HEARD in the BOOTHS

DURING the show much talk was heard among the dealers and manufacturers in regard to holding only one motorcycle show a year, and that at Chicago. It was the consensus of opinion that it would not be long before such a plan would be adopted.

"Watch the Thermometer Grow" was the slogan of the Chicago Motorcycle Club, which waged a membership campaign at the show.

Shorty Matthews was an interesting spectator at the show. He has just returned from a trip in Iowa which he said was a very successful one. "I found that I have brought Iowa up as second to the banner State of Ohio for Yale motorcycles this year," said Matthews.

It was surprising to hear so many motorcyclists talking about the proposed Elgin road race of 250 miles, scheduled for next summer. "Shorty" Matthews intimated that he would ride in the big event, and that his mount would probably be a seven horse "Jap" from across the Atlantic.

A big electric sign, announcing the motorcycle show, was in evidence on the opposite side of the street to the entrance of the Automobile show in the Coliseum.

Every exhibit booth was furnished with a writing desk and a bottle of distilled water. And some folks really drank the water.

Large red tags, bearing the words, "I am for Denver for the F. A. M. meet," and "Denver does things," were distributed among the visitors and dealers on Tuesday. The tags were gotten out by Denverites soon after they saw that the Chicago people handed out printed tags. Enthusiastic campaigns for Denver and Chicago were waged by the boosters.

Sixty-two per cent. of all the motorcycles on exhibition were United States tire equipped, according to the figures of C. J. Welsh, of that company.

All the booths at the show were uniformly carpeted with green canvas, while the hardwood floors served alone for the aisles.

Smoking inside of the show was under ban all week, and most of the visitors were requested to put out their cigars before entering. Every precaution was taken against fire.

The pleasing manner in which Miss Vera Matthews (no relation to "Shorty") explained the Feilbach scored a hit, as she certainly does understand the two-wheeler. Messrs. W. A. Feilbach and Clantz were there to help Miss Matthews.

A Harley-Davidson motorcycle was kept running most of the time at the firm's booth, and as some sections of the motorcycle's working motor were cross sectioned, the show visitors always crowded about to see the inner operation of the gray machine.

Good steel knives were given away as souvenirs at the Corbin Screw corporation stand.

A working model Bosch magneto, on an enlarged scale, was used as the chief attraction at the Bosch booth.

Wm. E. Eccles, of the Greyhound Motor Company, claims the honor of selling the first three sidecars at the show. Before he had uncrated his sidecars, E. L. Morse gave him an order for a $125 aluminum body car to be shipped to Los Angeles at once. Morse will use this car in covering the Pacific coast territory. W. W. Whitesell, of Los Angeles, also gave an order for one of the same models to be shipped at once, as did C. L. Waters, of the Motorcycle Equipment Company, who will make personal use of the car. It has been demonstrated at the show that the highest priced cars are most in demand. William Chadeayne was on the job in the Greyhound booth.

The Allied Motors Corporation has on its machines the new Ericson magneto, manufactured in Buffalo. Frank W. Pardee, vice-president and general manager, who is at the show, states that they will be ready to fill all orders within the next thirty days.

The Minneapolis Motor Company's exhibit is in charge of F. E. Starnes, General Manager H. L. Wessling, and J. P. Erich. Mr. Starnes says there are fine prospects ahead for the Minneapolis commercial van for parcel post service.

One of the largest orders taken early in the show was that of the Aermore Manufacturing Company, which sold 104 Rodger sidecars to the Chicago branch of the Miami Cycle and Manufacturing Company. G. V. P. Lansing, president of the Aermore company, turned the trick.

Many manufacturers of motorcycles were reporting carload lot contracts and duplicate orders taken by Tuesday night. Business at the show was very brisk, both big and little business.

The attendance figures for Tuesday, the second day, broke the first day's record by about 500. J. S. Vogel, office manager, reported 3,500 in attendance on Tuesday and 3,000 present Monday.

Freddie Huyck, of the Merkel stand, reported the first sale of the show. At three o'clock Monday afternoon he sold and received payment for a Merkel two-speed, 7 h., self-starter, with sidecar attachment. The motorcycle was sold for $335 and the side car for $85. The purchaser was Burton Adams, of Chicago.

The Chicago Belting Company exhibit shows a full line of belt dressings, done up in neat packages, as well as the famous Sea Lion belt. F. A. Mitchell, Lee H. Stiles and A. T. Scherer are doing the honors.

The Hughes & Wessling Company, a copartnership for the last five years, was recently incorporated for $12,000, under the firm name of Hughes & Wessling Co. The firm will devote itself entirely to the manufacture of electric lighting equipment for motorcycles. President D. C. Hughes is a mechanical and electrical engineer, a member of the American Society of Mechanical Engineers; he will be in charge of the manufacturing end of the business. H. N. Wessling, as secretary-treasurer, will center his efforts in the sales department. Mr. Wessling is a motorcyclist of considerable note, having covered over 100,000 miles on American and European roads in the past ten years, and as a result he is thoroughly familiar with motorcycle conditions here and abroad.

The Great Western Manufacturing Company is exhibiting bicycles. They state that the motorcycle proposition is still under consideration. C. A. Lonn, A. E. Lonn and E. J. Lonn were in charge. They gave out canes and pennants as souvenirs.

CLUB TO HAVE AUCTION

A MEMBERSHIP of 116 is now claimed by the newly organized Allegheny (Pa.) Motorcycle Club. The clubrooms have been furnished with pool tables and all the other necessary fittings, and in order to meet the special debt thus incurred it has been decided to hold an auction sale March 13. Letters have been sent to manufacturers asking for donations for the auction, the entire proceeds of which will go to pay for the new furnishings. Harry L. Neff, local dealer in motorcycles, bicycles and sporting goods, will exhibit all the donations at the Auto Show at Pittsburgh, March 1-8.

INDIANAPOLIS BANQUET

F. I. WILLIS, of Indianapolis, former president of the F. A. M., acted as toastmaster at a recent banquet of the Indianapolis M. C., which was held at the DeWeese Restaurant. Prior to the affair a lively business session was held at the clubrooms. As toastmaster, Mr. Willis proved very popular and held the crowd together until 1.30 a. m. Erwin Baker, who is now making a trip through the South, was present and was among the speakers. The banquet was the outcome of the recent membership campaign, which was conducted by two teams, the losing team being the hosts.

WILLIAM LENAUL, of Sheboygan, Wis., is making a motorcycle trip from Chicago to New Orleans and around the coast to New York and thence back to his home. He expects to spend four months on the road.

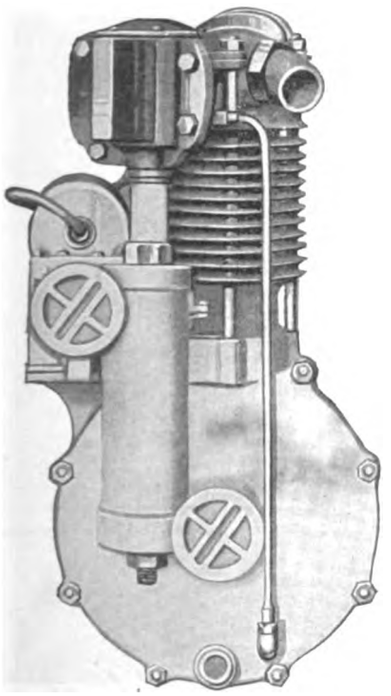
JENKINS EXHIBIT.

ALMOST interesting show exhibit is that of Jenkins & Co., factory representatives, of Twelfth and Locust streets, Des Moines, Ia., which embraces a number of features not likely to be overlooked by the thoughtful motorcyclist. The firm's most attractive offerings are the "Jenco" spring carrier and an improved lighting outfit. These new products will be described and illustrated in the next issue.

THE PHANTOM MOTOR

PHANTOM motors, both single and twin, are being displayed at the stand of the North Chicago Machine Company, of North Chicago, Ill. These products feature silent running, enclosed working parts running in oil,



accessibility, simple and efficient oiling system and higher compression and added power owing to the enveloping of the exhaust valve by the incoming gases. The single-cylinder motor, illustrated herewith has a bore of 3¼ inches and stroke of 3 43/64 inches. It is 19 inches high and weighs complete 69 pounds. The crankcase is made of aluminum.

PERFECTO TAIL LAMPS

IMPROVED "Perfecto" tail lamps for motorcycles, in both the gas and electric types, are being featured at the Chicago Show by the B-L Sales Company, 400 Monadnock building, Chicago, and interest in these offerings has been reflected in the unusual activity of the company's stand attaches since the opening of the show. The Perfecto tail lamp is given a life guarantee, will not jar out under the most severe tests, cannot be kicked off accidentally in mounting or dismounting and complies with the State laws regarding rear lights. The B-L firm also handles the Simplex water economizer nozzle, for use in garages, and its full line will include a wide variety of automobile and motorcycle sundries.

HARVEY BERNARD, the well-known racer, dropped in just long enough to shake hands with his show friends.

FEILBACH MOTORCYCLES.

FEATURED by a long-stroke motor of the automobile type and characterized by simplicity throughout, the Feilbach Limited, a newcomer in the ranks of single-cylinder motorcycles, is a mount calculated to create a distinctly favorable impression. It is produced by the Feilbach Motor Co., of 1144 Holton street, Milwaukee, Wis. One of the special features in the Feilbach is the improved spring seat post which embraces a horizontal shock absorber, working within the second bar of the frame. This construction permits of an ideal combination of flexibility and strength. Another noteworthy detail is the positive oiling system, which insures economy while giving all working parts of the motor their proper supply of the lubricant.

The Feilbach motor generates 5 h. and has a bore of 3 5/16 inches and a 4-inch stroke; the displacement is 34.50 cubic inches. All shafts are extra hardened and running in bronze bushings. The intake valve is of the mechanical type with adjustable tappet. The valves of this motor are at the front, instead of at the side, thus giving perfect balance and better cooling. General specifications of the Feilbach are as follows: Concealed double grip control, Heitger 1913 carbureter, loop frame, combined truss and spring fork, Eclipse free engine clutch, Corbin brake, Persons, Troxel or Mesinger saddle, Herz magneto.

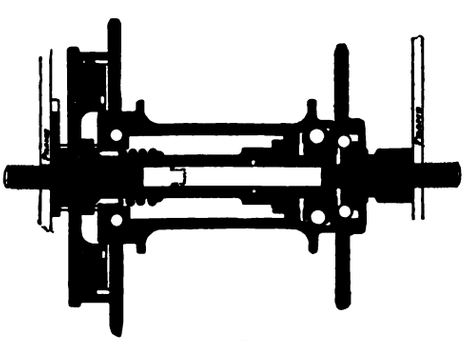
Those who are receiving visitors at the Feilbach stand are: Miss Vera Mathews, William Feilbach and William E. Glantz.

"ANDERS" SIDECARS

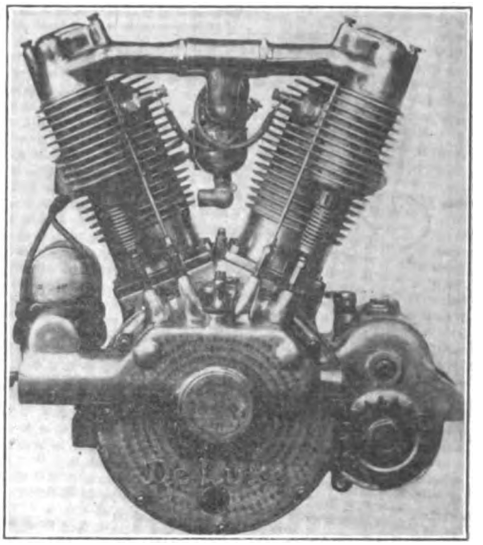
MOTORCYCLISTS who contemplate fitting sidecars to their machines for the coming season are finding much to interest them in the exhibit of the National Cycle Accessory Company, of Aurora, Ill., at the Chicago Show. What is probably the feature offering at the stand is a torpedo sidecar, fitted with side door and finished in white enamel and genuine buff leather. It is equipped with a leather top and curtains, so that the passenger is protected under all weather conditions. The firm's line will be fully described in the February 20 issue.

BIG ECLIPSE LINE

AMONG the most important features of the display of the Eclipse Machine Company, of Elmira, N. Y., is the new sidecar knockout axle, which has been adopted by some of the leading manufacturers of sidecars. Sales Manager J. C. Ferguson is elated over the fact that the booth of the Eclipse company contains one of the largest lines of accessories shown. Other representatives of the company seen at the show are Ralph D. Webster, vice-president and general manager; T. N. Biddle, known as the "Old Morrow Man"; Wilbur Lupton and M. G. MacPherson.



The Improved Eclipse Brake.

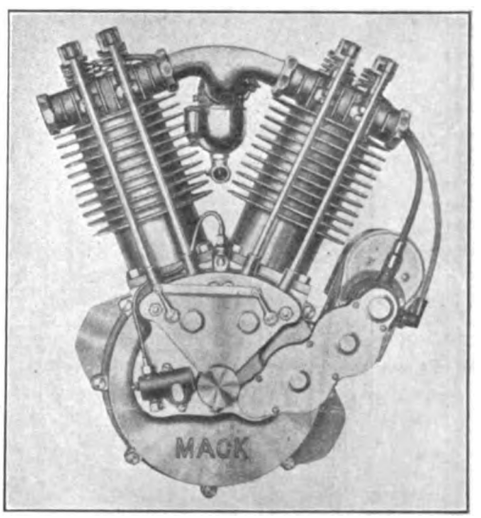


New De Luxe Twin, Exhibited by the F. W. Spacke Machine Co., of Indianapolis.

BANQUET AND ELECTION

PRIOR to the annual banquet of the Mansfield (Ohio) M. C. officers for 1913 were elected. F. R. Dippman was re-elected president, and John F. Meyer was re-elected road captain. The other officers are John Fay, vice-president, and C. O. Lister, secretary-treasurer.

MOTORCYCLE clubs affiliating with the F. A. M. during the week ending February 2 are reported by Secretary Gibson as follows: The Bellevue M. C., Bellevue, O.; the Dixie M. C., Roanoke, Va.; and the Kensington M. C., of Philadelphia, Pa.



MACK MOTORS

AT STAND No. 66 there is a striking exhibit of Mack motors, both single and twin types, as manufactured by the Universal Machinery Company, of Milwaukee, Wis. These power plants, 4 and 5 h. in the singles and 7 and 9 h. in the twins, have valves-in-the-head construction and all parts are interchangeable and ground to micrometer exactness. The firm calls attention to the exceptionally free intake and exhaust provided by the Mack valve system, and to the fact that greater power is afforded, for a given size of cylinder, than is furnished in other constructions. The positive mechanical pump is covered by one of Mr. Mack's patents.

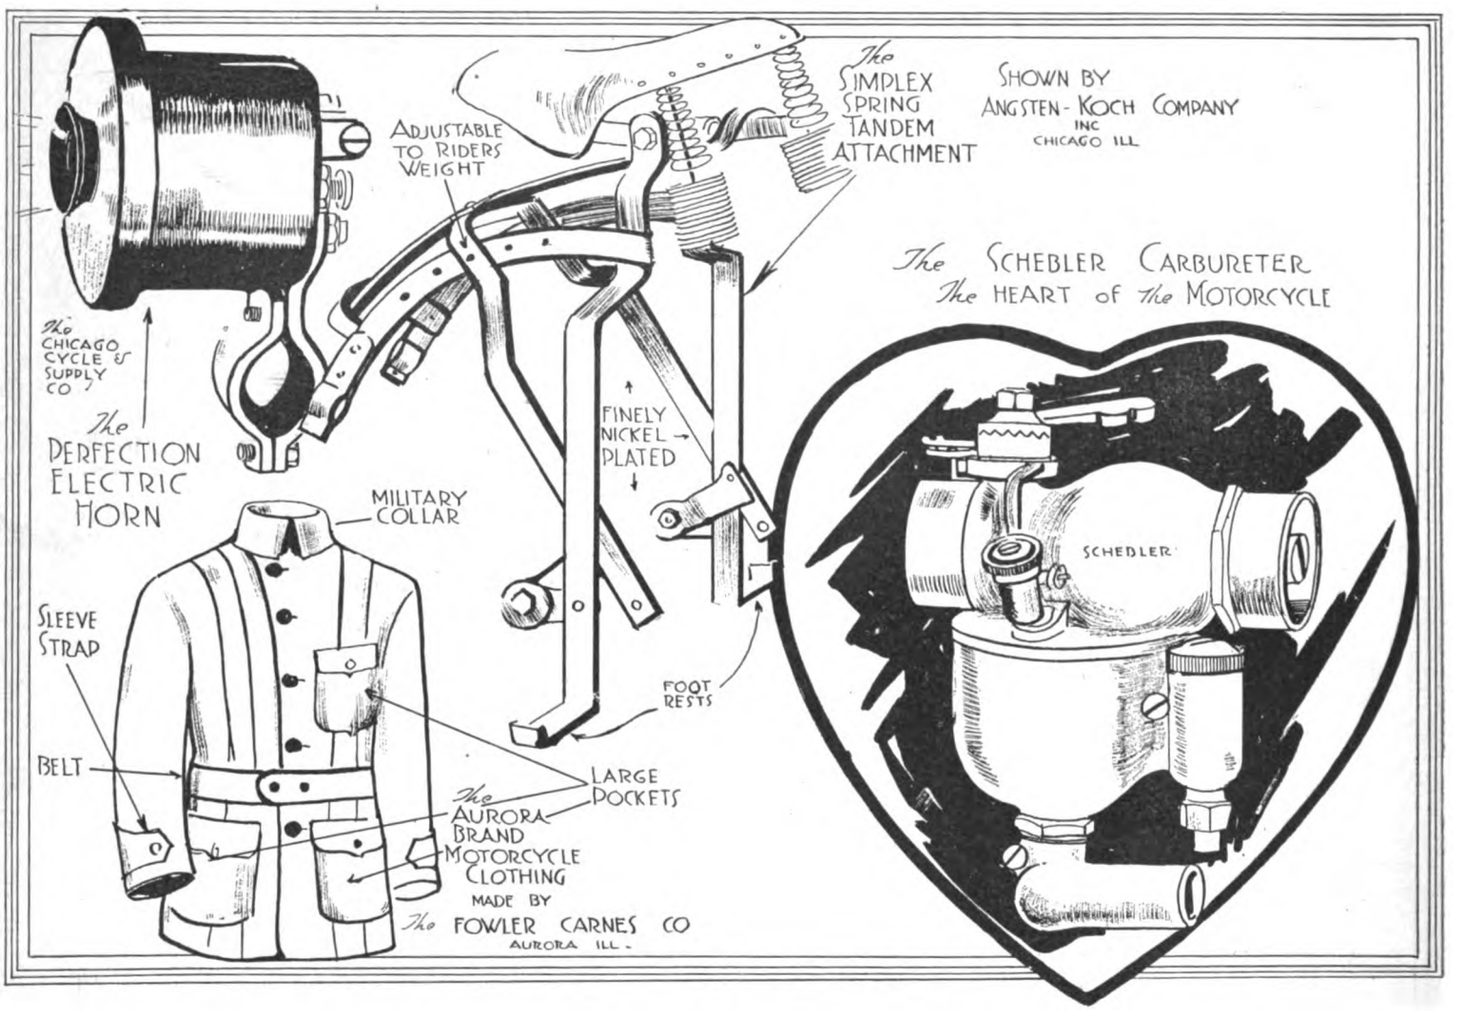
SHOW DETAILS—IN TEXT AND PICTURES



A FULL ACCESSORY LINE.

AN unusually large and pleasing line of motorcycle accessories is being shown by the Chicago Cycle Supply Company, of 22 West Lake street, Chicago. One of the features in this display is the firm's Perfection electric horn, which promises to be a rapid seller. The horn outfit includes a battery, battery case, wiring and handlebar push button, and the whole system is so well worked out as to be no less simple or attractive than an automobile electric horn. The outfit may be attached to any motorcycle with only a monkey wrench and screwdriver. The upkeep outlay is 35 cents for an electric battery which will operate the horn for about six months.

The firm is also showing its new Perfection headlights. These have been on the market for some time, but owing to their special advantages in the way of light-giving and sturdiness they are receiving much attention. A combination spring luggage carrier and tandem attachment is being exhibited, and among the smaller articles on display is the new Yale motorcycle lock. These features are backed up by a standard line of supplies and accessories for the motorist.

FOWLER CARNES CLOTHING

MOTORCYCLE clothing of every description is shown at the stand of the Fowler Carnes Company, of Aurora, Ill., where discriminating riders are lingering these days. Two of the F. A. M. suits, prepared especially for members of the Federation, are shown in connection with the regular line. Those in attendance at this booth are E. Lamb, D. A. Adams and I. N. Wilson.

ANGSTEN KOCH SPECIALTIES

AT the Show booth of the Angsten Koch Company, of 215 Englewood avenue, Chicago, there is a full line of the up-to-date specialties carried by this firm, including spring and rigid luggage carriers with tandem combination, the Simplex spring tandem attachment, an improved side seat, spring cushions for use with carriers, fabric pulley lagging, lamp brackets, waterproof motorcycle clothing, sidecar and commercial van outfits and other attractive incidentals to the motorcycle. An interesting feature of the firm's display is an improved motorcycle lock which is designed to clamp a steel bar between the spokes of the front wheel.

Visitors at the Angsten Koch stand are being welcomed by B. F. Koch, J. P. Angsten, Robert Phillips and H. W. Angsten.

"THE HEART OF THE MOTOR."

ALTHOUGH nothing distinctly new is shown by Wheeler & Schebler, of Philadelphia, at their Chicago booth, the stand is nevertheless an attractive one. The display is similar to that at the New York Show, a large red heart being a publicity feature of the motorcycle section, to exemplify the company's slogan, "The Heart of the Motor." Their model H motorcycle carbureter is a leading feature of the exhibit.

EASY MONEY FOR DONOVAN

J. S. DONOVAN, a live wire of Beckley-Ralston Company, was very much in evidence. Five minutes after the show opened he had received a certified check for $500 from William E. Stauber, of Chicago, as deposit on 50 Dayton motorcycles. With him were A. J. McKee, Boyd Spencer and H. S. Rector. Messrs. J. C. Ralston, W. L. Beckley and Gordon Beckley were also on deck to receive congratulations from their numerous friends on their new seven-story building, which they will soon occupy, and which will be devoted exclusively to the jobbing business and Dayton motorcycles.

PLENTY OF LIGHT

HUNDREDS of Tungsten lights were strung at the Motorcycle Show, and there wasn't a dark corner to be found. Windows on three sides of the large exhibit hall admitted plenty of light in the day time.

MOTORCYCLISTS of California are enthused over a statement made by the Post Office Department of San Jose, to the effect that the first parcel-post package was delivered by motorcycle.

UNIVERSAL SIDECARS

IN addition to the models shown at the New York Show, the Greyhound Motor Company, 1443 Niagara street, Buffalo, N. Y., is featuring two new reed sidecars at its Chicago stand. The first has the standard side door and the other is of the open body type. The spacious delivery van and the auto-car models are also shown. A new product, which is being displayed is the folding sidecar stand, which is adaptable to any make of sidecar. A telescopic fitting is employed between the sidecar and the lower portion of the motorcycle frame to form a fourth attachment, and there is also a combination storm apron which will not only protect the passenger under all climatic conditions, but will serve as a cover for the car when not in use.

BAXTER SIDECARS

SIDECARRISTS and prospective users of sidecars have found a warm welcome at the Show stand of the Baxter Sidecar Company, of 119 Broadway, Cambridge, Mass., and judging from the enthusiasm displayed by both visitors and attendants it has been a simple matter to keep interest in the company's offerings at a high pitch. The firm offers its wicker models in four styles, three with side doors and one with the popular high canoe front, in addition to its racy looking torpedo metal-body type that is bran new for 1913. As is already well known a distinctive feature of the Baxter line is the spring wheel fitting which permits of all the road shocks being taken up in double suspension springs. Special attention is being called to the hub spindles in the Baxter products; they are turned from solid Bessemer steel, with steel cones at the big end, driven on.

INDIAN SIDECAR

IN designing a sidecar applicable to the 1913 Indian, The Hendee Mfg. Co. was confronted with difficult problems entirely foreign to the auxiliary vehicle branch of the motorcycle industry. Heretofore sidecars had been built for use with rigid frame motorcycles, and the satisfactory attachment of such a vehicle to a spring frame machine presented unusual engineering difficulties which required a high degree of skill and exhaustive experiment to overcome.

The car will be built in two models for use in combination with the 1913 Indian T. T. two-speed and regular models, respectively. The differences in construction are in the rear stay rods and attaching clamps, the forward connection being uniform throughout.

The T. T. two-speed car can be attached to either the twin or single of this type, and the regular car similarly in its class. The cars are not interchangeable from T. T. two-speed to regular models unless two sets of fittings are used.

All chassis tubes are of 14 gauge steel, 1¼ inches diameter. The four corner posts of the frame are of steel, all other fittings being drop forgings. Exclusive features are the drop frame, and double cross members at the rear and left side. The low frame suspension induces the machine to hold the road at speed, and on corners, and also conduces to easier riding. The double cross members insure extreme rigidity, and unusual frame strength to successfully withstand road shocks. The road clearance is 8¼ inches.

The two Indian sidecar models will be illustrated and described more fully in an early issue.

MAJESTIC SIDECARS

SIX models of sidecars are now being produced by the Majestic Manufacturing Company, 34 Southbridge street, Worcester, Mass., and a new feature is brought forth in the Trinity model as displayed at the Chicago show and illustrated on another page of this issue. The Trinity model is built along the same lines as the Majestic standard canoe model, except that it has a detachable child's seat. Among the other models shown are the Majestic De Luxe canoe front and the De Luxe curved front, both listing at $90. The standard canoe model and the Majestic quick delivery van sell for $65, while the Trinity model, with child's seat attached, is sold for $75.

STANDARD SPEEDOMETERS

IN addition to the display which attracted much attention at the New York Show the Standard Thermometer Company, 65 Shirley street, Boston, Mass., is featuring at its Chicago exhibit an Indian motorcycle with a Standard speedometer and in operation. The front wheel is electrically driven and by an ingenious arrangement it is given a jar at intervals in order that the computing instrument may be subject to conditions practically the same as are encountered on the road. Needless to say, the exhibit is winning its full share of interest.

HAGERSTOWN LEGGINGS

MOTORCYCLE LEGGINGS of every description are displayed at the show by the Hagerstown Legging Company, of Hagerstown, Md. A feature of the exhibit is a new waterproofed legging, which is treated by a process just perfected and known as the "Byron" treatment. This is said to add also to the wearing qualities of the legging. A full line of the puttles and motorcycle leggings, both in leather and canvas, and in knee and thigh sizes are shown. Leggings made by the Hagerstown company are sold under the trade name of "Halco."

STRONG STANDARD STAFF

VISITORS at the Show booth of the Standard Welding Company are experiencing no difficulty in obtaining plenty of data bearing on the company's comprehensive line of steel tubing and other seamless steel parts, in view of the fact that seven of the firm's officials and department heads are very much "on the job." Those in attendance are: T. W. Guthrie, secretary and general manager; J. C. Manternach, general sales manager; R. S. Bryant, consulting engineer; F. L. Sessions, superintendent; B. A. Quayle, Chicago representative; B. G. L. Dodge, advertising manager and A. C. Clark, sales representative.

GREAT WESTERN SPECIALS

VICE-PRESIDENT CHARLES A. LONN, of the Great Western Manufacturing Company, of Laporte, Ind., is in charge of this firm's exhibit at Chicago. Mr. Lonn reports special interest in the company's newly patented bicycle frame and in the Fauber patented motorcycle crank-hanger which is one of the latest offerings of the Great Western company. These products were not shown in New York.

RECENT figures show that there are about 300 motorcyclists in St. Paul, Minn., and the local dealers expect to sell 200 machines before the riding season opens.

MESINGER "SUPERBA" SADDLE

AS might be expected, the Mesinger "Superba" leaf spring saddle is foremost among the saddles on exhibition at the stand of the H. & F. Mesinger Manufacturing Company, of 144th street and Austin place, New York City. The front divided springs are of chrome vanadium steel and the rear springs on each side are made of the same material with swing hinges, giving the saddle maximum spring action and insuring the lowest possible saddle position.

AMERICAN CO.'S STAFF

G. M. GREENE, distributor in Illinois and Wisconsin for the American Motor Company's products, is in charge of the Brockton firm's stand in at the Show. The company is showing the same machines that were displayed to good effect in New York. W. T. Marsh, of the American Motor Company, was seen at the stand at intervals for several days, but was unable to devote the full week to the exhibition owing to pressing business elsewhere.

Among the others who are working in relays to handle visitors at the American stand were: E. G. Zabel, of the Bertelson-Zabel Company, of Valley City, N. D., distributors for North Dakota, Wyoming, Idaho and Montana; D. W. Polkinghorn, of Cherokee, Iowa, distributor for Iowa; Hugh Scanlan and Dean D. Richards, of Scanlan & Richards, distributors for South Dakota, with headquarters at Bradley; C. W. Grady, of Howe, Ind., and M. J. Moran, of Cleveland, and D. H. Bothwell, of Toledo, of the company's sales staff and George H. Lloyd, of Syracuse, N. Y.; distributor for the Empire State.

COVENTRY PENNANTS

ATTRACTIVE pennants, bearing the inscription "'The Coventry' Chain; the Motor's True Mate," are in great demand at the show stand of the Sarco Engineering Co., of 112 Broad street, New York City, and "The Coventry" initiative is again bringing big publicity returns. Not content with merely passing the pennants out to visitors at the stand, the company's "chain gang" made the round of the exhibition chamber and tied a pennant to the handlebars of each machine on display. In some cases they even decorated the handlebars of machines standing outside the exhibition building. The Sarco firm is sole distributor for "The Coventry" chains in America, and no visitor at the Chicago show is being permitted to escape without being acquainted with the fact.

At the Sarco stand are Sales Manager H. F. L. Funke, L. H. Cornish and A. R. Roberts.

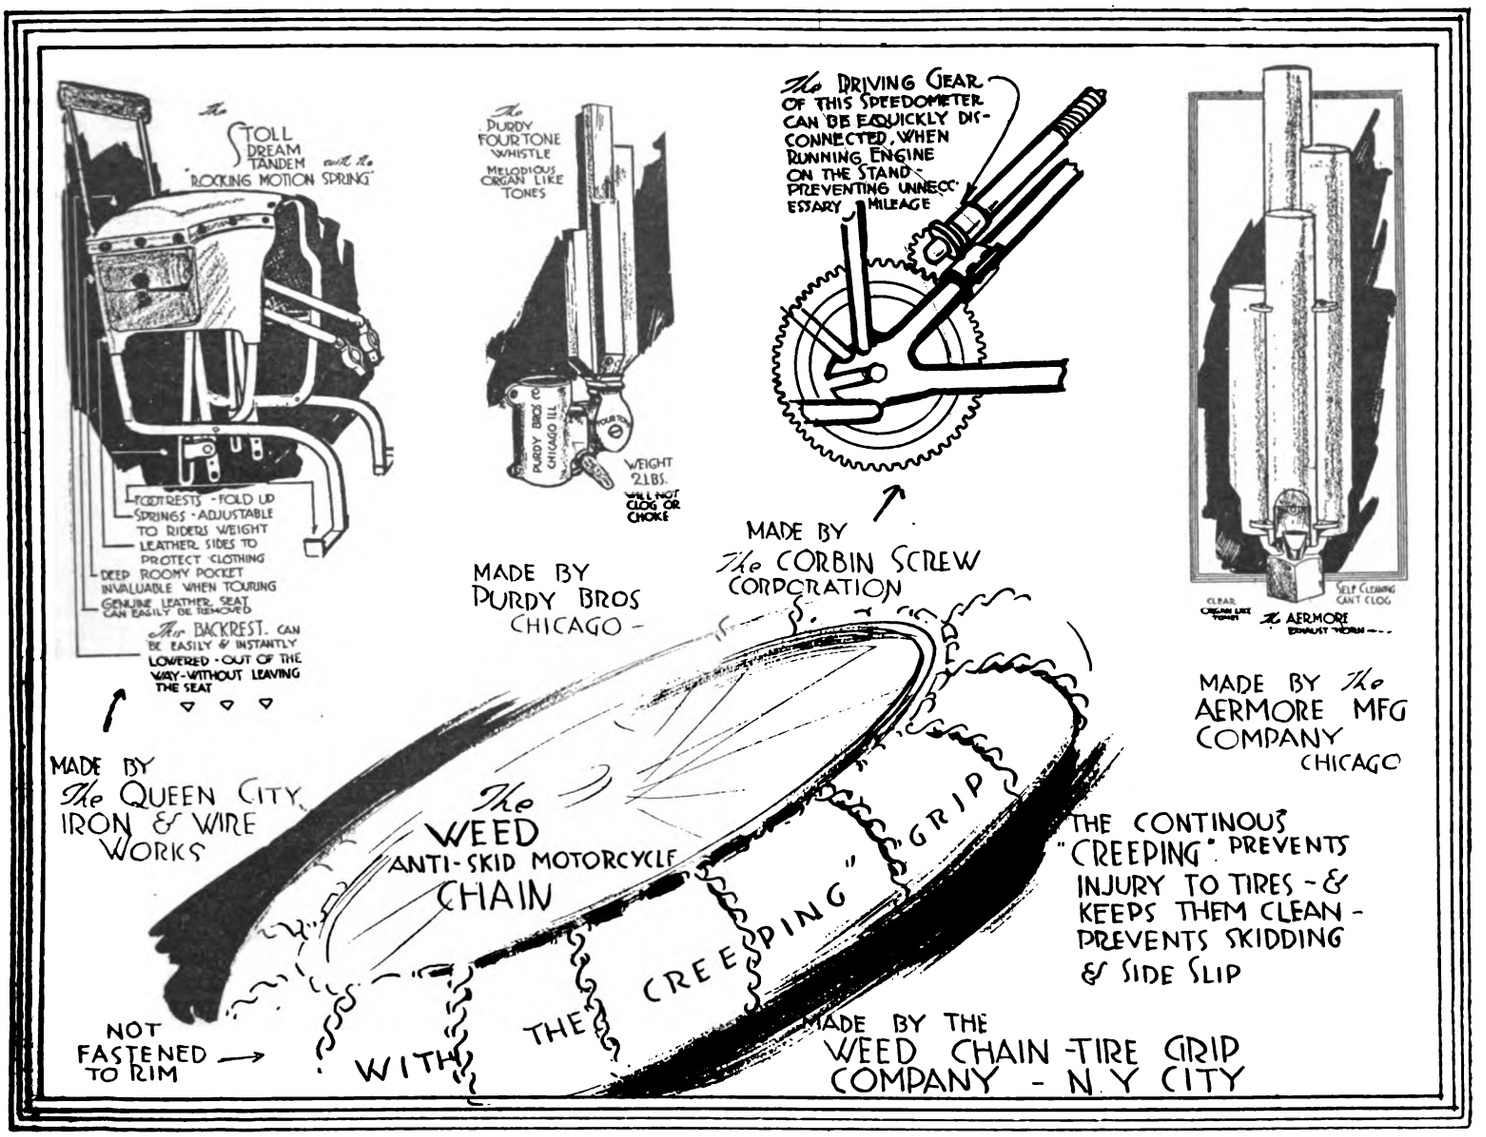
GENERAL MOTORCYCLE SUPPLIES

VISITORS at the Show booth of the Excelsior General Supplies Company, of 1436 Michigan avenue, Chicago, find a full line of motorcycle accessories and supplies and an attractive catalog, dealing with motorcycle goods exclusively, is in great demand.

THOMAS A BENEDICT

BALTIMORE, Md.—Raymond Thomas, known in racing circles as "Chic," was married to Miss Anna E. Muller, of this city, on January 27. The members of the Maryland M. C. attended the wedding in a body and afterwards made things lively at a reception.

Digitized by Google



STOLL DREAM TANDEM

AN offering of exceptional interest to the rider who wishes to carry a tandem passenger is the Stoll Dream Tandem, shown at the Chicago Show by the Queen City Iron and Wire Works, Thirty-third street and Walnut avenue, Denver, Colo. Both back and footrests are furnished with this tandem. If desired, the backrest may be lowered without the rider's having to dismount from the machine. The most important feature of the Stoll Dream Tandem is the rocking motion, in which all road shocks are absorbed.

WEED TIRE CHAINS

A DISTINCTIVE and most important feature of the Weed anti-skid motorcycle chains exhibited at Chicago by the Weed Chain Tire Grip Co., of 28 Moore street, New York City, is the "creeping grip." The great demand for a reliable chain is shown in the fact that the Weed company is now manufacturing and selling more than forty miles of chains every day. The continuous "creeping" of the Weed chains prevents injury to the tires and keeps them clean, at the same time minimizing the possibility of tire puncture. The secret process of hardening the cross chains which has just been adopted by the Weed company gives additional lasting qualities. Weed chains make so small a bundle when not in use as to allow them to be carried in the coat pocket.

PURDY WHISTLES

PURDY motorcycle whistles, manufactured by the Purdy Brothers Company, 939 West Garfield Boulevard, Chicago, Ill., are receiving their full share of attention at the Show. The Purdy line of exhaust whistles is featured by the A and B models. Purdy motorcycle pumps are shown in connection with the assortment of whistles, as well as a line of patent brackets and other specialties. The original model A whistle with the four variable tones, and the model B, which has been improved for 1913, the trapdoor valve now being used in this type, are the leading products of the display.

AERMORE FEATURES

IN addition to its Aermore exhaust horn and the Sabo motorcycle lock, the Aermore Manufacturing Company, of 1536 Michigan boulevard, Chicago, is exhibiting the Rogers sidecar which was illustrated and fully described in the New York Show Report number. The Rogers car is sturdy, well sprung, comfortably upholstered and fitted with an aluminum step which is of great value to the passenger in entering and leaving the car. The Aermore exhaust horn, illustrated elsewhere in this issue, is referred to as "The Horn Harmonious." It is simple, effective and far-reaching without being offensive.

CORBIN DISPLAY

CORBIN-BROWN speedometers and the Corbin duplex motorcycle band brakes are being displayed at the Chicago Show by the Corbin Screw Corporation division of the American Hardware Corporation, 229 High street, New Britain, Conn. The Corbin-Brown speedometer is built on the centrifugal principle and is so constructed that the accuracy of the mechanism cannot be affected by climatic conditions. Distinctive features of the 1913 Corbin speedometer are that the needle will not fluctuate, no matter how rough the roads may be, and that the instrument may be easily released when the machine is on the stand. This latter device enables the rider to keep a perfect record of his actual mileage. This speedometer records a total of 100,000 miles. In addition to the speedometer and the Corbin duplex band brake, a complete line of motorcycle and bicycle brakes, front and rear hubs, and knockout axles is being shown.

E. Mobberly, 1312 Scott avenue, has taken the agency for the Yale in Canton, Ohio.

Digitized by Google

VICTOR LAMPS

A NEW product of the Victor Auto Parts Company, Cincinnati, Ohio, is the Old Reliable motorcycle lamp, which is being featured at the Chicago show by the Fulton McCutchan Company, 1146 Michigan avenue, Chicago. This is being shown in connection with the line of X-Ray motorcycle lamps, which are also made by the Victor company and handled by the Fulton McCutchan company. An unusually large mirror reflector is used in the manufacture of the "Old Reliable," and the body of the lamp is stamped out of one piece of metal. The visitor at this booth finds a number of entirely new features in addition to the regular line.

OLD SOL LAMPS

OF unusual interest to the night rider is the complete display of Old Sol lamps, shown by the Hawthorne Manufacturing Company, Howard avenue and Spruce street, Bridgeport, Conn. Old Sol lamps, often termed "the lamps with the oversize lens," are displayed in varied types for both gas and electricity. Special attention is called to the new sidecar lamp, Old Sol No. 13, and the headlights, No. 17 and No. 8. The sidecar lamp shows a red signal, is rated at 100 candlepower, and is listed at $2.50. It weighs only ten ounces. Old Sol tail lights, numbers 9 and 20, are also shown, the latter being an electric lamp.

THE BECKLEY-RALSTON LINE

AN attractive assortment of tools and motorcycle and tire accessories are featured by the Beckley-Ralston Company, of Michigan avenue and Randolph street, Chicago. Among the high grade specialties found at this booth are: carbureters, chains, clocks, cyclometers, exhaust horns, gloves, grips, lamps, leggings, luggage carriers, spark plugs, speedometers and windshields.

BROAD ACCESSORY EXHIBIT.

EVERYTHING for the dealer and repairman was shown by the Chicago Cycle Supply Company at the Show. While inspecting this booth the rider can well imagine himself traveling through an accessory factory, so complete is the display. A full line of Perfection products is shown, among which are the motorcycle headlight, electric horn, combination spring carrier, generator and spark plug. An assortment of gauntlets, goggles, pedal rubbers, lamp brackets, motorcycle watches, Acme Sirens and Barco exhaust horns, Corbin-Brown speedometers and Schebler carbureters are also shown.

SPLITDORF PRODUCTS

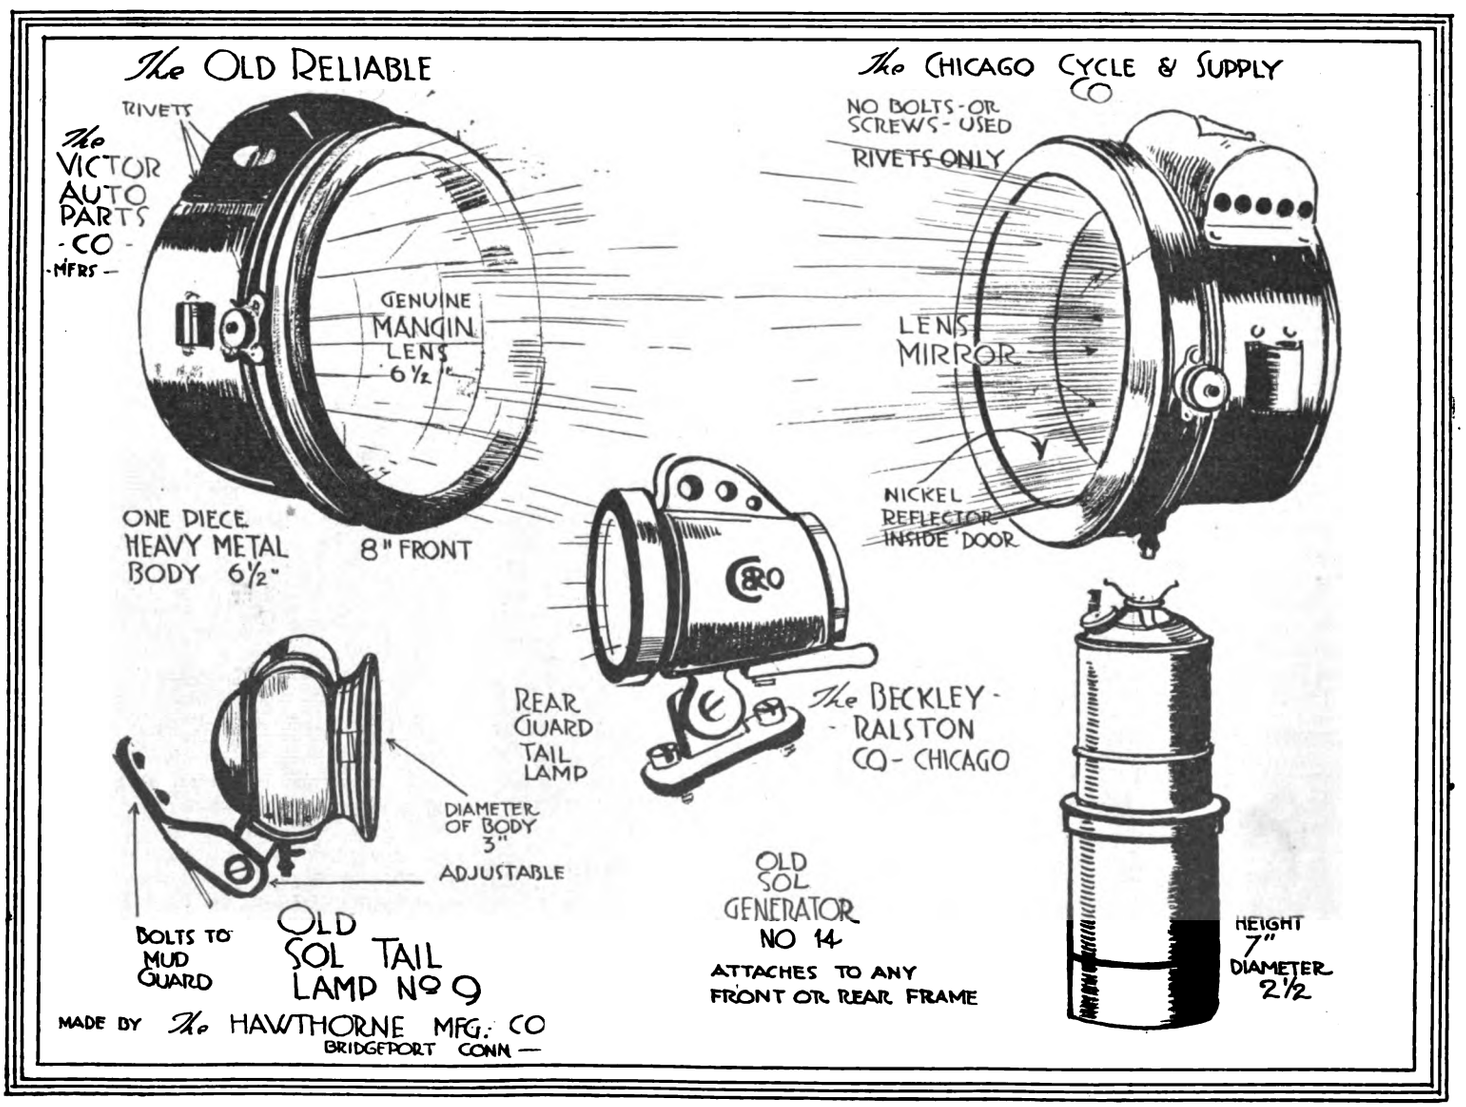
MAGNETOS of EU and EV models share interest with the "Common Sense" plugs at Stand 61, that of the Splitdorf Electrical Company. The EU model is for the ignition of single-cylinder motors, and the EV for twin motors, both models having been fully described in the issue of January 9. The spark-plugs are common sense in everything that the term implies, being gas-tight, soot-proof and unbreakable. They are made especially for motorcycle service, and give an intensely hot spark which will fire any mixture that is inflammable.

HART'S MACHINE SHOWN

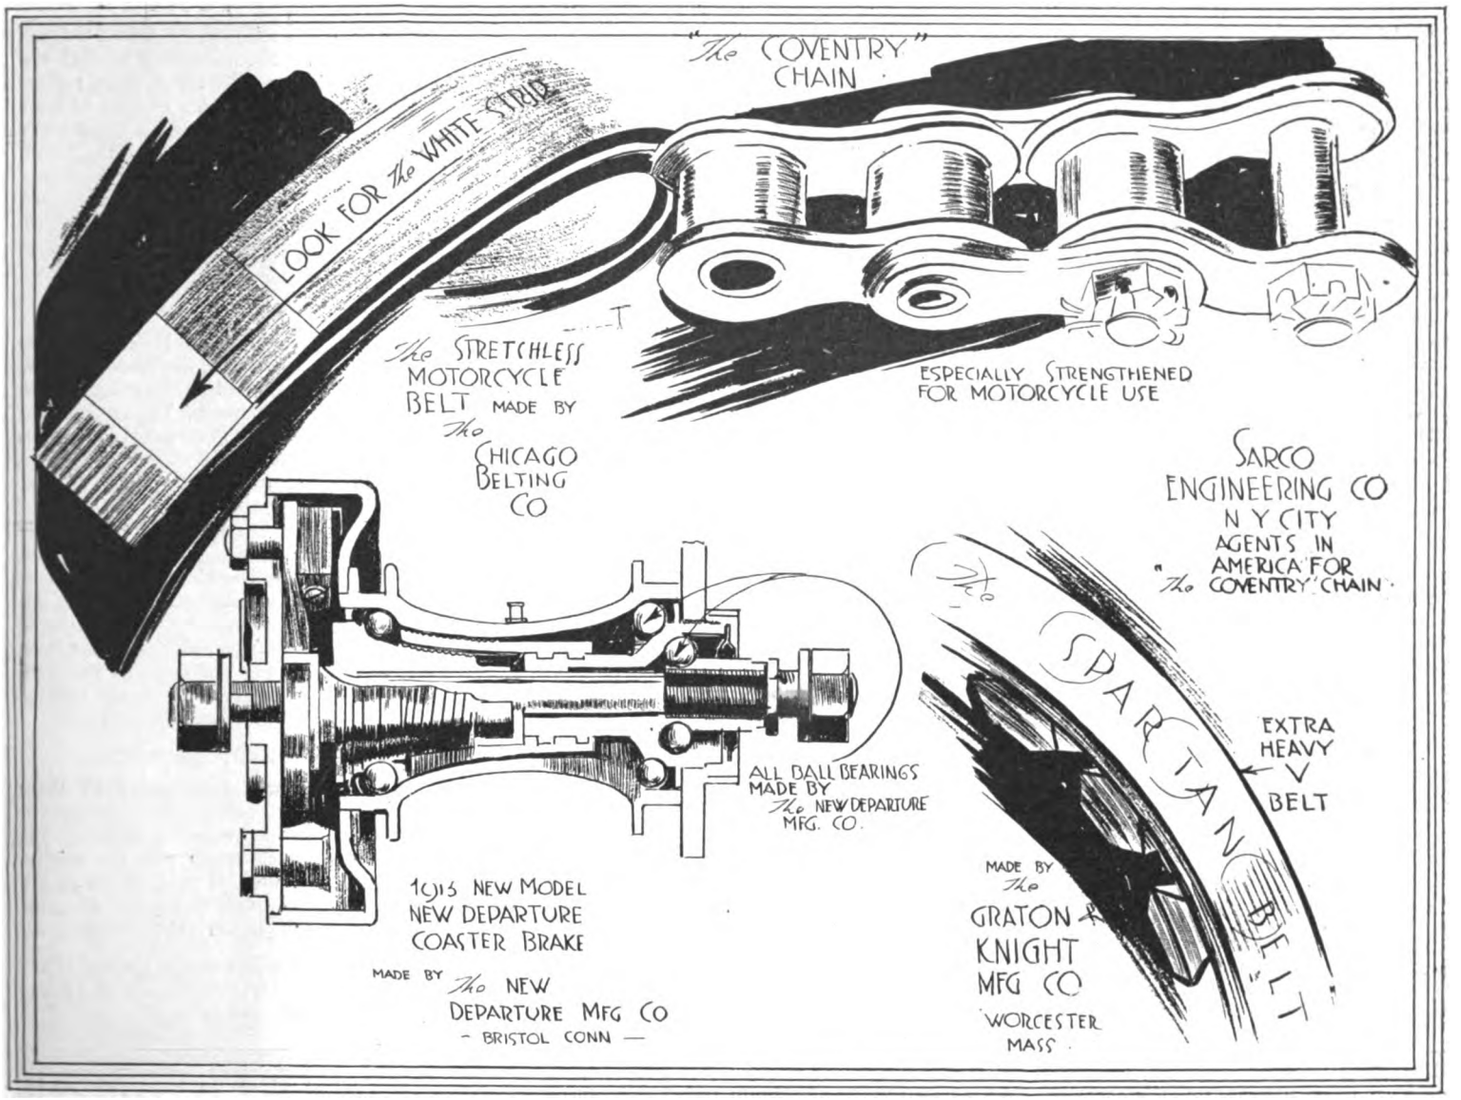
THE Aermore Manufacturing Company had on exhibit the machine ridden by Frank Hart from New York to Chicago, on which were fitted several articles manufactured by them. Hart left New York soon after the New York show, and was none the worse for his trip. This concern is going after the motorcycle trade strongly, and is making great headway. G. V. P. Lansing, D. R. Niver, P. Lightfoot, H. B. Jones, R. Rogers and Frank Hart. Hart is now connected with this concern as traveling representative.

MEETING POSTPONED

THE Chicago Retail Cycle Dealers' Association suspended their fortnightly meeting this week on account of the show, and the next meeting is scheduled for next week. M. L. Helpman, Jr., secretary of the organization, is at the show talking up the benefits of his organization.



Digitized by Google



NEW DEPARTURE BRAKE

AS might have been expected, the 1913 motorcycle coaster brake has had the lion's share of interest at the booth of the New Departure Manufacturing Company, of Bristol, Conn., since the opening of the Show, and the attendants have been kept busy explaining its distinctive points. This brake is credited with being strong enough to hold an automobile—and it looks it. When this brake is brought into action by back-pedalling it is capable of exerting a retarding force of a ton and a half in the brake drum. The mechanical construction, outside of the brake end, is practically the same as that which has been employed with unvarying success in the New Departure coaster brake for bicycles, but with all parts proportionately heavier to stand up under the excessive strain of motorcycle service.

In addition to the improved motorcycle coaster brake the New Departure company is showing a full line of its other brakes for both motorcycles and bicycles, fully demonstrated by its booth attaches. The New Departure company is showing its line of ball bearings, which have proved by rigorous test equal to stand with the firm's other products. In addition to its show display the company is conducting an individual exhibit of its ball bearings and motorcycle and bicycle sundries in Suite 1-7, Floor J, of the Congress Hotel.

"CHIBECO" PRODUCTS

WHITE STRIP motorcycle belts, both V and flat types, Sea Lion flat belts, "Chibeco" repair outfits, Sea Lion motorcycle belt dressing and "Chibeco" lagging are being featured in the comprehensive exhibit of the Chicago Belting Company, of 113 North Green street, Chicago.

Special attention is being called to the company's repair outfits, which are sold to dealers only. In this way the firm aims to help dealers by placing them in a position to repair belts, and thus to stimulate their business. The standard Chibeco repair set includes a belt knife, screw driver, finger steel, glue brush, roughing tool, heeler, scraper, Sea Lion cement and iron clamps. Literature relative to the company's line of motorcycle belts as well as the improved repair kits will be sent on request.

COVENTRY CHAIN EXHIBIT

IN addition to the attractive line of horns displayed at the booth of the Sarco Engineering Company, 112 Broad street, New York, was shown an assortment of the well-known Coventry motorcycle chains, manufactured by the Coventry Chain Company, Ltd., Coventry, England. Coventry chains have been much in evidence of late on winning machines in endurance runs and races in England, as well as in this country and have proven their durability to the satisfaction of the users and makers.

GRATON & KNIGHT DISPLAY

EVERY motorcycle product of the Graton & Knight Manufacturing Company, of Worcester, Mass., is being shown at the firm's stand in the Chicago show. The attractive display includes Spartan V and flat belts, solid round belting, motorcycle tire sleeves and cut lacing. The "belt with the pull" is a feature of the exhibit.

Sales Manager W. W. Shoemaker, of the motorcycle belt department, and G. W. Urquhart, manager of the Chicago branch, are in charge of the Graton & Knight booth.

GALE ON THE JOB

M. E. GALE, on a 10 h. Emblem, rode into Chicago Tuesday afternoon from Angola, New York. His machine was placed on exhibition in the Emblem booth. Gale made exceptionally fast time all along the route of over 500 miles.

INDIANAPOLIS REPRESENTED

A GOODLY number of Indianapolis motorcycle enthusiasts were present during the week. The Hoosier capital being within five hours' ride of Chicago, was in easy traveling distance.

Digitized by Google

FENTRESS-NEWTON CO.

PROBABLY the most interesting feature of the display at the Fentress-Newton Manufacturing Company stand is its improved tandem attachment, which embodies a luxurious cushion and a well-sprung, sturdy frame, with adjustable handlebars for the tandem passenger. When the cushion and handlebars are removed this attachment makes an admirable luggage carrier. The F-N back-rest for fitting to an ordinary motorcycle saddle fills a need long felt by the touring motorcyclist and its simplicity and ease of attachment, combined with its moderate price, make it a rapid seller. Another feature of the F-N exhibit is a universal lamp bracket which permits of attaching any make of lamp on any motorcycle handlebar. The firm also produces extension nuts and other fittings that are described in a neat folder. The company is located at 429 Bagg street, Detroit, Mich.

GRINNELL GLOVES

GRINNELL "Grip-Tite" gloves, especially suitable for use by motorcyclists, are being featured in the extensive line of the Morrison-Ricker Manufacturing Company, at the Chicago Show. These gloves may be obtained with or without the ventilating feature. A distinctive branch of the firm's well-known "Rist-Fit" gloves are also included in the display, and special attention is being called to the fact that all Grinnell gloves are made up from reindeer leather and coltskin, both affording extra long life in the glove and unusual pliability. The "Grip-Tite" glove has a specially constructed palm which resists wear and also permits the user to grasp an object as firmly as if the bare hand were used.

ATLAS DISPLAY

MODEL B, an improved spring combination luggage carrier, is the main feature of the display of motorcycle supplies shown by the Atlas Specialty Manufacturing Company, 557 West Jackson Boulevard, Chicago, Ill. Among the other articles on exhibition are the firm's standard combination tail-lamp, luggage carriers, tool rolls, dust-guards, and several other models of tail-lamps. The combination lamp is constructed for acetylene or electricity, and is made in one piece of highly finished aluminum, buffed and polished. The display of fabric goods includes a line of high-grade leggings, known as the Chicago brand. Messrs. Wollheim, Pieper and Hellman are in charge of this complete and attractive assortment of motorcycle accessories.

A WESTERN ENTHUSIAST

"MOTORCYCLE manufacturers as a whole do not realize the tremendous possibilities for business in the West," said E. L. Morse, of Los Angeles, at the show. "You have no conception," he said, "of the growth of the industry in the West, where the motorcyclists can ride all the year round. It is really the home of the motorcycle. One noticeable feature is that 90 per cent. of the machines have tandems, and the tandems have no handlebars. In Chicago, motorcycling is supposed to have quite a hold, but the comparatively small city of Los Angeles has 8,000 riders, so you can see what the interest amounts to. The recent record-breaking by Humiston has set the West afire with new interest. Roads are nearly always good."

SPECIAL EXHIBIT

THE Continental-Erie tires were not exhibited at the show, but were elaborately displayed at the New Southern Hotel, across the street from the Furniture Exhibit building. William J. Surre, well known for his congeniality, was on the job and was ably assisted by E. H. Strickland and their Chicago manager, Fred Fee. The display drew well during the week.

FOR THE TOURIST

THE Motor Sales Company, 1806 Michigan avenue, in its booth showing Merkel motorcycles, also had on display a large motorcycle cape which that concern expects to market exclusively in Illinois, Iowa and Missouri. The cape, which is manufactured by the Goodman Rubber Company, 116 Pennsylvania street, Indianapolis, carries with it a written guarantee in regard to its being waterproof. The cape was designed by Erwin Baker, of Indianapolis, and is made to retail at $4.

AN ATTRACTIVE ISSUE

A "CHICAGO SHOW NUMBER" of the monthly house organ, the *Harley-Davidson Dealer*, was distributed by the publicity men at the Harley-Davidson booth. The special issue is unusually attractive, the cover design being uncommonly interesting. The design is an actual photograph, taken at night by L. C. Rosenkrans, Harley-Davidson staff photographer, the picture being of a large electric sign which is now showing in Milwaukee on top of the Milwaukee Electric Railway & Light Company. The sign reads in bold letters: "The Electric Company Electric power is best; ask Harley-Davidson." The sign was put up in recognition of the fact that the Harley-Davidson company is the greatest user of electricity in Milwaukee.

HOTEL ROOM SCARCE

MUCH trouble was experienced by those searching for hotel accommodations, as the hotels all over town are crowded. The New Southern Hotel, which was the nearest to the motorcycle show, is sold up far in advance, and only a limited number of show visitors made their headquarters there.

A NUMBER of riders of the Tampa (Fla.) M. C. recently participated in a run to Lakeland and Mulberry.

REDMOND SPECIALS

ONE brand new accessory exhibit was the Redmond footboard, an accessory marketed to dealers by the Harry Svensgaard Sales Corporation, of Detroit, and manufactured by the Motorcycle Parts Company, of the same city. A. C. Redmond is the inventor. The footboard, which is adjustable to any motorcycle, weighs less than 2½ pounds, and is made mostly of aluminum, with drop-forged connections. The footboard proper, which is of aluminum, is arranged so as to make it easy for the foot to stay on the rest, and the boards are on hinges, which permit them to be folded out of the way when not in use. The whole apparatus is fastened onto the lower bar which runs from the head to the motor, and is arranged so as to take care of the different rods on the motorcycles.

C. A. Redmond also exhibited his latest patented shock absorber. The contrivance is arranged so as to be connected directly with the rear wheel in much the same manner as the spring forks are connected upon the front wheels of motorcycles. The Redmond shock absorber consists of enclosed 1¼-inch coil springs, with rebound springs, adjustable to weights and road conditions. The bearings are all hardened in oil and ground. There are three distinct bearings which are designed to prevent any possible sideplay. In connection with the shock absorber there is a durable stand, and the whole contrivance is made to fit any make motorcycle.

FOX TANDEM SEAT

THE Fox Manufacturing Company, of Seattle, Wash., exhibited the adjustable Fox seat, with the latest features incorporated. The handlebars this season are made adjustable, and may be folded down beside the tandem seat when not in use. The footrest for the tandem rider is on springs, and the rest folds backward in case of a "spill," thereby saving it from breaking or bending. Another set of coil springs has been added to the spring supports of the seat, in addition to the coil springs and flat adjustable main spring used last season.

NEW KOKOMO TREAD

FROM Kokomo, Ind., has come additional proof that there is "something new under the sun." This time the proof takes the form of a brand new motorcycle tire tread which is being featured by the Kokomo Rubber Co. in its Chicago show exhibit. The tread is known as the "Dazzler," and is made up of newly-designed studs with connecting ridges, the whole providing a surface calculated to reduce skidding and side-slip to the minimum, while insuring longevity of the casing.

An illustration shown elsewhere in this issue makes clear the construction of the new Kokomo product, and calls attention to the seven layers of material beneath the tread proper. In addition to the "Dazzler" tread the company will continue to make its standard studded line of motorcycle tires and its durable tubes, as well as its tire and tube products for bicycles.

D. L. Spraker and R. R. Bowen are in attendance at the show stand of the Kokomo company.

MARBURG FEATURES

THREE highly interesting products of Marburg Brothers, Inc., 1790 Broadway, New York, are attractively displayed at the Chicago Show. Probably the most prominent among these is the Marburg "Lucifer" electric lighting outfit for motorcycles and bicycles. The "Lucifer" is easily installed on any machine, does not detract from the appearance of the motorcycle and is absolutely waterproof.

The Mea magneto is another feature of the Marburg exhibition. The bell-shaped magnet, placed horizontally in such a manner that it can be shifted around the armature within the smallest space has contributed largely to the success of the Mea magneto. Mea high tension magnetos constitute a large portion of the enormous business done by Marburg Brothers. S. R. O. ball bearings were also exhibited by this firm. This bearing is manufactured by the S. R. O. Company, one of the largest and oldest ball bearing companies in Europe.

RENOLD CHAINS

ONE of the most interesting and novel exhibits at the Chicago Show is that of the Peter A. Frasse & Co., of 417 Canal street, New York. The company is showing a "chain process" board which makes clear the complete process in the manufacture of Renold chains, from the testing of the raw materials to the final trial of the completed chain. A standard 5-feet length of Renold cycle chain goes through an amazing number of operations from start to finish. The firm is also giving out interesting booklets entitled "Engine Room of the Cycle" and "Hints on Chain Drives for Motorcyclists."

HERZ MAGNETOS

A HERZ magneto, shown in operation while entirely submerged in water, is the leading feature of the exhibit of Herz & Co., of 295 Lafayette street, New York City. Although put to this unusually severe test, which would probably never be met under any weather conditions, the magneto continues to work perfectly. A line of Herz spark plugs is also shown. Attention is called to the fact that a Herz magneto was used on the machine with which Lee Humiston made his recent record-breaking trials.

NATHAN SPECIALTIES

AMONG the specialties for motorcyclists featured in the extensive exhibit of the Nathan Novelty Mfg. Co., of 84A Reade street, New York City, are the firm's hand windshield and its "slip-on" hip legging. The former is so designed that it amply affords the riders hands ample protection no matter how cold or windy the weather may be. It prevents the wind from reaching the wrists and from blowing up the sleeves of the rider's coat, thus obviating one of the most annoying features of cold-weather motorcycling. To provide additional warmth and comfort the firm has made its hand windshields from the best quality sheepskin, with the natural wool, a great heat retainer, on the inside. As the shields are covered on the outside with waterproof leatherette no water can make its way through to annoy the user or affect the material.

The slip-on legging is extremely pliable and hugs the leg closely without being uncomfortably tight. Much of the ease obtained from this legging is due to a pliable leather gore which is inserted in the back. This attention to detail is typical of the Nathan line. A catalog describing the firm's full assortment of accessories for the rider will be mailed on application.

BOSCH MAGNETOS AND PLUGS

A PROMINENT feature of the Chicago exhibition of the Bosch Magneto Company, 223 West Forty-sixth street, New York, is a model of its ZEV magneto, operating in connection with a chain bucket arrangement whereby it is placed under the conditions actually met with while motorcycling in a heavy downpour of rain. This bucket system is so arranged that water is constantly thrown upon the magneto which continues to operate perfectly in spite of the severe test.

In addition to this magneto and the company's standard line of spark plugs and magnetos there is shown a large model of its new high tension spark plug in section, so that the makeup of the plug can be clearly seen. The plug is in actual operation, the high tension current being supplied by a large Bosch magneto. This arrangement proves the continuous efficiency of the magneto and also shows the working of the plug.

BARCO CHIMES

BARCO motorcycle chimes and valves are on exhibition at the Chicago booth of the Barco Brass & Joint Company, of 226 North Jefferson street, Chicago. The 1913 Barco chime is larger than the 1912 model and is richer in tone. The horn has three tones so harmonized as to produce a rich, clear sound. The valve is slipped on the exhaust pipe and the horn is attached to the valve in a convenient position. The operation of the Barco signal is exceedingly simple.

ACME MOTORCYCLE SIREN

WITH reference to the comprehensive line of horns displayed at the Show stand of the Sarco Engineering Co., of 112 Broad street, New York City, motorcyclists were interested chiefly in the Acme Siren. This is a compact and most effective warning signal, of the bulb family. A single pressure of the bulb produces a sound of great range and carrying power. The Acme is made in four types for motorcycles and in two for automobiles.

WESTINGHOUSE VULCANIZER

AN electric vulcanizer, recently placed on the market by the Westinghouse Electric & Manufacturing Company, of East Pittsburg, Pa., simplifies the making of tire repairs and is credited with unusual economy in operation. The device can be used with either direct or alternating current circuits. It is provided with a concave surface for use in vulcanizing the casing, and a flat surface for use in making inner tube repairs. The heating element consists of a metal ribbon imbedded in mica and hermetically sealed in the vulcanizing casing. This construction keeps the heater free from air and prevents oxidization. The outfit is so compact that it is adaptable for motorcycle garages, or even for private use where electric current is available.

VAN CLEEF PRODUCTS.

A NEW aluminum headlight, which has just been perfected, is displayed at the Chicago show by Van Cleef Brothers, of 7707 Woodlawn avenue, Chicago. The distinctive features of this lamp are lightness and durability. The Midget tail light and the firm's tire repair specialties are also attracting notice. The products of this firm are sold under the name of "Dutch Brand." Noah, Paul, Maxime, and Felix Van Cleef and J. W. Leach are in attendance at the booth.

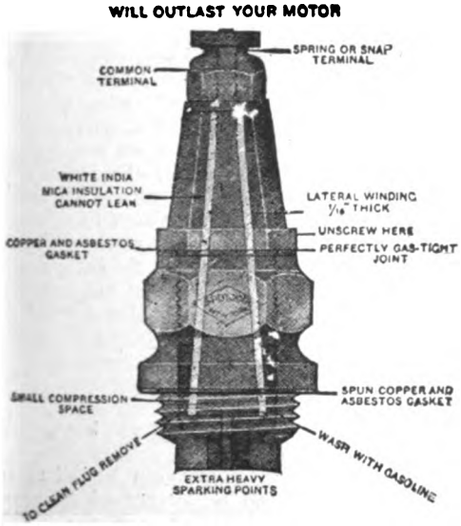
Digitized by Google

SOLAR LIGHTING EQUIPMENT

AMONG the exhibitors showing an attractive assortment of lamps and generators is the Badger Brass Manufacturing Company, of Kenosha, Wis., and New York City. The new Solar motorcycle lighting equipment is shown complete. The "Dad" and "Sonny" headlights are the leading models in these types, the body and flare on both being made of one piece, so that there is no door to rattle. These lamps have aluminum front reflectors and 1½-inch ruby jewels on each side. The right side jewel has a hinge and a catch to permit of lighting. The "Dad" model sells for $5 and the "Sonny" for $4. The Solar tail lamps are made in both the gas and electric types, the former selling for $1.50 and the latter for $2.

HINE-WATT OFFERINGS

COLUMBIA lamps, generators and supplies, manufactured by the Hine-Watt Mfg. Company, 16 East Randolph street, Chicago, are attractively arranged at the company's show booth. Head and tail lamps, in oil, gas and electric types, are shown. A line of Columbia burner cleaners and combination oil and grease guns, lamp brackets and burners are also displayed. Messrs. R. F. Mau and H. K. Ford are in charge of the Hine-Watt booth.



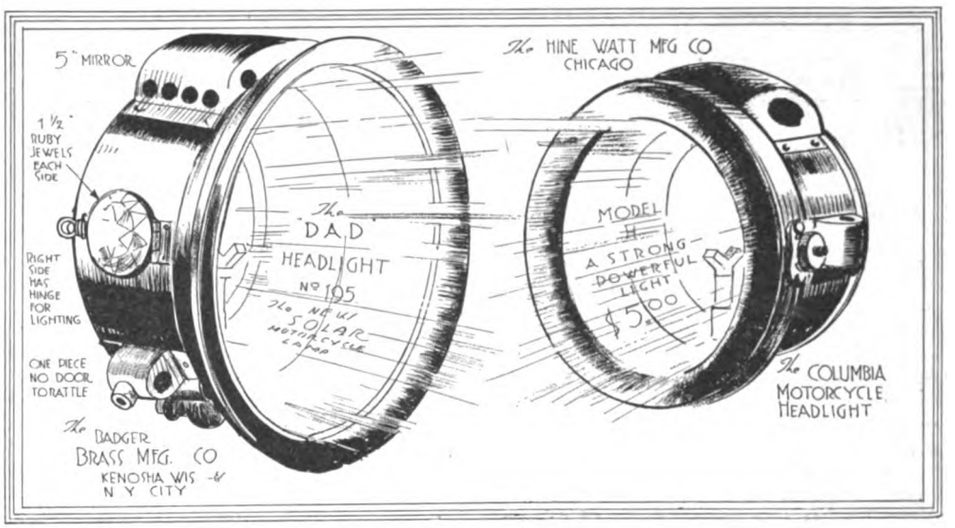
Splitdorf "Common Sense" Spark Plug, Which is Described Elsewhere.

LOW FEE SCORED HIT

THE fact that only 25 cents admission was charged to the show was one of the features which appealed to the motorcycle enthusiasts who visited the big exhibit. To any one who was interested, even in a small measure, in motorcycles and accessories, the show was well worth the price charged for admission.

WALTER F. WALKER was alone at the Weed Tire chain booth, but managed to demonstrate the Weed anti-skid grip to very good advantage.

THOSE in attendance at the show stand of the North Chicago Machine Co., which is featuring the Phantom motor in both single and twin types, are General Sales Manager Frank Palmbla, Salesman M. W. Crew and Superintendent E. S. Palmbla, who is also the inventor of the motor.



ACTIVITY IN THE SOUTH

"TWICE as many machines will be sold in Alabama this year as were sold in 1912," said T. E. Spotswood, Jr., of Mobile, who was an interesting spectator at the Chicago show. "The people in our section of the United States are just beginning to appreciate the value of good roads, and they are spending lots of money to get them in good condition. We look for banner business this year."

AN INDUSTRIOUS ORCHESTRA

THE orchestra at the show was given a roomy corner all to itself, and the music could be heard all over the exhibition hall, even during the busiest and most crowded hours.

THE Waverley Manufacturing Company, manufacturers of the Jefferson, was represented by A. F. Haberman, W. E. Klug and E. A. Punzel.

THE merits of the Schickel motorcycle were described to good effect by Sales Manager E. J. Carling and H. A. Skinner.

AT the booth of the Hagerstown Legging Company, the sightseer is greeted by R. L. Campbell, secretary, and L. V. Hershey.

THE Marburg Bros.' exhibit is in charge of F. Marburg, L. C. Marburg, E. C. Cheney and David Marschauk.

AT the booth of Angsten-Koch Company the enterprising young concern of Chicago, were found many new accessories for the motorcycle. Their new products aroused much interest. Those in charge were Henry Angsten, "the big gun"; Chas. J. Angsten, Joseph P. Angsten, B. F. Koch and Robt. Phillips.

THE new Superba saddle was well demonstrated by Messrs. Henry F. Mesinger and I. H. Whipple.

ONE feature of the Show that was distinctly original and that brought about all the good results expected of it was the distribution of 500 complimentary tickets for ladies. Feminine enthusiasts took advantage of this thoughtful arrangement in large numbers, and while their attention was given chiefly to the sidecar displays they managed to work up considerable interest in the purely mechanical aspect of the exhibition.

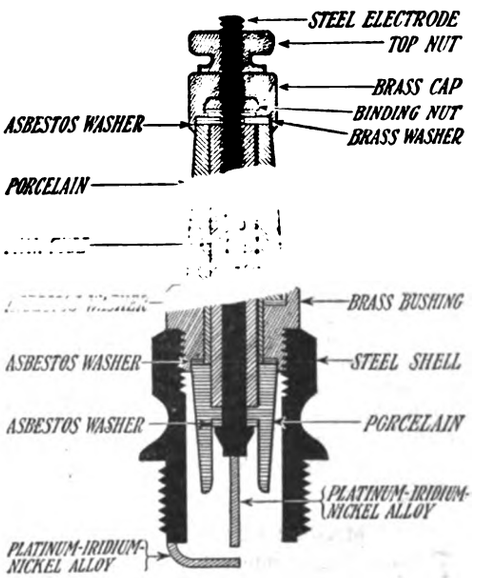
LOEWENBERG CLOTHING

LOEWENBERG clothing for motorcyclists as well as for all other lovers of outdoor sports is being shown to advantage in Chicago during Show week by L. N. Smith, who has an attractive display of the goods at the Hotel Brevoort. The Loewenberg line includes complete outfits for women as well as male enthusiasts, and Mr. Smith reports entirely satisfactory returns from the individual exhibit at the hotel.

ALTHOUGH the Troxel Manufacturing Company had no exhibit, its saddles were to be seen in many places. H. T. Roberts was there to see that they were well displayed.

"LONG JOHN" O'CONNOR, of the Hendee factory, was missed at the motorcycle show. A motorcycle show or convention without O'Connor on the job with his pencil, cap and startlingly long trousers, has heretofore been regarded as quite possible.

AN ordinance has been passed in Paducah, Ky., whereby motorcyclists riding at night without both head and tail lamps will be liable to arrest.



New Johns-Manville Spark Plug.

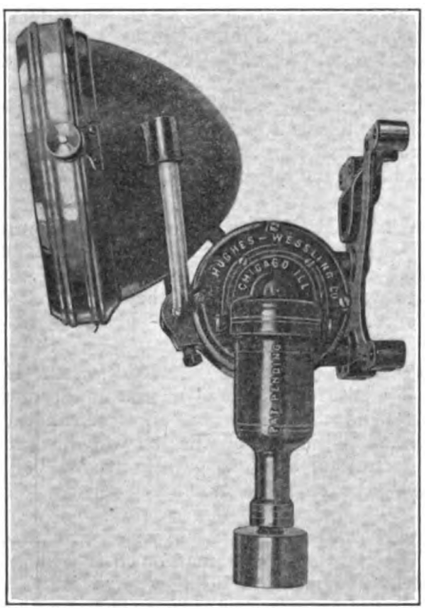
NEW ELECTRIC OUTFIT FOR ALL NEEDS

Hughes & Wessling Feature System, Including Headlight, Tail-Light, Speedometer and Trouble Lights and Electric Horn, and All May Be Used Effectively at Same Time

MOTORCYCLISTS who are giving careful attention to developments in the field of electric lighting for the motor two-wheelers are deeply impressed with the display at the stand of Hughes & Wessling, designers and manufacturers of metal specialties, at 3912 Hoyne avenue, Chicago. One of the first features to attract the visitor is the completeness of the Hughes & Wessling lighting outfit, which is made up as follows: A 6-volt, 6-ampere generator, complete with governor; a 6-inch headlight with parabolic reflector and an 8 candlepower bulb; a cast aluminum tail-light, with license bracket and 2 candlepower bulb; a 4-way switch, with all necessary wiring for the entire outfit; a 20-ampere hour



A View in Detail of the Improved Hughes & Wessling Lamps.

storage battery; a base for mounting the generator on the motorcycle; all necessary clamps for fastening outfit, and a wiring diagram and instruction sheet. Other fittings which can be used from the gem generator affecting the light, and which can be obtained from the manufacturers at moderate cost are: An electric horn, a trouble light and a speedometer light. All these extras may be used with the main lighting system in operation if the rider so desires.

The generator is of the inclosed type, being absolutely dust and water proof, and unaffected by rain or damp weather. It is wound to deliver its proper voltage at 2000 r. p. m., which is attained when the motorcycle is traveling 12 miles per hour, and it is mechanically governed to hold 2000 r. p. m. from 12 miles to 60 miles per hour. When the motorcycle is traveling at less than 12 miles per hour, or has come to a complete stop, the lights are supplied by the storage battery. The output of this generator is never drawn upon to its fullest capacity. For the benefit of those who do not understand electricity the generator output or load is figured upon the basis of a light drawing 1.3 watts per c. p.; therefore, a headlight of 8 c. p., a tail-light of 2 c. p., and for those who want them, a speedometer light of 2 c. p. will make a total of 12 c. p., or 16 watts. Sixteen watts divided by 6 volts will equal 2 2/3 amperes for lights. The battery will draw 1½ amperes, making a total of 4 1/6 amperes out of a possible 6, so it can readily be seen that the generator is never overworked and has reserve power for an electric horn or larger headlight if the rider should desire it, but it is thought by the manufacturers that 8 c. p. will be found sufficient.

The armature is especially wound to meet the requirements of a motorcycle lighting outfit, having the same power as an automobile outfit but using one-third the space. It is mounted on the best of imported ball-bearings, as well as the governing mechanism, making it very easy running under load; it does not consume more than one-twentieth of a h. p. at any time.

The brushes (which are a source of great annoyance in most generator sets) are made as nearly suitable to the requirements of this outfit as can be manufactured, the original test set now being used by the makers having gone nearly 10,000 miles, and the brushes are still in good condition. The majority of manufacturers employ laminated copper or bronze in the making of brushes for generators, which in thorough tests has proven unsatisfactory. The brushes used in this set are of a composition imported from France, which contains every essential quality of the laminated brush, and in addition enough lubricant to eliminate rapid wearing. They are so situated as to be easily accessible.

The governing mechanism and friction drive is also inclosed in a water-and-dustproof case, pivotly mounted on the end of the generator frame and held against the front tire through the medium of a coiled spring, which also takes care of any uneven running of the front wheel. The friction drive consists of a 12-disc, multiple disc clutch, which is considered by some engineers to be in advance of the cone or flat-face type of clutch, for flexibility and efficiency, and this in turn is controlled by the governing members, which can be adjusted to produce from 4 to 10 volts at 12 miles per hour or faster.

The connection between the driving mechanism and generator is not by bevel gear, as one would at first suppose, but, by what is termed among mechanical men—the silent-pin drive, case-hardened steel pins meshing with a cut fibre gear on the generator shaft and making it absolutely silent. The headlight is spun of one piece of heavy gauge sheet brass with no small parts to jar loose and drop off, and mounted with drop forged brackets to the generator frame in such a manner that the light can be thrown very close to the front wheel or raised up to throw a long distance in advance of the machine. It can be furnished in either black japan, with nickel trimmings, or in polished brass.

The reflector is a true parabola which will throw a clear white penetrating light fully 500 feet in advance of the rider, or a wide fan-shaped light the width of any city street. It is also made of heavy spun brass with nickel silver reflector and fitted with a focusing candelabra socket and an 8 c. p. tungsten globe, the best that can be obtained for use where vibration is a serious contention.

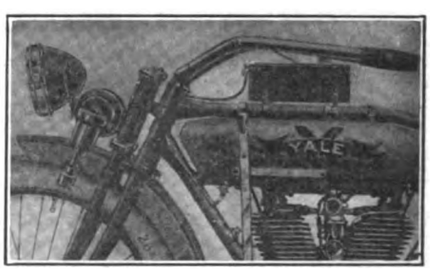
The tail-light and number bracket are cast of one piece of high-grade aluminum, insuring its always being in proper position, and is finished in black japan or polished aluminum. It meets all the requirements of the various State laws, inasmuch as it displays a brilliant red light to the rear and has a white jewel on the top, which illuminates the entire license number. It can be used on a machine carrying a tandem or luggage carrier as well as on one without this fitting.

A four-way switch is employed for operating the lights and battery, which can be secured to the handlebar or to the top of the tank at the will of the rider. It is made of hard rubber and is absolutely water-proof. The wiring is all inclosed in a water-proof casing with different colored leads for the different lights; with the aid of the diagram an amateur can easily equip his machine with the outfit.

The storage battery question, which has in the past been a difficult problem to solve, as jars and vibration had to be contended with, has been entirely overcome in the battery used with this outfit. It is small and compact, considering its capacity, and can be mounted on the top frame tube of the machine like a gas tank, or in any other suitable place, i. e., the luggage-carrier, handlebars or in front of the engine, on single cylinder machines. Clamps for mounting it on top of frame bar will be regularly furnished.

The trouble light, which can be had as an extra, will be found to be very advantageous in the event of a puncture or engine trouble at night when no other light is available.

The electric horn is of standard make and very neat in appearance, giving a loud but not offensive warning. It is finished in black enamel or polished brass.



The Hughes & Wessling Outfit [illegible] to a Yale Motorcycle.

Mr. Wessling, one of the firm of The Hughes & Wessling Co., claims he has driven a machine equipped with this electric set since June 1, 1912, covering close to 10,000 miles, and that the wear is so slight it is hardly noticeable, the tire still being in very good condition. He is also using the original lamps.

USING PARCELS POST

ADVANTAGE is being taken of the parcels post system by the Chicago branch of the Hendee Mfg. Co., for the shipping of parts to patrons who would otherwise be obliged to satisfy themselves with less speedy deliveries. Always on the alert to improve its service, the Springfield company has put in service an Indian delivery van which rushes all parcels post packages to the post office. Every afternoon at 4 o'clock the Indian van carries a shipment of parcel post packages to the Chicago office.

The large number of agents who are now ordering Indian parts from Chicago are availing themselves of the advantages of the parcel post to such an extent that there has been at least $150 or $200 saved in the aggregate to the various agents since January 1 on transportation alone. It is the intention of the branch to ship all goods by parcels post, unless otherwise specified, for the reason that it is a saving to the customers who are continually ordering small parts for the trade.

The parts department of the Chicago branch has been enlarged, and now occupies the entire second floor of the building at 1251 Michigan avenue, where a large supply of parts of all kinds for Indian machines is ready for immediate shipment.

OLD OFFICERS RETAINED

AT the annual meeting of the Republic Tire & Rubber Company recently, at Youngstown, Ohio, all the old officers and directors were re-elected. The year 1912 was a banner one, and a number of extensions were made, including a new shop, which greatly increases the capacity of the plant.

The officers and directors follow: President, T. L. Robinson; first vice-president and sales manager, J. H. Kelly; second vice-president, L. T. Peterson; secretary, C. F. Garrison; treasurer, M. I. Arms; general superintendent, A. H. Harris; directors, John and David Tod, J. C. Wick, H. K. Wick, M. I. Arms, C. H. Booth, Robert Bentley, J. H. Kelley, A. H. Harris, L. T. Peterson and T. L. Robinson.

DETROIT OUTLOOK IS BRIGHT

DETROIT, Mich.—It is likely that Detroit's two motorcycle manufactories that at the present time are in the hands of receivers will be in operation within a month under new management. At least there are steps now being taken to re-organize them both.

In the case of the Triumph Motorcycle Co., information which comes from an authoritative source is to the effect that the old officers of the concern are taking steps toward taking care of the indebtedness and again placing the business beyond financial difficulties. The factory, which now is in the hands of the Security Trust Co., as receiver, has not been in operation since the courts made the transfer and according to the information the transaction may be closed in a week or two.

The Detroit post office department is giving the motorcycle a trial as a parcel post means of delivery. A machine has been equipped with a special carrier and will be given a thorough trial and if found practical more probably will be pressed into service.

ADOLPH KLINE and Doyle Obie, of Hutchinson, Kan., have just completed a 1,000-mile trip by motorcycle through Kansas and Oklahoma, and are now planning to cross the Rockies in the spring.

SPACKE MOTORS

DE LUXE motors in both plain and two-speed types are attracting much attention at the show stand of the F. W. Spacke Machine Company, of Indianapolis. Eight motors in four sizes are on exhibition, including two motors in section to permit of the fullest inspection of their internal makeup. The company is also showing a full line of detail motor parts.

In each of the motors four distinctive features are holding the interest of visitors: The racing type roller connecting rod crank-pin bearings in the twins, the simple priming device, the improved splash oiling system and the enclosed intake valve levers and pins

The enclosed intake valve lever and pin arrangement consists of the enclosing of all these parts in a case, which is filled with hard grease and graphite. This construction keeps the parts clean, and has a silencing effect.

Perhaps the newest and most interesting feature of this exhibit is the new 1914 line of De Luxe two-speed unit power plant motors. These two-speed motors are the same as the standard plain motors in every way, except that a gear box containing a two-speed transmission and free engine feature has been added to the rear of the motor and made an integral part of it.

The transmission is of the sliding gear type, with the gears constantly in mesh. All gears are of ample pitch dimension and face width, and the shafts are hung on annular bearings. The control is operated by a single lever, one extreme of the travel of which represents high gear, the other, low gear, and the center position free engine.

The Spacke Company offers the two-speed motors in four sizes, the same as the plain motors, but states that deliveries in quantities will not be available before April 1. De Luxe two-speed motors are especially well adapted to motorcycle, side and tri-car use.

AMONG THE MISSING

A BLUE, magneto-model Haverford motorcycle has been stolen from F. J. Wilhelm, of 114 North Erie street, Toledo, Ohio. It was equipped with Kokomo 28 x 2½ tires, and an A. K. luggage carrier with red cushion, a Prest-O-Lite tank and a large lamp. The regular F. A. M. reward of $25 will be given for its recovery as well as the $25 offered by the owner.

PLAN ENDURANCE RUN

AT a recent meeting of the Urbana M. C., of Urbana, Ohio, arrangements were made for an endurance run to be held in the spring, and club officers were elected. The new staff: E. Holding, president; Forrest Toomire, vice-president; Fred Harenberg, secretary and treasurer, and John Hendrickson was chosen road captain.

PROVIDENCE M. C. BANQUET

PROBABLY the most important feature of the winter programme of the Providence (R. I.) Motorcycle Club is the annual banquet, which will be held Sunday, February 9. This is the seventh annual banquet of the Providence club.

USING HENDERSONS.

DR. FRANK MERRILL BELL, an aviator of St. Louis, Mo., using the Benoist military tractor biplane, is planning an exhibition tour of the gulf-coast resorts. He will carry as part of his equipment two Henderson motorcycles for errand and messenger service.

"SERVICE" THE WATCHWORD

"THE future of the automobile industry lies with the dealer," said H. S. Quine, of the Goodyear Tire and Rubber Company, in a speech delivered at the Hotel Astor during the show, "and the same statement applies with almost equal force to motorcycles.

"Without the dealer's desire to sell satisfaction, to give service and save the consumer money, the industry will suffer. And service consists in having what the motorist wants, where he wants it and when he wants it. For that reason the garage owner should handle accessories and the tires, and all the many things motorists need. The logical place to look for automobile necessities is the garage where the man bought the car, and if he is not enabled to get them he is disappointed.

"It is unfortunate that many garage men aim only at the large profit. They do not seem to realize that success lies in having a large volume of sales with small profits.

"But there is a new dealer today. He is a liberal user of newspaper space; he advertises and goes after the buyer. He applies system to his garage and knows what turns over quickly and what does not. And money is made on turnovers and lost on leftovers. This man applies modern merchandising plans to his business—and he never complains that business is going to the dogs.

"So it is the manufacturers' duty not only to protect their dealers in the matter of price, but also to give their dealers every manner of selling assistance—to help their dealers sell their goods and give them buyers as well as stock.

"It is pleasant to note that manufacturers are united in their efforts to give the ultimate consumer service, and this policy is bound to give a tremendous impetus to the industry."

HUSTLING NEW MANAGER

ARNOLD RAUDNITZ, well known wherever motorcycles are used in the New York district, has accepted the management of the motorcycle department of the Lowe Motor Supplies Company, of 1727 Broadway, corner Fifty-fifth street. With the heartiest kind of co-operation on the part of the Lowe Company, Mr. Raudnitz is busily engaged in the task of making his end of the business a credit to the motorcycle trade in Greater New York. He has secured the Greater New York distributing agency for the Jefferson, and also the sales agency for the Monarch, covering the entire country, exclusive of territory where agencies have already been established. Within the past fortnight, Mr. Raudnitz has lined up eight sub-agencies for these two machines.

His department will carry a full line of motorcycle supplies, which will be shown in a large and handsome catalogue now in preparation. The storeroom is being remodeled, and the window of the motorcycle department will be laid out on the lines of those of the big Broadway automobile agencies, so that Manager Raudnitz will be in position to display his machines to the best possible advantage.

HEDSTROM ON VACATION

OSCAR HEDSTROM, vice-president of The Hendee Manufacturing Company, Springfield, Mass., is taking his first actual vacation in years. He has gone down to Alabama on a quail hunt with Robert Stubbs, of Birmingham.

F. A. M. BACKS LOS ANGELES CAMPAIGN

THAT quick and definite results are possible when motorcycle affairs in any section of the country simmer down to a concrete demand for action by the F. A. M. is evident from the outcome of an exchange of telegrams on Wednesday, January 29, between State Commissioner R. Y. Leslie, of Pasadena, Cal., and Chairman J. Leo Sauer, of the F. A. M. National Committee on Legal Action. For some time past the Los Angeles M. C. has been planning to take a hand in influencing state and city legislation of interest to motorcyclists, and at a meeting on January 28, which was attended by State Commissioner Leslie, the club requested official information as to what material assistance could be expected from the Federation in the movement to improve motorcycling conditions in Los Angeles and throughout the state.

Commissioner Leslie, one of the most active officials in the western wing of the F. A. M., expressed his belief that the Federation was prepared to assist in the proposed campaign by a substantial donation and he agreed to place the matter before the Legal Action Committee at once. Accordingly, he sent the following telegram to Chairman Sauer:

Legal Action Committee of Federation Pledges Substantial Donation to Assist in Obtaining Legislative Reforms for Coast Riders

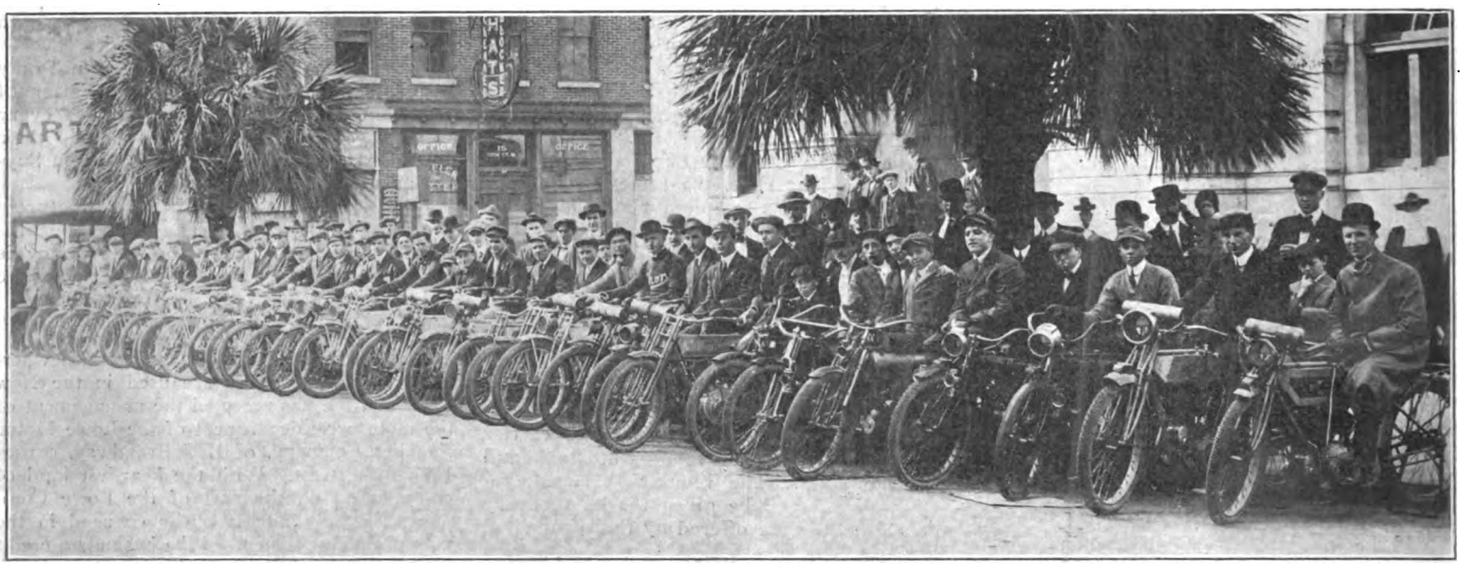
"Los Angeles Motorcycle Club wishes to know amount F. A. M. is willing to expend to bring about desirable legislation in state and city legislature now in session. May be necessary to send some one to Sacramento to look out for our interests. Moore and I at club meeting last night. Have written."

Immediately upon receipt of this telegram Chairman Sauer expressed the sentiment of the National Legal Action Committee, relative to co-operation with California motorcyclists, in a return wire which read as follows:

"Federation American Motorcyclists will contribute amount up to two hundred dollars to help effect desirable motorcycle legislation in state and city. If upon my arrival in California I find that larger fund is needed I will so recommend to our Board of Directors. Will reach Los Angeles, March 15."

Ever to the fore where the best interests of motorcycling are concerned, regardless of state lines, the Los Angeles club has been one of the most potent factors in the development of the sport on the Pacific coast, and its present movement for more satisfactory regulations is likely to result in similar activity throughout neighboring states. Speaking broadly, the club seeks to have reasonable laws adopted with reference to licenses as well as speed limits, and to have these regulations given general application. At present the California tourist never knows what new legislative wrinkle is going to present itself in a small out of the way town, and on more than one occasion during the last year parties of riders have been seriously inconvenienced through conflicting with outlandish speed and license laws as applied by local constables.

With the moral and financial backing of the F. A. M., and directed by as enthusiastic an official staff as is to be found from coast to coast the Los Angeles club is more than likely to gain its ends and thus pave the way for legislative revisions in other districts of the Far West that have long felt the necessity of more liberal interpretation of the laws as affecting motorcyclists.



Members of the Savannah (Ga.) M. C. Lined Up Prior to a Recent Run. The Savannah Squad is the Most Active in the South.

OYSTER ROAST FOR RIDERS

SO successful was the first mid-winter run of the Savannah (Ga.) M. C., that the following meeting brought forth an announcement of a run to be held the Next Sunday. Forty-eight machines were lined up for the start. The affair turned out to be a sightseeing trip to Kings Ferry, less than 20 miles distant. On returning the boys proceeded to Wheelman's Inn where an oyster roast was furnished by the club. Many of the riders were non-members and while the boys were eating Captain Balmer and President Williams distributed cards to those not connected with the club. This resulted in the addition of 21 members.

At the last meeting of the club it was decided to raise the club dues, which are now $3 a year.

THE Temple Hill Motorcycle Club was recently formed in Trenton, N. J.

OFFICERS ARE POPULAR

A NOTABLE feature of the recent annual election of the Providence (R. I.) Motorcycle Club is the fact that the president, secretary and treasurer, who already have served four terms each, were re-elected. The present staff is as follows: President, E. L. Buffington; secretary, J. G. Edwards; treasurer, B. A. Swenson (oldest officer in the point of service); captain, Edward G. Luther; first lieutenant, Charles W. Rayhill, and second lieutenant, George W. Lane.

READY FOR NEW SEASON

MEMBERS of the Grand Forks M. C., of Grand Forks, N. D., recently met in the local Y. M. C. A. building and elected officers. Sherman Schlosser was named president; M. Brawer, vice-president; R. P. Read, secretary; E. Supernant, treasurer, and John S. Olson was chosen to fill the office of club pessimist.

WORCESTER M. C. STAFF

CHARLES E. BRAMAN, Jr., was elected president of the Worcester (Mass.) M. C. at a recent meeting; Arthur R. Goodwin is the new vice-president; C. N. Robinson, secretary; William H. Tannebring, treasurer; William G. Cornell, road captain; Warren B. Bye, first lieutenant; Roy L. Dow, second lieutenant, and Charles H. Adams, governor for five years. Harry L. Cutting was appointed a governor to fill a vacancy.

ANOTHER HELPER NEEDED

ON account of the rapidly increasing work at his National headquarters, Secretary Gibson has added another helper to his staff. There are now five people constantly at work on F. A. M. matter in the secretary's department.

MEMBERS of the Houston M. C. recently made a run to Richmond, Tex.

CANADIANS AWAIT NEW CYCLECAR

Informal Announcement and Tentative Specifications Arouse Much Interest in Product Promised by Calgary Designer—Newcomer Will Have About 10 Horsepower and V-Belt or Belt and Chain Transmission

FROM Calgary (Alta.), Canada, comes the announcement that plans are being developed there to market a small car or a "cyclecar," having many features which will make it desirable for travelers, light touring work and nearly all town work. Different engines will be tried out, among them the 8 h. and the 10 h. J. A. P. engines, the Peugeot 7-9 h. and the Spacke 9 h. The car will have a wheelbase of 8 feet 4 inches or 8 feet 6 inches, and a track of about 4 feet 6 inches. The frame, for regular work, will be of ash, 2 x 3 inches and suitably braced; springs 1½ x 30 inches, wheels 26 or 28 inches, tires 2½, 2¾ or 3 inches. For racing, a tubular frame is being considered, and it is thought that on a straightaway a speed of close to 80 m. p. h. can be obtained with an 8 h. J. A. P. engine. The drive is not yet settled upon, but will probably be "V" belt or chain from engine to countershaft, then "V" belt to another countershaft, and then two "V" belts, one to each rear wheel.

On the second countershaft will probably be a device which gives an automatic change of gear ratios; that is, depending upon the amount of gas the engine is being given, and the pull on the back wheels. Briefly, it consists of two spring flanges, one to each pulley, so that the driver may go down a street at 5 m. p. h. on high gear, and then, if he desires to pick up quickly, he merely opens the throttle, and the pull of the engine forces the flanges apart until the spring resistance checks the outward movement of the flanges; then as the engine picks up speed and the car gains headway, the pull grows less and less, and the springs close up the "V," thus raising the gear again. A differential gear will also be incorporated in this countershaft, although details of it are carefully guarded by the designer. Perhaps it should be described as having a "differential effect," as there will be no differential gears. Steering will be of the Ackerman type, as these parts can be obtained from several good firms in England.

It might also be stated here that one can obtain differentials and back axles complete with brake drums and hubs, etc., if so desired, at a nominal cost, but it only adds to the weight. The specialty of the designer will be to build cars to order, and one may have a shaft-drive machine with three speeds and reverse, a 4 to a 10 h. motor, a body with one or two seats, detachable wheels or almost anything by paying the price. In the belt or chain-belt driven models the engine will be placed lengthwise in the frame; in the shaft-driven models crosswise, with starting crank in the front, whereas the chain-belt machines will be started with a handle at the curb-side of the machine. Such equipment as lamps, top, windshield, etc., will be left to the purchaser to select. The price of the machine complete will be about $650, depending on the transmission, size of tires, horsepower of engine and so on.

The designer figures that with an 8 h. engine and belt drive throughout he will be able to get the weight of the machine down to about 400 pounds, and lighter than that when stripped for racing. The question of overheating of an air-cooled motor is not a very serious one, as a fan will keep a good supply of air circulating under the hood, which will have a partially open front. If a purchaser desires, however, he can obtain at small extra cost a water-cooled engine with radiator, but the question of weight again enters the problem, and so it is thought that air-cooled motors will be most widely used. With a machine weighing not more than 500 pounds, it is expected that at ordinary speeds one can get 60 miles to the gallon of gasoline, and possibly more. Where water-cooled engines, gear boxes, differential gears, etc., are used, the mileage will come down somewhat.

The designer thinks that this car will fill a long-felt want, in that it will have all the comforts of a full-grown car and practically the economy of the motorcycle. These cars are said to have a wonderful "pick-up," and when used on slippery streets with tire chains they are said to be safer than any other kind of a vehicle.

LONDON M. C. PROGRESS

ONE of the most influential motorcycle clubs in Canada is the London M. C., of London, Ontario. The club has just held its sixth annual meeting at which time officers for the year were elected. The London M. C. was the first motorcycle club in Canada and one of the three clubs to organize the Canadian Motorcyclists Association. Fully seventy-five per cent. of the motorcyclists in London are enrolled in the club despite the fact that another club has recently been formed there. The new club is the Forest City M. C. and has applied to the C. M. C. for affiliation.

J. W. Cunningham, who has been president of the London club since its inception refused nomination at the recent election as he has accepted the chairmanship of the competition committee of the C. M. A., to which he desires to devote all his spare time. W. G. Tite, president of the club, has been elected treasurer of the C. M. A.

Officers elected at the recent meeting are: President, W. G. Tite; vice-president, J. A. Barnard, secretary-treasurer, William Beamish; captain, G. L. Watkins; delegate to the C. M. A., Frank Benson. Edward Bissett was appointed chairman of the house committee; A. Thorpe, touring committee, and Bert Johnson, racing committee.

MARIETTA MEETING

AT the annual meeting of the Marietta (Ohio) M. C. the following officers were elected: Earl Oesterle, president; Fred Trapp, treasurer; Leslie Meredith, secretary; Arthur Bender, road captain, and Arthur Maskrey and Robert Walker, lieutenants.

SYRACUSE M. C. ELECTS

AT the annual meeting of the Syracuse (N. Y.) M. C. the following officers were chosen: Harry Williamson, president; Fred Walrath, vice-president, and William St. John, secretary-treasurer. John Conroy was named road captain with Lawrence Schoffer as lieutenant. Jay B. Bixby, Percy Owens, Frank Scoville and William St. John form the board of directors.

Two Motorcyclists of Trenton, N. J., Caught in the Act of Putting an Empire Inner Tube to a Rather Remarkable Test.

NEW ORGANIZATION

AT an open meeting recently held in the Oak Room of the New Raleigh, the Washington Motorists' Association was formed. The new organization succeeds the Washington (D. C.) Automobile Club, but unlike the latter, includes in its membership motorcyclists as well as automobilists. This organization will co-operate with the Automobile Association, the Federation of American Motorcyclists, the National Capital Motorcycle Club, the local Board of Trade and the Merchants' Association in fighting arbitrary and unjust legislation, in advocating good roads and in promoting the interests of motorists in general.

Harrington Mills was elected president of the association; W. W. Chiswell, vice-president; John K. Heyl, secretary-treasurer, and W. S. Duvall, attorney. W. C. Long, W. D. West, J. M. Stoddard, Claude Miller and O. J. DeMoll compose the Board of Directors.

Announcement also comes from Washington that the Commissioners of the District of Columbia have refused to grant the request of the National Capital M. C. for revised passenger-carrying regulations. The commissioners state that there will be no hearing on the subject of the regulations adopted December 30 last, but that any written communication submitted to them will be considered.

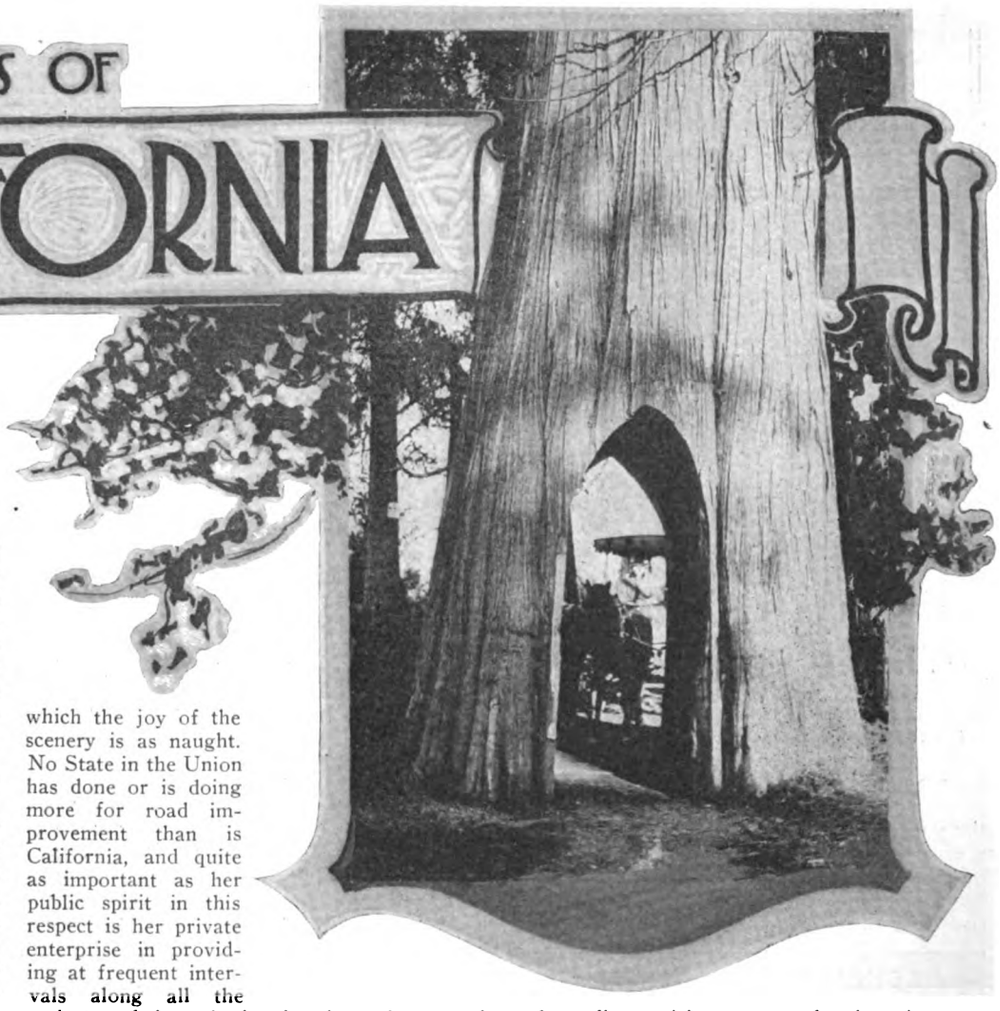
A SALES IDEA

SEVERAL letters have been received by Secretary Gibson from holders of repair shop certificates, stating that they are presenting F. A. M. memberships to all purchasers of 1913 machines.

Digitized by Google

BEAUTY SPOTS OF CALIFORNIA

WALDON FAWCETT



THE American motorcyclist who, during the winter and early spring months, finds the roads and climatic conditions in his own locality not exactly to his liking for touring, is apt to think instinctively of Southern California. And assuredly it would be difficult to find in all the world a domain better adapted to winter touring than this "Land of Sunshine." Of course, the reader will understand that nothing is farther from our purpose than to insinuate that California is simply a winter touring field. On the contrary, California is calculated to captivate the lover of the broad highway at any and all seasons of the year, but naturally its pre-eminence, most forcefully impresses the resident of the East, or the Middle West, or the Rocky Mountain country, when snowflakes are flying at home.

Its balmy, yet bracing, air, its clear skies and ever-fresh vegetation, Southern California has had to offer to the tourist since tourist travel began, but it has, of course, been only within the past few years that this region acquired the attributes that render it doubly attractive to motorcyclists. The residents of the Golden Gate State were among the first to appreciate what the modern era of motor locomotion might mean for them, and with characteristic solicitude for the comfort of the stranger within their gates they lost no time in providing all those incidentals without which the joy of the scenery is as naught. No State in the Union has done or is doing more for road improvement than is California, and quite as important as her public spirit in this respect is her private enterprise in providing at frequent intervals along all the main-traveled roads, hotels where the nomad may find food and shelter—obligingly gauged to the length of his purse.

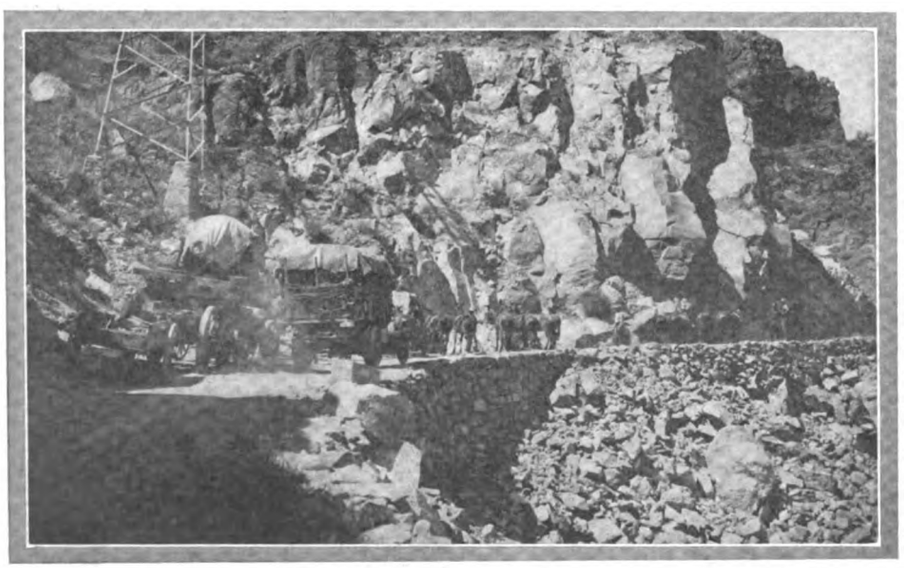
MATCHLESS OFFERINGS FOR TOURISTS.

These are the circumstances which (even without taking into consideration differences in cost, render Southern California the formidable rival of the Riviera or any of the other winter playgrounds of the Old World where Roman roads and ancient wayside inns of excellent cuisine were on hand, as it were, awaiting the advent of the motorist. Indeed, by this measure of comparison California deserves no end of credit, for whereas most of the popular touring districts of Europe have had to do but little to adapt their time-tried qualifications to the needs of the touring riders, the Golden Gate State had only her matchless scenery and climate as a heritage, and all the creature comforts that beguile the wanderer on pleasure bent she has had to create—and in an almost incredibly short time.

California has one powerful magnet for the touring motorcyclist in that he may reach his goal on his machine—by a sunny route through Texas, New Mexico and Arizona, if he chooses—instead of being compelled to curb his impatience for cycling during a long ocean voyage as would be the case were his objective, say, the shores of the Mediterranean. And arrived on the Pacific Coast the rider finds spread out before him a touring field which seems to duplicate, as possibly does no other in America, every advantage of scenery, association, history, environment and human interest that is claimed for the storied "show places" beyond the Atlantic.

COMPARED WITH FOREIGN SHOW PLACES.

And because every globe-trotter or would-be globe-trotter is prone to compare California, not with tourist meccas here at home, but with those over seas, let us pause for a moment to consider the advantages which are usually claimed for Europe over the United States,—California included. One of these arguments in behalf of Europe is the variety of the European panorama,—the circumstance



How Road Builders Work in California.

Digitized by Google

that comparatively little travel brings a complete change of scene. A second claim is for the historical interest supplied by the ruined castles and the cathedrals, centuries old. And a third,—to many, the most potent of all,—is the opportunity to see a picturesque present-day life, imbued with quaint customs and the color of fantastic costumes.

For each of these, though, California has her foil. In her Pueblo Indians, with their unique terraced houses, she has, brought down to date, a civilization as old as that of Egypt, with the further circumstance that their pottery work, rug-weaving and basket-making presents handicraft that is the peer of anything to be found in Europe or the Orient. In the splendid ruins of the old Missions of the Spanish regime California has relics which in historical interest and certainly in architectural value vie with the average castle abroad. And where is the fair or kermes abroad which so fills the eye as one of the modern carnivals of flowers or the rose battles which are events of the mid-winter season in California.

VARIETY IS THE BY-WORD.

As for variety, the very word is synonymous with California,—variety in scenery, variety of climate, variety of occupation, variety in all that goes to make up environment or that elusive something we are apt to refer to as "atmosphere." But what wonder that there is variety in all the more superficial phases of existence when anything approaching uniformity, much less monotony, is unknown even in the main essentials,—the basic features which make for character. Thus California has within her borders some of the highest as well as some of the lowest land in the United States, her snow-capped mountains look down upon valleys where oranges are ripening; magnificent forests with the largest and tallest trees in the world are distant but a few hours travel from dry and barren deserts; and glacial fields of ice but emphasize the delights of placid bays where every acquatic sport may be indulged in the whole year round.

Unquestionably this wealth of nature's bounty is due not less to the enormous area covered by the Golden Gate State than to her geopraphical form. Only Italy,—to which she is so often compared,—and the South American Republic of Chile can compare with California in possession of a far-flung coast line. Taken all in all however, this American El Dorado finds her closest counterpart in that other Promised Land,—the Palestine of the Bible. Each country presents the spectacle of a comparatively narrow strip of land facing a western sea and shut off from interior deserts by high mountains, and each country is prolific of those varieties of fruit which the world's epicures esteem most highly. But, whereas Palestine must needs fall back upon the glories of history to compensate for modern decay, California has drafted both history and nature to create the ideal twentieth century setting for open-air life.

NO STRICT TOURING PLAN NEEDED.

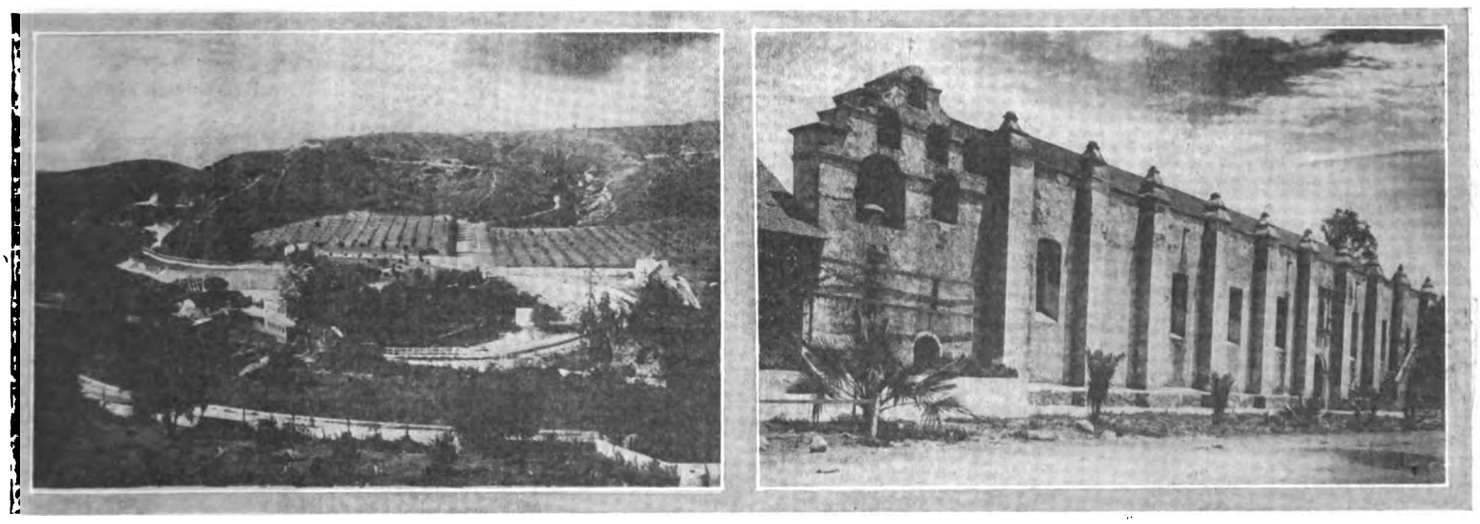
Whereas Southern California is, of course, the winter mecca, it need not be supposed that the motorcyclist must confine himself to that section. The rider who feels that he will probably have to content himself for all time with such glimpses of the empire of the Pacific as he can obtain during a winter tour need not despair for in all of California and particularly along the coast the winters are comparatively warm. It is only from the most elevated mountain resorts that the midwinter tourist is barred if he be a slave to comfort and even in such localities the roads are rarely impassible. Incidently it may be said that the motorcycle is the ideal vehicle for the tourist who would taste of all California's varied delights in a vacation of limited length. Without such a conveyance the most energetic traveler would be balked in an effort to "cover" expeditiously a State that if it were transferred to the Atlantic coast would extend all the way from Boston to Savannah.

To the motorcyclist atour there are several different plans available for viewing the beauties of California's summits, sea and shore. The sightseer awheel may zig-zag up and down or back and forth across the State, pausing in his progress as fancy dictates. Or he may select one city after another as successive "bases" for touring and from these pivots (each insuring ample hotel and repair facilities and adequate gasoline supply), invade the surrounding country in all directions. The selection of a traveling program can be dictated wholly by personal preference, for although California is a country of magnificent distances the speed of the motorcycle and the good roads enable the rider to ignore to a great extent the limitations that would beset the traveler dependent upon any vehicle not motor-propelled. Moreover, hospitality is so free and universal in this land of sunshine that the rider need not fear to be overtaken by nightfall in a locality devoid of hotels.

SOME CENTERS OF INTEREST.

Foremost among all the touring centers of Southern California is Los Angeles, the pleasure capital of the land of enchantment. Located some sixteen miles from the Pacific ocean, Los Angeles impresses every visitor as not only a particularly beautiful but a particularly up-to-date, modern city with all the to-be-expected attributes, including well paved streets and boulevards. At the same time there is in the very air something of that care-free element which suggests the large leisure class of well-to-do residents. From Los Angeles there radiate in every direction, like the spokes of a wheel, fine roads that, according to the direction chosen will bring the motorcyclist to scenery of almost any character sought.

Seaward, fringing the bay of Santa Monica, and dotting the coast for a distance of many miles are a chain of beach resorts of which the famous Long Beach is the most widely heralded, but all of which are worthy of a visit by the motorcyclist who would come under the spell of a surf-swept strand. In the opposite direction, and only about six miles from Los Angeles, nestling at the foot of the Sierra Madre Mountains, is the city of Pasadena, which has been fantastically termed "The Dimple of California's Smile." Pasadena is a vast hotel and cottage colony, but rides up and down its streets will repay any person who is interested in homes of unique and attractive architecture,—the California bungalow and the cement "mission" house are here seen at their best,—and an admirable system of highways so links Pasadena with the mountains that surround the city on three sides that the motorcyclist can have a taste of tobogganing mid the snow-fields in the afternoon and be back in town in time to pick from the trees the oranges for his supper.



An Impressive View of Lower California Scenery and One of the Picturesque Old Missions.

IN THE SAN DIEGO DISTRICT.

Santa Barbara is another touring center of Southern California, which in the estimation of many persons, rivals if it does not surpass Los Angeles, not only in its own attractions but in those of the district which surround it. Santa Barbara is picturesquely

Digitized by Google

placed between the mountains and the shore, and two of her boasted possessions comprise the beautiful Santa Barbara Mission and the much-praised Mountain Boulevard, which affords the rider an amazing moving picture of the estates of many of California's wealthiest residents. Within easy striking distance of Santa Barbara are a number of worth-while places of interest, including Ventura, which like so many Southern California towns has its old Spanish mission to give dignity to the landscape. Near this particular mission are several palms which are said to be the oldest in California.

Southward from Los Angeles, a run of about 160 miles will bring the motorcyclist to San Diego, and a more interesting ride can scarcely be imagined. During a considerable portion of the distance the rider may keep within sight of the Pacific and its beautiful surf, and when he arrives at what may be accounted our southernmost city on the Pacific he is confronted with the sight of a magnificent bay, affording a perfectly sheltered area 22 square miles in extent where the water pastimes are so fascinating that your average rider can be counted on to temporarily forswear allegiance to his motor hobby. San Diego is a progressive modern city,—busy with preparations for the exposition in 1915, which she is determined shall not be overshadowed by Frisco's show,—and days' may profitably be spent with this community as the hub for excursions.

A JAUNT INTO MEXICO.

Just across the bay from San Diego is Coronado Beach, one of the wonder spots of California and at Point Loma the touring rider may visit the impressive headquarters of "The Purple Mother." Some dozen miles from San Diego is La Jolla with its ten wave-carved caves and the motorcyclist who is keen for all the sensations a tour can produce will,

A QUARTET of rider-salesmen who are members of the Yale "Flying Squad." These boys are plugging all kinds of roads in the interest of the sturdy Toledo products, and doing big business.

of course, want to take a 15-mile spin southward from San Diego to the Mexican line. There he can cross the border to the little village of Tia Juana which figured rather conspicuously in recent exploits of the revolutionists and, if the normal peaceful conditions prevail, he will have opportunity for a variety of tourist "experiences" ranging all the way from mailing to friends a selection of the gaudy Mexican souvenir post cards to attending a full-fledged bull fight.

Moonlight touring is a very popular fad in Southern California, and one to which the average visiting motorcyclist is quickly converted. The California scenery, particularly along the shore, has an especial fascination as illuminated by the silvery light and the wide, gleaming white roads extend a most insistent invitation. Not infrequently riders set out for an excursion of this kind at eleven or twelve o'clock at night and cover fifty to one hundred miles ere they seek the downy couch.

Nor must the reader suppose that because comparatively short tours,—as from a centrally-located "base,"—are a favorite means of "doing" California there is neglect of the long-distance straightaway runs; for the latter a State one thousand miles in length obviously offers many advantages. An ideal route of several hundred miles is that from Los Angeles to San Francisco. Or, better yet, from San Diego to Frisco. Such an itinerary can be made to embrace almost all of the show places above enumerated and also, getting nearer to San Francisco, those beauty spots on the Bay of Monterey,—Monterey, itself, Del Monte, Pacific Grove, Santa Cruz and its neighbors. Monterey, which was the capital of California nearly a century and a half ago, still preserves much of the languorous, Spanish atmosphere, but this is tempered in some measure by the martial activities of the great U. S. Military Reservation at the Presidio.

NORTHWARD TO FRISCO.

This is a delightful district for touring and such is the marvelous evenness of the temperature,—only rivaled by that of Honolulu,—that the rider can feel the utmost confidence that never during the winter will the mercury register lower that 50 degrees. After he has enjoyed a visit to the grove of giant redwoods near Santa Cruz and has taken one or more spins over the vaunted Seventeen Mile Drive that begins and ends at Del Monte, the motorcyclist in quest of new worlds to conquer can push on toward San Francisco, but with San Jose and the Santa Clara Valley as his immediate objective. The entire valley is a garden but the bright, particular spot is terraced Los Gatos, perhaps the most picturesque of California towns.

A run of scant fifty miles along the shore of the Bay of San Francisco brings the rider to the California metropolis, and the most cosmopolitan of American cities. Thus ends the tour of Southern California proper, and it is a program to which months might profitably be devoted if leisure permits.

HOLLENBACH'S TRIP.

E. T. HOLLENBACH, agent for the Excelsior in Philadelphia, recently made a trip of 831 miles in 37 hours' actual running time, and the accompanying photo was taken upon his return to Philadelphia. He started the trip at Atlantic City, from which place he went to Philadelphia, New York, New Haven, Springfield, Boston and Providence. On the return trip he stopped at New London and Perth Amboy and finished the run in Philadelphia. Hollenbach is shown at the right with the hysterical cap upon his manly brow.

FRED J. OLSON, 333 West Franklin street, Paxton, Ill., forwards the accompanying photograph of a motor sled with which he has covered many miles over the roads throughout his district during the last month.

PRINCE PLANS TO MOVE MILE SAUCER

Track Builder Has a Scheme to Tear Down Playa del Rey Course and Rebuild it in Los Angeles—Other Coast News

LOS ANGELES, Cal.—There is about as much touring on motorcycles in Southern California at one time of the year as another, and after the first rains the roads that are not paved, at once become most inviting. Therefore, at present you will meet about as many motorcycles as automobiles, when touring in the south half of the state, while for business the single track motor is everywhere. In the far north of California, however, winter is now on.

Just at present there is no motorcycle racing going on in this vicinity as the only board track, the Los Angeles Stadium, is being fitted up for cow-boy sports, which take place in February. There were three meets programmed at a mile dirt track near Oakland, which is the Brooklyn of San Francisco. Two meets were held here the first two Sundays in December; then the promoters had trouble with the riders. The sanction, which had been given to A. L. Osborn, the Denver referee, who is spending the winter in California, was cancelled and Referee Frank E. Carroll, of San Francisco, notified the riders and Osborn that the check for prizes, given him by the promoter, was worthless and that the races would not be run.

PLENTY OF RACING TALK.

The promoter then attempted to get up a meet at Sacramento, where there is a splendid mile horse track, but the meet did not come off.

Paul Derkum, who is known in the east as the manager last summer of the Newark track, planned a circuit of dirt track meets to begin January 12, with a big meet on the mile track at Ascot Park, Los Angeles. As he was unable to start with Los Angeles, on account of unsatisfactory terms to lease Ascot Park, which is temporarily rented to a dirigible balloon promoting company, the first meet was held on January 5 at Santa Ana, a city of 10,000 people, situated about 40 miles south of Los Angeles and about 100 miles north of San Diego.

This meet was a combination automobile and motorcycle affair, and in one way marks the beginning of a new condition of racing affairs on the West Coast. Recently there has been much fighting through the press and by way of night letter telegrams between the National Contest Board of the A. A. A. in New York, and the most influential automobile dealers and enthusiasts in Los Angeles, over the question of jurisdiction of automobile racing in California, finally resulting in the organization in Los Angeles of the Western Automobile Association, backed by the Los Angeles trade, the Los Angeles Athletic Club, which has a million dollar clubhouse, and probably as great financial support as any athletic club ever organized, and enthusiasts throughout California.

DERKUM IS ACTIVE AGAIN.

This meet at Santa Ana had a sanction from the F. A. M. for its motorcycle races and an understanding with the W. A. A., which was not fully organized, and therefore not prepared to issue sanctions.

Derkum staged his next meet at San Bernardino on January 26. He now plans to put on combination meets throughout the state, financed by one of the millionaire officials of the Western Auto Association, and will apply to the F. A. M. for sanctions for the motorcycle racing, while the W. A. A. has already agreed to sanction the automobile races.

PRINCE'S NEW PLAN.

Jack Prince has been working of late on his proposed track scheme at San Diego, and claims that he has secured a site for a motorcycle saucer. As to whether it will be one of his proposed new idea five-lap tracks or a quarter-mile track, like those at Cleveland and St. Louis, depends on the finances which are yet to be raised.

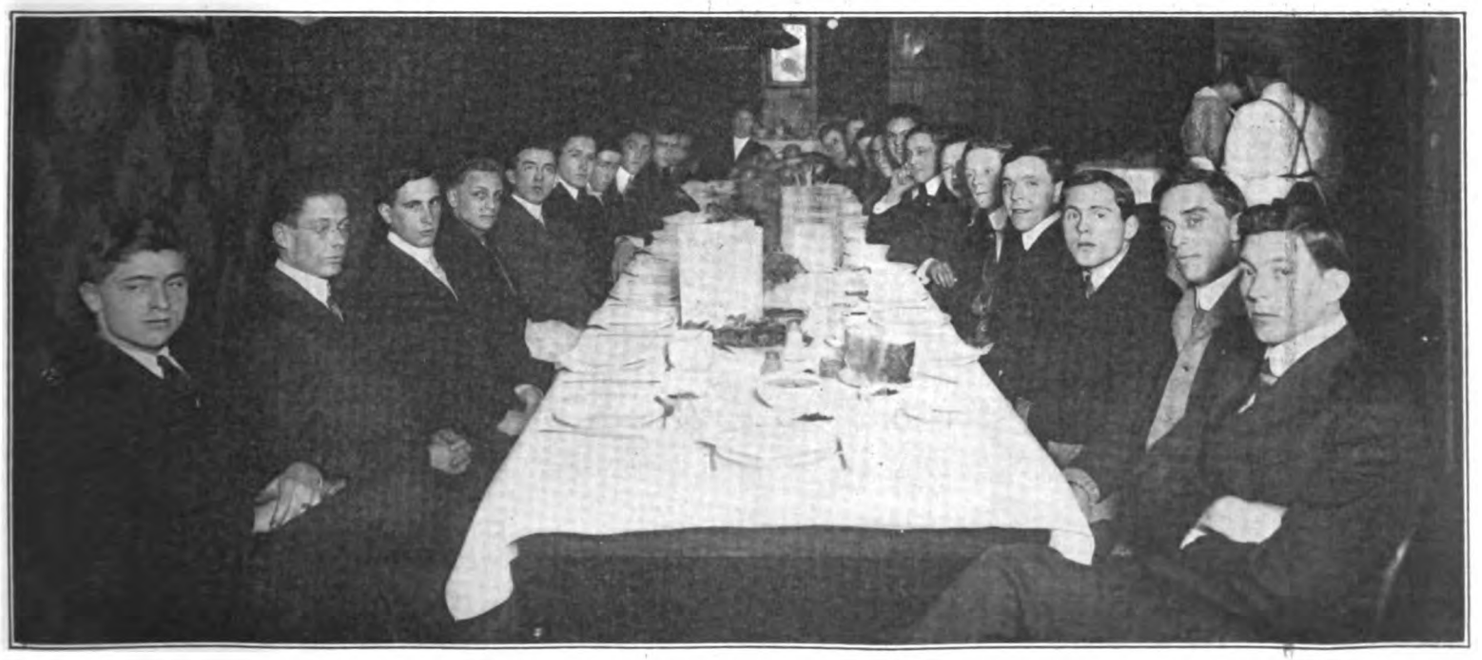
Prince is also working to build another board track at Los Angeles, although there is a perfectly good one in the Stadium. His latest "dope" is to tear down the mile piepan at Playa del Rey, which is near the ocean, and about 16 miles from the center of Los Angeles, and rebuild it at Ascot Park, in Los Angeles. This big board track, the only mile saucer track ever built, cost its owners, the railroad people who used to be known as the real owners of California, about $150,000 and has never paid expenses.

It is claimed that the 2 x 4 inch strips laid on edge for the track, with the tons of long spikes, each of which pierce four strips, form so solid a mass that the track itself cannot be successfully taken apart and put together again. Jack Prince thinks it can. But if this big board track is moved to Ascot Park, which is on the south edge of Los Angeles and so located that 20,000 people can be delivered there by the car lines in twenty minutes and at a five cent fare from all parts of the city, it will make motorcycle racing and record breaking more convenient and comfortable.

CLIMBING MT. WILSON.

To the east of Los Angeles, where the mountains divide the paradise of Southern California from the desert, rises a peak to an altitude more than a mile higher than Los Angeles. Up the side of this mountain a hundred years ago the mission fathers made a trail, which is still in use.

Recently this trail has been improved and motorcycles have often made the 9½-mile climb, which averages from 14 to 20 per cent. A few days ago Leroy Snodgrass, who manufactures the Superior sidecar, made the climb with a 4 h. Indian two-speed motorcycle, carrying a Superior sidecar and Mrs. Snodgrass. Mr. Snodgrass says that he made the whole climb without a stop. At present Mt. Wilson has a mantel of snow that comes down two miles on the road, and adds immeasurably to the dangers and difficulties of climbing.



Mansfield (Ohio) M. C. Members Ready to Begin Operations at Successful Annual Banquet Held Recently.

IN the WHITE MOUNTAINS

H. MASON, proprietor of the Melrose Motorcycle Agency, of Melrose, Mass., handling the Henderson and Reading-Standard motorcycles for northern New England, recently planned a week's trip through the White Mountains for both pleasure and advertising purposes. A prospective customer was invited to ride a Reading-Standard 4 h. demonstrating machine, the only one in stock, and Mr. Mason was to ride a Henderson. Unfortunately the invited rider was stricken by appendicitis and one of the agency repair men took his place for the trip.

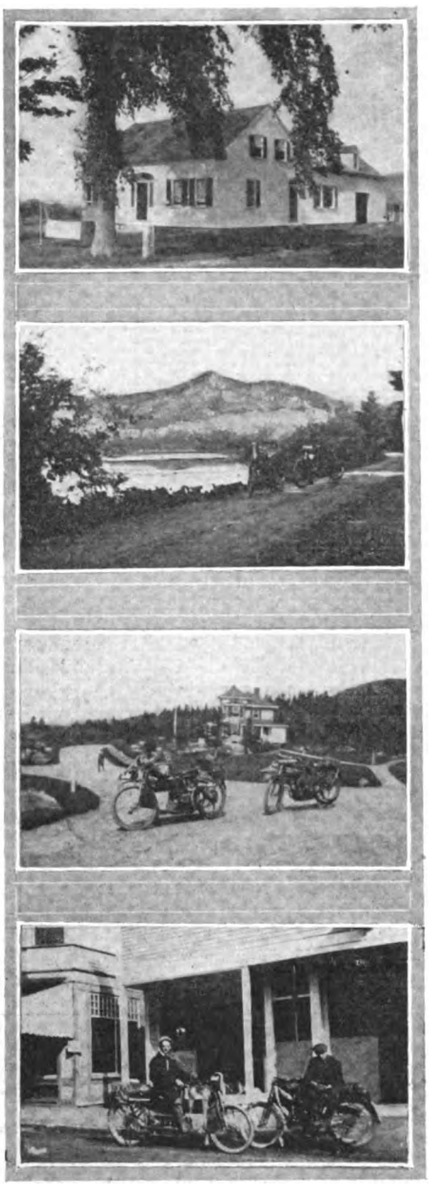
The route chosen was via North Andover to Haverhill, Mass., Newburyport to Portsmouth, New Hampshire, and then to Dover, all of which is over beautiful roads, and part of the way along the banks of the Merrimac River. At Dover few kind words could be heard regarding the road to Rochester, N. H., and small wonder. It is no picnic with an automobile, and as no side paths are available for motorcycles the sand causes much trouble. The distance is only eight miles, but a lot of excitement can be crowded into that short distance. Aside from one bump into a ditch by the Henderson, no annoying experiences were met with, other than the usual ones when deep sand is encountered. Both machines reached Rochester without mechanical or tire trouble. The run for the day was 85 miles.

Equipment for the Trip.

The equipment carried was mostly on the Henderson and consisted of a good tool kit, extra inner tubes, a good assortment of bolts, nuts and screws, blow-out and quick repair patches, with plenty of cement, a quick repair pedal, a few extra spokes and nipples, an extra belt, pulley lagging, extra chain links, extra brake parts, sweaters, a change of clothing and the usual toilet articles. High speed was not contemplated so there was no trouble in keeping clean.

The Henderson carried the usual forward tandem saddle, which could be used on either machine if necessary, but the only use it was put to for some time was to give a ride to some of the natives. A Prest-O-Lite tank was carried and an old Sol No. 8, in case night riding had to be resorted to. The R.-S. carried a gallon can of oil as insurance against trouble in the mountains, and the Henderson was equipped with a reserve gasoline tank, holding nearly two gallons. As it had rained the day previous and the weather was warm the roads were found to be in excellent condition.

After a good breakfast on the morning of the second day a start for North Rochester was made over rather poor roads, but as side paths frequently were available, the going was not as bad as on the day previous. The new State road was soon found and troubles were forgotten. Better dope regarding the Dover to Rochester route was obtained later, and it may help some other tourist. It is said that by going to Somersworth a good road is obtained to that point, and then the road from there to Rochester



From the Top: A Peaceful Scene near Ossipee, New Hampshire; at Lake Chocrua; in Suburbs of Haverhill, Mass.; Home in Melrose again, with riders and mounts in good trim.

is not in any part as bad as the other route. The hard going on this route is reported to be only about five miles against eight the other way.

Early in the day the R.-S. luggage-carrier worked loose and while making it tight a rider with an Indian 7 came along, followed soon afterward by the Indian agent at Union, N. H. Both were much interested in the Henderson, and the Aermore exhaust horn, which was demonstrated. Three horns were sold on the spot, which was good pay for the damaged luggage carrier.

Some Remarkable Views.

After leaving North Rochester a State highway is traversed to the mountains, and it is in excellent condition except for a few places where it is being repaired. Most of these are in Ossipee. Of course the hills are many and rather steep, but not too steep even for the R.-S. single. At Mountainview the day's ride ended, as it is the summer stopping place of Mr. Mason. Here a good dinner was ready. On a clear day the first good view of the mountains is obtained from the top of Milliken's Hill, in Ossipee. From this point can be seen 46 mountains, 26 villages, five counties and two States. This hill also gives the first good view of Mount Washington.

A start was made for Crawfords on Sunday about 8 a. m., and after Ossipee and its sandy spots were left behind, a most beautiful road was enjoyed passing through Conway, North Conway, Intervale and Bartlett, where a stop was made for oil, gasoline and lunch. While passing Lake Chocrua, a most beautiful view of the mountain was obtained and a stop made to perpetuate it by means of the camera. The morning's ride was of particular interest to the R.-S. rider, as it gave him his first view of a mountain. Hills he had seen, but mountains never before.

In Rolling Country.

The oil obtained at Bartlett was light, which resulted in foul plugs on the Henderson, but aside from that, the run to Crawfords, through the famous Crawford Notch, had no terrors for either of the machines. The road here was somewhat rough and muddy, due largely to the recent rain, which the heavy foliage prevented from being dried up as elsewhere. There are many turns and sharp hills. Fortunately the autoists in this district are mostly very careful or there might be trouble. The hills were not nearly as bad as was expected, except the old Tug-of-War hill near the Crawford end. The approach is unexpected and consequently both machines "fell down." It was tried over and both mounts climbed it.

Mr. Mason's brother-in-law is the station agent at Crawfords, and on his advice the "new" State road to the Mt. Washington Hotel was taken to procure a pennant. It was "new" in more ways than one. Mud and ruts 14 inches deep were liberally distributed all the way to a sign reading, "Not Passable for Motor Cars." That was plenty, so a turn was made down the fine road following the banks of the Ammonoosuc River. This is a beautiful piece of road and the scenery is hard to beat. It is advisable, however, to go and come via the Mt. Washington Hotel, instead of from Crawfords, especially after a rainfall. At the hotel a party of autoists were met who were glad to view at close range the machine they had admired "making Tug-of-War Hill." As the nut on the rear axle of the Henderson was missing a new one was obtained at the garage at a cost of ten cents, the only repair bill of any nature during the entire trip. After a pennant

Digitized by Google

was obtained, the return to Crawfords was made over the short route, which is a rough road, but not bad. This ended the third day with a milage of 70.

More Striking Scenery.

The start on Monday morning for Glen House, via Gorham, was not made until nearly 10 o'clock. Snap-shots were obtained in front of the Mt. Washington Hotel, but the position of the sun prevented the pictures from including the hotel itself. The road to Gorham is mostly good, but not like the road traversed the preceding day. The scenery is grand and should not be missed by any Mt. Washington tourists. There are some hills, but few until well headed for Gorham. As the Ravine House is approached the scenery changes from broad valleys and distant mountains to intervales and rugged heights close at hand. The Presidential range and Mount Washington in particular, seem to be just a short walk from the road. Frequent stops should be made to get the benefit of the rapid changes in this most beautiful scenery. Aside from some trouble with foul plugs, due to the light oil, no trouble was experienced until after reaching Gorham. The Gorham hill is "some hill," but not much to be feared going towards Gorham. Coming the other way would be hard, due to the great amount of sand and loose gravel, the poor approach and long, steep elevation. Lunch, gasoline and heavy steam oil were obtained at Gorham, the latter somewhat different from the thin imitation used earlier in the day. After fuel was obtained, the Henderson was weighed and tipped the scales at 390 pounds.

The road to Glen House was reported good with only a gradual rise, but it was found to be a close second to the Dover-Rochester road, as to sand, and as hilly a stretch as had been met with so far. While stopping to watch a damaged auto, the Henderson rider lost his balance and the heavy machine fell on his ankle and badly strained it. By night the ankle had grown worse and prospects for climbing Mount Washington began to fade. On advice from a traveler a stop was made for the night at Cascade Camp, about three miles beyond Glen House. The Camp is a new one, started this year.

A Stop in a Camp.

Temporary beds were constructed in regular camp style and a more pleasant stop could hardly have been imagined. As Mason's bad ankle would prevent climbing the mountain the next day, the machines were not cleaned. On rising the next morning it was found the camp was located at the foot of the Tuckerman Trail and Cascade. A walk to the Cascade was enjoyed before breakfast; as the return to Crawfords meant a run of only 35 miles, against the 50 of the previous day, there was no hurry in starting. The road down to Glen Station, where the main highway was met, proved to be a most excellent one and largely down grade. At Glen Station the "Morris chair" saddle on the Henderson was shipped home and the regular saddle was substituted, as it gave better control of the machine in sand, and sand seemed to be plentiful when least expected.

From Glen Station to Crawfords the road was the same as traveled before through the Notch. It was hoped that Tug-of-War Hill would be easily mounted this time, but to the dismay of the Henderson rider a pair of horses were met one-third up and in such a way as to cause a stop. While Mason was trying to screw up courage for a fresh start a Chase two-cycle three-cylinder touring car came laboring up, with four people broadly smiling at the motorcyclist's predicament. Somewhat to his satisfaction, however, he heard the Chase cough its last after rounding the next curve. Giving the Chase a chance to engineer the rest of the hill the Henderson rider then took his mount to the top with colors flying.

On arriving at the Crawfords station the balance of the day was spent in cleaning up, tanking up and "talking up" New Hampshire sand spots. The following day proved to be very rainy, so no further progress was made until Thursday. Thursday morning proved fair and an early start was made. The road to Profile House was found to be good, considering the recent rain, and fair progress was being made when an unexpected soft spot precipitated the Henderson rider over the bars.

DEDGE AND HIS CUPS

TOMMY DEDGE, the National Capital M. C. speedster, appears in the accompanying photograph with three cups which have recently been added to his collection. In addition to the cups Tommy's sweater is also worthy of special mention, orange and light blue—half and half—being the rather startling colors used. The sweater was presented to Dedge by the International Acheson Graphite Co., of Niagara Falls, N. Y., makers of "Oildag." Dedge is one of the chief boosters of a plan to have a three-lap board saucer erected at Glen Echo, near Washington, by the electric railway companies in the National Capital.

On the Trail Once More.

The main and spring forks, handlebars and rocker arms were much askew. The machine was stripped of its damaged parts and the R.-S. rider then proceeded some five miles to a blacksmith shop, accompanied by some very crooked tubing. He returned within an hour, however, and soon had the Henderson in riding trim. A stop was next made at Profile House for a pennant and a short way further on to view the Old Man of the Mountain, that wonderful piece of Nature's handiwork. After luncheon progress was continued over generally good roads, except where the State road was under construction, to Plymouth. The scenery of the Franconia Notch can best be seen in going from Plymouth toward Profile. A big mud hole just outside of Woodstock sent the Henderson rider down again. As he always was in the lead he got the surprises. This time the resulting bent spring fork was straightened with a piece of iron which happened to be near at hand.

While there is some sand and several hills before reaching Plymouth, the road is not really bad and the State road operations will soon wipe out the present bad spots. From Plymouth to the Weirs there are several long stretches of deep sand, and as it was beginning to get dark when Meredith was reached it was considered best to rest there till morning. The 75-mile run necessitated taking on more gas and oil, preparatory to the next day which was to bring the final run.

An Economical Outing.

The fuel and oil bill for the two machines was $4.25, or less than one-half cent per mile. Repairs cost only ten cents and there were no punctures. That afternoon the R.-S. was taken down to see if there was any perceptible wear. The machine, which was a 1911 model with 1912 attachments, had been used continually for the two seasons and yet not even a loose piston-ring was found. It was at once reassembled and made ready for Mr. Mason, who was to leave the following Monday for a week's trip through Rhode Island and part of Connecticut.

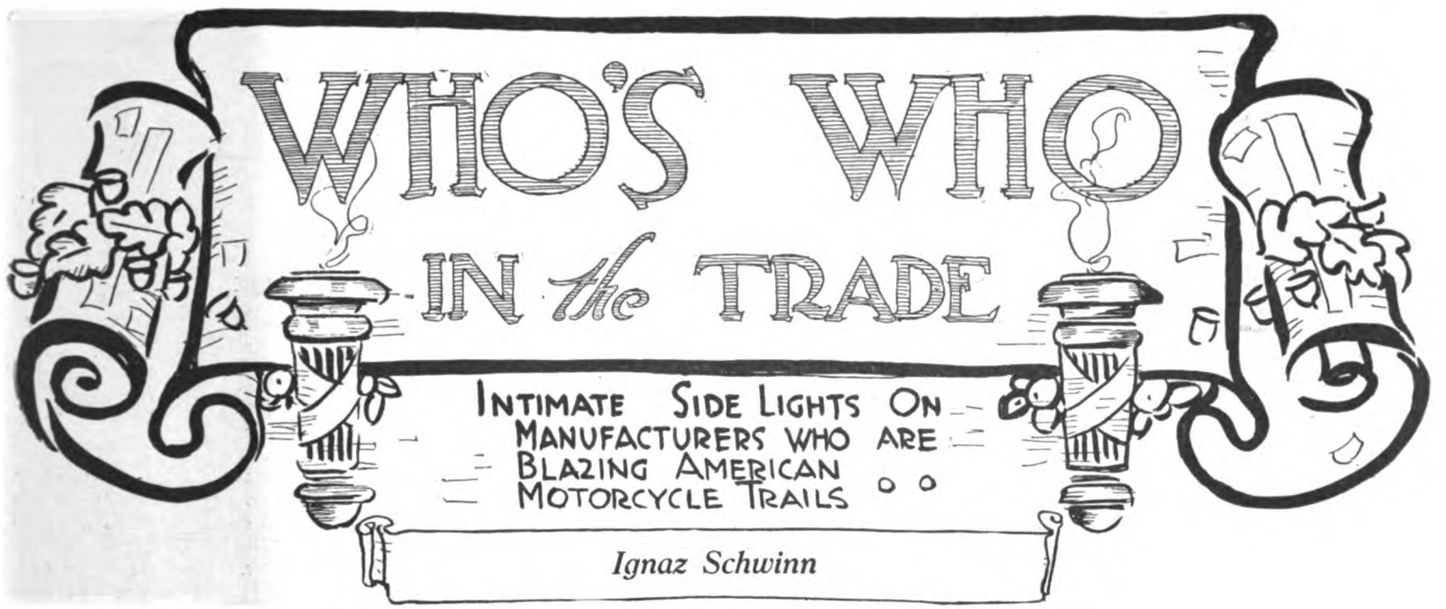
IGNAZ SCHWINN

Digitized by Google



FOLKS who have known Ignaz Schwinn for years past express no surprise when informed of the remarkable energy he has brought to bear upon his operations in the motorcycle field, in the production of the Excelsior line, for energy—of the straight-from-the-shoulder, result-getting brand—has been a Schwinn characteristic since the now well-known manufacturer was little more than a toddler in Hardheim, Baden, Germany. Mr. Schwinn was born in Hardheim, and before he had reached his eleventh year he was called upon to assume unusual responsibilities, owing to the death of his father. Always a thoughtful youngster,, and little given to the frivolities of present-day youth, the boy made the most of conditions as they presented themselves, and until he was fourteen years of age practically all his time was devoted to assisting the family.

It was at this age that he entered upon what might be considered his first formal position. Formerly he had worked wherever there was a demand for his services, giving little or no thought to the character of his employment as long as it brought financial returns and allowed him an hour now and then for his books, but in his fourteenth year he felt the need of work that seemed to point to a definite end. Already he had an eye on the future, a youthful, untrained eye, naturally, but one keen for results.

ENTERING THE BICYCLE INDUSTRY.

The position referred to brought young Schwinn into the plant of the Mannheim Rubber Company, where he was employed in the mechanical department, and there he laid the foundation for the thorough schooling in the cycle industry which has since stood him in good stead. In 1878 the youth entered the bicycle manufacturing field, and he at once displayed aptitude for designing and for refining the designs of other trade workers, with the result that he soon took up steam and gas engine work in addition to his other interests. These were days calculated to bring out the Schwinn characteristic of energy at its best, for the young designer worked tirelessly in every waking hour, often far into the night, to perfect the innovations which he persisted in introducing into the manufacturing system of the factory.

Industry brought its reward, as usual, for in 1886 the young man became superintendent of a bicycle factory in Frankfurt-on-the-Main. He remained in this position until he left Germany, in the spring of 1891. It was with some reluctance that Mr. Schwinn departed from his native land, for his progress had been rapid, and veteran designers and manufacturers were already giving his work most serious attention. His friends argued that he was taking a foolish step, but the designer, eager for bigger things, could not be persuaded to alter his plans. On arriving in the United States Mr. Schwinn went to Chicago almost directly, so that the staging of his present successful operations there is not without appropriateness.

A NEW START IN AMERICA.

Hardly had Mr. Schwinn arrived in Chicago when he evolved a plan to enter upon the manufacture of bicycles. He met with considerable success and continued to produce high-grade machines until he decided to sell the factory in 1895. In the spring of that year he established a bicycle factory under the name of Arnold, Schwinn & Company, and this name still stands for bicycle quality, as the company is operating a bustling bicycle plant and finding it pretty hard to fill all its orders. Mr. Schwinn is now the sole owner of the factory, having bought up Mr. Arnold's interest several years ago. Some idea of the success that has attended Mr. Schwinn's development of this factory may be gained from the statement that for the last five or six years his aggregate output of bicycles has averaged eighty to ninety thousand machines annually.

It was a short step from the manufacture of high-grade bicycles to the motorcycle industry, and when Mr. Schwinn finally decided to turn part of his attention to the production of motor two-wheelers he was far from being unprepared for the step. His early training in Germany obtained under conditions which rendered it most practical, was of great value to him. While he had been busy in the advancement of his bicycle interests Mr. Schwinn found some time to devote to purely experimental work, and in 1897 he built an electric car for his personal use which proved quite successful. From 1897 to 1902 he manufactured twelve experimental automobiles, and several of them are still doing good work.

AN IMPORTED DE DION.

It was in 1899 that the motorcycle idea began to assume definite form in Mr. Schwinn's mind, for in that year he imported one of the old motor bicycles in which a De Dion motor furnished the power. Mr. Schwinn put the De Dion through many a curious stunt in and about Chicago in the ensuing year, and from time to time he fitted a contrivance of his own design that assisted the outfit to meet the strenuous demands he made upon it. All this time the designer was far from satisfied. He had half a dozen big ideas under consideration, and his problem was to grasp the one that would fully meet his expectations. While the other Schwinn interests were developing the Schwinn energy and the ever-present demand for action were keeping pace with them, and finally in 1911 came the inevitable. Mr. Schwinn purchased the Excelsior motorcycle plant and immediately began to apply the methods that have characterized all his business operations.

A STICKLER FOR SUPERVISION.

Mr. Schwinn's chief hobby—and a most fruitful one it has been—is personal supervision of his entire plants. He makes regular trips through the big factories, studying production problems in such detail that he is never without a suggestion or two for his subordinates. When not at his desk or exploring the factories Mr. Schwinn is pretty certain to be chugging about over some of Chicago's excellent boulevards and suburban roads in one of his automobiles. He is exceptionally fond of automobiling and makes it practically his sole means of recreation.

That he is proud of the improved Excelsior motorcycles goes without saying, and his enthusiasm over Humiston's remarkable performances on a "Big X" flier on the Pacific coast recently was scarcely less exuberant than that of the men in the factory who had actually fashioned the sturdy space annihilator. From time to time Mr. Schwinn's friends question him as to where his energy is likely to break out next, for they know it has a confirmed habit of leading him into new fields, but he appears satisfied for the time being. At any rate, he smiles and says: "I'm doing very well, thanks, but I've never yet turned my back on a good idea, so how are we going to predict what may happen?"

TRAILING the EARLY SALE.

ANOTHER TALK WITH DEALERS

"DURING the last month I have heard more enthusiastic talk about early sales than in all my six years of previous experience in the motorcycle trade," said the Veteran Dealer, "and if I were the most confirmed pessimist in the Union I still couldn't help believing that there is something big and vital in the present display of enthusiasm. If a dealer makes up his mind that he is entitled to some early 1913 sales, he certainly is going to land them, but it's about time for the thoughtful salesman to lead himself off into a corner and consider that word "early" from every angle. If getting early action is going to help, the earlier it is the better. In other words, now is the time.

"I'm loaded to the muzzle with plans, and I trust every other agent in the country is doing just as much hard thinking as I am. A week ago, for example, I fired an application at the Motorcycle Dealers' National Information Bureau, in Indianapolis, for the series of special letters to farmers that is now being distributed, and while farmers are not so very numerous in my district I am going to get in touch with every one of them that might be at all interested in the purchase of a motorcycle. Where there is a son on the farm I figure that my work ought to be pretty easy.

WHERE THE FARMER COMES IN.

"When we are considering early sales the farmer should be given most careful attention. In the first place, he is quite likely to have money laid away, and if we can show him that we have a business proposition to offer he is not slow, as a rule, to display interest. From a purely recreation viewpoint I do not count upon interesting one farmer in fifty, but when I show him that I can solve the farm-to-town messenger and errand problem, and that I can help him to keep the boys around the old homestead, I believe I can talk business to nearly one hundred per cent. of them. I won't lose many, that's one sure thing

"In one of the recent bulletins of the Information Bureau I noticed a little story about two rival dealers in a small town which impressed me mightily," continued the Veteran, "for I think it socks the spike right on the noodle when it comes to explaining why many dealers are chronic grumblers. The dealers were Smith and Jones—or we'll say they were, at any rate—and on a certain day each received a tip from his factory that a likely prospect was running at large in that town. Then, according to the bulletin, "Jones hoped and Smith hopped." Jones hoped the prospect would be so deeply impressed with what he had heard indirectly about the —— machine that he would walk right into Jones' store and lay the purchase price on the counter. Smith, who did the hopping, trundled out his demonstrator and went after the prospect. He sold a machine, of course, and Jones is still hoping.

A QUICK-ACTION BUSINESS.

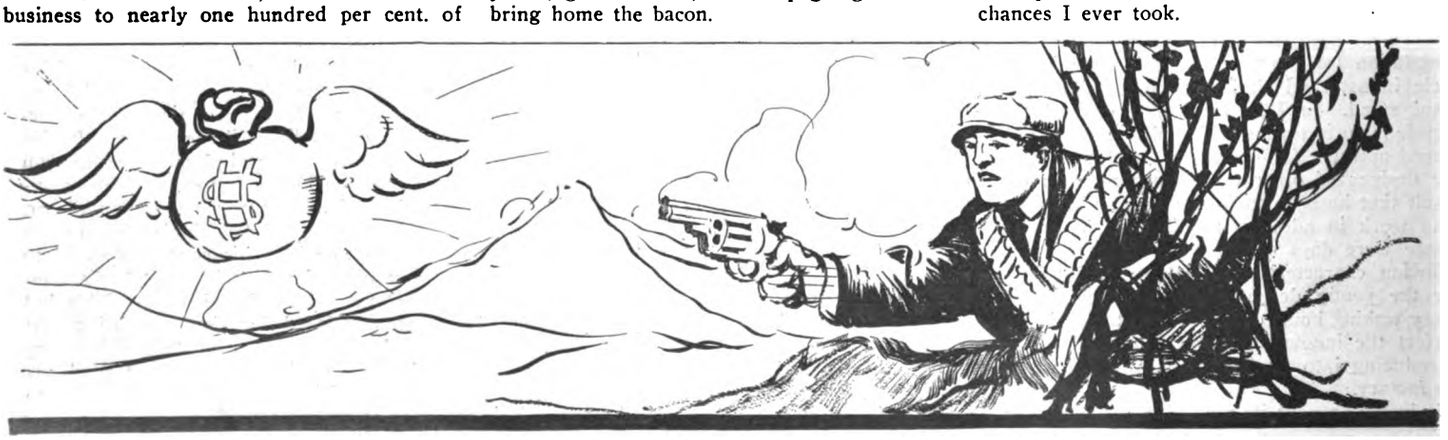
"Selling motorcycles is a quick-action business, and the sooner agents realize this the better for them. If you are an agent and you have an inquiry forwarded by the factory it is a fairly safe bet that another agent in your territory also has the prospect's name, and that every second you delay puts you in greater danger of losing the business. Here's another point. When you receive one of these promising inquiries don't sit down and write a letter full of rambling arguments in behalf of your make of machine; instead, go out and have a heart to heart talk with the prospective buyer. Letters have their uses, but they are cold and unsympathetic at best, and five minutes' conversation at close range will often bring down a sale that could not have been landed by five hours of letter writing. Don't wait, or write or sit down and hope—like Jones; go after 'em, and keep going. You'll bring home the bacon.

If you are so far away from the prospect that you can't jump on your demonstrator and buzz right around to see him, then's the time to write a letter. But don't try to sell the machine in that letter. Simply tell the prospective customer that you believe you have what he wants and that you are coming to prove your claims. Tell him when you will be there, and then go without fail. I have known one broken engagement to spoil a sale for a dealer who practically had the money in his pocket. If your first visit doesn't clinch the sale, go again.

WHERE DIPLOMACY IS VALUABLE.

"There never was a business involving sales that didn't require diplomacy," said the Veteran Dealer, as he glanced at last season's mount that is stored in his place and handed me a fat cigar, "and late last summer I proved this to my entire satisfaction. When I returned to the store after supper one evening I found a young man of my acquaintance in the place trying to convince my salesman that he should permit the visitor to try out one of our machines on a short run. The salesman 'couldn't see it.' He knew that he would be taking a chance on having the machine damaged, for the visitor had only limited experience in riding, and besides we had never been led to believe that he was interested in the make of machines we were handling.

"When I grasped the situation I did some quick thinking. I thought of all the troublesome possibilities my salesman had considered, and then some, but I told the visitor we would let him take a machine out for a short trip. Mind you, he didn't say he wanted to buy another machine, for he already had one of a rival make; he simply asked permission to try out one of our mounts. He had me guessing a bit, but I decided to take a chance, and results proved that it was one of the luckiest chances I ever took.



Digitized by Google

STRIKING THE PSYCHOLOGICAL MOMENT.

"It developed that this young man had asked a favor of the agent from whom he had bought his machine, and that he had been refused, for what seemed good business reasons. Then he decided to put me to a test, and without parley he asked for one of my machines, although he knew that I recognized in him a patron of a rival dealer. Well, to make a short story shorter, as this fellow O. Henry used to say, I nailed this rider at the psychological moment and made a friend of him for life. He rode one of my machines about town for weeks, holding up his friends right and left and explaining the good points of the mount, until he had a stream of prospects filing into my place every evening—and a good percentage of them meant sales for me.

Diplomacy is one of the greatest little assets any business can have. Why, I knew a dealer in a town of 30,000 inhabitants who had a corner on the motorcycle business, simply because he never was known to refuse a favor. But here's the point; he saw to it that the boys didn't ask for anything except what he was prepared to grant. Sounds simple, but it's not. Still it is well worth working for, this diplomacy stuff. If you haven't any in stock, you would do well to load up today; it'll never get stale on your hands.

MAKING UP THE LIST OF PROSPECTS.

"Getting back to our chat about early sales," said the Veteran Dealer, as he began to realize that the afternoon was well under way, "it's quite important not to put in too much time running down prospects who cannot afford to buy a machine no matter how strongly they may be inclined to. It's mighty disappointing to visit a chap, demonstrate your machine for him and give up considerable time, only to find that he cannot raise any money. However, don't blame the prospect for this condition of affairs; it's up to you to make up your list carefully and to eliminate those who are obviously in no position to make an outlay for a motorcycle.

"This list has an important bearing on early sales. If it contains the names of the right kind of recruits—those who are in a receptive mood and who can afford to buy a machine—a little lively canvassing about this time ought to stir up quite a few February and March sales. From my viewpoint an early sale is worth more than one closed along in the summer. Here are just two reasons why: The sooner you get your new models on the road the more likely will they be to bring you in additional inquiries. That's one. The other is that your time isn't worth half as much now as it will be in April and May, and you can give up days to working up a prospect now where you can't afford to later in the season."

IN the photograph below are shown the most active members of the National Capital M. C. of Washington, D. C., as they appeared at the recent annual banquet.

BOYD RE-ELECTED.

BALTIMORE, MD., January 18.—A well attended and enthusiastic meeting marked the annual election of the Maryland M. C., recently held at the club rooms. Frank O. Boyd was re-elected president; Frederick Shaffer is the new vice-president; William S. McCauley, secretary; William Wood, treasurer; Nelson Johnson, captain; Elmer Snyder, first lieutenant; Charles Frank, second lieutenant, and Frederick Wilkens, third lieutenant. Dr. F. Lauterbach and Roger Wilkens were appointed members of the executive committee. The Maryland Motorcycle Club now has a membership of 100. The annual banquet of the club will take place on January 30.

YORK M. C. OFFICERS.

ARRANGEMENTS have been made by the York (Pa.) M. C. to hold a series of sociability runs. Officers of the club, elected at the last meeting, are reported as follows: President, Frank H. Reiff; vice-president, Harrison D. Heindel; secretary and treasurer, Curvin L. Rinehardt; trustees, Luther Stough, Charles Kohler, Herman Smid and Charles Strathmeyer. Curvin L. Rinehardt was chosen road captain.

AT an organization meeting held in Oneida, N. Y., the Oneida Motorcycle Club was formed and the following officers were chosen: President, John E. Quackenbush; secretary, Daniel Donovan, and treasurer, R. S. Ryan.

COMPLETE LECTURE TOUR

CHAIRMAN SAUER, of the National Committee on Legal Action, announces this week the complete schedule for his F. A. M. transcontinental educational and membership campaign. His first meeting will be held in Baltimore Thursday, February 27. Director Howard A. French, with the assistance of the Maryland Motorcycle Club and others interested in the fraternal side of the sport, have assured Mr. Sauer that arrangements are already under way for a big meeting in Baltimore. Similar assurances have been received from Washington, Los Angeles, San Francisco, Denver, Chicago, Indianapolis, Cleveland and other cities on the route.

It will be noted from the itinerary published herewith that Mr. Sauer will first travel through the South, reaching Fort Worth, Texas, Monday, March 10. Meetings will follow in Dallas, San Antonio and El Paso, Monday, March 17, being the date of the Directors' representative's arrival in Los Angeles, where he is scheduled for a two days' stay. In Los Angeles Mr. Sauer will conduct conferences and hearings Monday and Tuesday afternoons and meetings at night. A two days' stay will be made in San Francisco and, after taking in Portland, Tacoma, Seattle and Salt Lake City, Chairman Sauer will reach Denver Sunday, March 30. From Chicago, in which meetings are scheduled for Wednesday and Thursday, April 9 and 10, respectively, Mr. Sauer will go back to New York for a few days' stay, and then continue his trip through New England and the Middle West, finishing with Philadelphia and Newark, N. J., on Tuesday and Wednesday, the 29th and 30th of April, respectively.

Pamphlets descriptive of the purposes of the tour, and giving the complete itinerary, with the names of the hotels at which Mr. Sauer will stop in each city, are now being printed and will be ready early next week. Upon application to either Chairman Sauer, Secretary-Treasurer G. B. Gibson, of Westboro, Mass., or Chairman E. M. Estabrook, of the Membership Campaign, of Bangor, Me., local club or F. A. M. officials, dealers and others interested may obtain, for distribution, as many copies of this pamphlet as they may require for circularizing purposes.

In each city on his itinerary, Chairman Sauer plans to address one or more meetings at night, and confer with local officials and conduct hearings during the afternoons. Wherever he goes, his time will be entirely at the disposal of the F. A. M. and club officials and members, and the latter are urged to make all the preliminary arrangements. Mr. Sauer will deliver a 30 minutes talk on the "Motorcycle and the F. A. M." and, after his address, ask and answer questions which have a bearing on the subject.

THE ITINERARY

Baltimore	February	27th
Washington	"	28th
Richmond	March	1st
Savannah	"	3rd
Atlanta	"	4th
Birmingham	"	5th
Memphis	"	6th

Philadelphia	"	29th
Newark	"	30th

All dealers, club and F. A. M. officials in the cities on the schedule are urgently requested to co-operate with one another in arranging for meetings in suitable places, on the scheduled evenings in each city. It is important that Mr. Sauer should be advised regarding arrangements not later than February 27, which will be the date of his departure from New York. It is also hoped that any local trade and club jealousies may be ignored for the occasion, so that this proposition will have the harmonious co-operation of everybody interested in the healthy development of the sport and the growth of the National organization.

Two handsome silver loving cups will be awarded by the National body, as follows:

One cup to the city contributing, upon Mr. Sauer's arrival there, the largest number of paid new memberships. Every F. A. M. member attending one of these meetings is urged to bring at least one non-member, prepared to hand in his membership. A second cup will be awarded to the city in which the meeting is best attended. In measuring the attendance, the Directors will, instead of simply considering the number of those present, base their award upon the percentage the attendance bears to the F. A. M. membership in each city on the 1st of March. In other words, in a town having a F. A. M. membership of 100 and showing an attendance of 200 at the meeting, a percentage of 200 will be given. The cup will be awarded to the city having the largest percentage according to this method of computation. This gives the smallest town on the schedule an equal opportunity with the largest.

Up to February 27, Mr. Sauer may be reached at 51 Chambers street, New York, and thereafter, according to date, in the cities given on the schedule.

TWO COMMITTEES NAMED

AT the last meeting of the National Capital M. C., of Washington, a letter was read relative to the visit to be paid the club on February 26 by Chairman J. Leo Sauer, of the F. A. M. National Legal Action Committee. The club appointed the following committee to receive the Federation official and assist him in carrying out his programme in Washington: T. O. Wansleben, George W. Beale, Frank Long, H. B. Cohen, Thomas R. Dedge, Frank Hazelton, George N. Parezo and F. Ruppert.

The club has decided to hold a race meet at the Bennings track May 30. Following is the committee in charge of the plans: E. M. Dodson, Paul Draper, Fred Mills, T. O. Wansleben, H. B. Cohen, W. F. Throop, Frank Hazelton, Frank Ruppert, T. R. Dedge, J. E. Pyle, R. T. Cator and L. R. Sakers.

PINS FOR VETERANS

SECRETARY GIBSON reports having received a stock of new and attractive F. A. M. pennants. They are small and so designed that the letters F. A. M. and the Federation emblem, both in yellow, show up well on each side of the pennant on a blue background. The F. A. M. has also ordered special pennants which are to be used as club ornaments, or for any wall decorations. These will be sold at 75 cents each.

A supply of special "Veteran's" pins have been received. These are similar to the "Founder" pins offered some time ago, being made of rolled gold, and they have the word "Veteran" on a scroll between the tips of the wings of the F. A. M. emblem. Members who joined the organization during the first five years of its existence (those holding cards numbered from 238 to 2762), are eligible to wear these pins, which cost $1 each.

NEW MICHAELSON OFFICIALS

ANNOUNCEMENT is made by the Michaelson Motor Co., of 526 Fifth street, south, Minneapolis, Minn., that Frank L. Thresher has been made vice-president of the company, and that S. F. G. Blymyer has been chosen for the office of secretary-treasurer. Both the new officials are well known in Minneapolis and have long been recognized as business men of high standing. At the Michaelson plant excellent progress is reported.

WELL WITHIN THE LIMIT

THROUGH one of those errors that are often as difficult of explanation as they are annoying, announcement was made in a table of 1913 machine specifications in the January 9 issue that the Harley-Davidson 8 h. twin, known as Model 9E, was credited with 63.34 cubic inches piston displacement, when as a matter of fact it should have been rated at 60.34 cubic inches. That nothing concerning the Harley-Davidson escapes the eye of the chap interested in motorcycles is evident from the fact that this erroneous specification was used to bar Harley-Davidson twins from a recent contest in California. The Milwaukee company is prepared to prove, of course, that its sturdy twin 8 does not go over 60.34 cubic inches, but this correction is made in order that such extreme measures need not be resorted to when another Harley-Davidson rider wants to show what he has in his mount.

MOHAWK RUBBER CO.

AKRON, Ohio, January 30.—The Mohawk Rubber Company is being organized in this city with a capital of $350,000, to take over the plant of the Stein Double Cushion Tire Company, of East Akron. The latter plant, which has a capacity of 100 tires daily, has been idle for some months, and it is proposed to place it in operation at once.

A MOTORCYCLE equipped with a special carrier is being tried out by the post office department of Detroit in the delivery of parcel post packages.

TO INCREASE CAPITAL

AKRON, Ohio.—At the annual meeting of the stockholders of the American Tire & Rubber Company, of Akron, held recently, directors were elected for the year and the stockholders authorized an increase from $200,000 to $500,000 in capitalization. Fifty thousand dollars' worth of this stock will be issued at once. The company will soon place on the market a solid rubber tire, for which patents have been applied for. Adam Duncan has been elected president; G. C. Waltz, vice-president; Frank Pfeiffer, treasurer, and F. E. Rowe, secretary and assistant treasurer.

AN AERMORE BOOSTER

HOWARD B. JONES, of Chicago, who appears in the accompanying photograph, was formerly connected with the Chicago distributors of the Excelsior, and is now manager of the motorcycle accessory department of the Aermore Manufacturing Co., 1536 Michigan Boulevard, Chicago, handlers of the Sabo motorcycle lock and the Shlosberg muffler. Mr. Jones is a college graduate and an excellent mechanic, and under his supervision the firm's motorcycle department will be revolutionized.

VISITORS AT HENDEE PLANT

A NUMBER of motorcycle enthusiasts after visiting the New York Show made a trip to the Hendee factory at Springfield, Mass., before returning to their homes. The alert photographer at the Indiana factory happened along just as the party was leaving and managed to get the accompanying picture. The layout includes: Mr. and Mrs. John Hurck, St. Louis, Mo.; Wesley T. House and Mrs. Langtry, Wheeling, W. Va.; Charles H. Kelsey, Little Falls, N. Y.; H. H. Bowen, Utica, N. Y.; Henry Schaefer, Dunkirk, N. Y.; E. F. Tracy, Cleveland, Ohio; O. L. Neal, Buffalo, N. Y.; A. G. Schmidt, Pittsburgh, Pa.; Clarence Walter, Butler, Pa.; Edward Stauber, F. L. Hunt, John Hannan, F. Dublin, W. Lovney, George Brey, Joseph Ochs and George Wagner, of Rochester, N. Y.; August Zimmerman, Baltimore, Md.; R. W. Ellingham, Springfield; E. B. Connell, Pittsburgh, Pa.; L. S. Schaefer and Earl Bates, Binghamton, N. Y., and E. T. Mills, Batavia, N. Y.

DIVIDEND DECLARED

AT the annual meeting of the Mansfield Tire & Rubber Company recently, it was reported that the net earnings for the six months during which the plant has been in operation have been 12½ per cent. A stock dividend of 10 per cent. was declared. Officers were elected as follows: Judge C. R. Grant, president; G. W. Henne, vice-president and general manager; Jesse E. Dow, secretary, and W. F. Henne, treasurer.

NEWARK ACTIVITY

WALTER GOERKE, Indian agent at Newark, N. J., reports that he has received 34 bona fide orders for 1913 models. Eight of the orders call for the De Luxe two-speed models. Judging from the general sales in Newark the twins lead the singles by about 80 per cent. Bush & McDougall, agents for the Harley-Davidson, Merkel, Henderson and Thor machines, are busy in their new quarters at 312 Halsey street and report almost daily sales. The new Henderson is coming in for marked attention. Herbert Austin, who has sold bicycles in Newark for fifteen years, has moved to the motorcycle section of the city and will handle the Reading-Standard.

BIG JANUARY INCREASE

GEORGE LYONS, formerly employed by the Miami Cycle & Manufacturing Company in the capacity of chief tester at the Middletown factory, has resigned his position with that firm to join the repair department of the American Motor Company, 2724 Michigan avenue, Chicago, distributors for Eagle and M. M. motorcycles. Manager Green of this firm reports an increase in sales of almost 50 per cent. for January.

MOTORCYCLE TIRE COMPANY

THE Motorcycle Tire Company, of New York City, has been incorporated for $10,000. The company will deal in motorcycle tires, accessories and specialties. The incorporators are Henry W. Torney, 65 Park avenue, New York; Earl E. Beyer, 454 Riverside Drive, New York, and J. E. Beyer, Rochester, Ind.

CHIEF OF POLICE KOHLER, of Cleveland, in his recent annual report recommended that the department be provided with a number of additional motorcycles.

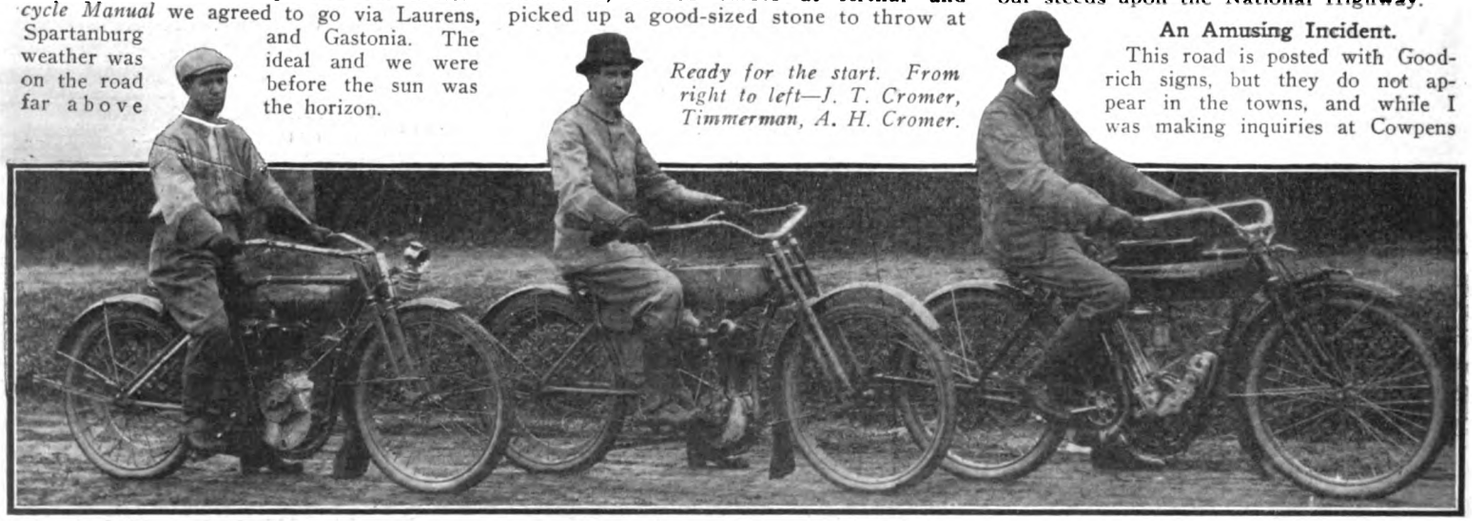
Touring the CAROLINAS

JOHN · T · CROMER

FOR some time I had been contemplating a trip by motorcycle into North Carolina, having heard a number of motorists refer to the excellent macadam roads over the line, and finally I put the proposition up to my riding partners, Arthur H. Cromer and I. T. Timmerman. As we have no macadam roads in our section of the Palmetto State, the prospect of a tour into North Carolina was very alluring, and the boys joined me enthusiastically in preparing for the outing. We decided to send our grips by express to Charlotte, N. C., in order to travel light, and on the machines we carried only such tools as we were likely to need.

Timmerman mounted an Indian 4, Arthur an Emblem and I used the same Wagner I have been riding for two seasons. After consulting our road maps and our *Motorcycle Manual* we agreed to go via Laurens, Spartanburg and Gastonia. The weather was ideal and we were on the road before the sun was far above the horizon.



Ready for the start. From right to left—J. T. Cromer, Timmerman, A. H. Cromer.

Troubles Break the Monotony.

After passing Jalapa, a little village seven miles from Newberry (our starting point) we overtook a through freight train, and for about 15 miles we had a pretty chase. Finally we managed to lose the train, and a short time later we pulled into Kinards. The roads were of hard clay, except for a few sand beds near Goldville and Clinton, and these did not bother us. We reached Laurens in good time, arriving at 7.25 a. m., having traveled a distance of 33.2 miles.

After leaving Laurens we found some pretty steep hills, and a few of them were quite rough. When we had ridden about 10 miles Arthur's machine began to puff and snort and we found the gasoline tank dry. It was a trip of 35 miles to the next town where gasoline was procurable, and we did not have enough in our tanks to carry all three over this route. Finally we learned that a gasoline engine was in use in the neighborhood and we persuaded the owner to sell enough fuel to carry Arthur to the next town. We thought now that we should have some fine going, for there was nothing to bother us but the long, steep grades. They made our 4's purr a bit, but we always managed to climb them gracefully.

An Exciting Episode.

While ascending one of these long hills we came across a full-fledged road hog, who probably held all records in his territory for being downright "ornery." Arthur was riding in front, and when he encountered the road hog in a buggy he began to figure how he was going to pass the rig. Suddenly the driver called to him to stop, but Arthur knew what it meant to stall his engine on that grade and accordingly he chugged around the rig, with only a few inches of space to ride in. This so enraged the owner of the buggy that he jumped to the road, roared curses at Arthur and picked up a good-sized stone to throw at him. In the meantime Arthur had taken a squint behind him, and he lost no time in putting his head down between the handlebars and scooting to safety.

I was next in order and when the road hog drew back to throw his rock at me I stopped. He demanded to know Arthur's name and when I refused to tell him he became so infuriated that he said he would shoot every mother's son of us if he had a pistol. Luckily he didn't have one.

Timmerman Brings the Climax.

Finally the owner of the buggy permitted me to push my machine past him, and I had begun to think that things had quieted down when Timmerman came roaring up the grade with his cut-out wide open and his machine volleying like a squad of artillery. Then there was excitement. I thought for a time we should have to lay hands upon our friend with the rock, to keep him from doing damage. As we finally pushed past him he announced that he would be waiting for us with a gun on our return trip. Needless to say, we returned by another route.

After this grade came good roads for a time. Then we struck trouble, mine coming first. The other boys passed me while I was straightening a dent in my rear pulley and when I was trying to overtake them a short time later I ran into a mudhole at 40 miles an hour and took a spectacular spill. When I had cleared the dirt from my eyes and mouth I found my machine in a nearby ditch and an examination showed that it was still ready to run. After five or six miles of good going I came within sight of Arthur, who had taken a spill and broken his clutch lever. This put his clutch out of business for the remainder of the trip. We arrived at Spartanburg about 10 o'clock. There we replenished our tanks and turned our steeds upon the National Highway.

An Amusing Incident.

This road is posted with Goodrich signs, but they do not appear in the towns, and while I was making inquiries at Cowpens my partners sped past me and took the wrong route. I set out to overtake them and when they saw me traveling after them at top speed they inferred that I was out for a race, and immediately let out their machines. Thus we traveled for several miles at top speed, and all my signals were of no avail. It was an amusing situation, but at the time it did not strike me as being very funny. Finally I stopped in disgust and sat under a tree until Arthur and Timmerman discovered their mistake and came back.

Then we took the right road and reached Gaffney about noon. Here we had dinner and a rest. From this point on to Charlotte the roads were as good as any motorist could expect, despite the hills. Arthur had a bad blow-out on one of the hills, and as the nearest town was 25 miles distant we had to make slip-shod repairs. After he had ridden a few miles the work had to be done again. We were told that when we reached Bessemer City we should strike macadam roads leading into Charlotte.

Digitized by Google

Sixteen Miles Off the Route.

At Bessemer City, however, we took the wrong road and went 16 miles out of our way before we discovered the mistake and got back on the main route. Finally we reached Gastonia a little before sundown. Here Arthur bought a new tire, and we started with throttles wide open, as we had no lamps and it was our desire to reach Charlotte in daylight. We crossed Catawba river at the toll ferry, paying 10 cents apiece for our machines, and reached our destination as per schedule.

We sent a telegram at once notifying the folks at home of our safe arrival and then went to the express office for our grips. To our surprise they had not yet arrived, and we did not receive them until the next day at noon. Our distance traveled from Newberry was 1,744 miles.

Charlotte is a fine little city of 35,000 inhabitants. Automobiles are plentiful, but I noticed only a few motorcycles. There appears to be a fine opening for the single-tracker in this city, but dealers seem to be lacking. Our machines were stored at Osbourne's garage free of charge and we spent several days in sightseeing. At last our vacation period drew to a close and we decided to return via Greenville. I may say that our homeward trip was quite as thrilling as the outward run. Arthur's machine suffered a puncture, and then he lost his valve key; his valve guide became loosened, his righ grip control got out of order, his front fork gave trouble and his clutch began to slip.

A Mechanic to the Rescue.

Arthur consumed three hours in traveling 12 miles, but we reached Gastonia eventually and found a mechanic who took the machine in hand. When we took to the road again, with Arthur's mount in good shape, a dog ran out suddenly and before Arthur could make a move he had struck the canine and put him out of commission. The owner threatened trouble, but we kept on moving, Arthur having escaped without a spill. We retraced the road to Spartanburg and then followed the National Highway to Greenville. We found this road excellent, although it has many short bends. We reached Greenville at sundown, having traveled 119.8 miles from Charlotte.

We spent the night with relatives and set out for home the next morning via Simpsonville, Owens and Laurens. This road was the best we had traveled and we made splendid time over it. We reached Newberry in fine trim, and we agreed that for a comparatively short outing our trip was about as thrilling as could have been expected.

PLEASURE AND BUSINESS.

AFTER stowing away a turkey and chicken dinner, members of the Harrisburg (Pa.) M. C. proceeded to the clubrooms and elected officers for 1913. Edward H. Bitner is the new president; Paul Clemm, vice-president; E. Keffer, secretary, and A. E. Gettys, treasurer. James Donnelly will have charge of road events for the coming season.

FIFTY members of the La Porte (Ind.) M. C. attended the second annual banquet held at the Plumbeck Cafe recently.

Needless to say, from the standpoint of mirth, melody (they had a song-fest, too,") and hilarity, the "spread" was highly successful.

SCENE OF RECENT SUCCESSFUL TORONTO HILL-CLIMB

BELOW is shown a remarkable photograph of the hill on which the Toronto (Ont.) M. C. recently conducted a series of successful climbing events. The hill, which is situated on the outskirts of the city, has a fairly good surface under ordinary weather conditions, but when the Toronto club conducted its program the course was not all that it might have been. The wavering tracks discernible in the photograph were made by an automobile which climbed the hill with a party of officials before the motorcyclists entered upon their contests. At the foot of the incline will be noted a wooden bridge which afforded the contestants a smooth but short start on the whirl to the top.

A flagging system was used by the officials to insure accuracy in the timing of the riders.

TOLD AMONG FRIENDS

LOCATING CLUTCH CONTROL

EDITOR.—Of late I have noticed several references in trade journals to the increasing inclination of riders toward simplicity in control systems, and I am led to believe that the chief interest in this direction at the present time concerns the clutch. There are really but three possible locations for the clutch control—lever on the tank, pedal or similar contrivance on the footrest and a small lever or twisting grip on the handlebar. Each position has its advantages as well as its disadvantages.

The foot pedal is seen at its best only when the machine is equipped with a two-speed, and is so rarely supplied that it hardly need be considered in this letter. The main quarrel lies between the tank and handlebar locations and my preference is decidedly for the former.

In the first place, one great advantage possessed by the tank location is its positive action—the fact that the lever will stay put; that is, the rider can set it so that the clutch will slip at an even rate, giving the effect of a reduced gear, as is often necessary in traffic or deep sand or mud. In case of the handlebar location, the rider must constantly regulate the amount of slip by the pressure of his fingers or by a "twist of the wrist." This is likely to result in undue racing of the motor or in stalling at very inopportune times; furthermore, as the clutch spring is quite strong, the rider's fingers are apt to tire of their work when it is desirable to slip the clutch over a long stretch of road.

The important advantage—in fact, about the only one claimed by the handlebar advocates—is that a rider can manipulate the clutch without removing his hands from the steering gear. That is not so vital a point as it might seem; my experience has proved that little or no difficulty is found in letting go one grip to work the clutch, even when on bad roads.

A further disadvantage possessed by the handlebar attachment is the difficulty of keeping the adjustment exactly right. The wire leading from the clutch arm to the control lever is likely to break under the strain, and is sure to stretch more or less, so that the rider is without his free engine until repairs or adjustments are made. Needless to say, this trouble is impossible in case of the tank lever system.

One important point that some makers neglect is to put the gas control on the opposite side from the clutch lever. If a motorcycle is to be started from a standstill, it is necessary to work the clutch with one hand, the throttle with the other, gradually increasing the gas as the clutch is engaged. This is quite awkward if both controls are on the same side.

New Haven, Conn. GEORGE M. JOHNSON.

WHEN I MEET A CHEERY HELPFUL WORD IN MY TRAVELS I WELCOME IT, GIVE IT A COMPANION IF I CAN AND PASS IT ON" —— Carlyle.

THE TWO-BRAKE SYSTEM

EDITOR MOTORCYCLE ILLUSTRATED.—As a constant reader of your publication abroad, I must take exception to certain statements made in an article headed "An American at Olympia" in your last issue. I refer to the author's criticism of the English braking system in particular, and feel that the statements were made rather hastily.

The English two-brake regulations were promulgated as a matter of safety, to give the rider another means of braking should the first or service system become inoperative through accident or the like and hardly because of inadequacy. I cannot agree with the author that such a measure is absurd. The block brake, with the shoe or block working in or behind the belt rim is by no means insufficient; the leverage in favor of the rider is such that care must be exercised in not making too powerful a pressure on the pedal for fear of being thrown over the front wheel. These blocks are used on belt drums of from 14 to 20 inches in diameter, and anyone familiar with the fundamental laws of mechanics knows that more power can be exerted on the hub from a radius of 7 to 10 inches than from one of 2½ to 3 inches, usually found in the shell of coaster type hubs. Then the braking strain is taken by a rod in tension acting directly on the lever carrying the block, while in the coaster type the pedalling chain and sprockets operate some form of nut and screw before the braking members act on the relatively smaller shell or drum. On this score I cannot agree with the "American" that the coaster type will oust the block or the band types.

I believe that there is one very prominent American motorcycle in use in Great Britain that is perfectly contact with the two-brake system, and uses a contracting band and expanding shoes on a drum on the rear axle. I certainly do not think that they fit inadequate brakes because they are not of the coaster type. If the author had noted such high-powered mounts as the Chater-Lea and Williamson at Olympia he would have seen band brakes of ample surface operated by pedal on the same lines as the machine just mentioned. Taking the block and band types in comparison with the coaster on the scores of simplicity and "fool-proofness" I again cannot agree with the statement that the coaster type will supplant the others used at present.

As to the block brake being capable of hard service, one need only look at the braking device on railway cars and locomotives for a very practical demonstration; this type has been used almost universally since 1829.

I should be very glad to hear from the author of this article, and hope that you will publish this, as the impression he conveys is hardly a fair one.

New York, Jan. 21, 1913. SCOTCHMAN.

TWO-CYCLE MOTORS

EDITOR.—Your issue of January 9 contains a letter in which several points relative to two-cycle engine operation are discussed. Therein, the author takes exception to statements made by the contributors to Question No. 8, and forthwith undertakes to undeceive them and your readers in general in regard to this "fallacy" on their part. His position, to be brief, is this: upon the opening of the exhaust port the burned gases rush out and cause a vacuum to occur within the cylinder at this time, thereby drawing in the fresh charge. The writers of the questioned articles stated the converse to be true, i. e., the fresh charge being introduced under slight pressure assists in expelling the exhaust.

When a gas engine first opens its exhaust the gases will start out into the exhaust pipe with a rush. If the pipe is free and straight the velocity of the gases will be considerable and their momentum may tend to keep them traveling after the pressure in the cylinder is reduced to atmosphere. If so, they will produce a vacuum behind them and draw over the fresh charge. That this occurs in all two-cycle engines or in any one engine under all conditions is a preposterous statement.

To get such an effect requires a long, straight passage for the exhaust, one free from all obstructions, a condition not often found in two-cycle engines. The average engine of this type has a right angle bend in the exhaust pipe just outside of the cylinder, which, with the obstruction offered by the muffler, results in greatly reducing the velocity of the exhaust, thus practically precluding any possibility of the vacuum effect.

We have in the manograph a very effective means of investigating the pressure occurring within the cylinder of a gas engine at any particular point in its cycle. The average two-cycle manograph card shows no drop below atmosphere at the end of the expansion line, in fact the whole of the exhaust line usually lies slightly above the atmospheric line, showing conclusively that no vacuum occurs in practice at this time.

The arguments regarding four-cycling brought forth by Mr. Slater to support his contention are little less than ridiculous and have no bearing on the subject under discussion. He states that four-cycling in a two-cycle engine is the result of either one of two causes, namely a vacuum or a back pressure. In other words, he argues that either a vacuum *does* occur, or a vacuum *does not* occur, thus proving that vacuum does occur.

The statement that the incoming charge assists in expelling the exhaust is practically correct, and most emphatically not do "all two-cycle experts agree . . . that there is a vacuum in the cylinder at that moment."

La Crosse, Wis. L. J. ECKLBERG.

A PROTEST FROM CANADA

A MOTORCYCLIST of Toronto takes exception to an article recently published in an English motorcycle journal regarding the Canadian championships. He refers particularly to a report on a five-mile race for belt-driven machines, and forwards the following letter:

"In the first place this race was for belt-driven machines only, and as nearly all the American machines nowadays are either equipped with chain drive or quote its option, the riders of such machines, as a rule, prefer the chain drive, owing to its greater speed and power for racing. The time for the race referred to, which was won by a Mr. Barnes, is given at 6 minutes 25⅕ seconds, while the 4 h. private owners' stock machine race was won by Bob Scott, on an Indian, in 6 minutes 12⅗ seconds, which is better by nearly half a lap.

"Owing to the rough roads in this country the single cylinder mount is not adaptable to sidecar use, so in practically all cases the American machine used for such work is a twin-cylinder model. As the Toronto M. C. will not allow the twin-cylinder machine on the half-mile track under any condition, either with or without a sidecar attached, and as none of our American single-cylinder machines have ever been in competition in a sidecar race, this leaves the field clear to the British models, and it will readily be seen how they won 'hands down' in this particular race.

"The writer has a very comprehensive knowledge of motorcycle affairs throughout the Dominion of Canada, and he cannot recall a single instance during the past season where a British machine has won the first place in open competition. FAIRPLAY."

PUTTING TIRES TO THE TEST

EDITOR.—From time to time I see items in your pages about tire records, and would say that if any of the boys want to test out their tires they should do a little riding in Montana. Not long ago I started from Townsend, Mont., for a run of 33 miles to the State Fair at Helena. I had some good going, but finally struck six miles of sharp stones, after which my tires were practically in ribbons. My rear tire went flat and I was unable to repair it. I could have bought a new casing at a small town, but finally decided to use the old casing alone, taking out the

Digitized by Google

tube, and thus protecting the rim a little. I walked a good deal of the way back, and had plenty of time to think over tire problems.

If any of the eastern boys are thinking of a trip through Montana, let me advise them to use the largest and heaviest tires their machines can take. Even then they can hardly get through without trouble. When I read some of the stories of bad tire luck told by eastern riders I feel that I would like to take them on a trip or two and show them some roads that really can tear casings to pieces.

A MONTANA RIDER.

TWO-SPEED GEARS

EDITOR MOTORCYCLE ILLUSTRATED.—The rapid increase in the use of sidecars and the varied utility of the motorcycle have brought a demand for a satisfactory two-speed gear and engine device that can be fitted to all machines without alteration. Many variable gears have been devised and subjected to tests, both in the United States and in Europe, but mostly without success. There is a great deal to be considered when designing and marketing such an article.

In the first place, as most machines are ridden by inexperienced owners, who have little or no knowledge of machinery, they must be designed to stand abuse. The variable gear device must be able to transmit the full power of the engine with little or no friction; it must be positive and yet give velvet action in starting. Then comes the price, which must be within reach of every rider.

Having given some of the principal lines along which a designer must work, one might say the problem is beyond solution, due to the small space into which the device must be cramped, but this is not so. I am glad to state that I am familiar with the ideal gear, which is located in the rear hub. It will hold half again more power than our largest twins generate, and weighs little more than a standard rear hub. It gives smooth and perfect action, may be started from a standstill without jolt or jar, and when the clutch is fully in, the action becomes positive.

The price is slightly more than the standard clutch equipment, and is within the reach of every motorcyclist. The gear is operated by a lever similar to that used for the clutch on most machines. By pushing this lever forward the low gear is engaged, the backward movement giving high gear. Gears are used only on low, while direct drive is obtained on high. Only one set of gears is used, and these are subject to no severe shocks or strains, thus eliminating all chances of stripping the gears.

I am an old rider of twin-cylinder machines and fully appreciate the idea of having a two-speed gear because of the many acknowledged advantages derived. Having been a constant reader of motorcycle journals, both domestic and foreign, and having seen the plea so often repeated for a reliable and low-priced two-speed gear, I have taken this opportunity to predict that 1913 will bring forth the much-talked-of product.

F. W. V.

A WORD FOR THE FORECAR

EDITOR.—In your issue of January 23 I note a photograph of an attachment for connecting a motorcycle with a forecar without taking out the front wheel of the machine, and the picture has suggested an inquiry. Why do we hear and see so little of the forecar these days? I think this form of a passenger attachment has its mechanical advantages, and I see no reason why it should not be as safe and comfortable as the sidecar. I know it has a drawback from a cooling viewpoint, as it shuts off direct air currents to the motor, but the rider who is sufficiently interested to rig up a passenger attachment should be able to overcome this trouble. The most serious objection I hear mentioned relative to the sidecar is the side strain it exerts upon the machine; the forecar eliminates this because the drive is directly behind it.

I am a rider but do not own either a forecar or sidecar. I am simply speaking from what seems to be a common sense standpoint. As I am thinking of fitting a passenger attachment for the coming season I would be glad to have some inside information on forecars from an experienced rider. I lean toward the forecar, but would not want to fit one, of course, if I would be piling up troubles that could not easily be overcome.

Brooklyn, N. Y. J. B. BRONSON.

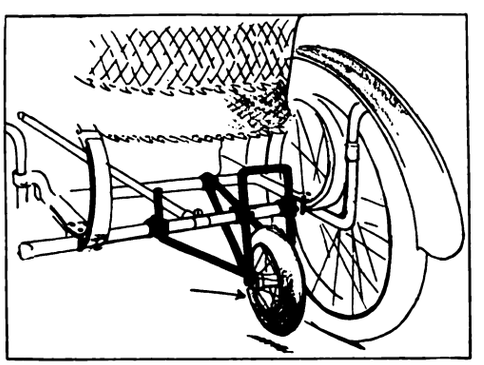
MORE UPKEEP FIGURES

EDITOR.—In several of your recent issues I have noticed items referring to upkeep records of riders, and I have finally decided that my little story may be interesting enough to justify appearance in print. I am a special delivery messenger in Chicago, and my duties necessitate the use of my Yale 4 every day when it is at all possible to ride. I have spent only $9.50 on my mount during the last year (machine was purchased in February, 1912), and I have covered about 12,000 miles. I spent $3 for batteries, $2 for tire repairs and $3.50 for ignition points and one dollar for pulley lagging. I do not claim to have established a record, but I feel that I have every reason to be satisfied with my motorcycle experience to date, and I would be interested in hearing from any motorcyclist who has kept his mechanical expense account for a year as low as I have.

Chicago. A. H. PENDL.

A SAFETY SIDECAR WHEEL

EDITOR.—I take it for granted that you have the English motorcycle journals on your desk, but fearing that you might overlook a sidecar feature which was illustrated recently in one of them I am sending you a clipping of the improved design. As you will note, the special feature is a safety wheel, placed on a strong frame in such a position that it is about six or eight inches inside the regular wheel and several inches from the road. Should the sidecar spindle give way the passenger outfit is let down



upon the safety wheel, and the driver has time to stop without an accident.

I am a sidecar user (two seasons' experience) and have not come across such an instance of breakage in an American sidecar, but it seems to me that makes of the "baskets" would inspire confidence by taking up something like this English safety wheel. My wife has covered 1,500 miles in sidecars, but she is still a bit squeamish about the stability of our outfit when we travel over 15 or 18 miles an hour. We have never had an accident, but I am thinking of fitting some sort of an extra wheel so that she may have entire confidence in our sidecar. Isn't it worth something to the trade to have our women enthusiasts feel entire confidence in the sidcars?

CAUTIOUS.

DECOMPRESSORS

DITOR.—Many American motorcyclists have read of the decompressor, that ingenious device of our British friends to assist their mounts in slow speed work and easy starting, and I believe a few suggestions looking to the adaptation of standard decompressors to our domestic machines are timely. As will be understood some change in the decompressor system is advisable as our machines are not, except very rarely, equipped with handlebar control of air and gasoline.

It is proposed that the decompressor action be obtained by engaging a "nub" or "hump" on the intake valve cam. The excess of mixture would be expelled into the intake pipe, and as a result part of each charge of gasoline mixture would visit the spray jet twice, automatically enriching what would otherwise be a "lean" mixture, due to the slow motor speed.

If, however, one of the detachable types of decompressors were used, it could be equipped with a pipe to the motor intake pipe. It is obvious that practically the same results would be obtained as in the foregoing method. When used as suggested the decompressor becomes in every way a desirable fitment. By using an advanced spark, full smooth power should be obtained, without carbureter adjustment, and gasoline bills should be reduced.

Syracuse, N. Y. HAROLD R. SHOEMAKER.

A DUPLEX FRAME

EDITOR.—The duplex frame, as shown in your issue of December 26, and suggested by Harry Townhill, of Cleveland, Ohio, is just what I have had in mind for some years, but instead of making the frame of piping, why not construct it of angle iron? Then if flat rear springs were added, instead of upper rear stays, it would, in my opinion, make an ideal frame. I would suggest having the upper frame made so that it could be removed, and would set the tank in and have it "pinched" between the four frame angle irons. At the same time I would make provision for placing a Prest-O-Lite tank on top of the gasoline tank, which, in my opinion, is the natural position for the Presto.

During the coming year we will see some great improvements in rear springing of motorcycle frames, and this is only to be expected, for we can hardly go too far with springing, as long as it does not detract from the dependability of the mount. With reference to the latter qualification I think the duplex frame has unusual advantages; long springs could be substituted for the rear stays and the whole construction would still be very sturdy.

North Tonawanda, N. Y. W. A. S.

THE POWER PROBLEM

EDITOR.—A writer in your issue of January 23 rings in a boost for the single-cylinder machine and intimates that he would not care to ride a twin. May I ask whether this brother has ever snuggled down over a husky twin on a long jaunt, and then tried to be satisfied with a single later on? A single looked good to me until I graduated into the twin class; now I wouldn't want to go back to the old mount. There is a place for the single, of course, but me for the big twin. Aside from the original cost I find that the twin is not much more expensive than a single, and as I go in for quite a bit of touring I feel that any extra outlay is worth while.

WARREN MCGILL.

Philadelphia, Pa.

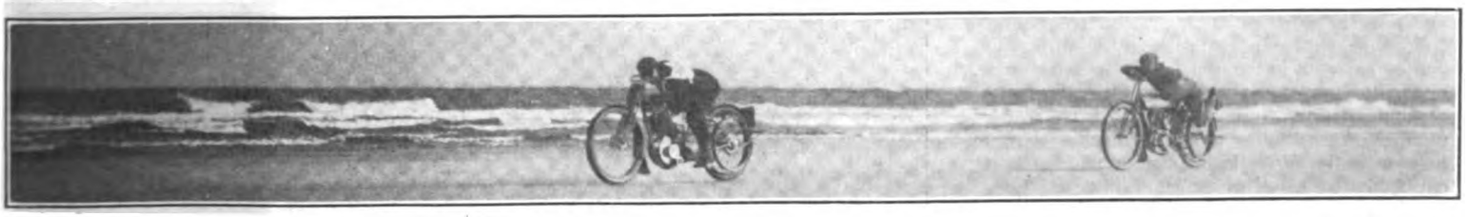
[In the article referred to, the writer stated that a single met all his requirements, but it is not likely that he depended upon it for long trips over varying roads. In extensive touring the moderate powered twin should be the choice of the practical rider. We lean to the belief, however, that many a twin is used solely for work that a single could do to perfection with proper handling.—Ed.]

TWENTY NEW MEMBERS

EDITOR.—It is not often that a club can make any headway with a membership campaign in the middle of winter, as the boys are not inclined to enthuse very much when they can't take their machines out, and it is for this reason that I feel justified in calling attention to the progress made by the Arrow M. C., of Jersey City, N. J. We have just closed a campaign that brought us twenty new members, and our club is enjoying a regular winter boom. This should encourage other clubs to follow our example, for we have proved that persistent work will bring results. Our twenty new members were taken in in two months.

GEORGE STROHSAHL, Sec'y.

Jersey City, N. J.



L. S. BROWN Winning a 10-Mile Race for 4 h. Machines on a Beach Course at St. Augustine, Fla. The Riders Are Shown at Top Speed in the Middle of the 2½-Miles Stretch, and It Is Interesting to Note That the Contestant in the Rear Is Flattened Out on His Machine in a Rather Startling Position to Reduce Wind Resistance.

A LIVELY POPE AGENT.

ONE glance at the front of C. L. Smith's motorcycle headquarters in Los Angeles, Cal., is calculated to convince the visitor that Smith is a "live one" whose policy provides for advertising, and plenty of it. Smith distributes Pope motorcycles in southern California, and wants the fact known. Accordingly he has utilized every available foot of his store front for signs. Mr. Smith appears in the accompanying photograph at the right, with his office and shop force.

PACIFIC COAST BRANCH

A BRANCH of the Motorcycle Equipment Company, of Hammondsport, N. Y., is to be opened in Los Angeles, Cal. C. P. Rudd, who during 1912 was superintendent of the Curtiss Aeroplane Company and the Curtiss Motor Company, and for several years a designer of motorcycles, has spent considerable time inspecting various locations, and has decided upon Los Angeles as a suitable place. The new store will be located on 3664 South Main street, from which point shipments will be made to all Pacific coast States, Mexico, British Columbia, Hawaii and the Philippines. This firm deals exclusively in motorcycle supplies.

BOOSTING THE THOR.

AN interesting story is connected with the recent sale of a fleet of Thor machines to the San Francisco police department by the Thor agency in Frisco, which is handled by A. Freed. Mr. Freed also is a wholesaler and retailer of motorcycle and bicycle supplies and automobile specialties. The Frisco dealer forwards the accompanying photograph of Thor machines in use by the San Francisco police. Before he succeeded in getting the order he had to compete in a number of speed contests and hill climbs and the machines were put through various other mechanical tests. A number of the leading makes of machines were in competition in all the events which were controlled by Chief of Police White and Corporal Mahoney. Within the last few years Mr. Freed has sold two thousand Thors for public service and other commercial use.

RAYFIELD BRANCH IN NEW YORK

FINDEISEN & KROPF CO., manufacturers of the Rayfield carbureter, following their policy of giving their customers the best possible service, have established their own sales and service branch in New York City. The location is the same as that formerly occupied by the Warner Instrument Co., at 1902 Broadway. The installation of service department is at the rear with a driveway entrance facing on Sixty-second street. Competent men will be found in charge to render the best service to both old and new Rayfield users.

THANKFUL FARMERS

BY way of expressing their appreciation of having their mail delivered by a motorcycle instead of by horse and cart, the patrons of rural route No. 3, from Wichita, Kan., after a recent snowstorm arose early in the morning and cleared away the snow in order that the mail carrier might be able to make his usual trip by motorcycle.

DAYTON A HILL-CLIMB VICTOR.

FROM Seattle, Wash., comes the announcement that a Dayton motorcycle, the product of the Davis Sewing Machine Company, of Dayton, Ohio, won by seven and a half seconds over its closest competitor in a police department hill climb. The hill was six blocks long and the grade ranged from 18 to 20 per cent. The Dayton's total load was 410 pounds and its pilot was "Bud" Armstrong.

MISTAKEN IDENTITY.

IN the January 23d issue of MOTORCYCLE ILLUSTRATED, an error crept into the half-page advertisement of the Baxter Side Car Company, 119 Broadway, Cambridge, Mass. Accompanying an illustration of Model No. 3 appeared a description of Model No. 1. The sidecar illustrated, the No. 3 Model, sells for $70, not $80, $80 being the price of Model No. 1 and $75 that of Model No. 2.

SOME SHOW BUSINESS.

FOLLOWING is a list of Merkel dealers lined up during the New York Show week: A. T. Rogerson, Plainsville, O.; D. R. Moody, Birmingham, Ala.; Auto Exchange Company, Columbus, Ga.; S. E. Johnston, Douglass, Kan.; Mike Suttle, Newport News, Va.; G. H. Tompkins, Richmond, Va.; W. S. Aaron, Altoona, Pa., and F. W. Buchanan, Johnstown, Pa.

Other agencies signed up at a later date are: C. E. Wyeth, Newark, O.; Wesley T. House, Wheeling, W. Va.; Kearney Hardware Company, Kearney, Neb.; O. R. Inglis, Rumford, Me.; F. H. Drew Company, Cedar Rapids, Ia.; Anthony Cycle Company, Des Moines, Ia.; C. Jungbluth, Washington, Ia.; L. S. Chidester, Ottumwa, Ia.; J. K. Haroldson, Rembradt, Ia.; Washta Implement Company, Washta, Ia.; L. Kirkegaard, Sioux City, Ia.; and Jons Auto Company, Boone, Ia.

AN INDIAN MISSING

THE first theft of a 1913 Indian motorcycle is reported by Chester D. Clapp, 610 Summit street, Toledo, O. It is a "7" twin, engine No. 70E554, and was equipped with lamp, gas tank, speedometer, luggage carrier and cushion. A reward is offered for its recovery.

KINKS AND KOMMENT

BY COURIER

INTERESTING Observations Anent Gasoline Grades and Coaster Brakes, inspired by a French Show Visitor—The Transmission Fever and its Symptoms—Some Figures on Lubricating Oils.

WANDERING through a motorcycle show with an engineer is one of the things that falls to my lot each January, and this year the gentleman was from just outside of Paris, and over on his vacation. Being somewhat interested in the two-wheeler, having formerly ridden in almost every road race in France, his comments would have surprised most of the readers of this magazine, and perhaps shattered a few idols as well. The features that most interested him were the automatic carbureters, free engine devices and coaster-brakes, all of which are practically unknown in Sunny France. But he was much more impressed with the "gasoline" we had here in New York and figuratively took off his hat to the carbureters that could vaporize such "heavy spirits," as he called them. When you see what we rode on during Show week, you will probably agree with me that gasoline is hardly the right name for the fuel sold.

A FEW "GASOLINES."

UP at the garage where my bus is housed, there were quite a number of growls about fuel, the riders doing the growling having to make too many carbureter adjustments per day and having the deuce of a time in starting in nearly every case. So getting a sidecar and calling on various garages I got samples of five different gasolines, as they turned out afterward. Regular gasoline has a specific gravity of 0.66 to 0.68; the best sample of the lot was 0.72, a naphtha of C grade. The fuel that gave the most trouble was a mixture of two naphthas and a strong suspicion of kerosene, and had a density of 0.785. No wonder the oil man could sell it for 16 cents a gallon. The fact that the riders could start their motors at all, spoke volumes for their carbureters, which had adjustable jet openings controlled by the movement of the throttle. Where this type is not fitted, the unfortunate rider will have to carry various sizes of jets in the future, or travel miles to get a correct grade of fuel for his lone "adjustmentless" jet. All this is really cheerful, especially as the prices of all petroleum products have gone up, and probably will continue skyward indefinitely.

CONFUSION IN GRADING.

UNFORTUNATELY, there are two methods by which fuel is graded, and as they are totally different and either may be used, there has been a lot of hard feelings on the part of riders about being deceived. The one scale is the Beaumé, and the other the specific gravity or density, both being taken by instruments called hydrometers, which are floated in the liquid and indicate the grade. You go to the oil man on one corner and hear him say he sells "56" gasoline, while the man on another corner announces "76" gasoline. The fuels are the same, and neither is true gasoline, but naphtha. However, the rider is up in the air at once; a 56 *specific gravity* fluid would be a thin one, almost a gas and used in place of laughing gas by dentists, while a 76 gravity fuel would be just the thing. When the man is asked what the grade is, he usually does not know whether the Beaumé scale or the other is meant. The oil companies generally give the Beaumé scale and the public the gravity. Hence the confusion.

THE SCALES COMPARED.

I GIVE the two scales for comparison, and suggest that the rider pastes a copy in his cap when he goes touring. He will need it pretty badly in the future when it will be cheaper to adulterate the naphthas with kerosene more and more.

Beaumé degrees.	Specific gravity.
44	0.811
45	0.807
46	0.802
47	0.798
48	0.794
49	0.789
50	0.785
51	0.781
52	0.777
53	0.773
54	0.768
55	0.764
56	0.760
57	0.757
58	0.753
59	0.749
60	0.745

Fifty-six Beaumé is 76 specific gravity, and most carbureters will take a fuel of this scale very nicely. To avoid all misunderstandings, ask what the gravity is when you next get fuel, and if the man does not know, but says it is about 57, look at the table; he is giving it in Beaumé, and the gravity is 0.757.

ON NATHAN STAFF

H. F. LEOPOLD, formerly secretary-treasurer, and one of the organizers of the Atlas Specialty Mfg. Co., of Chicago, is now connected with the Nathan Novelty Mfg. Co., of New York City, as western representative, with headquarters in room 415, at 22 Quincy street, Chicago. Mr. Leopold is widely known in the motorcycle trade, and has had plenty of experience in the fabric accessory line. He is preparing for an early business trip in the interest of the Nathan company.

COASTER BRAKE CONES.

MY French friend was also interested in the coaster brake, and was struck with the ingenuity of the braking mechanisms. His first query was did riders not frequently set up the cones too tightly? Well, as far as my experience has gone, that is exactly what lots of riders do, and then have no brake at all as far as stopping power is concerned or have one that grabs and refuses to release. The adjusting of cones is not at all difficult, and those who used to ride bicycles generally have little trouble as their push-biking experiences have given them ample familiarity with rear hub construction. When it comes to the others, it is surprising how few know how to make a proper adjustment—and how few dealers can tell the rider just what amount of setting-up should be done. The Editor informs me that special information on the coaster brake will soon be forthcoming, in articles written by the manufacturers themselves. For one, I will be rejoiced to see it, and there are dozens of other riders who will also be glad to read and learn.

TRANSMISSION FEVER.

JUST about this time of year the fever for something different in transmission seems to be most virulent, and this in spite of the satisfaction that belts and chains are giving. Commenting on a transmission of the hydraulic type put forth as being the most efficient ever constructed (they always are, on paper), one of the veterans in the motorcycle trade remarked that when the automobile people turned down some "genius'" idea, he immediately adapted it to the motorcycle or push-bike. It looks as if the veteran was right, as the patent office records will attest to anyone who wants to study up this subject. But, regarding hydraulic transmission, there have been but two successful types invented and manufactured, and dozens of purely theoretical ones which never got beyond the patent specifications, fortunately for their perpetrators. The most successful of the hydraulic types is the Manly, used on a certain make of motor truck, and its inapplicability to a motorcycle will be very apparent to the thoughtful rider who gives it consideration.

LUBRICATING OIL FIGURES.

ANOTHER query that came to my hand stated that the writer had had trouble getting suitable lubricating oil for his motor, which is of an unusual type, and what kind of an oil was used for motorcycle motors. As I do not play any one make of oil as favorite the answer can only be general, and may be of use to riders who cannot obtain standard brands while on their travels. The specific gravity should be from 0.890 to 0.895, and when the oil is heated in an open vessel it should flash at 550 degrees Fahrenheit. Most oil men of any account, when not handling motor oils, can give the above figures for any oil in their stock, and provided there is no horse-fat in the oil, one corresponding to the above figures would be adaptable to any motorcycle motor. It is best to use the oil recommended by the makers in any case, however, or one exactly similar to it.

ENGLISH NOTES By "BRITISHER"

STARTLING design of steam motorcycle is latest find of British riders seeking new road sensations; experimental model, though somewhat crude in parts, gives results that satisfy the makers.—Speedster Bailey perfects a new racing engine which has all the British cracks on the anxious seat.

CRANKS and faddists have yelled "Why not steam?" for ten years past. The trade retorted, "You are tired of life. Who wants to squat over a small boiler with a pressure of 5,000 pounds to the square inch? Who wants to massage his thighs against redhot steam pipes? Who wants to stop every forty miles to fill up with kerosene? What's the matter with gasoline, anyway?" The cranks retorted that the flexibility of the steam engine would abolish variable gears and belt drive at one swoop, besides affording a silence and a silkiness only possible to a deaf man with a leather skin on a gasoline bike; and there the matter has stuck for several years.

However, one of our steam automobile firms, Messrs. Pearson-Cox, of Shortlands, Kent, has at last essayed the thorny task, and I had the pleasure last week of sampling one of its experimental mounts. At first sight the machine looks like a resuscitated 1902 crock. The whole diamond frame is occupied by a tank, and there is another small cylindrical tank mounted just behind the saddle. A tiny engine is clamped between the saddle pillar post and the back mudguard, and there is a square generator at the fore end of the long sideboards.

But get aboard, and you forget 1902. The small single-acting, mushroom-valved engine is a revelation of compressed power; it is a tabloid edition of a racing 500 c. c. There is an impulse every down stroke of the piston, and so smooth is the torque of the tiny engine on a single short chain drive geared 3½ to 1, that you are unconscious there is any transmission at all. It is more reminiscent of a horse than of a steel cycle with an engine fixed to it; you feel as if you were riding a metal steed with muscles inside all its tubes. You can go up any curly precipice just as you please—fast or slow—and all on the track-racing gear ratio, while down the flats you open out to racing pace and hear no roar at all behind; you just feel the wind flattening your cheeks on their bones, and sense an extra pressure in the "wuff" of the exhausted steam astern. It's simply great; and it can do seventy miles of hilly roads on its tanks, and is light to handle—only 150 pounds; when you stop at the garage, ten cents' worth of kerosene replenishes your tank—no dubbing up of half a dollar for a drain of gasoline; and the lubricant goes as far as it does with gasoline.

SOME TECHNICAL DETAILS.

SOME technical details are as follows: The burner is of the horizontal Bunsen type, burning kerosene. The model I saw had no pilot by-pass, and took ten minutes for a start from cold. The next batch have a small by-pass, and take five minutes. The plunger pump for the water is vertical, operated by a crankshaft eccentric. The generator is built up of horizontal drawn weldless steel tubes, in four units, with connections. It is tested up to 7,000 pounds pressure, but works normally at 400 pounds. The engine depends on its own pump for filling the generator, and has to be walked a yard or two to move off; no clutch is fitted at present.

The control is all carried on the bar, and is very simple. Two gauges are fitted at the front of the tank, one on each side, for kerosene and steam pressure. An ordinary brake lever operates the steam release from the left grip; a similar lever on the right grip works the water control valve. The engine (and machine) are stopped by raising the steam lever. The water flashes into steam as soon as it enters the generator piping, and passes thence through a well-lagged tube to the engine. The exhaust steam is led away forward through two tubes to its outlets near the base of the generator. This arrangement has two motives—it creates a down draught, which gets rid of the by-products from the combustion at the burner, and its temperature is kept so high that it is invisible.

The kerosene is stored in the cylindrical tank back of the saddle, and the diamond frame tank holds the water. The acceleration of the machine on a good head of steam will lick any gasoline engine ever made. The machine is not being commercially launched at present, but is being used as the basis of experiments, designed to perfect a standard model for next autumn. Blase motorcyclists in search of a new thrill are wildly interested in it.

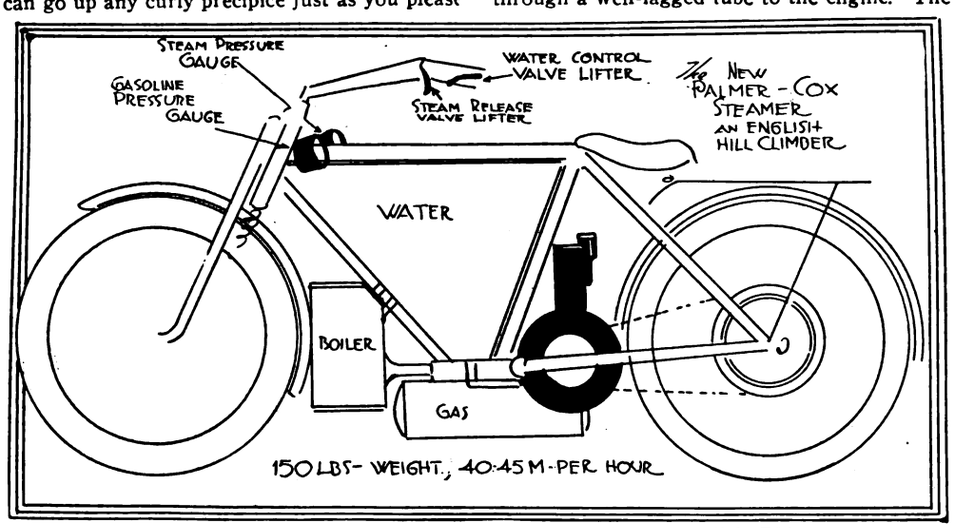

Diagram of Steam Motorcycle That Is Exciting Blase English Riders.

A REMARKABLE ENGINE.

MOTORCYCLING circles in England are waiting in breathless anxiety for the snow to melt, and Brooklands racing track to reopen for serious work. The sensation of last year's racing season was the debut of S. L. Bailey, a featherweight Australian enthusiast, who won practically everything he competed for, and set up a whole kit of new records, culminating in his 73 m. p. h. lap at Brooklands on a 350cc. Douglas twin-cylinder. Now, Bailey is not, like so many of the track boys, a mere saddle sitter, who in between times makes hit and miss experiments in ignition and carburetion and valve-timing. He is rather one of the very few speed merchants who has a sound grip on fundamental principles of mechanics, and he has got nearly 20 m. p. h. more out of the Douglas engine than any previous experimenter had obtained.

He has now compressed his experience and brains into a new engine of 494cc. on broadly Douglas lines. The weather and the repairs to the track have prevented any speed tests up to date, but it is an open secret that the bench test recorded 16 h. and a revolution limit of 5,500, even before any radical tuning had been attempted. The coterie of riders representing conventional machines are fidgeting unhappily about the flooded paddocks and clubhouse, vividly conscious that their records will go off the boards as soon as the weather clears, and the first "A. B. C." engine, in its waiting Matchless frame, snicks the electric contacts.

THE NEW ENGINE DESCRIBED.

THE engine has horizontally opposed cylinders, with a "square" bore and stroke of 68mm. x 68mm. Perfect balance has a lot to do with ultra high rates of revolution, and it is interesting to notice that the front piston is mounted on two light connecting rods, one on each side of the rear connecting rod. The gudgeon, or wristpin, is hollow, and secured in place by a light tube being threaded through it, after which the ends are flattened out. The

Digitized by Google

cylinders are turned up from solid bar steel, and machined throughout every square milimetre of their surface. The steel is a costly type of great tensile strength, and the thin patches of the walls (between the fins) are scarcely thicker than brownpaper. The radiating fins are drilled with holes to permit air to circulate, and their diameter thins down towards the central waist of the cylinder where the fins cease altogether.

Cast iron pistons are used, and the valves are located in the cylinder head, and operated by overhead rockers, and long tappets. The valves themselves are of enormous size, measuring 1½ in. in diameter for each 68mm. bore cylinder, and they are flatfaced. Flatfaced valves have proved a failure on many experimental touring engines; their great merit for racing purposes is that they afford a tremendous opening for a very tiny lift, and so enable cam contours to be smoothened, and prevent the great resistance to engine revolutions imparted by very strong valve springs and very steep cams. The springs are of short length, and huge diameter, tapering rapidly. A large external flywheel supplements the miniature steel wheels enclosed in the crankcase.

THE LUBRICATION SYSTEM.

IT is a little surprising that forced feed oiling has not been utilized, and it may yet be adopted in track work; but the inventor's idea at present is to supply engines to the whole trade for ordinary work. Consequently, mechanically-forced oiling is not at present adopted, as so many users are careless about filtering their oil, or keeping the tank clean, and dirt is fatal to the fine hairlike passages of a forced system. There is a sump in the crank case, and dippers mounted on the cranks pick up lubricant and hurl it all over the engine. Originally the rear cylinder received a superfluity of oil, and now baffle plates protect each cylinder, the orifice in each plate being adjusted to suit the engine. In track work a compression ratio of 100 lbs. per sq. in. will be relied upon, but the touring engines will not exceed 75 lbs.

S. L. Bailey is returning to Australia to create a market for the engines, but Granville E. Bradshaw will push them in Great Britain, and he has secured the Collier team to ride for him. I never knew an engine to create so tremendous a reputation without ever being run in public competition. But my visit to the works revealed ample justification. There are not many living men who have seen any petrol engine register 5,500 revolutions early in its tests. Those who have been privileged with the sight have not seen such an engine turning out quite smoothly at its colossal speed, clipped to the bench by a few light bolts; and when we add the fact of a power curve that shows a steadily increasing efficiency, with promise of more power yet to be extracted, the marvel is complete.

An air of settled gloom pervades the testing shops of rival firms. "Where can we find an engine to beat the A. B. C. in the Tourist Trophy Races?" is the burden of their lament. I hear that several firms are hastily constructing special cylinders of B. N. D. steel to substitute for the standard crude iron castings; but I doubt whether the mere change of cylinder material and pattern will fill the bill. The colossal revolutions obtained from the earliest and latest Douglas engines have always been a puzzle to the most expert conventional designers; and now the cat is out of the bag—balance has a tremendous deal to do with it. Moreover, the resistance to the torque, produced by very heavy valve springs acting against precipitous cam contours, must diminish revolutions considerably.

Nine different grades of steel are utilized in the engine, cast iron being used for the pistons, and aluminum for the crankcase. Some of the higher grade steels employed cost 10d. per pound in the bar, not allowing for the waste in machining. The complete engine retail is sold at $220, its price being high owing to the quantity and quality of the machining it requires.

PLAN ROAD CLASSIC.

AT the last meeting of the Savannah (Ga.) M. C., the club was reorganized and plans were laid for a 200-mile road race to be held next Thanksgiving Day, in connection with the Grand Prize and Vanderbilt automobile races.

EDITORIAL VIEWPOINTS

THURSDAY
FEB. 6, 1913

Entered as second class matter July 6, 1908, at the Postoffice at New York, N. Y., under act of Congress, March 3, 1879.

Western Representative, Harry G. Jacobs, 1230 First Natl. Bank Bldg., Chicago. Tel., Central 5908.

THE CHICAGO SHOW

AS this form is put to press, the first exclusive national motorcycle exhibition ever held in the United States has just opened. Although it is not generally safe to attempt to predict the outcome of an entirely new and untried proposition, we believe that an exception will prove to have been quite in order in this particular instance. In other words, we prophesy complete success for the Chicago Motorcycle Show, because this is just what the trade and thousands of riders have been waiting for, and also because this is the psychological time at which to make the attempt. The trade situation is so much bigger than it was at this time last year as to fully justify at least one separate national show. We are satisfied that this week in Chicago will demonstrate the advisability of indefinitely continuing the new arrangement and, in all probability, of making a similar effort in New York either next year, or at the latest, in 1915.

LEGAL ACTION

LEGISLATION is pending in the State lawmaking body of New York providing for regulations disadvantageously affecting motorcycle riders. Despite the fact that the F. A. M. should promptly go to the expense of engaging a good lawyer to represent the organization in Albany, the Chairman of the Legal Action Committee hesitates to take this step, in view of his having been criticized for having twice before devoted some of the funds of the Federation to fight unfair legislation in New York, while similar action has been seldom taken in other States.

This condition of affairs is easily explained. The chairman of this Committee himself keeps advised regarding the situation in Eastern States, but must necessarily depend upon other F. A. M. officials for information regarding prospective legislation in other parts of the country. If the Chairman is promptly informed regarding the possibility of adverse legislation in far-off States, he can be depended upon to help to the best of his ability and, in a financial way, as well as the F. A. M. can afford. Action has recently been taken in Indiana and California, and the assistance of the organization will be given in any other States where help is needed. But the Legal Action Chairman cannot be expected to act except with a full knowledge of the facts, and this knowledge must be supplied from other sources, namely, State and local officials of the F. A. M.

In his coming tour of the country, the Chairman of the above named committee will endeavor to impress upon his auditors the necessity of organizing each State, so that the much desired co-operation between the States and the National Board of Directors and the National Committees may become a fact in the near future. With a goodly proportion of the States fully organized, every member will share the benefits of a vastly improved situation.

NOT long ago we came into possession of a queer little booklet, published in a Western State by a certain Bill Barlow, a keen-witted and incisive writer on topics of the day, and on the back cover the writer had frankly sung his *credo* under the heading: "Bill he believes." Bill believed in most things that are big and broad and helpful—things that you and I and the other fellow need in our philosophy of existence, and sometimes overlook—but it is Bill's idea in the abstract with which we are concerned. He had found things to believe; homely facts on which he staked his courage and confidence, and he wanted folks to know that he believed. He stepped out on the cover of his booklet and said so.

MOTORCYCLE ILLUSTRATED is today in Bill's position. Its trade creed as regards the motorcycle is clearly defined, and, like the Wyoming philosopher, it doesn't mind saying so. MOTORCYCLE ILLUSTRATED believes:

That 1913 will bring about such general appreciation of the pleasure and commercial possibilities of the motorcycle as have hitherto been little more than dreamt of by trade enthusiasts;

That the independent Chicago show marks a turning point beyond which the industry will find a broad, straightaway road, shorn of deceptive corners, and with practically no speed limits;

That manufacturers are making better motorcycles than were even thought of five years ago, and that the practical Man in the Street is having this proved to his satisfaction daily;

That the man who persisted in regarding the motorcycle as a toy, a vehicle for the capricious seeker for new speed sensations, has been silenced for all time;

That the purchase price of a motorcycle represents a better investment—either pleasure or business—than the same amount of money tied up in anything else that travels our big country on wheels today;

That before 1913 has petered out the motorcycle will have an astounding share of the country's light delivery business, including parcels post and other government service;

That the sidecar is an invaluable aid in the popularizing of motorcycle travel, and that as regards this adjunct to the motor two-wheeler we have merely scratched the surface of public interest;

That the professional man, the conservative, takes an honest pride in his motorcycle outfit today, instead of looking upon it as a temporary substitute for a motor car;

That accessory and supply manufacturers are doing more for American riders than has been done at the same stage of the motorcycle's development in any other country;

That the spirit of motorcycle fellowship is abroad in the land, and that both the motorcycle and the land are better for it;

That an industry which draws its consumers from every field of endeavor and warrants the expenditure of hundreds of thousands of dollars in factories is big enough to call for our best efforts—and to reward them;

That no one who visits the Chicago Show will question a single item in our creed;

That we'd stick to it anyway, regardless of questions.

HERE'S modesty for you.

"Considering that the show represents our first formal effort to conduct an independent motorcycle exhibition of national scope," said President A. B. Coffman, of the M. M. A., "we feel that it has been quite a successful ice-breaker."

If a show that brings the dealers from all parts of the country out in hundreds, and the riders in thousands, and that exerts a direct influence for the advancement of the trade from coast to coast, is merely an ice-breaker, we are of the opinion that even ambitious Chicago would not care to accommodate an exhibition that the modest A. B. would admit was a rip-snorter.

ONE of the most satisfying indications that the motorcycle is permanently intrenched in public favor is the attitude of increasing friendliness assumed by automobile organizations throughout the country. This is at it should be. The American motorcycle has blazed its own trails, literally and in a business way, and broad-gauge consideration of its achievements by the motor car folks is simply one of the rewards of industry. There always is recognition for the worker who makes good.

I. M. C. ELECTION

AT the January meeting of the Independant Motorcycle Association, of St. Louis, Mo., officers for the new season were elected. Tim Bahnsen was elected president; C. B. Cornwell, vice-president; C. G. Van Horn, treasurer, and R. E. Winkler, secretary. William Hellman, A. Voight and F. Winter are members of the board of directors.

H. S. McCRILLIS, of 219 Newbury street, Lawrence, Mass., has been appointed local F. A. M. commissioner.

A CAPABLE MOTOR

ONE of the most interesting motorcycle power plants that has come to light of late figures in the two accompanying photographs, forwarded from Trenton, N. J., by John Hooper. The picture at the left shows the motor in the service for which it was built, while in the photograph below it has become the power generator in a full-fledged, although somewhat rakish, cyclecar. The motor was built by the late John Colgan, a well-known Trenton motorcyclist. He sold the machine to Ralph Swartz, who appears in the picture with the motorcycle, and Swartz finally rigged up the cyclecar, which is capable of turning off 35 to 40 miles an hour on the road.

GOTHAM SPORTING GOODS CO.'S NEW CATALOG IN PREPARATION.

A VERY attractive and comprehensive catalog. Their extensive line of motorcycle accessories is fully described and priced, and the recipient of this catalog will be fully repaid for sending a postal for it. Besides featuring descriptions and prices of all their goods, this catalog will contain some very valuable information together with drawings.

READY FOR BALTIMORE SHOW

BALTIMORE, Md.—All the local dealers are making preparations for the motorcycle exhibition in connection with the automobile show to be held here in the Fifth Regiment Armory from February 18 to 22. Last year the exhibits were placed at different points in the big armory, but this year they will be grouped together, which will tend to make their showing more effective. The exhibitors and their machines follow: Howard A. French & Co., Indian; Heinz Motor Company, Harley-Davidson; Randall Manufacturing Company, Reading-Standard and Pope; F. W. Sandruck, Excelsior and Merkle; Little Joe Wiesenfeld, Thor; Holofcener Gas & Electric Company, Yale.

BALTIMORE BANQUET

BALTIMORE, Md.—Over 50 members of the Maryland M. C. attended the annual banquet held January 30 at the Hotel Junker. Howard A. French gave a talk on the motorcycle and its relation to pleasure seeking. He drew a comparison between it and the automobile and showed that the two-wheeler is the true friend of the man of small means. President Frank Boyd made an address on the commercial value of the motorcycle, and Treasurer William Wood also had a few words to say.

Captain Nelson Johnson was presented with the diamond studded medal which he won by attending the most runs during 1912. The medal was donated by Howard French.

FRENCH A PIONEER

BALTIMORE, Md.—Howard A. French, the local Indian agent, returned from New York greatly pleased with the motorcycle exhibit. He also came back in a reminiscent mood, and recalled with pleasure that he was one of the first persons in this country to become interested in motorcycles. Shortly after Henri Fournier, of France, made such a sensation on the tracks, French imported one of the famous De Dion motors and mounted it on a home-made frame.

NEW 1913 motorcycles are being placed in the police department of Montgomery, Ala., to replace the old models.

CHESAPEAKE ACTIVITY

BALTIMORE, Md.—At the annual meeting of the Chesapeake M. C. a few days ago the members decided to go over to Washington on March 4 on their machines to attend the inauguration of President-elect Wilson. Only a blizzard will keep them from carrying out their plans.

Officers for this year were elected as follows: Herbert F. Vetter, president; A. W. Rupp, vice-president; George W. Coggins, secretary-treasurer; John L. Strube, captain; William L. Allers, first lieutenant; Samuel C. Brown, second lieutenant; Chester Sherman, third lieutenant; Herbert F. Shawker, color bearer.

The three prizes offered last year were awarded to the winners, as follows: George W. Coggins, silver loving cup for attending the most meetings, and a gold medal for attending the most called runs; Fred Kuhl, $5 in gold for getting the most new members. Enlargement of the clubhouse by the addition of another story was also decided upon. No called runs will be held until after March 1.

MOTORCYCLES were exhibited in connection with the annual Pure Food Show at Tacoma, Wash., in January.

A NOVEL SYSTEM

A WIRE chief of Salina, Kan., who has many calls to repair country telephone systems, not only uses a motorcycle to carry him quickly to the point of trouble, but he is saved the inconvenience of carrying an entire telephone equipment. He merely takes a receiver and a coil of twisted pair wire. The motorcycle is of the magneto type, so in order to test the wire he has simply to open the line and connect the line wires to the motorcycle by means of the pair wires. To call central he pedals a few times and connects the receiver to the wire.

REFREE PITMAN'S DONATION

ONE of the recent acquisitions of the F. A. M. Touring Bureau is a copy of "Ten Thousand Miles on a Bicycle," donated by Referee Will R. Pitman, known to motorcyclists the country over as "Happy Days." While the volume in question is written exclusively from the viewpoint of the bicyclist it embodies much road and general touring information that is of value to the motorcycle traveler. Referee Pitman has also presented several maps to the Bureau and has interested himself in the development along other practical lines.

BILL FOR OHIO ROAD IMPROVEMENTS

COLUMBUS, Ohio, January 30.—In his first annual message to the State Legislature, Governor Cox, of Ohio, recommended the improvement of the Old National Road from end to end. He urges the codification of the road laws to do away with conflicts and ambiguity, and also favors the enactment of a law requiring the use of split log drags on all roads. It is his idea that the state should maintain and repair all inter-county highways and he has endorsed a proposition appropriating $1,760,000 to begin constructing the inter-county road system, and a direct levy in 1914 of one-half mill, which will raise from $3,000,000 to $3,500,000 annually. A bill is also before the House of Representatives which provides for a special levy of three-quarters of a mill. The bill provides that 75 per cent. of the funds raised by the special levies be used in conjunction with the State highway department in the improvement and repair of the roads, while the remaining 25 per cent. shall be used for the construction and repair of the main market roads of the State. The bill also provides for the use of convict labor in both the construction and repair of roads.

Measure Now Before Buckeye State Legislature Provides For Special Tax Levy to Finance Extensive Highway Construction and Repairs

THE Columbus Motorcycle Club has united in the movement to have road signs erected on all of the highways in central Ohio. A law has been discovered which gives ten freeholders in any township, power to petition the township trustees to erect sign boards and in case the latter should refuse to erect the signs, the freeholders can erect them, collecting the cost, not to exceed five dollars, from the township.

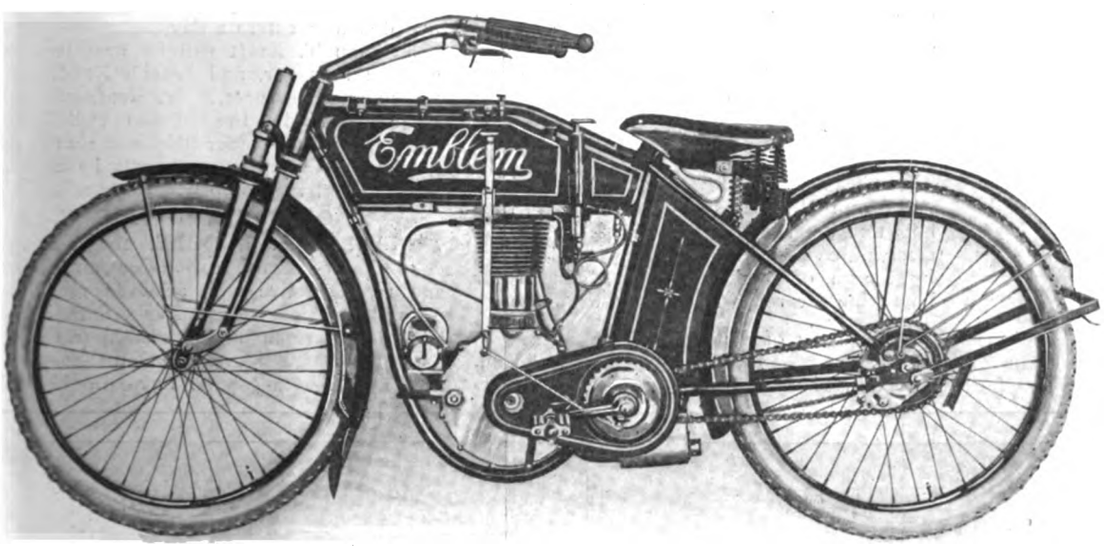
THE Barr Motorcycle Company, of East Gay street, reports the sale of a twin Indian to George V. Ward, a contractor and builder, who is said to be the oldest rider of a motorcycle in central Ohio. Mr. Ward is 73 years of age and uses the machine to oversee the various contracts he handles.

A BILL has been prepared by members of the Ohio General Assembly to compel motorcyclists to take out a state registration and pay a fee of three dollars a year. Under the present law motorcyclists are regulated by the municipal authorities.

THE Columbus Automobile Club will soon present a measure to the Ohio General Assembly providing that all motorcyclists, motorists, motormen of interurban street cars using glaring headlights must drop screens over their lights while passing traffic in an opposite direction. It is claimed that many accidents on the public highways are caused by blinding headlights.

OPEN NEW QUARTERS

INCIDENTAL to the opening of the new rooms of the East Side M. C., of St. Louis, Mo., which are located on the Lindell boulevard, one of St. Louis' finest driveways, the election of officers for the new season was held. The staff is composed of the following: F. Greenfield, president; H. Collins, vice-president; G. Schmidt, treasurer; John Kalhorn, recording secretary; G. Kalhorn, captain, and L. Read, lieutenant. Arrangements are under way for the annual masquerade and reception.



SCHENECTADY M. C. FORMED

MOTORCYCLISTS of Schenectady, N. Y., at an enthusiastic meeting recently held, formed the Schenectady M. C. Officers of the new club are: President, Walter Lewis; vice-president, David Laveny; secretary, Samuel Congress; treasurer, W. Fry; captain, John Rogers; first lieutenant, F. J. Veeder, and second lieutenant, A. M. Reynolds. L. F. Burke and J. A. McQueen were appointed directors at large.

1913 EMBLEMS

ABOVE is shown the 1913 Emblem single type, rated at 5 h., and at the right appears one of the sturdy twin models, for which the Angola company is finding a remarkable demand. Special attention is being given this year to the fitting of the tandem which is shown on the twin, in view of the fact that it is in wide demand and because the Emblem 8 and 10 h. machines are admirably suited to carry the extra passenger. One of the marked changes in the 1913 Emblem is in the top tube, which has the bend closer to the head than in previous types, thus affording the much-sought for low saddle position and racy lines. These machines were described previously.

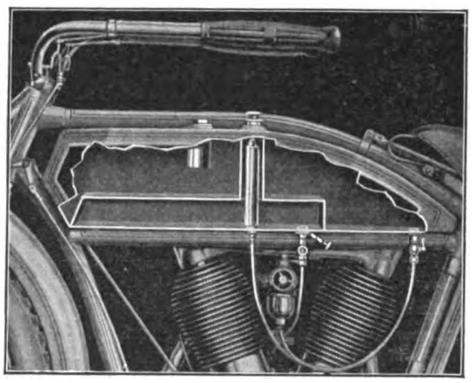
IMPROVEMENTS IN EAGLE TWIN

A NUMBER of marked improvements over previous construction feature the Eagle twin for 1913, as produced by the American Motor Company, of Brockton, Mass. Probably the most distinctive revision in design concerns the control system which is complete in the grips. The makers state that the new twin is the only machine in existence controlled entirely through the handlebar grips. The left grip engages and disengages the clutch with the first part of its movement, and beyond the point where the clutch becomes engaged the continued movement of the grip advances the spark. The right grip opens and shuts the throttle with the first part of its movement, and when the throttle is entirely closed a further movement of the grip raises the exhaust valves and relieves the compression. It is obvious that with this control system the rider will not be called upon to remove his hands from the bars while riding.

Another feature worthy of note is the constant-level saddle post. As the name implies, it keeps the rider on a constant level, regardless of whether the machine dips into road hollows or climbs over bumps. It is credited with eliminating all ordinary jars.

For the Eagle tank heavy sheet iron is used, providing for exceptional strength and longevity. The oil is contained in a compartment in the lower part of the gas tank, which is provided with an adjustable, sight-feed fitting and hand force pump. The forward part of the gas tank, in front of the oil compartment, acts as an extra gasoline reservoir for emergency service.

The improved Eagle fork carries all four tubes converging from the crown to the handlebars, which are joined at the head with steel fittings at two points. The side plates are heavy drop forgings. The four bearings are wide and provided with oil cups for constant lubrication. The fork springs are six in number, made from chrome vanadium steel. Attention is also being called to the automatic stand, which snaps up into the latch as soon as the rider pushes his machine ahead far enough to release it.



Tank construction showing separate oil and gasoline compartments and method of feeding.

PLAN TO IMPROVE ROADS

A TRIO of motorcyclists on Eagle machines, including R. A. Gaertner, agent for the Eagle, recently made a trip from Portland, Ore., to Salem, Wash. This trip and other runs within a radius of 100 miles from Portland, afford a wonderful variety of scenery. The roads, in the State of Oregon are sometimes little more than trails, but the scenery offsets these disadvantages. The same conditions prevail in Washington and the motorcyclists of this State are eagerly awaiting news from Olympia as to whether certain road bills that are before the House at its present session, have passed. It is expected that a large sum of money will be expended for improving the roads throughout the State.

IN the issue of January 23, the address of the Morse-Beauregard Company, manufacturers of the M-B motorcycle, was incorrectly given as Chicago. The firm is located in Detroit.

JOHNSON MAKES A CHANGE

W. A. JOHNSON, for the last eleven years identified with the Pierce Cycle Company, of Buffalo, N. Y., has just closed an agreement by which he becomes a member of the B. F. Goodrich Company's staff, at Akron, Ohio. Mr. Johnson will make an exhaustive study of expert tire manufacturing at the big Akron factory, and will later assume an important position on the Goodrich company's sales firing line. As yet the Pierce company has not appointed a sales manager to succeed Mr. Johnson.

It is announced that the reorganization plans of the Pierce company are now complete, and that the business is controlled by Percy P. Pierce. All departments of the Buffalo factory are being operated, and orders of 1913 motorcycles and bicycles are being shipped regularly. It is stated that orders now on hand will keep the factory busy until well along in May.

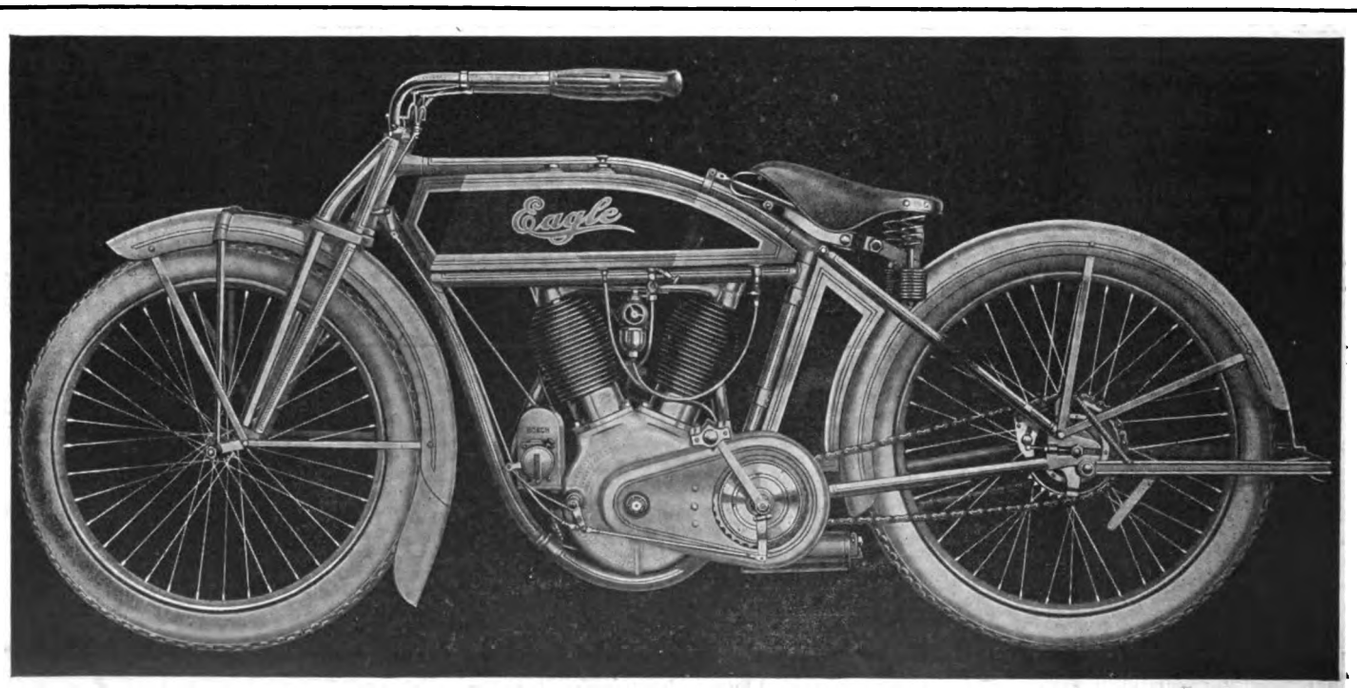
KRAFT CHANGES

THE Kraft Knitting Company, of Akron, Ohio, has recently incorporated for $10,000, to manufacture sweaters for all purposes. It will go into larger quarters very soon, where it will multiply the output by six, thus making an average of twenty-five dozen sweaters a day.

Herman T. Kraft will be president and general manager, and Joseph Zundel, secretary and treasurer. Mr. Kraft will continue to handle the Abesto Pull-E-Tape business alone, under the name of Kraft Appliance Company, and will be able to ship all orders promptly.

ON EASTERN TRIP

CHARLES F. BROOKS, the Twentieth Century Manufacturing Company's traveling representative who achieved remarkable success on his recent business tour, is now about to start on a long eastern trip in the interest of the well-known lamp manufacturers. Mr. Brooks is a popular figure in the trade.



New Eagle Twin, a notable feature of which is the complete control system through the grips.

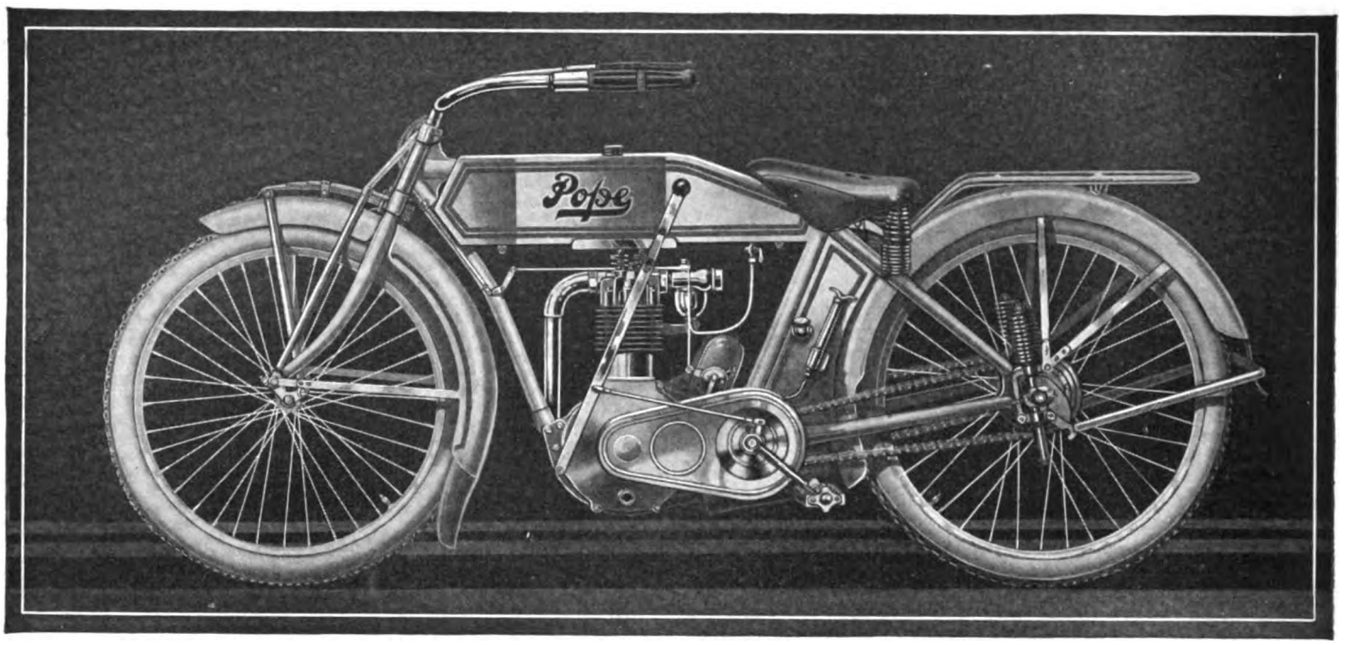
POPE QUALITY HAS NEVER BEEN QUESTIONED

POPE LINE TAKES A BIG LEAD FOR 1913



56½ inch Wheelbase—28 inch Wheels fitted with 2½ inch Tires.

Who did the BIG BUSINESS at the New York Show?
Who is doing the BIG BUSINESS at the Chicago Show?
Who will do the BIG BUSINESS everywhere else?
Dealers who pin their faith to the Pope Line are in RIGHT and RIGHT in it for 1913.

POPE FEATURES DOMINANT

OVERHEAD VALVE MOTOR—MORE POWER—Parts More Accessible—Valve Mechanism Simpler and Interchangeable.

POPE REAR SPRING SUSPENSION—Absorbs shocks without retarding speed.—Holds wheel in perfect alignment.—No side play.—No recoil shock.—Springs of different gauges to conform to varying loads.—Convertible at any time to rigid frame with low center of gravity.

COMPACTNESS - SIMPLICITY - STRENGTH - DURABILITY - BEAUTIFUL LINES

Pope Line Offers Greatest Variety of Models and Prices

Model L, "Twin" - - $250
Model M, 5 H. P. (chain drive) $215
Model K, 4 H. P. (belt drive) $200
Model H, Lightweight - - $165

Big Pope Exhibit of Motorcycles and Bicycles at the Chicago Show, Space No. 1

THE POPE MANUFACTURING CO. - Hartford, Conn.

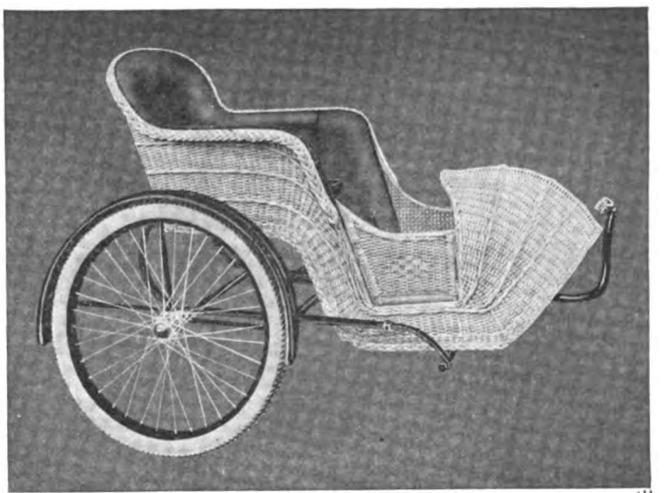
"AUTO CAR" MODEL—ALUMINUM BODY



SIDE DOOR MODEL—IMPORTED REED

The Sidecar of Quality

Universal Sidecars typify perfection in construction and design. They are faultless in their beautiful lines and finish and no expense has been spared to make them represent the Highest Quality car ever produced. They are strong where others are weak and very strong where others are only strong; in fact, in their high quality construction they closely resemble a high-grade automobile. In our "Autocar" model the design and finish conform closely to the torpedo type of runabout body. The door is rectangular and very large. The doors are fitted with auto hinges and locks. The upholstering is of the finest grade material, heavily tufted over curled hair, with spring backing. But you must see

UNIVERSAL SIDECARS

PLEASURE AND COMMERCIAL

to learn wherein they differ and in how many ways they excel. You have the opportunity now to inspect them at your dealers. Write us if he cannot accommodate you and catalog will be mailed you immediately.

Aluminum or Wicker Bodies

We make bodies in both Aluminum and Wicker. The body of the "Autocar" model, pictured above, is made of pressed aluminum over a framework of highly seasoned ash. These bodies are strong, light and durable. Our reed bodies are made of the finest imported reed. Frame of wood reinforced with steel. Finished in Baronical stain, shellacked and varnished.

They're Guaranteed

WE GUARANTEE EVERY UNIVERSAL SIDECAR TO BE FREE FROM IMPERFECTIONS IN WORKMANSHIP AND MATERIAL. OUR GUARANTEE HOLDS GOOD FOR ONE YEAR.

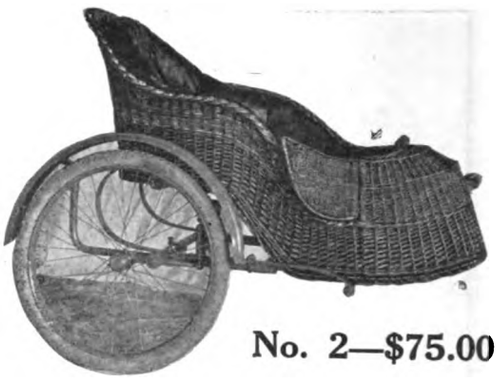
No. 4—$65.00

In the Baxter Sidecar you will find every desirable feature, such as inbuilt quality construction, tremendous strength, lightness, roominess, added to which is that much longed-for spring action which assures the greatest comfort and absence of bumping and side sway, no matter how poor the roads, or how fast the going.

The Baxter spring wheel was built to order for the American rider. It is a triumph of scientific shock absorbing construction. It comprises two perfectly tempered tension springs, fitted to the axle, affording a perfect "velvet" rebound on all road bumps.



No. 2—$75.00

The One Special Feature of Baxter Sidecars is Guaranteed Comfort

This special feature has done much to bring for the Baxter Sidecar that popularity which it so richly deserves. But this feature alone would not assure a side car's continued popularity were it not reenforced by other features of like merit. We will give but two or three other individual Baxter "wrinkles" which cannot be found in other side cars.

The Baxter is Built Close to the Ground

Its low underslung frame carries the body but sixteen inches from the ground. This assures holding the road at all times and minimizes road shocks.

The Baxter Has the Most Powerful Frame in the World

A glance at the Chassis shown herewith will convince the most skeptical observer of the powerful construction of the frame. Built of seamless steel tubing, double reenforced at every point, yet inconceivably light, owing to scientific distribution of weight, perfectly balanced with but two points of attachment, both quick-detachable, the Baxter frame is as close an approach to indestructibility as is possible to attain.

We believe the sidecar field a tremendous one. We are confirmed in this belief by the unparalleled sensation which the Baxter Side Car created at both the New York and Chicago Shows. The experience enjoyed by Baxter Side Car users in 1912 gave a remarkable impetus to side car riding throughout the country and we want to convince every skeptic of its joys. If you will sign the coupon below and send it to us, we will tell you a few things about side-carring in general and the Baxter in particular.

Insist Upon Having This Stamped on the Clothing You Buy

AURORA **BRAND**

Motorcycle Clothing

It is a guarantee of the highest quality obtainable. Fit, style, service and satisfaction are contained in every garment turned out by us. AURORA BRAND MOTORCYCLE CLOTHING has been conceded for years to be the acme of perfection, and although imitators have been numerous, none have been able to approximate the absolute "alrightness" of AURORA BRAND clothing. That is due to our policy of

Strength in every fibre
Quality in every thread

We make suits to your individual measure. We make the popular ladies' motorcycle dress, with detachable front panel. We make dusters for motorcyclists and automobilists. We make, in fact, everything in the line of wearing apparel for the motorcyclist. We solicit correspondence with club secretaries. Our specialty is outfitting entire clubs, of which business we have practically a monopoly in this country. We will send you our catalog on request.

SPLITDORF

"Always There"

Have you seen the SPLITDORF MAGNETOS—the sensational stars of the motorcycle firmament?

If not, get busy! Waste no time in "wising up" on the newcomers that are to figure so heavily in the equipment of the future.

There is nothing to it—the wide-awake motorcyclist wants and gets the best. He is missing no opportunity to become thoroughly acquainted with the season's offerings and the SPLITDORF MAGNETOS loom up as the ONE BEST BET where ignition is concerned.

The newcomers are **waterproof.** No short circuiting troubles through rain and mud —no water, mud or waste oil can penetrate SPLITDORF MAGNETOS.

The best engineering skill has been devoted to the construction of these instruments to make them electrically efficient, aside from the all-important waterproof feature.

Windings have been made to insure the fat, live spark that, although retarded, makes the **starting easy.**

In other words, they are "there with the goods" and, as running mates to SPLITDORF PLUGS, make an IGNITION TEAM unbeatable for effectiveness.

There's no motorcycle PLUG, by the way, like the SPLITDORF, because it's the one plug **made for motorcycle use.**

Racers and road-pluggers alike swear **by it** and not **at it.** They know by experience that perfect ignition is gained by its use and now that the waterproof and fool-proof SPLITDORF MAGNETOS have arived the feeling is general that the ignition problems are solved satisfactorily.

"EU" Magneto—Front View.

If interested in any form of ignition for gasoline motors, just write in for our free literature. Our new catalog, our "Racing Record" or our "New Lights for Old" is yours for the asking. Do it TODAY.

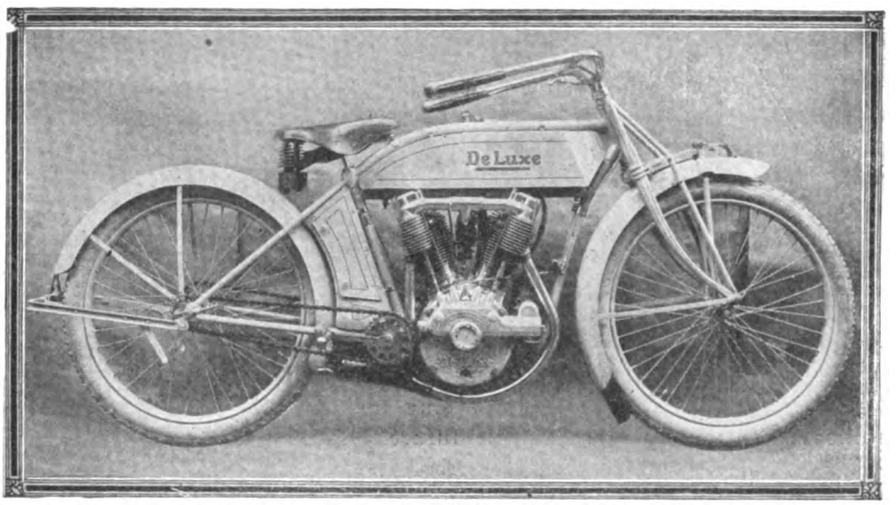
SOME REASONS WHY

7 H. P.
$275.00



9 H. P.
$285.00

"Built for the Road by Men Who Know."

De Luxe Motorcycles

Twins Only for 1913

IT is natural for every manufacturer to claim that his motorcycle is the best; but the up-to-date motorcyclist, particularly the experienced rider looking for his second or third machine, MUST BE SHOWN.

We therefore offer the following points of De Luxe superiority for critical consideration.

THE DE LUXE MOTOR

The real fundamental element of any motorcycle is the power plant, and the De Luxe motor is so far beyond any other motorcycle engine in every point in motorcycling that that alone puts the De Luxe in a class far above the rest.

The De Luxe motor is designed right by experienced engineers and built right in one of the most completely equipped plants in the country, by selected mechanics who know and appreciate the necessity of absolute accuracy and perfection of workmanship.

The predominant features of this motor are the single horizontal cam-shaft, which operates both the exhaust and intake valves, and drives the magneto, thereby positively assuring absolute accuracy of timing, both of valves and ignition.

The De Luxe is the only motor ever built with overhead mechanically operated inlet valves, all working parts of which are inclosed and run in oil. Thus, it naturally follows that De Luxe is silent.

The main shaft runs on the finest imported annular ball bearings. The connecting rod bearings are the roller type and extra large, thereby assuring a practically frictionless motor. The fly wheels are large and perfectly balanced, thereby eliminating vibration and allowing an extraordinarily high compression. The total of all this is a motor of maximum power, minimum parts, and one that is absolutely silent and frictionless.

FRAME AND FORK CONSTRUCTION

The De Luxe frame has been designed with the utmost care and the lines and re-inforcements are the result of scientific calculation. The fork is the now familiar trussed type with the familiar cradle spring. The main fork sides extend from the hub to the handle bar, with a two-point connection at the top.

The fork stem proper runs from the forged fork crown to the forged clamp that embraces the top of this stem and the fork sides. Thus the centre fork stem acts really as a pivotal member and all the load is carried by the fork sides.

There are, however, no unnecessary frills or freak schemes, which simply serve to complicate and increase the cost of a machine, without in any way improving it mechanically.

These are only a few points. The machine is built equally well throughout, and no motorcyclist can afford to buy his 1913 motor —and no dealer can afford to prepare for his 1913 business, without first carefully inspecting the De Luxe and De Luxe selling policy.

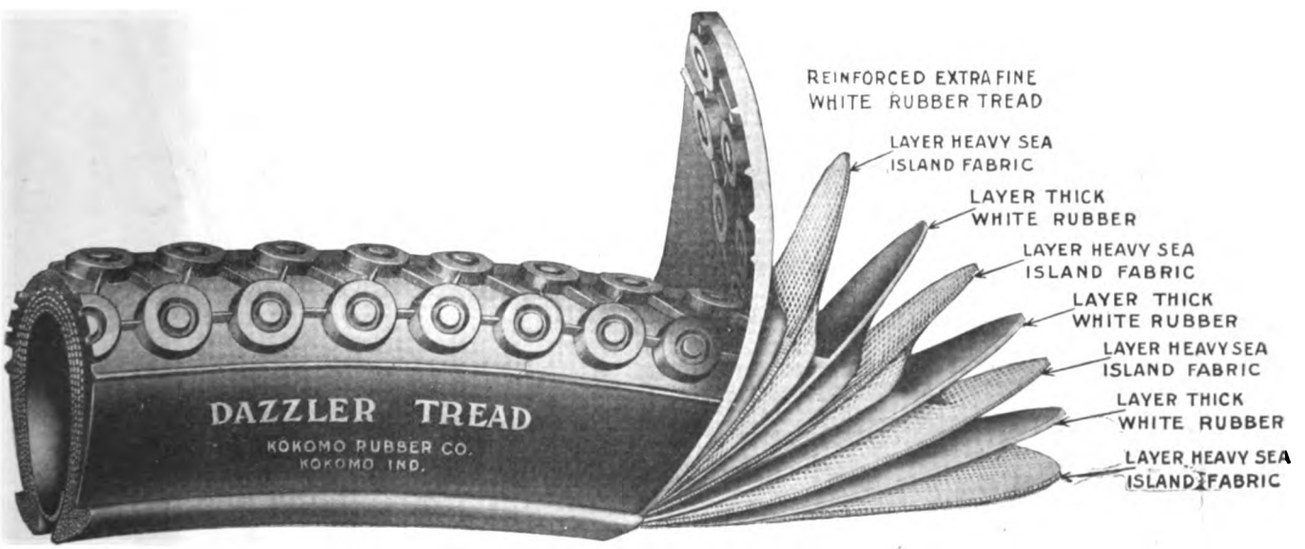
The "Dazzler" Tread

The Latest Edition to the Family of

Kokomo Tires



Dazzling indeed in its aggregation of service insuring features is this new arrival in the Kokomo group.

Note the distinctive studs. Your eyes give you the most convincing testimony as to their efficiency as skid and side-slip preventatives. Your common sense tells you that it would be impossible to find a more effective tread. And give your close attention to the seven alternating layers of thick white rubber and heavy Sea Island cotton. Can you find anywhere a more efficient, businesslike tire? (Chorus) NO!

Send for our catalog. It tells the whole story.

Kokomo Rubber Co. - Kokomo, Ind.

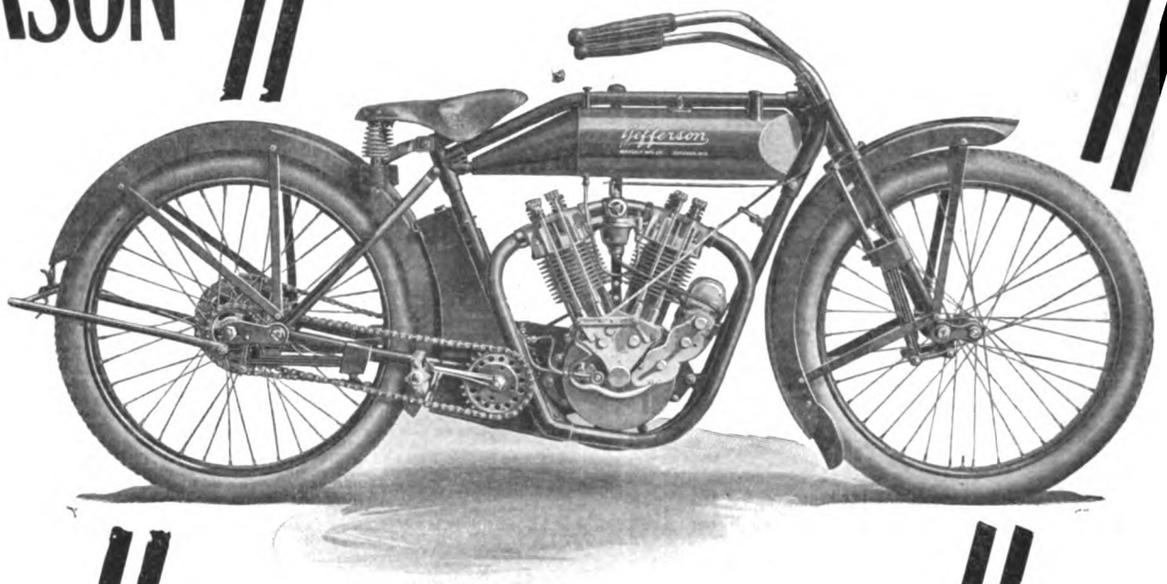
JEFFERSON



An Elegant, Powerful Durable Machine

The impression invariably brought to the mind at a first glimpse of the Jefferson is, "Here is a clean-looking, thoroughbred machine." And in performance the Jefferson more than makes good the promise of its snappy appearance.

During the past year, under the name of P. E. M., the Jefferson IV won 37 races out of the 47 which it entered and came second in ten. The Jefferson IV won six races against twins. The reason for these spectacular performances can be found in

The Jefferson Motor

For quick acceleration, for tremendous power, for smooth, vibrationless clean-cut action, the Waverley Engine is easily the peer of motorcycle motors. Bosch Armored Magneto, Mechanical Valves, large ball-bearing parts and perfect balancing complete a motor that cannot help but be perfect in service.

The perfected automobile leaf springs, for which the Jefferson holds original patents, makes comfort a foregone conclusion and immeasurably strengthens the frame of the Jefferson.

For the rider who desires power, speed, appearance, comfort, durability in his mount; for the dealer who wants to make the 1913 season spell "Big Business" to him, we prescribe THE JEFFERSON.

Dealers—Please Pay Attention to This

We want to send you our catalog and agency proposition. It is to your advantage to investigate.

An Ideal Method of Advertising

Pennants

As both an attractive and efficient form of advertising, pennants are hard to beat.

We are prepared to quote extraordinarily low prices to manufacturers. By dealing with us you eliminate the middleman, as we manufacture pennants ourselves, and are prepared to supply them at very short notice.

Dealers should get busy and stock a few hundred pennants. As a wall-hanger, no more attractive advertisement can be found. And riders would welcome an opportunity to decorate their machines with pennants. We not only make pennants for the make of motorcycle you handle, but we also can furnish pennants for every city in the United States.

Write us at once for quotations and send 10c. for sample pennant.

The strongest guarantee a manufacturer can give

"STANDARD SEAMLESS STEEL TUBING." If a manufacturer's specifications contain these words, you need no further assurance of the machine's strength and durability. That is the strongest guarantee a manufacturer can give. The use of

STANDARD TUBING

in a machine's manufacture means that no road conditions can cause the frame of that motorcycle to break. It means that wherever you may ride, on the road or track, fast or slow, the frame of your motorcycle is immune from disaster.

More and more manufacturers are learning that a motorcycle, in order to be built right, must have a solid foundation. That no matter how powerful the motor, how perfect the machine's construction, insofar as propelling power is concerned, if the skeleton which holds the vital parts of the machine together and must bear the weight of the rider and the impact of the road—if this frame has any fundamental weakness, the machine **must** make way for others whose ability to stand up is assured by STANDARD SEAMLESS STEEL TUBING.

We make over 75% of all frame tubing, rims and mudguards used in the United States. And we feel justified in claiming that we are directly responsible for the reputation of American motorcycles as the strongest made.

WE ARE PREPARED TO TALK 1913-14 BUSINESS NOW.

Model "10A," 10-13 H. P.

This Is A Two-Speed Year

And The Michaelson is THERE

The time has come when the two-speed gear is almost absolutely essential. With the growth of sidecar enthusiasm, without any appreciable improvement in road conditions, only the man with a two-speed machine can claim an absolute assurance of his ability to conquer every road or hill without the slightest suspicion of a "stall."

With the Michaelson, aside from its other high-class features, is offered the most simple, most perfect, most durable two-speed gear in the world. It is the product of an engineer who has been the designer and builder of two-speed machines for over five years.

Note these Specifications

Improved, Two-Speed Gear, Extra Heavy; Enclosed **Clutch** running in oil; Clutch Control Lever on Handlebar; **Mechanical** Oiler, also Hand Pump; Enclosed Rocker Arms; **Extra Heavy** Roller Chain, 5/16" x ¾" pitch; Chain Guard full length; **Cushion** Seat Post; 3" Tires, front and rear; 1½" Exhaust Pipe, **Silent** Muffler.

We offer dealers the strongest proposition of the year. **Write** quick for terms.

Diamond
MOTORCYCLE TIRES

NOW MADE OF

VITALIZED RUBBER

AND IN TWO FAMOUS TREADS

SAFETY

(SQUEEGEE)

AND

STUDDED

BOTH WITH A

DISTINCTIVE DIAMOND FEATURE

"MORE MILEAGE" STRIP

Vitalized Rubber is pure young rubber combined—by a secret process known only to ourselves—with a toughening compound and the result is the toughest, most wear-resisting material ever put into a motorcycle tire.

A brand new and exclusive Diamond feature is the mileage strip—extending all round the tire and adding 20% to the wearing surface of the tread. It not only means greater mileage, but it puts the side-slip bugaboo into the discard.

You have the choice of two treads—Safety (Squeegee) and Studded. The sharp, clear-cut studs on the new Diamond motorcycle tire, combined with the mileage strip, will hold your machine where you want it better than any other studded tread tire you can buy.

And, in addition to all these things, you get perfect 3-point rim contact—an assurance that the tire will sit perfectly in the rim. No unnatural distortion or bending of plies to break down the tire before it has given the mileage you pay for and should get.

TRADE MARK

Standard

In Name and Quality

Never has there been a truer saying than the time-worn old adage, "It's the little things that count." And it is the degree of attention paid to these "little things," that determines oftimes the success or failure of a machine to "get across."

Wise manufacturers are equipping with Diamond "E" Spokes and Standard Pedals because they are quality goods—because they reduce the number of repair shop trips for the rider—because farsighted manufacturers realize that a motorcycle's weakest points are its strongest—and it is that infinite attention to detail which bespeaks perfection.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond "E" Spokes and Nipples. The motorcycles that are not so equipped will inevitably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

Everyone knows the superiority of Standard No. 3 Pedals, their deep, soft rubber cushions, the interchangeability of the rubbers, and the thousand and one other good features that are not found in other pedals. The feet cannot slip no matter how rough the going. And the perfection of Diamond "E" Spokes is proverbial.

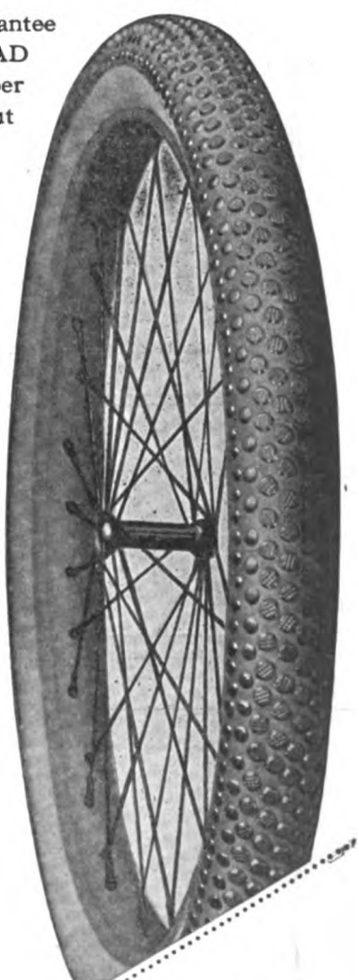
TIRE PROTECTION WITH A GUARANTEE

No longer is it necessary for motorcyclists to worry about PUNCTURES, BLOW-OUTS, GLASS CUTS, SKIDDING and unnecessary tire expense, which heretofore has MARRED the pleasure of all motoring—"BRICTSON" DETACHABLE TREADS will eliminate all this.

10,000 Mile Guarantee

SEND FOR COPY OF SAME

Yes, we will give you a 10,000 mile written guarantee with every "BRICTSON" MOTORCYCLE TREAD on a daily mileage basis of twenty-five miles per day. Can you get this kind of a guarantee on your rubber tires? Figure this guarantee out and you will see that it covers a period of 400 days.



Design and Construction

Made of select, specially prepared chrome tanned leather, soft and pliable, which gives with the "BRICTSON" the full benefit of the pneumatic tire. Studded on the surface with small neat-looking steel studs, designed to give perfect traction as well as a perfect "non-skid." There are layers of the best tire fabric between the layers of leather, which add strength and keep the tread from stretching. In addition to all these important features, the "BRICTSON" is lined perfectly smooth on the inside so there are no rivets or studs in contact with the rubber casing, making it impossible for the tread to injure the casing in any way.

The "BRICTSON" is the only scientifically constructed tread in that it CANNOT slip or slide on the rubber casing in ANY direction, owing to the patented, scientific method of fastening. It is held in position on the rubber casing by equal tension from all points of the circle, and for this reason may be adjusted to PERFECTLY fit the casing over which it is applied, which CANNOT be accomplished with any other method of fastening, and also envelops the entire casing, excluding sand, stones, mud, or even water from coming in contact with the rubber casing.

The "BRICTSON" is the ONLY TREAD THAT HAS PERFECT TENSION ADJUSTMENT FROM ALL POINTS OF THE CIRCLE, which other tread manufacturers have tried to imitate with metal contrivances that only detract from the appearance of the tread, add weight, and destroy the pneumatic feature, but still do not accomplish the desired result.

The "Brictson" Exclusive Patented Way of Fastening

The "BRICTSON" has no HOOPS, HOOKS, BUCKLES, SPRINGS, or any other unnecessary metal contrivances to add weight, break or eat into the rubber casing; neither is it cemented, laced, vulcanized, riveted or fastened to the rubber casing in any way—NATURAL INFLATION OF THE TIRE DOES THE TRICK—Simply clamped between the head of casing and rim—strictly Quick Detachable.

PRICES: One-half the price of a rubber casing and guaranteed three times as long. Compare the following prices:

26 x 2¼ $6.05	28 x 2½ $7.43	29 x 2¾ $8.15
26 x 2½ 6.60	28 x 2¾ 7.70	29 x 3 ..... 8.25
28 x 2¼ 7.15	28 x 3 ..... 7.98	

Other sizes on application.

Ask Your Dealer for "Brictson" Detachable Treads

Ask the best dealer in your town to show you the famous "BRICTSON" Guaranteed Detachable Tread. If for any reason he cannot supply you, fill out the attached ORDER BLANK, pin your check to same, mail it, and I will ship you the treads on TEN DAYS' FREE TRIAL, and if you don't find them perfectly satisfactory within 10 days from receipt of treads, return them and I will cheerfully refund your money. WE SELL EXCLUSIVELY TO DEALERS

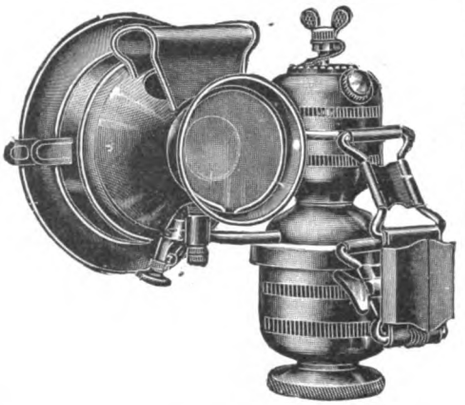
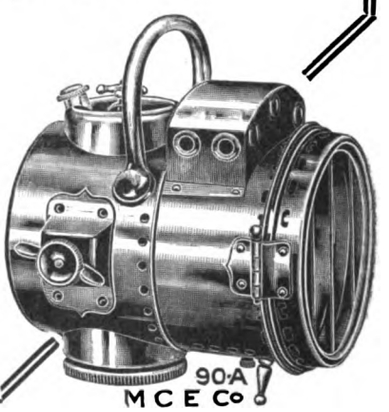
Our strict adherence to the policy of Protecting the Dealer by Not Soliciting Trade From His Customer, has given us pre-eminence in the automobile, motorcycle and bicycle supply field. We are amply equipped to give the **best** in **quality, service** and **price.** Here are Three Stunning Successes Any Dealer Can Handle with Amazing Results.

Duplex "Self-Lighter" Lamp



The law in most States requires rear lights on bicycles and motorcycles. The combination Duplex MEETS THIS REQUIREMENT. It lights up the road in front of the rider and also shows a RED LIGHT WARNING SIGNAL in the rear. This lamp is finished in nickel, has a flare-front door 4½ inches across and is fitted with a compact generator 2¼ inches in diameter. Height of lamp 5½ inches. This lamp attaches to fork on left side of wheel.

Price, $3.00 each

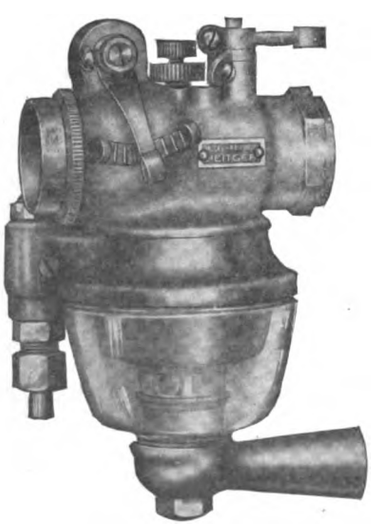


An Ideal Motorcyclist's Lamp. A "Close Coupled" Searchlight and Generator Combined. Weighs 28 ounces; size, 4 x 5 inches. Nickel Plated, Neatly Designed. No. 90 rear prop; No. 90A, side props.

Price $6.00 each

HEITGER MODEL K—1913

Made in ¾" and 1" pipe threads, and special threads for Spacke, Pope, H-D, Excelsior, Merkel, and Emblem, same list, ¾", $10.00; 1", $10.50. Where special fittings are needed, extra price. Has new air valve, no friction, or stems to wear, causing air leakage in low; air adjusted instantly from saddle, for starting, etc. Needs no priming in coldest weather. Furnished with glass or metal bowls, same price, the two being interchangeable.



HALF SIZE

Has new gasoline feed, two jets, one for low, one for high, with separate adjustments, giving minimum and maximum speeds. Owing to air valve action, etc., gives greatest possible speed to motor on minimum gasoline consumption. Light in weight, castings of aluminum, polished nickel plate.

The Better The Oil
The Better The Motor

The engine of a motorcycle is the most sensitive of gasolene motors. It quickly responds to good lubrication, and as quickly shows the injurious effects of poor oils. Nothing but the *best* should go into your motor—oils that have for years been tested and proven beyond a doubt to be the most efficient for gasolene motors—

Even with porcelain BROKEN it sparks perfectly

Unlike all other plugs, J-M Plugs spark just as well with the porcelain broken, as when it is whole—even when the current is supplied by a high tension magneto.

This perfect sparking service is made possible by the ***double*** insulation of the

J-M Spark Plug

There are two absolutely independent insulations in the J-M Plug—an inner insulation of mica protected from injury by a porcelain insulation. If the porcelain is broken, the mica prevents current leakage, and sparking will be just as strong as if the plug were not damaged.

Other exclusive features of the J-M Plug are—

Case hardened center electrode that cannot expand and contract when heated by the engine. All joints packed with asbestos or high temperature cements, baked so that they never require adjustment or "tightening up."

Look for name "J-M" on every plug. Shipped direct, prepaid, from our nearest Branch on receipt of price, $1.00, if your dealer doesn't sell them.

Ask our nearest Branch to send you Booklet

At Last—A Real Motorcycle Spark Plug!

MADE OF HEAT DEFYING, PERFECTLY INSULATING PORCELAIN—AND DESIGNED FOR MOTORCYLES ONLY

No need any longer to use the inferior mica plug or a makeshift porcelain. This new Motorcycle Standard Spark Plug, built by the greatest manufacturer of spark plugs in the world, gives motorcycle riders a plug with a porcelain insulator that is faultless, defies heat and insures perfect ignition.

MOTORCYCLE STANDARD SPARK PLUG—$1.00

Leading motorcycle engineers of the country have pronounced this plug right in principle and construction. The length over all is 2¼"—just the right size for the limited dimensions available for a spark plug in the motorcycle motor. The porcelain is made in our own potteries. Heat cannot crack it. The bushings are case hardened. The terminal nut will take ordinary wire, ring, or special "Indian" terminal.

Comes in half-inch or metric sizes. Your dealer will supply you—or sent prepaid on receipt of price and size. Our guarantee—"Your money back or a new plug, unless you are absolutely satisfied."

Let Us Send You This Sight Glass Oil Gauge

—AT OUR EXPENSE—

Mr. Harley-Davidson rider! Mr. Excelsior rider, and all the other riders that have no oil gauge on the crankcase of their engine! We have so much faith in our oil gauge that we wish to send it to you at our expense so that you can see it yourself—and then you can decide whether you want one or not. We want you to see the finest crankcase gauge ever put on a motorcycle, a gauge that will show you EXACTLY how much oil you have in your engine ALL THE TIME, and will do what no other one will—IT WILL KEEP CLEAN.

The gauge is handsomely nickel plated, an ornament to any machine, the size of a thin watch, only ⅛ of an inch thick. It screws firmly on the crankcase, is out of the way and won't jar or get knocked off. It will save its cost in oil in a few weeks. It will keep your plugs from fouling. After you have used it a week you would as soon be without your watch. It can be attached in ten minutes with the tools furnished. Do you know that if you have the right amount of oil in your engine you can start easily in the coldest weather?

We Have Lots of Letters Like This

Buck Sales Co., St. Louis:

Gentlemen—I received your Simplex Oil Gauge which is in service now and am very glad in having equipped with it, and I would say every careful rider should have it as it is a most practical and easy thing to put on. I also do not hesitate to advise any rider to get one. Yours truly,

H. UJITA, Menlo Park, Cal.

Brown Scientific Non-Deflating Pneumatic Tube

AN AIR-FILLED MOTORCYCLE TUBE POSSESSING VERY UNUSUAL FEATURES:

First: It withstands a tread puncture without deflating the tube.
Second: The higher the pressure the tighter the puncture closes.
Third: It eliminates the risk of destroying casings by reason of punctures.
Fourth: The danger of loss of control of machine is removed.
Fifth: It assures you of not being obliged to repair a puncture on the road and gets you "there and back" on full tires.

AIR FILLED ONLY.

Punctures are self-closing by reason of a scientific but simple principle of construction.

NO "DOPE," GUM, PASTE OR OTHER STUFFING MATERIALS.

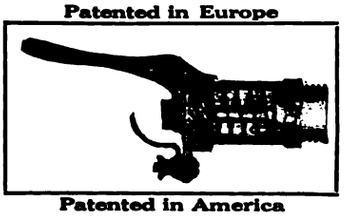
Will You Agree With Us That Air is Necessary to Increase Your Speed?

Patented in Europe



Patented in America

The M&M Economizer admits auxiliary air above the carbureter, through the six portholes. The gas coming from the carbureter is broken up and sprayed by the incoming air. This vaporizes the fuel so that when it reaches the cylinders it is a gas **OF THE HIGHEST EXPLOSIVE POWER.**

The M&M requires a ¼" pipe tap to insert into manifold. It is the only known carbureter adjuster on the market, and can also be used for priming the engine.

WE GUARANTEE that the M&M will increase your **SPEED AND POWER** 20% with less gasoline and less carbon. It is also guaranteed to save you from 40 to 50% of gasoline.

The M&M is nickel plated and highly polished. It is positively air-tight when closed.

BEWARE OF INFRINGEMENTS. PRICE, $1.25 Prepaid.

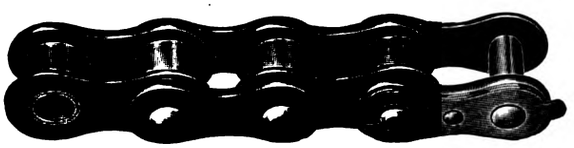
Department G MAIN OFFICE, 700 Betz Building, PHILADELPHIA, PA.

Your Motorcycle

should be equipped with chains that will stand up under all conditions. You can depend upon the "Whitney" Chain whether in rain, mud, sleet or snow; they are always on the job. They give the maximum amount of service because they are made by men with years of experience in chain making.



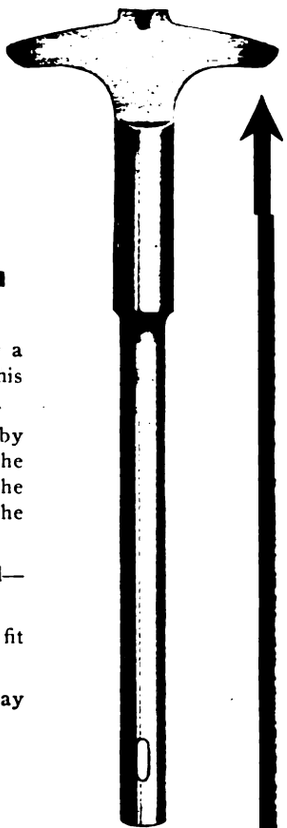
When making replacements insist on a "Whitney."

"Whitney" Chains Are Built for Strains

The Whitney Mfg. Co.

HARTFORD, CONN.

200% Longer Service Life—



THE cast iron seat is backed by a nickel steel head, giving this valve 200% longer service life.

The cast iron seat is welded on by the oxy-acetylene process making the valve a solid piece which combines the hardness of cast iron with the strength of steel.

The stem is special carbon steel—does not fatigue.

Two scientific heat treatments fit the valve for motorcycle service.

Your valves can be made this way from your own blue prints.

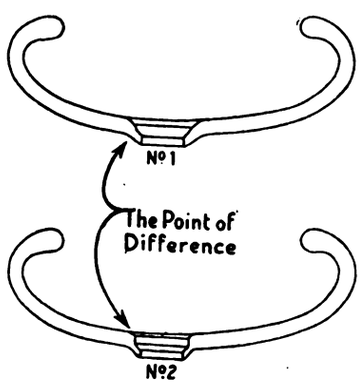
Narco
TIRE CUT FILLER

a self-vulcanizing, non-inflammable, combination rubber cement, cut filler and mastic. Fills cuts and puncture holes—heals over night—becomes like a part of the tire. $1.00 a tube. **Dealers—Car Owners.**

Send $1.00 for a trial can of Tirenew—enough for 10 tires.

National Rubber Co. 4438 Narco Bldg., St. Louis, Mo.



Mott Rims for Strength

THE superiority of the Mott motorcycle rim lies in the little points that the average riders never notice, but that show up strongly in hard service. For instance, take the way the spoke holes are punched. On Mott rims this is carefully and accurately done so that there is ample strength to hold the nipple securely. Sketch No. 1 shows the idea.

Most other rims come out like No. 2. This part of the work is hurried over, carelessly done, and as a result the holes are counterpunched too deep, making a weak spot, which often allows the nipples to pull through the rim.

Mott thoroughness shows up in the tests. Note the wheels that come through the severe endurance runs in the best condition. You'll find them fitted with Mott rims. To be sure of satisfaction, specify Mott rims for your machine.

The steadiness of the Corbin-Brown pointer makes the oscillating, uncertain speedometer pointer an evidence of inferior construction.

Absolute steadiness of speed indicator is another advantage to be found in the

CORBIN-BROWN

SPEEDOMETER

"The Speedometer of Absolute Accuracy"

As a result it can be read correctly at a glance no matter how fast or over what roads you may be travelling.

The mechanism of the Corbin-Brown Motorcycle Speedometer is extremely simple.

Its centrifugal governor has four balance weights so sensitive that they respond to the slightest fluctuation in speed. Low speed is therefore recorded as accurately as high.

Every Corbin-Brown is calibrated by hand up to 80 miles, and is tested to absolute accuracy before it leaves the factory.

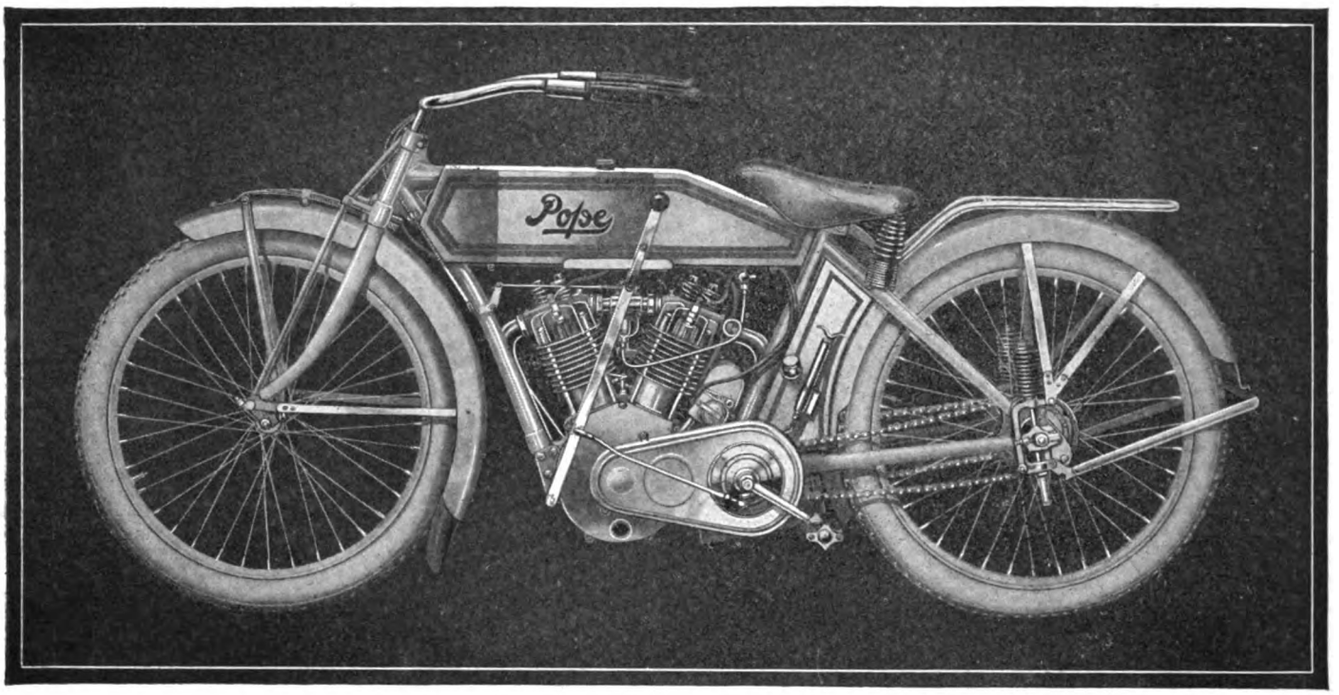
THE DOMINANT LINE AT THE SHOWS



Pope "Twin"—Has the only Shaft-Driven Magneto with double annular, adjustable ball bearings—No possibility of misaligning or cramping.

At New York and again at Chicago, the Pope Exhibit was the dominant center of interest and the busiest spot at both of these Shows. Dealers from all parts of the country decided then and there to pin their faith to the Pope Line, with its wide range of models and prices. Now that the Big Motorcycle Shows are over, we urge every dealer to consider the real reasons which underlie the Pope's Big Lead for 1913.

Pope Quality Pope Features Pope Prices

OVERHEAD VALVE MOTOR—MORE POWER. Parts more accessible—valve mechanism simpler and interchangeable.

POPE REAR SPRING SUSPENSION—Insures riding comfort without retarding speed. Holds wheel in perfect alignment. No side play. No recoil shock. Springs of different gauges to conform to varying loads. Convertible at any time to rigid frame with low center of gravity.

Compactness, Simplicity, Strength, Durability, Beautiful Lines

POPE LINE OFFERS GREATEST VARIETY OF MODELS AND PRICES:

MODEL L, "Twin" - - - - $250 **MODEL K, 4 H.P. (Belt Drive) $200**
MODEL M, 5 H.P. (Chain Drive), $215 **MODEL H, Lightweight - $165**

SPLITDORF

"Always There"

They've come; they've been seen; they've conquered!

Such paraphrasing of a famous remark is peculiarly applicable to the new SPLITDORF MAGNETOS—the sensational stars of the motorcycle firmament.

From the moment they made their appearance at the New York Show to their sensational reception at the Chicago Show—the wise motorcyclists did not overlook an opportunity of studying the newcomers.

There has been no doubt about the verdict, either. Equipment orders—dealers' demands and individuals' requests spell the unanimous voice of approval.

The newcomers are waterproof. No short circuiting troubles through rain and mud —no water, mud or waste oil can penetrate SPLITDORF MAGNETOS.

The best engineering skill has been devoted to the construction of these instruments to make them electrically efficient, aside from the all-important waterproof feature.

Windings have been made to insure the fat, live spark that, although retarded, makes the starting easy.

In other words, they are "there with the goods" and, as running mates to SPLITDORF PLUGS, make an IGNITION TEAM unbeatable for effectiveness.

There's no motorcycle PLUG, by the way, like the SPLITDORF, because it's the one plug made for motorcycle use.

"EU" Magneto—Front View.

If interested in any form of ignition for gasoline motors, just write in for our free literature. Our new catalog, our "Racing Record" or our "New Lights for Old" is yours for the asking. Do it TODAY.

This Brake Was One of the Most Important Features of the Shows

It is exactly the same kind, type and design of a brake as is used in automobiles.

It is powerful enough to hold an automobile—or a motorcycle of several times the horse power of any now on the market.

It gives you everything the autoist has:—

Absolutely reliable control of your motorcycle under all conditions;—

Fool-proof—a brake that will not wind, bind or lock;—

A slight back pedaling pressure will exert a retarding force of a ton and a half.

You surely want to know about this newest motorcycle device.

Write for fully illustrated and descriptive literature.

Thor

We Don't Assemble Motorcycles We Build Them

THERE is a vast difference between a motorcycle that is merely an assembly of good accessories and a machine that is **built**; that contains in its construction the character, the brains and the ingenuity of the men behind it. The prospective buyer should look beneath the mere surface indications of quality. He must probe until the vein of quality either "peters out" or broadens into the "mother lode" of real "class." If it is the latter, he can safely buy.

The Thor Has Individuality

We believe in keeping every detail of the THOR'S construction under our personal supervision. The value of this policy has been and is proven every day by its absolutely perfect service—the result of proper coordination of parts.

Thor Parts Prevail

The THOR motor, with its roller bearing connecting rods, mechanical **overhead** intake valves with THOR ball and socket joints; the THOR carbureter, with its improved twin air adjustment and butterfly valve; the famous THOR undergeared direct chain drive; the THOR ball-bearing free engine clutch, continually running in oil; the THOR mechanical force feed pump, oiling crank case direct, and last but not least, the THOR two-speed gear—these characteristics give the THOR clear title to its name.

Prompt Deliveries

With past experiences ever before us, we have continually been shaping our organization toward that much-sought-after quality, "EFFICIENT SERVICE TO DEALERS." We have now reached our goal. We can **positively** guarantee the delivery of THOR motorcycles on dates specified by our dealers. The wise dealer will appreciate what this means.

The Thor Line

Comprises Model 13-M, 4 h. p. single at $225; Model 13-W, a five h. p. single at $240, and Model 13-U, a seven h. p. twin at $290. Two-speed and two-speed control for any of the above machines, $40 extra.

Bosch—Of Course

OF the 77 motorcycles exhibited at the Chicago Motorcycle Show, 63 were Bosch-Equipt. In other words: 18 of the 24 makers represented, regularly employ Bosch magnetos for the required perfect ignition; the six that were left were divided between two other makers of ignition devices.

No re-arrangement of figures can be made, no other viewpoint can be taken, that could make less prominent the superiority of Bosch magnetos. They have earned their position by consistent success in every field they have entered; no gas engine accessory is conceded the universal recognition accorded to Bosch.

The leading motorcycles of the world are Bosch-Equipt —Be sure that yours is, and likewise remember that

The "Black Hawk" Stands Rigid Examination

Hundreds of Dealers, Thousands of Riders, at the Chicago Show, Gave the "Black Hawk" the Most Minute Inspection, the Most Unsparing Scrutiny—the Result Showed that We Underestimated Rather Than Overstated the Merits of Our Machine

Every feature of this 1913 marvel of motorcycle construction received most favorable comment. Old-timers in the business acknowledged the "Black Hawk's" superiority.

Others admitted that the "Black Hawk" is more than a good motorcycle, more than a high-grade motorcycle—in fact, that it is the best "buy" on the market.

Big dealer connections were made during the show week, and from all appearances, the "Black Hawk" is destined to become one of the most popular of all motorcycles.

Great Opportunity for Other Dealers

We have some choice territory yet unassigned. If you care to handle a motorcycle that you can sell with the knowledge that it will give the utmost in service and prove satisfactory always, we shall be pleased to hear from you.

Dealers will have orders for our machines as fast as we can deliver them. Our liberal contract terms and proposition has met with great favor with the trade. Write us for agency and we'll lay our plans bare before you.

To Riders

If you did not attend the show or see the "Black Hawk" demonstrated, send for our handsome catalog, which fully describes our belt and chain drive models.

After you read the mechanical details and see wherein the "Black Hawk" is two years ahead of its rivals, you will decide in its favor.

Write us today and we'll inform you the name of the nearest dealer where you can see the "Black Hawk." Address Dept. B.

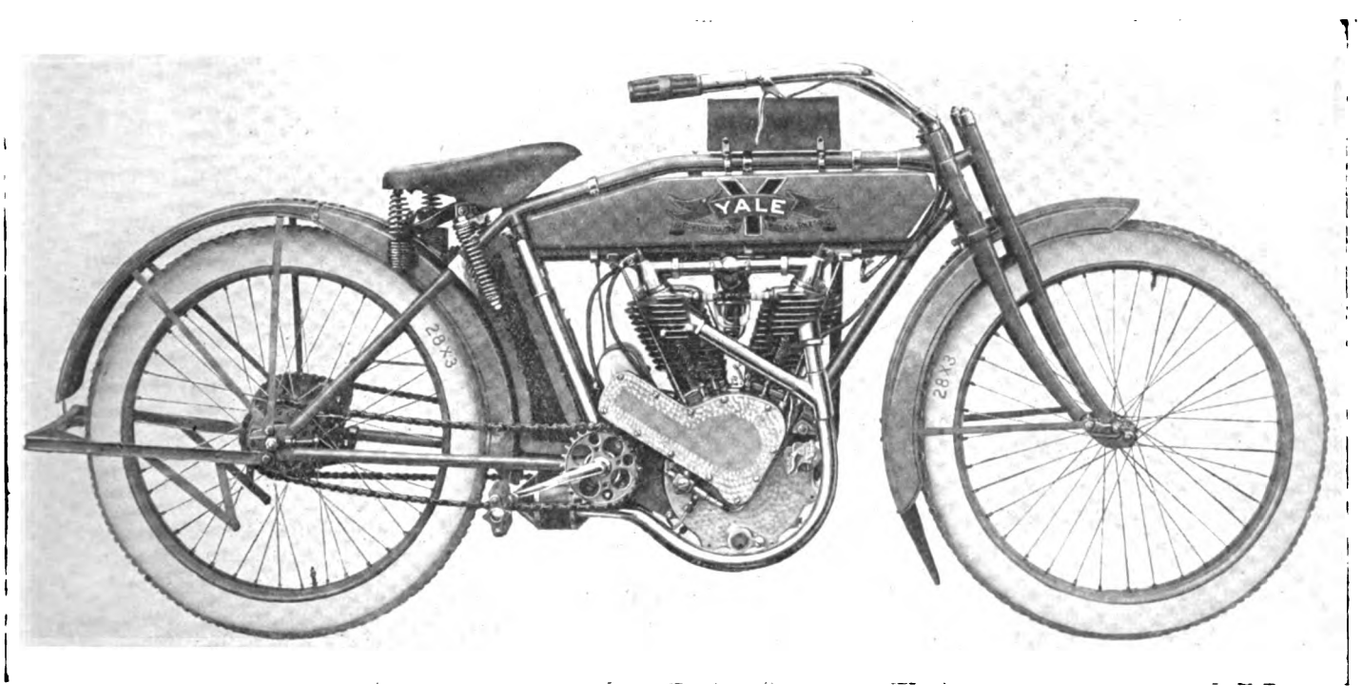
YALE

Interest That Meant Business

YALE motorcycles were the center of more real interest than any other display at the Chicago Show. Real interest—dealers with an eye to 1913 business success, and riders who want to lead on the road—not mere curiosity and a desire to look at new experiments and freak ideas.

Mechanical excellence, the combination of the best known to motorcycle designers and the elimination of mistakes found in other machines, concentrated on the "Big Y" the attention of the men who know what a motorcycle should be.

Comparison with the other mechanical features, as well as with sales policy, advertising work, and helps for agents that were offered by other machines, emphasized the superiority of the Yale way.



THE fastest road machine made, the big Yale twin. Its super-efficient motor, 60.92 cubic inches displacement, gives 9.2 real horsepower at the rear wheel, where the power does work. More speed than any rider dares turn wide open on the average road, and its low center of gravity, perfect balance and ease of steering allow it to be ridden safely at higher speed than other machines under all conditions. Three-inch tires, Y-A shock absorber and Yale cushion fork give luxurious comfort and relieve rider and machine from strain of road jars. Separate tanks holding three gallons of gasoline and a gallon of oil. Footrests with auxiliary brake lever. **$275**

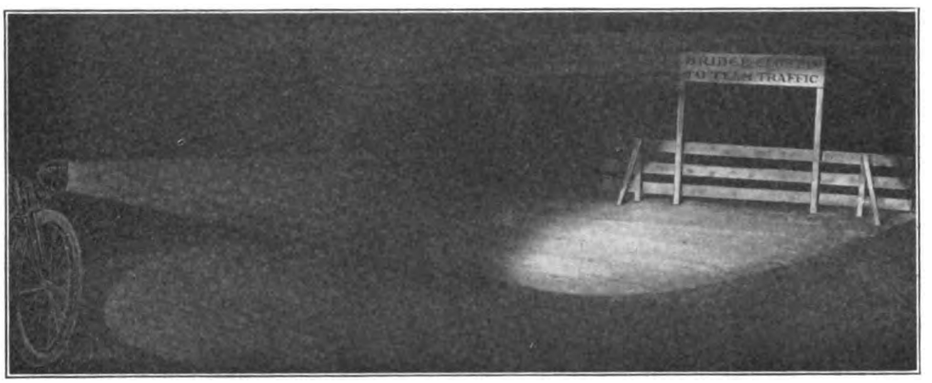
GENOLITE

The Only Complete Electric System for Motorcycles

GENERATOR **GOVERNOR** **STORAGE BATTERY**

An Actual Photo-graph



Demonstrating a "Genolite" in Action

The One You Have Been Waiting For

Why are our cities electric lighted?
Why are 90% of our automobiles electric lighted?
Because they want the best light at the least cost.

Why buy a 1913 model motorcycle which in every way fulfills your dream—the one you have been waiting months for, and then equip it with a lighting system as of 1903, 10 years behind the time?

The "GENOLITE" is not simply a headlight. It is a lighting system identical in principle with those installed in the highest grade automobiles, which throw a light a quarter of a mile in front of them.

The "GENOLITE," being adapted to use on a motorcycle, is smaller and simpler—throwing a straight shaft of white light 500 feet ahead.

With the "GENOLITE" the light is always the same, no matter how fast or how slow you travel. It is mechanically governed and absolutely controlled.

"GENOLITE" means a perfect electric generating plant that is small enough to be mounted on a motorcycle and yet strong enough to operate anything you wish to put on your machine—headlight, tail-light, speedometer light, trouble light, or horn—all at one time if need be, either when standing or when riding.

Send a post card for our descriptive booklet, and if your dealer does not handle it, order from us direct.

Gale's Pr
Belt

You are familiar with "Emblem" Scout. Of al specialties better than n

Mr. Gale did not use a belt-driven machine on his two recent trips.

Yet his experiences have brought about this remarkable testimonial in favor of the belt, regardless of the fact that he used the chain transmission. Mr. Gale is from old York State, not Missouri—yet now he has been "shown."

Sooner or later you yourself will come to the firm realization that the belt is absolutely the best.

Likewise will you come to Spartan Belts. Mr. Gale, by the way, will continue to use Spartans.

In our belt talks we have presented the belt from almost every angle.

We go so far as to say that if you want excessive speed, buy a chain driven machine.

But if you want low cost of upkeep, satisfaction, service and the highest efficiency, buy a belt driven machine.

As to which belt, we tell you to look around, make comparisons, read our letters from "men who know."

Now that the shows are over you will have ample time.

Write us today for our newest booklets. Learn the facts which have placed Spartan Belts on 90% of all 1913 belt-driven machines.

ference Is for the Transmission

great trips made by Mr. M. E. Gale, the famous men, Mr. Gale is in a position to know equipment anyone. Please read what he says about belts.

Angola, N. Y.

THE GRATON & KNIGHT MFG. CO., Worcester, Mass.

Gentlemen:—I have learned a great deal about motorcycling by reading and profiting by the other fellow's experience.

And as a long distance rider, I feel sure that I can add something that will prove beneficial to other riders.

As you know, I rode on my "Emblem" from Angola, N. Y., to New York City to attend the show. For the same purpose, I rode also from Angola, N. Y., to Chicago, Ill.

On the first day of the first trip I drove through rain, sleet and over icy roads to Le Roy, N. Y. On the next day, I bucked the snow drifts to Syracuse. The next day, I rode to Schenectady.

I arrived in New York, Wednesday night, after hard going over rough, rutted roads. The total distance covered was over 500 miles. The Chicago trip was even more difficult. Now, it's not often that a man would make a similar trip or even have the inclination. But the point is this: The matter of transmission seems to hold the center of the motorcycling stage right now. You say, "There can only be one best, and that one best is the belt form of transmission." And I agree with you and it is for that reason that I am writing you.

On the two aforementioned trips I used a chain driven machine. For three years previous, I had always used a belt. But I used the chain on these trips, thinking I would get better results than with the belt.

But my preference now, after these experiences, is for the BELT.

I know you have hundreds of letters praising Spartan Belts and telling of experiences, but I really think my experience is different and still further serves to substantiate the claims you have so consistently stood for.

Yours very truly,

M. E. GALE.

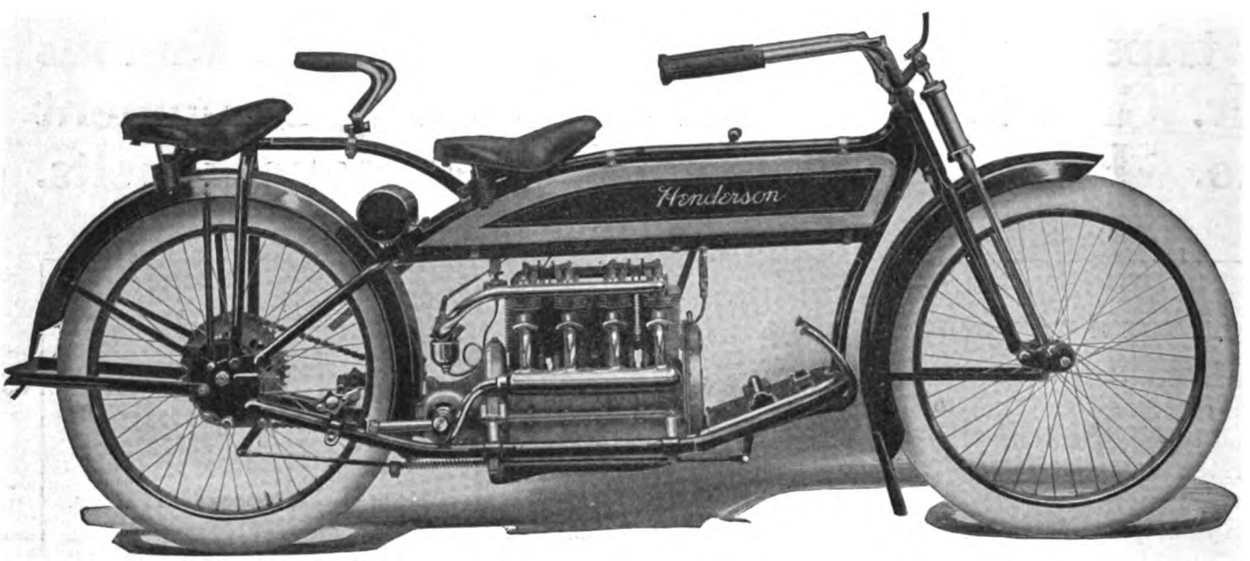
Every Henderson Dealer
Is Going to Have a Good Season



The 1913 Henderson 8-65, 8 H.P., 4 cylinders, free engine, chain drive, $325.

This is a positive assurance—not our say so, but an assurance based on a sound and substantial demand.

If you watched the trend of buyers' minds last year, you saw many turn from the ordinary machine to the quiet, powerful, comfortable Henderson. The number of these buyers was limited only by the number of machines we built.

This year the same thing will happen and on a larger scale.

So the Henderson presents an opportunity without parallel to the wise and wide-awake dealer.

Get in touch with us at once.

Prest-O-Lite
For Motorcycles

"Wouldn't ride at night without it"

That's what every experienced rider says about Prest-O-Lite. You know, if you've ever tried to do any road work at night that the oil lamp won't do. Small carbide lamps are but little better.

But with a Prest-O-Lite Tank and a lamp big enough you can tour safely any time and anywhere. You have a brilliant, dependable light that turns on and off like a gas jet.

Money Invested

Regard the money paid for a Prest-O-Lite Tank not as money spent,—but as money invested. It's extra insurance against accident. And, besides, a Prest-O-Lite Tank never gets to be second-hand. It can always be sold for about what it cost, owing to the universal use and demand. Exchanges cost little—never more than the carbide to feed a generator—and in most cases less.

$10

Try Prest-O-Lite for 30 days at our risk

You need Prest-O-Lite to make your night riding pleasant and safe. So that you can see how much you gain by it, we want to have it on your machine for 30 days' trial. Then if you decide you can do without Prest-O-Lite, the trial won't cost you a penny. Fair enough, isn't it? We want every rider who isn't using Prest-O-Lite to take advantage of this offer. Write for booklet and plan today.

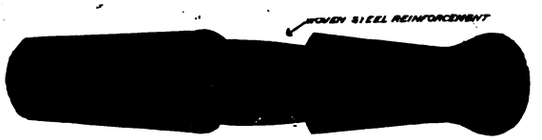
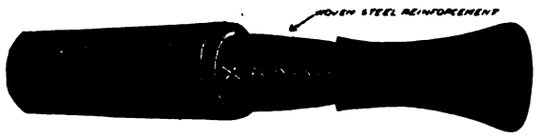
WOVEN STEEL REINFORCED GRIPS



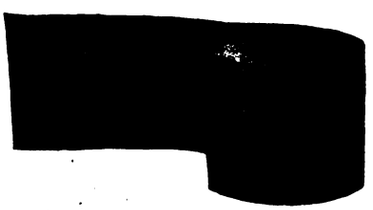
Regular Motorcycle Type



No. 100 Corrugated Type

CONTINENTAL-ERIE Woven Steel Reinforced Grips are the only grips made that are ABSOLUTELY INDESTRUCTIBLE. The Woven Steel Reinforcement in the center part of the Grip strengthens it at its weakest point and prevents it from breaking. In addition to the steel reinforcement, our Grips have an inner lining of fabric which makes them as pliable and as resilient as any other grip on the market. These are made to fit all makes of machines.

When ordering your 1913 machines, specify these Grips and thus avoid replacements.



TRADE
NON-SLIP-LAG
MARK

The only pulley lining on the market that gives entire satisfaction, prevents belt from slipping, increases power, applied without removing belt or wheel. Carried in stock by all jobbers and dealers.

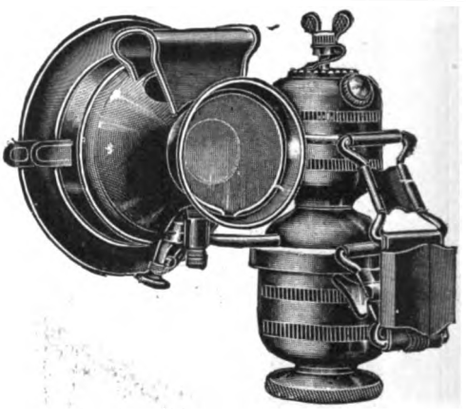
An Ideal Motorcyclist's Lamp. A "Close Coupled" Searchlight and Generator Combined. Weighs 28 ounces; size, 4 x 5 inches. Nickel Plated, Neatly Designed. No. 90 rear prop; No. 90A, side props.

Price $6.00 each

Dealers! Your Attention Please!

Do you realize that our enormous stock of high-grade automobile, motorcycle and bicycle supplies is **entirely** at your disposal? That not one penny's worth is sold to the rider direct? Consider what this means to you. Here are two stunning successes any dealer can handle with amazing results.



Duplex "Self-Lighter" Lamp

The law in most States requires rear lights on bicycles and motorcycles. The combination Duplex MEETS THIS REQUIREMENT. It lights up the road in front of the rider and also shows a RED LIGHT WARNING SIGNAL in the rear. This lamp is finished in nickel, has a flare-front door 4½ inches across and is fitted with a compact generator 2¼ inches in diameter. Height of lamp 5½ inches. This lamp attaches to fork on left side of wheel.

Price $3.00 each

51 CHAMBERS STREET NEW YORK CITY | THURSDAY, FEBRUARY 20 | TEN CENTS A COPY ONE DOLLAR A YEAR

READY FOR FIRST LECTURE MEETING

Director Sauer will Open Transcontinental Tour with Session in Baltimore, February 27

THANKS to hearty and enthusiastic local co-operation all along the line, indications favor a successful trip for Chairman J. Leo Sauer, of the F. A. M. National Committee on Legal Action, who will inaugurate an F. A. M. transcontinental lecture tour and membership campaign with a meeting at the Maryland Automobile Club's headquarters in Baltimore, Thursday evening, February 27. Director Howard French, State Commissioner Wood and other officials and members of the Baltimore M. C. have practically completed arrangements for the Baltimore meeting. Preceding Mr. Sauer's address, there will be an interesting program of entertainment, and, according to those in charge, there will be a big turnout of F. A. M. members and other riders to give the Legal Action Chairman a rousing send-off.

The second meeting will be held in Washington on Friday, February 28, under the auspices and at the headquarters of the National Capital M. C. The third meeting, originally scheduled for Richmond, will be held instead in Norfolk, Saturday, March 1, arrangements for the same being in charge of F. Eph Ball.

BIG MEETINGS ASSURED.

Good meetings are assured at Savannah, Atlanta and Birmingham, on Tuesday, Wednesday and Thursday, March 4, 5 and 6, respectively. It will be noted that changes have been made in the dates for which these three meetings were originally scheduled. Next in order will be Oklahoma City on Saturday, March 8, Dallas (including Fort Worth) on Monday, the 10th, and San Antonio on Tuesday, the 11th.

Mr. Sauer will arrive in Los Angeles on March 14. Arrangements are under way for a big meeting in that city on Sunday, the 16th. On Thursday, the 20th, the traveling Director will address a meeting of the San Francisco Club, and on the 24th and 25th inst. meetings in Portland and Seattle. Spokane is scheduled for Wednesday, March 26, Salt Lake City for Friday, March 28, and Denver for Sunday, the 30th. For Wednesday, April 2, a meeting is being arranged in St. Louis.

A Winter Scene in Northern Ohio.

Clubs Give Enthusiastic Co-operation and Show Lively Interest in Contests for F. A. M. Cups

MEETING OF F. A. M. DIRECTORS.

Mr. Sauer will report to the Directors in Chicago on Thursday, April 3, when a special meeting of the Directorate will be held in the Auditorium Annex. Arrangements for a meeting under the auspices of the Chicago Club either Friday, April 4, or Saturday, April 5, are already well under way.

Mr. Sauer will return to New York April 7, and remain there until the 13th. In the meantime he will address a meeting held under the auspices of the Invincible Club, of Brooklyn, a joint meeting of the New York clubs and any other meetings which may be arranged by clubs in lower New York, upper New Jersey or Connecticut. He will resume his schedule on Monday, April 14, with a meeting in Hartford, succeeded in the following order by meetings in Boston, Syracuse, Rochester, Buffalo, Cleveland, Detroit, Milwaukee, Indianapolis, Louisville, Columbus, Pittsburgh, Philadelphia and Newark.

CHANGES IN SCHEDULE.

It has been found necessary to make a number of changes in the schedule as originally published, and the correct schedule is printed herewith. It should be noted that the date of the Savannah meeting has been changed from March 3 to March 4, that of Atlanta from March 4 to March 5, and that of Birmingham from March 5 to March 6. The Dallas meeting will be held on the 10th, instead of the 11th, and the one in San

Digitized by Google

Antonio on the 11th instead of the 12th; El Paso and Tacoma have been taken off the schedule, and Fresno and Spokane added. The Seattle meeting will be held on March 25, instead of the 26th, and the Milwaukee meeting on April 22, instead of the 8th. The dates of the meetings in the following cities have been advanced one day, as follows: Detroit, April 21, instead of the 22nd; Columbus, April 25, instead of the 26th; Pittsburgh, April 26, instead of the 27th; Philadelphia, April 28, instead of the 29th; Newark, April 29, instead of the 30th.

PAMPHLETS DISTRIBUTED.

Several thousand pamphlets for local distribution among those likely to be interested have been printed, descriptive of the objects of Mr. Sauer's trip and giving the complete itinerary. Copies of these pamphlets may be obtained by writing either to Mr. Sauer, at 51 Chambers street, New York City; Secretary-Treasurer G. B. Gibson, of Westboro, Mass., or Chairman E. M. Estabrook, of the Membership Committee, of Bangor, Me.

The pamphlet recites that at a meeting held in New York January 15, the Board of Directors of the Federation of American Motorcyclists adopted a resolution authorizing one of its members to make a tour of the important motorcycle centers in the United States:

1. To interpret the Constitution and By-Laws of the F. A. M. and explain the administration of the affairs of the National body;

2. To get into intimate touch with F. A. M. Officials and Members in all parts of the country, ascertain their wants and report the same to the Directors;

3. To give hearings on matters concerning the Federation, its Officials and Members, with a view to making adjustment of any matters concerning which there may be differences of opinion;

4. To point out the way to the proper organization of State governments and demonstrate how local Officials and Members are in position to benefit by co-operating with the Directors and the Chairman of the National Committees;

5. To conduct a National Membership Campaign.

TWO CUPS FOR CLUBS.

Mr. Sauer wishes to call particular attention to the fact that two handsome silver loving cups will be awarded by the National body, as follows:

One cup to the city contributing, upon Mr. Sauer's arrival there, the largest number of paid new memberships. Every F. A. M. member attending one of these meetings is urged to bring at least one non-member, prepared to hand in his membership. A second cup will be awarded to the city in which the meeting is best attended. In measuring the attendance, the Directors will, instead of simply considering the number of those present, base their award upon the percentage the attendance bears to the F. A. M. membership in each city on the first of March. In other words, in a town having an F. A. M. membership of 100 and showing an attendance of 200 at the meeting, a percentage of 200 will be given. The cup will be awarded to the city having the largest percentage according to this method of computation. This gives the smallest town on the schedule an equal opportunity with the largest.

THE COMPLETE ITINERARY.

Up to February 27, Mr. Sauer may be reached at 51 Chambers street, New York, and thereafter, according to date, at the hotels named on his schedule, which will be as follows:

City.	*Date.*	*Hotel.*

THE CANADIAN MARKET

LETTER OF WELL-KNOWN TORONTO FIRM GIVES FIGURES TO PROVE THAT PREFERENTIAL DUTY ON MOTORCYCLES IMPORTED FROM ENGLAND REALLY AFFORDS THEIR AGENTS LITTLE ADVANTAGE IN HANDLING THE MACHINES—HOW THE SALES SYSTEM WORKS OUT.

FROM time to time there is new evidence that American motorcycles are making rapid inroads on the Canadian market, and students of trade conditions over the border will be interested accordingly in a recent statement by the Tangent Cycle Co., of Toronto, which was prepared with a view of explaining the growing popularity of motorcycle products from the States, as against the importation from England. The fact that American manufacturers are called upon to pay a duty of 30 per cent. on machines shipped into Canada, as against the 22½ per cent. preferential duty imposed on motorcycles brought in from England, leads to the conclusion that American shippers labor under a disadvantage, but the Toronto firm argues that in the long run there is little or nothing to favor the Canadian handler of British machines. In view of the rigid inspection system in operation the statement that American motorcycles are sometimes smuggled over the border may be accepted as rather fanciful, but otherwise the statement of the Toronto firm is a straightforward presentation of timely figures and first-hand conclusions. It follows:

"Suppose a Canadian agent stocks one dozen machines at an average cost delivered here of $300 each = $3,600, and $400 worth of sundries, say $4,000 for stock alone, he must expend $3,900; say another $500 for shipment, and then there is the cost of tools, etc. If he sell all his machines at $50 profit each, say $600, he about pays his rent. If there are any radical alterations in his next year's mount, most of his sundries are depreciated in value. If he give up the agency, or the firm he was agent for turn the agency over to another firm (and this has been done), the consequence is he has lost a considerable amount of money. But let him take up an American-made machine, he can order as low as three machines, and by paying $30 to the firm he is selling for can take or leave the machines if he forfeit $10 each. He has no parts to stock, as he can get them in one day's time, the same with machines; in fact, he can become a full-fledged agent on $300.

"English manufacturers think we have a lot of advantage over the Americans in the amount of duty to be paid, but this advantage is more fanciful than real, as the American duty is 30 per cent., and English 22½ per cent. How does this work out? On a machine worth, say, $200, we pay $45 duty; the American pays $60 (when the machine is not smuggled in or the invoices falsified, and both are done). The Americans pay $15 more duty than the English, but to offset this on British machines the agents pay for packing, carriage, dock dues, and insurance, which amount to little less than the extra duty paid by the Americans. Coupled to this are the disadvantages we suffer through slowness of delivery and having to pay almost spot cash. It is easy to see that the advantage of the English product is annihilated by the close proximity of the United States; and no doubt this has a lot to do with the Canadians' preference for the American product."

WITH reference to the consumption of gasoline by cyclecars it is worthy of note that some of the more prominent English types travel only twenty or twenty-five miles to the gallon. It is stated, however, that there are models capable of making forty miles per gallon, but even this is not calculated to impress greatly the roadster who has accustomed him to motorcycle mileages per gallon of gas.

ADAM DUNCAN has resigned from the presidency of the American Tire & Rubber Company, of Akron, Ohio, and has been succeeded by James Shaw.

LOS ANGELES M. C. ADOPTS RESOLUTIONS

Popular Pacific Squad Suggests Revisions in Governing Policy of F. A. M. and Favors New System of Handling Finances

WITH a view to assisting the F. A. M. in its movement to shape governmental policies on the Pacific Coast so that they will afford maximum satisfaction as applied to the particular conditions confronting motorcyclists there, the Los Angeles M. C. at a recent meeting adopted a set of resolutions which suggest a number of important revisions. Special attention is given the disposition of Federation funds, and it is argued that the present system of state units in the government of the organization may be improved upon. The resolutions follow in full:

WHEREAS, We believe the best service the F. A. M. can render to its members is to give them legal protection, in matters of legislation, injury, arrest, etc., and

WHEREAS, there has been much dissatisfaction in various western States because the control of F. A. M. matters of western interest has been too far removed from the West; and

WHEREAS, A large proportion of the support which the F. A. M. has received has been from far Western States; therefore be it

Resolved, That as large a proportion of all moneys received by the F. A. M. from franchise fees, sanction fees and fines as careful investigation will warrant, but preferably not less than 30 per cent., should be placed in the fund reserved for the benefit of racing men who are injured while competing under F. A. M. sanction,

Resolved, That this fund should be devoted not only to professional racing men, but to amateurs, and that emergency authority to incur expenses payable from this fund should be vested in all local referees;

Resolved, That from the balance of moneys received from the competition sources mentioned, and from all membership initiation fees and annual dues, there should be deducted and placed in the Legal Action fund such proportion, say 30 per cent., as investigation may show to be feasible with respect to routine expenses;

Resolved, That another proportion of such moneys, say 30 per cent., as investigation may show to be feasible, should be credited to each of various sections of the F. A. M., preferably sections composed of several States in each case;

Resolved, That the balance of all moneys received by the organization should be nearly or quite enough to pay all other expenses of the F. A. M.;

Resolved, That the F. A. M. would be better fitted to give its members the service it should give them if various sections, each composed of several States, were given the option of continuing the present plan, whereby each State will have a full complement of officers, such as State commissioner, secretary, etc., as provided by the constitution and by-laws, or of having only a working force of State commissioner, and one or more local commissioners for each city or town, in every State, in addition to such State or local referees as the Competition Committee may find necessary;

Resolved, That the plan of having a full complement of State officers, such as has been formed in Ohio and Indiana, is not likely to prove of the most service to members in those or other States;

Resolved, That the fact that such plan has been adopted in only those two States, after a period of six months has elapsed since the idea was adopted by the F. A. M., proves its inadaptability at this time to the majority of States;

Resolved, That we favor the reconstruction of the F. A. M. constitution and by-laws so as to permit the members of various States to form districts, each district to comprise several States, and to elect for each district a vice-president who shall also become, automatically, a member of the national Board of Directors, and who shall have power to appoint a State commissioner in each State, who in turn shall appoint local commissioners;

Resolved, That the F. A. M. should formulate a simple, businesslike plan whereby local commissioners, by showing prospective members facts about the efficacy of the Legal Action fund, can secure new members; whereby local commissioners' necessary expenses can be promptly paid direct by the national treasurer, upon the O. K. of State commissioners and district vice-president; whereby the expenses of State commissioners can be similarly paid upon the O. K. of district vice-presidents, and the expenses of district vice-presidents paid by the national treasurer after his own examination of their bills and vouchers:

Resolved, That we favor changing the membership requirement for qualification of clubs for F. A. M. affiliation so that 50 per cent. of the membership of a club will be the basis;

Resolved, That there should be more elasticity in the rules governing endurance runs and other competitions conducted by clubs, whether they be affiliated with the F. A. M. or not, so that the conduct of such events will not place financial hardship upon the clubs;

Resolved, That with an equitable division of F. A. M. moneys and the re-creation of districts and district vice-presidents, who shall also be members of the National Board of Directors, the purposes of the F. A. M. and the contentment of members and affiliated clubs will be much better served than is the case at this time;

Resolved, That a copy of these resolutions be sent to Mr. E. L. Moore, F. A. M. special representative, at Seattle, and to each of the motorcycling journals.

COUNTY COMMISSIONERS

STATE Commissioner O. F. McLain, of Indianapolis, Ind., has appointed the following F. A. M. county commissioners: Allen, C. F. G. Schory, Motorcycle Garage, 1110 Broadway, Ft. Wayne; Cass, E. W. Arnold, 211 Sixth street, Logansport; Clay, Ottis E. Allen, care of K. B. Piano Company, Brazil; Dearborn, E. V. Oberting, Lawrenceburg; Decatur, Earl Rodgers, 128 West Main street, Greensburg; Fulton, C. M. Studebaker, Twelve Mile; Grant, G. C. Harwood, 217 East Fourth street, Marion; Hamilton, P. E. Ummel, Noblesville; Knox, J. F. Borrowman, Vincennes; Kosciusko, B. C. Cooke, 120 West Market street, Warsaw; Madison, G. Relsinger, 12 West Tenth street, Anderson; Marion, D. Baumann and R. Hofstatter, 324 North Illinois street, Indianapolis; Marshall, V. Warner, Atgos; Miami, J. J. Miller, 19 East Main street, Peru; Montgomery, Grant Gould, Crawfordsville; Randolph, Thurman Constable, Union City.

REGISTERED REPAIR SHOPS

LATE additions to the list of F. A. M. registered repair shops are here given: Edward O. Haggett, 9 Casco street, Portland, Me.; The City Garage (E. I. Gully), Haviland, Kan.; W. Ambler Stetser, Broad street, Paulsboro, N. J.; Knight Mercantile Company (A. A. Knight), 211 North Twelfth street, St. Louis, Mo.; Herbert R. Sawyer, 18 Fleet street, Haverhill, Mass.; Earle S. Eckel, State street and North Wandling avenue, Washington, N. J.; E. P. Bauch, 172 Western avenue, Blue Island, Ill.; Charles D. Brown, Washington, Ill.; Schenck Motor Company (Ivan Schenck), Cardington, Ohio; Union Garage (I. H. Atherton), Union, N. H.; King & Wheless (J. B. King), Main street, Thomaston, Ga.; J. F. Kilham, 55 Broadway, Beverly, Mass.; Sanders Machine Shop (L. H. Kirk), Havre de Grace, Md.; Motorcycle Sales Company (A. J. Strube & J. H. Littinger), 3166 Reading Road, Cincinnati, Ohio; Frank B. Spoor, Byron, Ill.; William F. McCarty, 288 Main street, Nashua, N. H.; Central Motorcycle and Bicycle Store (Tutie Palmison), corner Central avenue and Madison street, Sandusky, Ohio; August Headstrom, Stromburg, Neb.; H. F. Windeknecht, 536 Washington street, Hoboken, N. J.; Lindsay Cyclery (E. W. Cosart), Lindsay, Cal.

Those reported for the week ending February 2 are as follows: O. H. Kathmann, 114 South Seventh street, Quincy, Ill.; Santa Cruz Cyclery (C. G. Coleman), 229 Pacific avenue, Santa Cruz, Cal.; Sarver & Retz, 508 South Walnut street, Muncie, Ind.; Edgar H. Brumelle, 359 Fulton street, Troy, N. Y.; A. D. Diamond, Public Square, Galion, O.; J. Johnson & Son, 3321 Kensington avenue, Philadelphia, Pa.; Harry F. Seamark, Sixth avenue and G street, W., Washington, D. C.; Santa Fe Trail Garage (J. P. McCollom), Dodge City, Kan.; Spahr Brothers (B. S. & A. J. S.), Canal Dover, O.; Medina Garage (W. W. Coons), North Court street, Medina, O.; Monarch Garage (Poulton & Hostetter), 20th street and 57th street, Philadelphia, Pa., and Frank T. Laird, 410 Drayton street, Savannah, Ga.

CIRCULARS are being sent out by Chairman Estabrook, of the F. A. M. Membership Committee, to 5,000 dealers throughout the country. These circulars contain literature prepared by the F. A. M. telling the dealer of the many benefits to be derived by registering with the F. A. M.

PRESIDENT Patterson has appointed J. A. Hall, of Brooklyn, State commis- for New York, and Charles Holland, of Midlothian, commissioner for the northern part of Texas.

A. L. SPINDLER, 1339 Michigan avenue, and L. H. Whipple, "the motorcycle man," are new Pope dealers in Chicago.

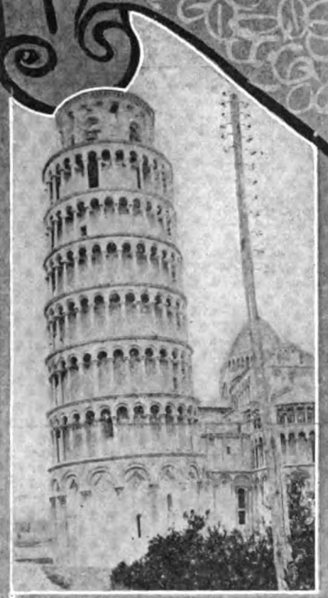
IN FRANCE & ITALY

with

F. W. BAUM



IT was almost dark when I arrived at the Place de la Pyramid, in Paris, and leaving my machine in the public square, I started to look for a hotel and a place to store my mount. Upon my return to the square, my machine had disappeared. On seeking aid from a gendarme I was led to the station where I found my mount and baggage; the latter had been opened and was scattered on a table. After proving my identity I was allowed to take my property, but not without being reprimanded. I felt sorry for the gendarme who had taken the machine to the station, as it was uphill work for five blocks.

I obtained accommodations at the Hotel d'Angleterre and the next morning I sought a repair shop and had seven spokes put in my rear wheel. On returning to the river, I was greatly surprised to see the embankments for several hundred yards swarming with people. During the night the peasants and petty dealers had erected booths and stands, and had everything from garden products to a complete assortment of department store goods for sale.

ENCOUNTERING AN ARMY.

Leaving Lyons, about three miles out, I was forced to abandon the road for an hour to let a line of French artillery pass. This was the largest aggregation of artillery I had ever seen, being fully three miles long.

From this point on I encountered many grades and several long tunnels. The sensation of riding through a tunnel, when the spot of daylight at the end seems to be the size of a dime, is the most peculiar I have ever experienced. One is continually afraid of running into the walls, and the only thing to do is to keep the eyes directly on the spot of daylight and hold the handlebars rigid. While rounding a turn on a mountain road I picked up a hob nail, and thereby lost the Brockton (Mass.) air out of my front tire.

ON DANGEROUS ROADS.

It was not long before I started the ascent of Mt. Anis. The road was very steep, with sharp hairpin turns. On making the turns it was necessary to slow down to such an extent that it would have been impossible to make the climbs without the help of my Eclipse clutch. A skid or failure of a brake to work when making these turns would mean a fatal fall. The road is around the mountain, rather than cut through it, and is very narrow, with the precipice at its edge. The outside of the road has stone studs every ten feet but these would not be likely to stop a motorcycle.

Modane is the last French city of any importance on this route. I passed through the little village of Lansleburg before coming to the top of Mt. Ceris. My Eagle made the climb in good style, and as this was the steepest gradient I had encountered I felt confident of being able to negotiate all others. I was first stopped by the French officers, but upon presenting my credentials from the Royal Automobile Club, I was allowed to ride about a half mile further to the Italian frontier. Here I was compelled to go into the office, and have my triptyque examined. I was told I must deposit eight francs in gold before I could go on. I soon convinced the official that I did not have that much gold with me, and as he could not accept an American Express check, he decided to sign my triptyque and also made out some special papers. Next he tied and sealed my kodak, instructing me not to open it until I had passed out of the fortified district. A lead seal was placed on the handlebar of the machine and I was told not to remove it while in Italy.

IN PICTURESQUE ITALY.

While on this point (6,829 feet above sea level), I could obtain a beautiful view of the valley of the Arc, overlooked by the Dent Parrachee glaciers. The ascent is about 20 miles in length. From the pass, the road is in very poor condition and has even worse turnings than the ascent from Modane. The Lake of Mt. Ceres and the road to Hospice are very beautiful. There is a valley with high, rocky cliffs on either side, and a winding stream near the road. I now found myself in the heart of the Italian fortifications, and the climate here affords a healthful summer resort. The road from Hospice is practically level for a mile, and then the treacherous part of the descent begins. I used my brake until my leg muscles ached. I also used my compression as a brake.

The Italian customs are again encountered at Molaretto, and from there the road descends by wide curves to Susa. I found a comfortable hotel, but was disturbed until midnight by the noise made by 200 banqueters in the hotel garden.

THE FIRST SPILL.

I stocked up on gasoline at 70 cents per gallon and left over a fine road for Turin. While on this road I actually attained a speed of 75 miles per hour. I made a short visit in Turin and then left for Milan. The road was very bad and in some places there were as many as six parallel ruts. Many little villages were encountered and all have exceedingly narrow streets, which are dirty and poorly paved. The natives made little effort to get out of my way and it was often necessary to stop. By a circuitous route I found my way to the Piazza Duomo in Milan, and had no trouble in locating the R. A. C. Hotel Metropole. I spent most of the next forenoon in seeing the city and taking pictures.

In the afternoon I left for Venice, but having been misdirected I soon found myself in Carate, about twenty miles north of Milan. I returned to Milan to find the road to Porta Venezia, as Venice is called. It was on this trip that I experienced the first spill from my Eagle which was caused by skidding on a car track. I bent my crank-hanger and while fixing it such a crowd gathered that I was forced to seek refuge in a shop. I found the main

Digitized by Google

road to be very wide and good, although white dust was much in evidence all through Italy. My route lay through Brescia, Lonato, Verona, Vicenza, Padua and Mestre.

SIGHTSEEING IN VENICE.

At Mestre, where all motor tourists in Italy must leave their machines, I found a garage where I could store my mount at a cost of twenty cents per day. I took the train for Venice, going over the famous railway bridge, which is supported by 222 arches. Venice is very impressive at the first glimpse, on account of the canals. The city outline is in the form of a huge vase with the Grand Canal winding its way in a reverse curve manner.

A motorcycle would be utterly useless here, of course, as the streets are all canals, except for a few lanes near piazzas, and these are intercepted with bridges which have stair approaches. Every building seems to be interesting in Venice, and it is needless to say that I visited St. Mark's Cathedral and fed the pigeons of St. Mark, which may be said to be one of the most lasting memories of the visitor to Venice. I took a gondola on the Grand Canal, visited the famous Rialto, the marble winding staircase, Bridge of Sighs, Ducal Palace, and many other equally interesting scenes. I returned to Mestre, feeling that Venice in itself was well worth a visit to Europe.

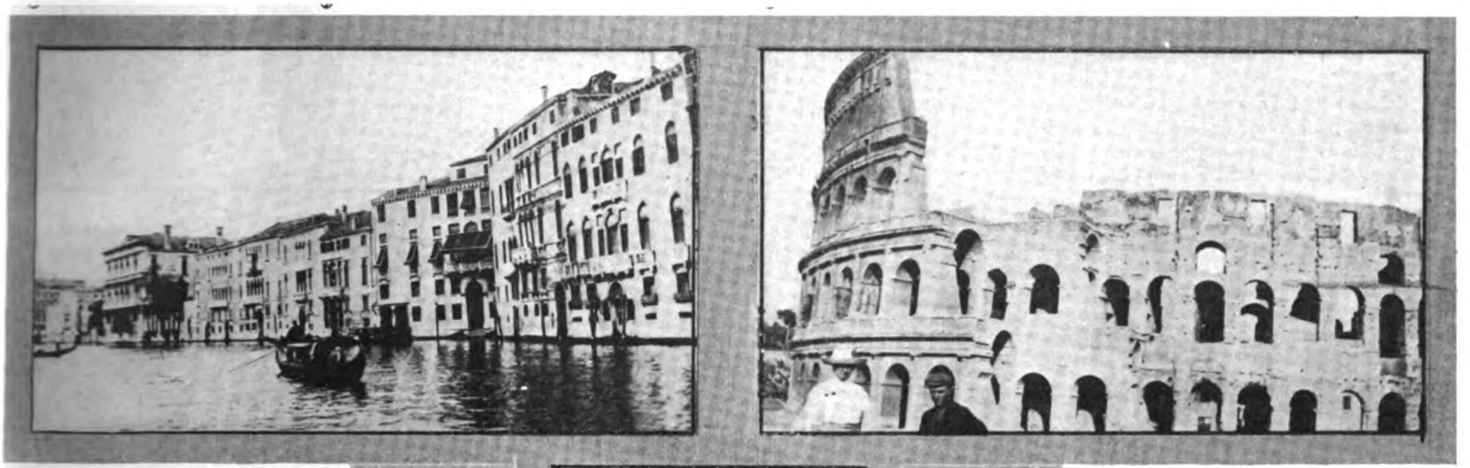
WHERE FUEL PRICES WERE HIGH.

The next day I left for Florence, stopping at Bologna, which did not prove very interesting for me, and reached Florence in the evening. The distance covered was two hundred miles, over mountainous roads with steep gradients. Up and down in roller coaster fashion the rider is carried through some of the most beautiful scenery imaginable. I met an English Belsize car just out of Florence and rode alongside it into the city. The occupants of the car gave me some useful information as to what I should visit in and about the city. It seems that the Cathedrals of Italy are the most important examples of architecture in the different cities. Near the Ponte Vechio, on the River Aino, I received a detailed map of the city from an English speaking jeweler. This bridge, the Ponte Vecchio, is the Rialto of Florence, and its shops on either side of the passageway of the bridge, remind one of the busy Rialto of Venice. The Piazza del Duomo, Palazzo Reale, and the monument of Victor Emmanuel, also the house of Dante, are among the more important places of interest.

At Arezzo I had to pay a chemist eighty cents a gallon for gasoline. It is seldom, however, that one is literally held up on the price of gasoline or oil as in this instance. It happened to be after business hours and as most storekeepers live in the rear of their shop I had no difficulty in arousing the proprietor. A few miles further on is Castiglion del Lago, which is near a beautiful mountain lake. In this valley I had my first taste of fresh figs. These are entirely different from the layer figs of our country, being much richer. They can be bought for one or two cents a dozen, but I'll wager few Americans could eat a dozen in succession.

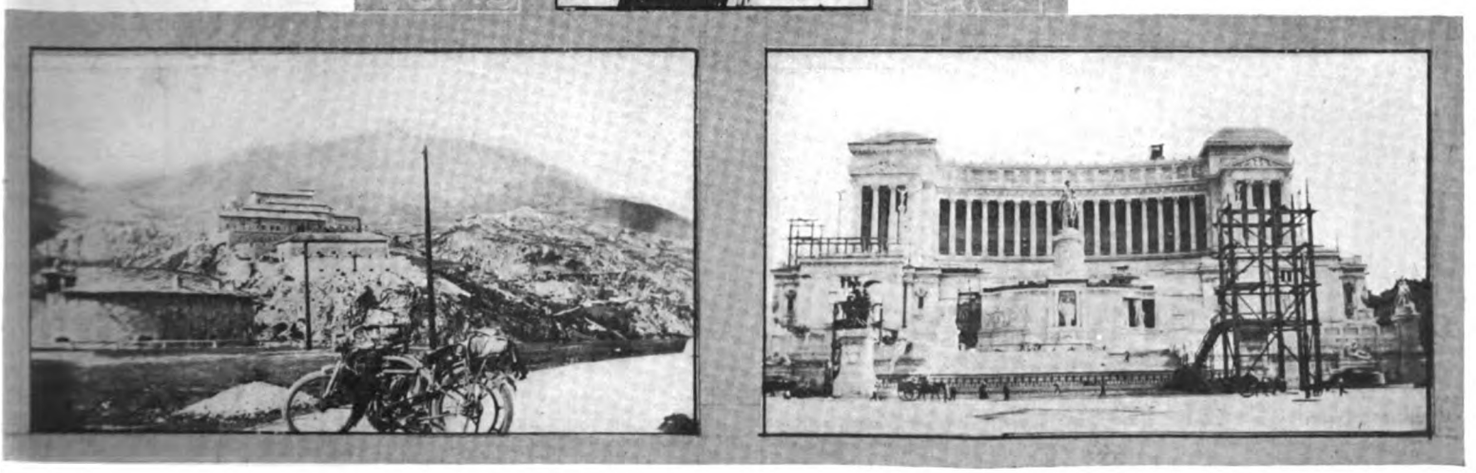
AMONG THE RUINS OF ROME.

My route to Rome lay through Perugia, Folingo, Somma Pass (2194 feet above sea level), and Passa Correse. The roads could not be considered very good, many of them being rough, dusty and mountainous. My in-



ABOVE is shown the first "street" that balked F. W. Baum on his recent tour of Europe. It is the Grand Canal in Venice, the principal thoroughfare of this picturesque Italian city. Baum left his motorcycle at a town some distance from Venice and made the trip to the "City of Canals" by an antiquated railway.

The upper picture at the right shows the ruins of the Coliseum in Rome. In the center of the picture Baum appears standing on the famous bridge of sighs in Venice. The lower left hand photograph gives an impressive view of snow capped mountains near the French frontier. In the lower right hand corner appears the beautiful Victor Emmanuel monument in Rome.



Digitized by Google

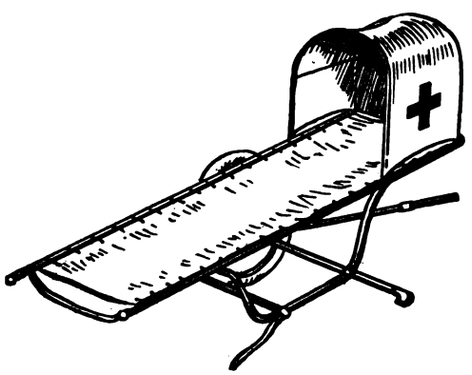
terest in Rome was much influenced by my study of the Roman history at school. The "Seven Hills" are almost undiscernible to the visitor, but will be pointed out by willing guides. From the rear stairway of the Campidoglio a fine view can be obtained of the greater part of the ruins of Old Rome, including the Forum, the Coliseum, Arc of Constantine, Arc of Tito and Nero's Fountain. The Coliseum was intensely interesting, the stone stairways, four stories or levels of the structure, the boxes for aristrocrats, the arena, animal dens, prisons of the Christians, and subterranean passages are enough to awe any visitor.

I next went to the Vatican and St. Peter's, and was greatly impressed with the statues, altar and interior decorations of this famous place. While visiting the Vatican I met an American lady from San Francisco who was traveling around the world. She had a letter to the Pope, whom she was waiting to see. Rome is as beautiful a city as one could wish to visit. The fountain at the end of the Via Nazionale is of unusual interest, with four huge bronze statues at the cardinal points. The new crescent shaped monument of Victor Emmanuel can be seen from almost every part of the city.

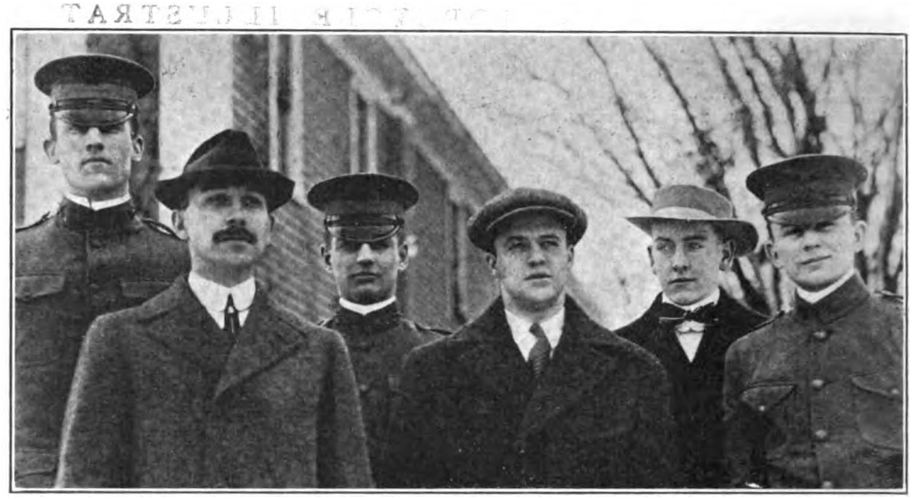
A RECORD FOR DUST.

I decided to take a jaunt out of the city to see the Appian Way, or old Roman aqueduct. This reminds one of a mammoth bridge, with several sections taken out at irregular intervals. I had intended to visit the newly excavated city of Ostia, but did not think of it until I had passed Civitavecchia which brought me out on the coast road. This was somewhat better than the roads around Rome. During my stay in Italy there was no rain and the dust was annoying. Many times after a motor car passed me I could not see the road for several minutes. At one time I started out of a city behind a big limousine and did not think to pass it before reaching the highway. The party drove fast and raised so much dust that I could not see to pass and was forced to stop for fifteen minutes to allow the dust to settle. The steam roller is a thing unknown in Italy. The stone is thrown on the road and the traffic grinds it into the roadbed.

Before reaching Pisa I passed through Leghorn or Livorno, as it is called. I could see the familiar outline and slant of the Leaning Tower long before I reached the city. After riding through many narrow streets I finally reached the Duomo or Cathedral. I paid about six cents to climb a lot of winding steps to the top, which has a circular promenade. The angle of the tower is very pronounced and the lower floor is sunken. There is little else to see in the city so I left soon for Geneva. I was advised to avoid the Carrara marble quarries, but upon inquiring I received so many contradictory answers that I decided to follow the regular route. I admit that I had considerable trouble, and was thankful that the weather conditions were favorable. In due time I reached Genoa, where I visited the birthplace of Columbus. This was a tiresome ride and I would advise prospective tourists to steer clear of this city unless they want to tax themselves and their machines to the utmost.



Sidecar Ambulance Outfit, Shown at Recent English Show.



CADETS TO TOUR EUROPE

A MOTORCYCLE trip through the British Isles and part of Continental Europe has been planned by Professor W. R. Berger and five cadets of the Manlius School, of Syracuse, N. Y. They will leave immediately after the commencement in June and will be on the road until the middle of October. The cadets are: Kenneth Chorley, New York; W. K. Jenne, Jr., Ilion; E. B. Jewett and Walter R. Edmonds, Buffalo, and G. M. Jones, Utica.

All the men will be equipped with new machines. Sailing from New York, they will land at Liverpool and then go West to Chester, Oxford and London. The first important stop after leaving England will be Antwerp. Then the party will journey through Holland, Belgium, Germany, Switzerland and Italy. The return to London will be made in time for the international motorcycle race September 22. On the return trip a stop will be made in Paris. Professor Berger, having spent last summer traveling in Europe, and Mr. Chorley, who is familiar with roads in both England and the Continent, will act as guides.

STATE ACTIVITY

FROM President B. J. Patterson, of the F. A. M., come several interesting extracts from letters recently forwarded to him by Federation commissioners.

State Commissioner Wharton states, for example, that North Dakota has only five F. A. M. members with which "to begin the new year," but that the outlook is bright for rapid progress in the state throughout the coming season.

State Commissioner P. N. Bushnell, of Aberdeen, writes that South Dakota has about 600 F. A. M. riders and that the Aberdeen club, a 100 per cent. F. A. M. squad, is looking forward to a membership of 100 before the end of February.

PRACTICAL TALKS

IN order to familiarize its members with all the details of the motorcycle and its numerous accessories, the Buffalo (N. Y.) Motorcycle Club is holding a series of lectures, which are given by experts. At the last meeting of the club, Frank W. Pardee, of the Ericson Manufacturing Company, of Buffalo, gave an interesting talk on the magneto. He showed some diagrams of the types of magnetos now in use on the various machines.

MAY HAVE TWO TRACKS

DETROIT, Mich.—As soon as the frost is out of the ground, work will be started on two motorcycle speedways in Detroit, according to the plans of Jack Prince and Chas. P. Salen. One of these tracks is to be a combination automobile and motorcycle speedway, a mile and quarter long, for which Prince leased a 120-acre tract of land at Gratiot and Taylor avenues, last year.

The estimated cost of this speedway is $100,000. According to the blue prints the track will be 50 feet wide, or four feet wider than the Indianapolis speedway, and it will be banked to 20 degrees in the stretches and to 45 degrees at the center of the banks.

Salen last week secured a five-year lease on a suitable tract of land on Jefferson avenue, near the Hudson automobile plant. It has 500 feet frontage, a depth of 520 feet, and is located on one of the principal car lines of the city.

The motordrome will be a huge wooden structure, 480 feet in diameter and over 30 feet high. It will have a quarter-mile track banked at an angle of 60 degrees. Above it will be seats for 10,000 spectators.

OHIO'S ROAD PLANS

COLUMBUS, Ohio.—Senator William A. Weygandt is drafting a bill to be introduced in the Ohio Assembly, providing for the sale of all abandoned canal property in Ohio and for the use of the proceeds for the improvement of the highways in the state. Governor Cox is favorable to the proposed law. It is estimated that the sum of $20,000,000 would be realized from the sale of the state's abandoned canal property.

DE ROSIER IN SPRINGFIELD

JAKE DE ROSIER, who recently returned home from Los Angeles, has now entered a Springfield (Mass.) hospital in an effort to save his injured leg through another operation.

WANTED - A HILL

BY DWIGHT · B · PANGBURN

IT was the Old Scout speaking. "I'll bet you my new hat against a gallon of oil that there isn't a hill within 25 miles of here that my twin won't carry me up." His remark was just by way of driving into me the superiority of a twin over a single; I ride a single. Sadly I admitted that there are hills my model won't take, and if he hadn't been so persistent the matter would have dropped there. But I couldn't bear to see him offer 5 to 1 with no takers, so I said finally, "I'll have a hill for you inside of a week."

A range of the foothills runs down from the north and stops a mile or two out of town, and the west side of some of the hills is almost a perpendicular cliff. None of the roads up that way are good, and like other motorcyclists I had steered clear of the place; but I had heard that there was a road that climbed the range somewhere, and that was what I was betting on.

I started out one afternoon to find that cross-over. I went up the valley road, with the cliffs on the right and the river between, keeping a watch for a cross road. Just above Twin Lakes, where the valley broadens, the range bends away to the right and shows a promising notch. A little further on I found that a narrow road started in the right direction. It was nothing to boast of as a road, but at that it was smoother than the road I had just covered, so I tackled it.

AN EXCITING INCIDENT.

The bushes grew up on high banks close to each side of the road and I was beginning to wonder what I would do if I met any traffic, when I topped a rise and came right upon a hay wagon, driven by a tow-headed yokel. The wagon was standing in the middle of the road, and filling it completely from side to side, while the horses were resting after coming up the hill. I stopped my engine and looked the situation over. The only thing that bothered me was how we were to pass each other, as the farmer couldn't drive over me and I couldn't get past him.

"Guess you'll have to turn 'round and ride the other way, Bud," suggested the driver cheerfully. "There ain't room for you to pass me an' I'm goin' right along. Git up, Dobbin; git up, Sarah!"

But I didn't intend to turn tail for any hay wagon, especially with the seediest part of the hay on top holding the reins, and more particularly as I saw that Fate had kindly prepared for me a way out of the dilemma. Between us was a low culvert in the road, and under this ran a small stream, usually 4 or 5 inches deep, but now nearly dried up by the summer heat. This stream made an opening through the bank and brush at the side of the road and quickly pushing my machine into the bed of the stream and up a little way from the edge of the road I was able to laugh at my friend the enemy as he drove by.

LOCATING A CROSSROAD.

I went on and soon passed a little farm, from which I suspected the farmer had come. From here on the road was less and less traveled until at the end of a mile it was practically all grass, and at this point I reached another farm house. A few yards beyond, to my dismay, the road ended. Also to my consternation there was a sign hung conspicuously on a corner of the fence. It read: "We keep a dog; he bites."

There didn't seem to be anyone in sight, but I was very near the notch and I wanted to find whether there was a road through it, so I nonchalantly dropped my wrench in one pocket and putting two or three good-sized stones in the other I approached the house. I knew there was no hope at the front and went around to the back door where I found a woman piling wood. I approached her and inquired if any road went through the notch, meanwhile keeping a nervous eye out for the dog.

"Sure they's a road through thar," said the woman. "What's matter? Some one chasin' ye? What are you lookin' around for?"

"No one's chasing me," I replied; "I was looking out for the dog."

"Oh," she returned, "there ain't none. Sis an' I had that sign put up to keep tramps from bothering us. Sis is that tender hearted she'd let 'em eat us out o' house an' home."

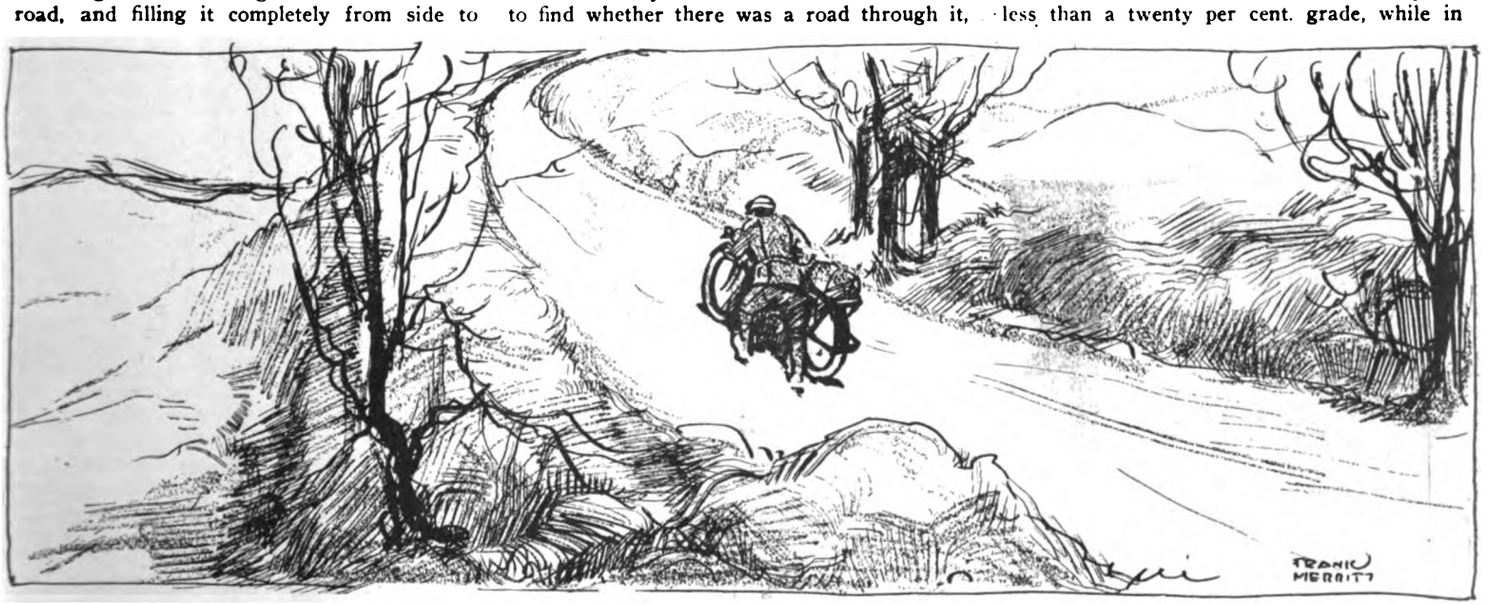
"Is there any way I can get to that other road?" I asked.

"Yep," she answered, "you can go acrost our orchard and wood lot if you want too. It ain't over a third of a mile. Just go through the bars ahead at your right an' don't forget to put 'em up after you. There's a trail through."

ON THE RECORD HILL.

I found the trail and started walking, as it was too rough to ride. All went well through the orchard but just before getting across the wood lot I ran over a very sharp stub and heard the air gently sizzle out of my rear tire. I went on the few remaining feet to the road and soon fixed the leak, using my last patch to do it. Then I started on and in two minutes I struck the hill.

I knew in a mighty short time that I had found what I wanted. The hill was steep—I have measured it since and find no place less than a twenty per cent. grade, while in

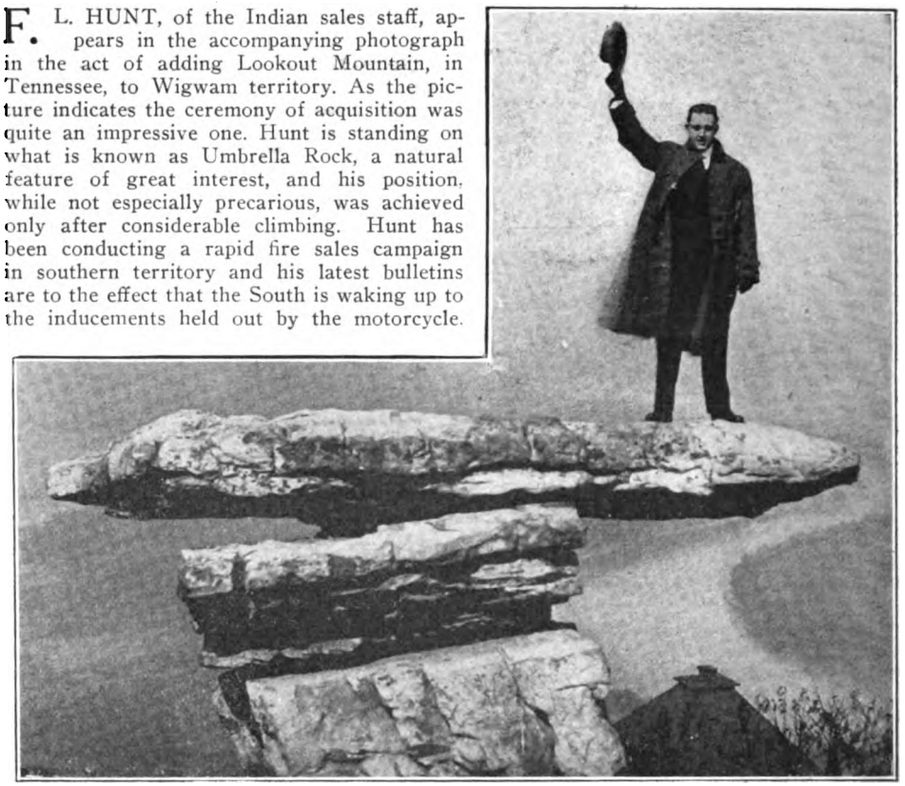


Digitized by Google

many spots it is thirty per cent. and almost 40 per cent. It could not be said to have S turns for they were too sharp; they were more like Z turns, and they came one right after another. It reminded me of climbing a circular stairway. The hill was so steep that most of the earth had washed away, leaving only a surface of stones. Most of these were small enough to roll under the machine, but frequently there were rocks as big as your head, and here and there a ledge of the mountain would crop out and make a steep pitch where it was hard to get traction; now and then there was a natural thank-ye-ma'am across the road.

My engine ran slower and slower; I pedaled to help it, but in spite of all I could do it stalled. I got off and walked up to investigate. About 100 feet ahead around the next turn the hill didn't seem so bad so I went back and started the engine to let it pull the machine up while I walked beside it. This worked till I got to the steeper pitches and then I began to push, for I was determined to get up that hill. Soon I had to stop and rest—you who have ever pushed a machine uphill know why. I turned around, expecting a fine view but I was far enough into the notch so that all I could see was the valley directly below, and there I saw my friend of the hay wagon apparently taking the road I should have taken and coming through the notch.

F. L. HUNT, of the Indian sales staff, appears in the accompanying photograph in the act of adding Lookout Mountain, in Tennessee, to Wigwam territory. As the picture indicates the ceremony of acquisition was quite an impressive one. Hunt is standing on what is known as Umbrella Rock, a natural feature of great interest, and his position, while not especially precarious, was achieved only after considerable climbing. Hunt has been conducting a rapid fire sales campaign in southern territory and his latest bulletins are to the effect that the South is waking up to the inducements held out by the motorcycle.



A SURPRISE FOR THE FARMER.

Then I knew I just simply had to get to the top. It would never do for him to find me stuck on the way up. So I went on. After a while I got to the top and sat down to get a rest and cool off while looking at the fine view. Half an hour later the hay wagon appeared with half the load missing. The driver blocked the wheels to give the horses a rest before starting up the last steep slope. In a few minutes they came on and got up opposite me, where they stopped again.

"Where's your hay," I called, "did it slip off?"

The driver came out from behind the team; he hadn't noticed me before.

"Gosh! How'd you get here?" were all the words he could find.

"Oh, the little old tub can pull pretty well," said I. "I've been sitting here enjoying the view for a long time—but where's your hay?"

"I had to leave half of it at the bottom of the mountain," he answered, "Two hosses couldn't never pull a full load up this here road. Well, I gotta go long and take this over an' come back an' get the rest. G'long, Dobbin! G'long, Sarah! It does beat all how them pesky machines climb hills don't it!"

I rolled into town and around to the Old Scout's house.

"I've found it," I chortled.

"Found what?"

"Why, the hill that'll stick you," I said.

"There isn't any such thing," he replied. Call off that bet of the hat against the gallon of oil," he went on. "If I can't climb yon hill I'll *give* you a hat like mine. If I do you needn't give me anything, because I can't fail and I'd hate to bet on a sure thing."

We went out. The Old Scout tried the hill on direct drive. He disappeared around a turn and I heard his engine stop. I walked on up with visions of a new hat. I found him straightening a pedal.

"This turn is so blooming sharp," said he, "that I went into the ditch, but I'll make it next time."

He got the pedal fixed and went down to try again. By using the clutch and slowing on the turn he made it, but when he rolled over the top of the last pitch his toes were on the ground to balance himself and his clutch was smoking like a small volcano. But he got up.

"Now that I know the road I'm coming up in a hurry," he shouted at me as he went down again. That time he rode all the way up on direct drive, except on the very worst turns, and went over the top at 15 miles an hour.

Next year I am going to ride a twin—one like the Old Scout has.

Bay Ridge Club, of Brooklyn, N. Y., at Its Annual Banquet.

BAY RIDGE M. C. GROWTH

ONE of the largest and most active motorcycle clubs in Brooklyn, N. Y., is the Bay Ridge M. C. The club was organized in the spring of 1911 when six motorcyclists of Bay Ridge met in the repair shop of the Simplex Machine Works and formed the Sunset Motorcycle Club. This name was changed in July, 1911, at which time the membership had been materially increased. The present name was adopted in honor of the section of the city in which the members reside. Prior to this time the meetings had been held at the homes of the members, but with the increased membership the boys felt the necessity of a clubhouse and accordingly one was rented on Fourth avenue.

The present staff of officers is made up as follows: President, H. Bishop; vice-president, L. Goemans; treasurer, Jules Verbeck; secretary, J. McCormack; captain, W. Kaiser; first lieutenant, W. Moers; second lieutenant, John Varbeeck; pennant bearer, C. Bergman; chairman house committee, F. Deckelmann, and C. Claussen and T. Halvorsen are the directors.

The accompanying photograph shows a number of the boys at a recent banquet.

The Timely Tipster

HOWDY, Old Top; great little assortment of winter weather they've been putting across the board for us of late, eh? Nothing monotonous about it, not for a minute. Mackintosh yesterday, fur coat today, and an even chance for shirt sleeves tomorrow. When a chap trundles the old bus out for an airing these days he never knows whether to carry an extra blanket or a palm-leaf fan. For example, I headed for the country one Sunday morning recently in full winter regalia; sweater, short fur coat, heavy knickers, thigh-length leather leggings, the stoutest shoes I could find and a fur-lined cap, and before I had been an hour on the road perspiration was trickling down my back and I was experiencing all the interesting but untimely sensations of a fat broker in a Turkish bath.

When I left home the day gave promise of being crisp and a bit windy, but before 10 o'clock there was April in the air. To make matters worse I had fitted tire chains, and finally in desperation I made a halt and removed them. I was not a transcontinentalist and didn't like to have other riders eyeing me as if I were on a record-breaking dash to Chilkoot Pass. It made me nervous. Still I couldn't shed the heavy coat; after working up perspiration I was obliged to stick to my winter togs, and what's more to the point they were sticking to me.

WHEN THE LAST STRAW FELL.

I ARRIVED back in New York early in the afternoon, and more as a joke than anything else I decided to run down to Coney Island. When I reached the big resort I found the beach fairly well peopled and the straw that nearly broke my winter resolution fell when I discovered that about seventy-five bathers were laughing and floundering in the surf. Imagine it! Regular human beings—quite like the rest of us—bathing on a Sunday in January, and enjoying it. And there I stood beside my mount, panting in a costume that was but one degree removed from the outfit of an invalid Esquimau. Great weather for winter riding. Yes, indeed.

A MOUNT FOR THE MUDLARKER.

WHILE I lay no claims to prowess as a mudlarker I have been quite deeply interested of late in a novel type of motorcycle offered by an Englishman named Roe, in which the aim is to afford the rider comfort and almost complete protection on the road.

The machine has a 6-ft. wheelbase and an open frame, minus a top tube; these are the essential peculiarities of its construction. Its great length permits the rear frame to be hinged amidships against compression and tension springs, and the long leverage thus provided attains silky suspension with the minimum of up and down motion. The rider sits (e. g., in a leather sling resembling a deck chair) just where the bottom bracket would grow on a standard frame; his rump only clears mother earth by a foot or so. His whole person, together with all the mechanism, if so desired, is enclosed in a high-sided, canoe-like body, which may be composed of sheet steel, of tin or aluminum panels on a spider frame, or of waterproof fabric stretched on cane girders and ribs. A small wind screen and hood can be fitted. Handlebar steering is impossible, owing to the high sides; so duplex wire cables run from the standard type steering head of the spring forks to a small vertical hand steering wheel, set at a convenient height in front.

STARTING AND STOPPING.

MR. ROE provides two alternative devices for facilitating the use of the machine when stationary or at low speeds. The vital part of both devices consists of a pair of 8-in. wheels, shod with cushion tires, and mounted one on each side of the rear wheel. For expert use he advises that they should be rigidly fixed at such a ground clearance that the machine cannot tilt over in either direction to a dangerous angle. The side doors can be pushed open by the rider's knees, so that he can thrust out a foot on to the ground, to steady himself in a clutch start, or in slowing down. The other design allows of the ground clearance being adjusted by a side lever placed within the body. For starts, stops or greaseriding the wheels would then be depressed into ground contact, and tucked up out of the way when the machine is on the move. This design presents great attraction to the all-weather riders over here.

SETTING THE PACE IN TIRES.

IT is worthy of note that English riders and manufacturers are inclining toward our policy of fitting larger tires, and that many experienced roadsters are now fitting 3-inch covers, at least for the rear wheel. In this connection a writer in *The Motorcycle*, of London, states that he found 3-inch tires capable of eliminating many of the discomforts of prolonged riding, and that his only objection to them (aside from the additional cost) was aroused by a proneness to sideslip.

I am willing to admit that he has theoretical grounds on which to base this claim, but motorcyclists of my acquaintance have not complained of increased slipping with the larger tires that are now being offered. On the contrary, a broad tread of up-to-date anti-slip construction would naturally be expected to afford an exceptional grip on the road, and I have reasons for believing that these expectations are fulfilled. What do the boys think of this? Is the 3-inch tire a slip producer?

SILENCER VS. EFFICIENCY.

I NOTE without surprise that the recent muffler tests conducted on Brooklands track, England, under the auspices of the A. C. U., showed the margin of speed in favor of the non-muffler motor to be negligible. This is significant in view of the fact that cut-out advocates usually create the impression that there is a vast difference in efficiency between a motor silenced by the standard muffler and one with a free exhaust. In one or two of the English tests muffled and unmuffled motors made precisely the same time in their circuits of the big track, and all in all the silencer proved that it is far from being the hindrance its enemies would have us believe.

LOOKING FOR "BIG THINGS"

GUS BETAT and C. F. Sauer, of New Orleans, were among the Chicago show visitors who returned home determined to do big things in the way of developing motorcycle interest in their state during 1913. They state that Louisiana roads are as a rule not inviting for motorcyclists at present, but that there is a bright outlook for progress in highway improvements.

Motorcycle Police Squad of Berkeley, Cal., Supplied with Thors by A. Freed, of San Francisco.

An Ideal Tour in the Berkshires

By ROBERT BRUCE of the A. A. A. Route and Map Service.

I AM obliged to speak without personal experience of the great country beyond the Rockies, and the Sierra Nevada Mountains; but after a long and fairly close acquaintance with most of the territory east of the Mississippi river, I have discovered no similar area exceeding in the infinite variety of scenery and all-around interest and attractiveness for the motorcyclists, what would be included within a radius of 100 miles from Albany and Troy, N. Y. In that imaginary circle will be included the far-famed valley of the Mohawk, practically all of the historic Lake George country, lower Lake Champlain, the upper Hudson watershed, and the very best of the Berkshire Hills district of Western Massachusetts. It is interstate territory—a trifle more than half in New York State and the balance in western New England.

A Good Road Past a Typical Farmhouse in Western Massachusetts.

Of all the individual localities within this radius, the best known and most traveled is that referred to collectively as the Berkshire Hills; their center is the city of Pittsfield, Mass., but they also include Lenox, Stockbridge, Lee, Great Barrington, Interlaken, Glendale, Housatonic and other pleasant towns. Between the Hudson at Albany or Troy and this interesting section are a variety of roads, not likely to be mastered in all their intricate windings by even the most persistent of motorcycle travelers, ranging from the very best macadam, such as most of the Albany-Pittsfield route, to the naturally poor, long-neglected kind, which best describes many of the secondary roads. Taking the usually good with the occasionally bad, the average will turn out very well; and, of course, the experienced motorcyclist gradually learns to pick out the one kind from the other.

The early scouts among my friends had passed along the information that the foliage in the Berkshire Hills last fall was finer than it had been for several years past. It will be remembered that the cold weather came late, and for an unusually long time this whole beautiful interstate section basked in the cheerful sunshine of Indian summer. I had already "sampled" it in the course of some shorter trips in the Mohawk Valley and the foothills of the Adirondacks. The touch of autumn had first lighted upon the tip ends of the topmost trees—slowly creeping to the exposed branches, gradually moved in and around, and finally enveloped the whole living tree.

Now I knew that this miracle of nature was always on a greater scale in Western Massachusetts than anywhere in the Hudson Valley, since the landscape there is more heavily wooded, and is in fact one vast panorama of valley, forest, lake and stream, often resplendent in colors. So, when unexpected business called me to a city on the other side of the Berkshire Hills, I telephoned to a friend in Poughkeepsie suggesting that he come up to Albany and join me for a motorcycle ride overland to Pittsfield. I broke in upon him rather suddenly in this manner:

"Hello, Sam, what do you say to the scheme? Are you on?"

"Am I on for a road trip to Lebanon Springs and Pittsfield? Well, I am really stale for the want of a day off; so you set the day and I will be with you—the sooner the better."

"Can you make it day after to-morrow?"

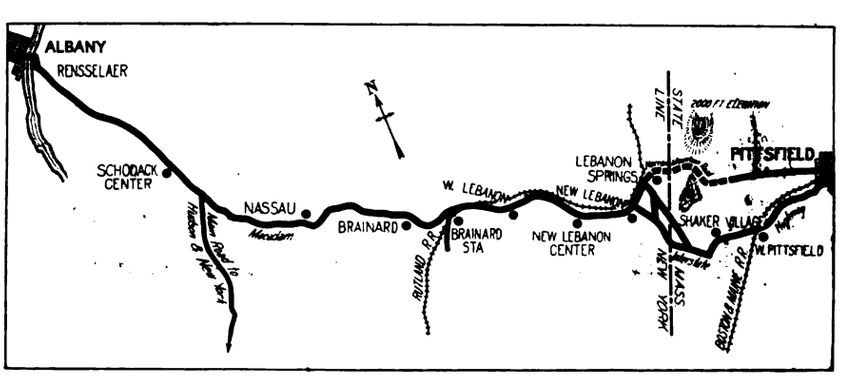
"Yes, day after to-morrow; I'll be on hand."

THROUGH DROWSY VILLAGES.

So it happened that the second Sunday morning in October we started down Capitol Hill on State street, Albany, turning right on South Pearl street, and soon left on South Ferry street to the old bridge that carries all the road traffic over the Hudson river at this point. Toll is charged, and you pay this as the outward and visible sign of your freedom from the city. The passage over the bridge is anything but a pleasure, on account of the heavy business traffic, and the big boats anchored on the river on the right suggest the commercial importance of the upper Hudson.

Turning right at the Rensselaer end of the toll-bridge you can at once speed up, running over the B. & A. R. R. tracks into the country, and toward the pleasant hills whose faint outlines can even now be seen. The old Post Road is followed through the scattered, sleepy town of Schodack Center to an important point just beyond, where travel bound for Hudson, Poughkeepsie and New York branches off to the south. Our route continues on a direct line toward Pittsfield, and at the same time leaves the line of the B. & A. R. R., which first dips down to Kinderhook and then bends up through Chatham to Pittsfield, covering a much longer distance than the road mileage.

It is only a few miles to the hamlet of Nassau, a quaint little village near the border.



Sketch of Main Highway Between Albany, N. Y., and Pittsfield, Mass.

line between New York and New England, and partaking somewhat of the rural characteristics of each. If you stop at a certain old store in this place to make inquiries or to buy something, as we did, you will probably see a sign on the wall, "No swearing or loud talking allowed in this store." Nassau is a local hub of routes, with connections to a lot of small places, of which you probably never heard before. For Pittsfield, go straight through on the main-traveled road; soon signs pointing the way to various Berkshire Hills places begin to appear, and the whole section

A Scout Taking a View From a Side Road Near Lebanon Springs, N. Y.

is covered with a veritable maze of cross-roads.

A NETWORK OF GOOD ROADS.

Excellent macadam extends all the way from Nassau to Brainard, and thence along the Lebanon Valley R. R., now a part of the Rutland R. R. system; in the vicinity of Brainard station, the macadam connection from Troy comes in from the north, and the routes coincide for the balance of the way to Pittsfield. There are four of the Lebanons, West, Center, New and the Springs, all located along the same valley in the mountain range which separates the valley of the Hudson in New York State from that of the Housatonic in Massachusetts; the entire range is heavily wooded, insomuch that the view of the way ahead is often lost, as the road winds its way through a bit of forest.

Signboards become more frequent as you approach the State line; usually they are not made of fancy materials, but are in the main correct, and that is what the traveler principally needs. There are a few deserted homes in this fine country, which would seem impossible were the evidence of one's eyes not the full proof; probably, however, the soil is not as productive as in the more level sections. The Lebanons are noted far and wide for their well-kept condition; many of the hilltops are cut into square or rectangular lots by well-built stone walls or fences.

NEARING THE STATE LINE.

As most of the signs read to Lebanon Springs, the stranger riding into New Lebanon will often think he is at the "Springs"; but they are a short distance to the north, away from the main road between Albany and Pittsfield. You are still in New York State, but the view ahead takes in also a wide stretch of Massachusetts—every road an aisle of color in mid-summer, partaking of the depth and richness which distinguish the Berkshires, even more than the valleys and hillsides of the Empire State.

About half way between New Lebanon and Lebanon Springs, there is a very prominent fork in the road—the left going into the "Springs," and the right to Pittsfield by the State Road through Shaker Village. It will take only a few minutes to go to the Springs, once one of the most fashionable summer resorts of the country; and in case one desires to spend the night in the vicinity, a fairly good hotel will be found where motorcyclists are welcome; the rates are about half what they are in Pittsfield. Going into the Springs take the left-hand road, bearing left into the village to "Columbia Hall."

The drives in this neighborhood are unsurpassed, and include pleasant runs to Queechy Lake, to Williamstown, Lenox or Stockbridge, or over the hills and mountains that encompass the locality in almost every direction. The distances to the most important points are as follows: Queechy Lake, 4 miles; Pittsfield, from 7 to 10 miles, according to the route taken; Lenox, 12 miles; Stockbridge, 17 miles; Canaan, 7 miles; New Lebanon, 2 miles; Hancock, 5 miles; Shaker Village, 2 miles; Summit of the Berkshire mountains, 3 miles; Williamstown, 20 miles; Great Barrington, 21 miles.

Lebanon Springs is not only one of the oldest summer resort in the United States, but at one time it divided the premier honors with Saratoga.

CLIMBING MT. LEBANON.

From the Springs to Pittsfield there is a choice of two routes, one unimproved and quite difficult, over the Tatonic range, and Lebanon mountain in particular, and the other one reached by returning to the forks at New Lebanon and going around by Shaker Village. In choosing the former for the sake of the less well-known view, and possibly more adventures, turn up past Columbia Hall and go directly out over the strong iron bridge spanning one of the deepest narrow glens to be found in this part of New York State. Less than a mile out on this road a granite post shows the boundary line between New York and Massachusetts.

This road over the mountains while much poorer, is three miles shorter than the one around by Shaker Village, but it is not recommended for average touring; we continued on it somewhat because we had started this way and were unable to turn back easily. Stopping a moment at the summit (2,624 feet high), and the clearer for the additional height and looking back, you see the opposite range all distance.

THE ARRIVAL AT PITTSFIELD.

After passing the summit, you descend gradually and enjoyably into the cradle of hills of which Pittsfield is the center. The road becomes better, and signs of civilization are not long in making themselves seen. Little incandescent electric lights extend almost to the foot of Lebanon mountain on the eastern side, enabling the tourist who might make this trip late in the afternoon or in the early evening to do so advantageously. In time the homes of the chief city of the Berkshire Hills grow in number; and before you know it, you are actually drawing up just west of the B. & A. R. R. station and swinging left into the business and hotel district of the city.

"Good enough for one forenoon," remarked my companion as we rode up to one of the hotels. Then I had a half-day's business to attend to, while the other motorcyclist decided to spend the afternoon in a side trip from Pittsfield to Lenox, Stockbridge and Great Barrington. That night we met in Pittsfield, and the following morning we started on the return trip to Albany. This time we decided to forego the mountain-climbing experience of the day before in order to take advantage of the magnificent State road built over the Lebanon or West Pittsfield mountain.

ON THE RETURN JOURNEY.

The mountain section of this road is about six miles long, with a grade for two miles of about 5 per cent., the balance probably being from 6 to 8 per cent., constructed after the usual practice in Massachusetts State roads. It is as fine an example of mountain road building and engineering as one will find, at least in the eastern part of the United States. Especially is this true of the western slope, where it is constructed on the side of the mountain.

The ten miles back to New Lebanon were made in less than half the time the seven miles over the mountain took the day before. Through this section occasional picturesque old stone houses suggest some of the suburbs

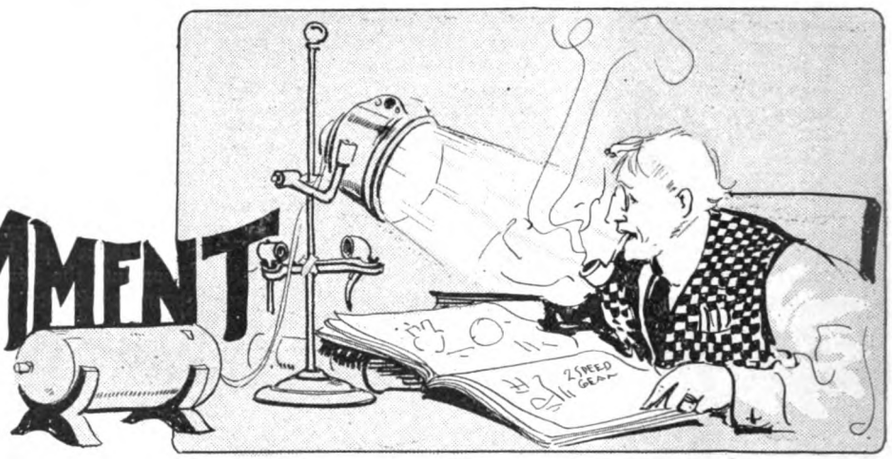
KINKS & KOMMENT

by "COURIER"



SINCE writing the latest batch of Kinks, I have received a letter asking for the address of a maker of kerosene carbureters from a rider who seems to have had trouble by getting something like the fuel I mentioned. Well, the answer that I have to give is that there isn't any make of kerosene carbureter that can be put on a motorcycle motor that will give satisfactory results, although for stationary engine work there are several good mixing devices for such fuel. But stationary engines are designed to work at approximately one speed all the time, and the work of load cannot be put on them till they have been well "warmed up." As soon as the speed varies, the mixture becomes too rich, and as kerosene contains more carbon than gasoline, the sooty deposit soon becomes a regular "fur" inside the cylinder and on top of the piston. When the lubricating oil is burned also, the deposit may have to be chipped away, which is more the work of a geologist than a motorcyclist.

WHEN KEROSENE CAN BE USED.

IN a carbureter with needle-valve jet adjustment, kerosene can occasionally be used after warming up the motor on gasoline, but the carbon will collect in a surprisingly short time and the motor will run hot also. I have tried this system myself several times for experiment, and once because I had to, when a smart Aleck in a country store played a joke on me by filling up the tank with kerosene. I traveled several miles before I got "hep" to the fuel that was bronzing my exhaust pipe and making me ride bow-legged to keep my knees away from the heat of the motor, but I finally struck an air valve and jet adjustment that caused me to touch only the high spots on the road. I used a lot of oil to assist cooling, but when I took the cylinder off I was reminded of my visit to a gas works, and used a sharp scraper to get rid of the flinty carbon inside the chamber. What enabled me to get home was the hood on the primary air intake through which I could draw sizzlingly hot air for the mixture, and which I had never used in warm weather before. I have tried the experiment since, but was never able to get the proper adjustment on the jet again.

On another carbureter, with a hot air jacket around the mixing chamber, I obtained middling results, but the jet opening was too small and could not be adjusted. As far as the compression and dimensions of the average motor is concerned, it is suitable for use with kerosene, but only under the conditions mentioned above. I hardly think that many will cast aside the naphtha-gasoline now thrust into their tanks for the cheaper but dirtier coal-oil of commerce. But there is big money in a kerosene carbureter that will thoroughly vaporize all parts of the fuel, and pretty soon some inventor will give us one, I hope.

THE FUEL SCARE.

LOOKING over the various motor trade publications I note the effect of D. R. Hobart's article on "Alternative Fuels," recently published in this journal, as an eye-opener for those who were resting serenely in the belief that the petroleum resources of this country of ours were inexhaustible. When motors did not run well, the carbureters were blamed, as usual, but when it was found that only Texas *gasoline* was obtainable and that naphthas were generally sold instead, the other journals started a scare and drove the thing into the ground. Now it turns out that three-fourths of the distillates of petroleum (gasoline, naphtha and kerosene) are sent abroad, where the prices are higher than at home. Well, cheer up, brothers, when the price of gasoline is equal to that now paid in England, we shall have most of that three-fourths remain here so as to save shipping charges for the oil magnates, and barring this trifling inconvenience to the pocketbook the fuel question will be solved for several years to come. Otherwise I am afraid that we will have to develop some other fuel, or go back to the push-bike. Think of hearing an announcement like this at a track: "Owing to there being only three gallons of fuel obtainable, the ten-mile pro event will be changed to a two-mile handicap and only three starters will be allowed to enter."

THE TRIAL THAT FIZZLED.

ALAS, for attempts at scientific competition! A bunch of riders belonging to a club which shall be nameless, decided on a carbureter-adjusting contest to settle a bet, and all using the same model of carbureter, had the adjustments changed by one of the members. At the start, all but one got away, but not one of the remaining five got a mixture good enough to do more than crawl, and the winner had to pedal the last two hundred yards to cross the line and fell exhausted from his efforts. The last man made the best time for the two miles, but the speed could easily have been beaten on a low-geared bicycle. Bets were declared off and the bunch straggled home, and if any person wants to start something, he has merely to say "carbureter adjustment" and take the consequences. They have since studied and applied the maker's directions, but no more trials of that nature for them. The funny part of it was that a half turn of the jet needle-valve either way would have fixed up most of them for a first-class mixture and a good fast pace.

Speaking of mixtures, I suppose it is the lot of most riders to have been astride a stubborn motor, but I think that fixing up a friend's bus with mixture away off and valves out of time has been my fate more times than is really necessary. I was at a dirt track last season, where an ancient but normally speedy single was hauled out to compete and it was up to me to time and adjust it. After retiming the valves and magneto, a fine mixture was obtained by turning a jet valve at the bottom of the carbureter, but unfortunately, as the rider finished the circuit of the track, the cover plate and gears in the valve train fell out, through all the screws not being put in, and the whole job had to be done again. This time I got the valves and ignition O. K., but for one good half-hour no proper mixture could be obtained. The air came through holes covered by little strips of brass which acted as reeds and rose as the suction increased. Finally I had to take off one of the strips, and the motor performed well at over 35 miles per hour, but bucked terribly as the speed was reduced and finally sheared off one of the supporting bolts and fell outward. It then had to be withdrawn, fortunately for all hands. But two weeks ago I met a rider with a similar bus stranded beside the road and in despair, and remembered the flapping little strips and the trouble incident to fixing up that other carbureter. Being soft-hearted, I went through the dismounting performance once again and fixed the strips with a pair of pliers, assembled the contraption and bade the rider God-speed as he went off. A mile or two further on I met him again, and he "jumped" me for having reduced the speed of his bus in my adjustment. I volunteered to tow him to the nearest garage, but was further abused, and so I left him. When a rider meets another of this calibre, the next unfortunate encountered usually is passed by in silence, as no one likes to be hammered after doing a favor.

A WORD FOR THE FORECAR.

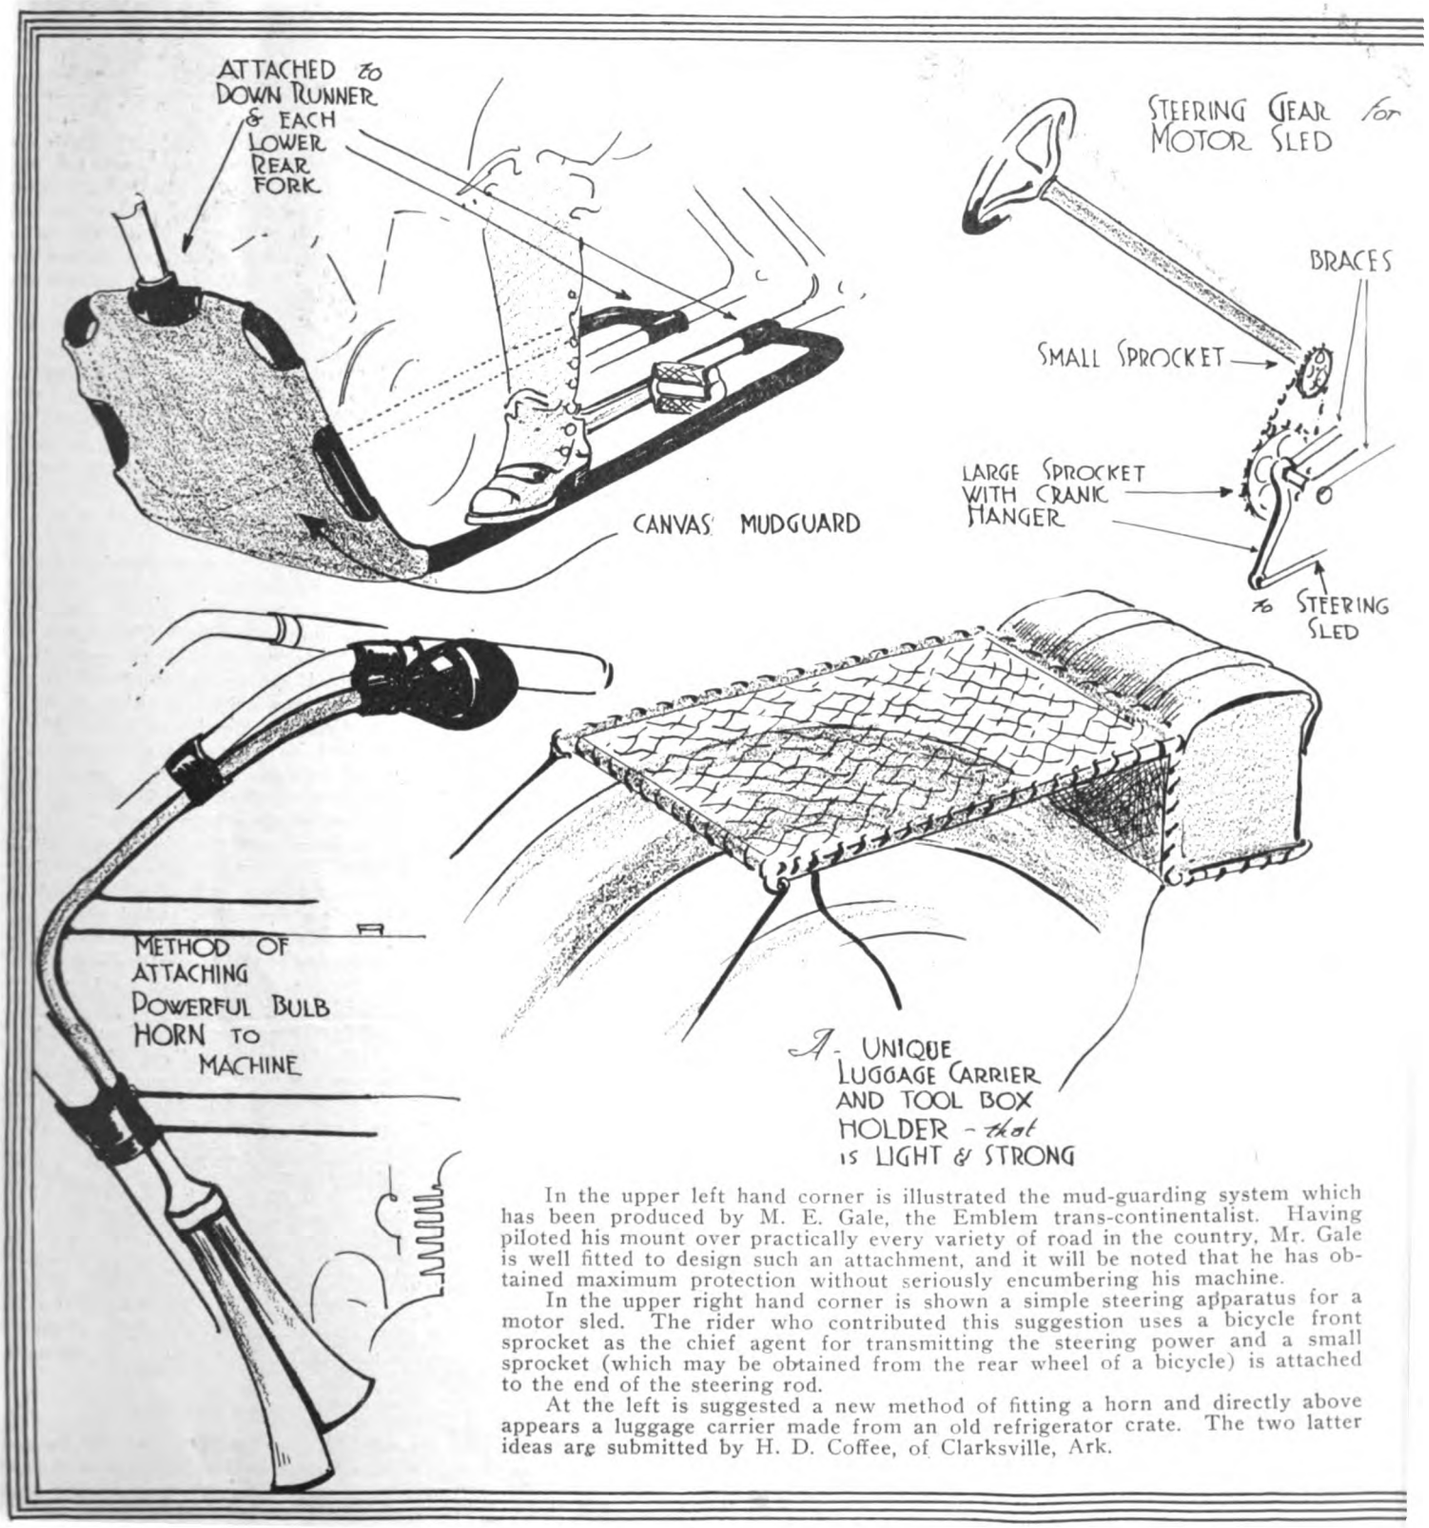
A LETTER in the "Told Among Friends" department in the last issue is interesting in bringing up the tricar or forecar again. I drove one of the old 1906 tricars for several

Digitized by Google

thousand miles during the "boom" and feel competent to speak about this form of passenger-carrying bus. The faults that killed the tricar were poor ignition, poor lubrication, poor springing and high prices. The word tricar is a relative term only, except in referring to a three-wheeled motor vehicle. In 1906 there were 3-horse power single, air-cooled tricars with no variable gears, and there were 9- and 12-horse power twins with three speeds forward and a reverse, and car control. The big engines were water-cooled, too. But the prices were monstrous, $700 for a 9-horse model for example. It is true they were speedy, but the driver had all kinds of trouble with batteries and coils, and the oil did not always find its way to the bearings. Abroad there are quite a number of these big tricars transformed into cycle-cars, with improved ignition and other features running finely. But the average tricar for the present day would be a 7-8 twin motorcycle with detachable forecar.

TRICAR CHARACTERISTICS.

THE tricar, fitted as just mentioned, has several peculiar characteristics, among which may be mentioned the necessity of the driver's howling to the passenger to make himself understood. This is inseparable to any tandem-seated arrangement where two occupants are any distance apart. Ag unless the track of the steering wheel is l by some inches than the standard 4 feet inches gauge of vehicles, the wheels will in the ruts and may be difficult to get out heavy going. The driving wheel is alwa however, on well packed road and th should be no lack of traction. The "pu of the tricar is directly forward instead from one side, as when a sidecar is fitt As to cooling, a fan will do all that is nec sary, and this fan can be driven from the gine pulley. Brakes can be put on all th wheels, and the whole vehicle can be spru



In the upper left hand corner is illustrated the mud-guarding system which has been produced by M. E. Gale, the Emblem trans-continentalist. Having piloted his mount over practically every variety of road in the country, Mr. Gale is well fitted to design such an attachment, and it will be noted that he has obtained maximum protection without seriously encumbering his machine.

In the upper right hand corner is shown a simple steering apparatus for a motor sled. The rider who contributed this suggestion uses a bicycle front sprocket as the chief agent for transmitting the steering power and a small sprocket (which may be obtained from the rear wheel of a bicycle) is attached to the end of the steering rod.

At the left is suggested a new method of fitting a horn and directly above appears a luggage carrier made from an old refrigerator crate. The two latter ideas are submitted by H. D. Coffee, of Clarksville, Ark.

A 1,000-MILE trip through Wyoming is not often heard of, probably for the reason that very few are made," writes R. B. Wheeler, who recently completed such a trip by motorcycle with his wife as a tandem passenger. "This, however, is not due to any lack of good roads or fine scenery," he continues, "for the natural beauties of Wyoming compare favorably with the best in the country." Mr. Wheeler, who made his trip on an Eagle, records his impressions of Wyoming as follows:

"The wonderful development of the country between Cheyenne and Rawlins, Wyoming, and from these points east and west, attracts the attention of the motorcyclist as he traverses the continental highway that is being constructed by the enterprising citizens living between the above-mentioned cities. For two weeks I traveled along this route and also visited other interesting towns, valleys and mountain gorges north and south of the main route. It may seem strange, but I found the inhabitants in the interior as deeply interested in good roads and improvements as those living along the National Highway. The latter extends along the U. P. R. R. right of way for a distance of more than 200 miles.

IMPRESSIVE SCENERY.

"Fine scenery is almost continuous from Cheyenne to Rawlins, and even beyond these points. Along this route from the main highway I viewed the most grotesque and magnificent valleys, springs and dales to be found anywhere in America. Several points which I passed within a radius of fifty miles of Rock River resemble the most beautiful scenery of Switzerland.

"This road is destined to be a national highway. Photographs of the scenery and the perfect construction of the roads, as well as the many wood and steel bridges and culverts, are being taken daily by touring motorists. These will find their way into the journals and ultimately reach the hands of the National Highway Bureau. During and after the Panama Exposition in San Francisco this highway is bound to become a prominent link in the transcontinental route.

"The citizens of the towns along this newly-built road are wide awake, and garages have been erected at intervals of from twenty-five to thirty miles. All this is being done with a view to furnishing supplies and accommodations to the tourist and thus making Wyoming an attractive touring district. One of the natural resorts of the States, and the most important, is the celebrated Yellowstone National Park. The section referred to in this article would necessarily be traversed in a trip to Yellowstone Park were the rider coming from the east. For a stretch of 400 miles garages are so plentiful that the motorcyclist should experience no inconvenience.

"Both motorcyclists and automobilists have learned by experience that the only drawback in high altitudes—aside from occasional bad roads—is carbureter trouble. This may be easily remedied by simply cutting down the automatic air and increasing the flow of gasoline, which can be done almost instantaneously. It should be said for this entire section that the hotels along the route are of the best type and that the rider will receive first class accommodations.

AIDS TO THE CAUSE.

"At Rock River I met President John F. Pierce, of the Good Roads Club; S. J. Morris, who has brought to bear much influence for the construction of the road; L. C. John, nominee for Congressman, and many others who are active in the good roads movement. President Pierce is backed by more than 200 members of the Good Roads Club, who have constructed sixty miles of road from Laramie to the Carbon County line.

At Medicine Bow I became acquainted with August Grimm, who is responsible for the building of the sixty-mile road from the Albany County line to Rawlins. These two energetic and far-seeing men—Pierce and Grimm—have inspired others to build additional roads. Mr. Grimm is the proprietor of the far-famed Virginian Hotel, located at Medicine Bow, and Mr. Pierce is general superintendent of the Diamond Cattle Company.

In traveling through this section the motorcyclist is brought close to nature. The Laramie, Rock River and Medicine Bow valleys are veritable Nile basins. Here are raised abundant crops of oats, wheat, barley and alfalfa, which deck the valleys and plains. These not only assure prosperity to the country, but add to the beauty of the general layout. Here, too, the rider sees thousands of cattle on the hillsides and hundreds of sheep grazing on the plains and in the valleys. The best kind of fishing is afforded in the valleys, where many small streams are found swarming with trout and other finny denizens. Sage chicken and other kinds of game are also plentiful, while antelope and elk are often seen and have become almost domesticated through their association with the herds of sheep and cattle.

"Towns in this section are not behind the times. I noticed with surprise the up-to-date attitude of people in even the smaller places, and in some of the larger cities there is all the activity one could desire. The district is one of great fascination for the tourist, and motorcyclists should not overlook it."

SALT LAKE M. C. PROGRAM

TWO big events are scheduled by the Salt Lake City (Utah) M. C. for the coming season. On Decoration Day the club will hold a road race, and a hill climb is also scheduled.

BUSY HARTFORD SHOW

MOTORCYCLES AND THEIR ACCESSORIES WERE EXHIBITED TO GOOD EFFECT IN CONJUNCTION WITH MOTOR CARS AT ANNUAL DISPLAY IN CONNECTICUT CITY—INDIAN, THOR, FLYING MERKEL, POPE AND EXCELSIOR MODELS MADE UP MOTORCYCLE SECTION, BUT SIDECARS WERE NOT SHOWN FOR LACK OF ROOM—STRIKING DECORATIVE THEME A FEATURE OF SUCCESSFUL EXHIBITION, WHICH PROVED A REAL BOOMER FOR MOTORCYCLES IN NEW ENGLAND.

MOTORCYCLISTS of Hartford, Conn., present and prospective, had their informal introduction to several of the 1913 makes at the Sixth Annual Automobile Show, held in the new State Armory last week. Five brands were exhibited as follows: Indian, Thor, Merkel, Pope and Excelsior.

Arranged along both sides of the immense drill shed, the motorcycle booths were so prominent that they could not well escape the eye of the most casual visitor. Accessory people also were "wall flowers," but very active ones, while cars occupied the center of the floor. No sidecars were shown, undoubtedly for lack of room, as none of the motorcycle spaces were large enough to accommodate a car attached to a machine.

At the Indian booth three machines were shown—"4" regular, "7" regular and "7" T. T. two-speed. E. B. Connell, who has just emigrated from Pittsburg to preside over the local tepee for George Maslen, was in command, assisted by Lewis Beckwith and H. E. Merriman. Connell had a list of 27 names booked for demonstrations on Monday night.

A few spaces down the row was the camp of Finch and Hayes, who handle the Thor and Merkel. They showed "4" and "7" Thors, single-speed, chain-driven, and a Merkel "7," also of the single speed type. A display board of Merkel parts also was an attraction here. Willis Hayes was boss, and his aids were C. H. Van Doren (a Merkel traveler), Merrill Mann and W. C. Holcomb.

Next door to Finch and Hayes was the Pope, which of course was right at home, as the general offices are located in Hartford. The Pope "Big 4" belt-drive, 3 h. belt single, and "7" chain twin, were on display. Genial F. W. Starr was chief preacher of Pope doctrine, and the supporting ministry included C. H. Clark, F. L. Merrill and G. A. Carey.

Across the hall, on the other aisle, was the Excelsior stand. The Eastern Cycle Company are local agents and showed "7" chain and belt twins, and a "4" belt single. A single cylinder engine partially disassembled was also shown. The show staff here consisted of D. Marholin, F. A. Clifford and Morris Madden.

The total number of motorcycles shown was 12, but it would probably have been twice as large if all the local dealers had come in and the exhibitors had been able to obtain more space. All the dealers exhibiting reported a healthy interest in machines and good prospects.

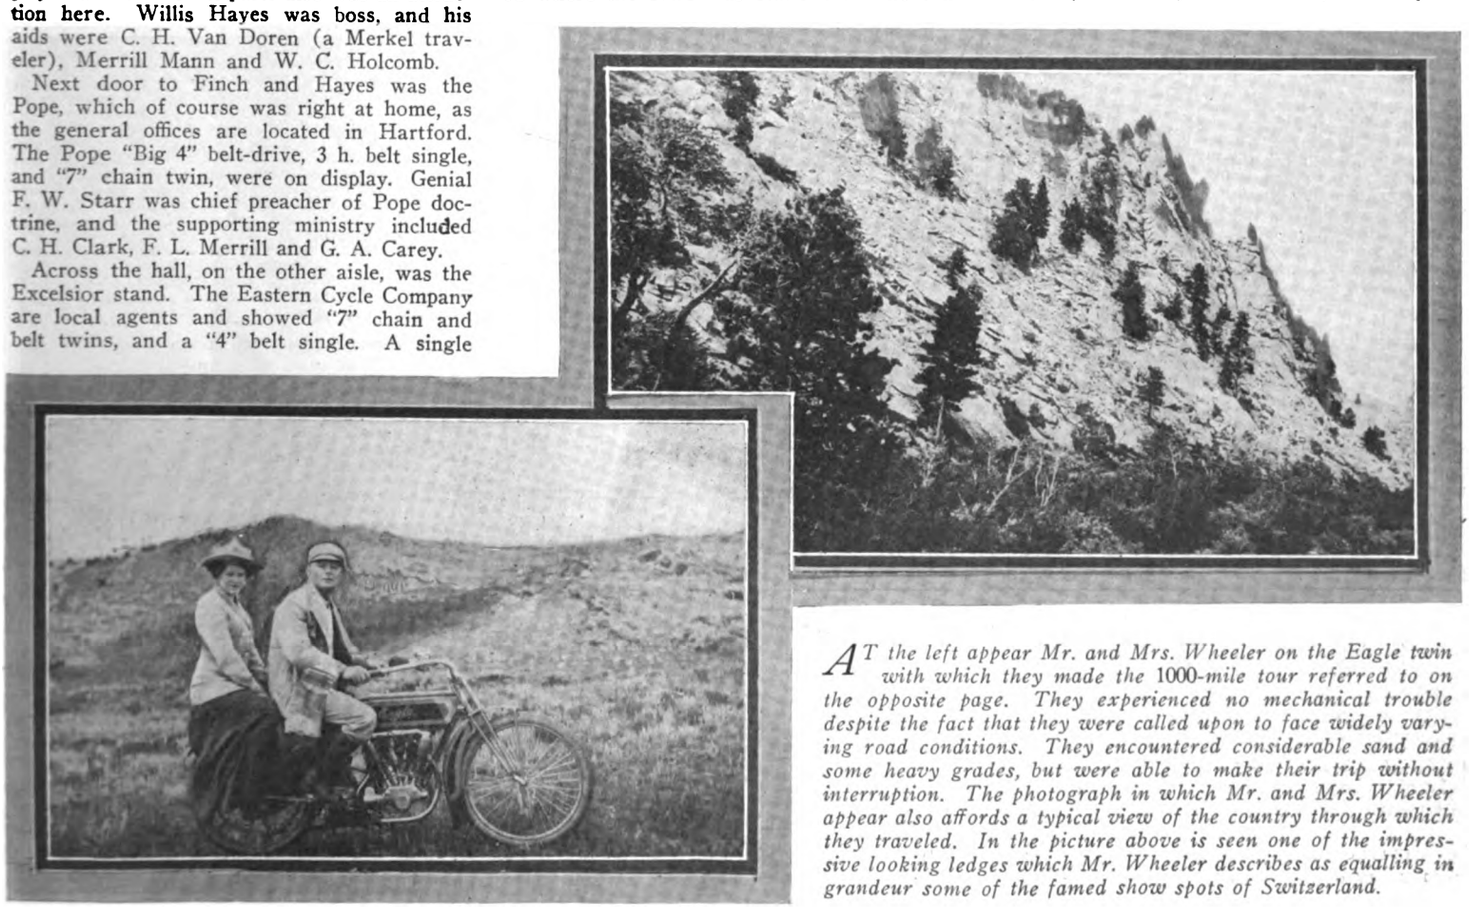
A significant feature was the extensive lines of motorcycle accessories shown by the automobile supply houses, indicating that they are reaching this profitable business. The accessory exhibitors showing motorcycle sundries were: R. D. & C. O. Britton, Universal Auto Company, Post & Lester Company, Charles E. Miller, Perry Motor Supply Company, E. J. Todd Rubber Company, XXX Auto Accessory Company and Windsor Locks Auto Company. The latter has the Pope agency, but showed no machines.

From a decorative standpoint, the show was the best ever held in Hartford. The scenic effects were striking, the general scheme being an Indian jungle layout. At the entrance the visitor was confronted by a vicious-looking tiger, crouched on a pedestal high above the floor, and seemingly ready to spring. In the center of the floor a pergola was erected where the band was stationed. The conventional automobile show "blue bunting," studdded with gilt stars, concealed the roof girders, while four immense trellis work arches of electric bulbs, extending from either wall to the roof, constituted the central illumination. These were supplemented by hanging arc lights. The walls were dressed in white, red and orange bunting, and canvas panels of jungle scenes carried out the spirit of the decorative theme. The piece de resistance of the whole color scheme was the striking canvas which covered the rear end of the hall. This specially painted curtain depicted an Indian prince's palace and gardens, and was a handsome specimen of the artist's handicraft.

SUNVILLE STAFF.

AT a recent meeting of the Sunville M. C., of Pueblo, Col., officers were elected as follows: F. C. Chinn, president; R. D. Atterbery, vice-president; George A. Turner, secretary; George J. Von Gundy, treasurer; A. Parson, captain; Ebert Johnson, first lieutenant, and R. L. Fleming, second lieutenant. L. H. Case and F. J. Herman were named directors.

AT the first meeting of the newly organized Plaza Motorcycle Club, of New York City, R. King was elected president; G. Ochs, treasurer, and P. Bilse, secretary.



AT the left appear Mr. and Mrs. Wheeler on the Eagle twin with which they made the 1000-mile tour referred to on the opposite page. They experienced no mechanical trouble despite the fact that they were called upon to face widely varying road conditions. They encountered considerable sand and some heavy grades, but were able to make their trip without interruption. The photograph in which Mr. and Mrs. Wheeler appear also affords a typical view of the country through which they traveled. In the picture above is seen one of the impressive looking ledges which Mr. Wheeler describes as equalling in grandeur some of the famed show spots of Switzerland.

THE ANNUAL SHOWS.

EDITOR.—A question has been raised of late relative to the advisability of holding one national motorcycle show annually at Chicago, and in this connection we believe that if any shows are to be held there should be one in New York. We do not think much of motorcycle shows being overshadowed by the automobile exhibits as they have been in the past, and as they were to some extent in the Grand Central Palace in New York this year. The motorcycle exhibit in connection with the automobile show affords a certain amount of good publicity for the single-tracker, but the motorcycle should have a fair chance as to position, etc., in order to enjoy such benefits.

The recent New York show was, to the writer's mind, unsatisfactory in this respect. As far as the writer can find out half the people who wanted to see the motorcycle exhibit went to Madison Square Garden, where it was natural to suppose the motorcycles would be found. In the exhibition of motorcycles the dealer need not be considered as much as the public; the dealer will go almost anywhere, but the public must be catered to. If we cannot obtain the desired results by hitching to the automobile show the writer believes we should cut loose from it, as we are usually overshadowed.

In regard to holding the shows earlier, we believe it would be a good idea to have them in December.

New York City. F. A. BAKER.

THE CLUTCH LOCATION.

EDITOR.—Under the above head I noticed in the issue of February 6 a most interesting letter from George M. Johnson. As a rider of some experience I think that he is rather unfair to clutch control positions other than that of the lever on the frame or in the tank position as he calls it. I have ridden machines fitted with all of these forms of control and personally prefer the handlebar location to either of the others. There is a good deal to be said on both sides about all of these locations, and some things for and against them Mr. Johnson may have probably omitted through forgetfulness.

Regarding the foot-pedal, I feel that Mr. Johnson has not ridden machines with the clutch so operated to any extent, and certainly not "single speeders," otherwise he would hardly have dismissed this location by saying that it is seen at its best only when the machicne is equipped with a two-speed. I fail to see that because a means of control is so rarely fitted, it should be condemned off-hand, and should be given the scant consideration that he gives it. Fitted with a heel-and-toe pedal, a rider can with very little practice do all that another rider with the hand lever can, and at the same time keep his hands on the grips, which latter he cannot do with the hand lever. Automobile clutches are operated by pedal and the method seems to be very satisfactory, whereas the hand lever, such as was on the old Winton and Packard cars, has disappeared entirely. A disadvantage in the pedal control is the difficulty in working the pedal when making a running mount.

The hand lever is undoubtedly positive in action, but the leverage may cause the rider to effect too rapid an engagement of the clutch in his anxity to get away quickly, for example. This, coupled with the reprehensible practice of slipping the clutch to get reduced speeds, is one of the chief causes of clutch trouble and gives joy to a lot of repairmen. The usual position of the hand lever on the left side of the tank makes it awkward for the rider to make a turn to the left and operate his clutch properly, as his left hand and arm is pinched between the handlebar and the tank as he turns the bars to the left. With a short lever, this is eliminated, as the rider reaches around or under the bars to get hold of the clutch lever and his hand is not caught.

I thoroughly agree with Mr. Johnson as to the twisting-grip control of the clutch, although I cannot say that I have ridden a machine so fitted for any distance. His remarks on the finger lever under the grip do not apply to a properly fitted wire mechanism, with a spring powerful enough to disengage the clutch when the lever is released and with a ratchet on the lever for retaining the latter in any desired position if the rider desires to occasionally slip his clutch for extended periods. Regarding breaking wire, I have never been troubled with this, as I took care to have good tough stock within the sheath of the control and not bargain-counter piano-treble cable. Most wire controls are fitted with some means of taking up any stretch, so that the writer's statement, I feel, is slightly overdone. There being no wires on a hand lever control there are naturally no such troubles as he has experienced with the finger lever.

The right-hand position of the throttle with the clutch operated by the left hand seems to me to be absolutely the proper one, and I agree with Mr. Johnson that any other arrangement is very awkward. There are quite a number of makes on motorcycle which fit the throttle on the right grip regularly, and almost any machine can have the controls changed about to put the spark on the left and the throttle on the right. I might add, in conclusion, that I am not booming any particular make of motorcycle.

STANLEY ROSEBERY.

New York, February 13.

MUFFLER TESTS

EDITOR.—I am a subscriber to an English motorcycle journal and of late I have noticed many references to muffler tests, some of them under direction of the British Auto-Cycle Union. What has brought about all this activity relative to silencers in England? Are their mufflers less efficient than ours, or do English riders and officials demand a closer approach to silence than we do? If it is possible to improve the standard muffler materially, why are we Americans not making efforts to hit upon new designs that will reuuce the noise of our exhaust without hampering our motor? I am a strong advocate of the silent motorcycle, and until I began to read the English articles recently I believed that my machine was as quiet as could reasonably be expected. Now I am a bit at sea. Are the Britishers more particular than we are about noise, or are English designers behind us in muffler constructing and simply trying to catch up?

BUFFALONIAN.

[We are informed that there is no appreciable difference between the silencing effects of English and American mufflers. In mechanical operation the best British machines are practically noiseless, but we are led to believe that the average rider in England pays less attention to the noise of his exhaust than the motorcyclist on this side. Some of the new designs of English silencers are five times as complicated as the most intricate American muffler, but whether they will justify the ingenuity worked into them by their inventors is another question. A number of new British silencer designs are illustrated on another page.—Ed.]

IN the accompanying photograph appear a number of members of the De Luxe squad of Indianapolis. John Merz is shown at the extreme left. Mr. Merz is agent for the De Luxe in Indianapolis and he heads this party on all its runs.

THE "BOB" SCOTT DISPUTE

EDITOR.—Having been asked by the directors to make a clear and concise statement of the Robert Scott trouble with the Toronto Club, I shall endeavor, in the following, to place the facts as clearly as possible along the lines taken up by the directors and as viewed by them.

In view of the fact that there has been so much discussion in the magazines in reference to this situation and also as these troubles ultimately led to the suspension of the Toronto Club, the views of the Board of Directors will therefore be interesting in fairness to all parties.

We all know Scott—as a rider—to be one of the cleanest and fairest on Canadian tracks.

At the Dunlop race meet in Toronto Scott's engine was protested by a member of the Toronto Club. A prominent member of the Toronto Club was referee that day and the president of the same club was chairman of the Competition Committee at the time. The protest was accepted. The engine was ordered down and the official measurers of the Toronto Club were the measurers appointed by the chairman of the Competition Committee to inspect the engine. After the inspection they reported in full to the chairman. Their report, however, was of such a nature that the chairman, who was also the president of that club, could not find enough reason to suspend young Scott, as he assured the boy that if he were to put a piston of the solid type in his machine that he would be all right again.

The Toronto Club wanted Scott to ride under protest at their meet, which they held the Saturday following the Dunlop meet. This he refused to do, so that he then received assurances that his riding would be satisfactory, with the one change being made in his engine.

Scott's opinion of his reinstatement was expressed in his statement made to the writer, that they were "afraid that he would not be riding in their faces if the suspension stood and that they needed him to complete their program."

The writer personally recommended to Mr. Johnston that if anything at all had been found that showed Scott to be tampering with his engine in any way that he be suspended immediately. This Mr. Johnston practically refused to do, stating that he had been hard enough on the boy in withholding his trophies won at the Dunlop meet.

As to the second, or Toronto Club meet, Scott went out and lowered all Canadian records and again cleaned up the slate with the engine changed to meet the conditions laid down by the Competition Committee and the officials of the Toronto Club.

Scott was advised that he had won the cups; was allowed to take his engine from the track; the donators of the cups were advised that he was the winner and, in fact, one of the trophies was turned over to Scott, being later secured again by the Toronto Club by their visiting the Toronto Motorcycle store, where the cup was on exhibition, and taking it away for the purpose, as they stated, of having it engraved.

Then Scott learned that they were going to keep the cups from him. Bear in mind that this action was taken after Scott's machine had been in the hands of all the officials; after it had been taken apart, examined, put together again and passed as meeting with requirements, excepting that an undrilled piston must replace the one drilled. This all happened in the early fall. In December, after Scott had fully made up his mind that he was not going to get these trophies from the Toronto Club, he appealed to the C. M. A. for its assistance, as the races had been run under its sanction and guarantee. He advised the C. M. A. that the Toronto Club had refused to turn over his prizes.

It was then learned upon investigation that the Toronto Club had assumed its own authority for withholding of the prizes, and that there had been absolutely no action taken by the referee or the Competition Committee.

As the Board of Directors deem it necessary that riders risking their lives, burning up gasoline and oil, wearing out tires and paying repair bills and traveling expenses must be given just as much protection as the club or promoters who simply pocket the profits of the race meet, the board then ruled that Scott's trophies be handed over without delay, giving as the reason that if every club were allowed the privilege of withholding prizes at its pleasure the riding situation would soon develop into a farce.

Toronto Club delegates then realizing that their club had taken too much upon itself in this instance, entered a protest against Scott's engine. Their only evidence, however, was verbal and of a nature entirely impossible to take action upon. It was also pointed out that Section 1, Article 17, of the racing rules, states distinctly that any protest against a machine must be made within 30 minutes after the conclusion of the last race. The protest of the delegates was then thrown out.

Another protest was then entered by the Toronto Club for Scott's participating against riders not affiliated, at Montreal. As the responsibility for this trouble was traced to the referee and Competition Committee this was also defeated.

Another protest against Scott was then entered by the Toronto Club on general grounds and was defeated.

On January 18 last, at the meeting of the directors, a complaint was again received from Scott that the Toronto Club had not complied with the directors' instructions.

The directors then passed a resolution giving the Toronto Club until the evening of Saturday, January 25, to return the cups. The Toronto Club then wrote Scott offering to return the cups, with the proviso that as a bond he was to give $600 cash. As these cups are worth considerably less than $100 and this being the first time offered there was no sentimental value other than that they were in future to stand for the Ontario Championships. The cash bond was for no other purpose than to defeat the rulings of the C. M. A. and to keep Scott from obtaining the prizes. In view of the fact that Scott is a lad of 18 years, working for some $15 a week and supporting himself, he could not meet the requirements and again drew the matter to the writer's attention on December 25.

Upon referring the question to Mr. Cunningham, of London, the new Competition Committee chairman, he ruled under Section 6, of Article 14 of the racing rules, that a $200 property bond would be sufficient.

The writer then got Mr. Johnston, president of the Toronto Club, on the telephone and endeavored in every way possible to get him to make arrangements to clean up the trouble and save the necessity of carrying the matter as far as was eventually necessary.

It was even offered to hold the question over for another twenty-four hours, but he advised that this would be useless. He stated that he was now through and that it was up to the C. M. A.

A telephone vote was then taken of the directors and outside of Mr. Johnston they were unanimous for suspension.

Mr. Johnston called the writer on the telephone on the following Monday asking that the suspension be withdrawn. The impossibility of this was explained to him, but an offer was made that if the Toronto Club would clean up its end of the difficulty the writer would immediately call a special meeting of the Board of Directors to look after the C. M. A. end and see if the suspension could not be raised. This Mr. Johnston refused to do.

Scott, of course, has not received his trophies, but the riders have received assurances that the C. M. A. will stand with them against unfair conditions.

K. R. SPENCER,
Hamilton, Ont. President C. M. A.

NEW WINDSHIELD.

EDITOR.—Now that many of the boys are out on the road facing wintry blasts, not to mention snow and rain, I send you this photograph of my new windshield in position on my two-wheeler. The shield

itself is of brown khaki cloth with a celluloid window 16 by 10 inches. It is 28 inches high and 20 inches wide at the top, tapering down to fit the bars. The frame is of ⅜-inch steel. I find that riding against the wind is very pleasant with it up and seems to cause practically no difference in the running of the machine. I have obtained a patent on it, more as a precautionary measure than anything else.

Trenton, N. J. JAMES MANNING.

FROM A SHOW VISITOR.

EDITOR.—You may be surprised to learn that I am a subscriber to MOTORCYCLE ILLUSTRATED despite the fact that I neither own a motorcycle nor ride one that belongs to somebody else. What's more, I am a full-fledged enthusiast, and I must say that my visit to the Chicago show was a most enjoyable experience. I was forced to marvel at the wonderful array of machines, so compact in appearance and still embodying such possibilities for speed.

I was interested especially in the transmission systems and drew the conclusion that our riders are not making the most of the belt drive. However, I expect to see the belt come into its own. I was pleased to find one prominent firm of belt makers giving a demonstration of the English idea as applied to the combination drive—chain and belt, with plenty of bearing for the belt on both engine pulley and belt rim. I take it for granted that the use of this system would permit of entirely enclosing the chain if desired.

I was much interested in the big twins, and believe the designers have turned out some fine pieces of work. Spring frames also attracted me, but I fear that we may go too far in this direction. Present designs seem to meet all requirements, but how far can we go toward providing a rider with a feather bed without affecting the stability of our mounts? I also gave considerable time to studying the individual motors, and were I a mechanic I would ask no better sport than hooking one of them into a frame and experimenting with it. I spent some time beside Humiston's Excelsior, which looked every inch a whirlwind, but I searched in vain for Humiston. The show was worth the trip and the expense.

Warren, Pa. W. M. ROBERTSON.

UTICA RESOLUTIONS.

EDITOR.—As members of a special committee named by the Utica (N. Y.) Motorcycle Club to draw up resolutions on the death of Charles H. Tessey, first secretary and treasurer of the organization, who died recently as the result of injuries sustained two years ago, we submit the following, with the request that you give it space in your columns. As Mr. Tessey's injuries prevented him from taking an active part in the work of the club he was unanimously elected an honorary member. The resolutions referred to are as follows:

"We, the members of the Utica Motorcycle Club, feel deeply the death of Charles H. Tessey, an honorary member of this organization. As an expression of our sense of bereavement we adopt the following resolutions:

"In the death of Charles H. Tessey we have lost one of our most ardent members. Always deeply interested in motorcycling, it was natural that he should have been one of the founders of our club and its first secretary and treasurer, where his ever-present enthusiasm and activity did much to promote its early interests.

"We recall pleasantly his cheerful manner and kindly disposition which remained with him through two years of illness and would have daunted a less brave spirit. We feel his loss keenly.

"As a further mark of our respect it is ordered that a copy of these minutes be spread upon the records of the club, published in the motorcycling journals, and sent to his bereaved family, to whom we extend our deepest sympathy in their affliction.

"HOMER G. BULKLEY,
"DAYTON ROTH,
"Committee."

"THE POWER PROBLEM"

EDITOR.—In the February 6 issue, on page 93, I read with interest a letter from Warren McGill, who inquired whether the author of the "Novice Rider" had ever bestrode a husky twin, etc. Well, the author of that article and I have ridden quite a number of miles together, on our singles, and both have bewailed the fact that while 4 to 4½ horsepower is ample for our purposes, we have not as yet been able to get *twins* of or near that power, and must perforce have to do with singles. I had my eye on a little, German-made 3 horsepower twin some time ago, but was unable to get one except at a prohibitive figure. Weighing only 139 pounds in riding kit and having had some little acquaintance with speed on four wheels and covered western Europe pretty thoroughly four years ago, I am sure that 3 or 3½ horsepower, with two cylinders, will take me anywhere I wish to go, leaving the big twin for those that desire it. I have never had any desire to pay for any fuel or tire mileage that I did not use, and so incline to the small single and twin. I would like to ask Mr. McGill if he has ever ridden a 3 horse twin fitted with a two-speed gear.

FROM FINDLAY to the FALLS

BY CLARENCE HELMS

DOUBTLESS you will recall the doing of the coy young maiden who said to her lover, "what would you rather have than a kiss," and his reply, "why, two kisses, of course." In a few words this is about the way my partner and I felt. After having made the trip, of which I am about to write, had any one asked us what we would rather "have" than a trip to Niagara Falls, both of us would have promptly replied—"two trips."

At the outset I want to offer a bit of advice relative to a plan which rendered the choice of our route a very simple matter indeed. In contemplation of our trip I went into a short study of automobile guides. After deciding upon the towns we wished to strike I merely made a clipping of the automobile route as given in the guide and pasted the same in a small note book which was easily carried in my inside coat pocket. This afforded ever-ready reference. We not only knew that we were "on the way," but also when and where we were going to land each day. If others would try out this suggestion I dare say it will prove equally valuable to them.

I have owned three motorcycles—first a Marsh, then an Excelsior, and now a seven horsepower Thor. My partner, Bill Weir, rides a twin Indian. It was on a beautiful Sunday morning, September 1, to be precise, that we left Findlay at 6:30. We reached Sandusky, 74 miles, at 11 a. m., and in doing this my new Thor digested less than a gallon of gasoline. We ate dinner there, and then the local motorcycle club—not because of any dislike of us, but quite the contrary—showed us out of town on our way to Cleveland.

VICTIMS OF A JOKE.

Upon leaving Sandusky we learned that it had been raining; therefore on two Vermillion we found plenty of clay mud and the road was much cut up. As we left Vermillion for Lorain we ran across our first humorous incident. I can "see the joke" yet. Evidently my side partner, Bill, has no penchant for "seeing things," while I have (though strictly temperate in my habits).

We saw a grade before us and both started to coast down hill, Bill leading, when all at once I spied a handsome little package daintily tied up with ribbon lying in the road. To me it looked like a two-pound package of bon-bons. I quickly checked the speed of my machine, dismounted and hurried to the prize-package. While it seemed to feel a little heavy for "sweets" I carefully untied it, and when I got inside I found a brick-bat, nothing but a brick-bat, and a red one at that. Somebody's joke? Yes. And it worked like a charm, too.

Leaving Lorain we enjoyed fine roads clear into Cleveland, where we arrived at about 5 p. m. We stopped overnight at the Weddell House, and our machines were stored at the hotel garage free of charge. At all other places we had to pay 25 cents each for their keep. Neither Bill nor I is a seer, so it will not be expected that either of us could read the condition of the streets of a fine, large city in advance. Neither may it seem at all strange that Mayor Baker, of Cleveland, had not written us a special delivery letter descriptive of their famous Euclid avenue. Everyone possessing some knowledge of cities has heard of that long, wonderful stretch of thoroughfare called Euclid avenue, but not all are acquainted with its then outer condition. It had been paved going out and also coming in, but between these two "pavings" we hit an open piece of road that might well be called "terrible."

Weir and Helms.

SOME BAD GOING.

This was Labor Day, September 2. It had been raining, and some 7 to 10 miles out of Cleveland the street had been torn up for both repairing. Here is where we came very nearly turning back for home. With the street clogged by long piles of curb blocks, and paving blocks, and the street car track running ankle deep with mud and water, what could we do? Well, we got our "Dutch up" (this strikes Weir) and finally decided to "go to it." We pushed and fought like Trojans through a mile or more of this mud and water mixture.

A little further on we came to a sewer that had been cut straight across the street. A twelve foot incline was just ahead of us. A light machine would have come in good here, but with the heavy Thor and Indian, both suitcase laden, we were subjected to the extreme exertion of our excursion. We shoved the machines through and out of this sewer, utilizing a handy plank as a runway. Muddy! tired!! and thirsty!!! You remember that I have already stated that this was Labor Day. How strikingly and fittingly named! Did we LABOR? We did!

A short distance outside of Erie, near a small town, we were climbing a hill when we came across an automobile with its front wheels over an embankment. The hind wheels were blocked. We gave a helping hand, and it took seven or eight others with the assistance of a team to pull it back to the road.

ONLY PUNCTURE OF THE TRIP.

Nearing Willoughby I got a puncture—the only one on the trip—by a sharp piece of iron. Neither of us had any serious machine trouble during the whole time. I would like to state here that we left Cleveland at 8 a. m. and reached Erie at 4 p. m. It was between these two cities that we found the worst roads. On our way to Erie we met two riders who told us that a bunch of Cleveland fellows had tried to get through to Buffalo on this same route and had to give it up.

The clerk at The Wayne hotel in Erie informed us that it had rained for 49 days, this having been the greatest rainfall in 40 years. He also said that automobiles had turned back from the Buffalo road to escape the mud. My puncture continued bothersome. The tire would get flat every 15 miles or so, and I had to keep pumping in order to reach Erie. On arriving there I went after the tire again, and located a double puncture. The iron had gone through both sides.

This day it did not rain, so we were able to get out of Erie at 10 a. m. The roads were very much cut up and rough, but we managed to reach Buffalo at about 4 p. m. where we stayed over night. The next morning we rode about the city, had dinner, and then started for Niagara Falls. It was on September 4 that we reached our final destination, running into the Falls over very bad roads at about 2 p. m. During the afternoon we made good use of our time in visiting the local sights. On the fifth we took in the Gorge Route in addition to a side trip on a boat to Toronto and return.

UP AGAINST CUSTOMS RULES.

There had been a desire on our part to route ourselves from Niagara Falls to Windsor and then cross over to Detroit and

Digitized by Google

back to Findlay by way of Toledo. Later we learned that the American customs office grants certain courtesies to Canadian riders that they (Canadians) do not extend to American riders. On paying 5-cent tolls we rode our machines across the bridge to the Canadian side, where we ran up against a strict customs ruling—pay the duty or stay out. The regular duty is 35 per cent. of the article's value. This would have given our machines a duty claim of $75 each—a larger sum of money than either of us carried. We stayed out.

While we knew that the Canadian customs office would accept a bond permitting the passing of automobiles we did not know that no such provision prevailed regarding motorcycles. So we were thus barred out. I wish to say right here that this is a matter which should be looked into by the F. A. M. So long as no questions are asked Canadian riders coming into the States it should be made easier for those of us who want to cross over the line into Canada. Otherwise our experience should serve as a warning to those who are expecting to make this trip without a large wad of money. Had there even been some provision covering motorcycles similar to that applying to automobiles, it would not have cost us in excess of $2 or $3 each for the bonded security.

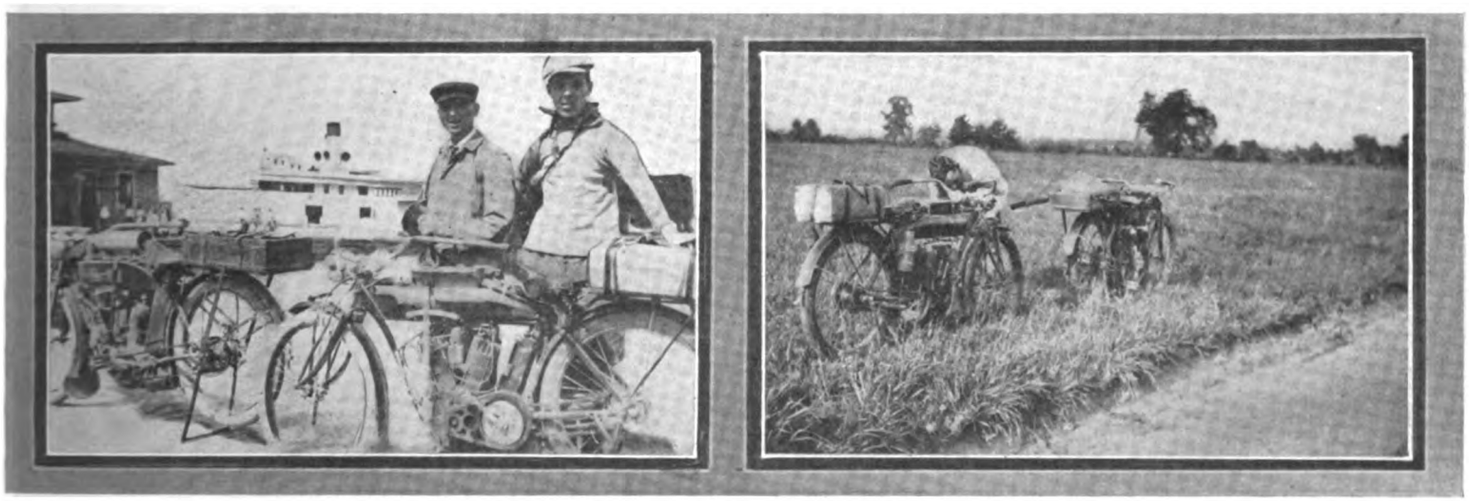
On our first lap for home between Niagara Falls and Buffalo I had the reservoir of my "curiosity" drawn upon again. You know I have previously mentioned that "seeing things" is my hobby. We were shunting along at about a 25-mile clip when I beheld something in the road that looked like real money. I stopped instanter—went back to the object, and to my joy and surprise found that my eyes had not played me another trick. I picked up—not a duplicate red brickbat—but two brand new one dollar bills.

Considering the bad roads we said, "never again!" We asked ourselves, "How might we avoid them?" The answer came loud and strong, "Take a boat." So turning our hearts and faces toward the setting sun we made the second lap for home by taking the 9 p. m. boat from Buffalo to Cleveland. In the meantime, however, we had tanked up (not ourselves, but our machines) with 23 cent gasoline, and it is probably not necessary for me to remark how hurt we were to have to pour it all out before they would allow us to go aboard the boat.

Like the proverbial cow's tail we were behind. It was late when we got to the dock and made inquiry about berths for the trip to Cleveland. We were politely informed that every berth had been engaged. And while we noticed that this situation elected us to the occupancy of a floor "berth," we came to the conclusion that we were playing in luck to have a chance to get on the boat at all. Once abroad we did not get lonely; we had plenty of company, for there were some 50 to 60 other passengers also without berths.

The last lap of our journey was from Cleveland to Findlay. After having been gone six days we found these roads better than when we started. On the home stretch we got anxious and became innoculated with a desire to "burn up the road." We struck a piece of sand-road which made my machine skid into a ditch, bending one pedal a trifle. As we entered Findlay Bill attempted to turn out for a team and his machine skidded in some dust, the pedal catching his foot and cutting a hole clear through his shoe into his foot and requiring the service of a doctor. These two so near home represent the total of our mishaps.

On the way we took a large number of pictures. And notwithstanding that the roads were so bad in places we had a mighty fine time. We not only hope to go again, but would advise all motorcyclists, if possible, to make the trip some time. You may grouch quite a little on the way if you strike bad weather, but, all in all, you'll be glad you went—just as we were.



Weir and Helms Ready to Leave Cleveland by Boat; a Stop for Wayside Repairs.

LONG ISLAND ROADS

Motorcycle Scout Finds Most of Them in Good Condition, Despite Rapid Changes in Weather of Late.

WITH a view of ascertaining the condition of the roads of Long Island so that the spring endurance runs of the various local clubs could be mapped out intelligently, a representative of all the clubs was recently sent over practically every main artery of travel between New York City and Patchogue.

After thoroughly canvassing the main highways the rider undertook the task of investigating the conditions of the less important crossroads, but due to the very poor condition of these roads no real effort was made to cover all of them. From New York City to Patchogue via the Queensboro Bridge, Hoffman Boulevard and the Merrick Road, good going is the rule. Through some of the smaller towns a short stretch of poor road may be met with. This, however, should not deter the average rider from undertaking the trip, as with a little care in navigating on the "soupy" spots the rider will be none the worse for his experience.

It is surprising how many riders fail to take advantage of the present good road conditions. If the motorcyclist is warmly clad many pleasant trips can be taken provided the best roads are picked out. On the north side of the island the Hempstead Turnpike is in fair condition. From New York City to Great Neck very good roads are met with. From Great Neck to Roslyn the turnpike is in poor shape at the present time, as the "dips," as the small valleys are called, are more or less muddy. On the grades of the hills, however, the roadbed is in excellent condition, as sand has been sprinkled over the road surface, making the roads ideal for riding.

From Roslyn to Oyster Bay and Huntington the roads are in very poor condition, and until the early spring travel over these roads will be anything but pleasant. Jericho Turnpike, the main artery of travel, is in excellent condition as far as Jericho. From Jericho, however, the roads are very muddy going to Oyster Bay, Woodbury and Hickville.

At the present time the best route for any rider who desires a trip entirely free from poor roads is over the Long Island Motor Parkway, which is in fine condition. During the three days in which the rider traveled over the Long Island roads not more than twenty fellow motorcyclists were met with. This is no doubt due to the erroneous impression that most riders have concerning the road conditions of Long Island.

SPECIAL care should be exercised to keep the inner tube dry in making repairs during winter road trips. Drying a tube properly by the roadside is a difficult operation, and should it be placed in the casing while wet the rider will be borrowing future trouble.

WHEN it becomes necessary to remove the tire for road repairs, wipe both casing and rim carefully, making the removal. Otherwise grit and mud may enter the cover and play havoc with the tube. Two or three minutes devoted to the cleaning operation will be well spent.

AMONG THE CLUBS

ANNUAL INVINCIBLE RUN

AT the last meeting of the Competition Committee of the Invincible M. C., of Brooklyn, N. Y., it was decided to hold the annual spring run on Sunday, May 4, over the South Shore route to Southampton, L. I. The return trip will be over the North Shore route. There will be no check at Patchogue, the course being direct to Southampton and then back to East Quoque, thence east to Riverhead. In former years Southampton has been the dinner stop, but this year it will be Riverhead. After dinner the riders will continue to Port Jefferson, Smithtown, Jerico and along Jerico Turnpike to Hillside avenue.

Matters will be so arranged that no rider will be allowed to use the Motor Parkway on the return trip as a short cut. Unlike other years there will be no 100-mile division, it being the belief of the committee that any rider who can not make the 200-miles should hold off for some other event. Anyone arrested for speeding will be disqualified. Certain details of the run have not yet been decided upon, such as the selection of souvenirs, the starting and finishing point, etc. Stress is laid upon the fact that this is a pleasure run and not a competitive event. Special provision will be made for New York and Jersey riders.

NEWARK CLUBS TO UNITE

IF present plans do not miscarry the New Jersey Motorcycle Club and the Newark Motorcycle Club, both of Newark, N. J., will unite. Steps toward the amalgamation were taken by the New Jersey club when a committee, composed of President Roy Pascall and J. H. Gunn, was named to wait upon Newark club and extend it a formal invitation to join the New Jersey M. C.

Elmer Crosbie, E. A. Allen, P. E. Stevens, Holmes Wright, Edward Wright and George Post were appointed by President Pascall as a committee to arrange for the Memorial Day endurance run of the club, which, as usual, is expected to be a two-day affair.

ANNIVERSARY AND ELECTION

INCIDENTAL to the celebration of the first anniversary of the Chesapeake Motorcycle Club, of Baltimore, Md., officers were elected. H. F. Vetter is the new president; A. W. Rupp, vice-president; George W. Coggins, secretary-treasurer; John L. Stube, captain; William L. Albers, first lieutenant; S. C. Brown, second lieutenant, and C. Sherman, third lieutenant.

Reno, Nev., contemplates the purchase of motorcycles for use in its police department.

HAVERHILL M. C. STAFF

SPLENDID progress is being made by the newly organized Haverhill (Mass.) Motorcycle Club. At a recent meeting officers were chosen as follows: Harry M. Fernald, president; Edwin Tappan, vice-president; H. W. Urquhart, treasurer; Hiram P. Ayer, secretary; Ellsworth Wilkie, captain; Joseph Bray, first lieutenant; George A. Baker, second lieutenant; Frank Brodie, bugler, and H. R. Sawyer and George Seavey, directors.

CLUB INCORPORATES

A CERTIFICATE of incorporation has been filed by the recently formed Indian Motorcycle Club, of New Brunswick, N. J. The trustees named are: George B. Rule, E. J. Miller, F. M. Thickstun, T. Y. Sutphin, W. F. Gulick, L. A. Voorhees, Herman Goetz, Oscar B. Martin, and George L. Burton.

MAY ABANDON RACE PLANS

ALTHOUGH a final decision has not been made by the Savannah Automobile Club with reference to the offer made by the Savannah M. C., to run a series of motorcycle races in connection with the annual automobile events, it has been unofficially announced that the offer will not be taken up.

CHICAGO M. C. PLANS TO REBUILD AT ONCE

Handsome Clubhouse of the Chicago M. C. Before the Fire.

CHICAGO, Ill.—That there is the proper spirit behind all the operations of the Chicago Motorcycle Club is evident from the enthusiasm with which the members of the organization have entered upon plans for reconstructing the section of its handsome clubhouse that was destroyed by fire on February 11. The loss was fully covered by insurance and no time was lost in taking steps to bring about an adjustment.

The fire, which proved to be one of the most stubborn the city has had to fight in its residence district in years, wiped out several large apartment buildings adjoining the Chicago club's headquarters and left 400 families homeless. A change in the direction of the wind, a fire wall and the desperate efforts of the firemen combined to save the clubhouse from complete destruction. The principal damage to the club's home was done by water and falling walls. Practically everything in the building was ruined by water, including the handsome mission furniture, two pianos, a player attachment and pool and billiard tables. The dance hall was destroyed.

Immediately upon the discovery of the fire the club steward telephoned President R. T. Purdy, of the club, and he in turn telephoned to all the club members who could be reached by wire. In a few minutes the Midway resembled a motordrome. Riders headed for the clubhouse at top speed and from all directions, and traffic limits were smashed to smithereens. The members saved some of the club records and nearly all of the machines stored in the club garage, but they were soon driven from the building. Fred Huyck, Jack Purdy, Robert Hill, Jay Starr and Dick Purdy were among the first to arrive and undertake the salvage work. An hour or two after the start of the fire nearly all the club members were on the scene, and President Purdy called an impromptu meeting at a nearby hall, where plans were taken up for obtaining temporary quarters pending the reconstruction of the damaged clubhouse.

A THREE-DAY Franco-British convention will be held in London in September. Such matters as hotel accommodations, comcunication, customs, improvements and the organization of international touring will be discussed.

ALTHOUGH Los Angeles is known as one of the best policed cities in the United States, Sheriff Hammel plans to organize an interurban police force consisting of about 125 men, each to be equipped with a motorcycle.

PRESIDENT PATTERSON has appointed P. N. Bushnell, of 316 South Lincoln street, Aberdeen, State Commissioner of the F. A. M. for South Dakota.

Scene in Rear of Clubhouse After Adjoining Buildings Had Been Destroyed.

MINNEAPOLIS SHOW

MINNEAPOLIS, Minn.—Despite the fact that there were only two exhibitors of motorcycles at the annual motor show in this city the single-trackers created an excellent impression and business is reported to have been entirely satisfactory.

The motorcycle exhibitors were the John F. Wingate Co., of Minneapolis, which displayed Minneapolis motorcycles and commercial vans, and Guy W. Webb, of the Arcade Cycle Exchange, who offered an attractive exhibit of Harley-Davidson machines. The Wingate Company featured two Minneapolis forecar delivery vans, one finished in white and the other in dark blue. The white outfit was sold during the show to the Kimball-Storer Co., printers and stationers of Minneapolis. Another exhibit of special interest at the Wingate stand was a 10 h. Minneapolis twin with two-speed.

At the Harley-Davidson stand Mr. Webb was assisted by E. J. Megow, of St. Paul, who looks after Harley-Davidson interests in that city; Burt Mahowald, of Mankato; Rodney Gates, H. A. Whitney, E. W. Wood, I. S. Embrietson, of Minneapolis, and P. B. Marshall, of Marshall, Minn., were also in attendance to assist in welcoming visitors to the Harley-Davidson booth.

Mr. Webb exhibited two of the famous "5-35's" one chain drive, the other belt drive; one 8 h. twin, and a cutaway model of another twin 8 h., showing its complete makeup, i. e., the valve action, various reinforcements, etc. He also had a board containing a complete set of drop forgings as used in the manufacture of the Harley-Davidson motorcycle

ARTIST'S MACHINE STOLEN

A 1911 5 h. Indian belonging to Arthur Merrick, 32 Union Square, New York City, was stolen from Foley's Garage on Jerome avenue recently. The thief broke in through the rear window and made his getaway on Merrick's motorcycle. The motor number is 20C087. A reward of $25 will be paid for its recovery.

GIRL RIDER ON TIME

ONE of the orders booked by Otto Oberwegner at the Chicago show was for a Pope 5 to be delivered to Miss Adele Schaerfer, of East St. Louis, Ill. Miss Schaerfer is a member of the East St. Louis M. C., and although only sixteen years old she has been riding a motorcycle for the last year.

COLUMBUS, Ohio.—The P. I. Haynes Company, of Columbus, Ohio, local distributor for the Harley-Davidson, will move on or before March 1 to a new location near the corner of Chestnut and High streets.

MRS. ARABELL WADE, a woman motorcyclist of Cardiff, Wales, and a writer for English motorcycle trade papers, is the guest of George Post, of Newark, N. J., former president of the New Jersey M. C.

L. W. LUDER and Scott Campbell, of Caro, Mich., expect to make a three weeks' motorcycle tour of the East in June. They plan to visit New York, Boston, Portland, Washington, D. C., Philadelphia and Baltimore.

WORTMAN & KING, proprietors of a large department store, are said to be first in Portland, Ore., to adopt the motorcycle for delivery purposes.

A SIMPLE method of preventing the hardening of spare tubes is to place them in hot water once every six weeks. This is said by riders who have tried it to keep the rubber in excellent condition.

BUSY SAVANNAH MEETING

ONE of the busiest meetings ever held by the Savannah Motorcycle Club took place February 11. At this meeting twenty-eight new members were added to the list. The dues of the club were raised from $3 to $9 a year and the club became 100 per cent. F. A. M. The age limit of the club was reduced from 18 to 16 and this will add materially to the membership, it is believed, as there are many very young riders in Savannah.

A committee composed of J. S. Cafiero, J. Waters, G. R. Coes and O. A. Meyer were appointed to arrange for Mr. Sauer's visit. President Williams announced the following committees who will serve the club for the following year: Finance—J. F. Entleman, G. M. Baker and G. R. Coes. Membership—J. D. Ivey, George Potter and W. S. Mell. Competition and Tour—G. R. Rossignol, Jr., J. A. Waters and George Balmer. Entertainment—J. L. Hartzel, H. A. Rushing and J. W. Gregorie. Legislative—G. C. Waters, C. E. Harrington, Jr., and W. C. Carraway.

MOTORCYCLISTS of Knoxville, Tenn., recently met in the Central Y. M. C. A. building and formed the Knoxville Motorcycle Club. Officers were elected at the first meeting and are reported as follows: President, R. T. Freels; vice-president, C. V. Hackney; secretary, James A. Trent; treasurer, Stanley Tinsley; press and publicity agent, Roy Sexton. C. A. Burnett was named road captain, with Ernest Dew, lieutenant.

A MOTORCYCLE PLAY

A MOTORCYCLE play, written, staged and produced by motorcycle riders, will be put on by the Manhattan (Kan.) M. C. Claude Stone, Merle Ebelblute, and K. W. Hougham are to be the joint authors, and Professor Kammeyer, of the Manhattan Agricultural College, will give the play its final touches.

CONCOURSE M. C. STAFF

AT a meeting of the Concourse M. C., of New York City, 1913 officers were elected as follows: President, William McClelland; vice-president, T. A. Turner; corresponding secretary, Clinton L. Frobisher, and road captain, Russell E. Polhemus.

BRADFORD OFFICERS

A SPECIAL meeting of the Bradford (Pa.) M. C. was recently held for the purpose of electing officers for the new season. William Demler is the new president; Edward L. Fish, vice-president; George J. Kelly, secretary and treasurer; Walter J. Fuermann, captain, and Emil Graff, lieutenant. The treasurer's report showed the club to be in an excellent condition.

AT a recent meeting of the Cleveland M. C. a committee was appointed to obtain a hall for the lecture to be given April 19 to Cleveland motorcyclists by Director J. Leo Sauer, of the F. A. M.

The La Verne M. C., of Lordsburg, Cal., is a new club on the F. A. M. list.

HUDSON COUNTY RACER.

ERNEST HELLER, a member of the Arrow Motorcycle Club, of Jersey City, N. J., and one of the fastest speedsters of Hudson county, will figure prominently in local speed events in the spring. At a recent meeting members of the Arrow Club appointed a committee to arrange for a series of weekly runs.

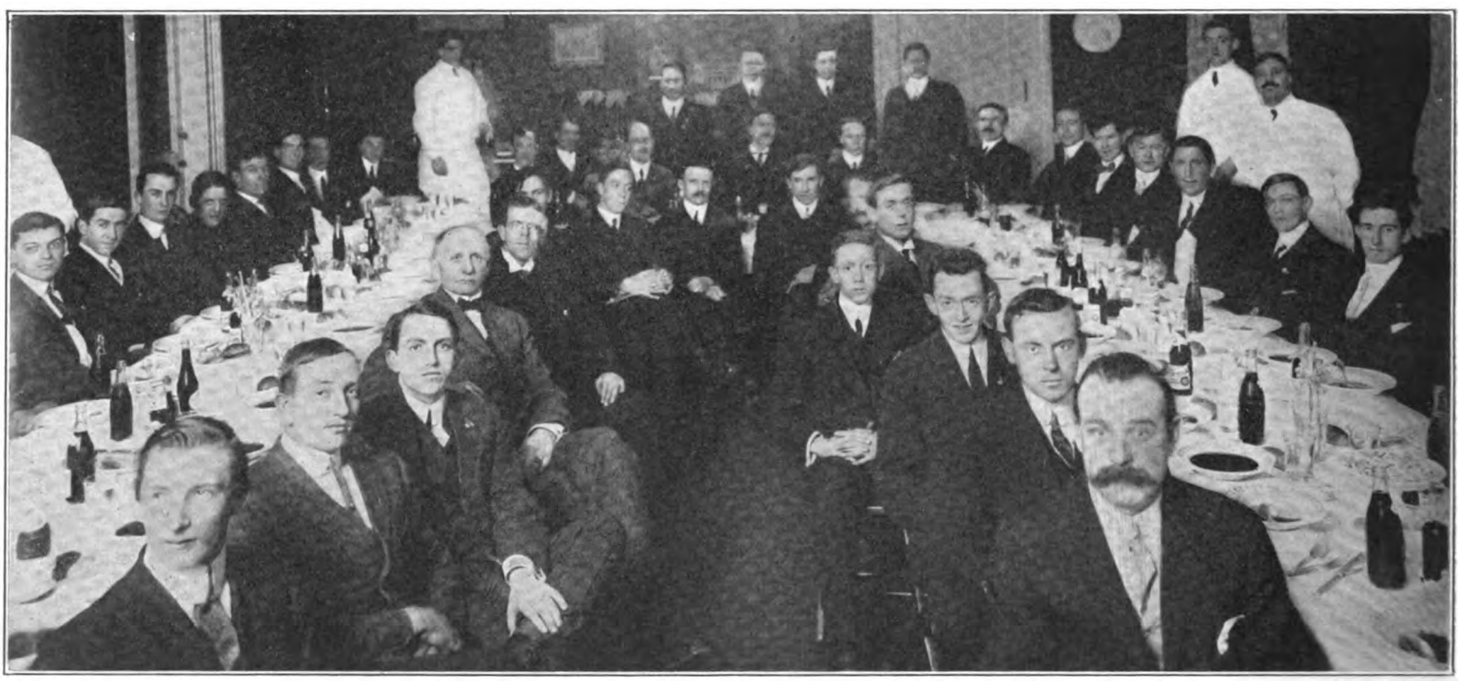
CINCINNATI CLUB ELECTS

AT the annual election of the Indian Motorcycle Club of Cincinnati, Ohio, the following officers were chosen: President, W. E. Horn; first vice-president, M. D. Green; second vice-president, W. Krebs; Henry Wydner, captain; Joe Uhl, secretary; James Mahoney, assistant secretary, and Henry Allioner, treasurer. After the business was over the members present were served with a light luncheon.

MEMBERS of the newly organized District of Columbia Motor Club, of Washington, D. C., recently participated in the nrst club run. The course was over the new Washington and Baltimore boulevard.

AMONG the new motorcycle clubs recently organized are the New Britain (Conn.) M. C., the Lyons (Kan.) M. C., the Bellevue (Ohio) M. C. and the Brainerd (Minn.) M. C.

A. A. Allen, Livermore Falls, is a local appointee of the Maine State Commissioner.



PROVIDENCE BANQUET

NO less than fifty members of the Providence Motorcycle Club were present at the seventh annual stag banquet held recently. It goes without saying that the affair was a success. It was after five o'clock when President E. L. Buffington gave the order to the road officers that all was in readiness for the run, and orders were given to see that all lights were lighted, to open the cut-outs, blow the horns and to keep to the right. The members were then placed in their seats at the tables and a picture of the club was taken.

For the next hour the members devoted themselves to securing a good supply of fuel for the run of the evening, President Buffington being the toastmaster. After the dinner was served the toastmaster introduced Secretary G. B. Gibson.

Dr. Gibson spoke of the work and the recent growth of the F. A. M., and told what the federation was doing about touring maps for the use of the members. He also spoke about the cards that the members carried and called attention to the fact that the twenty thousandth has been issued and that Treasurer B. A. Swenson of the Providence organization was the possessor of No. 97.

Those present were: G. B. Gibson, E. L. Buffington, J. G. Edwards, B. A. Swenson, Charles S. Coulters, W. C. O'Brien, E. G. Luther, Charles W. Rayhill, G. W. Lane, Harry H. Little, Felix Beauvais, Herman Benson, F. G. Dowding, S. Litterio, C. A. Anderson, A. B. Carlson, C. E. Hadfield, G. W. Hayden, J. Crovin, A. Hurle, M. Ross, C. Buffington, G. W. Suft, A. V. Howe, John Kay, F. Bayshaw, W. C. Keene, C. A. Bowen, A. E. Manchester, O. A. Anderson, J. C. Loftus, D. F. Adams, G. L. Koerner, R. E. Hornby, E. E. Smith, E. A. Lutz, J. Parent, H. G. Roscow, G. P. Williams, H. L. Thomas, C. Latterio and O. Klindt.

IN THE BERKSHIRES

(*Continued from page* 31.)

of Philadelphia, only that this vicinity was settled by the Shakers instead of the Quakers. Then we simply retraced the route to Brainard, Nassau, Schodack Center and Albany.

A quick trip of this kind only allows one to sniff the ozone and glance at a few of the scenes which the Berkshires offer; but in this busy age such brief outings are not to be despised. Sometimes they are only the respite which an overworked business man is allowed, and they are certainly better than nothing at all. Even when one makes the journey over these mountains for some special business reason, he is apt to lose sight of his mission for the time being in the enjoyment of the trip he is making.

HILLS GIVE NO TROUBLE.

It is scarcely possible to believe when traveling through an unsettled section like some parts of this district that the State of Massachusetts is more thickly populated than Italy or Germany; but, of course, the average is made up in the great cities on the eastern seaboard. Pittsfield is the "hub" of all motorcycle routes in western Massachusetts, and thanks largely to its summer vacation, is becoming quite a modern city.

One who has not known the Berkshires by motorcycling in and among them may think they are too hilly for safe touring. On the other hand, the very unevenness of their topography enhances the pleasure of a trip.

The main roads through the western part of Massachusetts do not have the steep grades that many imagine. Most of them follow the valleys and watercourses and, like these, go around the hills rather than over them. The newest roads are generally a part of the splendid modern system which the Bay State Commonwealth is constructing as an example to the country at large. The traveler will also notice the numerous clear, cold springs and drinking cups close to the roadside throughout much of this entire section. He will be pleasantly surprised at the number of hotels, even in out-of-the-way villages, supported more by the tourist travel—of which he is conscious of being a part—than by the more mixed travel so much more in evidence over in the adjacent portions of New York State.

SHORTER THAN RAIL ROUTE.

One interesting thing about the Pittsfield-Albany run is the fact that the road distance is several miles shorter than the Boston and Albany railroad mileage between the two points. The road takes a nearly straight natural route over the mountains, and as far as distance is concerned, the highway has the better of it by at least 12 miles.

Motorcyclists who have never made any of these trips may be unduly exercised about going over the mountain roads. As a matter of fact, the Berkshires are principally large, rounded hills, with seldom a grade steeper than 10 or 12 per cent.; and they are not nearly so hard to negotiate as some through the Hudson river highlands, within fifty miles of New York. Gradually, too, modern State roads are covering all this territory, the old Commonwealth finding it well worth while to encourage summer visitors who prefer to come by the highway. Taken as a whole the roads are in better shape for motorcycling than the average in New York State.

How Santa Claus Rigged Up His 1912 Xmas Outfit at Fred J. Barr's Flying Merkel Agency in Davenport, Iowa. The idea proved a great publicity winner.

HUMISTON'S STANDING O. K.

AN announcement from the office of National Secretary Gibson to the effect that Lee Humiston's membership in the F. A. M. had expired on January 2, 1912, occasioned a report that his recent records could not be accepted after all, but it has been discovered that the speedster's membership really expired on January 2, 1913, instead of 1912. As renewal of membership in the Federation within three months of the expiration of the old card restores a rider to uninterrupted membership, and in view of the fact that Humiston renewed his membership and paid over his fee before undertaking his record-breaking trials, there appears to be no question as to his good standing in the organization. It is stated that a special affidavit is now on the way from the coast to the effect that Referee W. H. Powers received Humiston's renewal fee prior to the trials.

Chairman Thornley, of the F. A. M. Competition Committee, has received the affidavit of Referee Powers to the effect that Humiston's trials were conducted in keeping with all the Federation competition requirements, and the chairman announces that the records have been formally accepted.

SOME TORONTO FIGURES

DURING the two years that the Toronto police have had six Triumph motorcycles in operation 53,250 miles have been covered in aggregate. The gasoline consumption amounted to 701 gallons and 14 gallons of lubricating oil were consumed. The total cost of running, including tires, belts and repairs is figured at one and one-eighth cents per mile.

MAY FORM RACING LEAGUE

A NUMBER of Cleveland promoters are behind a movement for the formation of a national motorcycle racing league, which they purpose launching in the spring. The following are reported as being interested in the movement: M. F. Bramley, James F. Kelley, Jacob Mintz, W. S. Lougee, Charles P. Salen, J. H. Smith, J. J. Mueller, and Maurice Maschke. It is planned to form teams in each city where those interested in the league operate tracks. Five riders will go to other cities to compete and five will stay at home.

PLEA FOR SMALLER TAGS

A BILL is being introduced into the Nebraska State legislature providing for smaller license tags to be carried on motorcycles. At the present time a tag must be not less than four inches in height, and each stroke of a figure not less than one half inch in width.

EXPERIENCED riders whose machines have forks with exposed springs make a point of having a harness-maker fit a neat leather cover over the springing agent. When the springs are covered with grease and the leather shields sewed on firmly, these parts should give no trouble in the hardest service and under any weather conditions.

THOSE fastidious motorcyclists who use glass windshields—and there are some—will be interested in knowing that glycerine and kerosene mixed in equal quantities is handy for preventing rain from accumulating on the glass. A little of this mixture will cause the rain to run off.

FROM Milan came the statement recently that plans had been practically completed for an Italian national motorcycle event, along the lines of the English T. T., but it is now explained that the race has not been sanctioned by the Italian Union and there is trouble in the air.

ACCORDING to the latest plans of the Short Grass Motorcycle Club Yellowstone Park will be the goal for its annual run this summer.

ECLIPSE

The Clutch of a Thousand Speeds

"—AND THE ECLIPSE FREE ENGINE CLUTCH"

On how many 1913 specifications have you seen these words prominently displayed?

The year 1913 will be a "large" year for motorcycles. Just as popular as was the "bike" five or six years ago, will the motorcycle become in 1913.

And why? Mainly because the ECLIPSE FREE ENGINE PULLEY AND MULTIPLE DISC CLUTCH has eliminated from the motorcycle that one last objectionable feature—uncertainty of control. With the ECLIPSE, the rider can get automobile service from his motorcycle. He can stop while the motor is still running. He can start without violent pedalling for half a block, or running alongside. He can, by the aid of the ECLIPSE, "make" hills absolutely impossible without it. He can glide through the worst roads, shifting sand, treacherous mud, deep snow—easily and surely. In traffic riding, its many discs insure the right speed at the right time. The rider can slow down to a walk and then quickly dart into an opening. THE ECLIPSE BELONGS ON YOUR MOTORCYCLE.

If it isn't—why not?

MOTORCYCLE ILLUSTRATED

Published every other Thursday at 51 Chambers Street, New York. Home subscriptions, $1.00 a year; foreign, $2.00; 10 cents a copy.

TELEPHONES 3690 AND 3691 WORTH.

Entered as second class matter July 6, 1908, at the Post Office at New York, N. Y., under Act of Congress March 3, 1879.

J. LEO SAUER, President.

H. N. CONDICT, Secretary.

WESTERN REPRESENTATIVE:
HARRY G. JACOBS
1220 First National Bank Building, Chicago. Telephone 5908 Central.

CIRCULATION THIS ISSUE MORE THAN 14,000 COPIES.

IMPORTANT.

OWING to its large circulation, it requires two full days of 24 hours each, after the last form has closed, to print, bind and mail a full edition of MOTORCYCLE ILLUSTRATED. In view also of the fact that this publication is read in more than 2,400 different cities, towns and villages in the United States, its wide distribution demands that each issue be placed in the mails not later than noon every other Thursday, the date of publication. In order to make the mails at this time, forms must close not later than 6 p. m. Tuesday, and advertising copy cannot, therefore, be handled if received later than Tuesday morning.

RECEIPT OF TEXT MATTER.

This applies also to text matter. Photographs should reach us not later than Monday morning preceding each date of issue. They will be given better attention, however, if reaching us the Saturday preceding.

CORRESPONDENCE.

MOTORCYCLE ILLUSTRATED requires correspondence and subscription agents in many towns where the paper is not already so represented; we pay a liberal commission to subscription agents, and the best space rates for quality, text-matter, drawings and photographs.

PHOTOGRAPHS.

Drawings, photographs and manuscript not suitable for publication will be returned if sufficient stamps are enclosed for the purpose. In every case, photographs should be plainly marked, so that they may be properly identified.

SIDECAR NUMBER

FOR the motorcyclist who finds that a companion is essential to his complete satisfaction on the road—and we believe this applies to seven out of ten riders—there is a treat coming in our next number, that of March 6. Mark the date.

This number will sing the siren song of the sidecar in all its fascinating and instructive variations—through at least twenty pages of text and pictures—**and if, by any chance, you are one of those solitary roadsters who derive no joy from companionship, we warn you not to read it. If you do, you will probably break up the resolutions of a lifetime and find a touring partner.**

Incidental to the sidecar matter there will be tandem features, an intimate story of the construction of a full-fledged American cyclecar—and the regular newsy departments that you have come to expect. Keep a keen eye open for this number. It's on its way.

EDITORIAL VIEWPOINTS

ONE of the most encouraging indications of the present winter season is the persistent and lively interest in motorcycle touring. Never in the past have so many riders kept their mounts in service throughout the period of ice and slushy roads, and there has been an unprecedented demand for maps and route information.

It is also noteworthy that scores of applications for touring data to be utilized during the coming summer have already been filed with the F. A. M. Touring Bureau, all of which goes to prove that there is no longer a period of winter laxity in the motorcycle field, and that touring developments of the coming summer are likely to be little short of amazing.

INFORMAL discussions have their value, but when it comes to making a decision, the level-headed gentlemen who compose the Motorcycle Manufacturers' Association will vote to continue the New York Show provided, of course, that arrangements can be made to stage the motorcycle end of it under more favorable conditions than heretofore. The manufacturers of motorcycles transacted more business with dealers at the New York Show than they did in Chicago, while the makers of accessories did much better, as a rule, in the Western metropolis. There were still numerous agencies to be assigned at the time the New York Show opened, but few remained to be closed up in Chicago. On the other hand, there is no question whatever that the manufacturers of motorcycle accessories are able to work to better advantage in a separate motorcycle show, where a dealer can, in a few days' time, and in one place, arrange for the purchase of his complete stock for the season.

To sum up, while the running of two shows—automobile and motorcycle—in separate buildings, compels the manufacturers of both motor and motorcycle accessories to have two exhibits, or be unrepresented in one place, the New York arrangement, with the manufacturers of motorcycle accessories widely distributed in two buildings, has been anything but satisfactory. There doesn't seem to be any reason why, even in connection with the automobile show, the exhibits of the motorcycle accessory manufacturers cannot all be placed in close proximity to the machine exhibits, thus duplicating, in a combined auto-motorcycle show, all the desirable features of Chicago's separate show, and at the same time giving the manufacturers of motorcycles an opportunity to interest at least a small proportion of the thousands who annually visit the big show in the national metropolis. No trouble should be had in working out the details of a plan of this character.

IT is at this season—when the New York and Chicago shows have been written glowingly into the history of the trade and all the new models have been introduced to an expectant public with fitting eclat—that the oft-repeated admonition "talk motorcycles" achieves greatest pertinence. Now, if ever, the dealer and his friends and their friends should be abroad in the fertile field of public interest, scattering seeds of enthusiasm and practical information, in order that the first balmy days of the riding season may meet expectations by producing a bumper crop of sales. There is not a moment to be lost. Here we are at the twentieth day of February; another month and the reaping should be in full swing.

In no other industry is there such an imperative demand for early activity on the part of dealers. Perhaps the closest approach to such a requirement is in the automobile field, but here the agents who fail to make the most of their January, February and March opportunities, and who deluge the manufacturers with late orders, have scores of factories to draw upon. As long as enthusiasts come forward with coin of the realm there will be motor cars to buy. On the other hand, the output of motorcycles is dependent upon a comparatively small number of factories, and the possibility of reaching the production limit while agents are still pleading for deliveries on late orders is ever present. Such conditions existed last summer, and despite the broad-gauge policy on which all motorcycle manufacturers are basing their 1913 operations, we may find the trade facing just such a healthy but unsatisfying overflow of business before we are through the 1913 season.

It devolves upon dealers to do their part toward avoiding a motorcycle shortage at the height of the riding term by placing their orders early, and thus providing the manufacturers with a working basis for their output calculations. A late rush of applications for machines imposes an unjust strain upon the maker, and often results in keen disappointment for the agent and the prospective rider when they are obliged to wait for tardy deliveries. It is obvious that no dealer can foresee the extent of the business he will be called upon to handle within the next four months, but by keeping in close touch with every prospect and canvassing his district systematically he should arrive at an estimate of great value to himself and to his manufacturer. The policy of ordering twenty-five or fifty machines on a more or less speculative basis and then bombarding the factory for heavy additional shipments at the eleventh hour should have no place in the operations of the 1913 motorcycle dealer. This is an attitude that has to be lived down by nearly every industry in any way dependent upon the seasons, and the motorcycle trade fortunately has developed beyond the need of it.

Aside from manufacturing, the early sales idea has many angles that should impress the thoughtful dealer. For example, interest in the motorcycle and its passenger and commercial adjuncts is now at top pitch as a result of the shows and the extensive publicity campaigns that have been waged for some time past by manufacturers, and any prospect worthy of the name is in a receptive mood for first-hand information and demonstrations. With the arrival of the early summer season he may be attracted toward other recreation fields and the task of the motorcycle salesman will be complicated. The ability to guarantee delivery upon a specified date is always an aid to salesmaking, and the agent who settles down to booking orders now is in a position to take advantage of this fact. Later he may not be so fortunate. There are a dozen other arguments equally practical and all pointing to the necessity for action—now. If there is a prospect at large in your district, look him up today. Don't put off the visit until tomorrow. Empires have crumbled in a night.

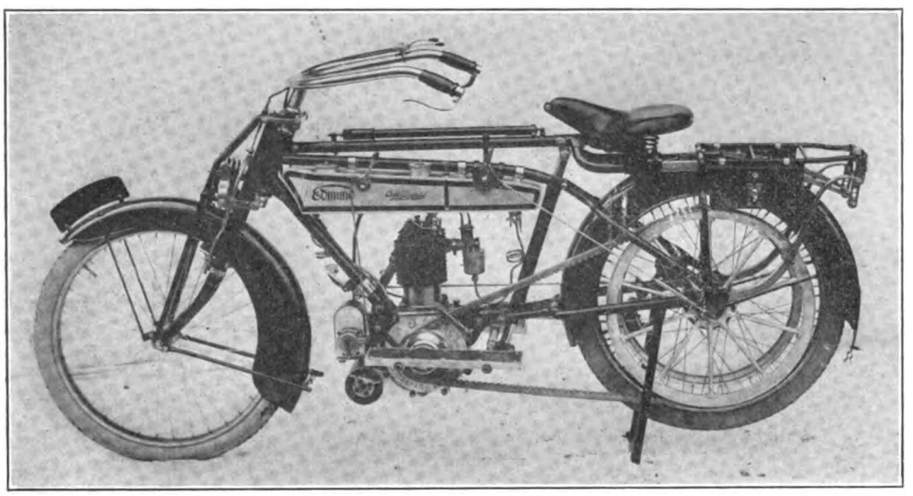
ENGLISH NOTES by "BRITISHER"

An Improved Type of English Spring-Frame Motorcycle; Interesting Details of the 1913 Rover; the Wall Parcelcar That is Winning Favor with British Merchants; a View of the New Clyno, with Detachable Wheel.

THE photo of an Edmund machine, reproduced below, shows how one of our English designers grapples with the springing problem. It is clear that the top tube, saddle and carrier are all completely insulated on the long double laminated springs mounted astern of the machine. The saddle post slides up and down in the frame tube, which is greased, providing a bearing which prevents any lateral sway; its lower extremities form the rear mounting of the hinged footplates, so that the rider's person is sprung at all points of contact with the machine. Spring frames are not widely demanded in Great Britain, owing to the excellence of our roads, but the Edmund is among the best. Its weight is its chief drawback, for the special construction scales a good 10 lbs. The springs are adjustable to suit the rider's weight, as the holes in the plate at the tail of the carrier show.



The English Edmund, Showing Ingenious Spring Frame Construction.

OVERBOARD WITH CONVENTION.

AFTER a long period of stagnant convention, our makers are showing a praiseworthy tendency to launch out in new directions, for the warm welcome accorded to such freak designs as the Scott and Douglas machines and the A. B. C. engine, indicates that the buying public is less hidebound than we used to fancy. I have just been privileged to inspect the first sample of a novel design which probably illustrates the top spot of forward tendency over here. The engine has been designed to order for one of our leading firms, who are preparing to scrap their old pattern in its favor.

The power plant is made in unit form, and its basis is a one piece crankcase, with a long coverplate on the lefthand face. The crankcase is extended rearwards in the form of a shell casing, which accommodates a three-speed sliding gearbox, capable of rotation within the shell to maintain chain adjustment; the lock of the adjustment is external, and simple to operate. The engine drives the primary shaft of the gearbox by means of a fully encased "silent" chain; the coverplate of the crankcase forms the back half of the chaincase, and a second plate is superadded.

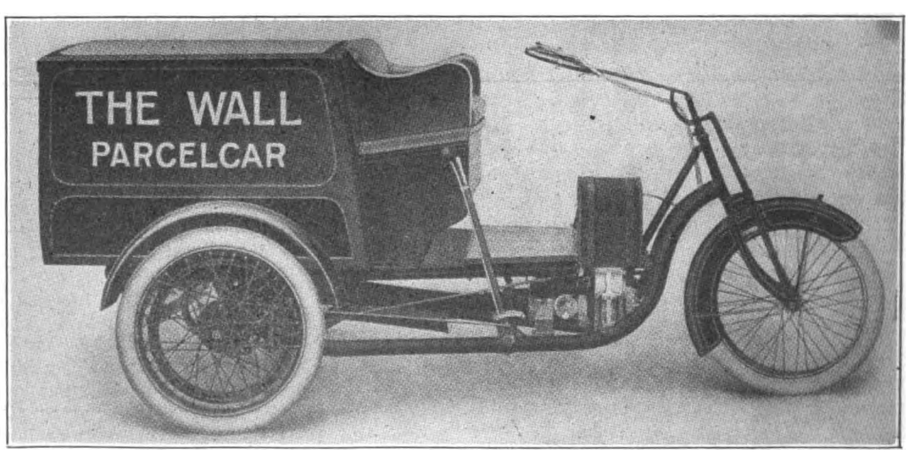
The whole exterior of the aluminum casting is rotund, smooth, oilproof, and free from trademarks. Not a single spot of oil emerges at any point of the base casting; indeed the makers showed me a flawed casting, and spirting a drop of oil on the blowhole with the engine running I saw the oil sucked in —not inhaled. The explanation of this weird phenomenon is that the basechamber is fitted with a vacuum valve, and forced feed oiling from a sump. This method permits the designer to retain the V type of twin cylinder engine, and yet to insure absolutely even lubrication of both cylinders. The engine is made in 500cc. and 750cc. sizes, the same crankchamber serving for both types. The dimensions are 60 x 88mm., and 73 x 88mm., respectively. The final drive to the back wheel may be either chain or belt, at the maker's option; probably the belt will be fitted for solo work, and the chain for sidecars. This design embraces three points of most interest to our public at the present moment, viz.: 1. A durable engine (obtained by perfect oiling of all bearings under pressure); 2, An absolutely oilproof and easily cleaned base chamber; 3, An absolutely weatherproof transmission, incorporating a countershaft three speed gear.

THE L. M. CYCLECAR.

THE L. M. Cyclecar is a good representative of the all-weather patterns, which eschew the belt drive. It has a V aircooled engine of 8 h. p., and its transmission consists of two chains with a central twospeed gearbox, and differential rear axle. It weighs 560 lbs. ready for the road, and costs $580. It can climb a 25 per cent. grade, with two persons up, touch 45 m. p. h. on the flat, and cover 45 miles on a gallon of gasoline. The springing consists of quarter elliptics astern, and two pairs of vertical coil springs in front. The steering is of the geared rod type, and when the engine is tuned up perfectly, the driver can start it up without leaving his seat, by digging with his right foot on the starting handle, which is mounted amidships.

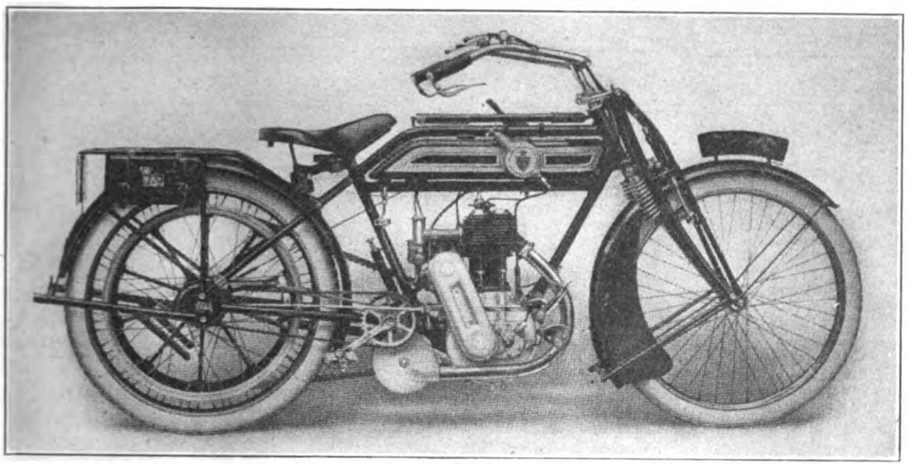
THE IMPROVED ROVER.

I ENCLOSE a cut of the new 3½ h. Rover motorcycle. As the outline shows, the machine is distinctly reminiscent of its dis-



A British Commercial Outfit That Is Growing in Popularity Among Merchants.

Digitized by Google



1913 *Rover Model; Note Circular Oil Tank Set Into Fuel Reservoir.*

tinguished predecessor, and its success is due rather to the intensely conscientious methods by which it is manufactured, than to any novelty of design. However, a few minor details attract attention. The magneto is carried in the best location—high up abaft the cylinder, where it is cozily placed for tuning the contacts, and well away from water and mud. The spring fork is superior to most competitors, and the saddle position is as low as is consistent with large tanks.

The oil tank consists of a separate cylinder, pressed laterally through an orifice left for the purpose in the gasoline tank. This is an expensive type to manufacture, and personally I could never see that it showed any real advantage over a first-class two compartment tank of ordinary type, except that it locates the oil pump at a more handy spot. Behind the saddle pillar tube may be seen the hand oil gun, used for lubricating the threespeed hub and bearings generally; it drops into a splitsided tubular carrier, and never shakes out. The muffler is an expansion box, from which a final outlet emerges on the lefthand side of the machine; it is the quietest on the road, though its size is by no means obtrusive.

Note the mudguarding, provision of stands to both wheels, and pannier toolbags, secured by vibration proof bent clips and D nuts; these bags are as tight after 10,000 miles without attention, as they were when they left the factory. The operating lever of the threespeed hub can be seen on the top tube, and the clutch and brake pedals are conveniently located on special spindles just above the front footrests. The gear ratios are variable by adjusting the engine pulley; they range between the series 4, 7, 9 and 6½, 9, 13, at the rider's pleasure. The engine develops 8 b. h. p. on a dynamometer test.

OFFICIAL MUFFLER TRIALS.

THE Auto-Cycle Union has now carried out its track test of the twenty mufflers submitted for competition. The test has so far only extended as far as impressions by ear, and tests against the clock on Brooklands track, comparing the open exhaust speeds of two Rudge machines with the same machines racing on the competing mufflers. All the mufflers entered fulfilled the standard of silence imposed by the judges, who had expressed that standard in the form of a huge experimental muffler. The entrants drove their machines over a lap with the silencers fitted, it being to their interest to coax as much pace out of the muffler as possible; then an expert retained by the officials tried to beat the entrant's time using the naked exhaust. The results of these time trials proved nothing, as they failed to eliminate personal factors.

In 14 cases the machine was a little slower with the muffler fitted, the difference seldom exceeding a mile per hour, though the Sharpe muffler robbed the machine of ten miles an hour. One Rudge touched the same speed with and without a muffler. Five machines were faster muffled than unmuffled, viz., the Rover (1.31 m. p. h.), two Rudges (3.80 and 2.66 m. p. h. faster), the Macbeth (.50 faster), and the Chase (2.13 m. p. h. faster). The general deduction is that these trials were worthless. The laboratory tests must be trusted to provide any valuable results. They will include the registration of the actual noise made at a high rate of revolutions, and recorded by a special electrical instrument designed for the purpose by Col. Holden; together with dynamometer tests for maximum h. p. with and without mufflers, designed to indicate any back pressure created by the competing fitments.

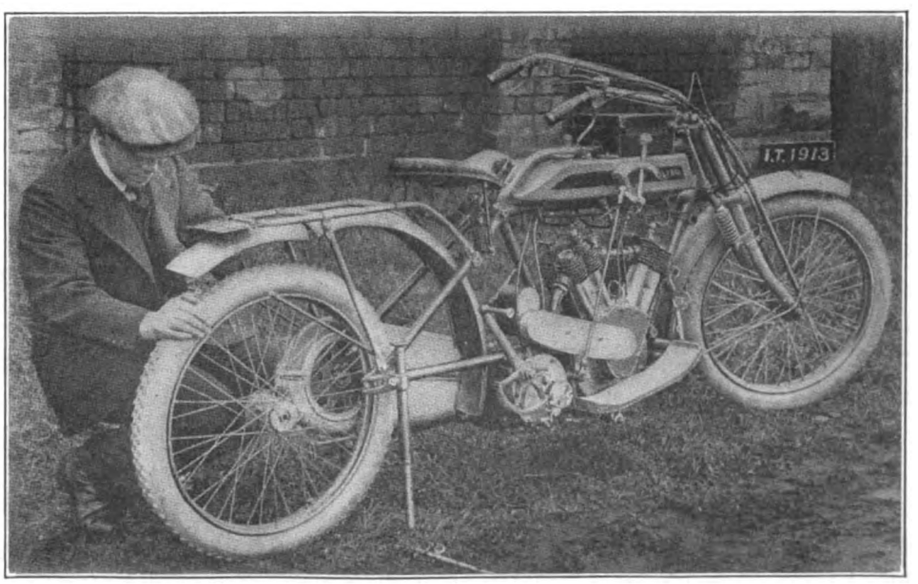
Only two of the mufflers showed particular originality, and neither of them promises to reveal exceptional technical merit. One—the Warby—incorporates two cooling fans, rotated by the rushing gases, and alleged to produce a cooling effect; the other consists of a series of miniature mufflers, resembling the rose of a garden watering can; any number of these may be threaded together on a spindle to form a complete muffler giving the exact degree of silence preferred by the user. This device is known as the Macbeth, and its greatest merit is that the gases are in permanent contact with external surfaces throughout their travel, and so should cool off fast.

THE WALL PARCELCAR.

THIS uncouth title describes a rather novel light delivery outfit recently marketed by one of our oldest firms, and shown in the accompanying cut. Threewheelers are very popular with business firms in our principal cities, owing to their light upkeep and nippy turning qualities. The machine in question can almost turn right about face in its own length, and like most two-wheel-astern tricycles, never skids. The frame is built of enormously stout tube—2 in. diameter, and the big 86 x 96mm. engine in front drives by a shaft to the gearbox (two-speed) mounted just in front of the differential rear axle. The steering wheel absorbs all road vibration, being of the stirrup type, mounted on a long flat strip of spring steel. The obvious technical defect of the outfit is the fact that the weight is concentrated too far astern, causing the front wheel to lift unduly at high speeds over bad going; but it is astonishingly comfortable at traffic speeds in city work, and is remarkably fast in snatching a path through crowded streets; it can insinuate its way where a big fourwheeler would be hopelessly blocked.

COMPETITION CLASSIFICATION.

THE objectionable word "novice" has been eliminated from our governing body's new classification of competition riders, and in future we are all to be ranked as "experts," or in the "general" class, events and prizes being reserved at all meetings in large quantities for the "generals," a rider being transferred into the "expert" classes after one or two victories. A roll recording all performances in club and open events is already at work. So the old classification of "trade rider," "amateur" and "shamateur" is as dead as a donkey, and the new scheme should work well, especially when the first



English Clyno Machine, Showing Convenience of Detachable Rear Wheel.

Digitized by Google

half dozen events of the season have exalted most of our cracks into the upper house.

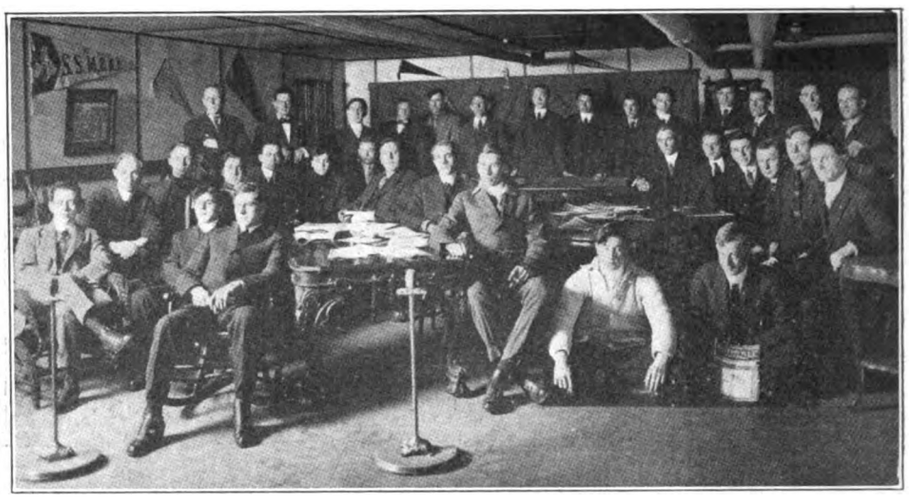
Towards the end of the season the "general" classes will be fiercely contested by a weird assortment of duffers, for the men who know a little will mostly have qualified as experts by then. It is questionable how far the scheme will secure a fair chance for the genuine amateur, owning a single stock roadster, which he tunes up without factory assistance. I can see the autumn "general classes" being won by duffers riding special machines tuned up by the factory expert; while the average sporting amateur will by then be qualified as an expert, and forced to ride against the "expert," as heretofore. Verily, it baffleth the wit of man to make a fool appear as though he were not a fool.

THE SIDECAR BOOM.

AS I have ceaselessly prophesied, the premature boom in cyclecars has utterly failed to scotch the pre-existent boom in sidecars, and many of our "nuts" think nothing of expending $100 on the attachment. One of the most popular is the "Canoelet" sidecar, which in the opinion of our doggiest boys is "absolutely it" just now. The chassis shows fully enclosed spring shock absorbers, adjustable from grandmamma to the latest thing in a Merry Widow billiard lamp shade, and so silky to sit over that they scarcely need the addition of the usual long Cee springs. The body outlines show a neat streamline chair in rolled aluminum panelling with storm apron complete.

We are learning one tip which some of your makers may do well to take to heart. We had a surfeit of broken sidecar axles last year. It is impossible to make these too thick, or to use too stout a steel for them. In fact, some of our more conscientious makers make a point of fitting some thing underneath the axle, to prevent the contraption turning turtle if the axle snaps. The sidestrain on the axle of a car attached to a luridly driven 7-9 h. twin on rough roads baffles description. One maker fits a strut underneath, carrying a small solid tired wheel on its toe; this serves as a stand during tire repairs, and gives the driver half a chance to pull up safely if the axle snaps.

GOUSTKRS KAHOROS, the Greek rider who is making a tour of the world on a Flying Merkel motorcycle, arrived in Washington, D. C., February 7, having covered 4,890 miles of the tour. He announced his intention of remaining in Washington until after the inauguration, March 4.



MEMBERS of the South Shore Motorcycle Club, of South Chicago, are shown in the accompanying photograph, which was taken recently at the opening of the new headquarters, located at 9119 Commercial avenue. The club room is one of the coziest in Chicago, is steam heated, electrically lighted, and is equipped with coat and wash rooms, piano and pool tables.

Agent Brown, who handles the Excelsior and Emblem machines, was on hand and after making a few remarks on club fellowship and co-operation he donated the use of the clubroom for the first year, it being located in his building. The room was fitted up mostly at his expense.

The present staff of officers of the South Shore M. C. is as follows: President, A. E. Walkowiak; secretary, W. J. Hughes, and treasurer, W. J. Behnke.

GOOD ROADS FOR ILLINOIS

NO less than 600 delegates attended a recent convention at Springfield, Ill., for the purpose of advancing the good roads project in that state. Governor Deneen, who welcomed the delegates, was strongly in favor of the improvements which were suggested during the session and promised to do all in his power to aid in the work. Senator Homer Tice was on hand and outlined some of the features of the bill he will introduce in the Senate at its present session. Congressman Morris was also present and promised to cooperate in every way with the delegates.

The good road advocates are being further encouraged by the new governor, Edward F. Dunne, who has declared himself in favor of the road improvements. The governor's idea of an ideal good road bill includes state cooperation with county or township, the compulsory dragging of roads and the use of the funds from the state automobile registration for good road work. He would also have convict labor employed on the preparation of materials for the roads and in maintaining the roads after they are constructed.

BAKER'S 1912 RECORDS

EXTRACTS from the 1912 motor diary of E. G. Baker, the Indianapolis specialist, in wide-open throttles, give some interesting figures as to his gasoline mileage from December 14, 1911, to December 14, 1912. During the year his road mileage was 17,584, and his track mileage 1,583, making a total of 19,167 miles. Out of the 86 races in which he competed he lost only 13. He took 53 firsts, 9 seconds, and 11 thirds. He hung up 12 track records and finished with perfect scores in three endurance runs.

NEWSPAPERS IN LINE

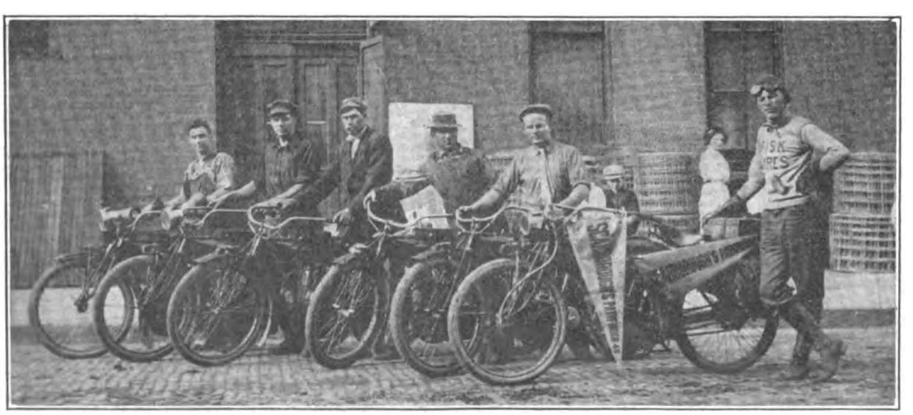
THE *Morning Sun,* of Coffeyville, Kan., has just purchased an Excelsior twin to be used in its news and business department. This is the second local paper to use a motorcycle. The Lowe Printing Company has also purchased an Excelsior for the purpose of rushing proofs to its patrons. Clyde King, city engineer, has placed an order for a 1913 Indian.

SPEAKING OF CAPS

FROM the *Irish Cyclist,* of Dublin, Ireland: "Photographs of American motorcyclists, as seen in the pages of our exchanges from the states, show that they invariably wear their caps with the peak in front! In spite of this great technical oversight, however, they apparently manage to get as good sport from the pastime as their brethren on this side, whose idea seems to be that motorcycling and the normal style of wearing headgear are absolutely incompatible!"

COBB IN THE RANKS

NO less a personage than Tyrus Raymond Cobb—yeah, ole Ty Cobb—is an honorary member of the Augusta (Ga.) Motorcycle Club. At a recent race meet in Augusta Ty acted as official starter. He is something of a motorcycle enthusiast, and has participated in club runs.



Indian Riders of Boone, Iowa, Acting as Escort to Pathfinder H. A. Stewart (at the right) on One of His Map Making Trips for the Scarborough Company.

Questions & Answers

ELECTRIC LIGHTING

H. E. TABLER and E. M. Blaylock.—1. Electric lighting for motorcycles is a practical proposition and is considered by some riders to be the most efficient type of illumination.

2. Prior to the advent of the wire drawn Mazda lamps, the old cry "the electric lights are no good" because the filament was one continuous source of trouble due to breaking, had just grounds for complaint. Now, however, it is a rare thing to hear of a "Mazda" filament breaking. Its efficiency is above all other types, operating as it does at 1.23 watts per c. p. as against a much higher voltage in other forms of lamps.

3. An ideal equipment consists of a 4 c. p., 4-watt "Mazda" lamp, taking two amperes. The headlights are very compact and are easily adjustable for either beam or focus. It is extremely important that the proper focal length be maintained to throw a maximum beam of light ahead. A good idea is to scratch a mark on the slider of the headlight, and thus be sure that the proper focal length is being used.

4. It has been proved that a small object lying in the road is clearly visible at 100 feet and that a vehicle is discernible at approximately 500 feet, when an equipment is installed as specified above, provided the right focal length is utilized.

5. A 2-volt 20-ampere-hour battery is the most suitable with the above equipment. Its size, about 3½ x 3½ x 7 inches, permits of its being stored in the tool box.

6. Different types of batteries are in the market, the type giving the most reliable service being the jelly electrolyte type.

7. Of course, the battery requires frequent recharging. About nine or ten hours of continuous light is all that can be obtained from the above type of battery. It is practical to install two batteries with a throw-over switch, and thus double the length of service of the source of supply.

8. The proper size of wire to use is 12 or 14 B. & S. rubber covered, duplex wire.

9. It is a good practice to tin the ends of the wire before securing them to the fixtures, so that none of the strands can unravel and cause a ground or short circuit. The two-wire system should be used. Under no circumstances should economy be sought by installing only the one wire system, using the ground as a return, as trouble will surely result.

10. The headlights, wiring, batteries, switches, etc., are standardized products. Numerous firms carry them, among which are the General Electric Co., 30 Church street, New York City; Manhattan Electric Supply Co., 17 Park Place, New York City.

GEARING AND SPEED

FREEPORT (Ill.) RIDER.—The gear for the 9 horsepower machine mentioned would be in the neighborhood of 3.12 to 1, and the speed at 2,800 revolutions per minute would be 74.6 miles per hour. See the gear ratio and speed table, page 60, of our October 17 issue. Individual motors might take a 3 to 1 ratio and at 3,000 revolutions give 82.8 miles if a "billiard table" road was traversed. But such a performance would probably be very exceptional.

CONVERSION OF DRIVE

JOHN H. MARK.—(1) A change from belt to chain drive could be made, but some sort of compensating device, a sprocket, for instance, is necessary. Many motors which run well with belt drive do not stand up with chain drive due to improper use of the clutch, etc., so that the compensator is very desirable. A gear of 4¼ to 4⅜ to 1 should give good hill-climbing ratio in general. Fix the sprocket to the wheel hub in preference to the spokes, or provide it with spokes of its own to the hub if the design of the latter will permit of this.

(2) We suggest that you have the double chain drive, as a single chain for a 4:1 gear will have a very small engine sprocket and a large wheel sprocket, conditions which are for from favorable to good chain performance. We do not advise reforming the front fork for use with a chain on the tire, as the fork might be weakened by bending out of line. The better method, although the most expensive, is to have a new crown put in place of the present one. The cost of all but the last operation might run as high as $35, figuring time at 60 cents the hour.

BALKS ON HILLS

R. SANDERS—First try giving more gasoline in proportion to the air than you do at present. This may be the chief cause of your failure to negotiate hills. Go over the machine for misalignment; see that the clutch does not slip and that it takes hold when you want it to. Does the brake drag? When riding a hill, rush it, but give the gas gradually, do not "dump" the throttle into the motor, as you will be sure to choke it up or at the least slow it down to such a point that it will not climb hills. Do not be in a hurry to advance the spark or give gas unless an emergency arises.

INSULATION QUERIES

LOUIS TISHER—Sealing-wax is a good insulator, but will not stand much vibration as a rule, and will crack away. Some of our correspondents have used a rubber cement on leaky cables and have got good results, while for bare wires, they coat with cement and then use electricians' tape as a protector. A naked wire is out of place on a motorcycle and should be replaced by a cable or insulated wire as soon as possible. For figures, etc., on paraffine, write the Standard Oil Company.

THE WRIST-PIN

GEORGE FRENCH—The wrist-pin is that pin which passes through the piston and serves to connect the piston with the connecting-rod. It is sometimes called the piston-pin, by reason of its passing through the piston. The wrist-pin is usually made fast in the piston while the upper or "small" end of the connecting-rod is furnished with a bushing or brass in which the wrist-pin can turn as the rod oscillates during each stroke. In a few cases, however, the wrist-pin is fast in the small end of the connecting-rod, and the bushings are in the piston. A good way to remember where the wrist-pin and crank-pin are respectively, is when holding the hand upwards; the wrist represents the small end and wrist pin, while the elbow represents the crank crank-pin, and the "big end."

PLUGS AND CARBON

C. D. BREMER.—Carbon deposit due to burnt lubricating oil or to too rich a mixture are the chief causes of dirty plug electrodes. Water in poor gasoline is frequently deposited on the plug points also. Carbon is a good conductor of electricity; it is used to "collect" the current from the slip-ring of the magneto and pass it to the spark plug. The carbon is in the form of a pencil or "brush." Being a conductor, the current goes across the plug gap, through the motor, and returns to the magneto as when no carbon is on the points. No spark passes, however, and misfiring occurs, since the deposit bridges the gap between the plug points.

WEAK REAR CYLINDER

C. A. SHAW—Look for leaks in the manifold or inlet pipe and see that the connection between the pipe and the dome is tight. How are the baffle plates in the rear cylinder? If they are broken or absent, the cylinder will get too much oil and carbonizing will result. Look for leaks also in the bayonet joint where the dome fits into the head. Smear oil or soap-water on the piping or joints with the motor running, and if there is any sign of sucking in the oil or water, there is the leak. With auxiliary air valves on each cylinder you should have no trouble in getting a good mixture for each cylinder.

TWO-CYLINDER OPPOSED MOTOR

ROSCOE ROYAL—Our lists and files give no instance of a maker of two-cylinder opposed motors for motorcycle use, and unless it is an isolated instance, we therefore cannot give you information as to the sale of such a machine. Some two years ago, an unknown writer announced such a type of motor for which great things were claimed, but nothing further has been heard of it to date.

RENEWING THE POINTS

EL. A. SCOTT.—We think that the platinum points are too badly worn to enable adjustment to be made, so advise renewing them. The fact that you get a fat spark when the metal bit is put on indicates this.

MANUFAC

A POPULAR TIRE EXPERT

C. J. WELCH, of the United States Tire Company, who is manager of the motorcycle department of the central district, with headquarters in Chicago, is very enthusiastic about the motorcycle situation for 1913. Mr. Welch stated at the recent New York Show that the tire business is a fair barometer by which to gauge the

motorcycle business generally, and that there is every indication that at least one hundred thousand motorcycles will be sold during the present season.

In discussing the tire business, Mr. Welch stated that his company's motorcycle business has increased more than five hundred per cent. this season over the corresponding period of 1912, and that judging from the present shipments, the United States Tire Company will enjoy a still greater increase before the season is well advanced. The demand for Chain-tread and Nobby-tread motorcycle tires is increasing so rapidly that the United States company's Indianapolis plant has been forced to increase its equipment for the manufacture of these popular non-skid tires, and is working twenty-four hours every day.

Mr. Welch has been identified with the motorcycle tire industry for the past seven years, being connected with Morgan & Wright, of Detroit, and with the United States Tire Company since its organization. Mr. Welch enjoys a wide acquaintance in the bicycle and motorcycle trades and is one of the most popular men in the industry.

DOUGLAS AT HENDEE PLANT.

W. W. DOUGLAS, of Douglas Brothers, manufacturers of the Douglas motorcycle, and third largest builder of the motor two-wheeler in England, was a recent visitor at the Indian factory at Springfield. He was amazed at its size and at the methods of production, as the largest motorcycle manufacturer in England has an annual output of only 6,000 machines.

CHANGE IN MANAGERS

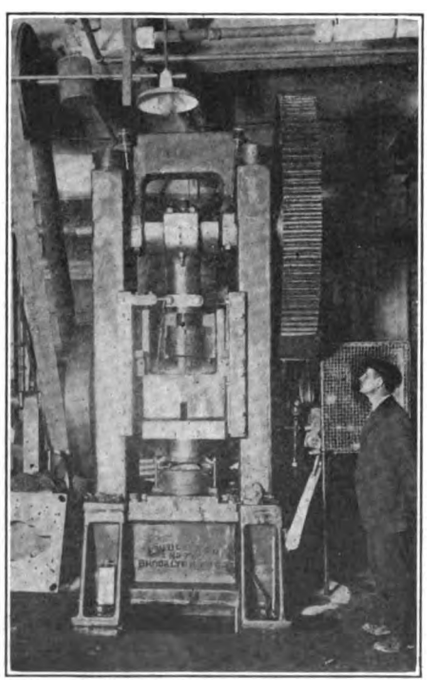
E. H. PARSONS has been succeeded by J. A. Maroney as manager of the St. Louis (Mo.) branch of the Goodyear Tire & Rubber Company. Mr. Parsons has been advanced to the managership of the St. Louis district, which embraces cities in Missouri, Oklahoma and Texas.

A MONSTER PRESS

HOW complex the manufacture of quality motorcycles has become, is shown by two recent purchases of the Harley-Davidson Motor Company. The twelfth press added to the press room equipment weighs 33,000 pounds and cost $3,250, or nearly ten cents a pound. Five floors above this monster press is a tiny electric furnace —the only electric furnace in Milwaukee.

The big press, used in the manufacture of pressed steel parts, and the little electric furnace used for special hardening work are necessary parts of the equipment of the Harley-Davidson factory. An idea of the size of this huge press can be obtained by comparing it with Walter Davidson, the company's president and general manager, who is shown standing beside it in the photo. It will be observed that his head hardly comes to the bottom of the large drive wheel of the main shaft. Back of him can be seen the guard built around the gear mechanism to protect passing workmen and the employees who operate the press.

The connecting rod on this monster is 7 inches in diameter. This big press can deliver a stroke of 285 tons; it can stamp



out a blank of steel 2 inches in thickness and 2 feet in diameter without any more fuss than would be shown by a housewife in cutting out a biscuit.

EWELL BACK FROM TRIP

R. G. EWELL, secretary of the American Motor Company, of Brockton, Mass., has just returned from a Western trip during which most of his time was given up to interviewing agents and salesmen and studying conditions at the various distributing points. Mr. Ewell gave up much of his trip to the State of Ohio, and he reports

unusually bright prospects for 1913 motorcycle business in the vicinity of Akron, Cleveland and Columbus. He states that the new chain-drive Eagle is making friends on all sides and that dealers are remarking the unusual number of cash orders.

Mr. Ewell states that the clay roads of Northern Ohio are putting a damper on motorcycle sales in that section, but that a rush is expected as soon as contemplated road highway improvements are carried through.

POPE GENEROSITY

AN amusing incident occurred at the booth of the Pope Manufacturing Company, at the New York Show, in connection with the distribution of pocket-pieces similar to half dollars by one of the Pope salesmen. The company was giving as souvenirs aluminum and silver medals which resembled American half dollars, and this particular salesman, after handing one to a dealer and calling attention to the generosity of the firm, discovered that he had handed out a genuine half dollar out of his own pocket.

VISITED EXCELSIOR PLANT

DURING the week of the Chicago show a party made up of prominent trade men paid a visit to the Excelsior factory, and were conducted through the big plant by President Ignaz Schwinn. The party was made up of George M. Hendee, F. J. Weschler, Dave Smith, W. H. Crosby and Fred Johnson, the latter of the Iver-Johnson Company. After the inspection trip the visitors complimented Mr. Schwinn upon the part he is playing in the development of the American field.

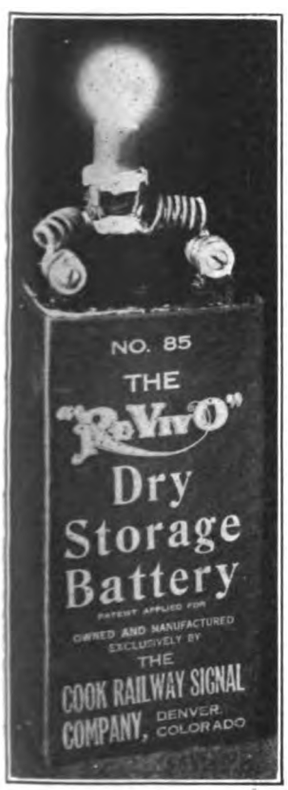
TURERS

TIRE CHAIN SUIT

A TEMPORARY injunction has been obtained in the United States District Court at Chicago by the Parsons Non-Skid Company and the Weed Chain Grip Manufacturing Company to restrain several firms from disposing of the stock of chains made by the Perry Manufacturing Company, of Lansing, Mich., which they have in their possession. The parties affected are: Emil J. Crimske, individual members of the E. Z. On Chain Tire Protector Company, the Hartley Manufacturing Company, Manufacturers' Auto Tire Company and the Whitaker Manufacturing Company. It is claimed that the Perry chain infringes the Parsons patents, with the exception of a wire spring, which is so frail as to be easily broken off, according to the statements of the complainants. When this spring is removed, it is alleged, there is no material difference between the Perry product and the Weed chains.

A NEW BATTERY

A NEW type of dry battery, which can be easily recharged, even when entirely exhausted, and which is manufactured in a type especially adapted for motorcycle lighting, has just been perfected in Denver, Col., by the Cook Railway Signal Company. The new battery is pronounced exceptionally light and compact, and while it can be recharged the same as the wet type of battery, it contains no acids or fluids and so does away with the annoyance of leakage. The type intended especially for motorcycle lighting, miners' lamps and the like, is made in three sizes, ranging in weight from twenty-two to fifty-seven ounces, and will last nine hours on one charge.



One of the batteries may be badly broken and have the appearance of being utterly worthless, but when the broken parts are bound together in their proper relation the elements will be found to be still active and capable of burning a light for several hours.

AN ECONOMY WINNER

IN a recent economy contest of the Atlantic City M. C., P. Gravatt, riding a Pope "Big 4" established a club record. He covered 24¾ miles on one pint and 14 ounces of gasoline. W. B. Hardee (Haverford 4), was second, with one quart and 2 ounces, and Thomas Newman, riding a Thor 4, was third with

3 pints. Gravatt, who was also winner of the recent beach races at Atlantic City, is shown in the accompanying photograph.

CLAIM PATENT INFRINGEMENT

BERNARD MORGAN, of Newport, R. I., has brought suit against the Thirty-Five Per Cent. Automobile Company, of New York, claiming an infringement of his patent on priming cocks by the act of the defendant selling Champion spark plugs, made by the Champion Spark Plug Company, of Toledo, Ohio, which produces both automobile and motorcycle spark plugs. The Champion plug in question is of the so-called priming type, consisting of a plug, the shell of which is threaded with an inclined passageway, into which fits a priming cup, screwing into the bored portion of the plug. When the cup member is screwed tight into the thread in the plug, a needle formed on the end of the cup member makes a tight fit against the plug shell, keeping gases from leaking out through the passage.

MEETING OF SALESMEN

SALESMEN of the Western Electric Co., of New York, which recently combined with the Pittsfield company, met in Chicago not long ago for a program in which business and entertainment features were admirably merged. The week was a busy one, and the results are expected to be far-reaching in the company's sales organization.

BOSCH MAGNETO EXHIBIT

TO demonstrate the universality of Bosch products throughout the entire field of internal combustion engine endeavor, is the purpose of the exhibit of the Bosch Magneto Company, at the Motor Boat Show in Madison Square Garden, New York, this week. The magnetos shown range from the DA2 and ZEV motorcycle types through the field of four, six, and eight cylinders up to the gigantic equipment for stationary gas engines of 500 horsepower and upwards.

TO ENLARGE LINE

RIDERS who are acquainted with any of the high-grade products that go to make up the line of the L. Wilson Novelty Works, of 222 South Clinton street, Chicago, will be interested in the announcement that the firm is preparing to market a series of motorcycle mudguards. Long experience in the production of bicycle guards has fitted the company to step into the motorcycle field under most auspicious conditions. Not the least important feature of the firm's announcement is that A. B. Coffman will act as its sales representative, with headquarters at 6 Glenwood Court, Toledo, Ohio.

NEW J-M TRAVELER

C. L. WHEELER has joined the staff of the H. W. Johns-Manville Company, of New York City, and will represent the firm as traveling salesman, his headquarters being in Atlanta, Ga. The feature offering of the Johns-Manville Company for motorcyclists is an improved spark plug.

ONE of the trade hustlers who did not figure in the personal items incidental to the Chicago Show number, probably for the reason that he did not remain in a given spot long enough for the scribes to locate him, was L. B. Lyman, sales manager of the motorcycle department of the B. F. Goodrich Company. Mr. Lyman was kept on the jump between the independent motorcycle shows and the automobile exhibition at the Coliseum, and official figures show that his mileage for the week was a record-breaker.

"The manner in which business piled up amply repaid me for the effort to be in two places at the same time," explains the genial Lyman.

"Long John" O'Connor, whose publicity war-whoops have earned him recognition as a full-fledged warrior of the Indian Wigwam at Springfield, Mass.

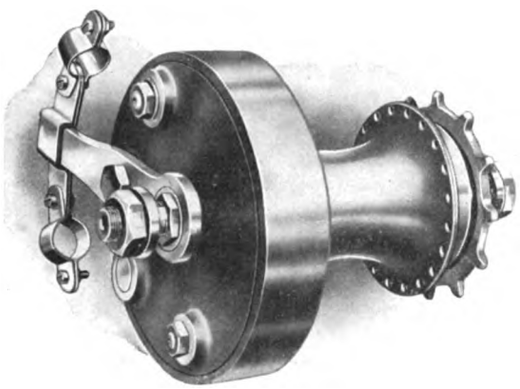
NEW DEPARTURE BRAKE FOR 1913

Simplicity of Construction and Ability to Exert a Retarding Force Sufficient to Hold an Automobile are Features Which Make Improved Product of the Bristol Firm Vitally Interesting to Motorcyclists—The Mechanism Described and Illustrated.

IN these days of long tours and of extraordinary tests for the motorcycle and its equipment, experienced riders are paying more attention than ever before to their braking systems, for it is obvious that the lack of a



Model "L," for Belt Drive Machines.

dependable brake at a crucial moment will set at naught all other precautionary measures for which the rider may have provided. As the 1913 motorcycle is intended to balk at nothing in the way of a hill, it is to be expected that tourists will subject their machines to more severe trials on heavy grades than in years past, and it is with a view of meeting these conditions that the New Departure Manufacturing Company, of Bristol, Conn., has brought into play the greatest skill of its designers and mechanics in the production of its new coaster brake. The New Departure Company makes the unconditional claim that its 1913 brake is strong enough to hold an automobile, and that its simplicity of construction practically eliminates mechanical troubles.

Brake Drum Interior.

The improved brake, which is fully illustrated on this page, is operated from the pedals, and a back pedalling pressure of seventy-five pounds will exert a retarding force of a ton and a half in the brake drum. The mechanical construction, aside from the brake end, is almost identical with that employed in the New Departure coaster brake for bicycles, with provision made of course for heavier parts throughout to withstand the extra strain of motorcycle service. It will be noted in the illustration of the brake drum interior that the operating mechanism is extremely simple. The brake shoes are spread so as to give frictional contact with the inner wall of the drum at all points. The brake spreader cam is arranged in a slot so that one brake shoe cannot take a greater proportion of the braking stress than the other. As a heavy spring is provided for returning the brake shoes to a position out of contact with the wall of the drum when the brake is released, it is impossible for the mechanism to bind or stick. The surface of the brake drum has a series of milled grooves which break up the oil film and also serve as reservoirs of lubricant to insure positive engagement and prompt release.

The New Departure company calls special attention to the fact that all parts of the brake mechanism are protected from dust and grit, and that no part is so exposed that it can work loose or sustain damage in hard road service. Steel is used in the brake construction throughout; all the essential parts of the mechanism are made of the best alloy steel, specially treated. The axle is one-eighth of an inch thicker than is used in the heaviest motorcycle construction, and the ball bearings are unusually large; 7/16-inch balls are used, with the automobile type of separator. The brake shoes are drop forgings of special steel. In designing the brake the company subjected all kinds of frictional braking materials to exhaustive tests, and the steel shoes were selected as being the most efficient and durable.

The actuator cam lever and the bearing on which the actuator pivots are drop forged in one piece, thus preventing the parts from working loose or wearing unevenly. The brake drum is fastened by the electric spot welding process to the hub, in order to obviate the danger of parts working loose, as is often the case where riveting or screws are resorted to. On the chain-drive model the flange to which the motor drive sprocket is attached is spot welded to the drum so that the parts are practically integral. The sprocket is attached by bolts so that it may be removed when necessary.

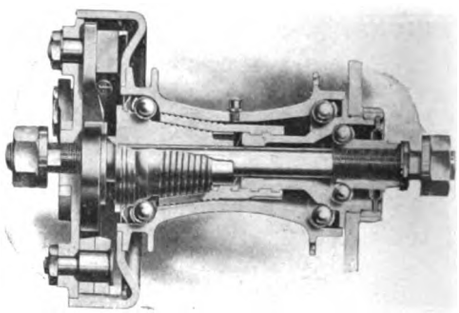
NEW CYLINDER OIL

MOTORCYCLISTS who have experienced difficulty in obtaining an entirely satisfactory cylinder oil will be interested in Maroline, a new motorcycle oil that has just been placed on the market by the Marshall Oil Co. It is claimed by those who have given the new lubricant a thorough test that it shows surprising results and is well adapted to meet the special needs of the motor two-wheeler. Students of the motorcycle lubrication problem agree that a strictly mineral oil should be employed. Oils that are compounded with animal or vegetable fats contain acids which decompose under heat and form pitch, and for obvious reasons they are unsuitable for motorcycle use.

The Marshall company's new product is credited with being a strictly mineral oil. In addition it is stated that particular care has been exercised in determining the flash point of the Maroline lubricant. Experience has shown that oils having too high a flash point pass the piston rings when overfed and enter the combustion chamber where their high flash point prevents them from being volatilized and burned away cleanly. As a result they act as collectors of carbon and ultimately cause trouble.

NEW J-M SPARK PLUG.

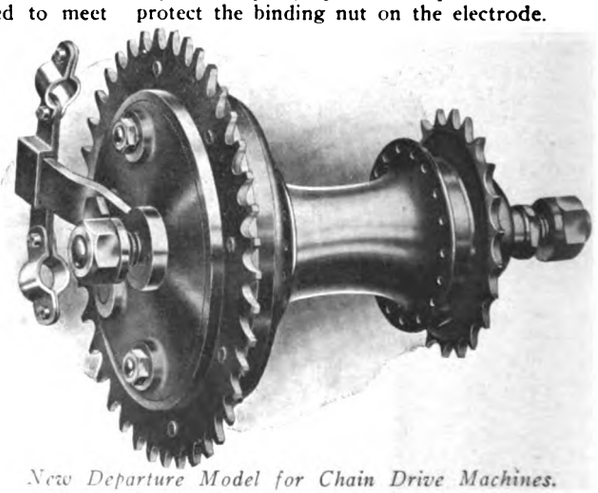
A NEW arrival in the ranks of spark plugs with special adaptability to the motorcycle is the J-M, which is being offered by the H. W. Johns-Manville Company, of New York City. This plug is credited with combining the desirable features of both the all-porcelain and the all-mica types of plugs, through a judicious use of porcelain and mica for insulation. The J-M plug is designed especially to prevent short-circuiting or troubles likely to be caused by oil, water and carbon. If the porcelain becomes broken the plug's sparking ability is not impaired. There are essentially



New Departure Brake in Section.

but two parts to be handled by the user, the shell of steel which threads into the motor and the electrode unit, consisting of the center firing pin and the insulation.

The center firing pin is surrounded by layers of tightly wrapped sheet mica. The mica tube is protected from oil, water and possible disintegration by a substantial porcelain. The porcelain also adds to the insulating value of the plug. The outer or ignition end of the plug is fitted with a brass cap, surmounting the porcelain and protecting it from any ordinary injury. This cap also serves to protect the binding nut on the electrode.



New Departure Model for Chain Drive Machines.

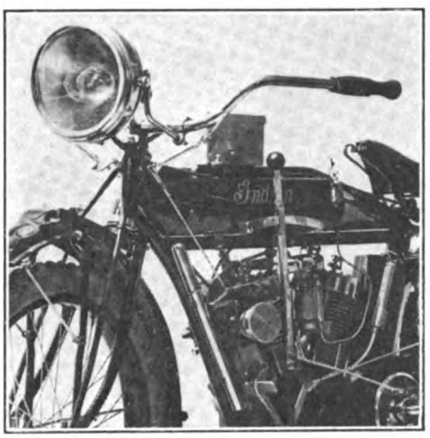
FEATURES IN JENKINS SPECIALTY LINE

ONE of the most attractive offerings of Jenkins & Co., of Des Moines, Iowa, is the "Jenco" spring carrier, which is made to fit all machines. This carrier is equipped with footrests and is handsomely nickel-plated. It is constructed of the best material possible and, owing to the care with which the springing principle is applied, the fitment shows no side-sway. A patent covering the attachment has been applied for.

The special "Jenco" spring attachment for Indian machines has a base made of ⅝-inch, five-ply veneer wood and is upholstered with high-grade hair. The tension of the springs on both carriers has been shown to be correct, in long tests, and it is noteworthy that the base is adjustable for any weight. The carrier for Indian machines was originally fastened by ¼-inch bolts, running through the carrier tubing, but the method of attaching has been changed; the firm now uses a full nickel clamp, which fits around the carrier tubing, making it very neat and easy to attach, and at the same time avoiding undue strain upon the tubing. Footrests are supplied for this carrier when specified. The price of the regular carrier is $6, with footrests. For a dollar extra a genuine leather pad is furnished, made with round corners to fit the carrier exactly. The upright bolts on the top of the Indian carrier and those on top of the firm's steel top carrier are of the same size so that the two tops are easily interchangeable.

"Jenco" Spring Attachment Ready for Passenger Carrying.

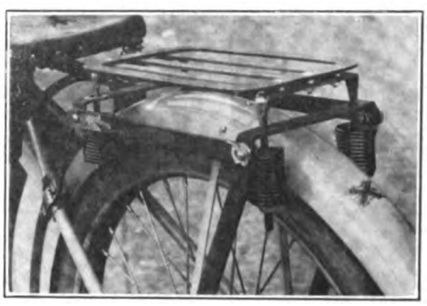


The Jenkins Electric Lighting Outfit.

Special attention is also being called to the electric lighting outfit offered by the Jenkins company. In the illustration shown the dynamo is run directly from the engine and is capable of furnishing more current than is needed for any motorcycle lamp. The bulb used in the headlight is of 25 candlepower and the lamp may be had with 7 or 9-inch front.

The company provides three lighting outfits, one the dynamo and governor, sending the current direct to the head and tail-lights; another in which the dynamo sends the current to a storage battery, with an automatic cut-out to do away with overcharging the battery. The third outfit includes simply the lights and the battery. The battery is quite small and can be hung from the handlebars. For this system the firm supplies a 6-inch parabolic head and a Tungsten globe is used, rating from 2 to 8 candlepower. The covering of the battery is indestructible.

Announcement is made that the Jenkins company will be ready for deliveries about March 1, and in the meantime detailed literature will be prepared to tell the interesting story of the firm's specialties. The lighting outfit shown in the photograph was run on the inventor's machine all last season and proved its dependability as well as its ability to give a powerful, far-reaching light.



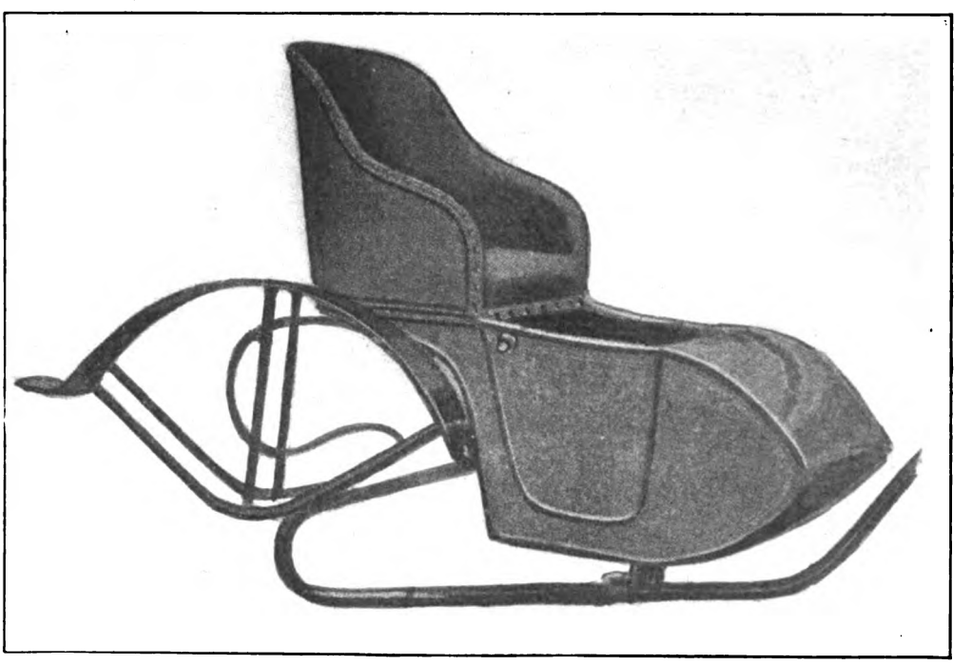
Spring Carrier of "Jenco" Design, Built for Hard Service.

ATTRACTIVE "ANDERS" SIDECAR MODELS

MOTORCYCLISTS who are turning their eyes toward 1913 sidecars will find plenty to interest them in the line of "Anders" passenger attachments manufactured by the National Cycle Accessory Company, of Aurora, Ill. This firm makes several models for both pleasure and commercial purposes. One of the leading types is the torpedo model, fitted with side door and finished in white enamel and genuine buff leather. It is equipped with a leather top and curtains.

Another model has a phaeton body with storage room under the seat, and is finished in red with genuine leather upholstering. A third type is a delivery van, finished in blue and so constructed as to give maximum strength and durability with minimum weight. This van is proving an excellent vehicle for R. F. D. work, being fitted with rear or top doors to facilitate the handling of matter carried in it.

The National Cycle Accessory Company makes several other models of sidecars, each holding out special inducements for the thoughtful motorcyclist. One of the types for which there is a constantly increasing demand is a combination pleasure and business vehicle. It has a roomy semi-box body supporting a comfortable seat.



One of the Pleasure Types in the "Anders" Sidecar Line.

CONQUERING BELT TROUBLES

Experience in England Proves That with Large Engine Pulley and Belt of Reasonable Size This Type of Transmission Is Capable of Meeting All Demands, Even for Heavy Going with Sidecar Attachment—Some Figures.

By Britisher.

THE main contrast between the English and American motorcycling markets is that the belt is facile princeps over here, and that the chain seems more characteristic of your favorite practice. Sterner work may have something to do with the seeming preference for chains in the states, but some recent experiences of my own may indicate another possibility. In the season of 1910 I was riding a light single-geared 3½ h. racer, with an engine of the high-speed type. I normally drove it with a gear of 5¼ to 1, on which it could beat fifty miles an hour, and was very handy on country grades, and in city traffic.

The makers were of the get-rich-quick type, and fitted a very cheap belt of small size; its cross section was only ⅞ inch. Well, I had a most cheerless time with the transmission of that machine. In dry weather I was constantly repairing pull-throughs, and I seldom essayed a prolonged jaunt without carrying a couple of spare belts looped picturesquely round my lamp, carrier, waist, or handlebar; in wet weather the brute was practically unrideable, for the belt began to slip permanently as soon as I spied a puddle on the road. When I sold it, I bought an Indian, for my stomach was gorged with belt drive. Like most journalists I make it a principle to familiarize myself with as many types of jigger as possible, and I never buy two samples of the same make consecutively.

When the Indian had served its time, I rather timidly invested in a first-class English belt driver. This had a large engine pulley, a multi-speed hub, and a 1⅛-inch belt of best make. This mount revolutionized my notions of the belt. I never had to stop to tighten or rejoint the accursed thing when the roads were dry; and in rainy weather on roads awash I might have had a chain beneath me for all I knew about it. With and without a sidecar I have attained huge mileages, and I have come to the conclusion that the belt is good enough for anything, provided one uses a big belt of good make on a big pulley. Of course, the three-speed gears which are now the touring standard over here, enable us to retain a 4½-inch engine pulley under all conditions.

FREED'S LETTER

FOLLOWING is a copy of a letter which has been forwarded by A. Freed, of San Francisco, to the Aurora Automatic Machinery Co., the Excelsior Motor Mfg. and Supply Co., and the Harley-Davidson Motor Co., with reference to alleged infringement of a patent which has recently been assigned to him:

"When I saw you on my trip to Chicago in November, I stated to you that your manufacture and embodying in your motorcycles of the saddle mounts or spankers which you were then using and are now using were and are infringements upon the patent belonging to me. That patent has since been issued, and the number thereof is 1,050,925, issued in the name of Abram W. Duck, of Oakland, California, and an assignment to me of which patent is of record in the office of the Commissioner of Patents of the United States. The application for this patent was filed March 14, 1912, serial number 683,699. This is to notify you that I shall hold you strictly responsible for your use of said mounts or spankers and for all infringing on my rights under this patent, and I shall expect you to account to me for the use already had thereof, and shall hold you to account for all future use thereof."

Mr. Freed states that he will forward similar letters to the Excelsior Cycle Co., manufacturer of the De Luxe machines, and the Davis Sewing Machine Co., of Dayton, Ohio, maker of the Dayton motorcycles.

COUNTER SUIT FILED

FROM Detroit, Mich., comes the announcement that the Zenith Carbureter Company, of that city, has taken legal action against the Stromberg Motor Devices Company, of Chicago, maker of the Stromberg carbureter, for infringement of the Baverey patent, No. 907,953, under which patent it is stated that the Zenith company is manufacturing its present type of carbureter. Unusual interest attaches to the action in view of the fact that not long ago the Stromberg company filed suit in the Federal Court, of Detroit, against the Zenith company, seeking an injunction to prohibit the latter firm from producing its carbureter on the grounds that it was an infringement of two patents owned by the Stromberg company.

PREST-O-LITE SUIT DISMISSED

JUSTICE SPIEGELBERG, in the Municipal Court, of New York City, Borough of Manhattan, recently dismissed a bill of complaint brought by the Prest-O-Lite Company, of Indianapolis, maker of automobile and motorcycle gas tanks, against the American Auto Supply Company, of New York City. The complaint claimed that the defendant had filled a tank of the Prest-O-Lite company with acetylene gas produced by another firm. It was shown that the American company pasted a label over the Prest-O-Lite trade-mark when selling the tank to make known the fact that Prest-O-Lite gas was not being sold.

Justice Spiegelberg's opinion called attention to the fact that Section 367 of the business law, under which the Prest-O-Lite company believed its trade-mark was protected, was revised in 1909, so that it no longer referred to products other than soda, mineral waters, etc. It was provided in the new trade-mark regulations that manufacturers of products not covered in the revised law must file new papers covering their trade-marks. The Prest-O-Lite company filed an application for registration of its trade-mark and trade name under the new law during last November. The Indianapolis company has other suits of a similar nature pending in the New York Municipal Court.

WORKING NIGHT AND DAY

THE Racine Foundry Company, of Racine, Wis., has added a new building to its plant which will permit the firm to count upon a production of eleven tons of cylinder castings per day. The company is now working night and day to fill orders for motorcycle cylinders, and for the time being it is compelled to refuse new business in order that present customers may have their wants filled.

A DIRECT factory branch has been opened in Winnipeg, Man., by the Fisk Rubber Company, of New York City. This is one of the first tire establishments of the kind in Canada to be operated directly by the manufacturing company.

A FORMIDABLE array of Excelsior machines appears in the accompanying illustration, which shows the store front of the Central Cycle & Supply Company, 135 North Market street, Wichita, Kan. This firm makes the most of all available publicity space.

BIG HARLEY-DAVIDSON EXTENSION

MILWAUKEE, Wis.—Negotiations for obtaining what is known in Milwaukee as the Clinton street factory of the Pawling & Harnischfeger Company have been completed by the Harley-Davidson Motor Company, and in keeping with the speedy and systematic handling of all the undertakings of the latter firm, simultaneous arrangements have been made for the installation of machinery. The building has a frontage of 91 feet on Clinton street and 100 feet on Oregon street, and is a modern factory structure, admirably suited to meet the demands of the Harley-Davidson Company. There are three stories and a basement 11 feet deep.

Much of the floor space in this new acquisition, designated by the company as Factory No. 7, will be devoted to the Harley-Davidson automatic screw machine department, and some of the succeeding operations, performed with hand screw machines, will also be handled in this building. In addition the new factory will accommodate departments for the earlier operations on cylinders, flywheels and many drop forging parts.

The acquirement of the new factory brings the increase in floor space since September 1 last up to 143,600 square feet. It will be noted that this is on a basis of 28,700 square feet a month. No other industry in Milwaukee can point to similar growth, and as might be expected it is a source of considerable satisfaction to the manufacturers of the Harley-Davidson line.

BRANDT IN NEW ROLE

J. W. BRANDT, when not selling saddles, amuses himself by acting as a detective. On Tuesday, January 21, a lad walked into the office of the Troxel Manufacturing Company. A few feet from the door is a coat rack, on which hung a young lady's sweater coat. The lad deftly extracted a pocketbook from a pocket of the sweater. The act was noticed by a stenographer, who immediately called to Brandt's attention what was going on, and he gave chase and caught the thief after a run of three blocks. Although Mr. Brandt was somewhat out of breath, he claims the result was well worth the exercise.

NEW DEPARTURE ACTIVITY

ANNOUNCEMENT is made that the rapidly increasing business of the New Departure Manufacturing Company, of Bristol, Conn., will make it necessary for the firm to occupy the recently-purchased plant of the Whitlock Coil Pipe Company, at Elmwood, Conn., with all possible dispatch. It was believed some time ago that the newly-acquired factory would not have to be used for a month or two, but with the home plant at Bristol working to capacity, it is imperative that the additional space be taken advantage of at once.

SAMPSON REPAIR PLUG

A PRODUCT featured by Brown Brothers, Ltd., of London, at the recent Olympia show was their new Sampson outer cover repair plug, made for motorcycle and cyclecar tires. This plug is intended to repair small cuts or bursts. It can be used with or without solution, and as it grips the edges of the cut, it insures a permanent repair. The most important feature of the patent is the threaded wire which is used for tightening the cap, which when properly fixed will never come off. The threaded wire is removed by notching at each side with a file and snapping off.

NOT ON THE PROGRAM

ONE of the unprogrammed entertainment features toward the close of the Chicago show was the dancing of the three children of John L. Donovan, the Beckley-Ralston "live wire." The Donovan youngsters, Helena, Melvin and LeRoy, ranging from four to eight years, made the most of every lively air furnished by the band, and their surprising versatility and confidence scored a big hit and attracted a crowd of spectators whenever they saw fit to present their dancing specialty.

H. A. Fitch, of Cutler, Fla., 61 Years Old, Who Rides a Pope Single Almost Daily.

GOODYEAR SALES FOR 1912

AT the banquet given by the Goodyear Tire & Rubber Company, in Chicago, during show week, President F. A. Seiberling stated that Goodyear sales for 1912 approximated $25,000,000, thus nearly doubling the value of the output for the preceding year.

BALTIMORE SHOW

BALTIMORE, MD., Feb. 18.—The biggest motorcycle show ever held in this city opened in the Fifth Regiment Armory this evening in connection with the exhibition of automobiles. The showing of the motor two-wheelers was made more effective by the grouping of the exhibits in one corner of the building, this being the result of a complaint from the dealers, who were located in different sections of the building last year.

BILL FOR STATE FEE

COLUMBUS, Ohio.—Senator Kaiser has introduced a bill in the Ohio Senate providing for the licensing of motorcycles by the state. It is provided that every motorcycle operated within the state must pay a fee of five dollars. At present motorcycles are registered under municipal authorities.

BERNE NADALL is a recent addition to the staff of the Stewart-Warner Speedometer Corporation, of Chicago.

MORE REGISTERED SHOPS

SO great has been the demand for registered repair shop signs during the last few weeks that the F. A. M. was for a short time unable to make immediate deliveries. A week's addition to the list is reported by Secretary Gibson as follows: Knupp Brothers Garage (S. J. Knupp), Sidney, Ohio; Carter & Turner, Huntington, W. Va.; Markley-Smith Motor Company (C. F. Markley), Manhattan, Kan.; Swint Motor Company (Eugene Swint), Oakharbor, Ohio; Tyler & Brown, Cleveland, Ohio; Ludden & Whitten, Brockton, Mass.; William R. Benedict, Hudson, N. Y.; Noah Smith, San Angelo, Tex.; Ideal Cycle Company (A. M. Henney and C. A. Honsinger), Bellevue, Ohio; Hendricks Brothers (S. L. Heltman), Santa Barbara, Cal.; Morler's Cyclery (Chris Morler), Boise, Idaho; Mt. Pleasant Motorcycle and Bicycle Company (L. W. Sakers), Washington, D. C.; Garfield Park Auto Garage (H. E. Halbert), Chicago, Ill.; Boller Brothers (Albert B. Ernest), Union Hill, N. J.; Steen's Hardware Company (E. J. Steen), Findlay, Ohio; Sanford Clark, Anderson, Ind.; Corvallis Bike Works (Andrew Anderson), Corvallis, Ore., and the Frank D. Johnson Company of Worcester, Mass., received a re-issue.

A LOS ANGELES VETERAN

IN a paragraph which appeared recently in these columns, referring to veteran motorcycle dealers on the Pacific Coast, no mention was made of Lincoln Holland, the well-known Los Angeles distributor, and in fairness to Mr. Holland it should be stated that his name was omitted inadvertently. On January 31 he completed his thirty-first consecutive year in the motorcycle business, and that he is fully entitled to mention as a veteran dealer goes without saying.

NEW MERKEL AGENTS

LATE additions to the list of Flying Merkel agents are reported as follows: H. W. Vandever & Co., Wilmington, Del.; H. S. Brant, Norristown, Pa.; George B. Carter, Petersburg, W. Va.; Bond Bros., Muscatine, Iowa; C. A. Van Doren, Atlantic City, N. J.; Ropson & Brown, Batavia, N. Y.; Theodore Henn, Eldora, Ia.; Connor & McCargel, Hagerstown, Md.; C. H. Merril, Winchendon, Mass.; A. L. Aumack, Vineland, N. J.; S. Savarasske, Brooklyn, N. Y.; Cooper & Co., Ashland, Ohio; J. E. Swank, Bucyrus, Ohio; Milton & Mathews, Mt. Gilead, Ohio; D. M. Hottenstein, Lebanon, Pa.; Beloit Motor Garage, Beloit, Wis.; George Dern & Co., Wausau, Wis.

NEWARK AGENTS

HOLMES WRIGHT, formerly connected with the Bush & MacDougall Company, 312 Halsey street, Newark, N. J., is now manager of the Newark Motorcycle Company, of 47 William street, sole distributor for the Flying Merkel in Newark. The Bush & MacDougall Company handles the Excelsior, Thor, Harley-Davidson, and Henderson machines.

BUSY CANADIAN AGENT

A. McBRIDE, of Toronto, Ont., Pope and Excelsior distributor for Quebec and Ontario, recently made a business trip through western Ontario and established agencies in Hamilton, London, Stratford, Chatham, Berlin and St. Catherine's. McBride also has agencies in Ottawa and Montreal and his contracts with these sub-agents call for 150 machines, mostly of twin chain models.

BENZOLE EXPERIMENTS

ENGLISH MOTORCYCLISTS REJOICE OVER ANNOUNCEMENT THAT COLLIERIES CAN SUPPLY SUBSTITUTE FOR GASOLINE IN LARGE QUANTITIES, AND THUS OFFSET HIGH FUEL PRICES.

LATE reports are to the effect that experiments under way in South Wales to recover benzole from coal with a view of using the by-product as a fuel substitute for gasoline are meeting with success, and English motorcyclists, as well as other users of motor vehicles abroad, are watching developments keenly. Heretofore the coking ovens were so operated that the gas was simply burnt from the coal and utilized to heat the ovens, but now that the value of the gas as a means of recovering benzole has been demonstrated an entirely new system is being planned. Quite elaborate plants will be needed for the recovery of the benzole, but one large South Wales colliery has already entered upon the work of saving this and other by-products heretofore neglected, and other companies are preparing to follow suit.

Statistics collected in England show that during the last year 48,000,000 gallons of gasoline were used. The coal output annually is about 100,000,000 tons, and on this basis it is figured that enough benzole can be obtained to meet a fuel demand more than twice as large as is recorded at present. Some of the coke ovens with which experiments are now being conducted are producing benzole at the rate of one to one and three-quarters gallons to a ton of coal.

Motorcyclists in England have been forced to consider the substitution of benzole for gasoline because of the soaring prices of the latter, and it is believed that no effort will be made to send the rates higher now that the availability of benzole as a motor fuel has been demonstrated.

POOL DEFI IS ISSUED

STATISTICS are now at hand to prove that during the Chicago show, Shoemaker, of the Graton & Knight sales force, and Whitesell, the well-known Pacific coast distributor, played two match games of pool and broke even, each cueist carrying off a game. Both have reputations in trade circles as pool experts. On another occasion during the show week Sales Manager Kirk, of the Excelsior Motor, Manufacturing & Supply Company, teamed up with Shoemaker and this pair administered a sound drubbing to Whitesell and George Meiser, of Excelsior and Black Hawk fame. Whitesell and Shoemaker teamed against Leo Birkenback, of Columbus, and Mickel, the Omaha dealer, in a match game for a dinner, and the latter duo were downed to the tune of 150 to 62. Whitesell and Shoemaker now issue a challenge to any two-man team in the motorcycle trade for a match game, to be played during the week of the 1914 Chicago show, with a dinner as the stake.

NEW HARTFORD MANAGER

GEORGE S. MASLEN, Indian dealer at Philadelphia, Pa., has reorganized his store at Hartford, Conn., and has placed in charge E. B. Connell, formerly connected with A. G. Schmidt, who conducts the wigwam at Pittsburgh. Mr. Connell succeeds H. S. Lake as manager of the Hartford agency.

WILL HANDLE MOTORCYCLES

TOLEDO, Ohio.—The Maumee Motor Car Company, of Toledo, has been incorporated with a capital stock of $10,000 to deal in motorcycles and cycle accessories among other things. The incorporators are Richard D. Logan, A. J. Gallagher, M. E. Frankenberger, Adolph E. Burlen, and Edward A. Koster.

BOSCH AGENCIES

TWO of the latest agency appointments of the Bosch Magneto Company are The Powell Supply Company, 2119 Farnam street. Omaha, Neb., and The Kansas City Automobile Supply Company, 1504 Grand avenue, Kansas City, Mo.

H. F. McGrew, who lives in the wilds of the West Virginia mountains, carrying his family on a Pope.

NEW OFFICERS NAMED

THE Western Electric Company, as a result of its alliance with the Pittsfield Spark Coil Company, has chosen two new vice-presidents. Gerard Swope, general sales manager, and A. L. Salt, general purchasing agent, were appointed to these newly-created positions at a recent meeting.

NEW BROOKLYN FIRM

THE Yale Motorcycle Company, of Brooklyn, N. Y., has been incorporated with a capital of $1.000 to handle a general line of motorcycles and supplies. The incorporators are Charles Winkel, 1172 Fulton street; Irving M. Levy, 523a Gates avenue, and Eno M. Levy, 518 Quincy street, Brooklyn.

MORE ROOM NEEDED

M. B. DOOLEY, agent for the Yale in Somerville, N. J., reports having sold a number of the 1913 models in Somerset and Hunterdon counties, both of which he controls. Owing to the success he had in selling Yales last season, he has recently opened a new and larger store at 46 Main street.

A NEW firm which will sell and repair motorcycles has been opened in Columbia, S. C., and will be known as the Columbia Motorcycle Garage. The firm has contracted for the Harley-Davidson agency in Richland and adjoining counties.

THOR SALES

VIEWING the Chicago Show from a standpoint of sales it has proven a wonderful success, according to reports from the Aurora Automatic Machinery Company, Aurora, Ill., which firm is now delivering an average of forty machines a day. A. Freed, of San Francisco, who is the largest distributor for the Thor, has placed orders for fifteen carloads of machines, all of which will be shipped to him within the next two months. Other carload orders were received from Cleveland, Columbus, New York City, Brooklyn, Buffalo, Savannah, Jacksonville, Denver and Salt Lake City, thus making actual orders for twenty-four carloads received during the Chicago Show. In addition to this 750 individual orders were received from smaller agents. Originally the Aurora firm had planned an output of 10,000 machines for 1913, but it has now arranged for an additional 5,000, and increased space and facilities are being acquired accordingly.

WHO'S WHO

MUCH interest has been shown by the trade in the "Who's Who" portraits and stories published in MOTORCYCLE ILLUSTRATED. The third of this series was to appear in this number, but an unexpected delay in obtaining some of the required material is responsible for the absence of this interesting feature from this issue. The series will be resumed, however, in the March 6th issue, and continue regularly thereafter.

CARLOAD OF YALES

A. R. HORN, distributor for the Yale in Minneapolis, Minn., has just received a carload of 1913 Yales. This is said to be the first solid carload of motorcycles to be received in Minneapolis.

BILLBOARD PUBLICITY

A METHOD of advertising which has proved eminently successful in the case of Mark J. McCann, of 92 Gorham street, Lowell, Mass., is that of placing bill boards in a conspicuous position along the roads leading to the city. In this way all riders entering the city know just where the Excelsior and Dayton agent is located," says Mr. McCann.

RALPH HINOUSH, a popular Cleveland rider, has accepted a position with Tyler & Brown, manufacturers of sidecars and subagents for the Merkel. Mr. Hinousch will have charge of the repair department.

UHLER BROTHERS have just entered the motorcycle field in Cleveland, where they will be sub-agents for Thor and Excelsior machines. An up-to-date repair shop will be a feature of their establishment.

H. H. HUNTSBERY has joined the sales staff of I. H. Silsby, of Cleveland, who has been selling Merkels at the rate of one a day since the Show.

IRA C. COOMBS, 154 West Street, Worcester, has been appointed local commissioner by the Massachusetts State Commissioner.

This is Real Service

EDWARD BAUMGARTNER, contracting foreman for the Union Hardware Company of Marietta, Ohio, has ridden his 1911 Harley-Davidson 20,000 miles with a total repair expense of ten cents.

An interesting feature of this record is the fact that Mr. Baumgartner weighs 210 pounds.

Every manufacturer will tell you that his machine will stand up better than the rest, but——can any other prove it?

The Harley-Davidson costs more but is worth it.

Harley-Davidson Motor Company

MOTORCYCLE MART

One time, three cents a word; twice, two cents a word each insertion. Agents' cards, five cents per word; two or more times, three cents per word each insertion. No advertisement for less than fifty cents.

FOR SALE OR EXCHANGE

FOR SALE.—Indian twin; magneto 5 h. p., with free engine clutch; machine in good condition; tires in fine shape; price $100. H. A. Young, Utica, Ohio.

SEVEN-PASSENGER HAYNES car, fully equipped 1909 model; will exchange for 1912 Ford or similar car. 1507 Bushwick Ave., Brooklyn.

FOR SALE.—Harley-Davidson 4 h. p. single magneto, 1911 model, good running order; 2¼-in. rear tire (new), speedometer and whistle; $150. R. J. Mueller, Rhinelander, Wis.

FOR SALE.—Indian twin, late 1912 two speed; fine condition, fully guaranteed. $220. G. Leslie Dougherty, Jerseyville, Ill.

FOR SALE.—1912 M. M. Battery 4 H; good as new; enamel in fine shape, $90. Russell B. Watters, Damascus, Ohio.

MOTORCYCLE Dealers and Riders, Attention—1913 Peerless luggage carrier cushions for Indians, Merkels and others. Newest and best. Get prices from dealers or direct. Johnson, Cushion Mfg'r, Detroit, Mich.

FOR SALE.—1912 8 H. M. M. twin, like new; run less than 500 miles. Fully equipped with clutch; horn, luggage carrier, tools and kit. Must sell. First check of $210 takes it. Charles Anthony, East Berlin, Pa.

DO NOT OVERLOOK to get our bargain list. Speedometers, $6.50 up; Prest-O-Lite, $8; side cars, $35 up; pennant holders, 20c., postpaid; tandems with seat, $5. Many other bargains. Investigate. Motorcycle Exchange, Schenectady, N. Y.

FOR SALE.—1912 Bradley; good condition; exceptionally fast; cheap; also ported cylinder racing car; carbureter, piston for Flanders "4." $15. Frank Gravatt, 2203 Fairmont, Atlantic City, N. J.

FOR SALE.—Indian 7 H.P. (1912), new rear tire; exhaust whistle; excellent condition; price, $150; a bargain. W. P. Woodward, Hudson, N. Y.

WILL EXCHANGE 3 h.p. gasoline engine and D. C. generator 20 light capacity 110 volt, value $150, for good motorcycle. Albert Briggs, Rhinelander, Wis.

MODEL 8 E. 7-8 h. p. Twin Harley-Davidson; good as new; only run 1,500 miles; tires good; tandem, lamp, horn and Presto tank; all for $190. Address Grover Browning, 212 Scoby St., Greensburg, Ind.

FOR SALE—Generator and 1,400-candle power lamp; value, $13. Will send by parcel post for $9. Both new. Frank Smith, Box 167, Rose, N. Y.

MEDICAL books, manikins, chemical apparatus, chemicals, drugs, chemical cabinet, 1 set of books, Electric Engineering, nearly all new, total, $350; for cash or motorcycle, late model. Must be in fine condition; full details exchanged. J. J. Dineen, 156 Margin st., Lawrence, Mass.

FOR SALE.—1911 Model Excelsior Single, first-class condition; Prest-O-Lite tank and lamp and horn. Price, $125. W. R. Stanchfield, Fairfield Centre, Me.

FOR SALE.—1912 4 h. p. Indian; first-class condition; 2¼-in. rear tire; Ero tandem and luggage attachment; Yale shock absorber; price complete, $165. H. Lystul, Glendale, Ore.

FOR SALE.—1912 Flying Merkel 6 H. twin chain drive; guaranteed. $185. Write Alfred Bauer, Perry, N. Y.

SNAP.—Brand new Monarch 5; cost $225; guaranteed; will sell for $175. Ship C. O. D. Robert Trowbridge, Delta, Ohio.

CYCLECAR parts, nine horse Anzani motor, 2-speed gear, front and rear axles, wheels and springs. Bargain. Mack, 571 45th st., Brooklyn.

WILL TRADE 1913 motorcycle for side car and cash. Will sacrifice 1913 motorcycle ordered special and not taken. Melrose Motorcycle Agency, 111 First st., Melrose, Mass.

FOR SALE.—Bargain, $100. Pope 1912 Model 3, ½ H. P., magneto ignition; perfect running order. R. Ward, 212 Broadway, Camden, N. J.

FOR SALE.—1912 Excelsior 4 h., used 200 miles; chain drive, Bosch magneto, Eclipse clutch, horn, self-lighting lamp, luggage carrier with foot rests. Write if you want a bargain, $175 cash. Herbert Hoefer, Higginsville, Mo.; R. I. Box 6.

FOR SALE.—One new side car, complete; fits any machine, $25. H. Kaskel, Spencerville, Ohio.

HELP AND SITUATIONS WANTED

MECHANICALLY inclined, ambitious young man wants position in motorcycle repair shop; some experience. E. M. Van Name, 336 51st st., Brooklyn, N. Y.

WANTED.—Good all-round bicycle and motorcycle repair man; steady job. G. W. Campbell & Co., Waterloo, Iowa.

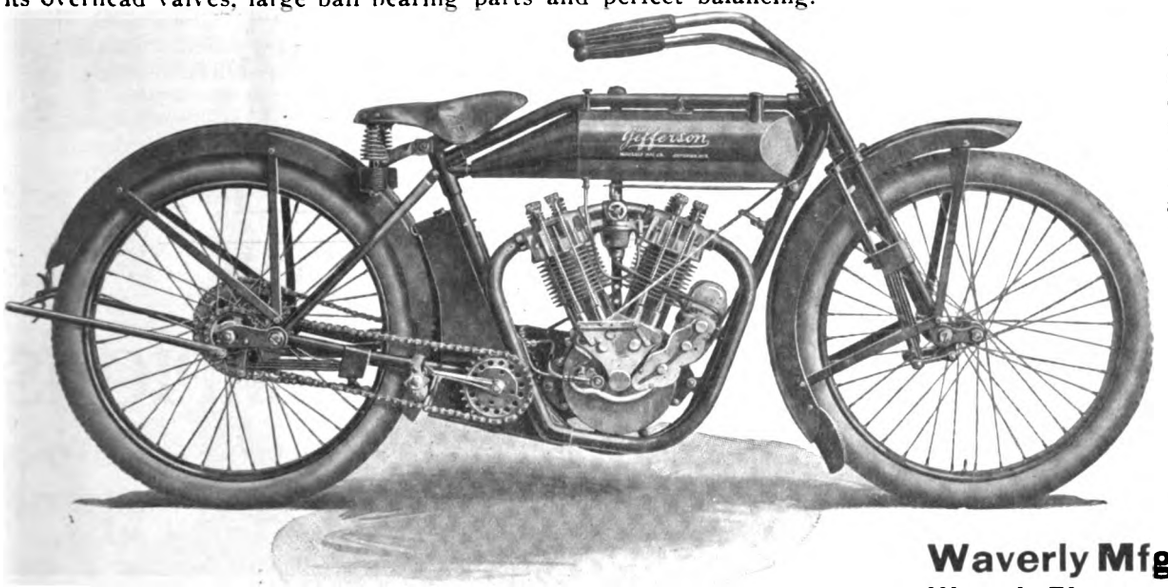
THE 1913 JEFFERSON HAS EVERYTHING

Speed—Power—Comfort—Durability

The JEFFERSON has these features in abundance. Its speed was proven beyond a doubt when, under the name of P. E. M., it won six races against twins, besides winning 37 out of 47 races which it entered. Power is assured by its overhead valves, large ball bearing parts and perfect balancing.



Aside from the automobile leaf springs, which not only make comfort a striking feature in the JEFFERSON, but add immeasurably to the strength of the JEFFERSON'S frame, the construction of the JEFFERSON — re-enforced frame parts, makes it proof against wear.

DEALERS—Our proposition is a good one. Write us about it.

Waverly Mfg. Company
Waverly Place Jefferson, Wis.

Standard

In Name and Quality

Never has there been a truer saying than the time-worn old adage, "It's the little things that count." And it is the degree of attention paid to these "little things," that determines oftimes the success or failure of a machine to "get across."

Wise manufacturers are equipping with Diamond "E" Spokes and Standard Pedals because they are quality goods—because they reduce the number of repair shop trips for the rider—because farsighted manufacturers realize that a motorcycle's weakest points are its strongest—and it is that infinite attention to detail which bespeaks perfection.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond "E" Spokes and Nipples. The motorcycles that are not so equipped will inevitably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

Everyone knows the superiority of Standard No. 3 Pedals, their deep, soft rubber cushions, the interchangeability of the rubbers, and the thousand and one other good features that are not found in other pedals. The feet cannot slip no matter how rough the going. And the perfection of Diamond "E" Spokes is proverbial.

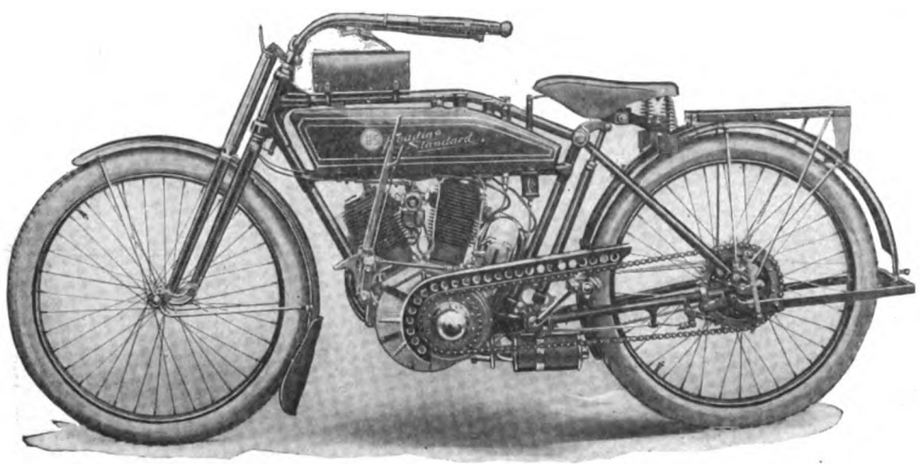
WORCESTER MASS.

THE OLDEST MAKERS OF THE NEWEST MOTOR SEATS IN AMERICA



We can deliver your R-S at once

Riders, do not underestimate the importance of this announcement. It **means** something. This is no idle statement. Go to your dealer and ask him when you can get an R-S. You'll be satisfied with his answer.

Every rider in this country has a profound respect for the R-S. It is universally recognized as being a machine that "knows its business." To think of the R-S is to think of quality.

At the shows—visiting engineers, competent to judge, offered their opinion—that the R-S embodied those common sense features making for strength where it is needed most—absolute **reliability** and **comfort.**

Models for 1913 are: Twin, Chain Drive, $275; Tourist, Belt or Chain, $225; Service, Belt Only, $200. Get our handsome art catalog.

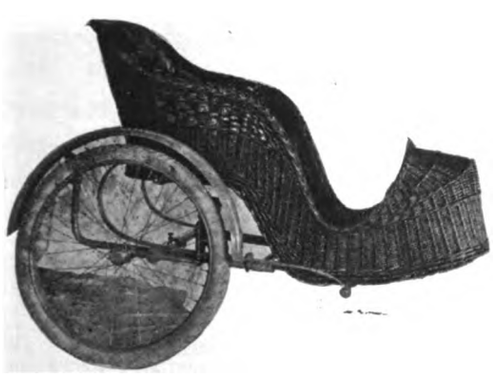
The Baxter
THE
Transcontinental Sidecar

"The most convincing proof of quality is service." What stronger proof would one desire of the Baxter Sidecar's supremacy than its latest performance—its recent transcontinental trip just completed, in which trip Messrs. Fargo and Crawford—Henderson and Baxter Sidecar—encountered every kind of road, and sometimes no roads at all. Through mud motor deep, through streams from which bridges had been washed away, through boulder-strewn mountains, "goat-paths," through desert sands, the Baxter Sidecar nobly stood the test. And why? Because it was built to endure.



The Most Powerful Frame In the World

Its chassis of seamless steel tubing, double truss frame construction and rigid mudguard gives it enormous stability. The hub spindle, the most vulnerable point on a sidecar, is turned from solid Bessemer steel.

An Indestructible Body

Made of Asiatic Reed, Indian Rattan or willow, the Baxter Sidecar Body is strongly reenforced with steel. Extraordinary precautions have been taken to prevent the deep leather cushions from fraying or the willow from weaving.

The Marvellous Baxter Spring Wheel

This special feature has done much to bring for the Baxter Sidecar that popularity which it so richly deserves. But this feature alone would not assure a sidecar's continued popularity were it not reenforced by other features of like merit.
The Baxter is an all-around perfect sidecar, built by a man who has done nothing but make sidecars for the past ten years.

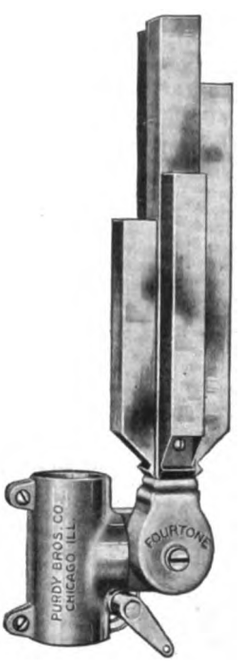
THE BAXTER SIDECAR CO.
119 BROADWAY, CAMBRIDGE, MASS.

"Purdy Fourtone" WHISTLES

The latest creation in the line of motorcycle alarms—the highest type of a melodious warning. Equipped with an entirely new style "Purdy" valve, which operates similar to a trap door and when blown forces the full exhaust through the chimes, emitting a musical organ-like chord that can be heard far in advance.



The tone portion of the whistle works on a pivot with the lower part and can be adjusted to any angle. When tightened it is locked into position and positively will not jar loose.

Weighs less than two pounds—principally constructed of aluminum composition.

Pipes are securely fastened and cannot work loose—large openings throughout that will not clog or choke.

Price complete with handle bar control $7.50.

When ordering state make, horse power, and year model of machine.

Have you confidence in your lighting equipment? Is it everything it should be? If it isn't, then study the OLD SOL line, because in this lamp family is the lamp for you. From OLD SOL No. 8, the largest and positively the most powerful motorcycle light manufactured, to OLD SOL No. 20, every requirement of the rider has been carefully considered and successfully met.

OLD SOL No. 8 is the "Big Feller." It's **the** lamp for the rider who wants a surplus of light for the same reason that he wants two cylinders on his machine—just for the satisfaction of knowing the surplus is **there,** ready for any emergency. It has 1,500 candlepower.

And then there's OLD SOL No. 17, the "Big Brudder," a little less powerful than OLD SOL No. 8, but still much more powerful than any other make of motorcycle lamp.

Then we make OLD SOL Nos. 1 and 2, husky "middleweights" that scatter a light of 600 candlepower strength and differ only in bracket arrangement.

Then we make Models 3 and 4, self-contained lamps, and we make a crackerjack of an electric tail lamp and we make a dandy sidecar lamp and—oh well! The best thing for YOU to do, Mr. Rider, is to get our catalog and learn what a truly wonderful and comprehensive line of **good** lamps we make. G'wan now! Sit right down to it. It's a cinch to write a postal card. If you haven't a postal card handy, just send one of the kids out for one. You'll thank your stars you did it! You'll be considerably en**LIGHT**ened.

AUTOCAR MODEL—ALUMINUM BODY.

DEALERS!!

Do you realize the advantage of THIS COMBINATION??

No dealer should be without a sidecar to properly demonstrate his machines to any class of prospective buyers.

We use the same chassis on both the Autocar and Delivery Van Models.

You need both to demonstrate properly. We are prepared to make you a

SPECIAL COMBINATION PRICE

on an Autocar Model with an extra Van-Body, Platform and Springs.

All that is then necessary is to attach the chassis to the motorcycle and by the use of eight small bolts, the Springs and Body of either the Autocar or Delivery Van can be attached.

Write us for complete information and special price to dealers on this combination.

Universal Sidecars

are built for service and durability.
We make all styles—wicker or metal bodies.

The Monarch
Made Good at the Shows

At the recent shows, the MONARCH certainly showed up as the best ever, backing all of our claims. Orders booked at both shows go to prove this. Everybody that saw the MONARCH agreed with us that they were leaders.

Design, Quality, Finish and Construction make the MONARCH far in advance of them all. And when we say that we have the best Motorcycle built, we are telling the truth.

Our leaf spring saddle suspension was adjudged by all as the most perfect shock-absorbing device ever brought out, and on account of the incessant demand we have built a tandem, on the same idea, which was the sensation of the Chicago Show.

LESS VALVE GRINDING

Fit your engines with this valve and save the rider the necessity of frequent re-grinding.

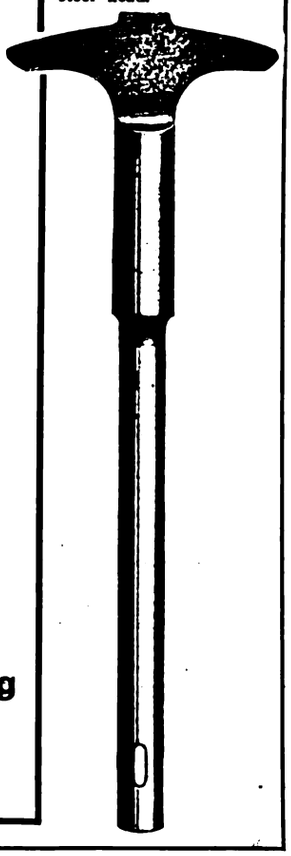
The cast iron seat does not pit even after long service. It is welded to a nickel steel head which will not warp or break.

The valves close tightly and your motor gives full power through the entire season's service.

Insure yourself now against complaints from valve trouble. Send your blue prints for our prices.

The Electric Welding Products Co.
CLEVELAND, OHIO

Cross Section showing cast iron seat welded to steel head.

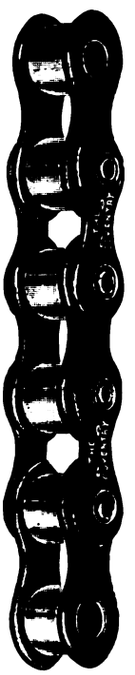


"The Coventry" Chain

"The Motor's True Mate"

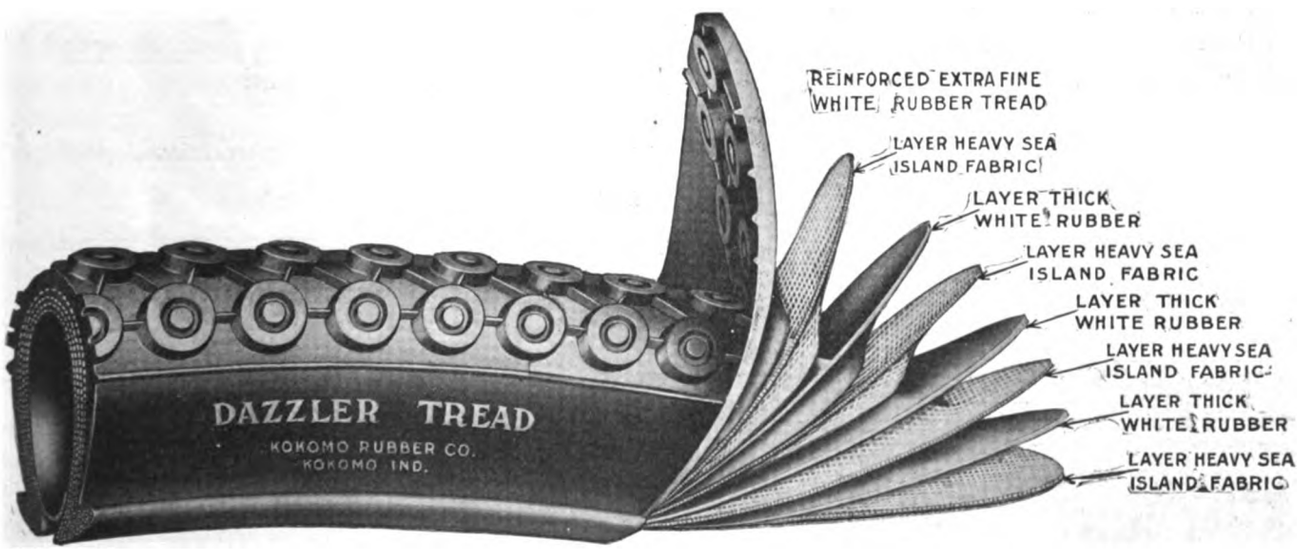
There is only one reason why "The Coventry" chains are not used on every chain-driven machine in the United States. It is because not every rider, dealer, jobber and manufacturer has yet learned how wonderfully efficient, how superbly strong, silent and supple a transmission "The Coventry" chain really is.

But our extensive publicity campaign is steadily adding more and more to the army



of "The Coventry" chain users. The enthusiasm of a "Coventry" chain user is catching. Ask him. His opinion is not biased. He will tell you the truth. He has no reason for doing otherwise. And then go to your dealer and get a set. Or if he don't carry them, order from us direct, sending his name and address. We'll send you one of our Tiger Pennants for your trouble. What do you say?

Saroo Engineering Co.
112 BROAD ST., N. Y.



The Dazzler—A Real Non-Skid Tread

Dazzling indeed in its aggregation of service insuring features is this new arrival in the Kokomo group.

Note the distinctive studs. Your eyes give you the most convincing testimony as to their efficiency as skid and side-slip preventatives. Your common sense tells you that it would be impossible to find a more effective tread. And give your close attention to the seven alternating layers of thick white rubber and heavy Sea Island cotton. Can you find anywhere a more efficient, business-like tire? (Chorus) NO!

Send for our catalog. It tells the whole story.

SPEED WITH ECONOMY

Patented in Europe

Patented in America

The M&M Economizer is guaranteed to increase your speed and power 20%, **WITH LESS GASOLINE,** and **LESS CARBON. IT IS ALSO GUARANTEED** to save from 40 to 50% of gasoline. It is the only known carbureter adjuster on the market. Do not throw your old carbureter away until you have applied our device. **THEN NOTICE RESULTS.** It is **GREAT** for priming the engine, and acts in the capacity of an air brake.

The M&M is nickel plated and highly polished, and it is positively air tight when closed. It requires a ¼" pipe tap to insert into manifold. It is made with six portholes, which when open, admits auxiliary air into the manifold.

READ THIS! Then watch for next month's testimonial.

Gentlemen: Elmira, N. Y., Feby. 6th, '13.
I wish to advise that I have tried the M&M on my Flying Merkel with gratifying results. In testing this device on my machine, I find to my satisfaction that it has given me from 30 to 40% more speed and power, at the same time saving from one fourth to one third gasoline consumption. I find that by setting throttle, then opening the M&M, immediate acceleration is noticeable; in closing the M&M, retardation in speed takes place (throttle kept stationary during this action). This proves that the M&M is giving more air and producing a better mixture than carbureter alone. I expect to install another Economizer on my INDIAN, just as soon as same has been overhauled, as I now receive perfect satisfaction from the use of this valve on my MERKEL.
Yours very truly,
(Signed) LAWRENCE E. POPECK,
No. 608 E. 2d St.

Money refunded in 30 days if unsatisfactory. **PRICE $1.25 Prepaid.** **Send for catalog and information.**

"Hints on Chain Drives for Motorcyclists"

That's the name of the most valuable and instructive little book ever compiled for the guidance of motorcycle riders. It tells the story of the making of the first chain by Hans Renold; it gives accurate directions as to the proper care of chains—in fact—it goes **very deeply** into the subject of chains. And you can get a copy **absolutely free** if you'll write in and ask for it, giving the name of your dealer when doing so. Of course, the fame of the

RENOLD CHAIN

as the most reliable and efficient transmission in existence has reached you by this time. Of course you know that it is almost exclusively used by the chain-drive motorcycle manufacturers in England. There is a very good reason for it. Let us explain.

PETER A. FRASSE & CO.

Buffalo 419 Canal St., N. Y. Philadelphia

This "Ad" is meant for the Ladies

We wish to call attention to our ladies' clothing department, and particularly to the skirt illustrated here. This skirt may be used either for riding or walking purposes. The two divisions of the skirt are formed in front by a button panel and when worn thus appears as an ordinary skirt. When riding, the front panel is unbuttoned at the left side, folded over and buttoned down the right side or removed entirely, as desired. We make a Norfolk Jacket to complete this habit, which is similar to our men's jacket. These habits are symmetrical in outline, practical, smart, sensible and are the perfection of the tailor's art.

Dealers—Read This-Then Act

Dealers—are you awake to your opportunities? Do you realize that every minute some other dealer is making a sale which **you** should rightfully be making? White strip and Sea Lion Belts will find a ready sale because discriminating and experienced users realize their superior quality. **Write us about it.**

White Strip Belts

The distinctive feature of the White Strip Stretchless Belt is a thin strip of White material, which runs the entire length of the belt between the outer plies. This insert has over 3 times the tensile strength of single leather. The entire strain of the Belt comes on this center ply and the outer layers of leather act as a cushion on the pulleys. This is only one reason why White Strip Stretchless is superior to other Belts. White Strip Stretchless Belts are guaranteed in the strongest way.

Sea Lion Belts

The leather used in Sea Lion Belts is made from specially selected stock, cut from the choicest part of the belting butt —the center of the back. It is tanned with pure oak bark, by the old-fashioned, long-time process. This is the only process ever developed that properly tans leather for belting purposes. These Belts are built along the lines of our factory Belts. Sea Lion Belts are protected by an unusually broad guarantee.

At Last—A Real Motorcycle Spark Plug!

MADE OF HEAT DEFYING, PERFECTLY INSULATING PORCELAIN—AND DESIGNED FOR MOTORCYLES ONLY

No need any longer to use the inferior mica plug or a makeshift porcelain. This new Motorcycle Standard Spark Plug, built by the greatest manufacturer of spark plugs in the world, gives motorcycle riders a plug with a porcelain insulator that is faultless, defies heat and insures perfect ignition.

MOTORCYCLE STANDARD SPARK PLUG—$1.00

Leading motorcycle engineers of the country have pronounced this plug right in principle and construction. The length over all is 2¼"—just the right size for the limited dimensions available for a spark plug in the motorcycle motor. The porcelain is made in our own potteries. Heat cannot crack it. The bushings are case hardened. The terminal nut will take ordinary wire, ring, or special "Indian" terminal.

Comes in half-inch or metric sizes. Your dealer will supply you—or sent prepaid on receipt of price and size. Our guarantee—"Your money back or a new plug, unless you are absolutely satisfied."

Jeffery-Dewitt Company 55 Butler Avenue, Detroit, Mich.

The Miller "Block" Non-Skid Tread" Tire

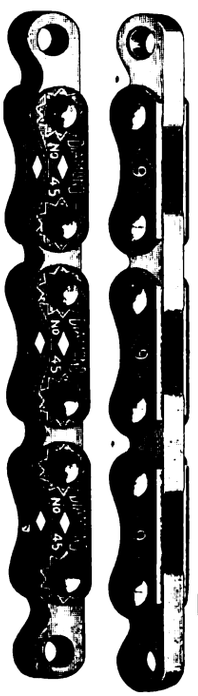
"When we put out a Diamond Chain we never hear of it afterwards"



Years ago the Davis Sewing Machine Co. decided upon Diamond Chains. They have had no regrets since as evidenced by their testimony above.

It's the high grade material, accurate workmanship and our pioneer experience in chain making that make such lasting friends for Diamond Chains, and have made these the standard equipment for the past 21 years. When buying a new chain, know what you are getting. Look for the Diamond trade-mark on the connecting link.

STOLL DREAM TANDEM

PATENTED

"JUST FLOATS ALONG"

A few of the features that help make the STOLL DREAM TANDEM the easiest riding tandem in the world.

Genuine leather cushions gracefully shaped and provided with skirt guard and pockets.

Folding foot-rest.

Rocking motion which allows the tandem to remain steadily in the same position, regardless of the jolting of the machine.

The back-rest combined with the rocking motion give the rider a sense of security and comfort found in no other tandem. Can be raised or lowered instantly while riding.

Send for catalog. Dealers' proposition now ready.

Brown Scientific Non-Deflating Pneumatic Tube

AN AIR-FILLED MOTORCYCLE TUBE POSSESSING VERY UNUSUAL FEATURES:

First: It withstands a tread puncture without deflating the tube.
Second: The higher the pressure the tighter the puncture closes.
Third: It eliminates the risk of destroying casings by reason of punctures.
Fourth: The danger of loss of control of machine is removed.
Fifth: It assures you of not being obliged to repair a puncture on the road and gets you "there and back" on full tires.

AIR FILLED ONLY.

Punctures are self-closing by reason of a scientific but simple principle of construction.

NO "DOPE," GUM, PASTE OR OTHER STUFFING MATERIALS.

Write for prices, full description and sectional sample.

Mott Rims for Strength

THE superiority of the Mott motorcycle rim lies in the little points that the average riders never notice, but that show up strongly in hard service. For instance, take the way the spoke holes are punched. On Mott rims this is carefully and accurately done so that there is ample strength to hold the nipple securely. Sketch No. 1 shows the idea.

Most other rims come out like No. 2. This part of the work is hurried over, carelessly done, and as a result the holes are counterpunched too deep, making a weak spot, which often allows the nipples to pull through the rim.

Mott thoroughness shows up in the tests. Note the wheels that come through the severe endurance runs in the best condition. You'll find them fitted with Mott rims. To be sure of satisfaction, specify Mott rims for your machine.

WRITE US FOR FULL DETAILS
THEY WILL SETTLE THE RIM PROBLEM FOR ALL TIME

Showing Back Closed

REAL SEARCHLIGHTS

Dictionary Definition—"SEARCHLIGHT—A powerful light set in a reflector and so mounted that its rays are almost wholly gathered into one beam, which may be used to throw light on distant objects."

This definition accurately describes the action of 20th Century Lamps. Their construction closely parallels that of the naval searchlights. That is why

20TH CENTURY LAMPS

do not scatter their rays. They have a long range power with direct concentrated ray, revealing dangers in plenty of time to be avoided. They brilliantly illuminate the road far ahead, mercilessly exposing every rut, every stone in the road. They are the ideal touring lamps.

Our illustrated catalog describes our entire line and is yours for the asking.

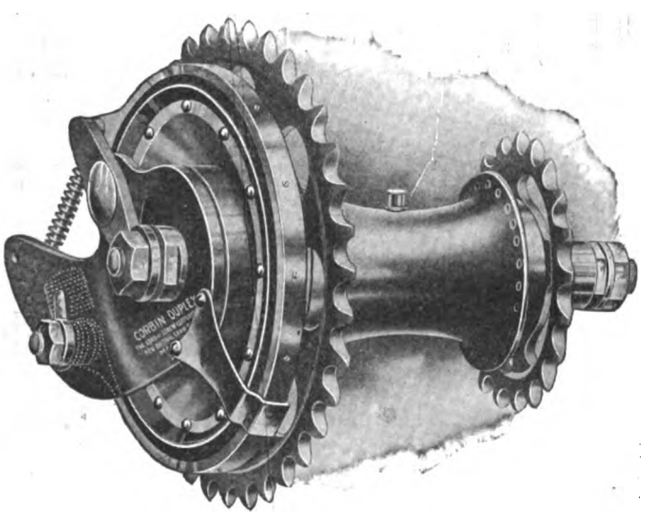
The Popularity of the

Corbin Band Brake

FOR MOTORCYCLES



This is fully attested by the fact that so many motorcycle manufacturers are equipping this brake to their 1913 models.

Over one-half of all the motorcycles that will be manufactured in America during 1913 will be Corbin equipped.

The Corbin is the brake that motorcycle manufacturers take pleasure in announcing in their catalogs. It is the one brake that holds the full confidence of motorcycle riders.

Send for new 1913 catalog describing all the models of Corbin Brakes and Hubs.

Your Motorcycle Becomes a Different Machine the Moment You Equip

PENNSYLVANIA Oilproof VACUUM CUP TIRES

built to the same standard of construction as our Oilproof Vacuum Cup Automobile Tires.

With these tires your machine cannot skid on wet or greasy pavements—the suction hold of the Vacuum Cups is positively dependable.

Yet there's not the slightest loss of power.

With these tires you can travel over even freshly oiled roads with impunity. They are absolutely oilproof and immune from "oil disease."

What Is More

Vacuum Cup Motorcycle Tires carry a definite printed guarantee of

5,000 MILES

and average a far greater distance.

When writing to advertisers, please mention MOTORCYCLE ILLUSTRATED.

Digitized by Google

To the best of our knowledge, gained by wide observation and investigation

Our guaranteed mileage of 5,000 miles represents twice the average mileage made by ordinary motorcycle tires

If you realize that your motorcycle is a true power-propelled machine and not merely a big bicycle, then you will equip

Vacuum Cup Motorcycle Tires

DEALERS: The strong tendency toward increased power that marks the production of over 80,000 new motorcycles for 1913 will lend great additional stimulus to sales of Vacuum Cup Tires, because of the safety and service qualities which lift them above all comparison with other motorcycle tires, and because of the definite 5,000 mile guarantee that backs them up. Be ready to supply them—make the most of the demand swinging over to them.

$10,000 Set Aside
To Introduce
The Rogers Motorcycle Sidecar

The motorcycle sidecar is here to stay!

The perfected 1913 Rogers Motorcycle Sidecar is the proven leader in the field. We are preparing to sweep the country during the coming season.

We are confident that the first Rogers seen in the streets of any city **will sell scores of others.**

In order to give the thousands of motorcyclists an opportunity to study the merits of the Rogers, we have decided to use $10,000 to introduce these remarkable sidecars all over the country.

Here is the plan—the benefit of the $10,000 is yours:

Write your full name and address on the Ten Dollar Introductory Certificate printed on the opposite page. Mail it to us together with ten dollars. The certificate and your money will be accepted as a part payment of twenty dollars on a Rogers Motorcycle Sidecar. The order **must** come from a city of more than 5,000 population to be considered.

Rush your order at once! We want a thousand.

The Rogers Motorcycle Sidecar

Price $85.00 F. O. B. Factory, Goshen, Ind.

Note the beautiful body design, the sweeping lines, the roominess of the body. These factors, together with distinctive constructional features easily make the Rogers the choice of motorcyclists.

Digitized by Google

The Rogers Leads Them All!

The Only Sidecar Built For Pleasure and Business

Increases Motorcycling Joys

Don't appear selfish. Don't allow your traveling companion to ride on an objectionable rear seat. Take advantage of our introductory offer and purchase a Rogers Sidecar. Your friends will be delighted to ride in it—**by your side**—with a clear vision ahead. There is no sidecar like the Rogers for beauty, comfort and safety. It has attractive racy lines—looks like an automobile. The tonneau is roomy. The seat and trimmings enhance the car's appearance and give additional comfort to the passenger. Long, resilient springs insure maximum riding ease and lasting service. The car can be attached **in 3 minutes** and detached **in one minute.**

The Rogers' Delivery Service

Here is another big reason why you should have a Rogers. It is the only sidecar built that can be converted into a package carrier. You don't have to detach it from the motorcycle. All that is necessary is to remove the seat and trimmings as a unit. The operation takes less than a minute. When it is finished you have a spacious, reliable carrier of merchandise. It will sustain a load of 400 pounds. It has a capacity of 20,000 cubic inches. It is just the kind of a delivery service every merchant should have. It is swift—economical. Get a Rogers and it will build your business by assuring your customers of a rapid delivery service.

Constructional Points of the Rogers

The Rogers Sidecar was designed and built by a noted engineer. Every part is so constructed as to give strength and durability, comfort and safety. Read a few of the specifications: Extra long Cee springs of special design, constructed to eliminate the use of shackles that work loose or rattle. Frame of Shelby seamless tubing welded with oxygen-acetylene process instead of brazed. Fittings all steel. All adjustments for lining up motorcycle and sidecar by threaded parts. This, together with square tubing found in no other car, makes loss of alignment impossible. Body enameled and striped in red, gray, bronze and black.

Get in the Race! Clip the Certificate Below! Mail It Today!

Clip the certificate below now. Don't delay a minute because scores of others in your locality will be in the race. It's an unprecedented offer. Mail the certificate and your $10.00 and we will credit you with $20 on your Rogers as stipulated below. This offer is backed by every resource of this company. We back this offer by our reputation. Clip the certificate now.

Pittsburgh, Pa., Feb. 24th, 1913.
Continental Rubber Works, Erie, Pa.

Gentlemen: I am writing this letter to inform you of the wonderful service of a Continental Tire that was purchased by me from a Buffalo jobber last summer; this tire is the regular 28 x 2½ size and was installed on the rear wheel of a Yale Motorcycle. After 2500 miles of hard service, it was put on the front wheel and entered in the Columbus tour to the F. A. M. meet last summer, since that time the tire has traveled 1500 miles on the front wheel and has never been punctured.

This tire is still in excellent condition and has certainly proved that the tire for service is the Continental. When the buttons are off the tread, you still have some tire left and this is where the rest fail.

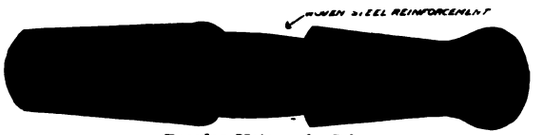
I have specified my new machines to be equipped with your tires and know I will not be disappointed.

If this letter will be of any assistance to you then use it as you wish, as all the facts are absolutely correct.

Wishing you every success, I remain,
Very truly yours,
(Signed) EARL W. DEAN.

4000 Miles on Continental-Erie Tires without a puncture!

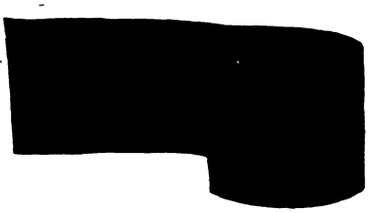
That's Service for you!



Regular Motorcycle Grip.

Continental-Erie Woven Steel Reinforced Grips are the only grips made that are ABSOLUTELY INDESTRUCTIBLE. The Woven Steel Reinforcement in the center part of the Grip strengthens it at its weakest point and prevents it from breaking. In addition to the steel reinforcement, our Grips have an inner lining of fabric which makes them as pliable and as resilient as any other grip on the market. These are made to fit all makes of machines.

When ordering your 1913 machines, specify these Grips and thus avoid replacements.



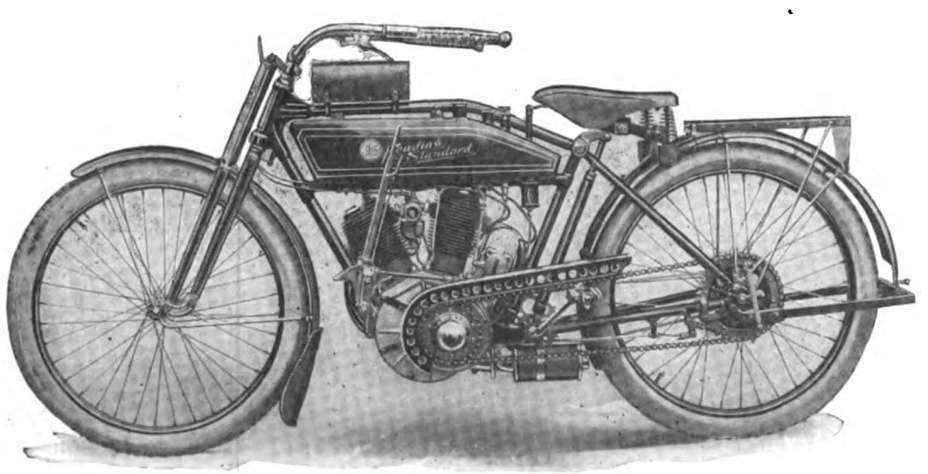
Continental-Erie Non-Slip-Lag The only pulley lining on the market that gives entire satisfaction, prevents belt from slipping, increases power, applied without removing belt or wheel. Carried in stock by all jobbers and dealers.

CONTINENTAL RUBBER WORKS, Erie, Pa.

BRANCHES { NEW YORK 35 Murray Street | CLEVELAND 1551 Columbus Road, N. W. | CHICAGO 180 No. Market St.

Mr. Dealer, what will you do if you lose the R-S agency for your town?

With what machine will you attempt to compete with the R-S? What other machine has a motor like the R-S, with its integral cams and gears of specially treated vanadium steel, its large cooling flanges, its long stroke, its foot rests, its perfect shock-absorbing spring seat posts, its double brakes, double oiling system, and hundreds of other features?



What other machine has anything like the perfect service behind the R-S, the product of years of rigid study and research?

And what other motorcycle has behind it the sterling reputation, the good name of the R-S? Can you afford to compete with the R-S dealer?

Our catalog is yours—if you want it.

The Biggest Hit at the Show

The Perfection Electric Motorcycle Horn

This was the only electric horn shown which was furnished complete with all attachments for operating. Hardly a dealer has seen this outfit who has not ordered from one to a dozen, a large number of distributors taking from twenty-five to one hundred each. Three Canadian dealers recognized the worth of this horn and are numbered among those who placed orders with us.

This horn gives a long-range, penetrating sound similar to that emitted by the electric automobile horns.

We furnish with the horn a standard battery which will give long service, the battery being enclosed in a nicely nickeled case which can be fastened to the frame of the motorcycle with clamps which we also furnish. All the tools necessary to attach the horn and outfit are a screw driver and wrench. Horn comes complete with all attachments. No extras to buy—comes all ready for business. The best thing in the way of a motorcycle alarm ever invented.

Dealers should have a sample outfit—large sales and legitimate profit assured. We have them ready for delivery.

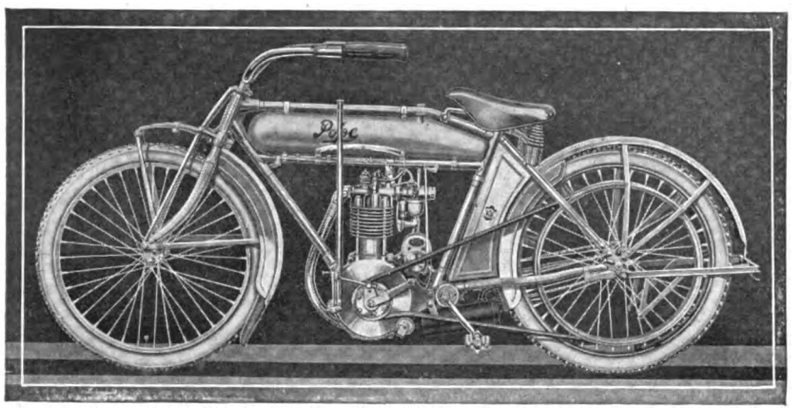
The Leading Lines for 1913 Includes Two Pope Pioneer Motor Cycles



Model K—"Big 4"—$200—Magneto Equipped.

The Powerful "Big 4" with Mechanically Operated Overhead Valves—producing more power because of Quick Ignition, Direct Thrust, and Positive Exhaust.

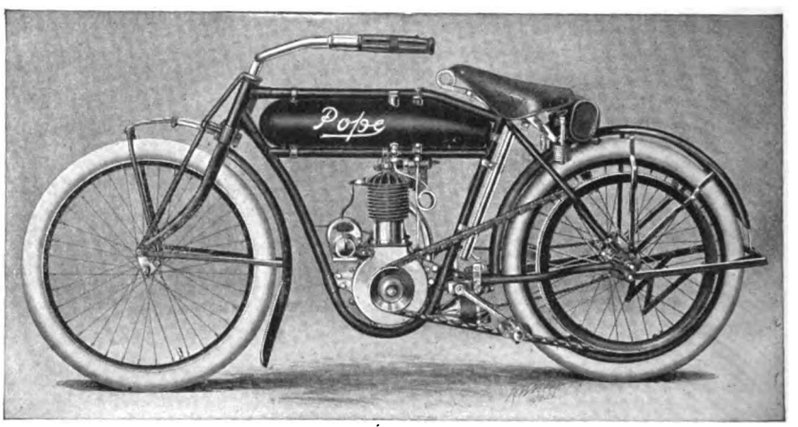
Offset Cylinder—eliminating dead center and giving maximum power at slow speed.

Cylinder and Head, separately cast, preventing carbon deposits and facilitating cleaning.

The Light, Reliable, Economical, Model H—a 4 h. p. machine, unquestionably the best of its type.

In a class by itself, its cost of upkeep is extremely low. A practical machine for every commercial purpose, always on the road and ready for use—not in the repair shop with the rest.

The leading machine of Moderate Size, Power and Price.



Model H—Lightweight—$165—Magneto Equipped.

POPE QUALITY HAS NEVER BEEN QUESTIONED

Every dealer is urged to consider the reasons which underlie the Big Lead of the Pope for 1913.

COMPACTNESS—
SIMPLICITY—
STRENGTH—
DURABILITY—
POPE FEATURES
POPE PRICES
BEAUTIFUL LINES

Two Dominant Reasons in the Chain Models

Overhead Valve Motors—More Power—More Accessible—Simpler Valve Mechanism—Interchangeable.

Pope Rear Spring Suspension—Insures riding comfort without retarding speed. Holds wheel in perfect alignment. No side play. No recoil shock. Springs of different gauges to conform to varying loads. Convertible at any time to rigid frame with low center of gravity.

POPE LINE OFFERS GREATEST VARIETY OF MODELS AND PRICES:

MODEL L, "Twin" - - - - $250 **MODEL K, 4 H.P. (Belt Drive), $200**
MODEL M, 5 H.P. (Chain Drive), $215 **MODEL H, Lightweight - $165**

DEALERS

Get the Agency for the "Black Hawk" and You Can Control the Motorcycle Sales In Your Territory

This statement is founded on good, solid facts—facts that will aid you to sell more motorcycles, in time, than the claims of any other machine on the market.

Just read this ad and note for yourself the real quality behind this better motorcycle. Or, perhaps you know all about the "Black Hawk" and its features of superiority. Perhaps you have read our advertising and noted **the frame-and-tank construction, the mechanical oiler with sight feed, the spring seat-post, etc.**

But if you don't know all about this wonderful motorcycle, its features of excellence, **its tremendous selling possibilities, etc.**, you should learn all about it right now.

The Steel Tank Built Integral With Frame is one feature that will appeal to every rider. Built of 16 gauge tubing it is practically indestructible. The frame is reinforced so as to positively prevent centralization of vibration and is the most reliable of any ever constructed. Another advantage of our frame design is that it permits low saddle position without loss of frame **lines.**

The Low Saddle Position of the "Black Hawk" is a reality, the saddle being **only 29½ inches** from the ground, allowing the rider to place both feet flat on the earth without straining.

The Mechanical Oiler, With Sight Feed, is another remarkable invention (patent pending) which marks the superiority of the "Black Hawk" motorcycle. Our oiling system, of which there is **only one working part,** requires no attention. It is **positively automatic in action.** Once adjusted, it regulates itself to speed at which machine is driven and the flow stops when motor stops. Sight feed is provided to observe the adjustment. In addition to our mechanically operated oiler, the "Black Hawk" is equipped with suction sight feed system to supply surplus oil, should an excess quantity ever be needed, as in racing.

The Spring Seat Post, an absolutely shock-absorbing device that provides rider with utmost comfort in riding, coupled with safety, is accomplished by an entirely new method of spring suspension, which gives a soft spring action for ordinary work. In case of excessive shock the arrangement of the levers checks the downward movement of the saddle easily and noiselessly. All of the working parts are enclosed in one compartment of our specially designed tool box.

The Motor is without a doubt the most reliable, efficient and flexible of any motor ever put on a motorcycle. It is clean and oil tight,

TRADE MARK
BLACK HAWK

while its position in frame permits of its easy removal. One year's strenuous abuse under every possible variety of trying conditions failed to develop a single weakness.

The above are only a few of the "Black Hawk's" features that show it to be worth every cent of the $235.00 asked for it—**and a good deal more.** No motorcycle ever contained so much real value—values which could be checked up with every assertion of the manufacturer.

In addition to the selling points which we have mentioned, the "Black Hawk" leads in

Spring Fork Construction;
Improved Eccentric;
Simple Grip Control;
New Free Engine Clutch and Coaster Brake;
Simplicity and Accessibility of all parts, etc.

All of the features which we mention are features which are of utmost value to anyone considering the purchase of a motorcycle.

For instance, one decided advantage of the "Black Hawk" system of building the tank integral with frame is that it adds greatly to the strength and stiffness of both tank and frame, positively prevents leakage, does away with a large number of objectionable small parts, eliminates pockets which gather dirt, and makes possible our large filler caps which render funnels unnecessary.

Take the motor, too. When we claim **greater flexibility, reliability** and **efficiency,** this is more than a mere statement. We mean:

Flexibility—the ability of the motor to handle machine at all speeds from 50 to 60 miles and down to 4 miles per hour without the use of the clutch.

Reliability—the ability to travel hundreds of miles without making numerous road adjustments such as are necessary with most machines.

Efficiency—the delivery of ample power under any and all conditions, the "Black Hawk" motor developing more than 6 h. p., as has been shown by repeated brake tests.

Take any single part of the "Black Hawk" and you'll find the same condition exists. That is, that it is an improvement, a refinement, over any part on any machine.

In appearance, there is no room for argument. The long-straight lines of the "Black Hawk," its clean cut design, its real beauty and symmetry are evident in the illustration shown at the top of this page. Look at it. Compare it with the ordinary type machine, for instance the loop frame construction, and you'll admit that, in itself, is one reason why the "Black Hawk" is worth more in dollars and cents, and will sell more quickly, more easily than any other machine on the market.

A Big Opportunity for Dealers

Dealers who are desirous of obtaining selling rights for the "Black Hawk" in their locality are invited to write us. The selling possibilities of the "Black Hawk" are tremendous for the simple reason that the dealer back of our motorcycle has a great advantage over all his competitors. Our liberal contract terms and proposition to agents has met with great favor from other dealers. Write us, while territory is still open, and we will lay our plans bare before you.

To Riders You owe it to yourself to investigate the "Black Hawk's" claims before putting your good money into any motorcycle, regardless of make and price. If you will write us, we will send you a handsome catalog which will give you a more complete idea of Black Hawk Motorcycles—their absolute quietness in operation, their unsurpassed riding qualities and their perfect control at all times. Write for catalog—NOW—today.

Prest-O-Lite
For Motorcycles

Ride at night with pleasure and safety

Ride when and where you please. Don't be tied down to the daylight limit, and don't judge night riding by experiences with oil or generator lamps.

Get a lamp big enough and a Prest-O-Lite for motorcycles. Then get out on the country roads. You'll have a brilliant, dependable light that turns on and off like a gas jet, at no greater expense—in all probability less cost—than carbide to feed a generator.

Regard this as an investment

$10 with gauge

Don't consider the price you pay for Prest-O-Lite as money spent. It isn't. A Prest-O-Lite can always be sold for about what you pay for it. It is the only part about your machine that doesn't become second-hand, because genuine Prest-O-Lite is in universal use and demand everywhere. And remember one spill caused by unreliable light might prove more costly than years of Prest-O-Lite service.

Test Prest-O-Lite, FREE

Let any dealer put Prest-O-Lite on your motorcycle. Use it for 30 days. Try it out over country roads and city streets. Prove to yourself that it's the best accident insurance you ever bought. We take all the risk. If you find that you can afford to be without Prest-O-Lite, take it back and your money will be refunded.

Write today for full particulars.

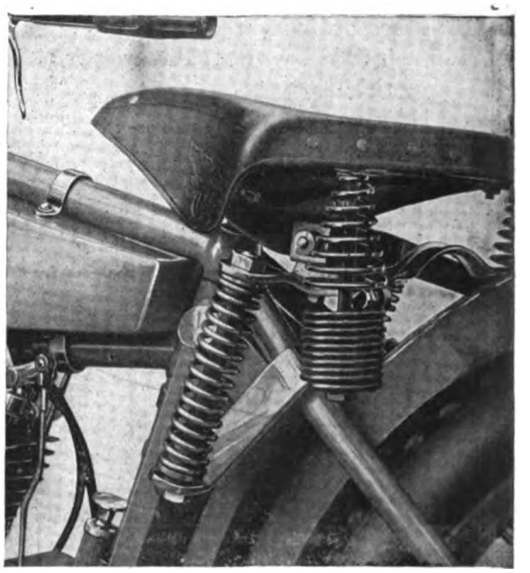
YALE

Comfort, without Danger

ON the Yale, road jars are eliminated by 128 inches of springs, (10 feet 8 inches of steel in two big coils each six inches long) in the Y-A shock absorber, placed where most good is done and comfort is insured without loss of strength.

We do not risk the rider's safety by sandwiching springs into the frame, where a break may mean serious injury.

→ Watch for changes in the spring frame designs that are now being boasted of. Their mistakes will come to light quickly on the road.



REAR-WHEEL jolts are smoothed out for Yale riders by the famous Y-A shock absorber, the "shock absorber that absorbs shocks." Two big, competent coil springs take up every big jar or little vibration—for there are 128 inches of spring steel in those two big coils. Its location is most effective, for it insulates the rider from all effects of rough roads and relieves the machine of the effect of jars and vibrations, without weakening the frame or necessitating hinged frame joints where sideplay develops to make control difficult. Y-A design makes sideplay impossible and gives the lowest saddle position. It has all the effectiveness that other designers hoped to get with elaborate spring frames, but it has none of the complications, weaknesses, and faults that make failures of the others. The Y-A shock absorber has had years of practical trying out and is proved to be right—it is not a "revolutionary" 1913 experiment.

Thor

The World's Greatest Motorcycle

Why We Can Give You More for your Money

In our preceding advertisement, we showed the desirability of making all parts under one roof, from the standpoint of **service** and proper co-ordination of parts. We showed how the THOR, with its distinctive features, had a clear title to its name.

Now we want to present another side of the question—that of quality. Did you ever stop to think that the manufacturer who eliminates parts-maker's profits by making his own parts and accessories, can afford to put better material, more time and attention into his product than would otherwise be the case? That he can give you **more** for your money?

It is a fact widely known throughout the motorcycle industry that no manufacturers make more of their own parts than do the builders of the THOR.

The THOR motor, with its roller bearing connecting rods, mechanical overhead intake valves with THOR ball and socket joints; the THOR carbureter, with its improved twin air adjustment and butterfly valve, the famous THOR undergeared direct chain drive; the THOR ball-bearing free engine clutch, continually running in oil; the THOR mechanical force feed pump, oiling crank case direct, and the celebrated THOR two-speed gear—these are some of the parts made in our enormous factory.

THAT is another good reason why you should carefully consider the THOR line, which comprises Model 13-M, a 4 h. p. single at $225; Model 13-W, a 5 h. p. single at $240, and Model 13U, a 7 h. p. twin at $290. Two speed and two-speed control for any of the above machines, $40 extra.

Get our art catalog, dealers, even if you're booked up for the season. You will be interested, nevertheless.

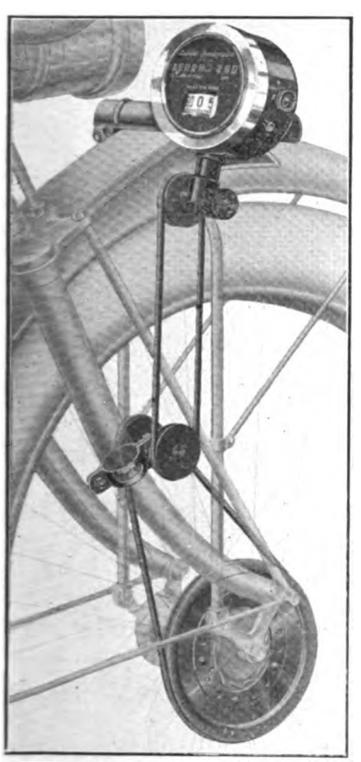
Model D

75-mile speedometer; 100,000 mile season odometer; 100 mile trip register, which can be readily reset to any tenth of a mile without disturbing total mileage of season register, front wheel two belt drive complete with pulleys and brackets.

The New Stewart Motorcycle Speedometer

Magnetic Type

Showing the new Two-Belt Front Wheel Drive



HERE is the only practical motorcycle speedometer made. Just as accurate, reliable and complete as our most expensive automobile speedometers. Our Front Wheel Two-Belt Drive and manner of installation render it impossible for the speedometer to get out of alignment with its driving equipment, this because both instrument and driving equipment are attached firmly to parts that move in unison.

Is installed upon your mudguard or extension spring. As it thus is within the range of your headlight you can read it as easily at night as during the day. This is an exclusive feature not to be had with any other make.

Indicates accurately miles per hour, miles per day or trip; miles per season.

This special instrument is made on the famous magnetic principle. Over 95% of all the speedometers manufactured (for either motorcycles or automobiles) are now built on this practical principle.

For sale by dealers all over the world. Price $12 complete.

Write us for a handsomely illustrated catalogue which explains in detail, the many advantages and fine construction of this improved motorcycle instrument. This book is free. Write today.

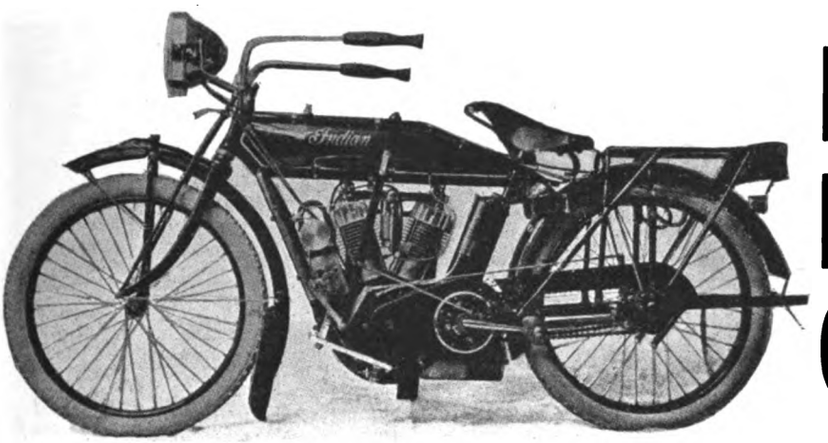
The New-Lite



Electric Lighting Outfit

IS NOT run by friction on the tire, but rather direct from the engine. It **does not** go out every time you slow up or stop for a minute. It runs whenever the engine runs, whether machine is standing or moving. It will furnish more current than can ever be used on a motorcycle, including the largest headlight, tail light, sidecar light, speedometer light, watch light, and will run an electric horn or anything electrical. It is right. We guarantee it.

Our popular outfit No. 2, which includes large 8-inch headlight with 18 c. p. bulb, fine tail light, generator wire, switch brackets, pulleys, belting, etc., all ready to install. We furnish pictures with which anyone can understand how to install system. Price complete, $30. We will be making deliveries for all machines soon, but are making deliveries now on Indian outfits. Orders will be filled in rotation. Send full amount or $10 deposit, and we will ship balance C. O. D.

This Brake Was One of the Most Important Features of the Shows

It is exactly the same kind, type and design of a brake as is used in automobiles.

It is powerful enough to hold an automobile—or a motorcycle of several times the horse power of any now on the market.

It gives you everything the autoist has:—

Absolutely reliable control of your motorcycle under all conditions;—

Fool-proof—a brake that will not wind, bind or lock;—

A slight back pedaling pressure will exert a retarding force of a ton and a half.

You surely want to know about this newest motorcycle device.

Write for fully illustrated and descriptive literature.

United States Tires

The Tires that will cut down your tire expense

Suppose your gasoline bills were running too high, and you determined to find a way to reduce them. The natural thing for you to do would be for you to talk the matter over with several of your experienced rider friends.

Each one would probably give you some scheme that he had worked out for himself. Combining these ideas would be certain to make a substantial reduction in your gasoline expense.

The four separate factories of this company have spent years in devising methods of reducing tire expense.

Today the rider who uses United States Tires gets the benefit of all their experience and all these money saving ideas, combined into one tire.

TEN CENTS A COPY
ONE DOLLAR A YEAR

F. A. M. APPEAL TO NEW YORK LAWMAKERS

Alexander Schwalbach, Representing Legal Action Committee of Federation, Starts State-Wide Campaign to Prevent Adoption of Undesirable Motorcycle Regulations.

MOTORCYCLISTS throughout New York State will welcome the announcement that there is to be no lapse of F. A. M. activity in the movement to prevent passage of drastic motorcycle regulations by the State Legislature in connection with proposed automobile amendments, and that in the absence of Chairman Sauer, of the Federation Committee on Legal Action, the campaign to protect the interests of riders will be carried on by Alexander Schwalbach, one of the best known cyclists in the metropolitan district. Before leaving New York on his F. A. M. lecture tour Mr. Sauer placed the matter in the hands of Mr. Schwalbach, and with characteristic promptness the latter entered upon the task of convincing the State lawmakers that the references to motorcyclists in the amendments under consideration are not justified. He has already brought the motorcycle situation to the attention of several State senators and assemblymen and obtained pledges from these members of the lawmaking bodies that they will oppose the passage of a bill imposing a tax upon motorcycles in the Empire State.

Mr. Schwalbach is also making arrangements to bring the matter in person to the attention of Governor Sulzer, who is known to have a broad policy with reference to all outdoor sports. By way of supporting Mr. Schwalbach in his appeal, motorcyclists throughout the State are requested to communicate with their senators and assemblymen at once, making known their objections to the proposed regulations and asking that motorcycles be eliminated from the motor law amendments. If such action is taken without delay it is practically certain that the references to motor two-wheelers will be stricken from the bill.

"We believe that it would be unfair to impose a tax upon New York motorcyclists at the present time," said Mr. Schwalbach, "in view of the fact that the State has a comparatively small number of riders and that the wear resulting to the roads from their mounts is insignificant. There are, roughly speaking, 9,000 motorcyclists in New York State, and it must be admitted that they represent a very small percentage of the State's population of about 9,000,000. If a tax of, say, three dollars were imposed on each motorcyclist the total income to the State would be small and little good would be accomplished through this revenue, but the strain placed upon the individual rider would in some cases amount almost to a hardship. Motorcyclists in general are of the middle class, and we do not feel that they should be called upon to pay a tax for exercising the only means of recreation many of them have. At no stage of the game can the motorcycle be brought under an automobile classification, and this is practically what will be done if the motor two-wheelers are included in the contemplated amendments.

"There is no practical reason why the State should desire a new policy with reference to motorcycles at this time, and if the situation is properly called to the attention of the senators and assemblymen by the riders of their respective districts we are firmly convinced that there will be no change."

The ALL SEASON SIDE CAR

by MEEDS D. HULSE

MANY of my friends insist that my record as a sidecarrist is out of the ordinary and that I am entitled to credit for getting more actual value out of my outfit than the average motorcyclist, but I must say that I have never viewed my achievements in that light. I simply lay my plans for a trip and then buckle down to it without ever thinking of such a thing as failure. That's all there is to it. True enough, I base all my calculations on practical experience, and that may account for the fact that I have been able to do some things that would have balked most tourists, but the same opportunities for studying the demands of road work are open to every owner of a machine and sidecar. I have never seen a road where a wheel could find traction that I would not tackle with my outfit, and I never expect to see one. That's a broad statement, but I am ready to stand by it.

Only two weeks ago, for example, I struck a New York state road where the mud was so deep that it slopped into the sidecar, and for several miles the wheels of my motorcycle were buried almost to the hubs. This was one of the worst trips I have ever experienced, and I will be frank enough to say that before I was through with it I had to pay a farmer for hitching a horse to my machine and towing it over a mile. Some idea of the depth of the mud may be gained from the statement that an automobile which had passed over the road ahead of me had sunk so deeply in the mire that its curved front axle ploughed a perfectly formed trough in the center of the road.

AN ALL-SEASON ENTHUSIAST.

My machine has not been out of service so far this winter and unless we have a blizzard I do not expect to lay it up for more than a day now and then. I do some solo riding, but a heavy percentage of my mileage has been covered with the sidecar, and my wife and children have become so accustomed to the latter that they think no more of jumping in for a 75 or 100 mile trip than they would of boarding a trolley car for a ride of five blocks. There are several reasons for this confidence. In the first place, we have never had an accident and we have always reached our destination on schedule time; secondly, my passengers have never been held up along the road while I tinkered with my motor or with tire or tube troubles. It is easy to see why they look upon our motorcycle and sidecar as a most dependable and comfortable outfit.

I am now using a 1912 Indian two-speed seven, and my sidecar is a Simplex of special pattern. To date my machine has covered 13,500 miles and the sidecar has 6,600 miles to its credit. Reference to the photographs will show that I utilize a large dust blanket, a folding leather top, side curtains and a large mica window in the front curtain for the benefit of the passenger. I am not exaggerating when I say that my wife is as comfortable when thus protected on a stormy trip as she would be in any taxicab.

ABOVE appears a striking photograph of the sidecar outfit used by Meeds Hulse and described in his article on this page. The sidecar carries several special fittings designed by Mr. Hulse, among them the high metal dashboard which, in conjunction with the lap robe, fully protects the passenger from dust and mud. Hulse is able to make fifty miles an hour on the road with the sidecar and its two passengers, and he has never yet failed to reach his destination, regardless of road conditions.

ATTENTION TO DETAILS.

The motorcyclist who desires to make the most of his sidecar outfit will do well to pay strict attention to details. It is always the little things that count. They do not cost much and they can be easily attached, as a rule, but they assume the utmost importance when a machine is to be used in all kinds of weather. I never go out without a full supply of extra parts for the motorcycle, but I rarely have to depend upon them. If I discover that a certain part has just about lived its life of usefulness I don't wait for it to give me trouble on the road; I replace it at home and thus avoid annoyance later when I would not be so well equipped to cope with it.

I carry a regulation motorcycle headlight and gas tank and two smaller electric headlights on the sidecar, and these meet all my requirements. To supply current for the sidecar lighting system I use a 6-volt storage battery, which is placed in the carrying-case at the rear of the car. I also use a dependable tail-lamp and a 3 c. p. light over my speedometer. I have a Connecticut coil box that is hooked up with the storage battery and grounded so that the coil is ready for business at all times when the switch is on. As a result no one can touch my machine or sidecar without getting a shock that will be remembered. I have had considerable trouble through curious persons tampering with my outfit when it was left in a garage or standing at a curb, but I must say that no one ever bothers it these days. As soon as they put a finger on it they discover that it is not meant to be meddled with. This is a hint that some of the boys may profit by.

FOR TWO-PASSENGER SERVICE.

I have a small seat that is easily placed in position when I need to carry a second passenger, and I find that there is plenty of room in the sidecar for it. On many occasions in good weather when my wife is unable to accompany me I seat one of the children in the sidecar and make quite long trips without the slightest trouble. It may surprise even experienced sidecar travelers to learn that I have driven forty miles with one of my youngsters sound asleep on the sidecar seat. There was not sufficient vibration to disturb him, and he was almost as safe as he would have been at home in his crib. I never drive for speed when I have the sidecar attached to my machine, but it must not be inferred from this statement that I lose any time in getting over the road. When it becomes necessary I can push the miles behind me at the rate of 48 to 52 an hour, with the sidecar attached.

I have driven my machine with sidecar from

Digitized by Google

New York to Boston in 9½ hours, with only one stop, at Springfield, for dinner. I have been in Buffalo three times since the opening of the 1912 riding season and in each instance the run was made in two days. I have encountered some bad weather on these trips and on other business journeys into New York State, but I have always plugged through in some way. Since the up-state roads have been covered with ice and snow I have found it necessary to use Weed anti-skid tire chains, and I must say they have been of great service to me. No matter how smooth the ice may be I can make headway, and all in all I find that winter trips give me less trouble than those of the summer.

A WORD FOR FROZEN ROADS.

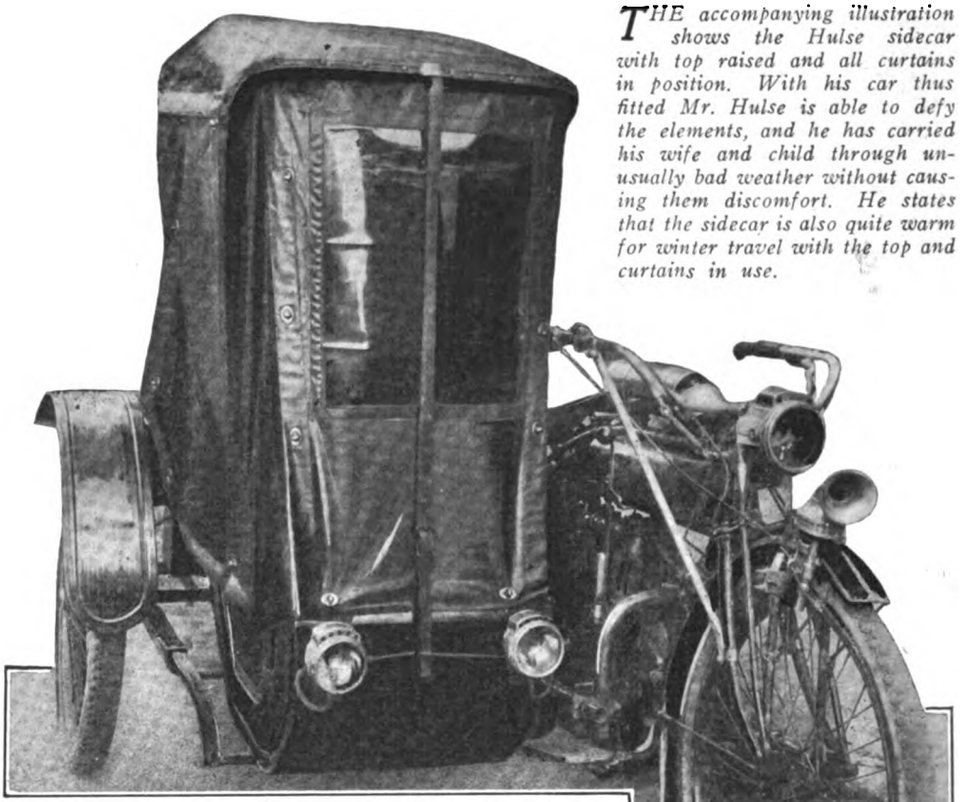
Of course a badly rutted road that becomes frozen in that condition will give the sidecar traveler some anxious moments. It will be found impossible to keep the wheels in the ruts, and this, perhaps, is just as well, as it saves tires. Nothing will ruin a tire more quickly than driving in ruts. No matter how careful the driver may be he cannot prevent the tires from climbing up on the sides of the rut, and this continuous chafing mile after mile plays havoc with the casings. The same effect is obtained when riding in street car tracks.

As long as the roads are hard I can get over them at a good clip, and when they are soft or icy I simply attach my tire chains and keep on moving. I combine business with nearly all my motorcycle trips and in this way the returns are doubly satisfactory. On some trips in winter weather I probably could cover my territory with slightly lower expense by riding in by a train, but I would be deprived of the healthful outdoor exercise, the crisp fresh air and the satisfaction of getting over the ground on my own power. I am a firm believer in the sidecar as a health producer. My wife's trips in our outfit have been highly beneficial to her, and the children are not subject to all the petty little ills of other youngsters during the winter. They are accustomed to fresh air and plenty of it in all seasons, and they have our sidecar to thank for it.

THE LIGHTING SYSTEMS.

Too much importance cannot be attached to the lighting systems on a motorcycle and sidecar. The lamps should be dependable, above all things, and I consider it advisable to carry both the gas and electric systems. I use a 6-volt 40-ampere K. W. generator to keep the battery stored. When I am burning all my lights I have to draw part of the current from the battery as the generator does not supply enough to keep all the lights going. When a tank and regulation gas headlight are used the rider should examine the burner frequently and see that it is always in condition. Should it become cranky on the road at night difficulty will be experienced in tinkering it into shape again.

As might be expected I have had quite a few interesting experiences and on more than one occasion I have had the natives in some upstate village crowd around me and my sidecar outfit in amazement when I stated that I had covered a certain stretch of road that they knew to be almost knee-deep with mud and slush. Naturally, the motorcycle and sidecar have had to go through some tough trips and they have the honor marks of faithful service upon them now, but I do not believe I would part with them unless I could duplicate them.



THE accompanying illustration shows the Hulse sidecar with top raised and all curtains in position. With his car thus fitted Mr. Hulse is able to defy the elements, and he has carried his wife and child through unusually bad weather without causing them discomfort. He states that the sidecar is also quite warm for winter travel with the top and curtains in use.

Not long ago I ran out of gasoline and was obliged to operate my motorcycle on a paint oil called Tuberline. It brought me home after a fashion, but I could not start my motor the next morning until I had cleaned the tank. Such experiences as this are accepted with a smile by the experienced sidecarrist. If he has the proper spirit he wants to land his passenger at the required goal and he will not permit any ordinary trouble to stop him.

I am driving my machine with the sidecar nearly every day, and often come in at night with the outfit, myself and my passenger covered with a layer of mud and ice, but the exhilaration of sidecarring over winter roads is worth all it costs. At least that's the way it strikes me and I've been at it long enough to have a few inside opinions.

MILWAUKEE CLUB ACTIVE

ABOUT forty-five members were present at the annual election of the Cream City Motorcycle Club, of Milwaukee, Wis., held at the club rooms February 24. During the meeting a committee was appointed to make arrangements for Director Sauer's visit on April 22. A building at 538 Muskego avenue which is now being remodelled will be occupied by the club on April 1, and the members are highly pleased with the new headquarters. An entrance to the basement will permit riders to enter the building on their machines without dismounting. The new staff is as follows: F. A. Bremer, president; A. Weisig, vice-president; A. Tank, secretary; A. Eggelbrecht, treasurer; F. Beanesch, captain, and A. Czarnecki and P. Widemeyer, lieutenants.

BUFFALO CLUB PROGRAMS

ANOTHER lecture in the series of practical mechanical talks being conducted by the Buffalo (N. Y.) Motorcycle Club was given at the last regular meeting. Mr. Houten, of the Diamond Rubber Co., was the speaker, and his talk centered upon the general construction of tires and the history of tire manufacturing from the time the rubber leaves the tree until it is turned out at the factory.

The Buffalo Club visited the Lockport M. C. on Wednesday, March 5. A banquet and smoker was held in the evening. On February 26 the club conducted a card party for the members, and suitable motorcycle prizes were awarded the winners.

TORONTO DOINGS

IT was decided at the recent election of the Wanderers Motorcycle Club of Toronto to hold the office of president open for a short time. W. Self, now holding that office, is a member of the directorate of the C. M. A. and it is the policy of the club that its officers shall have no other official position in motorcycle circles. H. W. Kipp was elected vice president and B. H. Bramble, secretary.

LAST CALL FOR DEALERS

NATIONAL SECRETARY GIBSON is issuing his last call for dealers who wish to register their shops and have them placed in the revised list to be published soon in an F. A. M. booklet. Another list will not be published until the spring of 1914, so it behooves dealers to have their names in the list which the secretary is now preparing to have printed.

A RELIABILITY run of 750 miles from Paris to Nice via Dijon, Lyons and Marseilles will bring French motorcyle experts together March 13-16. The program is in the hands of the A. C. F., and it will be noted that the riders will be called upon to cover nearly 200 miles a day.

PRACTICAL SIDECARRING

BY D.R. HOBART

I CONSIDER it only fair to preface my suggestions for "Practical Sidecarring" with the announcement that the article which follows is intended for those riders who desire to know the full joy of travel with a companion, and for whom occasional discomforts simply add spice to an outing. If you, gentle reader, are classed among the boulevardiers who refuse to take chances on country roads, you may profit by the above warning and skip along to another article; but I don't believe you will, for in these days the sidecar owners who confine themselves to city and suburban streets are comparatively few. "A pleasure shared is a pleasure doubled," according to the old adage, and for me sidecarring has always been pleasant, even though it has been featured at times by hard work.

SELECTING THE MACHINE

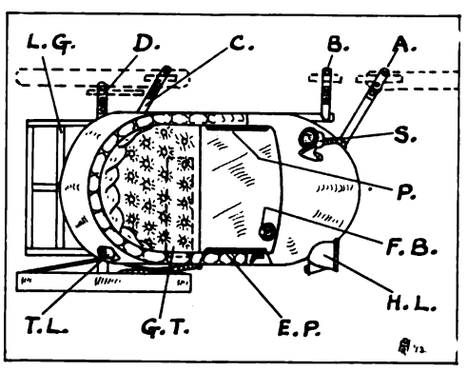
Naturally, the first question arises over the selection of the motorcycle. This will generally have to be of 6 h. at least, unless a two-speed gear is fitted. In the latter case a 5 h. twin may be used, but it is better to have the big twin—and a variable gear also, if you can get it. As to transmission, the superiority of either the belt or the chain is not yet established to my satisfaction; I have driven a 6 h. V-belt twin with a medium weight car over roads called "fair-to-poor," and climbed stiff hills by nursing along with alternate opening and closing of the throttle, and there was no slip of the belt noticeable. The chain-driven machine belonging to my running mate went up the hills by slipping the clutch, and had a more powerful motor than mine at that. This is but one trip and proves very little, and there is a great deal to be said in favor of either type of drives. To a rider unfamiliar with the V-belt, I suggest a chain drive for sidecar work, but I cannot recommend the flat belt at all. As fitted to the average motorcycle, the flat belt does not seem to be wide enough to carry the additional load, and has the disadvantage of slipping when the work gets a trifle too heavy instead of buckling down to it as the V-belt and chain do. I have seen a few city outfits with flat-belt drives and they seemed to be doing finely, but on country roads I prefer to leave this form of transmission to the other fellow.

SOME SIDECAR DETAILS

The sidecar itself should be sturdy and comfortable. If it is only a question of short distance touring, a light wicker body with a low front or "nose" and lined with some good stout material to keep out the dust, makes a satisfactory and inexpensive rig. There is little need nowadays to examine closely sidecar frames of the standard makes as they have been tried out and found satisfactory, except when driven like "Sam Hill" over bad roads or hurtled across railroad tracks too frequently. The effects of hard driving are felt by the motorcycle as well as the sidecar, and the highway incinerator faces a repair bill on both units of the outfit.

For long tours the torpedo or canoe body sidecar of metal or wood is nearly ideal when attached to a 7 or 8 h. twin. Dust from the front wheel is kept away from the passenger, and the wind resistance is reduced by the forms of these bodies. Bodies of similar shape in wicker, when well lined, are quite satisfactory, but lack the dust-proofness of the panel types. Whatever the nature of the sidecar body, a storm apron should be carried and a lap-robe (not a canvas sheet) is a necessity. Luggage can be carried on a grid at the back of the frame, and the bodies usually have pockets for small articles, or space under the seat for tools. There is an arrangement which takes in most of the articles required on a trip, shown in the figure below.

In this illustration A is the front connection attached to the down tube of the machine, and B is the second connection, attached to the lower part of the same tube or to one of the crankcase bolts. C is the third or seat-post connection and D the rear stay or axle connection. P is a pocket in the side of the body for miscellaneous personal articles, and S shows the speedometer in position where it can be read by either driver or passenger. E-P is the side door with pocket similar to P, for maps, etc. F-B is the foot-bell, and G-T the gas-tank on the frame. Under the seat is a tool compartment, access to which is gained by lifting off the cushion. The headlight is shown at H-L and has a red lens throwing light to the rear. If the latter is not fitted, the tail light, T-L, is used. L-G is the luggage grid at the rear for bags, etc. Anything in the nature of slickers, etc., can be stowed in the "nose" of the body at the front. The cycle parts are shown dotted.



When connecting the sidecar to the machine, there are three main points to be noted. These are: horizontal alignment, vertical alignment, and riding balance. Horizontal alignment consists in having the sidecar wheel and the motorcycle driving wheel parallel to each other horizontally, and this can be done with straight boards and a string. Put on the clamps and have the wheels approximately vertical when setting up the connections, then place the outfit facing a wall or fence. Take a straight board and lay it along the cycle wheel, and mark the point where it touches the wall. Have a friend do the same with the other board against the corresponding part of the sidecar wheel.

Measure the distance between the ends of the boards and compare this with the distance between the marks on the wall; when the distances are the same the alignment is correct. With the machine on a level surface put a plumb line on each wheel, and adjust the connections till both wheels are vertical and parallel. This gives the second or vertical alignment. Riding balance means that the operator is able to release the handle-bars while traveling slowly on the level without having the outfit run to either side. To obtain this set the sidecar wheel hub approximately on line with the rear hub of the machine, and if the outfit tends to turn to the right shift the car forward. If it tends toward the left, shift the car to the rear.

With a sidecar fitted as above the tires are worn evenly, which is not the case when the outfit is out of alignment; the strains on the machine are reduced to a minimum, as the sidecar is merely driven along by the motorcycle, and not carried by it, and steering is easier.

THE MIXTURE AND THE THROTTLE

As a heavier load is carried when the sidecar is attached, the setting of the carbureter used for solo work will rarely allow the motor to develop its full power, and the proper mixture will be richer than when the motorcycle is ridden solo. The setting of the carbureter will have to be gone over the same as at any other time, but the adjustments to the jet and auxiliary air valve will have to be made when the

Digitized by Google

outfit is on the road, a stand adjustment being rarely satisfactory. On starting off, a slap-dash method of dropping in the cluth will swiftly cause trouble in the nature of a stalled motor, or actual breaks in the transmission or motor parts. An outfit should be started on just sufficient throttle to move it when the clutch is first engaged, and while the clutch is manipulated with one hand the throttle should be operated by the other. As the outfit gathers momentum, the clutch should be fully engaged and the throttle given the desired final opening for running. The "throttle-dumper" is as destructive to a sidecar outfit as the "clutch-banger," and apart from the damage they both do to the machine they are unpleasant as drivers from the viewpoint of the sidecar occupant.

BRAKES AND BRAKING

Probably the most important item in the make-up of a sidecar machine is the brake. I regret that I cannot say *the brakes,* but a single coaster is often the sole equipment of this nature fitted. Having an extra load it behooves the rider to allow ample space in which to pull up, almost double the space allowed when the same motorcycle is ridden solo, and from that distance upward according to the power of the coaster brake fitted. It is asking too much of a small-hubbed brake to pull up a heavy sidecar outfit frequently, and a failure may come at a critical moment. For this reason alone there ought to be a big band-type brake, at least, and a reserve or emergency brake also, each being operated independently on all motorcycles for sidecar use. One might even go a step further, and fit a brake to the ordinarily free-running sidecar wheel, but any fitting of the latter should provide that the cycle wheel got at least two-thirds of the braking effort and the sidecar wheel only the remainder; otherwise some fancy skidding will be indulged in.

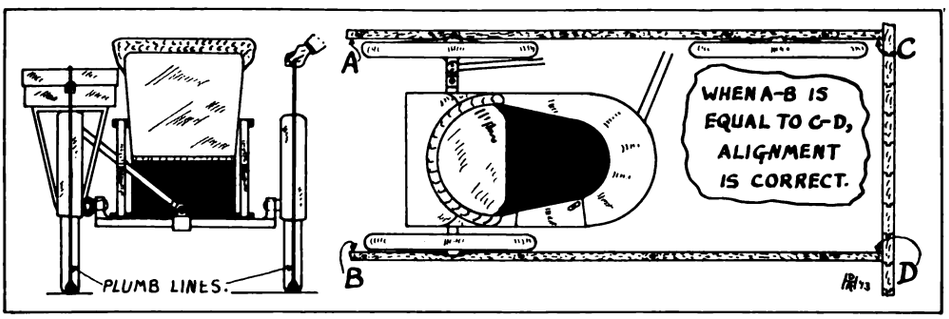
DRIVING KINKS

Sidecar driving is somewhat different from solo or tandem motorcycle riding, as far as the steering is concerned. Turns to the right must be taken by swinging the handlebars across as in steering an automobile, while leaning in is, of course, useless. A rather strong turn of the front wheel is necessary, as the sidecar wheel tends to travel in a straight line and this tendency must be overcome. Left turns, on the other hand, must be made more gently, as otherwise the sidecar will pivot round sharply, and only a violent swerve will set the outfit on the right course again. It is amusing to see a rider on his first trip with a sidecar shoot all over the road when making a left turn, but very little practice will enable anyone to drive a sidecar well.

In driving on rutty roads, keep the motorcycle wheels in the ruts in preference to that on the sidecar. It is easier to break down the sides of a rut when there is the "push" of the driving wheel back of the front wheel, but the sidecar tire merely rolls along, and there may be some trouble getting it out if the rut is deep and the ground hard. Naturally, if all wheels can be kept out of the ruts, the better for the whole outfit.

LIGHTING POINTERS

The usual practice of having one front headlight and a red lens at the rear is suitable only for city driving, and may be the cause of an accident on a dark country road. The driver of an oncoming vehicle, seeing only the single headlight may think it represents only a solo motorcycle and may not give enough room to pass. An overtaking driver may also think that he can pass on the right (assuming that it is only a motorcycle), and you can imagine the rest. Therefore, take a leaf out of our British brothers' sidecar book, and fit two headlights, sufficiently far apart to mark the full width of the sidecar outfit. One of these will naturally go on the lamp bracket of the machine, while the other will be placed as far to the right of the sidecar body as possible without danger of being knocked off. As to rear light, one should be on the mudguard, and a red lens from the sidecar light toward the rear will do for the other.



Diagrams Showing Methods of Plumbing and Aligning Motorcycle and Sidecar Wheels.

The arguments of the rival camps for front or rear drive for the speedometer need have no weight with the practical sidecarist, as the best position for this instrument is on the sidecar body where it may be driven from the sidecar wheel. It would be well, also, to fit a horn or foot-bell on the sidecar, so that the passenger can do the signalling and thus relieve the rider. I like the idea of the foot-bell. The grunt or squeak of the automobile and cycle horn is familiar nowadays, and often fails to attract attention, but the cuckoo chime of the bell will direct attention by its novelty, although it was really the predecessor of the horn in the days of push-bikes and steam carriages. The signal is pleasing, and the bell always sounds, which is more than can be said of some other devices.

PLAN BIG RELAY EVENT

Des Moines M. C. Riders Would Have Message Carried from New York to Frisco by Squads of Motorcyclists.

PLANS have been taken up by the Des Moines (Iowa) M. C. for a coast-to-coast relay program with a view of having a message carried from New York to San Francisco, and efforts are now being made to interest clubs and individual riders along the main transcontinental touring routes. No route has been mapped as yet and it is the intention to outline it in such a way as to include the cities and towns in which the most dependable riders are obtainable. It is suggested that the trip should be made in relays of 50 to 100 miles and that at least three riders should compose each squad.

After relay stations had been located on the trip across the country it would be the aim of the club to have the different sections of the route patrolled at regular intervals and in this way it would be possible to obtain fairly up-to-date information on cross-country roads at any time. The plan has many favorable points and there are indications that it will meet with approval.

TOURING IN EUROPE

ANOTHER American to invade England by motorcycle is Arthur C. Hanifin, an architect of Chicago. He has just arrived in England, and with him he has one of the new 1913 Yale twins. The past week was spent in riding over Ireland, and he reports that his machine has shown speed on the road equal to any of the English machines that he saw, and superior hill-climbing ability.

Hanifin embarked on this trip with no previous experience with motorcycles. He had never ridden a machine, and knew nothing of their construction. His only information on the subject was gained from a motorcycle handbook that he read on the steamship while crossing the Atlantic.

His machine was shipped from the Yale factory at Toledo to New York, and from there loaded direct on to the steamship, so that it was not uncrated until he reached Liverpool. In spite of this, however, Hanifin reports that he had no difficulty whatever in learning its manipulation. The only difficulty he has had, was a little stiffness when the engine was cold, due to the use of too heavy cylinder oil, and the cold, damp English mornings.

STATE ACTIVITY

PRESIDENT PATTERSON has received announcements to the effect that two States will hold motorcycle conventions this spring, and reports show that motorcyclists of other communities are rapidly perfecting their state organizations.

ENGLISH motorcyclists and designers are waging a merry war over the desirability of steel cylinders as against the cast-iron products.

LOCATING THE LOAD.

Stout Tourist—"You'll have to get off and walk a bit, Willie. The machine can't climb this hill with such a heavy load!"

SIDECAR MECCAS of FLORIDA

by WALDON FAWCETT

WHILE motorcyclists have by no means made the most of their winter touring opportunities in Florida up to date, there are encouraging indications that the inducements held out by this state will soon be fully appreciated and that every road and place of interest in it will have its quota of the competent single-trackers. This implies that sidecar interest will be developed in leaps and bounds, for outside of California it is doubtful if there is another state in the Union so admirably suited to sidecar travel. Where smooth roads, climatic conditions, scenery and amusement resorts all combine to attract the motor tourist it is obvious that the sidecarrist will find little to complain of.

And, speaking of road conditions, it should be mentioned at the outset that Florida has lately offered new and strong recommendations to the motorist in the admirable system of roads which she is rapidly developing. Indeed, in the matter of highway conditions in general the Peninsula State is in sharp and pleasing contrast to certain other portions of the South. To be sure the millennium of good roads has not yet been reached in all parts of Florida, but acceptable pathways lead to almost all the tourist meccas. On the east coast, especially, there is an almost continuous good road the entire length of the state, for the people in this preeminent sightseeing section are enthusiastically doing their part to bring about the proposed Montreal-to-Miami highway.

THE GOOD ROADS BOOM.

It was the rock roads built at Miami by that wizard of the east coast, Henry M. Flagler, the Standard Oil millionaire, that constituted Florida's first up-to-date object lesson in modern road building and the example has certainly been followed energetically, considering the limited time that has elapsed. Florida has an admirable native material for roads in the coralline rock, which is soft and easily quarried and yet hardens under exposure to the air. Motorcyclists are almost unanimous in their endorsement of the roads formed from this crushed rock, but most of the riders with whom I have talked have been even more enthusiastic regarding the shell roads (formed from oyster shells), possibly because of their novelty and their picturesque appearance as they gleam white in the sunlight.

Florida, in the tourist routes which this oblong state opens to the motorcycle rider and sidecarrist might be compared to the prongs of a fork. In order to gain an adequate conception of all the attractions of this popular winter and spring playground the rider had needs make three excursions "down" the state from its northern gateway, or at least as far down as circumstances will permit. One of these routes is down the east coast; a second is along the west coast; and the third traverses the central portion of this narrow domain. In all sections the tourist awheel may as well be prepared to make long detours to avoid rivers and other waterways, and when he reaches the southern part of the state he will find his progress pretty effectually blocked by the Everglades and other swamp and wilderness regions—unless, mayhap, he chooses to put his machine aboard one of the trains of the "sea-going" railroad for transfer to Key West, with the object of spinning about that interesting island outpost.

CHOOSING A SIGHTSEEING ROUTE.

To most states and touring domains there are several entrances, but in this respect

A Seminole Indian; This Tribe Has Always Made Florida Its Stamping Ground.

Florida is almost unique. In so far as the main body of pleasure-seeking invaders are concerned there is only one gateway from the north, namely Jacksonville, which is reached not only by rail, but also by steamer from various northern ports. Located twenty-five miles from the sea on the St. John's River, Jacksonville is the metropolis of the state, and yet it affords the visitor scarcely a foretaste of the features of life and scenery which render Florida distinctive. For all that, it is well worth the while of the rider to tarry here for a few days and traverse the well-paved streets that were provided by a liberal public policy following the great fire of 1900. There are a number of interesting side trips from Jacksonville for the sidecar tourist including the one to the ostrich farm, which is one of the show places of Florida.

The rider who has been impressed beforehand by the storied glories of Florida will probably desire to make first the trip down the east coast, even though he intends later to visit the other interesting sections of the state. And the rider whose time will allow him to "do" only a portion of Florida can be counted upon, in nine cases out of ten, to choose the east coast, such is the prestige that section has attained, thanks to exploitation in the public prints and on the lecture platform. Presuming that the objective is Miami, the motorcycle traveler finds stretching almost straight southward a route of approximately 360 miles, most of it via a road that approximates a broad, hard-surfaced boulevard.

SOME POINTS OF INTEREST.

Following the coast route southward from Jacksonville, a run of something like forty miles brings the motor pilgrim to St. Augustine, probably the most fascinating as it is certainly the most historic community in Florida. Founded by the Spaniards, and successively under four flags, St. Augustine disputes with Santa Fe, New Mexico, the honor of being the oldest city in the United States. Fortunately for the present-day visitor all the most interesting mementoes of St. Augustine's old-time glory remain, but little impaired by the passage of the centuries. There is old Fort Marion, built by the Spaniards and with its bastion and moat and dungeons, all vivified by tradition; there is a cathedral as beautiful as many of those which Americans travel

Digitized by Google

to Europe to see; there is the old city gateway, a cherished landmark; and a dozen other mementoes of the past, not forgetting the quaint, narrow streets with the odd, overhanging balconies characteristic of Spanish architecture.

In strange and marked contrast to this atmosphere of by-gone centuries is the beauty and luxury of the modern St. Augustine. Here are hotels which, as veritable palaces, perhaps have no rivals anywhere in the world. Here are handsome villas erected by wealthy winter residents—notably that Moorish gem, the Villa Zorayda. And here, radiating in all directions from the Plaza, are beautiful paved streets which invite the rider to view panoramas of tropical vegetation and glimpses of the sea. Alike to all Florida resorts, St. Augustine is the hub for many entertaining side trips. Perhaps the best is that to Anastasia Island and by a 12-mile spurt to Matanzas Inlet where there are to be seen the ruins of an old Spanish fort. These should be ideal trips for the sidecar tourist.

AT FAMOUS ORMOND BEACH.

A run of less than four score miles from St. Augustine brings the motorcyclist to Ormond, the portal to a district which is a literal paradise for riders, thanks to the opportunities for high-speed riding on that unrivalled beach which has attained world-wide fame as the scene of some of the most exciting automobile races in history. Ormond is often designated as Ormond-on-the-Halifax, and the explanation lies in the fact that the Halifax River is here parallel with the Atlantic Ocean, the two being separated by a peninsula about half a mile in width. Indeed the Halifax, fed by an inlet from the sea is virtually a lagoon and this is a form of waterway which is encountered at various points on the Florida coast.

Ormond is known to riders for its cycle paths and trails overhung by splendid oaks, but the pride of the place is, of course, the beach above mentioned. It is at mean tide fully 300 feet in width at the narrowest part, and it extends for miles up and down the coast, affording a speed course where the rider may in peace and security test the qualifications of his machine. The touring rider will follow the beach five miles south to the city of Daytona, which shares in the possession of this ocean-side speedway. Indeed the strand is usually referred to as the Ormond-Daytona Beach. At Daytona, as at Ormond, there are delightful shady roads for the sidecarrist who prefers sylvan surroundings and, dominating all, that thirty-mile beach so smooth and hard that the hoof of a trotting horse, much less the tire of a motor vehicle makes absolutely no impression upon its surface. Finally, it is to be borne in mind that the temperature in this section of Florida is of such a quality that riders may comfortably prolong their stay here until after the first of May. And, day in day out, the rider is assured an ideal natural highway, for twice every twenty-four hours the roadway is, in effect, rebuilt by the tides. Even though immense holes be dug in the beach one visitation of the tide will obliterate every trace. Furthermore, not only is there neither mud nor dust, but owing to the climatic and other conditions tire troubles are almost unknown.

THE "NEWPORT OF THE SOUTH."

Speeding southward from Daytona, when he is finally able to say adieu, the sidecar enthusiast comes, after a thirteen-mile run to New Smyrna, the oldest settlement on the coast south of St. Augustine and historically famous for a Greek colony established a century and a half ago. Here the rider finds another stretch of beach roadway, second only to that which he recently left. Rockledge, so named for its great ledges of rock, next claims attention; then comes the Indian River country with its vast fruit-raising industry; and Fort Worth, a resort favored by sportsmen. This brings the tourist amotor to Lake Worth and Palm Beach, twin resorts which constitute the fashionable center of winter life in Florida, and that are frequently referred to as the "Newport of the South."

This parade ground of the wealthy is located about 300 miles south of Jacksonville, and the water setting is similar to that already described as afforded by a lagoon or arm of the sea, paralleling the ocean itself. Lake Worth is a salt-water lagoon, twenty-two miles in length by a mile in width, and facing this placid waterway is the resort which bears the same name but which in general practice is consolidated with Palm Beach, which in reality is situated a mile away on the opposite side of the peninsula and facing the broad Atlantic. The two resorts are connected by promenades and motorcycle paths and there are numerous excursions to be made in this vicinity, including visits to an alligator farm and trips in the "jungle" to the haunts of the Seminole Indians—a remnant of the tribe that has long made the trackless inland sections of Florida its stronghold. At Palm Beach and Lake Worth may be seen wonderful examples of tropical vegetation; rare specimens of the cactus and a number of cocoanut palms, the origin of which is traced to the wrecking on this coast of a Spanish bark laden with cocoanuts.

IN THE PLANTATION DISTRICT.

Leaving Palm Beach the rider glides along superb roads through fruit and vegetable raising districts whose pineapple plantations and other sources of wealth cannot fail to interest the man who is at all concerned with human activities. At places the road skirts the Everglades, and stops at isolated trading posts of the Seminoles will afford the motorcyclist glimpses of native life that are wholly denied to the traveler who is restricted to transit by rail. After some forty miles of such experiences the nomad of the sidecar comes to Miami, located on Biscayne Bay and the most southerly of that chain of east coast resorts which to the average tourist signifies Florida. Miami is a wide-awake up-to-date town, but with all the charm that can be afforded by tropical landscapes. Hence depart the steamers for Nassau, a resort that is all but accounted a Florida show place and from Miami innumerable excursions may be made by small boats into the heart of the Everglades. But it must not be supposed that the rider arrived at Miami will need to put his machine out of commission for the time being. Excellent roads have been built to Cocoanut Grove and a number of other outposts in the vicinity, and the wealth of vegetation and the unusual agricultural methods are most interesting.

These Scenes Are Typical of the Striking Vistas Spread Before the Tourist on Florida's Eastern Coast.

2000 MILES IN A SIDE CAR

HOW JULIUS FRESE, ERSTWHILE SPEED COP, CARRIED HIS WIFE & DAUGHTER FROM SPOKANE TO LOS ANGELES

BY CHARLES FULLER GATES

ONE of the most remarkable sidecar trips on record in this country was made not long ago by Julius Frese, a motorcycle repairman of Spokane, Wash., who designed his own passenger attachment and carried his wife and little daughter from Spokane to Los Angeles, a distance of more than 2,000 miles over good, bad and indifferent roads. Frese had acted as Indian agent in his district and had also served as a speed officer, so that he was well fitted to make the most of his Indian mount when he headed southward on his long jaunt.

Owing to the fact that he was obliged to carry two passengers Frese decided that a standard sidecar would not meet his requirements, and accordingly he built a roomy attachment along such lines that it afforded the regulation 56-inch tread found in automobiles and wagons. This was a bigger feature than it may appear to the uninitiated, for it is extremely difficult at times to drive a sidecar outfit with the motorcycle wheels down in a rut and the sidecar wheel bumping along in a track of its own. Frese fitted his attachment with a wide seat and with space in the rear, very much after the fashion of a boot on a stagecoach. The complete sidecar weighed 100 pounds and was large enough for two persons and some luggage.

COMPLETE ROAD EQUIPMENT.

A food box was built to fit under the seat and hold dishes, table implements, "grub" and an alcohol stove. A large telescoping luggage box was used to carry extra clothing, and for bedding there were five blankets and some lighter coverings. As the Freses were to sleep outdoors throughout the trip (and some rain was expected), a 7 by 9 tent was also carried. Mr. Frese weighs 173 pounds, his wife 125 pounds and the little girl, 90 pounds, so that with passengers and luggage in the sidecar the motorcycle was called upon to handle 886 pounds.

The start was made from Spokane on September 23, and Walla Walla, seven miles from the Oregon border and 156 miles from the starting point, was reached the second day. On the same day the 44-mile trip to Pendleton, Ore., was made and here a stop of two days was made so that the party might attend the cowboy contests known as the "Rodeo," for Pendleton is the headquarters of the promoters of these frontier sports which are staged, so to speak, in various parts of the country west of the Mississippi from time to time.

Along the route from Pendleton to The Dalles, some 250 miles of the road is good; it is the oldest road in that section of the country and runs parallel with the Columbia river. From The Dalles to Portland, about 200 miles, the roads are so bad that most travelers in that section go down the river by boat. The boat trip is not very expensive and the scenery along the river is excellent.

A THRILLING INCIDENT.

A day was devoted to sightseeing in Portland and the party figured that it had covered about one-third of the journey at this point. All had not been plain sailing, however. Soon after leaving Pendleton, for example, a six-horse freight team took fright at Frese's motorcycle and sidecar outfit and the frenzied animals got completely beyond the control of the driver. They wheeled about, broke the tongue off the wagon and did other damage, besides giving the driver a close call. Frese went to the rescue of the driver and later paid him for all damages, to avoid the delay incident to a lawsuit. In that section of the country the motorcycle has no standing in court—certainly not with the local lawmakers—and Frese figured that it would be as well to dispose of the matter at once.

The roads are quite sandy in the eastern part of Washington, but being a motorcycle mechanic and knowing his Indian seven thoroughly, Frese managed to get through with little trouble. He carried several sets of sprockets so that he was prepared to reduce the gear ratio in unusually heavy going. Most of the time he used a 5 to 1 gear on account of the sidecar and its heavy load, but in the mountains he found 6 to 1 on the high gear none too low for the work; at times he was compelled to use even a lower gear.

ENTERING CALIFORNIA.

South from Portland it is a run of 353 miles to the California line, and 452 miles from the state boundary to San Francisco, by way of Grant Pass and Sacramento. This route is now marked all the way with signboards of the Pacific Highway, the name given to a route along the Pacific which is expected by its promoters to extend in time from Alaska to South America; it is in use at present from Canada to the Mexican border. Naturally the new signboards of the Pacific Highway were a great help to Frese on his long journey, and on the whole he considered the going fairly good to Redding which is 150 miles south of the Oregon-California border. Below Redding the roads are used more extensively, crossroads are quite plentiful and the district begins to show signs of the population found in the central and southern sections of the state. In this neighborhood Frese began to notice automobiles and motorcycles, and he found that the wilderness had been left behind him.

Through Washington, Oregon and northern California a sidecar had never been seen before, and wherever the Freses stopped they were surrounded at once by a crowd of curious natives. In several of the small towns it was found necessary to hide the outfit in a shed in order to avoid creating a disturbance and getting into trouble with the police. In Eugene, Ore., the outfit was left in front of a motion picture theater and in a few minutes the street in front of the amusement place was blocked.

WELCOMED IN SAN FRANCISCO.

In San Francisco, Manager Hopkins, of the Hendee branch, who has been a sidecar enthusiast for years past, extended a warm welcome to the Frese party, and Mr. Frese was introduced to many of the motorcyclists of the city before he was permitted to resume his trip southward. South of San Francisco much of the journey is along the Pacific on El Camino Real, the old mission road. In this district good roads are the rule, and often for miles at a stretch the highway is paved and as smooth and hard as asphalt. There are old missions scattered along the line and many interesting places that will repay the traveler for a visit. All in all, El Camino Real has earned its title as "the road of a thousand wonders."

All along this section of the route are the road signs of the Automobile Club of Southern California, which now has 5,400 members, and which spends a small fortune each year in marking highways and bringing about improvements. These signs, designed by the writer, show the topography of the road and the turns so that a traveler can follow the road at the rate of a mile a minute, if necessary, and still read the pictures and know what is ahead of him. The signs are placed about eight feet from the ground on white posts and about 200 yards ahead of the turns, crossings, etc., they refer to.

ARRIVING IN LOS ANGELES.

The Frese party arrived in Los Angeles October 17, where they were welcomed by relatives. Following a short rest after his 23 days on the road Mr. Frese disposed of his luggage, added his sister to the party and the four went sightseeing all over southern California. If that isn't a great record for a home-built sidecar and a 7 h. motorcycle we would like to have some one inform us as to just what constitutes a great performance for such an outfit.

Sidecars are so numerous in and about Los Angeles (there is a sidecar factory here) that the Frese attachment does not attract much attention in the streets, but whenever Frese can be induced to tell the story of the run from Spokane to Los Angeles he has no

Digitized by Google

difficulty in finding listeners. Frese states that his running expenses were very low throughout the trip, and that owing to his intimate knowledge of the motorcycle and sidecar the upkeep has been held down practically at zero.

THE ROUTE AND MILEAGES.

Frese's route and the mileages from Spokane to Los Angeles are given below. The traveler did not keep a detailed log on his way down along the coast, but after arriving in Los Angeles he collaborated with the writer in the preparation of the route as given here. As this is the main route for motorists along the coast, at least between Portland, Ore., and Los Angeles, it should prove of interest to tourists in general.

HELPFUL HINTS FOR SIDECARRISTS

BY TIMELY TIPSTER

SOME funny things happen occasionally when a sidecar outfit has the brake suddenly applied. If the front wheel is turned to the left at the time the brake takes hold, a skid toward the right will occur and the faster the speed of the outfit at the instant of braking the handsomer the skid. The wheel should be kept in the line in which the rig is going or better, when possible, turned slightly to the right.

WATCH the sidecar tire to see that the chair is in proper line with the machine. The tread should be worn off evenly in the center when all adjustments are properly made but wear on either side quickly indicates misalignment. When on the left of the tread, it may mean that the chair leans in toward the machine or that the distance at the front of the wheel is greater than the distance at the rear. Wear at the right side indicates that the sidecar leans out or that the front of the wheel points inward instead of being parallel.

UNLESS you are going to tour across the Continent, carry as little luggage as possible on your trips. Every pound of dead load means extra wear and tear, and greater consumption of fuel. The springs carrying the chair are not intended to carry railroad iron or an equivalent weight as well as the passenger.

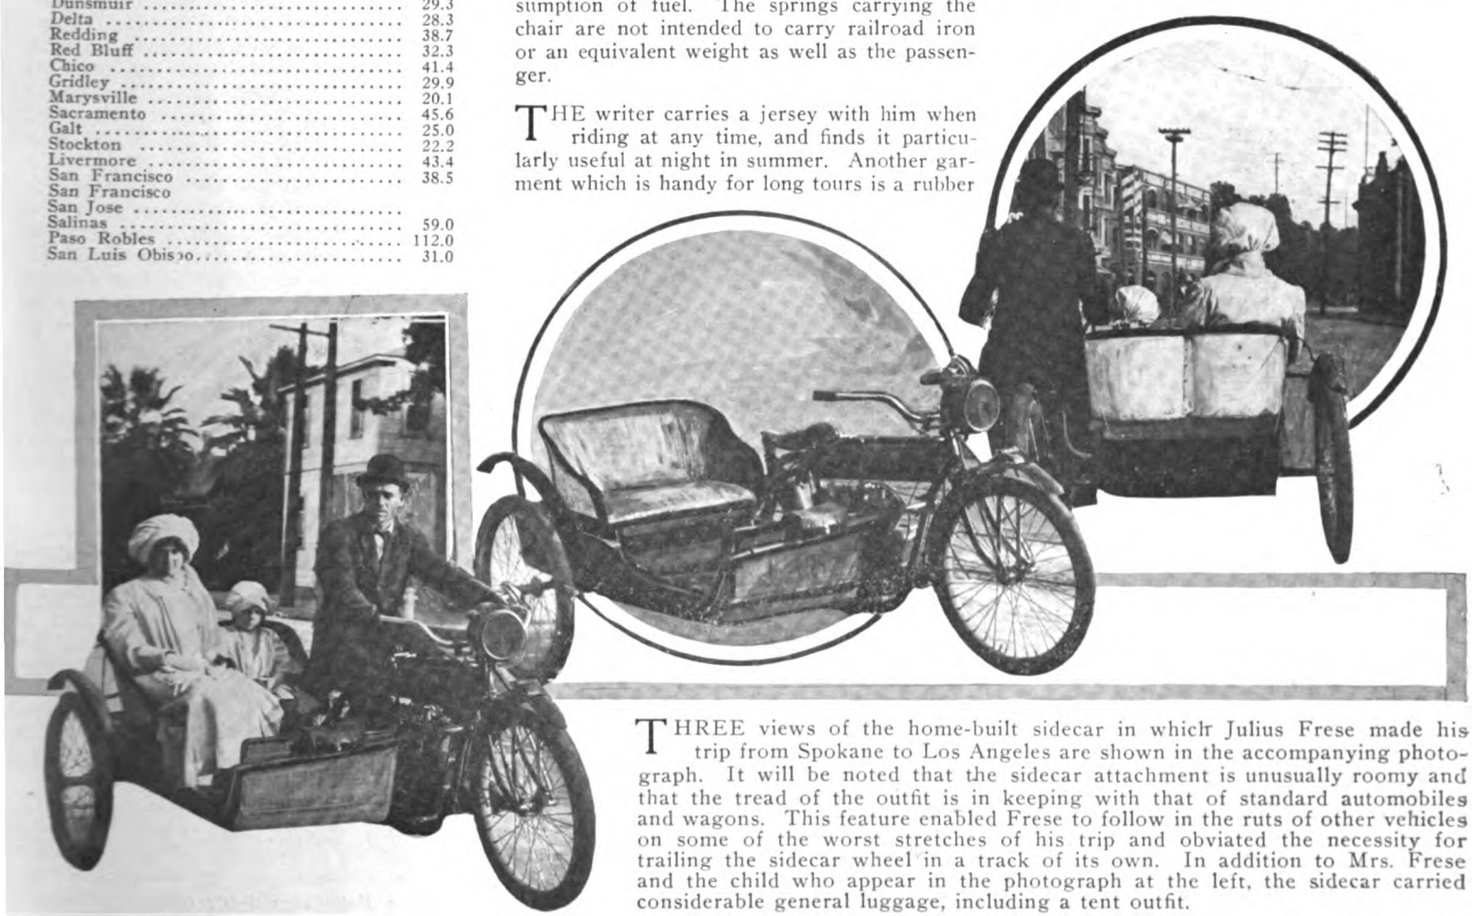
THE writer carries a jersey with him when riding at any time, and finds it particularly useful at night in summer. Another garment which is handy for long tours is a rubber poncho or cloth having a slit in the center through which the head is put when worn as a cape. This slit has a fly-flap, and the skirts can be spread over the sides of the chair when used by the passenger. When used by the rider, the skirts hang down front and back, and if the poncho is big enough the front skirt can be fastened to the handlebars so that the arms are shielded from the rain. Eyelets are fitted to the skirts, so that strings can be used for fastening them down if desired. The skirts mentioned are the longer sides of the poncho.

FOR the owner of a sidecar outfit who smokes, wind-matches are desirable and become additionally useful when [illegible] are to be lighted. For the latter [illegible] ck action is essential, as such matc[illegible] very briskly. A pocket lighter using alcohol is also good, but for pipe-lighting at high speed does not compare with the wind match.

WHEN using a sidecar with a two-speed machine, don't hesitate to change gear as soon as the motor shows signs of working hard. You save the motor and its bearings by so doing, and also yourself and passenger from getting out and pushing. As the motor may run hot if kept too long on the low gear, change up to the high as soon as conditions warrant it. Change up quickly and down slowly, the latter to let the motor gather speed.

SIX motorcyclists of Pensacola, Fla., recently made a run to Atmore, Ala. They found the roads in fairly good condition.

CLARENCE L. SANDS, of the Secret Service Bureau, Manila, P. I., received the F. A. M. membership card numbered 20,000, and is justly proud of his acquisition.



THREE views of the home-built sidecar in which Julius Frese made his trip from Spokane to Los Angeles are shown in the accompanying photograph. It will be noted that the sidecar attachment is unusually roomy and that the tread of the outfit is in keeping with that of standard automobiles and wagons. This feature enabled Frese to follow in the ruts of other vehicles on some of the worst stretches of his trip and obviated the necessity for trailing the sidecar wheel in a track of its own. In addition to Mrs. Frese and the child who appear in the photograph at the left, the sidecar carried considerable general luggage, including a tent outfit.

A HOME BUILT CYCLE CAR

by ROY S. PASCALL

FOR some time past motorcyclists in Newark, N. J., have been dividing their interest between the 1913 models of motor two-wheelers and a brand new type of four-wheeler, the latter being a product of Wilmer Stevens, which he has introduced to the New Jersey city as a full-fledged American cyclecar. In view of the fact that Stevens constructed this vehicle after his own design, aside from the motor, and owing to its demonstrated ability to meet all ordinary requirements—and some that are quite extraordinary—it is not

Head-on View of the Stevens Cyclecar.

remarkable that it has attracted considerable attention. Stevens does not claim that his cyclecar is a thing of beauty as yet, but that he can obtain a surprising amount of work from it under adverse conditions has been proved to the satisfaction of Newark motorists in numerous tests.

Stevens, by the way, is well known in Newark and vicinity as an endurance rider and one of the most dependable motorcycle roadsters that ever plugged a flooded highway. He is manager of the eastern distributing agency for Yale machines, which is conducted in Newark by F. C. Cornish, and was at one time president of the New Jersey M. C. Stevens has romped off with the reliability cup in two consecutive annual runs of the New Jersey club, and for four years he has shown a perfect score in the club's big round-the-state endurance trial. It follows, naturally, that he is pretty well acquainted with the innards of a motorcycle motor.

SOME SPECIFICATIONS.

Just how Stevens came to enter upon the construction of his cyclecar is not explained, but he has always been given to tinkering with motorcycles, and it is likely that the cyclecar idea originated when he found himself in possession of a power plant that was not needed for motorcycle service. At any rate, he has spent much of his time during the past winter in perfecting the interesting little vehicle, and it is now paying him big amusement returns.

The frame of the Stevens cyclecar is built of oak, 1½ by 3 inches, and semi-elliptical springs of the automobile type are used. In this way the designer has obtained all the strength and rigidity necessary and still kept the weight of his car down to the minimum. The oak frame is not as cumbersome as might be supposed, and with the desirable qualities above mentioned it combined economy. The axles are made of steel tubing, and it will be noted in the photographs which appear on this page that they embody one or two of the builder's own ideas. The front axle, in particular, shows an ingenious arrangement that is worthy of attention.

The power plant is a 7 h. Yale motor, which has proved quite adaptable to its new work. Cooling of the motor is assisted by a fan which is driven by a short belt from a pulley actuated by the magneto gearing. The brakes are operated by a foot lever, acting on Corbin rear hubs fitted with V-band brakes.

INTERESTING TRANSMISSION SYSTEM.

As might be expected, the most noteworthy feature of the Stevens product is the transmission system. It is of the friction disc type, and affords a range of gearing from 4 to 1 on high to 28 to 1 on low. There is also a reverse. With this rather startling range of gearing the cyclecar is capable of performing sensational stunts. Even when the front wheels are placed directly against a six or seven-inch curb, for example, the machine is able to pull itself over the obstruction without difficulty. Stevens has enjoyed himself immensely on several occasions by demonstrating this ability of his vehicle for the benefit of incredulous Newark motorists.

Flexibility in the drive has been obtained by using springs in a sort of universal joint to the propeller shaft with a friction disc on the rear end; then carrying the drive to the jack-shaft by a friction-driven wheel in the center. This does away with the necessity for a differential gear. V-pulleys on the ends of the jack-shaft drive a 1⅛-inch V-belt to each rear wheel. Up to date this transmission system has given Stevens little or no trouble.

The jack-shaft swings on eccentrics to permit of the friction wheel's being shifted to change the gear, and also to act as a clutch, the latter being operated by a foot lever. The propeller shaft and jack-shaft run on roller bearings.

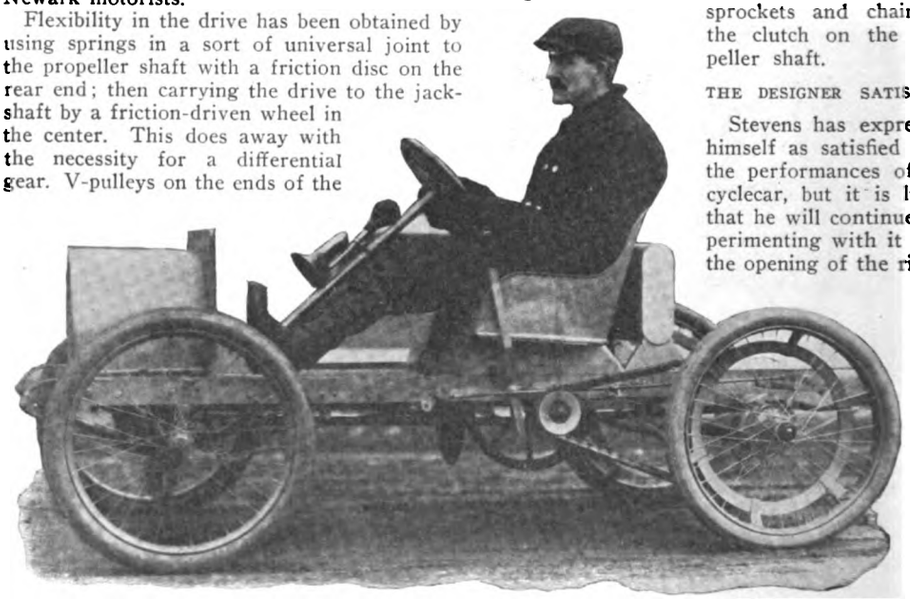
A LIVELY ROADSTER.

Stevens states that he has repeatedly driven his novel little vehicle 45 miles in an hour on the road, and that it can be depended upon to reel off 40 miles an hour with two people aboard. The whole outfit weighs only 300 pounds, but despite this fact, it holds the road satisfactorily at speed, and is credited with remarkably easy riding. The front axle has springs in the steering knuckles in addition to the body springing, and this helps to provide more flexibility than is found in many light automobiles.

The tank, which is elliptical in shape, is fastened back of the seat and holds four gallons of gasoline and one gallon of oil. The lubricant is fed to the motor by a force system, a small hand pump being utilized. The oil is brought to the dashboard and then through a sight-feed to the engine. A small gauge on the dash-board shows the tank pressure. The spark and throttle are controlled from the steering wheel. The wheelbase of the cyclecar is 67 inches and the tread 42 inches. The top of the chassis is 18 inches from the ground, and the seat is 25 inches from the road. The hood and seat are made of bent material, while oak has been used for the dash-board. Starting is by a crank in front, operated on a short countershaft running to the back of the motor and then by sprockets and chain to the clutch on the propeller shaft.

THE DESIGNER SATISFIED.

Stevens has expressed himself as satisfied with the performances of his cyclecar, but it is likely that he will continue experimenting with it until the opening of the riding



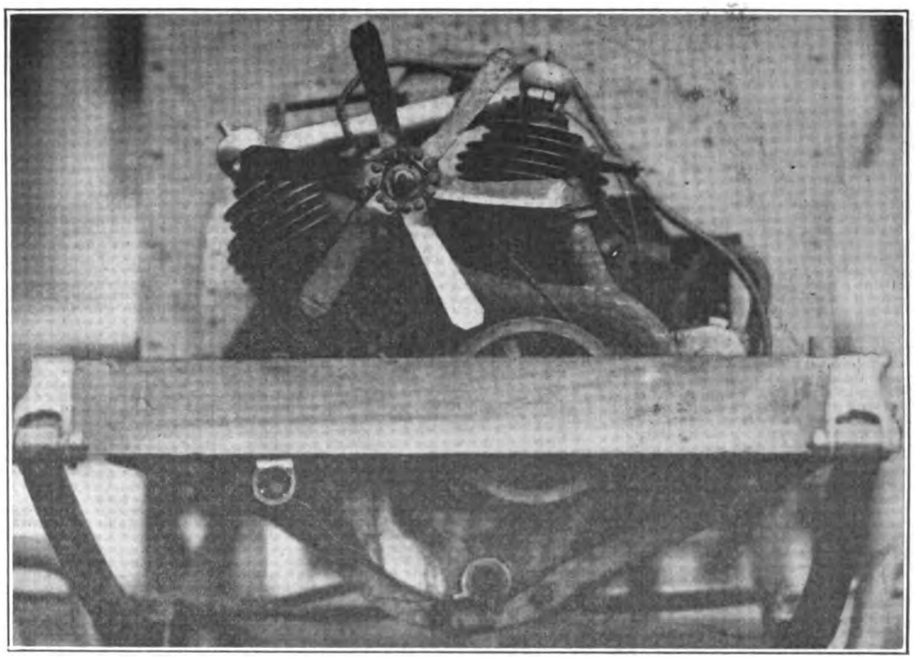
Side View of the Newark Product, Showing Belt-Drive System.

Digitized by Google

season with a view of obtaining still better results from it. Unusual interest attaches to the car because of the fact that it is one of the very few American vehicles to which the term cyclecar can be legitimately applied. The classifying of English cyclecars is somewhat hazy, but it seems obvious that a vehicle operated by a stock motorcycle engine and driven by ordinary V-belts is entitled to be known as a full-fledged cyclecar—if anything is to be so designated.

Within the last few months reports have been received from several designers in various parts of the country to the effect that they have home-built cyclecars in successful operation, but it is unlikely that any of these experimenters has worked out his machine along the novel lines found in the Stevens product. As a rule, light automobile parts are combined with a motorcycle power plant, but it will be noted in the Newarker's design that he has used his own ideas practically throughout the construction.

EARL ARMSTRONG, the Indianapolis racer, who is spending the winter in Caya, Porto Rico, writes that motorcycles are numerous along the coast. The section of the country in which he is staying is noted for its steep hills, but Armstrong says that none have balked his motor.



The Motor as Fitted in the Stevens Cyclecar. Note That It Is Tilted to the Left to Permit of Placing the Magneto.

SHORT GRASS M. C. PLANS

OFFICERS of the Kansas Short Grass M. C. held a meeting in Hutchinson, Kan., on February 22, at which Denver was endorsed for the scene of the 1913 national convention of the F. A. M., and tentative plans were outlined for the annual tour of the Short Grass riders. It was decided that Denver will be the destination of the club on its coming trip, provided the F. A. M. accepts the offer of the Mile-High City to act as host for the big assembly. The Short Grass tour for 1913 will consume 11 days, and that it will be even more successful than those held in the past is evident from the fact that the Kansas State Automobile Association has signified its willingness to co-operate with the motorcyclists. With this arrangement it is likely that there will be over 300 motorcycles and about 100 automobiles on the tour.

A novel feature of the 1913 tour, according to present plans, will be a road race from Kansas City to Denver, over the last 650 miles of the tour route. It is the intention to cover this distance in two riding periods of eight hours each, in view of the fact that a racing schedule of 40 miles an hour is counted upon. Under this arrangement the riders would cover 325 miles in each eight-hour day.

The route from Kansas City to Denver will be over the Golden Belt. It will follow the Union Pacific railroad to Oakley, Kan., and to Colby and then follow the line of the Rock Island railroad to Denver. It is stated that these roads will be found in excellent condition and that it will be possible to maintain the 40-mile an hour schedule without great difficulty. The winner of the road race will be awarded a silver loving cup to cost not less than $250.

The Short Grass club will follow the general plans of its 1912 tour in preparing for the coming trip. The riders will pay in a certain percentage of the outlay for the trip in advance, and will be assured that all their wants will be provided for by the club. As in 1912 an automobile truck or two will carry full camping equipment and there will be a staff of cooks, helpers and musicians to assist in carrying out the big program.

DENVER M. C. ENTERTAINS.

A SPLENDID entertainment was recently given by the Denver (Colo.) Motorcycle Club at its clubrooms. The occasion was marked by the unusually large attendance of the fair sex. Eddy T. Kelly, who has for some time been starring on the Orpheum circuit, was the most prominent entertainer. Walter W. Whitney, agent for the Harley-Davidson in Denver, was instrumental in having Mr. Kelly on the program. A number of other features were offered, among which was a boxing match between Jim Cox, "the Texas Cyclone," and "Kid" Gray, the club champion. Mr. Burnham, of the Denver Convention League, gave an interesting talk on the possibility of having the 1913 F. A. M. convention in Denver. At the close of the entertainment Mr. Whiting distributed 150 boxes of Phillip Morris cigarettes, especially manufactured for the Harley-Davidson Company.

RACE OVER MOUNTAINS

A COMMITTEE appointed by the Bakersfield Motorcycle Club, Bakersfield, Cal., recently arranged for a race between H. C. Park and Jules Berges. The race was over an eighty-mile course through the mountains. Park sustained a bad spill and was forced to quit the race. Berges, mounting a 1913 Thor 7, finished after doing some hard riding. This race being for a side bet of $100 placed the riders in the professional class. A run is held every Sunday by the Bakersfield club and sidecars are much in evidence on these occasions.

BY way of calling attention to the fact that the Augusta (Ga.) M. C. is a broad-gauge organization, the club officers state that its membership list includes riders from Cleveland, Chicago, New York and Pittsburgh, as well as from a number of Georgia cities aside from Augusta.

REGISTERED SHOPS

AMONG the latest F. A. M. repair shop registrations are: Carl Krueger, Hutchinson, Minn.; Elmer Kittell, 1214 Moro street, Manhattan, Kan.; Pioneer Motorcycle Exchange (R. E. Rodgers), Monessen, Pa.; Normanskill Motor Shop (H. L. Tibbits), Albany, N. Y.; Ira S. Dille, Billings, Mont.; C. M. Cleveland, Earlville, Ill.; Coalinga Auto Repair Shop (C. C. Clink), Coalinga, Cal.; Ashland Motorcycle Garage (Charles E. Ogden), Ashland, Ohio.; Tecumseh "Big Chief" Garage (L. P. Williamson), Tecumseh, Mich.; Elmer Peters, Mineral Point, Wis.; Sallot & Sallot, Fort Wayne, Ind.; Thor Motorcycle Garage, Aurora, Ill.; Badger State Motorcycle Co. (Adolf Waech), Milwaukee, Wis.; Clark Cycle Co. (E. O. Clark), St. Josephs, Mich.; Lents Garage (Arel Kildahl), Lents, Ore.; G. S. Wilson, Bechtelsville, Pa.; D. W. Polkinghorn, Cherokee, Iowa; Guarantee Electric Co., Ltd. (H. P. Wagner), New Orleans, La.; Roy R. Baer, Sterling, Ill.; Gerber & Winter, St. Paul, Minn., and J. Polier of Portland, Ore., received a re-issue.

INDIANA STATE PROGRAM

PRACTICALLY all the plans for the Indiana State F. A. M. convention, which will be held May 16, 17 and 18, have been completed, and State Commissioner O. F. McLain has sent out letters to county commissioners telling of the program for the event. Every local commissioner is to call a meeting of F. A. M. members in his county and elect delegates. One delegate will be allowed for every ten members, and the county commissioner will be a delegate by virtue of his office.

The program has not been completed, but a number of speed events have been arranged for. If possible one of the national events will be run, and if not a state championship will be put on. A 24-hour endurance run is also scheduled.

DURING the week ending March 1 the Bay City Motorcycle Club of Bay City, Mich., and the Hyde Park M. C., of Hyde Park, Mass., affiliated with the F. A. M.

The SIDE CAR AS A SALES BOOSTER

BY ARTHUR LAROE

ALTHOUGH concerning itself with the use of the sidecar as an adjunct to the business of the dealer in motorcycles, this article is not intended to be without interest to riders generally.

Altogether too many dealers completely overlook the sidecar as an adjunct—yes, almost a necessity to their business. Let's see how important the sidecar is by comparing it with some other things, naming them in order of their importance to the dealer. First of all, a good machine to sell and good salesmanship to sell it; then next in order a well-dressed and attractive display window, and a neat and inviting salesroom. This probably meets with approval. But how many will agree when the sidecar is mentioned next in order? and not wholly forgetful either of the real value of advertising in local newspapers. Experience has shown that the sidecar gives better publicity results—and they are what we are looking for.

Of course, it is true that in some localities newspaper advertising would take precedence over "sidecar" advertising, depending upon the number and class of people reached by the particular advertising medium employed. This is a pretty high estimate of the actual value of the sidecar as a promoter of sales, but the opinion is based upon experience that extends over one successful season with the third-wheeler, as compared to several seasons without it.

A sidecar may be used for many kinds of work; in fact, for an endless variety of purposes. Let's classify a few of these, too, in order of importance. First comes advertising, for nearly everything the dealer does with his sidecar is one form or another of advertising. Probably next in order comes demonstrating, in which the sidecar is almost a necessity. Then we should note the instructing of purchasers in the manipulation of the controlling devices; exhibiting the case with which the machine can be handled, and routing prejudices that a few people still hold against the motorcycle.

AN ADVERTISING ADJUNCT.

There are so many ways in which the "basket" can be used as an advertising medium that I cannot essay to enumerate a tenth of them. It attracts attention to the dealer's enterprise, to his machine, and to passenger carrying in general. Suppose we consider a few of these methods without any regard this time for order of importance. Every minute that the sidecar outfit is before the eyes of the public it is performing its little mission of advertising. It behooves the dealer, therefore, to keep it on the streets of his city as much as possible, even if it must stand idle before his door. This will prove at least that it is not undergoing repairs in the shop. And this having it "in harness" conveys the idea that it is a machine that is always ready for business.

Of course, the more it is driven about the streets the better will its function be performed. Ordinarily, no doubt, a better impression is made upon the mind of the public if the equipage includes a passenger besides the driver. And generally speaking, the prettier she is, the better that impression. Granted, most dealers have one or two other little details of business to attend to in addition to driving about the streets as a moving advertisement. But every dealer has errands *ad lib,* for which the three-wheeled buggy may well be used, especially considering its very low cost of mileage and maintenance. The writer's sidecar has been used for everything from posting a letter to moving furniture.

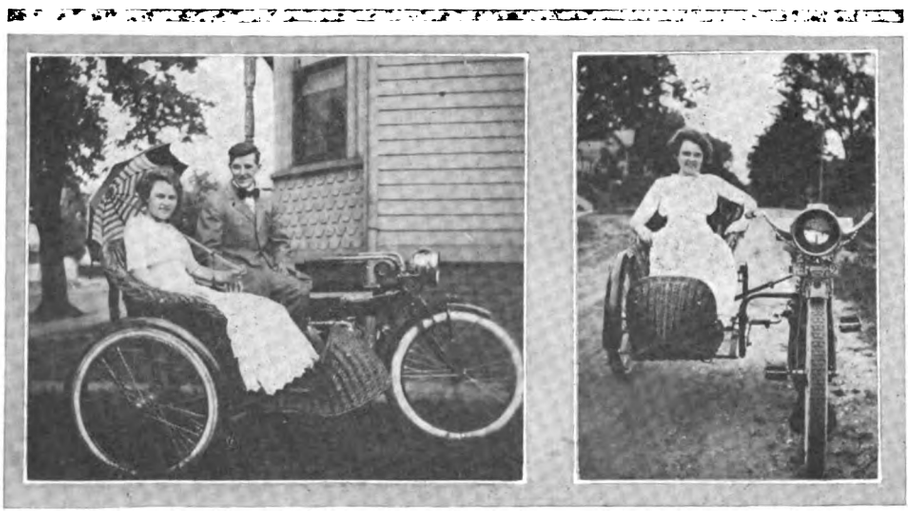
SOME PUBLICITY POINTERS

Perhaps the most fruitful scheme for getting free advertising is to proffer the service of your sidecar to a local newspaper for use on special occasions such as at election time, and, whenever you can, for conveying reporters to scenes of fires and accidents. In one instance my sidecar was used by the staff of a daily newspaper for the collection of election returns. The results of this experiment were highly satisfactory to both the staff and myself, and, of course, my outfit came in for a nice little write-up next day. The reporter who used the sidecar could cover three times the territory covered by the others, and the matter was turned in at headquarters written, while the others sent it over the wire.

Another role which the sidecar has played to perfection is that of official vehicle to a master of ceremonies or parade marshal in holiday programs. There is certainly no vehicle better adapted to this service than the motorcycle with sidecar. It has the requisite properties of reliability, rapidity, and perfection of control in traffic; and besides it is so small it can be squeezed into and through places where an automobile would get all tangled up and stalled. It is easy to realize the great prominence afforded the little vehicle under such circumstances, for who doesn't go to see the "p'rade"?

A HOLIDAY SUGGESTION.

The dealer who fails to enter his sidecar in any appropriate holiday festivities, in one capacity or another, surely loses a splendid opportunity to place his machine favorably before a large majority of his city's populace. Unless acting officially, the outfit should carry some catchy decorations—and the prettiest girl in town. It shouldn't be hard to persuade her to act as passenger. Even more effective than artistic decorating is some scheme of grotesque trimming, which will quickly suggest itself to anyone with a funny-bone.



One which has been very successfully carried out is that of "Mutt and Jeff," in which Mutt acted as driver and Jeff as passenger. The equipment of the entry included among other things, stove-pipe, halter rope, fire-crackers, cow-bells, and a 36-inch Stillson wrench, which never failed to make the motor mote. The name of the

Digitized by Google

machine and dealer must be prominent among the trimmings.

These are a few of the methods in which the sidecar can be used as an advertising agent. As a demonstrator it is almost a necessity, for how else can the skeptic be shown the real capabilities of the machine? Surely not by asking him to stand on the curbing and watch you ride past him. With a sidecar you can show him, and most people buying motorcycles are "from Missouri." There is nothing that the writer can think of that clinches a sale more quickly or surely than a ride in the sidecar.

HOW BOOSTERS ARE MADE.

Although not absolutely essential to proper instruction in manipulation and control, it is exceedingly convenient in this service It permits a novice, as a passenger, to become thoroughly familiar with the various controlling devices before anybody's health and happiness depends upon his skill. And it usually inspires him with confidence in himself, to note the perfect ease with which the control is managed. There is another function which the sidecar performs so perfectly that it must be mentioned; that is, making boosters out of knockers. There is not a better cure for those fellows that are continually railing against the "infernal jigger" than a good ride beside one of them. In 100 per cent. trials it has convinced the subject that there is no easier-riding vehicle.

To those dealers who have been using a sidecar attachment, these suggestions probably sound tame. Those who are not yet on the band wagon may easily prove to themselves the utility of the outfit in their business by investing in one. They may be assured that it will pay for itself many times over in a season.

NATIONAL HIGHWAY PLANS

WITH a view of arousing further interest in its project for a national network of good roads the National Highways Association, with headquarters at Washington, D. C., is distributing copies of a map showing a tentative outline of the routes embraced in the country-wide plan. While the scheme is of such scope that it may impress the casual reader as somewhat visionary, it is finding advocates in many influential circles and is at least worthy of serious consideration from all road-users and motorists in particular.

The following list of highways will serve as a key to the network of routes laid out on the map:

Main National Highways—1, Northern; 2, Central; 3, Southern; 4, Atlantic; 5, Mississippi; 6, Pacific Trunk National Highways; 7, Appalachan; 8, Canada-Gulf; 9, Great Lakes-Atlantic; 10, Great Lakes-Gulf; 11, Lake-Mountain-Pacific; 12, Missouri-Arizona; 13, Northwest; 14, Oklahoma-Carolinas; 15, Puget-Gulf; 16, Rocky Mountain; 17, Santa Fe; 18, Southwest; 19, Texas-Atlantic.

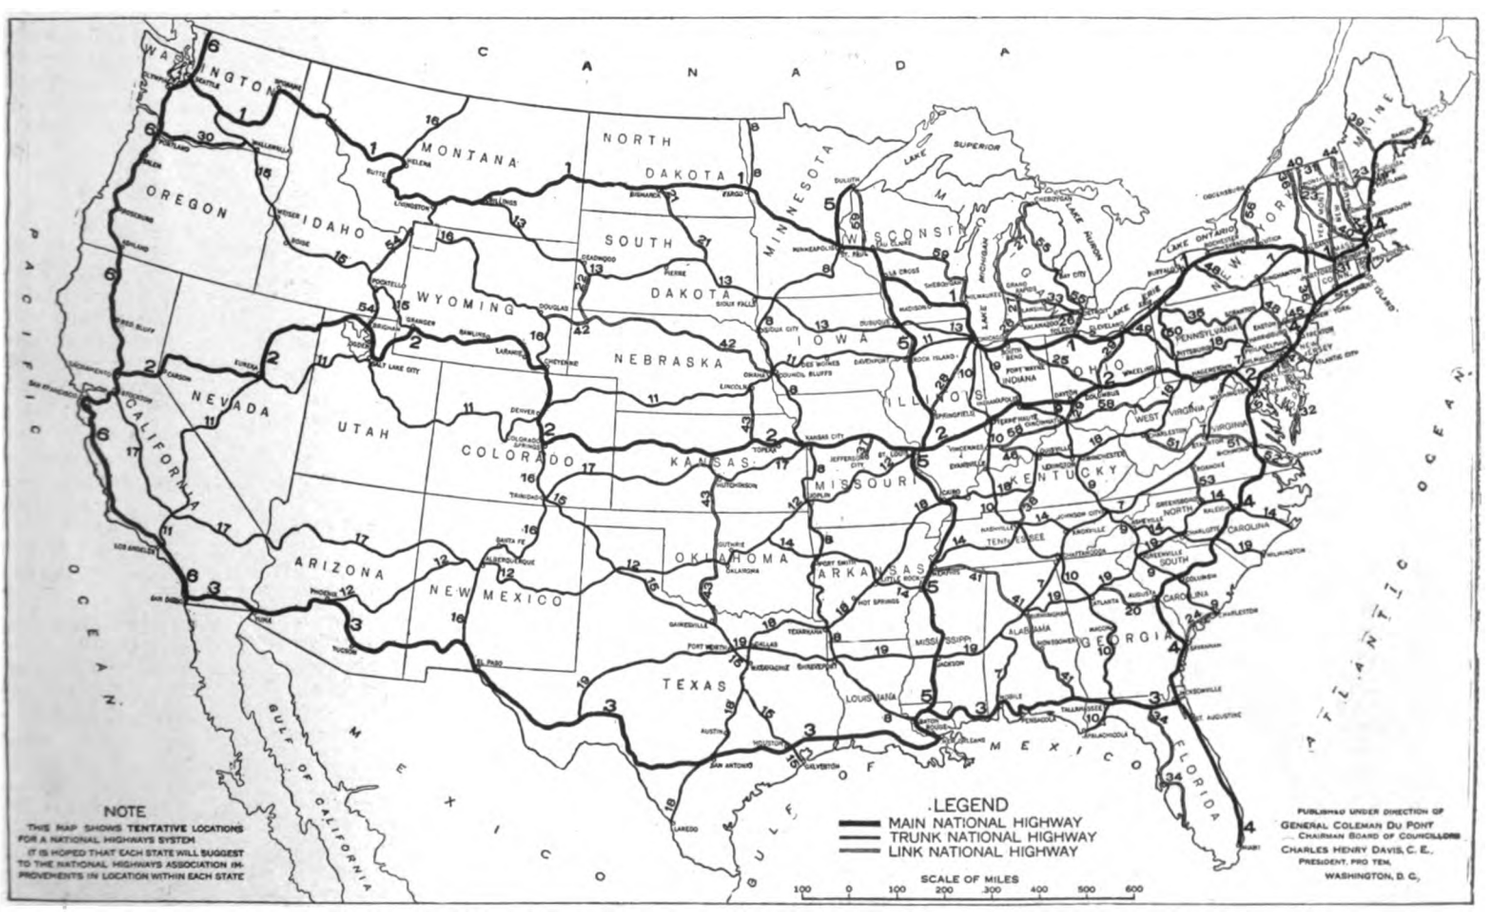
Link National Highways—20, Atlantic-Augusta; 21, Bismarck-Pierre; 22, Black Hills; 23, Burlington-Portland; 24, Charleston-Savannah; 25, Chicago-Columbus; 26, Chicago-Detroit; 27, Chicago-Mackinac; 28, Chicago-St. Louis; 29, Cleveland-Cincinnati; 30, Columbia River; 31, Connecticut Valley; 32, Delaware-Chesapeake; 33, Detroit-Grand Rapids; 34, Florida West Coast; 35, Harrisburg-Erie; 36, Hudson-Adirondacks; 37, Jefferson City; 38, Louisville-Nashville; 39, Maine-Quebec; 40, Massachusetts-Vermont; 41, Memphis-Florida; 42, Nebraska; 43, Nebraska-Texas; 44, New Hampshire; 45, New York-Scranton; 46, Ohio-Wabash; 47, Philadelphia-Atlantic City; 48, Philadelphia-Buffalo; 49, Pittsburgh-Cleveland; 50, Pittsburgh-Erie; 51, Richmond-Charleston; 52, Richmond-Norfolk; 53, Roanoke-Greensboro; 54, Salt Lake-Montana; 55, Toledo-Mackinac; 56, Utica-Ogdensburg; 57, Washington-Annapolis; 58, West Virginia-Indiana; 59, Wisconsin.

REVIVAL IN GERMANY

REPORTS from abroad are to the effect that Germany is experiencing a revival of interest in the motorcycle, and that a number of prominent firms that gave up the manufacture of the motor two-wheelers several years ago in favor of automobiles are now preparing to enter the market again. Every effort is being made to offset the invasion of English and other foreign-built motorcycles, and it is stated that a well-known company is designing a special 3½ h. horizontal twin with which a bid for favor is to be made in the near future.

ENGLISH RACING POLICY

ANNOUNCEMENT is made that the English Motorcycle Manufacturers' Union has decided upon the policy followed last year with reference to competitions. The organization will support a number of important events and refrain from participation in the others.



Tentative Outline of Roads to Be Included in National System by Highways Association.

TIPS FOR THE TANDEMITE

BY C. V. ARMSTRONG

BY way of introduction allow me to state that I am a confirmed tandemite. If I had ever used a sidecar I might be a strong rooter for the third-wheel attachment, but as things stand now I am quite satisfied and expect to remain so. I believe that most troubles held against tandem riding result from improper arrangement of the rear saddle and unreasonable expectations on the part of the machine owner. True enough, there are some problems to be met in tandem work, but I have overcome them and I am sure other riders can be equally successful. Several points have been brought home to me by long experience, and I will try to pass them along for the benefit of the other boys.

LOCATING THE SADDLES.

The all-important thing is this, the tandem rider must not sit back of the rear hub. Any and all weight back of the rear hub tends to make the front wheel unmanageable in sand, to make it wobble worse in starting and skid worse in mud. A machine with the rear saddle back nearly to the end of the mudguard, where some of them are fitted, runs all right on good roads, but in cross-country riding it has the spirit of a bucking broncho; it will throw you in ruts and sand just as quickly next summer as it did this summer. No amount of experience or grit can conquer it.

However, with the seats placed as they should be I believe tandem riding is just as safe as riding alone, and a dozen times more fun. Of course the machine should be a twin, with a long wheelbase. I believe the extra weight demands a wheelbase of sixty to sixty-five inches. It is probable that the reason so many saddles are placed so far back is because there isn't room for them to be any farther ahead unless the front saddle is moved forward. Moving his own saddle ahead is something the average rider does not like to do. He is used to it where it is, and it undoubtedly belongs where it is when used in solo work. But tandem riding is a different proposition, and the front saddle should be pushed ahead. Of course, with the front saddle ahead, say, eight inches, the machine handles differently, and one must learn to drive all over again, as it were, but you can learn, and in a few hundred miles of tandem riding you will find that your terror of bad roads has disappeared. I know that on most machines the front rider's saddle could not be moved ahead eight inches. The pedals would then be too far back, the clutch lever or belt lever or something on the tank would be in the way of the saddle, and last, but not least, the handlebars would hit the rider. I had all these things to deal with, and here's how I managed my machine.

A RECONSTRUCTED MACHINE.

I got rid of pedal trouble the first thing by purchasing a machine that had no

pedals, a two-speed twin with three-inch tires. My wife and eleven-year-old boy ride on saddles placed side by side, sixteen inches apart, over the rear wheel, as shown in the picture. The rear handle bar is mounted in the top of a pipe fastened in the seat-post tube. There is a footboard on each side of the rear wheel and the rear riders have plenty of room. I reconstructed my saddle frame and fastened it to the top bar eight inches forward of its original position. It is right over the gasoline shut-off, but this doesn't bother me. I had to take the speed change lever off, but I put on a more simple rig farther ahead and that is all right now. The clutch lever was in the way, but I had a blacksmith make a new one, which is bent ahead just above the arc. I also fastened my foot-board to the bottom of this lever so that I can work the clutch with my foot a good part of the time. My handlebars swung past me all right after I cut off the flexible extensions of the grips.

Perhaps you wonder what this machine can do. I want to tell you that it can do

Digitized by Google

wonders on bad roads with its load of three people, making over six hundred pounds entire weight. We take sand, ruts, roadsides, ditches, meadows, etc., with great success, and the only thing that gets us real quickly is a wet street car rail. When we hear of some place or see some place on the map that we want to go to we go right along without regard for whether the roads are "good" or not. The three-inch tires are great for sand and soft ground; also they do not puncture as easily as small ones. Other riders seem to shun this class of roads and we have to make most of our trips alone. Last fall we rode more than sixty miles on a fine day without seeing another motorcycle. Another day we followed nine miles of muddy road from the end of one stone road to another, at a cost of one spill, and coming back we saw half a dozen tandem riders who had given up the attempt to get even to the end of the stone road just because it was a little slippery. However, we don't go hunting up muddy roads as a general thing. "My wife won't let me."

EXCELLENT MILEAGE SHOWING.

Of course, it is our low gear that puts us through the bad places and up steep hills. We could do no better than others if we had to use the high gear for everything, and I do not expect ever to buy another single-speed machine or one with pedals. What good are pedals, anyway? They are all right on a bicycle, but are out of place on a motor. They make the poorest kind of a foot rest and you can't do anything by pumping with them, as every body knows. Our machine has a good braking system and the foot-starter is far handier than pedals. When a pedal machine goes down you bend the cranks, but foot boards fold up.

Our machine carried the three of us over 2,300 miles the last season, 500 miles of it being on a trip from Detroit, Mich., to Fulton, N. Y. We made the run from Cleveland to Buffalo in nine and one-half hours. I'll bet my gear has been changed oftener and worked harder than most of the others, and it has not given any signs of trouble yet.

I work the clutch with my foot and thus have a chance to change gears carefully at the same time with my free hand. By the way, I know a stunt that has even my foot-operated clutch beat. It is operating the clutch from a finger lever just in front of the spark grip. The Emblem rider, when he starts, has both feet on the ground and both hands on the handlebars, where they belong. I see the new Excelsior has adopted this system, and I guess some others have also. It's bound to come. I'm going to rig my own clutch to operate in this manner this winter, for I have made up my mind it can be done. This will give me the ideal control, namely, throttle and brake on left handlebar and spark and clutch on the other. The single rider can ride with one hand or most any old way, but when he gets 200 pounds extra on the machine it's real nice not to have to take either hand off the bars in bad roads or when starting.

Well, I hope to meet you on a tandem two-speed twin on the good roads around Buffalo in the happy days to come. By exercising my faith I can see the orchards in blossom now and hear the chug of my motor over the country roads. My machine is an Indian T. T. model, fitted with three-inch United States tires.

FLYERS USE MOTORCYCLES

THAT aviators regard the motorcycle as their most natural means of travel while on the ground, is proved by the fact that there is scarcely a big aviation camp in the country without its motor two-wheeler. The United States Army flyers and the Moissant International Aviators both have winter camps in Augusta, Ga., and these birdmen use motorcycles at every opportunity.

SIXTEEN additional motorcycles have been purchased by the police department at Cincinnati.

OILING THE CHAIN.

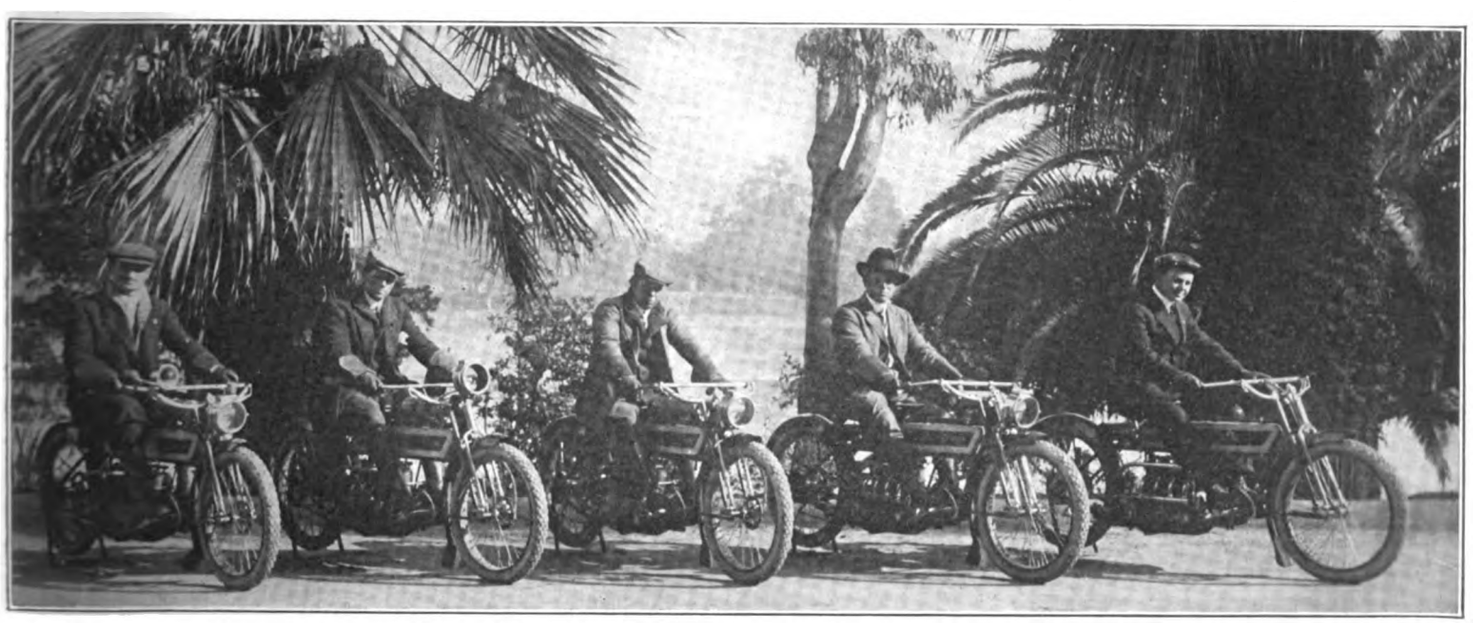
MORE motorcycle drive chains are ruined through improper lubrication than through any other cause. A common practice is to pour oil over the outer surface of the chain while it is on the machine, incidentally pouring considerable oil on the sprockets and rear wheel. After the machine is started the surplus oil flies over the frame of the machine and the rider's clothing, giving rise to the claim that chain-drive machines are necessarily dirty. The oil remaining on the outside of the chain soon becomes a paste through the adhesion of particles of sand and grit. This paste not only effectually prevents any of the oil from reaching the wearing surfaces of the chains and sprockets, but also works its way in, having almost the same abrasive effect as emery. The result is a condition which will soon wear out even the best chain on the market. The rider says, "that chain is no good" and goes out and buys another equipment of chains and sprockets.

The only way to properly lubricate a chain is to take it off the machine entirely and soak it in gasoline until every particle of dirt and oil is washed off. Then put it into a pan of hot tallow in which has been placed a few spoonfuls of powdered graphite, and let the mixture soak in properly. Then remove the chain from the pan and wipe off all the exterior grease. Put the chain back on the machine and the lubricant which has worked into the rollers will oil the chain properly for about a month, when the process should be repeated.

FIRE AT GOODYEAR PLANT

FUMES of burning rubber greatly hampered the work of the firemen at a blaze which started in the reclaiming department of the Goodyear Tire & Rubber Company, Akron, O. The fire was caused by the explosion of an acid container.

A NEW garage with clubrooms above has been rented by the West Philadelphia Motorcycle Club, of Philadelphia.



LOS ANGELES POLICE.

IN the striking photograph above appear some of the members of the county police motorcycle squad of Los Angeles, Cal., with their new Henderson machines. These officers cover much territory and have established an excellent reputation. They have obtained satisfactory results in curbing speedsters and their machines are proving handy in many other branches of county and municipal service.

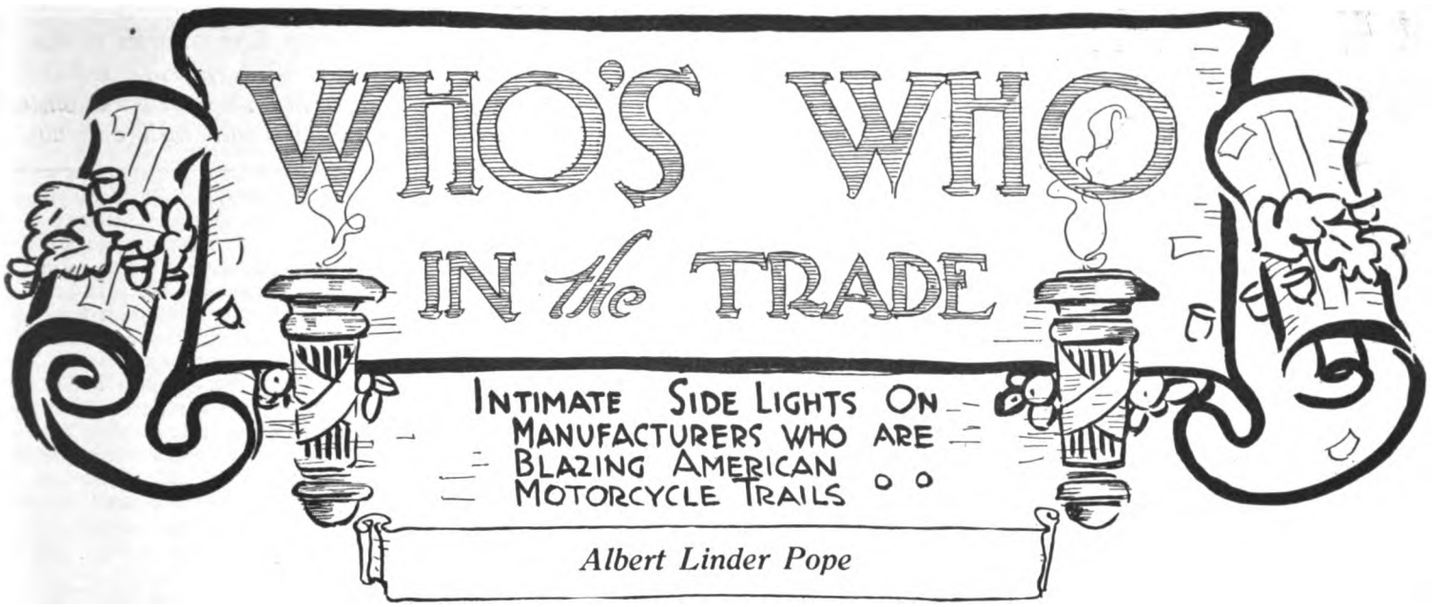
ALBERT LINDER POPE

Digitized by Google



THE same qualities which enabled Colonel Albert A. Pope to make good as a gallant soldier, fighting for the preservation of his country, as a wonderfully successful manufacturer—promoting new modes of travel and transportation—and as a pioneer leader of the good roads movement, are responsible for the success of his son, Albert Linder Pope, under whose progressive management the Pope Manufacturing Company has become a leader in the motorcycle industry in addition to its other activities in the bicycle and automobile manufacturing fields.

As a boy President Pope was deeply interested in the great industries which his father was developing; as a man he has done much to advance and strengthen the Pope company's position in its various fields of endeavor. And in no branch of the business has President Pope taken keener interest than in the development of its motorcycle department. Perhaps he sees in the rapidly growing motorcycle business something more or less parallel to the bicycle boom. At any rate his views on the subject are wonderfully optimistic, and he looks for the development of a big and permanent motorcycle business.

PRACTICAL BUSINESS TRAINING.

During his long connection with the Pope company, Mr. Pope has occupied various positions from factory workman to posts of great responsibility in the sales and executive end of the business. After the boy left school his father put him to work in the factory at Hartford, where he spent a year learning the practical details of bicycle manufacturing. He worked on exactly the same basis as any other man in the factory, starting at 7 o'clock in the morning and keeping regular factory hours. This thorough mechanical training has since stood him in good stead, giving him an insight into the problems of factory management and production which he could have acquired in no other way. The first position of large responsibility to be held by Mr. Pope in his early career was manager of the Pope company's wholesale and retail bicycle branch in Boston. In 1897, he was promoted to be secretary of the company at Hartford. Two years later when the original Pope company was absorbed by the American Bicycle Company, he became manager of the Columbia sales department.

After the Pope company's subsequent withdrawal from the trust and its complete reorganization as an independent company under the presidency of its founder, Mr. Pope became vice-president. He succeeded to the presidency of the company shortly after his father's death in 1909. As head of the Pope company, Mr. Pope's influence has always been used for the best interests of the trade as a whole. He has been a director of the National Association of Automobile Manufacturers for a number of years, and has been selected to head some of its most important committees. He has a wide acquaintance with manufacturers and with business men in the automobile, bicycle and motorcycle trade throughout the country, many of whom have had dealings with the Pope company for a quarter of a century or more.

A STRIKING PERSONALITY.

Mr. Pope's associates characterize him as a man of sound business principles and unerring judgment. Of powerful physique and dynamic personality, he has a vigorous, energetic way of doing things which makes him an ideal executive for an industry that is moving fast like the motorcycle industry. He is direct, frank, and outspoken in his manner; forceful in expression; quick to make up his mind, and discerning in his judgments of men and affairs. Persevering and progressive in everything he undertakes, there is a strong undercurrent of conservatism in his nature. In shaping the company's policy he has been both broad-minded and far-seeing. In all his personal and business dealings, Mr. Pope is known as a man whose word can be depended upon.

With his early training in the bicycle business, it was quite natural that Mr. Pope should ultimately focus his attention on the motorcycle and concentrate his energies on this branch of the business in which he has so much faith. All his life he has been a great believer in out door life and recreation. He has been an enthusiastic bicyclist, and still rides occasionally. Yachting and automobiling are his favorite recreations, however. His tremendous interest in the motorcycle is not merely a matter of business policy but springs from his innate love of all outdoor recreations that promote the health and happiness of its devotees. He believes in the motorcycle because it appeals to a fundamental trait in human nature—the desire to travel further and faster just as the automobile does.

HOW THE BUSINESS WAS FOUNDED.

The great business over which Mr. Pope now presides was begun in Boston at Dock Square just after the close of the Civil War with $900 which Colonel Pope had saved from his soldier's pay. The Pope Manufacturing Company was not organized, however, until 1876. It was first interested in the handling of small patented articles, among which the air pistol was a leader. Just at the time more business was needed, the management stumbled upon the bicycle. In 1876 Colonel Pope went to the Centennial Exposition at Philadelphia where he saw a bicycle for the first time and was fascinated with its possibilities. In the bicycle he saw his opportunity. Assisted by an Englishman, John Harrington, with whom he had had business dealings, the first bicycle made in America was subsequently constructed for Colonel Pope at a cost of $313. It had wooden wheels and iron tires, which probably weighed more than most bicycles complete do today. Colonel Pope's first move in the bicycle business was to import some English machines. During its first year the company disposed of ninety-eight bicycles and in the following year its sales jumped to eight hundred. Most of these wheels sold in and around Boston where Colonel Pope had established a school of instruction in bicycle riding.

THE POPE LINE OF TODAY.

The Pope motorcycle line has grown with great rapidity since the production of the first Pope model so that it now embraces a twin and three singles—an achievement of which Mr. Pope is justly proud. At the recent motorcycle shows, dealers were genuinely surprised to see what the Pope company had accomplished in a comparatively short time by reason of its long experience, its completely equipped plants, its splendid organization, and its large resources. From the first, Mr. Pope was determined that the Pope line should be a leader and that "Pope Quality" should mean as much to the motorcyclist as it does to the bicyclist and the automobilist. To that end he has spurred his organization on to its best efforts, and the results satisfy him—as nearly as anything can satisfy a man who is always looking ahead to still bigger things.

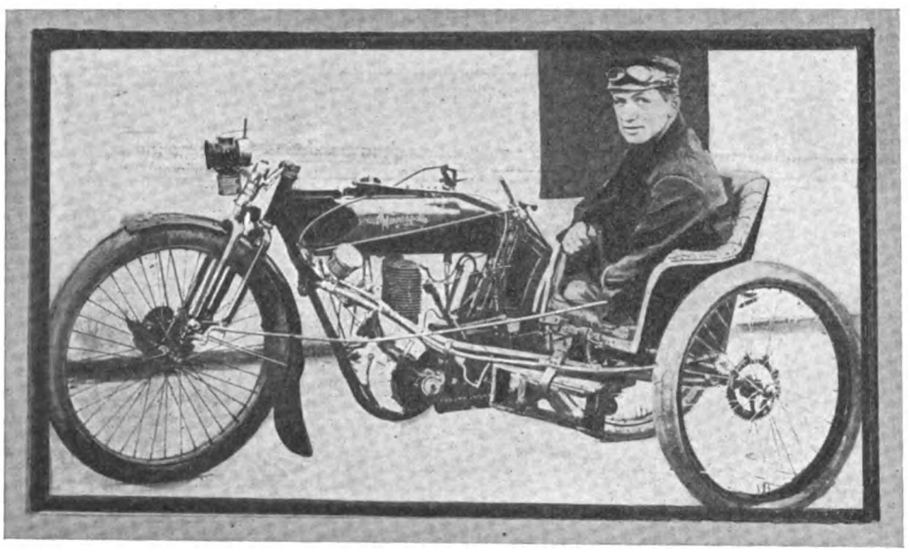
WHAT THE SIDECAR MEANS TO A CRIPPLE

Graphic account of a trip from Los Angeles to San Francisco and return on which the rider, legless and with only one arm, managed his motorcycle and sidecar in sand and on heavy grades with little difficulty

By ALFRED LE ROY

THIS is the story of my trip in a Minneapolis sidecar from Los Angeles to San Francisco, along the Pacific coast for about 500 miles. It was made last August in three successive days. I traveled along the coast road, known as El Camino Real, the old mission highway laid out by the padres over a hundred years ago to connect the string of twenty-two Catholic missions on the California coast. As California is mountainous there are many passes on this route, some of which, like the Casitas, have very sharp turns and steep grades.

As I have but one arm and have lost both legs, I was obliged to have a 4 h. Minnie fitted up so I could work levers with my good right arm and steer with the stump of my left arm, and in this way I was able to hit the road at good speed. I left Los Angeles for San Francisco on a Tuesday morning about 6 o'clock, with my Minneapolis geared about 5 to 1 on the high, as I had no way to get through sand or up the steep grades except by the power of the machine alone. I started the engine by putting the machine on the regular stand; then with high gear in I would turn the crank with my right hand. Of course, my right arm is naturally stronger than the average right arm on account of being my only "weapon."



Albert LeRoy in the Sidecar with Which He Made His Tour.

SOME DIFFICULT CLIMBING.

About seven miles out I fouled the spark plug and changed it and then the new plug became dirty, too, and I had to change that. From that time on, over Cahuenga, Calabasas and Conejo passes and the country between, I made good time and was in the little Mission city of Ventura (Santa Buena Ventura), seventy-three miles out, at 9:10 a. m. Here I stopped long enough to replenish my gasoline and oil supply and then started on for Santa Barbara, the next Mission city, thirty-six miles distant, including the eighteen miles of mountain roads in the two-summit Casitas Pass. Each of the summits has a three-mile climb and there is altogether about nine miles of uphill work, averaging from ten to twenty-five per cent. No single-cylinder motorcycle has ever climbed these grades without the aid of pedaling unless it was a two-speed machine, while lots of 7 h. machines do not get up without pedaling and even some two-speed machines stall on the sharp turns.

I made the run betwen Ventura and Santa Barbara in an hour and fifty minutes, which is faster than most automobiles make it. I had to have some repair work done in Santa Barbara and while Fred Lowe, the Excelsior agent, was doing this for me I got lunch. Then after putting in more gasoline and oil, I beat it out of town towards Gaviota Pass, some thirty odd miles up the coast. This run along the Pacific from Santa Barbara to Gaviota pass is strenuous, as there are over sixty small canyons to cross. The railroad along here has high steel trestles over these canyons, but the highway winds through the canyons, some requiring a half-mile of travel to cross. And at most of them are steep grades, where low-speed work was necessary.

I forgot to state that in the Casitas Pass, where I got stalled at one place, I broke my stand and therafter had to start by coasting on a down grade to get engine going. The stand was repaired at Santa Barbara. In the Gaviota Pass I took the new road through the great San Julian Spanish grant and came out at Lompoo, instead of at the Old Santa Ynez Mission, near the town of that name. This new road was very fine much of the way. In the Gaviota I had to use low speed for four miles at one time.

GOOD MILEAGE ON SECOND DAY.

On reaching Lompoo, a small interior town, I had covered 176 miles and so concluded to stay overnight there. Here I was a curiosity and the boys at the garage took me under their care and kept me going till midnight having a good time. They fixed my goggles, which I had broken, filled up tanks and would take no money.

On the second day I did not get started until about 8 o'clock, and got out of town on the wrong road. I finally reached Santa Maria, the next big town, over steep grades, having gone over the new Gloriosa grade to Orcutt. There was three miles of low-speed work and then I ran down so steep a grade that I had to stop and cool my brakes.

It was about ten o'clock when I rode into Santa Maria over good roads. I only stopped here for gasoline and oil and then went on without delay to the Mission city of San Luis Obispo, where I had noonday lunch. At the Emblem and Excelsior agency, where I stopped for supplies and some slight repair work and adjustments, the agent would not accept any money from me.

A few miles out from San Luis Obispo is the long climb up the south side of Cuesta Pass, where I had plenty of low-speed work, but a glorious coast down the north side from the old watering trough, most of the way into the little village of Santa Margarita. Without stopping I flew over the fine road through the natural park of the long pass of the Oaks (Paso del Robles), and was soon in Templeton, another small town, where I paused to get some soda water, as it was warm and at times a little dusty. The rest of the beautiful road into the little city of Paso Robles, famous for its wonderful baths, was soon covered and here I pulled up at Henderson's new garage, opposite the big hotel about 4 p. m. Here I had to have my clutch fixed, as it was slipping, and then with fresh supplies I started on for the next Mission town, which was San Miguel. I was making fast time and so did not stop here, but went on to Bradley, which I reached about 5 o'clock, and as I had covered 120 miles for this second day, I was satisfied to stop overnight here. I had had a hard time getting through the sand of Salinas River at the long ford, which was dry.

SILENCING A TEAMSTER.

At Bradley I met a fellow who was doing a stunt with two dogs hauling him in a cart. As there was but one small hotel and only one room left in that I had to double up with the "dog man" or sleep in the barn. The performer had taken ten days to get this far from San Francisco, 200 miles, which I was to cover on the morrow in one long day. The world-famous Salinas wind was blowing. It has a sweep of nearly 200 miles down this valley, starting off the sea in the Monterey Bay country. In the night I thought the little hotel was going to blow down.

Thursday morning I was up early, to be ready for the 200-mile run into the metropolis, and at 6 o'clock I was on the road. By 8 o'clock I was in Jolon, the little old town in the San Antonio Hills, four miles from the old mission of San Antonio de Padua, having averaged about 20 miles an hour. As I had been having my gasoline feed pipe leak I had it soldered here. I had breakfast there and then lit out again northward.

Before reaching Gonzales, where the highway and railroad run side by side through the Salinas valley, a train overtook me and I had a race with it that lasted most of the way

Digitized by Google

to the city of Salinas, where the train got away from me. Between Soledad, where there is a Mission ruin, and Salinas I had a tow with a teamster driving a six-horse team. I did not want to shut off my engine there in the sand and have a hard time starting again, but the driver insisted that I stop my engine and he was going to beat me up if I did not. I got out my little old gatling gun and he decided to let me alone. The horses shied some and that was all.

It was about 11 a. m. when I reached Salinas, making about 90 miles for the five hours I had been on the road, with considerable sand work. As it was so near noon I ate lunch and was on the way north soon afterward. The much dreaded San Juan grade, which is as steep as 25 per cent. in places, and often 20 per cent. for long stretches, delayed me some as I had to stop to cool the engine. On the down grade I had to stop several times to let the brake cool off.

IN SAN FRANCISCO.

I was at San Juan Beautiste Mission at 2:30 and had two punctures to fix here. My chain had been too loose and had climbed the sprocket on the counter shaft coming down the grade and thus broken a lot of the teeth, but I tightened the chain as much as I could and finished that way.

The next stop I made was at San Jose for gasoline and oil, and then I went along the shore of the great San Francisco Bay and reached Oakland, which is the Brooklyn of 'Frisco. At 6.30 I was at the Oakland ferry, which is out on the mole, and about 7 p. m. I was in San Francisco, having covered 496 miles in three riding days. I don't think this was bad for a man without legs and with but one arm, and I had not been over any part of the road north of Gaviota Pass. On the trip I averaged about 60 miles to a gallon of gasoline and used about eight gallons of fuel and about two gallons of oil.

On the return trip I left San Francisco on Friday at 3 p. m., figuring on the moonlight and riding all night. All went well and I was in San Miguel, the old mission town, at 6 o'clock the next morning, having covered 211 miles in the fifteen hours elapsed time. Here I took a short sleep and by 8 o'clock I was on the road again, reaching Paso Robles in 45 minutes, where I stopped only for gasoline and oil. Soon I was enroute for San Luis Obispo, which I reached at noon; there stopped for lunch. San Luis Obispo was left on Saturday at 12.30 p. m. and the 32 miles to San Maria were covered by 2.45, as I was now taking it easy after the long all-night ride.

Leaving the old city of Santa Maria, I followed the Foxin canyon pass route to Los Olivos and then went past Santa Ynez Mission into the Gaviota Pass by the regular route and was at Gaviota railroad station on the ocean shore at 6.30. I rode into Santa Barbara at 9 p. m. where I put up for the night. On Sunday morning I left Santa Barbara at 5 a. m. and at 10.30 I had covered the 109 miles into Los Angeles, including the five mountain passes on that section of the coast road. Thus between Tuesday and Sunday mid-fore noon I had ridden about 1,000 miles.

C. D. CLAPP, JR., of the Union Supply Company, 231 Superior street, Toledo, Ohio, reports the loss of his 1913 Indian motorcycle. Mr. Clapp offers a reward of $25 for its recovery. The motor number is 70E554.

CHIEFS IN POW-WOW

Department Heads of Indian Wigwam in Springfield Gather for Interesting Program and find "Heap Much" Good Fellowship.

UNDER the innocent sounding title of "Twenteith Century Progressive Club," department heads of the Hendee Mfg. Co. get together when the spirit moves them for a non-stock pow-wow. After a month of passiveness, the spirit became active again recently, and despatch bearers were sent out to assemble the little chiefs on Saturday night, February 15. Tepee 12 of the Highltnd Hotel was the rendezvous, and 11 of the little chiefs were on hand. After a hearty council of war, it was decided to admit the publicity-man of the Big Chief, on condition that he behaved and permitted his report to be censored before posting it on the totem poles. For the benefit of late coming chiefs, Indian pennant confetti was scattered liberally through the hotel corridors leading to Tepee 12. However, this confetti proved very popular with paleface merrymakers, and they filched it when the warriors were in council assembled.

Gene Madden occupied the sachem's stump, and Charlie Spencer officiated as medicine man, with P. C. Johnson as the pale-face captive to be tortured. Johnson withstood all tests of courage and bravery and was welcomed to the inner circle.

The 1913 Indian war dance, which is the fantastic conception of Spencer, and has modern Terpischore out-terpsichored, was executed by the chiefs in full regalia. After tomahawks and scalping knives were sheathed, corn, venison and fire-water were set before the chiefs.

A NEAR ARCTIC TRIP

O. W. FULLER, Yale traveler in New England, has been forced to do some riding of the Arctic variety of late, and the accompanying photograph shows him in the act of demonstrating the good points of the Toledo product for the benefit of a prospective buyer at Waterville, Me. The thermometer registered 20 degrees below zero at the time and the streets were covered with well-packed snow. Despite these handicaps Fuller landed his sale.

PITTSBURGH SMOKER

A RECENT smoker brought out forty members of the Pittsburgh (Pa.) Motorcycle Club. Club meetings are held every other week and the officers are endeavoring to hold some social event between meetings to keep up interest until the riding season opens. E. B. Connell, a prominent member of the club, has left the city, and Mark Dornberger has been appointed to take his place on the membership committee. W. T. Gregg succeeds him on the house committee.

A NEAT DELIVERY VAN

IN the accompanying photograph appears a motorcycle delivery van, designed and built by P. E. Gottschalk, agent for the American Motor Co., in Waseca, Minn. Unusual interest attaches to the outfit at this time owing to the fact that it has been constructed with a view to meeting the special requirements of parcels post delivery. Gottschalk has provided over forty pockets for carrying parcels, and in addition there is considerable room for general mail matter. In spite of this orderly arrangement and the large number of parcels that can be carried the van is very compact and attractive in appearance. It has given excellent service over all kinds of roads and its designer is justifiably proud of the showing it has made. All in all, this outfit is one of the most ingenious that has so far come to notice in connection with mail delivery work.

ON F·A·M· LECTURE TRAIL

Federation Traveler Addresses Enthusiastic Meetings and Finds Clubs Anxious to Co-operate with National Body—Interest Runs High in Membership Campaign.

SAVANNAH, Ga., March 4.—When Director Sauer arrived here this afternoon on his transcontinental F. A. M. lecture tour he was met at the station by a committee made up of Secretary J. S. Cafiero, of the Savannah M. C.; G. R. Coe, of the United States Tire Co.'s Savannah branch; Martin Schroeder, vice-president of the club; John Waters, of the club's executive committee, and O. A. Meyer, chairman of the publicity committee. The F. A. M. Traveler was given a rousing reception.

Arrangements have been completed for a big meeting to-night, and it is likely that at least eighty new memberships will be turned over to Mr. Sauer, thus putting the club in the first rank of contenders for the handsome F. A. M. cups. The meeting will be held in the club headquarters in the Savannah Banking and Trust Building. Prior to the session there will be a fish supper at the Casino, and entertainment features will follow the meeting if there is sufficient time.

NORFOLK CLUB STARTS BOOM.

NORFOLK, Va., March 3.—The meeting addressed by Director Sauer in this city tonight was well attended and the F. A. M. official expressed the opinion that it was the best result-producer so far encountered on his schedule. Many new memberships were received and the club was affiliated with the Federation. The latter move places it in a position to take steps looking to the reduction of the ten-dollar city tax which the riders are now obliged to pay in additon to a state tax of two dollars.

Eph Ball, one of the city's most active dealers, was in charge of arrangements for the meeting. Unusual enthusiasm was manifested in connection with plans for the state tour which is to be held at the time of the state F. A. M. assembly. A two-day race meet will also be staged and there are indications that the general program will be one of the most successful ever carried through in the East.

BIG SESSION AT RICHMOND

RICHMOND, Va., March 2.—A splendid meeting was held here on Saturday night at which Director J. Leo Sauer addressed local motorcyclists and riders from neighboring towns, and there was no end of enthusiasm on tap. President Tompkins and State Commissioner Ewell were in charge of the session. Plans were taken up for a big tour and a state convention to be held in Norfolk May 27-31. Motorcyclists in Richmond, Norfolk, Roanoke, Portsmouth and Charlottesville have joined hands to make the state convention a big success.

WASHINGTON PROGRAM

WASHINGTON, D. C., February 28.—An interesting entertainment program was carried out in connection with Director Sauer's lecture, which was given under the auspices of the National Capital M. C. in this city The speaker outlined F. A. M. policies and answered a number of questions, and at the close of the session he expressed himself as satisfied with the manner in which the motorcyclists of the city had received him. There was an unexpectedly large attendance at the meeting, and the program throughout scored a hit.

FIRST MEETING IN BALTIMORE

BALTIMORE, Md., February 27.—The transcontinental lecture tour and membership campaign of J. Leo Sauer, chairman of the Legal Action Committee of the F. A. M., began in this city last Thursday night with an address before a large and enthusiastic assemblage of motorcyclists. The meeting was held in the assembly rooms of the Automobile Club of Maryland and was under the auspices of the Maryland M. C. With rain pouring down Mr. Sauer said that he would not expect many to attend, and he was agreeably surprised when he found nearly two hundred men waiting to hear his address.

Preceding and following the addresses entertainment was provided in the way of moving pictures of the automobile and motorcycle races at Laurel, Md., last fall. A pianist helped to pass away the time, while the Indian quartette had a new stock of songs to spring on the boys. Mr. Sauer was pleased with the entertainment features and he told the members of the club it was a good way in which to get the riders together.

Presiding over the meeting was Howard A. French, who made some characteristic remarks in introducing President Frank Boyd, of the Maryland M. C. Mr. Boyd proceeded to give a history of the club and tell what it has accomplished in this section for the motorcyclist. Mr. Sauer followed him, and that nothing was missed became obvious when, after he had finished, he became the target for a rapid fire of questions pertaining to the work of the F. A. M. and motorcycling in general.

Mr. Sauer's address in part was as follows:

"Last fall, at the meeting of the board of directors, I made an alleged disparaging remark anent our good friend Howard French. It offended him and was taken as a piece of sarcasm. Someone made the remark that it was 'Sauercasm,' and I was forthwith sentenced to two months at hard labor. Tonight I begin the serving of my sentence. I selected Baltimore as my initial stopping place because I believed it was a good city in which to start, and the enthusiastic reception which has been accorded me proves that I was right. It is my hope that there will be as much enthusiasm manifested along the rest of the long and arduous journey across the continent and back.

"My purpose in visiting you is to explain certain things about the F. A. M. and bring all its members throughout the country into closer contact with the organization. I come among you to invite criticism and to answer it. There has been, first of all, considerable comment anent the expense attached to the meetings of the board of directors. Our meetings cost money, it is true, but it cannot be avoided.

"Take our meeting in St. Louis recently. It was rather expensive, because we had to journey to that city, due to the fact that the president was unable to come east. But you, gentlemen, do not know that we spent an entire day and part of the night in one room working out problems for your interest, going so far as to have our meals sent up so that we would not lose any time. The directors neglect their personal business to attend these meetings in your interest, and their expenses naturally should be paid. In a good many cases, however, the meetings cost little, as the members happen to be in the city at the time on business of their own and then do not charge a cent for expenses.

"You might suggest that correspondence would answer in performing our duties, but we have found this method unsatisfactory. Men have different opinions, which is natural, and the writing of letters fails to accomplish anything. By meeting around a table in one room we are able to talk matters over calmly and arrive at a definite solution of our problems in a short time. The value of these meetings is seen when I say that decisions in nearly all cases are by unanimous vote.

"An important matter I want to speak about is the holding of state conventions throughout the country. They are needed and they will accomplish some wonderful things. The annual convention is almost purely a local affair, as motorcyclists throughout the country have not the time and money to make a long journey. To solve this problem we should have state conventions, held once a year in the principal city in each state. I would suggest that the F. A. M. elect one of its officers to make a tour of the country beginning in June, and visit all the states, arriving in time for all the conventions and meets. He would cooperate with the local organizations and in this way the members of the national body would enjoy the same advantages as if they had attended the national convention.

"I am informed by your state commissioner, William Wood, that you will meet on March 11 to form such a state organization, and I sincerely wish you success. Co-operation like this is what is needed in this big movement. 'United we stand, divided we fall,' is a true axiom and well applies to motorcycling.

"I have another suggestion to make regarding our touring bureau. This is a new undertaking and we have already about four hundred routes which are ready for motorcyclists at any time they want them. Now, I would ask that each one of you, as you go about the state, made a few notes on the trips you make, and some time next fall sit down and prepare a

Digitized by Google

route for us. This is not a difficult matter and you will thereby be supplying information for your fellow motorcyclist, who, by preparing routes himself, will be giving you the opportunity to seek new byways to explore."

SCHEDULE ALMOST COMPLETE

WITH the exception of meetings in Texas, for which arrangements had not been completed at latest reports, Director Sauer's schedule is now approved as far as Chicago, from which point he will make a jump directly to New York City before going out on the second leg of his tour through New England and into the Middle West.

Arrangements for the Atlanta, Ga., meeting on March 5, and the Birmingham, Ala., meeting on March 6, were handled by L. S. Crane and W. E. Johnston, in the former city, and by W. D. Gresham in Birmingham. Reports received just prior to going to press were to the effect that rousing meetings would greet the Federation traveler in both these cities.

As has been stated above, the arrangements for lecture meetings in Fort Worth, Dallas and San Antonio were still in progress at latest reports, and the same conditions obtained in Oklahoma City, Okla. On March 20 Director Sauer will speak before the San Francisco M. C., and it is likely that a special session of the Oakland club will be arranged for the following evening. Satisfactory plans have been made for the meetings in Portland, Seattle and Spokane on March 24, 25 and 26, respectively. It is reported from Salt Lake City that a big meeting will be held on March 28, at which the Federation transcontinentalist will be welcomed. Denver and St. Louis are also in line, and energetic F. A. M. boosters are handling arrangements in these cities for the sessions at which the Federation representative will speak.

RECOLLECTIONS OF LEBANON VALLEY

Impressive vistas and panoramic views of striking beauty feature section of the Berkshires which abounds also in historical interest—Observations on early history of Lebanon Springs, once popular with wealthy recreation seekers.

BY OLD TIMER.

THE article in your issue of February 20, "An Ideal Tour in the Berkshires," brings to mind a section that I walked over and traveled on horseback a great deal before the days of motorcycles. In that way I formed a closer acquaintance with it that the occasional traveler could possibly do, and naturally studied also its historic and scenic features. Perhaps some of the very many of your readers who will sooner or later go over that route, may be interested to have a few notes from the standpoint of an old timer who, by the way, is not too far along in years to enjoy the motorcycle.

Speaking of Columbia Hall at Lebanon Springs: This hall stands on an eminence overlooking the Lebanon valley south and west for miles, and the views from the top are exceedingly picturesque. Toward the west the valley stretches away in fertile beauty to the village of Nassau on the way from Albany. Maple Hill, on the southeast, rises with an easy slope from the pretty village, and a mile southward is New Lebanon. The Wyomanock creek flows through the valley, blending its waters with the Kinderhook, on the way to the Hudson. You are now on the western slope of the Taconic mountains, whose many peaks divide the valley from the Housatonic, and are plainly visible on the east; on the west another range of hills adds greatly to the beauty of the outlook.

AN IMPRESSIVE VIEW.

From the summit of the mountain the country, more than sixty miles in extent, presents itself like a map at the feet of the beholder. Here on a clear day the distant Catskills may be seen from the Helderbergs, west of Albany, to the Sugarloaf, far below Catskill village. The Catskill Mountain House can often be plainly discerned by the naked eye, and the stretches of the Hudson river traced, with the steamers and sailing vessels passing upon its waters, looking like miniatures in fairyland. From a point a little distant from the highway a good view of the upper part of Albany can be secured, and with a field-glass even some of the buildings can be recognized, especially the State Capitol. From Perry's Peak, a nearby station of the United States Coast Survey, there is also an uninterrupted view across the State of Connecticut and Long Island Sound.

The history of the discovery of the place is an interesting one. Capt. James Hitchcock in 1760, after the French and Indian War, was garrisoned among the Stockbridge Indians. By kindness he gained their friendship, and when they perceived that he was suffering from a skin disease, they carried him to the "medicine spring," as they called it, and remained there with him until he was cured.

Charmed with the location, he marked the spot, and when relieved from service, collected a colony and occupied the country immediately surrounding the springs. A grant covering this land was made by the General Court of Massachusetts in 1765 in favor of Ephraim Keyes, who conveyed it in turn to Charles Goodrich. The narrow strip of land extending along the western slopes of the Berkshires was then in the State of Massachusetts, and not until 1787 was the true boundary determined.

ONCE A POPULAR RESORT.

After the Revolution, the "Springs" became the resort of many wealthy people from New York, Boston and the South, who not only filled the hotels in the town, but were often quartered on the hills, until it was said that every house for a distance of ten miles in every direction was filled, and whole stage loads were at times unable to obtain accommodations. In those days the stage horn could be heard at all hours of the day and night, and a tavern at the foot of the hill leading to the Spring was the winter rendezvous of the stages. There still stands the famous old elm tree under which runaway couples were married when the Massachusetts laws made New Lebanon the Gretna Green of all that region. The old tree had a platform about fifteen feet from the ground, where ten persons could stand comfortably, and from which a fine view could be had.

After the building of the railroad and the discovery of other springs, north and west, the tide of travel fell away, and this resort lost most of its former popularity. Of late years, however, this old-time standing is coming back, and the magnificent views, charming drives and healthful waters have co-operated to restore some of the former color and fame to the place. In the olden days, no important visitor from the other side to the United States was held to have thoroughly seen the country until he had visited Lebanon Springs. General Lafayette came in 1824, as the old registers show.

OVER LEBANON MOUNTAIN.

Mrs. Trollope, Harriet Martineau and Charles Dickens have written their impressions of the locality. Willis and Bryant have also dwelt upon the same theme. Henry Vincent, an English writer, says of the locality: "Hills, mountains, valleys, trees, gardens, farm houses and farms spread around and above you, in ever-varying beauty, reminding one of Llangollen, in Wales."

Passing from the village of Lebanon Springs to the summit of Lebanon Mountain (2,624 feet high) and looking back, you see the opposite range all the clearer for the additional height and distance. The roads wind in and out, following the contour of the land, and affording the traveler a view, or rather a series of views, of hills and valleys such as can rarely be found. You look over the valley of Lebanon into the Green Mountains of Vermont, the view embracing the Shaker settlement, with its well-kept buildings and thrifty acres—over the village of Lebanon Springs, surrounded by its sloping hillsides marked out in squares—a perfect checkerboard of fields of different colors.

Observe the topography carefully and you will see that the descent into Pittsfield from Lebanon Mountain is like the descent from one saucer into another—now you see the city, now you don't. Sometimes it seems as if you were back again in the hill country, but on gaining another eminence the city is at your feet, or just ahead of you; then you lose it again just as mysteriously. Looking ahead at one point your vision along the road is absolutely cut off by a large clump of willows, and it seems as if to get into Pittsfield, you would have to sail over the top of them. However, as you reach them you see that in order to preserve these trees, the road has taken a divided course, coming together just beyond.

The Berkshire hills offer the most delightful touring opportunities to be found anywhere in the Eastern States. They are easily accessible from either New York, Albany or Boston by a generous variety of routes. They have good roads, romantic and beautiful scenery, and old-fashioned, well-kept inns.

ECLIPSE

The Brake You Can Trust

More than one hundred square inches of braking surface!

A square inch for every 3½ lbs.

What more positive assurance of ABSOLUTE SAFETY can the rider require than the knowledge that his brake is stronger, proportionately, than the most powerful automobile brake made?

Figuring the average machine and rider to weigh approximately 350 pounds, that allows a square inch of braking surface for every 3½ pounds weight. No automobile brake made is proportionately as strong as the Eclipse Perfection Multiple Disc Brake.

This brake differs is design from previous Eclipse Brakes, in fact it is different from any other brake yet made.

The Brake operates on the multiple-disc idea, similar to the Eclipse clutch. The discs are mounted on one side of the hub, instead of inside it. There are six discs 5¼ in. in diameter.

The bearings contain ⅜-inch balls. Lubrication is a matter that will require little attention, for the hub can be packed with hard oil at the start of the season and this supply will last the entire year.

The Ideal Brake for Sidecar Riding

The great working surface and simplicity make this brake fine for heavy service, such as sidecar work. No matter what momentum the outfit may attain, the Eclipse can and DOES absolutely annul the most terrific speed and brings the machine to a quick halt.

Dealers should stock heavily.

Eclipse Machine Company

MOTORCYCLE ILLUSTRATED

Published every other Thursday at 51 Chambers Street, New York. Home subscriptions, $1.00 a year; foreign, $2.00; 10 cents a copy.

TELEPHONES 3690 AND 3691 WORTH.

Entered as second class matter July 6, 1908, at the Post Office at New York, N. Y., under Act of Congress March 3, 1879.

J. LEO SAUER, President.
H. N. CONDICT, Secretary.

WESTERN REPRESENTATIVE:
HARRY G. JACOBS
1220 First National Bank Building, Chicago. Telephone 5908 Central.

CIRCULATION THIS ISSUE MORE THAN 14,000 COPIES.

IMPORTANT.

OWING to its large circulation, it requires two full days of 24 hours each, after the last form has closed, to print, bind and mail a full edition of MOTORCYCLE ILLUSTRATED. In view also of the fact that this publication is read in more than 2,400 different cities, towns and villages in the United States, its wide distribution demands that each issue be placed in the mails not later than noon every other Thursday, the date of publication. In order to make the mails at this time, forms must close not later than 6 p. m. Tuesday, and advertising copy cannot, therefore, be handled if received later than Tuesday morning.

RECEIPT OF TEXT MATTER.

This applies also to text matter. Photographs should reach us not later than Monday morning preceding each date of issue. They will be given better attention, however, if reaching us the Saturday preceding.

CORRESPONDENCE.

MOTORCYCLE ILLUSTRATED requires correspondence and subscription agents in many towns where the paper is not already so represented; we pay a liberal commission to subscription agents, and the best space rates for quality, text-matter, drawings and photographs.

PHOTOGRAPHS.

Drawings, photographs and manuscript not suitable for publication will be returned if sufficient stamps are enclosed for the purpose. In every case, photographs should be plainly marked, so that they may be properly identified.

BUILDING A GARAGE

ONE of the most timely and interesting features of the March 20 number of MOTORCYCLE ILLUSTRATED *will be an article giving detailed directions for the construction of a home motorcycle garage, accompanied by practical plans. With the spring season almost at hand, the problem of housing a motorcycle is uppermost in the minds of many prospective riders, and experience has shown that the most satisfactory solution lies in the individual garage building.*

If you are a motorcyclist without a garage of your own, you will read this article with interest. Less than twenty dollars will put you in possession of a trim little building, designed to meet all your motorcycle requirements. The article above referred to tells how—and shows you.

There will be another ideal tour, outlined and illustrated by Robert Bruce, of the A. A. A. Route and Map Service, and the usual line-up of technical, news and departmental features with their accompaniment of sprightly pictures.

EDITORIAL VIEWPOINTS

"WE are anxious to obtain photographs of large groups of American motorcyclists," writes an English exchange. "On this side pictures of scores of riders lined up are very rare." There is something significant in this. We cannot claim the extended experience of English riders, but we are learning rapidly and appreciation of the possibilities of good fellowship, as applied to motorcycling, fortunately is a feature of our education.

THE PASSING OF A RACING PIONEER

WITH the passing of Jake De Rosier motorcyclists see brought to a close the most picturesque racing career the sport has known—or is likely to know. The conditions that developed the French-Canadian track wizard from a bicyclist to a motor pacing specialist and then to a motorcycle champion will not be experienced again. De Rosier grew up with the motorcycle industry in America and was a part of it. He contended against obstacles not encountered by the motorcycle speedster of today, and to a great extent blazed his own trail. He was a track general in instinct, a daring gambler against chance and a sportsman in whom the spirit of achievement was not quenched while life remained. To win from De Rosier, a competitor had to possess a faster machine. It was his proudest boast that he never sold a race; that he rode to win—always. Let that be his epitaph.

DEVELOPING OUR SIDECAR OPPORTUNITIES

DESPITE the fact that we have as yet done little more than scout along the frontier of sidecardom, and that our manufacturers—until the present season—have entered somewhat gingerly upon the production of the third-wheel attachment, we have been successful in convincing sidecarrists abroad that we can, in the parlance of the day, "deliver the goods." This is shown in the report of a prominent firm of American sidecar manufacturers that has on its list orders from points in Central and South America, the Hawaiian Islands and the Philippines, in addition to inquiries from Sweden, France, Australia and Japan. That inquiries and orders from these countries have been filed with American firms, when they could in some cases, at least, have been forwarded more easily to England—the recognized home of the sidecar—should be provocative of serious thought on the part of sidecar builders in the United States. Let us meet our opportunities halfway.

ENGLISH CYCLECARS FAIL TO OVERSHADOW SIDECARS

FOR some time past a debate of more than passing interest to American motorcyclists has been carried on in British motoring circles, anent the relative merits of the sidecar and the cyclecar, and it is noted that the former is not losing prestige through the comparison. This is significant in view of the predictions freely made some time ago in England that the newcomer would usurp all the prerogatives of the sidecar as well as those of the standard light automobile. That the cyclecar will make an appeal to a certain class of motorists who are impressed by its speed possibilities and its somewhat rakish aspect is to be expected, but we incline to the belief that the motorcycle sidecar—much after the manner of the poet's brook—will "go on forever," or as long, at least, as the demand of riders is for a vehicle that will combine maximum pleasure and exhilaration with minimum expense.

CLUBS ARE MEETING THE F. A. M. HALFWAY

LATE bulletins from Director Sauer, who began his transcontinental lecture tour in behalf of the F. A. M. at Baltimore, on the evening of February 27, indicate that clubs and individual riders are meeting every expectation in their readiness to enthuse over Federation aims and possibilities, and that there is full appreciation of the effort now in progress to afford them intimate, first-hand information concerning the attitude of the organization with which they have allied themselves. There is, in short, a spirit of fairness on the part of club officials and riders, a disposition to grant the F. A. M. reasonable leeway in its plans for advancement and a growing realization that, after all is said, the national organization must depend for its success upon the loyalty and energy of its units—the clubs.

TRUE enough, these are conclusions based upon the receptions accorded the F. A. M. traveler during only his first few days on the lecture route, but there are no good reasons for believing that these conclusions will lose pertinence as the trail leads westward. Clubs in the Southern, Southwestern and Pacific Coast districts, that have in the past complained of a feeling of aloofness from F. A. M. activities, will have the Federation doctrine brought to their doors and with it the knowledge that there is an earnest desire on the part of the national organization to be worthy of their loyalty and co-operation. It is only fair to assume that this spirit of the governing body will be met in kind.

AMONG the most noteworthy developments of the lecture tour are the reports received so far relative to booms in club membership. From cities several weeks ahead on his schedule the F. A. M. traveler has had bulletins to the effect that lively campaigns are under way with a view of capturing one or the other, or both, of the handsome cups offered by the F. A. M. One cup will go to the club turning over to the Federation representative the largest number of paid new memberships, and the other to the city in which the lecturer's meeting is best attended. National Secretary Gibson is being bombarded with requests for the leaflets telling of the methods by which the trophies are to be awarded, and it is already evident that greatly increased club memberships all along the line will be not the least satisfactory feature of the transcontinental lecturing program.

DE ROSIER CROSSES the TAPE

Veteran speedster succumbs, following operation in Springfield Hospital—Had recently arrived from Pacific Coast in good spirits.

BORNE to his final rest by his five younger brothers, and sleeping almost in the shadow of the motordrome where thousands once cheered his brilliant victories, Jacob De Rosier, the greatest racing motorcyclist the world has ever known, was laid away in St. Michael's Cemetery, Springfield, Mass., Saturday morning, March 1. The great "Old Warhorse" succumbed to the third operation on his shattered left leg, at Hampden Hospital, Tuesday evening, February 25.

The name of Jake DeRosier was a by-word wherever motorcyclists congregated. His graceful style of riding, his masterful handling of a machine at the highest speed with no apparent sense of exerted effort, a courage, a daring, a determination and a generalship unequalled, were the qualities that made him the idol of his profession. Jake DeRosier wrote his name indelibly on the pages of motorcycle racing for over a decade, and his memory will endure as long as the sport itself.

DeRosier was born at Quebec, Canada, and was 33 years of age. His parents removed to Fall River, Mass., when Jake was four years old, and there he grew up. He took up bicycle racing at the age of 17, and became one of the best riders in that section. His unusual prowess quickly was recognized, and he was honored with the steersman's seat on a bicycle sextet team which gave exhibition races against a locomotive on a specially prepared mile course at Rocky Point, R. I.

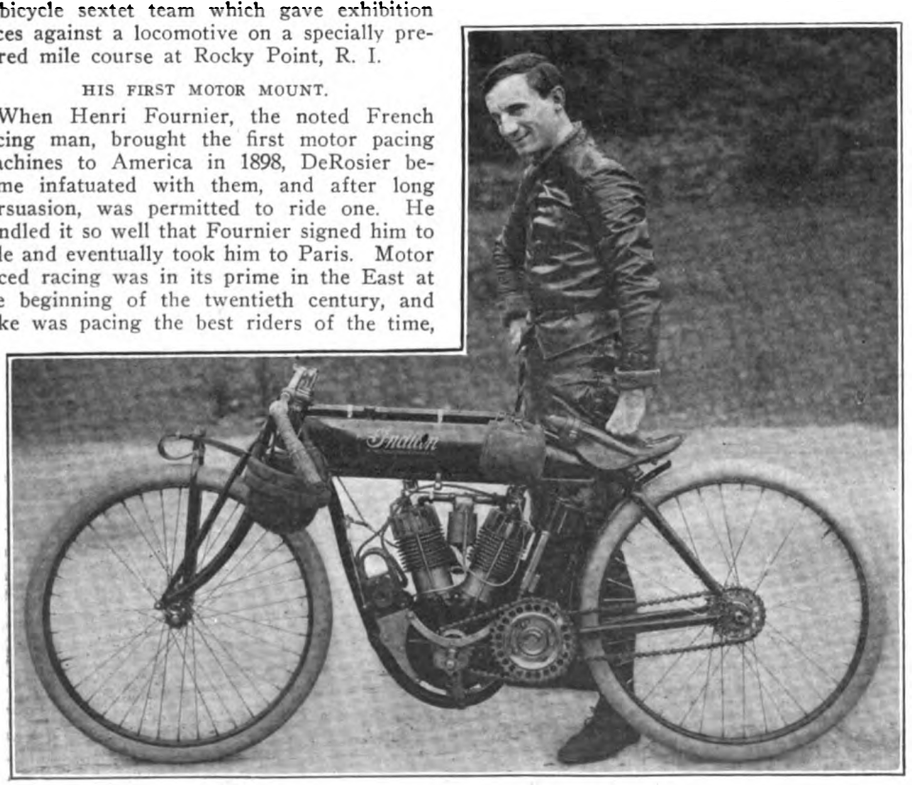
HIS FIRST MOTOR MOUNT.

When Henri Fournier, the noted French racing man, brought the first motor pacing machines to America in 1898, DeRosier became infatuated with them, and after long persuasion, was permitted to ride one. He handled it so well that Fournier signed him to ride and eventually took him to Paris. Motor paced racing was in its prime in the East at the beginning of the twentieth century, and Jake was pacing the best riders of the time, such as Jimmy Michael, Will Stinson, Harry Elkes, John Nelson and Bobby Walthour.

While pacing Nelson in 1901, Jake came in contact with Oscar Hedstrom, who was building pacing tandems at that time, and tried out some of the latter's machines. The following year Jake rode exhibitions at the Madison Square Garden six-day bicycle race on the first single-seat pacing machine ever built in America. During his pacing days Jake was under the management of F. Ed. Spooner, now an automobile photographer.

As most of his pacing work was on the New England circuit, which flourished at that time, Jake took up his residence in Springfield in 1901, and put in his spare time in a garage. Early in 1902, and shortly after the manufacture of the Indian motorcycle was commenced, Jake entered the factory and spent several months there. He now gave up pacing work, and became a well known figure at race meets and hill climbs on an Indian.

Although Jake left the Indian factory after a few months to become foreman of a local garage, he continued riding Indians, whenever he could obtain leave of absence. Although he rode in the F. A. M. national endurance runs of 1905 and 1906, he specialized on track racing, in which, even at that early period, he was a brilliant rider. Jake's pacing career was the school that laid the foundation for his wonderful rise to fame as a motorcycle racer in later years.



One of DeRosier's Best Photographs, Taken Just Prior to His English Trip.

ON THE INDIAN TEAM.

At the F. A. M. national meet at Paterson, N. J., in 1908, he eclipsed all the other riders in negotiating the steep six-lap track at high speed, and at that time became permanently attached to the Indian racing team. From that time on Jake's star shone brighter each week. He campaigned at all the board tracks, and soon became the acknowledged king of the professional ranks.

In 1909, at Los Angeles, Jake rode his first 100-mile record trial, a favorite distance of his, and established new records. During his career, he went the century several times at new record speed. Los Angeles was the center of motordrome racing in America and here he rode the majority of his races, and achieved his greatest American success.

Jake reached the height of his career in 1911. On February 7, at Los Angeles, in an attempt to lower his own 100-mile record, he established new marks from 2 to 92 miles, but was robbed of further laurels by his gasoline tank running dry. This phenomenal performance was made without a stop, at an average of 43⅖ seconds per mile. The greatest feature of the achievement was the covering of over 83 miles in the hour. This was the most brilliant ride he ever made in this country.

In April he came east to prepare for his trip to England to ride in the Tourist Trophy race. While in New York he was challenged by Arthur Chapple to a 500-mile race at Guttenberg. Jake posted $500 in cash, and Chapple's manager asked for time, whereupon Jake called the deal off, and said he would ride no more in this country until his return from England. He left $100 posted, as evidence of willingness to meet anyone upon his return from Europe, and sailed from New York, May 17.

GOOD WORK ABROAD.

Jake's fame had preceded him, and he was lionized from the moment he set foot in England. He adopted an attitude of modesty, reticence and gentleness that won the hearts of the Britishers who had been led to believe him ever looking for trouble. He made his first appearance in English competition in the great annual 400-mile 24-hour run of the Motor-Cycling Club of London, from that city to Edinburgh and return, and won a handsome gold medal for a perfect score. The contest proved a continuous ovation for him, and at one control a little girl presented him with a silk American flag. Even the simple country folk had heard of the great DeRosier.

Immediately afterward Jake took up his quarters at Douglas, in the Isle of Man, to train for the Tourist Trophy race, and his riding was a revelation to the Englishmen. They were frank to acknowledge him a master.

Digitized by Google

After he became accustomed to the course Jake set a new lap record in practice. It was after a strenuous morning's practice that he made the remark which the English have immortalized: "This ain't going to be no tea-party."

When the day of the T. T. came Jake was one of the big favorites. He led on the first lap, and was holding a predetermined schedule when suddenly valve trouble set in, and he found he had lost his tools and spare parts. He accepted outside assistance, in violation of the rules, and after finishing in twelfth place, was disqualified. Even his countrymen's regret at his misfortune, was no greater than that of his English friends. His defeat did not diminish his popularity in the least.

DEFEAT OF ENGLISH STAR.

He attained the zenith of his fame at Brooklands track July 15, by defeating C. R. Collier, the English champion, in a series of matches, carrying the world's championship. Jake won two heats, and blew a front tire in the other His skill in bringing his machine to a stop without disaster, after the tire came off evoked the highest admiration from the Britishers. Those who witnessed these matches unite in pronouncing them the most thrilling and hard fought that ever have been held in England. In addition to the title they netted DeRosier a handsome gold medal, and $650 in prize and accessory bonus money.

One week previous to his match with Collier, Jake attacked the kilometer and mile records at Brooklands, but did not lower them. He tried again on August 4, and was successful, being awarded another medal. He sailed for home on August 5, carrying with him the warmest regard of the English motorcyclists. On the eve of his departure he was the guest of the Collier family at a banquet, and the following tribute by an admirer appeared in one of the motorcycle papers:

"Bon Voyage! Jake, if you must go,
Across the 'Streak' from whence you came,
But ere you part from all you know
We'd like to say 'You've played the game!'"

"We'd have you know sport makes all kin
And tho' you've licked us without fuss,
We're glad to see the best man win
So shake hands, pard, you're one of us!"

Shortly after Jake's return to America he went to Chicago, and through an unfortunate misunderstanding, suddenly was released from the Indian team. With his reputation, he was quickly taken up by the Excelsior camp.

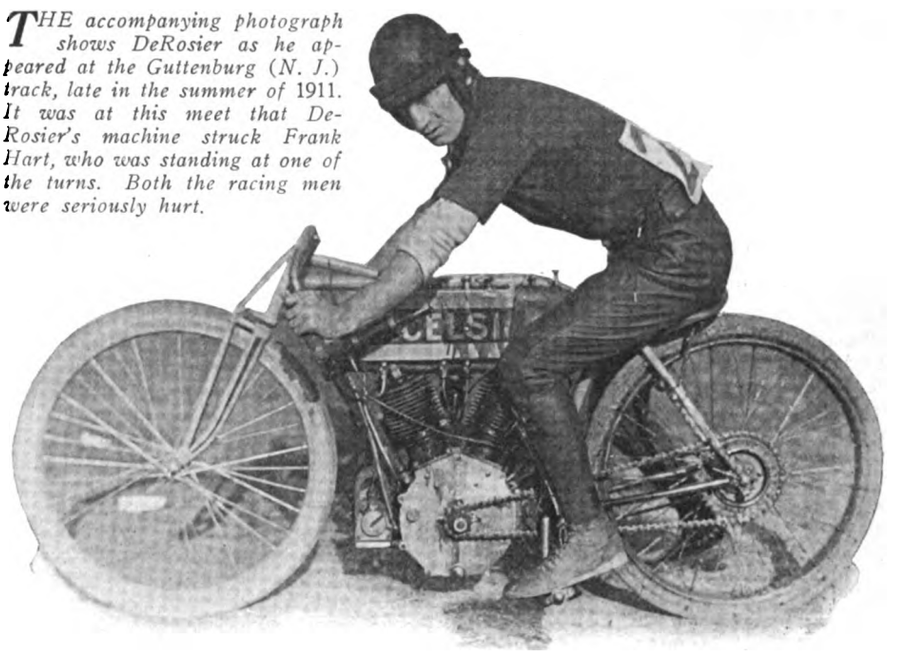
THE LOS ANGELES ACCIDENT.

In December, Jake went to California with his Excelsior racer, and on March 12, 1912, in a match with Charles Balke, on the Los Angeles Stadium, he sustained the injury which barred him from the starting line forevermore. Jake was picked up for dead, but his indomitable vitality asserted itself once more, and he went to the hospital with chances of recovery slim. After an operation on his leg, which was broken in several places, he seemed to be mending, and last Summer was able to enjoy an automobile outing.

Later he experienced a change for the worse, and last Fall his mother went to his side. He underwent another operation, and this time nearly succumbed. It was decided to bring him home, in the hope that he would recover more quickly in the east, and he finally arrived in Springfield, February 5. Although the long journey caused him considerable suffering he seemed pleased to be home again, and expressed confidence in his ultimate recovery.

When Jake entered the local hospital, he was in the best of spirits, and expressed a willingness to sacrifice his leg if it would mean quick recovery. Although pale, and showing evidences of intense sufferings after his long confinement, he seemed to have good chances of recovery, and talked interestingly of his future plans.

His oldest brother was by his side in the operating room, and after two and one-half hours under the knife he was returned to his room. When Jake came out of the anaesthetic he remarked that he felt fine, and then relapsed into a peaceful sleep. Two hours later a change for the worse was noted, followed by a temporary rally. After asking for his mother he again became unconscious, and the end came peacefully at 8.45 p. m.



THE accompanying photograph shows DeRosier as he appeared at the Guttenburg (N. J.) track, late in the summer of 1911. It was at this meet that DeRosier's machine struck Frank Hart, who was standing at one of the turns. Both the racing men were seriously hurt.

VICTORIES APLENTY.

During his career Jake DeRosier won over 900 races. He was a unique figure, developed by a rapidly rising sport, and possessed to a full degree the peculiarities of the racing motorcyclist, in addition to a magnetic personality. There was but one Jake DeRosier, there never will be another, for the conditions under which he achieved fame never will return. He was without question the most famous racing motorcyclist the sport has known in any clime.

Jake was the oldest and craftiest rider who ever trod a motordrome. Riding was his profession, his business and his hobby. He acquired all the tricks of the trade, and invented many new ones. He took competitors as he found them, and adapted his methods to theirs. He was blamed for many things of which he was innocent, and his proudest boast was that he never "sold" a race. To defeat Jake DeRosier a man had to have a faster machine.

Among the many beautiful floral tributes placed on his grave were a broken wreath from the Hendee Mfg. Co., a pillow from the employees of the test room, and a wreath from the Excelsior Motor & Mfg. Co. The latter wired Treasurer F. J. Weschler of the Hendee Mfg. Co., to extend condolences to the family and send a floral tribute in their behalf. Telegrams of sympathy were received from friends in many parts of the country. As a final mark of respect President Hendee ordered the factory flag half-masted, and all work suspended for five minutes, while the funeral passed the shop. In the unavoidable absence from the city of President Hendee, the Hendee Mfg. Co., was represented at the funeral by treasurer F. J. Weschler, Howard O'Brien and J. J. O'Connor.

STUDYING ROAD MATERIAL

NEARLY 200 samples of road building material,, gathered from 54 counties, are on exhibition in one of the rooms of the state highway commission at Columbus, Ohio. Under the direction of Commissioner James R. Marker they were collected last summer by Professor W. C. Morse, of the geology department of the Ohio State University. The remaining 34 counties of the state will be canvassed during the coming season to complete the collection. Material corresponding to each of the samples obtained is now being analyzed and tested at the Ohio State University. This is being done with a view of determining the hardness, toughness, cementing values and specific gravity of the various products. When this is completed the samples will be arranged in the exhibit according to their value for road building purposes.

FIRST RUN OF SEASON

MEMBERS of the Middletown (Ohio) Motorcycle Club held their first run of the season on Sunday, February 23. The riders were all mounted on Flying Merkels and rode from Middletown to Hamilton, and thence to Cincinnati. They were met outside the city limits by a delegation from the Queen City M. C. and escorted to the club headquarters. F. L. Valiant, of the Merkel staff, was among the riders and acted as host at a chicken dinner at Shuler's. After the lunch the party made a run to the mountains, where Valiant won an impromptu hill-climb. Among those participating in the run were L. S. Taylor, H. H. Huntsbery, of Cleveland; C. R. Mershon, M. E. Jones, Emil Buerger, F. Stenger, H. C. Forster and L. S. Dockstader. The boys covered about 110 miles.

FOUR motorcycle policemen have been appointed in Butte, Mont.

QUESTIONS and ANSWERS

CARBURETER SETTING

RAY FOLSOM—Setting a carbureter of the type you mention is by no means so onerous as you seem to think. With the machine on the stand open the jet needle valve and cover the auxiliary air inlet with your hand while pedalling. As soon as the motor starts, remove the hand from the air inlet and adjust the air valve by means of the wing-nut at the rear of the upper part of the instrument, until it stays closed with practically a "closed" throttle. I say practically, because your machine has a slight opening from the carbureter to the motor when the grip is turned to off or shut position. Next screw down the needle valve until the motor runs as slowly as desired. Take machine off the stand and ride on the road, giving more jet opening by means of the valve until the machine will crawl or move as slowly as desired. The sharpest sound of the exhaust is a good indication of the proper quality of the mixture. As you open the throttle when riding, see that the "bark" of the motor is sharp and that no black smoke comes out of the muffler. Make further adjustments by means of the wing-nut controlling the air valve, getting the best mixture possible, and noting the color of the exhaust between the muffler and exhaust valve, if possible to do so. The MOTORCYCLE MANUAL has directions for carbureter setting, and the makers of your carbureter will send free a very excellent explanation of their instrument.

HAND VS. PEDAL STARTING

EMIL M. BRANDES.—On the hand-cranked motor, the leverage is direct on the motor crankshaft or through a bevel gear with the leverage in favor of the rider, as on the Henderson. With pedals the rider has to drive: 1, the pedal-gear; 2, rear wheel, and 3, transmission before he reaches the crankshaft. On a chain transmission this means four bearings, a wheel and three chains with the radius of the pedals less than that of the starting crank. A comparison with the crank directly on the motor crankshaft will clearly show why the motor can be turned over more easily.

Then, also, when you are working the hand crank you can give a sudden pull to get the motor over center at the proper time, and this is felt directly. With pedals you may make a number of revolutions without effecting a start, and the usual method is to "pedal your head off" so that starting will be assured. Every bearing gives so much friction against starting, and on the pedals you literally heave the motor over by your weight and the amount of "kick" in your system. Hence, the valves are arranged to lift to start. Most men can lift considerably more than they can push down, too.

KEROSENE AS FUEL.

ARNULF C. ROSE.—It is possible to run a motorcycle as the motor is at present constructed on kerosene or coal-oil. The trouble lies in the obtaining of a carbureter to properly vaporize the heavier (than gasoline) fuel. A kerosene carbureter needs to have a larger jet opening than one for gasoline. The Schebler or one of similar type can be used in this respect. But also, the fuel must be preheated in order to thoroughly vaporize it, and this means a jacket around the mixing chamber or inlet pipe. No carbureter for motorcycles is fitted with this, and within this jacket must circulate the exhaust gases to get the heat necessary for vaporization. A failure to properly vaporize the kerosene means heavy carbon deposit in the cylinders, dirty exhaust and a smell due to unconsumed gases in the cylinder, but burned in the exhaust. There are no kerosene carbureters made at present for motorcycles. See the article on Alternative Fuels, by D. R. Hobart, published in these columns some time ago, and the Kinks and Komments in the February 6 issue.

FITTING 9 HORSE MOTOR.

C. HOELZEL.—(1) We do not advise fitting the 9 h. motor in the frame. The chances are strongly against it standing up, and the risk is not worth the damage that might result to you. (2) By no means. See Answer 1, above. (3) The motor mentioned is first class, and the material is as good as in any motor on the market. It should do the work faithfully day in and day out. One of our contributors has fitted a Mack single in an Indian frame and run it practically without repairs since the fall of 1911 with an inch V-belt drive. (4) We cannot state definitely what the mileage per gallon will be, but should presume about 45. (5) Use a 1¼ V-belt for the drive. (6) From runs made by our Technical editor on the machine you mention, no irregular firing was noticed in increasing or reducing pace. But this man is careful not to "dump the throttle into her," a fault which is too common, and by the practice of which any motor will give temporary irregular firing. Do not pay too much attention to the opinions you mention; the chances are that those who made them were very unfamiliar with two-stroke motors, at the least. Bad news, usually manufactured, travels faster than good news. (7) As far as we know, the two-stroke motor will give as good service as any other type. (8) Yes, we think you could depend on this make for the trip you mention. (9) Communicate with the makers, whose address will be found in our advertising columns.

REAR LIGHTS

JAMES B. BROWN—We strongly advise your fitting a rear light no matter whether it is compulsory in your State or not. You can easily rig up a tube from the Prest-O-tank, connecting it with a tee so that when the valve is opened, both headlight and tail lamp will be fed gas simultaneously. With a red rear light, dangers of collision will be better avoided and the excuse that the man at the rear didn't see you until too late will be of no avail. A point worth remembering in city riding, whether by day or by night: don't leave your machine at the curb near a corner, as there are numerous drivers who cut the turns short, and you may find your bus on the sidewalk in a battered condition, and the offender gone. This applies to the bigger cities with more force than the smaller ones.

NEW YORK LICENSE.

FREDERICK HAAS.—(1) At present there is no license required in New York State, but the age limit is supposed to be 16 years. (2) A red rear light is not compulsory, but we advise your fitting one, as you may tour in other States which do require such a light. Also, fit one as a matter of precaution against rear-end collisions. Legislation is pending for licensing of machines and the carrying of number plates, and we will announce any changes as soon as they are made.

GEAR RATIOS.

GROVER KORTONIE.—In our October 17 issue, page 60, will be found a Gear Ratio and Speed table which will give you what you want. For a tour from Niagara Falls to Cleveland and back again send to the F. A. M. Touring Bureau, 51 Chambers street, New York, for tours B-29, Buffalo to Erie, Pa., and F-138 Erie to Cleveland, Ohio.

OSCILLATING VALVE MOTOR

INQUIRER, N. Y.—As far as we know the only oscillating valve motor is the Phantom, shown in the February 6 issue, page 61. For automobile motors of this type, see the *Horseless Age* or *Motor* for the past year.

A. R. VOGEL—Write the Consolidated Manufacturing Company, Toledo, Ohio, who manufacture the Y-A shock-absorbing seat device. See our advertising columns also.

Digitized by Google

A SUNDAY run was recently made by the Plaza Motorcycle Club of New York City over the Long Island Motor Parkway. This was the first club run and a large number of the riders were on hand. The Long Island roads and the Parkway were in good condition, and the trip was so satisfactory that another will be held soon.

VARIOUS INQUIRIES

S. E. CORY—(1) Write the Motorcycle Equipment Company, Hammondsport, N. Y., for wire casings, both of domestic and foreign manufacture. (2) The rating of English motors is in cubic centimetres, which may be converted into cubic inches by dividing by 16.38. They have no arbitrary rating like 7.50 cubic inches equals one horsepower, but class motors in contests and trials according to piston displacement. Thus, the Douglas 2.5-inch bore and 2.36-inch stroke opposed motor is 330.5 cubic centimetres capacity and comes in Class A—cylinders up to 350 cubic centimetres. As this motor runs up to 4800 revolutions per minute on the track and a speed of over 70 miles an hour has been obtained with it, its power is somewhat over the 2¾ figure which would be its rating according to the M. M. A. figures in this country. It is said, actually, to turn up 9 horsepower. You can see, therefore, that the relation between piston displacement and rating has very little to do with the actual power of a motor. (3) Cone clutches can, of course, be slipped as well as any other type, and being generally large, will radiate the heat better than a small type of clutch. Slipping any clutch is bad, and should not be resorted to unless an emergency arises. The life will be prolonged if the clutch is alternately engaged and disengaged instead of letting it drag. More good clutches have been prematurely put out of commission by riders slipping them when a simple adjustment of the spark and throttle would have been just as effective and saved the whole machine from wear and tear. (4) Give more gas at first in the endeavor to correct the trouble, and go easy with the throttle manipulation. Do not "dump" the gas into her; it is not a matter of life and death to get away quickly. You can get the same effect as giving more gas by reducing the air, but the first method is the better. If you desire speed, you will, of course, get it at the cost of economy, and *vice versa*. If you should enlarge the jets, do it very carefully or you may cut them too large and your fuel consumption will then be enormous. Motors after considerable running will not operate satisfactorily on the same carbureter setting as when they were new. By no means make any changes of carbureter; the one that you use was designed for the motor that it is fitted to and should work satisfactorily.

FUEL TANK MATERIAL

CHAS W. BERGMAN.—A variety of materials can be used for gasoline and oil tanks, tinned copper being very excellent and used in considerable numbers. It is very light and fairly strong, and the tin coat is put on to prevent oxidation or rusting. One motorcycle manufacturer in this country has one of the most satisfactory metals for tank construction on all his machines; the stock used is block tin such as is used for 40-gallon milk cans, and the resulting tank is practically puncture-proof. Galvanized zinc is another material of good service-giving qualities, but a lining of copper is better to employ with such a material. Sheet iron is good and needs no lining, and there would be no objection to your using it for your purposes.

To determine the pressure of the exhaust gases at any distance from the exhaust valve it will be necessary to find the explosion pressure and the final pressure as the exhaust valve opens. We cannot give you figures for your particular motor, as we have never had a chance to make calculations on it, and no two motors of the same model and even of successive numbers from the same lot have the same compression pressure, explosion pressure and final (exhaust) pressure. It should be well over 50 pounds maximum for the type you mention that is the exhaust pressure, after it leaves the exhaust valve chamber.

WIRE CASINGS

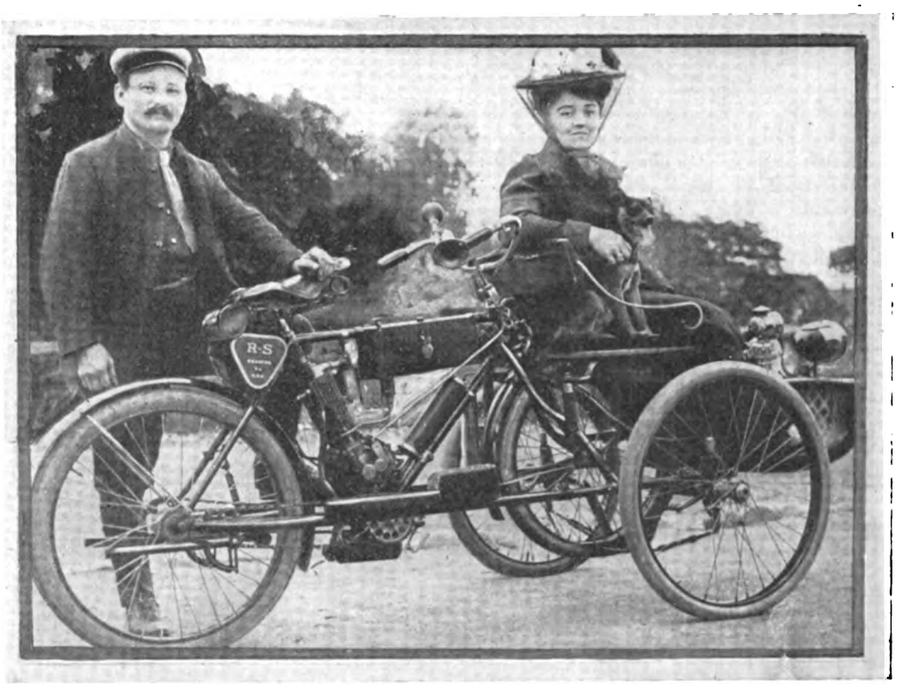
JOHN H. WHITNEY—Write the Motorcycle Equipment Company, Hammondsport, N. Y., for figures, etc., on wire casings, stating your needs in the letter. The Bowden wire mechanism is handled by the J. S. Bretz Co., 250 West 54th street, New York, and your dealer should have it in stock or get it for you.

STATE REGULATIONS

I. W. CASHNER.—The information you desire is given in full in our *Motorcycle Manual*. Licenses are needed in California according to local ordinances; at present there are no motorcycle regulations for Nevada; Utah has an exemption for non-resident riders bearing the license of other States. Colorado has local ordinances which vary; Kansas has similar provisions and Missouri an non-resident exemption. Illinois has an exemption for nor-residents, and so has Indiana and Ohio. Pennsylvania exempts non-residents, and so does New Jersey at present.

OSCAR HEDSTROM RETIRES.

OSCAR HEDSTROM, long a prime factor in the development of Indian motorcycles as vice-president of the Hendee Mfg. Co., announces his retirement from active participation in the company's affairs, and states that his only plans for the present concern a long recreation trip on which he has had his mind set for some time. Mr. Hedstrom's retirement becomes effective on March 1.



Motorcycle with Forecar Attachment, the Latter Patented by T. W. Razoux, of Brooklyn, N. Y., Who Appears in the Photo. The Forecar is Attached Without Removing the Front Wheel of the Motorcycle.

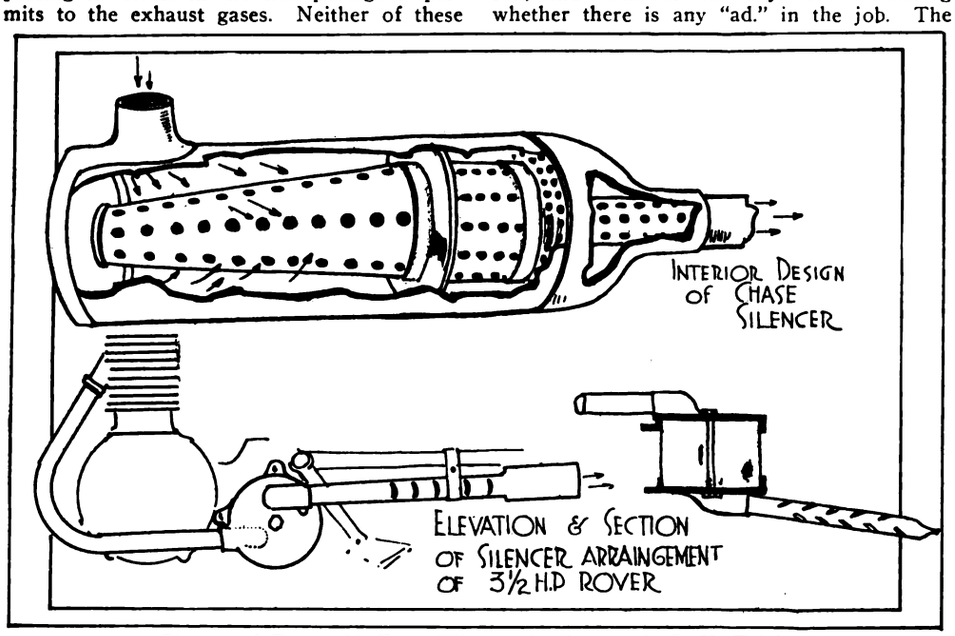
ENGLISH NOTES By "BRITISHER"

Winning Mufflers in A. C. U. Silencing Trials; the Last Word in Freak Hill-Climbing; What Stanley Is Doing with His Singer Racers; the Tidy Clyno Sidecar Outfit, and Other British Novelties.

THE muffler awards are now out, and the first prizes have gone to the Rover and Chase devices, which are bracketed equal, both in respect of the silent running they afford, and of their dynamic efficiency, each surpassing its rivals in the free passage it permits to the exhaust gases. Neither of these patterns interfered perceptibly with the power output of the engine, and neither of them allowed any noise to which any rational being could object. I append cuts of the victorious arrangements. The drawings are self-explanatory. The Hutton-Macbeth, Dawson and Clair mufflers received inferior certificates, while the Davis and Dunlop devices proved tolerably satisfactory without rivaling the others. The Ariel, Matchless and Phelon-Moore mufflers were silent to the ear in the running test, but put undue back pressure on the engine in the bench test.



Chase and Rover Mufflers, Winners in Recent A. C. U. Trials.

A FREAK HILL CLIMB.

SOME of our "knuts" are very badly bitten with the notion of arranging a hill climb on the world-famous Cresta toboggan run in St. Moritz, Switzerland. This run consists of an artificially laid track of frozen snow, three-quarters of a mile in length, with an average grade of 1 in 6, up the side of an Alp. It is the private property of an Alpine sports club, who go to considerable expense in preparing it for the annual racing season. The climb includes several bad turns, which are carefully banked to mathematical angles with earth, over which ice is deposited.

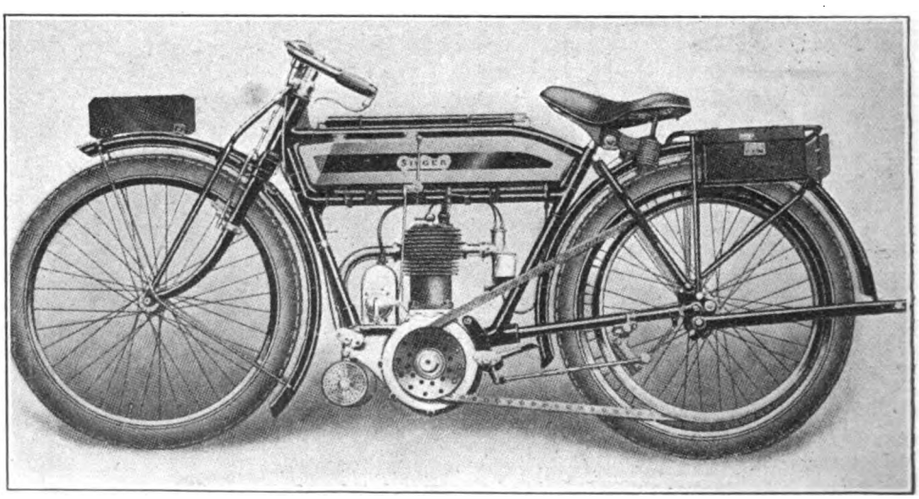
The worst grades are little short of 1 in 2, or 50 per cent., and the toboggan racers attain speeds of over eighty miles an hour by dint of gravity alone. The club's secretary has offered to open it for motorcycle racing two days after the close of the sledge racing season, and some of our boys are wondering whether there is any "ad." in the job. The first problem is to find a tire which can grip frozen ice at a 50 per cent. slant. The second is to get the jiggers to the venue, for the canton of Grisons, with a prejudice not uncommon in Switzerland, absolutely closes all its roads to motor vehicles, and the machines would have to be carted to the sports ground. It is therefore rather a toss up whether the climb will materialize.

TWO DETAIL REFINEMENTS.

"MONY a mickle mak's a muckle" is the good old Scottish proverb, and the illustrations on the next page, of brasswork details, show how carefully our modern machines are planned in every detail. One tap shows how the compression cock on the cylinder head is protected against the entry of road grit, when a rider uses a gasoline injection to free a gummy piston. The other shows how we are saved from diving under our overalls to seek the gasoline squirt in cold weather. The long spout of the tank drain cock is pivoted, and can be turned over the compression tap, so that an injection can be procured without the aid of a loose squirt.

SINGER MOTORCYCLES.

THANKS to young Stanley's daring track work the reputation of the Singer machines is rising by leaps and bounds. Stanley is one of our few really heady racing men. The others mostly tune up on the hit or miss system; they get a picked engine from the head of the factory testing shed, they go down to the track and experiment with every detail, testing each adjustment by trial spins round the three miles of cement against the electric clock. Stanley has a little private shed of his own, in which he is usually hidden. Suddenly without warning he emerges, wires up to town for a record attempt permit, and without any trial spin he gets away, and puts up records unless something snaps, or a tire goes. He is a small, withered looking little man, with an anxious face. The cuts show a standard



The Singer, on Which Stanley Is Doing Some Remarkable Work in England.

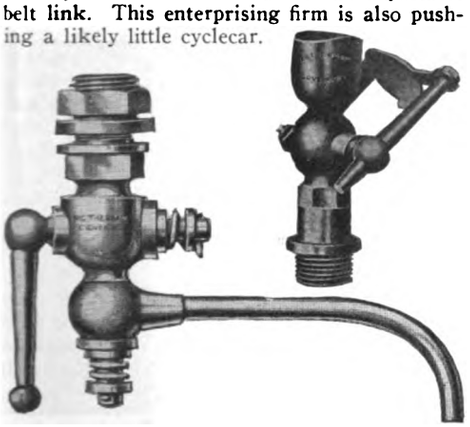
Singer racer and their open-frame ladies' machine with dress guards. The rear wheel of the Singer can be removed by undoing the two main axle nuts.

SOME PREMIER POINTS.

THE Premier Co. is the most inclined of all our trade to cater for the faddist rider, and it manufacturers about a dozen different models, which looks on paper like a short-cut to bankruptcy, but seems to bring them a tremendous volume of business. One of the Premier features is a neat cast aluminum belt shield, which protects the most vunerable arc in the belt run from wet, and also catches any oil blown out through the release hole at the tip of the crankshaft. Another is an arrangement for whipping the cylinder off in four minutes when its owner desires to remove any carbon deposits; and still another is a countershaft two-speed gear, which utilizes the popular combined chain-cum-belt drive.

This is one of the few designs on the market which provides an *adjustable* countershaft pulley. If the nut on the countershaft pulley spindle be slacked back, the outer flange can be screwed in or out with the fingers, so that it is never necessary to cut the belt, and any desired series of gears can be instantaneously secured with the aid of an adjustable belt link. This enterprising firm is also pushing a likely little cyclecar.

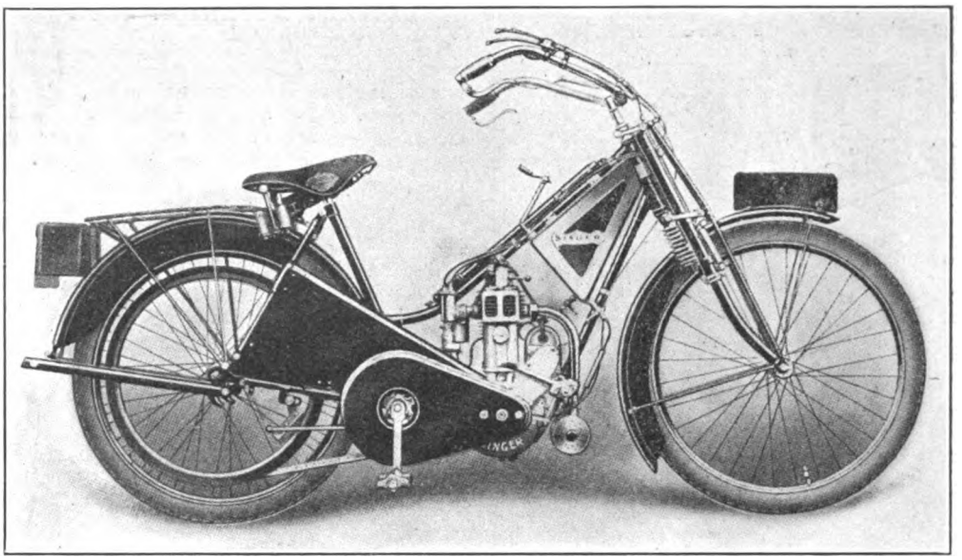


An English Priming System (at the left) and an Improved Compression Tap.

A SCIENTIFIC SADDLE.

OR—as the makers prefer to call it—"the" only scientific saddle. I am not familiar with American saddlery lines, but the average British saddle of best make has: (1) non-adjustable springs; (2) no rise and fall at the front; (3) an average rise and fall of 1½ in. at the back; (4) no lateral rigidity. The X1-all saddle, above referred to, successfully eliminates all these theoretic defects. The springs are adjustable, and are mounted horizontally instead of vertically as is the case with other makes. The ends of the springs are attached to bell-cranked levers, moving in opposite directions, mounted in bearings, the friction of which damps the action of the levers, and so stops excessive oscillation of the springs.

Thus, when a shock is sustained by the machine, the main jerk is absorbed in the transformation of vertical into horizontal motion, while the back and front of the saddle share any change of level equally, so that the rider sustains no change of angle, and does not suffer from back-ache. Furthermore, the shape of the saddle is not determined by guess work. The patentees were the only saddle makers to take plaster casts of the human anatomy in its riding posture, and they saw at once that no leather could possibly take or keep the required shape. They made their first saddle top out of naked pressed steel, and found it infinitely more comfortable in use than any existing leather top. They have since padded it with felt overlaid with the best hide, and as a result have produced by far the most comfortable saddle on our market.



Ladies' Model of the Singer, an English Favorite.

A NEAT GUDGEON PIN FASTENING.

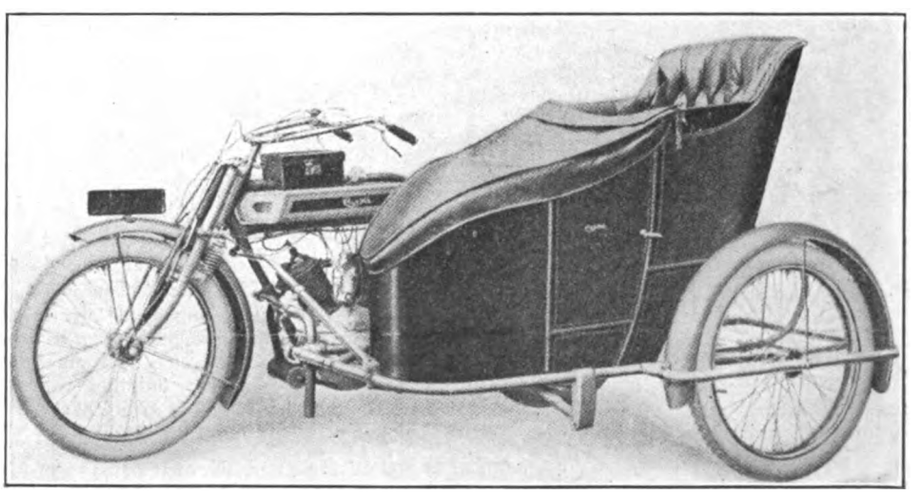
OUR B. S. A. piston wristpin shows a popular method of securing this troublesome detail. In old days it was locked by a pair of cottered screws, which for some mysterious reason used to drop out, foul the flywheels, and cause a pretty smash in the interior of the engine. A good many modern engineers trust to luck, and make the pin a driving fit, giving it a slight taper.

This is well enough as sent out from the works, but if the rider withdraws the pin, and has to replace it at home, he usually taps the light piston out of truth in re-fitting the pin. One or two of our best makers prefer the B. S. A. plan, which has not developed any demerit in prolonged tests. A divided wire ring slips into a groove and jams the parts tight. It is easily inserted by a twist with a pair of slender pliers, and can be picked out in no time.

TRICAR DESIGN.

A CONTROVERSY has been raging in British circles anent the safety of three-wheeled motorcycles when a tire deflates or bursts. Some users assert that under such conditions the outfit becomes unsteerable, and either makes a beeline for the ditch or neatly empties out its occupants on the road center; others maintain it is possible to bring the concern safely to rest. This divergence arises from experience with different types. If the rear frame is itself sprung, a spill is probable. When the tire deflates, it trails out of the rim either to right or left. This pulls the wheel over, by expanding the elliptic spring on the far side, so that the rear wheel is instantly thrown out of track and out of the vertical.

This prejudice has proved such a trouble to the makers of our "A. C." sociable tricar that they have at last decided to vindicate the safety of their chassis on Brooklands track. Next week they are sending a test chassis to the track. It will be sent round a lap with an ancient and deflated cover on the rear wheel at a touring speed. After that an inflated tube will be put on the rear wheel, and several big nails driven just so far as not to puncture it. Then the tricar is then to be driven at racing speed to demonstrate the safety with which it can be stopped when the burst occurs.



Neat Clyno Sidecar Outfit, with Apron to Protect Passenger.

PORTLAND HILL-CLIMB

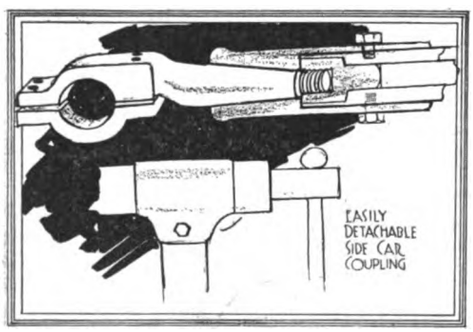
IN a hill climb at Portland, Ore., on February 24, a Pope model K big "4" took first place among the singles. The course was 1,940 feet long, with a total rise of 278 feet, the last 200 feet of the grade being 22 per cent. The winner's time was 40 1-5 seconds, beating his nearest competitor by seven seconds.

WON FROM SKATER

"BUNNY" PAINE, riding a single Harley-Davidson, gave an exhibition of flat track riding February 25, at the Auditorium Rink, East End, Pittsburgh, Pa., when he defeated Ben Specht, a local speed skater, in a one-mile pursuit race. His time for the eleven laps was two minutes, ten and one-quarter seconds.

A SALEM SIDECARRIST

ERNEST W. CURWEN, an Indian rider, of Salem, Mass., rode his machine more than 2,000 miles during the last season with his wife and nine-year-old boy in a Majestic sidecar. He reports excellent service from the outfit.



English sidecar couplings.

CLEVELAND M. C. BUTTON

IT was decided at a recent meeting of the Cleveland Motorcycle Club to adopt a club pin or button, and all members will be supplied with one. In carrying on the campaign for new members the club has split up into five teams, and the winning team will receive a handsome pennant.

SECRETARY Gibson announces the affiliation of the Harley-Davidson M. C., of Portland, Ore.

LIVELY DOMINION CLUB

ALTHOUGH the Hamilton (Ont.) Motorcycle Club has only 60 members, it is one of the liveliest organizations in Canada. It maintains a well furnished clubroom equipped with a pool table and piano, and an orchestra is on hand every evening. The club recently held its annual banquet.

TAKEN FROM GARAGE

A 1912 model, 7 h. Indian belonging to Julius Sterns was taken from the New York Motorcycle Garage, 310 West 48th street, New York, Friday, February 28. The motor number is 80D396. Sterns is an F. A. M. member, and the usual $25 reward will be paid by the Federation for the recovery of the machine.

IN FINE NEW HOME

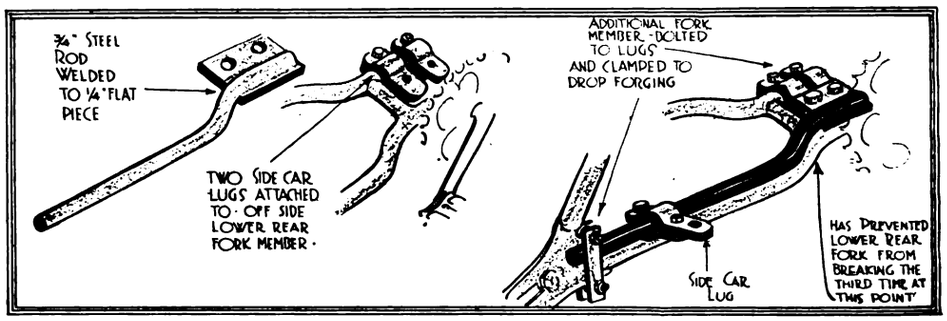
HAVING moved into its new quarters, the South Side Motorcycle Club now boasts of having the finest club rooms in St. Louis, Mo. Two events of interest held this month by the club are the annual banquet and reception and the public installation of officers.

TO HAVE NEW QUARTERS

AT the last meeting of the National Capital Motorcycle Club, of Washington, D. C., Frank Long, chairman of the committee on quarters, submitted a report. The committee recommended the renting of an entire floor near Ninth and N streets, N. W. Attention was called to the fact that the renting and equipping of these quarters will result in a considerable expenditure and will necessitate an increase in the dues paid by the members. It was decided to raise the dues to $1 per month, if necessary. A new committee consisting of Frank Long, Leo W. Beall, F. M. Mills, E. M. Dobson and L. R. Sakers was appointed to take charge of the new quarters.

FOLLOWING the example of the local police department, the Baltimore street cleaning department has supplied the street superintendents with motorcycles. The machines were bought from Howard A. French.

P. E. SPAULDING, of Harrison, has been appointed local commissioner by the F. A. M. State Commissioner for Maine.



How one rider braced his motorcycle frame for sidecar work.

BASKETBALL TEAMS

FOUR teams, the Thor, Pierce, Indian and Yale, have formed a basketball league in Houston, Tex. These teams are composed of members of the local motorcycle club. At latest reports the Thor team was far in advance, leading by 500 points.

SCREEN BILL DEFEATED

COLUMBUS, Ohio.—The bill which was fathered by the Columbus Motorcycle Club and the Columbus Automobile Club to compel motormen of interurban cars to screen their glaring headlights while passing motorists has been defeated.

AMONG THE MISSING

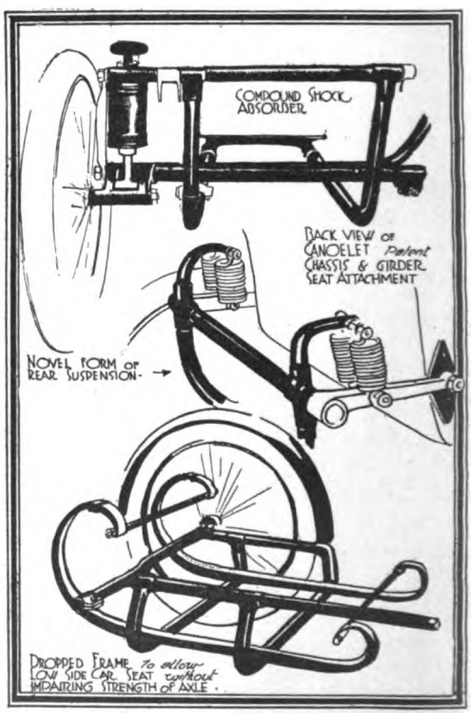
A REPORT is made of the theft of a 1913 Excelsior from J. H. Stowell, 2633 Indiana avenue, Chicago, F. A. M. member No. 12,441, for the recovery of which the usual reward of $25 is offered. The machine was equipped with Goodyear tires and head and tail lamps; it had an extra oiler on front of the cylinder and there was no pump in the tank. The motor number is 39071.

MAY PURCHASE PROPERTY

AMONG the more important business discussed at the last business meeting of the Buffalo (N. Y.) Motorcycle Club was the project of purchasing a building valued at $10,000 to be used by the club as a permanent home.

CHIEF HARRISON, of the Evanston (Ill.) fire department, has recommended the addition of three motorcycles to the department.

IT is reported that the motorcycle is a most popular means of travel in Panama and that the motor two-wheelers are extensively used by government employes.



Shock-absorber, rear springing and frame construction as found in types of English sidecars

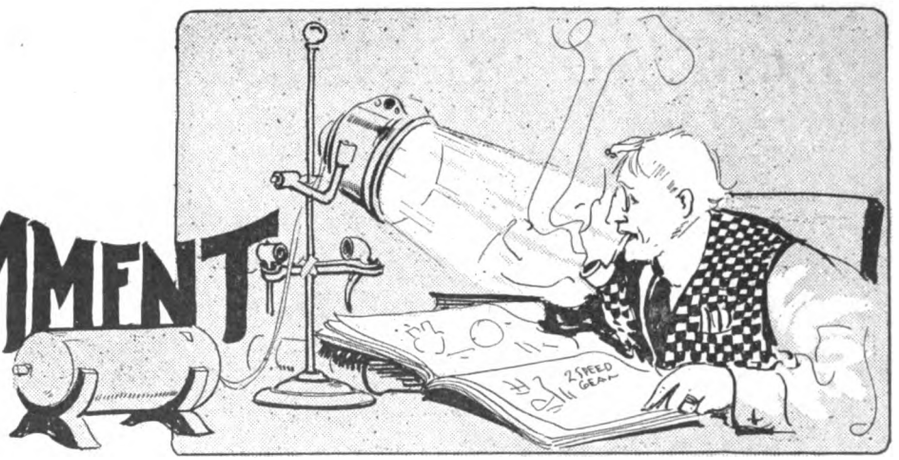
KINKS & KOMMENT

by "COURIER"



PROBABLY the most noticeable motorcycle feature of the freakish weather we have been experiencing is the sensitiveness of our carbureters. I say our, but that is rather narrow in its scope, as the same thing holds good with regard to automobiles also. Riding along roads where motor traffic of all kinds is numerous these days, the great number of black-smoke exhausts seen (and smelt) is surprising. I think we leave too much to the automaticity of our carbureters, and this has a bad effect on our riding. As we are generally averse to constant tinkering at any one thing about a machine used primarily for pleasure purposes, the mixture is let go any old way so long as the motor drives the machine. Matters are worse when the rider has to reach under his knee and twiddle knobs or nuts which are concealed, and I for one am going to take a leaf out of our British cousins' book and fit my auxiliary air control so that it can be operated from the handle-bar.

RIDING AS A FINE ART.

MOST riders are more or less familiar with horses, and in one respect, driving a horse and riding a motorcycle properly require the ability to do certain things. Any child can guide a horse by means of the reins, and almost anybody that can balance, turn the grips and back-pedal can drive a motorcycle, but that is far from being all that is required in either case. A person who cannot harness a horse and put him through all his paces at any time can hardly be considered a driver, and likewise a motorcyclist who simply straddles a two-wheeler and cannot adjust his mixture, regulate his oiling, and act properly in an emergency can not be called a rider. Riding is all of these plus the knowledge of "pulling-up distances" at any speed of the bus, knowledge of the rules of the road, and how to run over all kinds of surfaces. This may seem formidable, but a little general riding in the country and city will develop a rider's ability until all these things become second-nature to him.

BLAMING THE CARBURETER.

PERSONALLY, I am far from being a speedster, but like most riders I don't object to a brush now and then when road conditions permit. A big twin is as fast as any pleasure automobile and when I am out on the road at all, I hate to see a motorcycle passed by an automobile, and worse yet, when the rider of the motorcycle tells me his carbureter wasn't working just right. If the rider is a novice, you can show him where the trouble lies, but when he has ridden for several seasons, the inference is that he is far from being a first class motorcyclist.

On one occasion I had just got a tube back after a puncture, and along came a rider on a 7-twin with a big closed car slightly ahead. The driver of the car was all smiles as he came by, and the distance between the two increased about 100 feet and grew greater each second. At the end of about three city squares it was all over, and the rider gave up and came back to where I was. Then came the celebrated excuse, which should go arm-in-arm with the "slipping compensating sprocket" of former seasons. Then I started to talk. My short lecture on carburetion was well received, but the appendix on ridership was met with ire, and laying a bet, we both rode off to hunt that limousine. The speedometers showed 20 miles before we gave it up, but we never saw that driver and his car again. A movement of the air-lever about ⅛ of an inch on my friend's mount would have made all the difference in that brush as it turned out.

SIDECAR RUNNING.

THIN black smoke, showing too rich a mixture, may not make much difference in ordinary running when the machine is traveling solo, but when a sidecar is attached it may mean both rider and passenger pushing up hills that with a proper mixture would be taken nicely. Recently I saw a four-cylinder bus with heavy sidecar attached fail several times on a short steep grade, and the black smoke told the story only too well. The rider claimed that the setting was all right when he started out about three hours before, but then the sun was bright and the air moist, while later the air was dry and the weather cloudy. When the suggestion was made that the auxiliary air knob was put there for use on such occasions, the reply was, "Why do they call it an automatic carbureter, then?" My riding partner offered to make that hill from a standing start, but the offer was badly received, so we went off leaving the sidecarrists to think it over or go some other way around. The fact is that the increased load of the sidecar and passenger necessitates an entirely different mixture from that adjusted for solo work, and it naturally will be richer in gasoline. With a sensitive carbureter, the variation in the moisture in the air will affect the quality of the mixture quicker than ordinarily, so that a pretty frequent adjustment in weather like we are having now will be necessary if good running is to be obtained. Every rider who uses a sidecar ought to keep his motor "up to snuff" more diligently than ever, as a failure on a hill, no matter what the fault may be, is scored against both the machine and the sidecar. I know that 1913 is to be a sidecar year, and it is the pioneers that accelerate (or retard) the growth of a pastime, so study your outfits and boom the rational form of passenger attachment.

COMBINATION DRIVE.

THE first showing of the combination drive in this country was at the Chicago Show just passed, but the notice paid by some of the press to it was very scant. One young representative on being asked what he thought of it had not even seen it, but had seen a "belt drive with large pulleys" on one of the stands. Differing from this one was one of the readers of MOTORCYCLE ILLUSTRATED, whose letter in the "Told Among Friends" section last issue, is certainly worth reading, particularly as he is not yet a rider. I hope to see this chain-cum-belt transmission come into use shortly, as it is a corker and admits of using a clutch and variable gear in any position desired and has the advantages of both chain and belt with a few of its own. It can be used for sidecar work, too.

A SIDECAR STAND.

WITH the sidecar fitted, there are times when a stand for the latter will be desirable, and one that I saw the other day shows how quickly and cheaply a stand can be fitted. The rider took a piece of 2 x 2 wood and shod one end of it with sheet iron. Cutting it to the proper length, he fastened it to the axle-member of the sidecar frame by means of a curved strip of iron or zinc, and attached a dog-chain to it and to the mudguard. Simply loosening the chain from the hook on the guard allowed the "stand" to drop, and the sidecar was easily lifted onto it.
